Balance of Trucks account, Jan. 1, 2023	
Truck No. 1 purchased Jan. 1, 2020, cost	$18,000
Truck No. 2 purchased July 1, 2020, cost	22,000
Truck No. 3 purchased Jan. 1, 2022, cost	30,000
Truck No. 4 purchased July 1, 2022, cost	24,000
Balance, Jan. 1, 2023	$94,000

The Accumulated Depreciation—Trucks account previously adjusted to January 1, 2023, and entered in the ledger, had a balance on that date of $30,200 (depreciation on the four trucks from the respective dates of purchase, based on a 5-year life, no salvage value). No charges had been made against the account before January 1, 2023.

Transactions between January 1, 2023, and December 31, 2026, which were recorded in the ledger, are as follows.

July 1, 2023	Truck No. 3 was traded for a larger one (No. 5), the agreed purchase price of which was $40,000. Ichiro paid the automobile dealer $22,000 cash on the transaction. The entry was a debit to Trucks and a credit to Cash, $22,000. The transaction has commercial substance.
Jan. 1, 2024	Truck No. 1 was sold for $3,500 cash; entry debited Cash and credited Trucks, $3,500.
July 1, 2025	A new truck (No. 6) was acquired for $42,000 cash and was charged at that amount to the Trucks account. (Assume truck No. 2 was not retired.)
July 1, 2025	Truck No. 4 was damaged in a wreck to such an extent that it was sold as junk for $700 cash. Ichiro received $2,500 from the insurance company. The entry made by the bookkeeper was a debit to Cash, $3,200, and credits to Miscellaneous Income, $700, and Trucks, $2,500.

Entries for straight-line depreciation had been made at the close of each year as follows: 2023, $21,000; 2024, $22,500; 2025, $25,050; and 2026, $30,400.

Instructions

a. For each of the 4 years, compute separately the increase or decrease in net income arising from the company's errors in determining or entering depreciation or in recording transactions affecting trucks, ignoring income tax considerations.

b. Prepare one compound journal entry as of December 31, 2026, for adjustment of the Trucks account to reflect the correct balances as revealed by your schedule, assuming that the books have not been closed for 2026.

P10.5 (LO 1, 3) (Depletion and Depreciation—Mining) Khamsah Mining Company has purchased a tract of mineral land for $900,000. It is estimated that this tract will yield 120,000 tons of ore with sufficient mineral content to make mining and processing profitable. It is further estimated that 6,000 tons of ore will be mined the first and last year and 12,000 tons every year in between. (Assume 11 years of mining operations.) The land will have a salvage value of $30,000.

The company builds necessary structures and sheds on the site at a cost of $36,000. It is estimated that these structures can serve 15 years but, because they must be dismantled if they are to be moved, they have no salvage value. The company does not intend to use the buildings elsewhere. Mining machinery installed at the mine was purchased secondhand at a cost of $60,000. This machinery cost the former owner $150,000 and was 50% depreciated when purchased. Khamsah Mining estimates that about half of this machinery will still be useful when the present mineral resources have been exhausted, but that dismantling and removal costs will just about offset its value at that time. The company does not intend to use the machinery elsewhere. The remaining machinery will last until about one-half the present estimated mineral ore has been removed and will then be worthless. Cost is to be allocated equally between these two classes of machinery.

Instructions

a. As chief accountant for the company, you are to prepare a schedule showing estimated depletion and depreciation costs for each year of the expected life of the mine.

b. Also compute the depreciation and depletion for the first year assuming actual production of 5,000 tons. Nothing occurred during the year to cause the company engineers to change their estimates of either the mineral resources or the life of the structures and equipment.

P10.6 (LO 3) (Depletion, Timber, and Unusual Loss) Conan O'Brien Logging and Lumber Company owns 3,000 acres of timberland on the north side of Mount Leno, which was purchased in 2013 at a cost of $550 per acre. In 2025, O'Brien began selectively logging this timber tract. In May 2025, Mount Leno erupted, burying the timberland of O'Brien under a foot of ash. All of the timber on the O'Brien tract was downed. In addition, the logging roads, built at a cost of $150,000, were destroyed, as well as the logging equipment, with a net book value of $300,000.

At the time of the eruption, O'Brien had logged 20% of the estimated 500,000 board feet of timber. Prior to the eruption, O'Brien estimated the land to have a value of $200 per acre after the timber was harvested. O'Brien includes the logging roads in the depletion base.

O'Brien estimates it will take 3 years to salvage the downed timber at a cost of $700,000. The timber can be sold for pulp wood at an estimated price of $3 per board foot. The value of the land is unknown, but must be considered nominal due to future uncertainties.

Instructions

a. Determine the depletion cost per board foot for the timber harvested prior to the eruption of Mount Leno.

b. Prepare the journal entry to record the depletion prior to the eruption.

c. If this tract represents approximately half of the timber holdings of O'Brien, determine the amount of the unusual loss due to the eruption of Mount Leno for the year ended December 31, 2025.

P10.7 (LO 1, 3) (Natural Resources—Timber) Bronson Paper Products purchased 10,000 acres of forested timberland in March 2025. The company paid $1,700 per acre for this land, which was above the $800 per acre most farmers were paying for cleared land. During April, May, June, and July 2025, Bronson cut enough timber to build roads using moveable equipment purchased on April 1, 2025. The cost of the roads was $250,000, and the cost of the equipment was $225,000; this equipment was expected to have a $9,000 salvage value and would be used for the next 15 years. Bronson selected the straight-line method of depreciation for the moveable equipment. Bronson began actively harvesting timber in August and by December had harvested and sold 540,000 board feet of timber of the estimated 6,750,000 board feet available for cutting.

In March 2026, Bronson planted new seedlings in the area harvested during the winter. Cost of planting these seedlings was $120,000. In addition, Bronson spent $8,000 in road maintenance and $6,000 for pest spraying during calendar-year 2026. The road maintenance and spraying are annual costs. During 2026, Bronson harvested and sold 774,000 board feet of timber of the estimated 6,450,000 board feet available for cutting.

In March 2027, Bronson again planted new seedlings at a cost of $150,000, and also spent $15,000 on road maintenance and pest spraying. During 2027, the company harvested and sold 650,000 board feet of timber of the estimated 6,500,000 board feet available for cutting.

Instructions

Compute the amount of depreciation and depletion expense for each of the 3 years (2025, 2026, and 2027). Assume that the roads are usable only for logging and therefore are included in the depletion base.

P10.8 (LO 1) Groupwork (Comprehensive Fixed-Asset Problem) Darby Sporting Goods Inc. has been experiencing growth in the demand for its products over the last several years. The last two Olympic Games greatly increased the popularity of basketball around the world. As a result, a European sports retailing consortium entered into an agreement with Darby's Roundball Division to purchase basketballs and other accessories on an increasing basis over the next 5 years.

To be able to meet the quantity commitments of this agreement, Darby had to obtain additional manufacturing capacity. A real estate firm located an available factory in close proximity to Darby's Roundball manufacturing facility, and Darby agreed to purchase the factory and used machinery from Encino Athletic Equipment Company on October 1, 2024. Renovations were necessary to convert the factory for Darby's manufacturing use.

The terms of the agreement required Darby to pay Encino $50,000 when renovations started on January 1, 2025, with the balance to be paid as renovations were completed. The overall purchase price for the factory and machinery was $400,000. The building renovations were contracted to Malone Construction at $100,000. The payments made, as renovations progressed during 2025, are shown below. The factory was placed in service on January 1, 2026.

	1/1	4/1	10/1	12/31
Encino	$50,000	$90,000	$110,000	$150,000
Malone		30,000	30,000	40,000

On January 1, 2025, Darby secured a $500,000 line-of-credit with a 12% interest rate to finance the purchase cost of the factory and machinery, and the renovation costs. Darby drew down on the line-of-credit to meet the payment schedule shown above; this was Darby's only outstanding loan during 2025.

Bob Sprague, Darby's controller, will capitalize the maximum allowable interest costs for this project. Darby's policy regarding purchases of this nature is to use the appraisal value of the land for book purposes and prorate the balance of the purchase price over the remaining items. The building had originally cost Encino $300,000 and had a book value of $50,000, while the machinery originally cost $125,000 and had a book value of $40,000 on the date of sale. The land was recorded on Encino's books at $40,000. An appraisal, conducted by independent appraisers at the time of acquisition, valued the land at $290,000, the building at $105,000, and the machinery at $45,000.

Angie Justice, chief engineer, estimated that the renovated plant would be used for 15 years, with an estimated salvage value of $30,000. Justice estimated that the productive machinery would have a remaining useful life of 5 years and a salvage value of $3,000. Darby's depreciation policy specifies the 200% declining-balance method for machinery and the 150% declining-balance method for the plant. One-half year's depreciation is taken in the year the plant is placed in service, and one-half year is allowed when the property is disposed of or retired. Darby uses a 360-day year for calculating interest costs.

Instructions

a. Determine the amounts to be recorded on the books of Darby Sporting Goods Inc. as of December 31, 2025, for each of the following properties acquired from Encino Athletic Equipment Company.

1. Land. **2.** Buildings. **3.** Machinery.

b. Calculate Darby Sporting Goods Inc.'s 2026 depreciation expense for each of the properties acquired from Encino Athletic Equipment Company.

(CMA adapted)

P10.9 (LO 2) (Impairment) Roland Company uses special strapping equipment in its packaging business. The equipment was purchased in January 2024 for $10,000,000 and had an estimated useful life of 8 years with no salvage value. At December 31, 2025, new technology was introduced that would accelerate the obsolescence of Roland's equipment. Roland's controller estimates that expected future net cash flows on the equipment will be $6,300,000 and that the fair value of the equipment is $5,600,000.

Roland intends to continue using the equipment, but it is estimated that the remaining useful life is 4 years. Roland uses straight-line depreciation.

Instructions

a. Prepare the journal entry (if any) to record the impairment at December 31, 2025.

b. Prepare any journal entries for the equipment at December 31, 2026. The fair value of the equipment at December 31, 2026, is estimated to be $5,900,000.

c. Repeat the requirements for (a) and (b), assuming that Roland intends to dispose of the equipment and that it has not been disposed of as of December 31, 2026.

P10.10 (LO 1) Groupwork (Comprehensive Depreciation Computations) Kohlbeck Corporation, a manufacturer of steel products, began operations on October 1, 2024. The accounting department of Kohlbeck has started the fixed-asset and depreciation schedule presented as follows.

Kohlbeck Corporation
Fixed-Asset and Depreciation Schedule
For Fiscal Years Ended September 30, 2025, and September 30, 2026

Assets	Acquisition Date	Cost	Salvage	Depreciation Method	Estimated Life in Years	Depreciation Expense Year Ended September 30	
						2025	2026
Land A	October 1, 2024	$ (1)	N/A*	N/A	N/A	N/A	N/A
Building A	October 1, 2024	(2)	$40,000	Straight-line	(3)	$13,600	(4)
Land B	October 2, 2024	(5)	N/A	N/A	N/A	N/A	N/A
Building B	Under Construction	$320,000 to date	—	Straight-line	30	—	(6)
Donated Equipment	October 2, 2024	(7)	3,000	150% declining-balance	10	(8)	(9)
Machinery A	October 2, 2024	(10)	6,000	Sum-of-the-years-digits	8	(11)	(12)
Machinery B	October 1, 2025	(13)	—	Straight-line	20	—	(14)

*N/A—Not applicable

You have been asked to assist in completing this schedule. In addition to ascertaining that the data already on the schedule are correct, you have obtained the following information from the company's records and personnel.

1. Depreciation is computed from the first of the month of acquisition to the first of the month of disposition.
2. Land A and Building A were acquired from a predecessor corporation. Kohlbeck paid $800,000 for the land and building together. At the time of acquisition, the land had an appraised value of $90,000, and the building had an appraised value of $810,000.
3. Land B was acquired on October 2, 2024, in exchange for 2,500 newly issued shares of Kohlbeck's common stock. At the date of acquisition, the stock had a par value of $5 per share and a fair value of $30 per share. During October 2024, Kohlbeck paid $16,000 to demolish an existing building on this land so it could construct a new building.
4. Construction of Building B on the newly acquired land began on October 1, 2025. By September 30, 2026, Kohlbeck had paid $320,000 of the estimated total construction costs of $450,000. It is estimated that the building will be completed and occupied by July 2027.
5. Certain equipment was donated to the corporation by a local university. An independent appraisal of the equipment when donated placed the fair value at $40,000 and the salvage value at $3,000.
6. Machinery A's total cost of $182,900 includes installation expense of $600 and normal repairs and maintenance of $14,900. Salvage value is estimated at $6,000. Machinery A was sold on February 1, 2026.
7. On October 1, 2025, Machinery B was acquired with a down payment of $5,740 and the remaining payments to be made in 11 annual installments of $6,000 each beginning October 1, 2025. The prevailing interest rate was 8%. The following data were abstracted from present value tables (rounded).

Present Value of $1.00 at 8%		Present Value of an Ordinary Annuity of $1.00 at 8%	
10 years	.463	10 years	6.710
11 years	.429	11 years	7.139
15 years	.315	15 years	8.559

Instructions

For each numbered item on the schedule, supply the correct amount. (Round each answer to the nearest dollar.)

P10.11 (LO 1) (Depreciation for Partial Periods—SL, ACT, SYD, and DDB) On January 1, 2023, a machine was purchased for $90,000. The machine has an estimated salvage value of $6,000 and an estimated useful life of 5 years. The machine can operate for 100,000 hours before it needs to be replaced. The company closed its books on December 31 and operates the machine as follows: 2023, 20,000 hours; 2024, 25,000 hours; 2025, 15,000 hours; 2026, 30,000 hours; and 2027, 10,000 hours.

Instructions

a. Compute the annual depreciation charges over the machine's life assuming a December 31 year-end for each of the following depreciation methods.

1. Straight-line method.
2. Activity method.
3. Sum-of-the-years'-digits method.
4. Double-declining-balance method.

b. Assume a fiscal year-end of September 30. Compute the annual depreciation charges over the asset's life applying each of the following methods.

1. Straight-line method.
2. Sum-of-the-years'-digits method.
3. Double-declining-balance method.

***P10.12 (LO 1, 5) Groupwork (Depreciation—SL, DDB, SYD, ACT, and MACRS)** On January 1, 2024, Locke Company, a small machine-tool manufacturer, acquired for $1,260,000 a piece of new industrial equipment. The new equipment had a useful life of 5 years, and the salvage value was estimated to be $60,000. Locke estimates that the new equipment can produce 12,000 machine tools in its first year. It estimates that production will decline by 1,000 units per year over the remaining useful life of the equipment.

The following depreciation methods may be used: (1) straight-line, (2) double-declining-balance, (3) sum-of-the-years'-digits, and (4) units-of-output. For tax purposes, the class life is 7 years. Use the MACRS tables for computing depreciation.

Instructions

a. Which depreciation method would maximize net income for financial statement reporting for the 3-year period ending December 31, 2026? Prepare a schedule showing the amount of accumulated depreciation at December 31, 2026, under the method selected. Ignore present value, income tax, and deferred income tax considerations.

b. Which depreciation method (MACRS or optional straight-line) would minimize taxable income for the 3-year period ending December 31, 2026? Determine the amount of accumulated depreciation at December 31, 2026. Ignore present value considerations.

(AICPA adapted)

Using Your Judgment

Financial Reporting Problem: The Procter & Gamble Company (P&G)

UYJ10.1 The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

a. What descriptions are used by P&G in its balance sheet to classify its property, plant, and equipment?

b. What method or methods of depreciation does P&G use to depreciate its property, plant, and equipment?

c. Over what estimated useful lives does P&G depreciate its property, plant, and equipment?

d. What amounts for depreciation and amortization expense did P&G charge to its income statement in 2020, 2019, and 2018?

e. What were the capital expenditures for property, plant, and equipment made by P&G in 2020, 2019, and 2018?

Comparative Analysis Case: The Coca-Cola Company and PepsiCo., Inc.

UYJ10.2 The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

a. What amount is reported in the balance sheets as property, plant, and equipment (net) of Coca-Cola at December 31, 2020, and of PepsiCo at December 31, 2020? What percentage of total assets is invested in property, plant, and equipment by each company?

b. What depreciation methods are used by Coca-Cola and PepsiCo for property, plant, and equipment? How much depreciation and amortization was reported by Coca-Cola and PepsiCo in 2020? In 2019? (Use cash flow statement amounts.)

c. Compute and compare the following ratios for Coca-Cola and PepsiCo for 2020.

1. Asset turnover.

2. Profit margin on sales.

3. Return on assets.

d. What amount was spent in 2020 for capital expenditures by Coca-Cola and PepsiCo?

Financial Statement Analysis Case: McDonald's Corporation

UYJ10.3 **McDonald's** is the largest and best-known global food-service retailer, with more than 32,000 restaurants in over 115 countries. On any day, McDonald's serves approximately 1% of the world's population. The following is information related to McDonald's property and equipment.

Summary of Significant Accounting Policies Section

Property and Equipment. Property and equipment are stated at cost, with depreciation and amortization provided using the straight-line method over the following estimated useful lives: buildings—up to 40 years; leasehold improvements—the lesser of useful lives of assets or lease terms, which generally include option periods; and equipment—three to 12 years.

Property and Equipment

Net property and equipment consisted of:

	December 31	
(In millions)	**2020**	**2019**
Land	$ 6,349.1	$ 6,026.4
Buildings and improvements on owned land	18,218.9	17,003.7
Buildings and improvements on leased land	13,364.5	12,605.9
Equipment, signs and seating	3,119.0	2,994.5
Other	425.0	420.4
	41,476.5	39,050.9
Accumulated depreciation and amortization	(16,518.3)	(14,890.9)
Net property and equipment	$ 24,958.2	$24,160.0

Depreciation and amortization expense for property and equipment was (in millions): 2020—$1,469.4; 2019—$1,392.2; 2018—$1,302.9.

(in millions)	**2020**	**2019**	**2018**
Cash provided by operations	$6,265.2	$8,122.1	$6,966.7
Capital expenditures	1,640.8	2,393.7	2,741.7

Instructions

a. What method of depreciation does McDonald's use?

b. Does depreciation and amortization expense cause cash flow from operations to increase? Explain.

c. What does the schedule of cash flow measures indicate?

Accounting, Analysis, and Principles

UYJ10.4 Electroboy Enterprises, Inc. operates several stores throughout the western United States. As part of an operational and financial reporting review in a response to a downturn in its markets, the company's management has decided to perform an impairment test on five stores (combined). The five stores' sales have declined due to aging facilities and competition from a rival that opened new stores in the same markets. Management has developed the following information concerning the five stores as of the end of fiscal 2024.

Original cost	$36 million
Accumulated depreciation	$10 million
Estimated remaining useful life	4 years
Estimated expected future annual cash flows (not discounted)	$4.0 million per year
Appropriate discount rate	5%

Accounting

a. Determine the amount of impairment loss, if any, that Electroboy should report for fiscal 2024 and the book value at which Electroboy should report the five stores on its fiscal year-end 2024 balance sheet. Assume that the cash flows occur at the end of each year.

b. Repeat part (a), but instead assume that (1) the estimated remaining useful life is 10 years, (2) the estimated annual cash flows are $2,720,000 per year, and (3) the appropriate discount rate is 6%.

Analysis

Assume that you are a financial analyst and you participate in a conference call with Electroboy management in early 2025 (before Electroboy closes the books on fiscal 2024). During the conference call, you learn that management is considering selling the five stores, but the sale won't likely be completed until the second quarter of fiscal 2025. Briefly discuss what implications this would have for Electroboy's 2024 financial statements. Assume the same facts as in part (b) above.

Principles

Electroboy management would like to know the accounting for the impaired asset in periods subsequent to the impairment. Can the assets be written back up? Briefly discuss the conceptual arguments for this accounting.

Developing Your Professional Skills

Critical-Thinking Cases

CT10.1 (LO 1) (Depreciation Basic Concepts) Burnitz Manufacturing Company was organized on January 1, 2025. During 2025, it has used in its internal reports the straight-line method of depreciating its plant assets.

On November 8, you are having a conference with Burnitz's officers to discuss the depreciation method to be used for income tax and external (GAAP) reporting. James Bryant, president of Burnitz, has suggested the use of a new method, which he feels is more suitable than the straight-line method for the needs of the company during the period of rapid expansion of production and capacity that he foresees. Following is an example in which the proposed method is applied to a fixed asset with an original cost of $248,000, an estimated useful life of 5 years, and a salvage value of approximately $8,000.

Year	Years of Life Used	Fraction Rate	Depreciation Expense	Accumulated Depreciation at End of Year	Book Value at End of Year
1	1	1/15	$ 16,000	$ 16,000	$ 232,000
2	2	2/15	32,000	48,000	200,000
3	3	3/15	48,000	96,000	152,000
4	4	4/15	64,000	160,000	88,000
5	5	5/15	80,000	240,000	8,000

The president favors the new method because he has heard that:

1. It will increase the funds recovered during the years near the end of the assets' useful lives when maintenance and replacement disbursements are high.
2. It will result in increased write-offs in later years and thereby will reduce taxes.

Instructions

a. What is the purpose of accounting for depreciation?

b. Is the president's proposal within the scope of generally accepted accounting principles? In making your decision, discuss the circumstances, if any, under which use of the method would be reasonable and those, if any, under which it would not be reasonable.

c. The president wants your advice on the following issues.

   1. Do depreciation charges recover or create funds? Explain.
   2. Assume that the Internal Revenue Service accepts the proposed depreciation method in this case. If the proposed method were used for stockholder and tax reporting purposes, how would it affect the availability of cash flows generated by operations?

CT10.2 (LO 1) Writing (Unit, Group, and Composite Depreciation) The certified public accountant is frequently called upon by management for advice regarding methods of computing depreciation. Of comparable importance, although it arises less frequently, is the question of whether the depreciation method should be based on consideration of the assets as units, as a group, or as having a composite life.

Instructions

a. Briefly describe the depreciation methods based on treating assets as (1) units and (2) a group or as having a composite life.

b. Present the arguments for and against the use of each of the two methods.

c. Describe how retirements are recorded under each of the two methods.

(AICPA adapted)

CT10.3 (LO 1) (Depreciation—Strike, Units-of-Production, Obsolescence) The following are three different and unrelated situations involving depreciation accounting. Answer the question(s) at the end of each situation.

Situation I: Recently, Broderick Company experienced a strike that affected a number of its operating plants. The controller of this company indicated that it was not appropriate to report depreciation expense during this period because the equipment did not depreciate and an improper matching of costs and revenues would result. She based her position on the following points.

1. It is inappropriate to charge the period with costs for which there are no related revenues arising from production.
2. The basic factor of depreciation in this instance is wear and tear. Because equipment was idle, no wear and tear occurred.

Instructions

Comment on the appropriateness of the controller's comments.

Situation II: Etheridge Company manufactures electrical appliances, most of which are used in homes. Company engineers have designed a new type of blender which, through the use of a few attachments, will perform more functions than any blender currently on the market. Demand for the new blender can be projected with reasonable probability. In order to make the blenders, Etheridge needs a specialized machine that is not available from outside sources. It has been decided to make such a machine in Etheridge's own plant.

Instructions

a. Discuss the effect of projected demand in units for the new blenders (which may be steady, decreasing, or increasing) on the determination of a depreciation method for the machine.

b. What other matters should be considered in determining the depreciation method? (Ignore income tax considerations.)

Situation III: Haley Paper Company operates a 300-ton-per-day kraft pulp mill and four sawmills in Wisconsin. The company is in the process of expanding its pulp mill facilities to a capacity of 1,000 tons per day and plans to replace three of its older, less efficient sawmills with an expanded facility. One of the mills to be replaced did not operate for most of 2025 (current year), and there are no plans to reopen it before the new sawmill facility becomes operational.

In reviewing the depreciation rates and in discussing the salvage values of the sawmills that were to be replaced, it was noted that if present depreciation rates were not adjusted, substantial amounts of plant costs on these three mills would not be depreciated by the time the new mill came on stream.

Instructions

What is the proper accounting for the four sawmills at the end of 2025?

CT10.4 (LO 1) Writing **(Depreciation Concepts)** As a cost accountant for San Francisco Cannery, you have been approached by Phil Perriman, canning room supervisor, about the 2025 costs charged to his department. In particular, he is concerned about the line item "depreciation." Perriman is very proud of the excellent condition of his canning room equipment. He has always been vigilant about keeping all equipment serviced and well oiled. He is sure that the huge charge to depreciation is a mistake; it does not at all reflect the cost of minimal wear and tear that the machines have experienced over the last year. He believes that the charge should be considerably lower.

The machines being depreciated are six automatic canning machines. All were put into use on January 1, 2025. Each cost $625,000, having a salvage value of $55,000 and a useful life of 12 years. San Francisco depreciates this and similar assets using double-declining-balance depreciation. Perriman has also pointed out that if you used straight-line depreciation, the charge to his department would not be so great.

Instructions

Write a memo dated January 22, 2025, to Phil Perriman to clear up his misunderstanding of the term "depreciation." Also, calculate year-1 depreciation on all machines using both methods. Explain the theoretical justification for double-declining-balance and why, in the long run, the aggregate charge to depreciation will be the same under both methods.

CT10.5 (LO 1) Ethics **(Depreciation Choice—Ethics)** Jerry Prior, Beeler Corporation's controller, is concerned that net income may be lower this year. He is afraid upper-level management might recommend cost reductions by laying off accounting staff, including him.

Prior knows that depreciation is a major expense for Beeler. The company currently uses the double-declining-balance method for both financial reporting and tax purposes, and he's thinking of selling equipment that, given its age, is primarily used when there are periodic spikes in demand. The equipment has a carrying value of $2,000,000 and a fair value of $2,180,000. The gain on the sale would be reported in the income statement. He doesn't want to highlight this method of increasing income. He thinks, "Why don't I increase the estimated useful lives and the salvage values? That will decrease depreciation expense and require less extensive disclosure, since the changes are accounted for prospectively. I may be able to save my job and those of my staff."

Instructions

Answer the following questions.

a. Who are the stakeholders in this situation?

b. What are the ethical issues involved?

c. What should Prior do?

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE10.1 Access the glossary ("Master Glossary") to answer the following.

a. What is the definition of amortization?

b. What is the definition of impairment?

c. What is the definition of recoverable amount?

d. What are activities, as they relate to the construction of an asset?

CE10.2 Your client, Barriques Inc., is contemplating a restructuring of its operations, including the possibility of spinning off some of its assets to the original owners. However, management is unsure of the accounting for any impairment on the assets. What does the authoritative literature say about these types of impairments?

CE10.3 Your great-uncle, who is a CPA, is impressed that you are majoring in accounting. However, he believes that depreciation is something that companies do based on past practice, not on the basis of any authoritative guidance. Provide the authoritative literature to support the practice of fixed-asset depreciation.

CE10.4 What is the nature of SEC guidance concerning property, plant, and equipment disclosures?

Codification Research Case

Matt Holmes recently joined Klax Company as a staff accountant in the controller's office. Klax Company provides warehousing services for companies in several midwestern cities.

The location in Dubuque, Iowa, has not been performing well due to increased competition and the loss of several customers that have recently gone out of business. Matt's department manager suspects that the plant and equipment may be impaired and wonders whether those assets should be written down. Given the company's prior success, this issue has never arisen in the past, and Matt has been asked to conduct some research on this issue.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

a. What is the authoritative guidance for asset impairments? Briefly discuss the scope of the standard (i.e., explain the types of transactions to which the standard applies).

b. Give several examples of events that would cause an asset to be tested for impairment. Does it appear that Klax should perform an impairment test? Explain.

c. What is the best evidence of fair value? Describe alternate methods of estimating fair value.

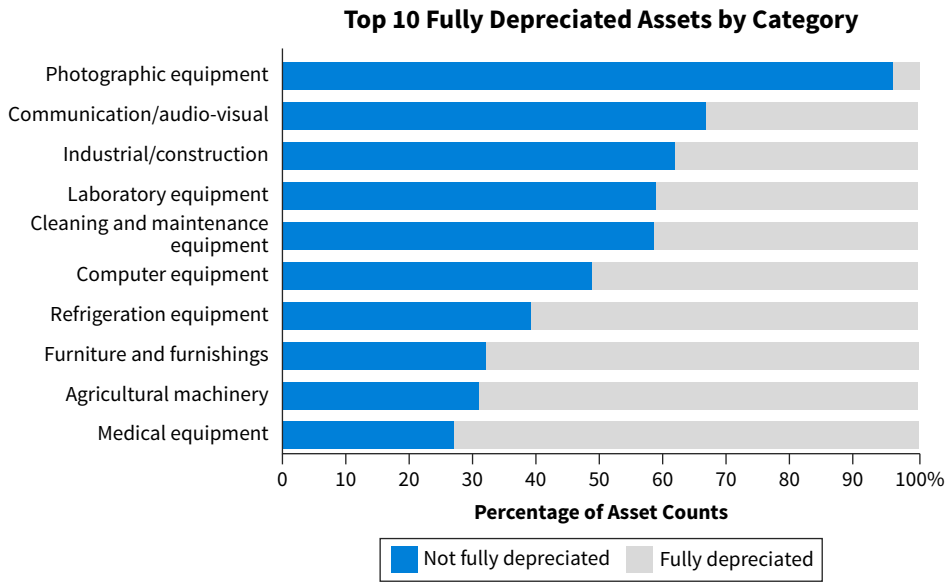
Go to Wiley Course Resources for other career-readiness resources, such as career coaching, internship opportunities, and CPAexcel prep.

Analytics in Action Activities

Using Data Visualizations to Guide Depreciation Policies

DA10.1 A company's depreciation policies can significantly affect its financial statements. The depreciation method used, along with estimates of useful life and salvage value, will impact the rate of depreciation recorded on the income statement each reporting period. As a result, companies should evaluate their depreciation policies over time to ensure they are most accurately reporting depreciation expense and book value of property, plant, and equipment on the balance sheet.

Using data visualization tools like Tableau or Power BI can help management pull detailed financial data from the general ledger system and display it in a more user-friendly format to help with decision-making. For example, the following graph can help management evaluate useful life estimates by asset category.



Required

As an accountant at a large research university, you have been tasked with reviewing its depreciation policies to better align it with other universities. Using visualizations like the graph above, you will answer a series of multiple-choice questions about the impact of a potential change to the university's depreciation policies.

Go to Wiley Course Resources for complete details and instructions.

DA10.2 Visualization tools allow management to easily bring in financial data from the general ledger system to evaluate financial metrics. However, to get a full analysis, we need to look beyond just financial data. Visualization tools allow us to join financial data, like accumulated depreciation, with nonfinancial data, such as individual asset counts and asset categories, to expand the insights we can gain from the visualization.

Required

Using the depreciation and fixed asset visualizations from DA10.1, you will consider the impact of a change in depreciation policy on the financial statements.

Go to Wiley Course Resources for complete details and instructions.

Using Data Analytics to Create an Asset Depreciation Report

DA10.3 It is not uncommon for official fixed asset records to be maintained outside of the general ledger. Many times, these records include thousands of individual asset items that must be maintained for reporting items like depreciation expense and property and real estate taxes. Excel can be a useful tool in maintaining these records and calculating the necessary outputs related to fixed assets.

Required

In this exercise, you will start with an Excel file that includes a large amount of raw data related to the asset register of a large university. You are tasked with calculating depreciation expense in accordance with the university's depreciation policies. You will use various tools within Excel to help you accurately calculate the amount of expense.

Go to Wiley Course Resources for complete details and instructions.

IFRS Insights

LEARNING OBJECTIVE 6

Compare the accounting for property, plant, and equipment under GAAP and IFRS.

GAAP adheres to many of the same principles of IFRS in the accounting for property, plant, and equipment. Major differences relate to use of component depreciation, impairments, and revaluations. Following are the key similarities and differences between GAAP and IFRS related to property, plant, and equipment.

Similarities

- The definition of property, plant, and equipment is essentially the same under GAAP and IFRS.
- Under both GAAP and IFRS, changes in depreciation method and changes in useful life are treated in the current and future periods. Prior periods are not affected.
- The accounting for plant asset disposals is the same under GAAP and IFRS.
- The accounting for the initial costs to acquire natural resources is similar under GAAP and IFRS.
- Under both GAAP and IFRS, interest costs incurred during construction must be capitalized. Recently, IFRS converged to GAAP.
- The accounting for exchanges of non-monetary assets is essentially the same between IFRS and GAAP. GAAP requires that gains on exchanges of non-monetary assets be recognized if the exchange has commercial substance. This is the same framework used in IFRS.
- GAAP and IFRS both view depreciation as allocation of cost over an asset's life. GAAP permits the same depreciation methods (straight-line, diminishing-balance, units-of-production) as IFRS.

Differences

- IFRS requires component depreciation. Under GAAP, component depreciation is permitted but is rarely used.
- Under IFRS, companies can use either the historical cost model or the revaluation model. GAAP does not permit revaluations of property, plant, and equipment or mineral resources.
- In testing for impairments of long-lived assets, GAAP uses a different model than IFRS to test for impairments. As long as future undiscounted cash flows exceed the carrying amount of the asset, no impairment is recorded. The IFRS impairment test is stricter. However, unlike GAAP, reversals of impairment losses are permitted.

Additional IFRS Resources

Additional IFRS Insights with assessment are available online at Wiley Course Resources. For those who want more IFRS coverage, *Intermediate Accounting, IFRS Fourth Edition* exists as another resource.

CHAPTER 11

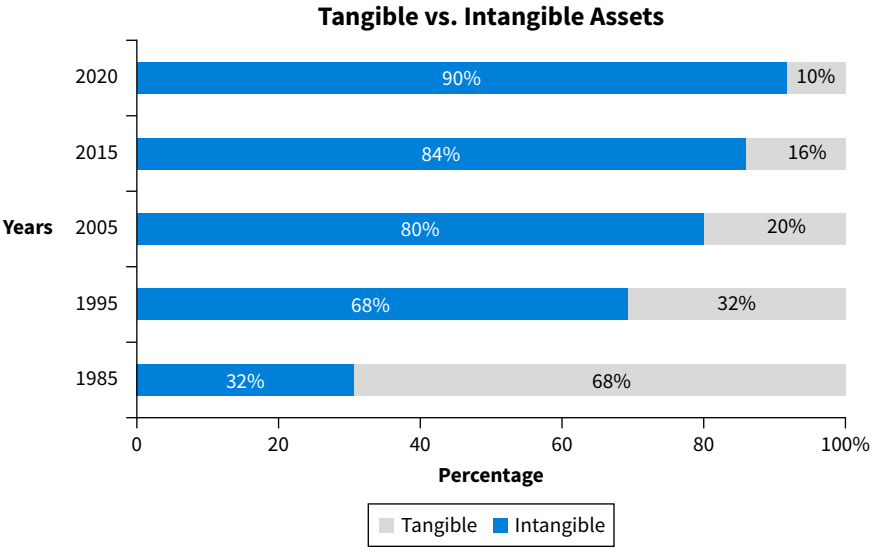
Intangible Assets

WHAT are intangible assets?

Intangible assets derive their value from the rights and privileges granted to the company, including such items as brands, licenses, franchises, patents, other intellectual property, and goodwill. Unlike assets such as property, plant, and equipment, intangible assets lack physical existence. In many cases, intangible assets do not even appear on company balance sheets.



Source: Aran Ali, "The Soaring Value of Intangible Assets in the S&P 500," *visualcapitalist.com* (November 12, 2020).

WHY is information about intangible assets important?

We need to look no further than data on the relative contribution of intangible assets to company values to see the importance of information on intangible assets to investors and creditors. As shown in the adjacent chart, intangible assets currently account for 90% of the value of companies in the S&P 500 (or over $21 trillion!). Not only is this an historical high, it also shows just how prevalent technology has become in our lives.

The growing importance of intangibles is also revealed by a comparison of the five largest companies worldwide today versus 35 years ago, as shown in the the comparison to the left. In the past (in 1985), the largest companies (e.g., **ExxonMobil**, **GE**, and **Chevron**) held significant tangible assets (more than 50%). Most recently (in 2020), the top five are dominated by tech companies (e.g., **Apple**, **Microsoft**, and **Meta Platforms** (previously **Facebook**) for which intangible assets contribute more than 80% of company value. Clearly, investors and creditors need good information on these assets, which are critical to generating future cash flows.

1985	2020
• IBM	• Apple
• ExxonMobil	• Microsoft
• GE	• Amazon
• Schlumberger	• Alphabet
• Chevron	• Meta Platforms

HOW do we account for intangible assets?

In general, intangible assets provide benefits over a period of years. Therefore, companies normally classify them as long-term assets, with accounting that is similar to long-lived tangible assets. Intangible asset accounting varies depending on whether the intangible asset has a limited or indefinite life.

Chapter Roadmap

LEARNING OBJECTIVES	TOPICS	REVIEW AND PRACTICE
LO 11.1 Discuss the characteristics, valuation, and amortization of intangible assets.	**11.1 Intangible Asset Issues** • Characteristics • Valuation • Accounting	Examples **11.1** Amortization of a License **11.2** Amortization of a Brand **11.3** Impairment of a Patent **11.4** Accounting for a Trademark **11.5** Impairment of a License Put It into Practice **LO 11.1** Record Intangibles and Impairments
LO 11.2 Discuss the accounting and financial statement presentation for various types of intangible assets.	**11.2 Types and Presentation of Intangibles** • Marketing-related • Customer-related • Artistic-related • Contract-related • Technology-related • Presentation	Examples **11.6** Trademark **11.7** Customer List **11.8** Residual Value—Customer List **11.9** Copyright **11.10** Broadcast License **11.11** Patent Put It into Practice **LO 11.2** Account for Various Types of Intangibles
LO 11.3 Explain the accounting issues for recording goodwill.	**11.3 Goodwill** • Recording • Impairment • Bargain purchase • Presentation	Examples **11.12** Goodwill Impairment **11.13** Bargain Purchase Put It into Practice **LO 11.3** Account for Goodwill
LO 11.4 Describe the accounting and presentation for research and development and similar costs.	**11.4 Research and Development Costs** • Identifying R&D • Accounting for R&D • Similar costs • Presentation	Examples **11.14** Start-Up Costs **11.15** Initial Operating Losses

Go to the **Review and Practice** section at the end of the chapter for a targeted summary review. Multiple-choice questions with annotated solutions, as well as additional exercises and practice problem with solutions, are also available in Wiley Course Resources.

11.1 Intangible Asset Issues

LEARNING OBJECTIVE 1

Discuss the characteristics, valuation, and amortization of intangible assets.

Characteristics

Gap Inc.'s most important asset is its brand image, not its store fixtures. **The Coca-Cola Company**'s success comes from its secret formula for making Coca-Cola, not its plant facilities. **Amazon Prime**'s subscriber base, not its warehouses, provides its most important asset. The U.S. economy is dominated by information and service providers. For these companies, their major assets are often intangible in nature.

What exactly are intangible assets? **Intangible assets** have two main characteristics, as follows. **[1]** (See the FASB Codification References near the end of the chapter.)

1. **They lack physical existence.** Tangible assets such as property, plant, and equipment have physical form. Intangible assets, in contrast, derive their value from the rights and privileges granted to the company using them. For most intangible assets, the only evidence of their existence is a document showing the company was granted a patent, copyright, or trademark from the government.
2. **They are not financial instruments.** Assets such as bank deposits, accounts receivable, and long-term investments in bonds and stocks also lack physical substance. However, financial instruments derive their value from the right (claim) to receive cash or cash equivalents in the future. Financial instruments are not classified as intangibles.

In most cases, intangible assets provide benefits over a period of years. Therefore, companies normally classify them as long-term assets.

Valuation

Over the years, the valuation of intangible assets has been controversial in the business world. Consider these two examples:

Universal Music Group (UMG)

- Purchased the copyrights to all of Bob Dylan's music for about $300 million.
- Cost included the purchase price, legal fees, and other transaction costs.
- **Recorded as an intangible asset on the balance sheet.**

Alphabet (parent of **Google**)

- Spent over $27 billion on research and development (R&D).
- This spending is to develop and design new services and technology or enhance existing services and technology.
- **Recorded as R&D expense on the income statement.**

Why the difference in the two approaches? UMG records an intangible asset for Dylan's music because it can trace the expected cash flows that it will achieve from making this expenditure.

Therefore, companies **record at cost** intangibles purchased from another party. Cost includes all acquisition costs plus expenditures to make the intangible asset ready for its intended use. Typical costs include purchase price, legal fees, and other incidental expenses. Sometimes companies acquire intangibles in exchange for stock or other assets. In such cases, **the cost of the intangible is the fair value of the consideration given or the fair value**

of the intangible received, whichever is more clearly evident. Essentially, the accounting treatment for purchased intangibles closely parallels that for purchased tangible assets.[1]

Alphabet (parent of Google), however, has a great deal more uncertainty about the future potential of its research and development expenditures. Specifically:

- Costs incurred internally to create intangibles often bear no relationship to the intangibles' real value.
- It is often difficult to associate internal costs with a specific intangible.

As a result, GAAP requires that companies can only capitalize direct costs such as the purchase price and related transaction costs related to the purchase. Costs incurred internally generally are expensed as incurred (see **Underlying Concepts**).

Underlying Concepts

The controversy surrounding the accounting for R&D expenditures reflects a debate about whether costs incurred internally, such as R&D, meet the definition of an asset as established in the Conceptual Framework. If they do not, an "expense all R&D costs" policy results in overstated expenses and understated assets.

Accounting for Intangibles

Intangible assets can be further classified into the two categories of **limited-life (finite) intangibles** and **indefinite-life intangibles**. The accounting is slightly different for these two categories, so let's take a deeper dive into each one.

Limited-Life Intangibles

The cost of a limited-life intangible is amortized to expense over its useful life. The useful life should reflect the periods over which the asset will contribute to cash flows. A company, like **Disney**, considers these factors in determining useful life of its intangible assets.

1. The expected use of the asset by the company.
2. The expected useful life of another asset or a group of assets to which the useful life of the intangible asset may relate (such as studios and production facilities).
3. Any legal, regulatory, or contractual provisions that may limit the useful life.
4. Any provisions (legal, regulatory, or contractual) that enable renewal or extension of the asset's legal or contractual life without substantial cost. This factor assumes that there is evidence to support renewal or extension. Disney also must be able to accomplish renewal or extension without material modifications of the existing terms and conditions.
5. The effects of obsolescence, demand, competition, and other economic factors. Examples include the stability of the industry, known technological advances, legislative action that results in an uncertain or changing regulatory environment, and expected changes in distribution channels.
6. The level of maintenance expenditures required to obtain the expected future cash flows from the asset. For example, if significant investments are required to maintain a technology patent, that may suggest a very limited useful life. **[2]**

The amount of amortization expense for a limited-life intangible asset should report the pattern in which the company consumes or uses up the asset, if the company can reliably determine that pattern. If a pattern of use cannot be determined, then a company uses the straight-line method. (*For homework problems, assume the use of the straight-line method unless stated otherwise.*)

[1] What if a company buys several intangibles, or a combination of intangibles and tangibles? In such a basket purchase, the company should allocate the cost on the basis of fair values. The accounting in this section relates to the acquisition of a single asset or group of assets. The accounting for intangible assets acquired in a **business combination** (transaction in which the purchaser obtains control of one or more businesses) is discussed later in this chapter.

Example 11.1 Amortization of a License

FACTS Second Wave, Inc. purchases a license to provide a specified quantity of a gene product called Mega. Second Wave should amortize the cost of the license following the pattern of use of Mega. If Second Wave's license calls for it to provide 30% of the total the first year, 20% the second year, and 10% per year until the license expires, it would amortize the license cost using that pattern.

QUESTION If the cost of Mega is $1,000,000, what is the amount of amortization expense reported in the first and second year? Prepare journal entries to record the purchase and the amortization in the first and second years.

SOLUTION

To record purchase of intangible asset:

Licenses	1,000,000	
Cash		1,000,000

To record first year amortization:

Amortization Expense ($1,000,000 × .30)	300,000	
Licenses		300,000

To record second year amortization:

Amortization Expense ($1,000,000 × .20)	200,000	
Licenses		200,000

At the end of the second year, the balance in the intangible asset account is $500,000. Note that when amortizing intangible assets, companies typically credit the asset directly instead of crediting an accumulated amortization account. *For homework problems, credit the asset account directly.*

The amount of an intangible asset to be amortized over its useful life should be its cost less any residual value. The residual value is assumed to be zero unless at the end of its useful life the intangible has value to another company.

Example 11.2 Amortization of a Brand

FACTS U2D Co. has an intangible asset of $400,000 related to its RealSoap brand name, which it sells to wholesalers. The brand has an estimated useful life of 10 years. One of U2D's wholesalers, Hadley Company, commits to purchasing this brand name for $160,000 at the end of 8 years.

QUESTION How should you record the amortization of the RealSoap brand in the first year?

SOLUTION

The computation of the amortization in the first year is $30,000 [($400,000 − $160,000) ÷ 8]. U2D reduces the cost of the intangible by its residual value for purposes of amortizing the Brand. Since U2D will be selling the asset at the end of 8 years, it uses 8 years as the useful life rather than 10 years. The entry to record amortization of the RealSoap brand at the end the first year is as follows.

Amortization Expense	30,000	
Brand (or Accumulated Amortization)		30,000

What happens if the legal or economic life of a limited-life intangible asset changes? In that case, the remaining carrying amount should be amortized over the revised remaining useful life. Companies should, on a regular basis, evaluate the limited-life intangibles for **impairment**.

Impairment of Limited-Life Intangibles

The rules that apply to impairments of property, plant, and equipment (Chapter 10) also apply to limited-life intangibles. A company should review limited-life intangibles for **impairment** at certain points, specifically whenever events or changes in circumstances

indicate that the carrying amount of the asset may not be recoverable. Recall the two-step process for determining if there is an impairment:

1. **Recoverability test**. The company estimates the future cash flows (undiscounted) expected from the use of the asset and its eventual disposal, then makes the following comparison and conclusions.

   - If the sum of expected future cash flows is **greater than** the carrying value of the intangible asset, **there is no impairment**.
   - If the sum of expected future cash flows is **less than** the carrying value of the intangible asset, **there is an impairment loss**.

   If the conclusion is impairment, the company continues to the fair value test.

2. **Fair value test**. If the intangible asset is impaired, the impairment amount is calculated as follows.

Carrying Value of Intangible Asset – **Fair Value of Intangible Asset** = **Impairment Loss**

As with other impairments, the loss on the limited-life intangible is reported as part of income from continuing operations. The loss is generally reported in the "Other expenses and losses" section of the income statement.

Example 11.3 Impairment of a Patent

FACTS LightHouse Inc. has a patent on programmable home-lighting systems. Unfortunately, advances in Smart Home technology adversely affected the demand for its programmable systems. Thus, the patent has provided little income to date. As a result, LightHouse performs a recoverability test. It finds that the expected future net cash flows from this patent are $35 million. The present value of the expected cash flows is $20 million. LightHouse's patent has a carrying amount of $60 million.

QUESTION How would you compute the impairment loss, and what is the journal entry to record this loss?

SOLUTION

LightHouse first performs the recoverability test as follows.

Sum of expected future cash flows		Carrying value of intangible asset
$35 million	<	$60 million

Because the expected future net cash flows of $35 million are less than the carrying amount of $60 million, LightHouse has an impairment loss. The present value of the expected cash flows is the fair value of the intangible asset, which is used to determine the impairment loss as follows.

Carrying amount of patent	$60,000,000
Less: Fair value (based on present value computation)	20,000,000
Loss on impairment	$40,000,000

LightHouse records this loss as follows.

Loss on Impairment	40,000,000	
Patents		40,000,000

In Example 11.3, after recognizing the impairment, the reduced carrying amount of the patent ($20 million) is its new cost. LightHouse should amortize the patent's new cost basis over its remaining useful life or legal life, whichever is shorter. Even if demand for its lighting system increases in subsequent periods and the value of the patent increases, LightHouse **may not restore the previously recognized impairment loss.**

Indefinite-Life Intangibles

If no factors (legal, regulatory, contractual, competitive, or other) limit the useful life of an intangible asset, a company considers its useful life indefinite. An **indefinite life** means that there is no foreseeable limit on the period of time over which the intangible asset is expected to provide cash flows. Therefore, a company **does not amortize** an intangible asset with an indefinite life.

Example 11.4 Accounting for a Trademark (Indefinite-Life)

FACTS Double Clik Inc. acquired a trademark that it uses to distinguish a leading consumer product. It renews the trademark every 10 years. All evidence indicates that this trademarked product will generate cash flows for an indefinite period of time.

QUESTION How should Double Clik account for the trademark?

SOLUTION

In this case, the trademark has an indefinite life. Double Clik does not record any amortization.

Accounting Matters — Crypto at Cost?

Companies like **Tesla** and **MicroStrategy** are using excess cash to purchase Bitcoin as a way to diversify cash holdings and maximize returns. What do you think? Should Bitcoin be accounted for like cash?

Current accounting for cryptocurrencies like Bitcoin is more aligned with that of an intangible asset instead of a financial instrument. As a result, investments in digital currencies must be carried on the balance sheet at cost and written-down if deemed impaired.

Volatility can be common with digital currencies, but current accounting rules do not permit write-ups on the value of an intangible that had previously been written-down. This could be confusing for investors and may lead to increased non-GAAP disclosures around cryptocurrencies.

Source: Michael Cohn, "Companies Investing in Crypto May Be in for a Rude Accounting Surprise," *Accounting Today* (February 25, 2021).

Impairment of Indefinite-Life Intangibles

Companies should test indefinite-life intangibles for impairment at least annually. The impairment test for an indefinite-life intangible asset is a **fair value test** as follows.

- If the carrying value of intangible assets is **less than** the fair value of the intangible asset, **there is no impairment**.
- If the carrying value of intangible assets is **greater than** the fair value of the intangible asset, **there is an impairment loss**.

Unlike the two-step approach for limited-life intangible assets, companies use this one-step test because **many indefinite-life assets might never fail the recoverability test,** as cash flows may extend many years into the future.

Example 11.5 Impairment of a License (Indefinite-Life)

FACTS Arcon Radio purchased a broadcast license for $2,000,000. The license is renewable every 10 years if the company provides appropriate service and does not violate Federal Communications Commission (FCC) rules. Arcon has renewed the license with the FCC twice, at a minimal cost. Because it expects cash flows to last indefinitely, Arcon reports the license as an indefinite-life intangible asset.

Recently, the FCC decided to auction significantly more of these licenses. As a result, Arcon expects reduced cash flows for the remaining 2 years of its existing license. Arcon performs a fair value test for this indefinite-life intangible and determines that the fair value of the intangible asset is $1,500,000.

QUESTION Is Arcon's license impaired? If so, what is the amount of the impairment and the related journal entry?

SOLUTION

The license is impaired, as indicated by the following computation.

Carrying value of broadcast license	$ 2,000,000
Fair value less costs to sell	(1,500,000)
Loss on impairment	$ 500,000

The entry to record the loss is as follows.

Loss on Impairment	500,000	
Licenses		500,000

Arcon Radio now reports the license at $1,500,000, its fair value. Even if the value of the license increases in the remaining two years, Arcon may not restore the previously recognized impairment loss.

What are some indicators that an indefinite-life intangible asset might be impaired? Companies may do an optional qualitative assessment to determine whether it is more likely than not (i.e., a likelihood of more than 50%) that an indefinite-life intangible asset is impaired. [3] Factors considered in this assessment may include:

- Deterioration of general economic conditions.
- Increased competitive environment.
- Change in the market for a company's products or services.
- Regulatory or political developments.
- Overall financial performance such as negative or declining cash flows.

If the qualitative assessment indicates that the asset is not impaired, **the company need not continue with the fair value test**. As a result, use of the qualitative assessment should reduce both the cost and complexity of performing the impairment test.

Illustration 11.1 summarizes the accounting treatment for intangible assets.

ILLUSTRATION 11.1 Accounting Treatment for Intangibles

	Manner Acquired			
Type of Intangible	**Purchased**	**Internally Created**	**Amortization**	**Impairment Test**
Limited-life intangibles	Capitalize	Expense*	Over useful life	Recoverability test and then fair value test
Indefinite-life intangibles	Capitalize	Expense*	Do not amortize	Fair value test only

*Except for direct costs, such as legal costs.

Accounting Matters

Purchase or Develop?

As indicated in Illustration 11.1, the accounting for intangible assets depends on whether the intangible is purchased or whether it is developed internally. This is the case for **The Coca-Cola Company**. Its brand value is estimated to be worth about $69.7 billion, but its balance sheet values its "trademarks with indefinite-lives" (i.e., brands) at just $6.7 billion. As you are learning in this chapter, this reporting results because the accounting rules prohibit companies from recognizing brands and many other "intangible" assets if they created them internally.

In contrast, when **Procter & Gamble (P&G)** acquired **Gillette**, it realized an additional $24 billion in intangible assets on its balance sheet. That is, P&G paid $57 billion for Gillette and estimated the Gillette brand value to be worth $24 billion of the total paid.

Sources: "Untouchable Intangibles: Sometimes You See Brands on the Balance Sheet, Sometimes You Don't," *The Economist* (August 30, 2014); and Baruch Lev and Feng Gu, *The End of Accounting* (Hoboken, N.J.: John Wiley & Sons, 2016).

Put It into Practice LO 11.1
Record Intangibles and Impairments

FACTS Pershing Company, organized in 2024, has the following transactions related to intangible assets in 2025.

1/2/25	Purchased patent (8-year life)	$320,000
4/1/25	Secured a trademark (indefinite life)	60,000
7/1/25	Purchased license with 10-year life; expiration date 7/1/35	250,000
		$630,000

INSTRUCTIONS

a. Prepare the entries as of December 31, 2025, recording any necessary amortization. (Use straight-line amortization.)

b. At December 31, 2025, recoverability of the intangible assets appears assured, except that new competition has raised concerns about the value of the patent. Pershing estimates expected (undiscounted) cash flows on the patent to be $270,000, and the fair value of the patent is estimated to be $250,000. Pershing estimates the trademark to have a fair value of $75,000 and the license to have a fair vale of $260,000. Prepare necessary entries for impairments.

c. Indicate the intangible asset balances to be reported in the balance sheet at December 31, 2025.

SOLUTION

Patents

Beg. bal.	320,000		
		(a)	40,000
	280,000		
		(b)	30,000
End. bal.	250,000		

Licenses

Beg. bal.	250,000		
		(a)	12,500
End. bal.	237,500		

a. To record amortization on limited-life intangibles:

December 31, 2025

Amortization Expense	52,500	
Patents ($320,000 ÷ 8)		40,000
Licenses [($250,000 ÷ 10) × 1/2]		12,500

b. There is no impairment on the trademark or the license, as the fair value is greater than the carrying value.

For the patent, the analysis at December 31, 2025, is as follows.

1. Recoverability test:
Because the sum of the expected future cash flows ($270,000) is less than the carrying value of the patent ($280,000), the patent is impaired.

2. Computation of the impairment loss:
The carrying value of the patent ($280,000), minus the fair value of the patent ($250,000), equals a loss of $30,000.

To record the impairment loss:

Impairment Loss	30,000	
Patents		30,000

c. Balance of intangible assets as of December 31, 2025:

Patents	$250,000
Trademarks (no amortization)	60,000
Licenses ($250,000 − $12,500)	237,500

11.2 Types and Presentation of Intangible Assets

LEARNING OBJECTIVE 2

Discuss the accounting and financial statement presentation for various types of intangible assets.

As indicated, the accounting for intangible assets depends on whether the intangible has a limited or an indefinite life. There are many different types of intangibles, often classified into the following five major categories. [4]

1. Marketing-related intangible assets.
2. Customer-related intangible assets.
3. Artistic-related intangible assets.
4. Contract-related intangible assets.
5. Technology-related intangible assets.

Marketing-Related Intangible Assets

Companies primarily use **marketing-related intangible assets** in the marketing or promotion of products or services. Examples are trademarks or trade names, Internet domain names, and noncompetition agreements.

A **trademark** or **trade name** is a word, phrase, or symbol that distinguishes or identifies a particular company or product. Trade names like Kleenex, Pepsi-Cola, Buick, Tylenol, Wheaties, and Sunkist create immediate product identification in our minds, thereby enhancing marketability. The right to use a trademark or trade name, whether registered or not, rests exclusively with the original user as long as the original user continues to use it.

Registration with the U.S. Patent and Trademark Office provides legal protection for an **indefinite number of renewals for periods of 10 years each**. Therefore, a company that uses an established trademark or trade name may properly consider it to have an indefinite life and does not amortize its cost.

- If a company buys a trademark or trade name, it capitalizes the purchase price as the cost of the asset.
- If a company develops a trademark or trade name, it capitalizes costs related to securing it, such as attorney fees, registration fees, design costs, consulting fees, and successful legal defense costs. However, it excludes research and development costs.
- When the total cost of a trademark or trade name is insignificant, a company simply expenses it.

Example 11.6
Trademark

FACTS Hatley Company acquired a trademark, which cost $3 million, that will help the company to better identify and distinguish one of its consumer products in the market. The trademark has a remaining life of 8 years and is renewable at a minor cost every 10 years. Numerous internal studies have indicated that this trademark will provide substantial cash flows to Hatley for an indefinite period.

QUESTION What entries do you believe Hatley should make in the first year?

SOLUTION

Hatley should record the purchase of the trademark as follows.

Trademarks	3,000,000	
Cash		3,000,000

Given the information provided, the trademark should be considered to have an indefinite life and therefore should not be amortized. The trademark should be tested for impairment yearly using the fair value test.

The value of a marketing-related intangible can be substantial. Consider Internet **domain names**. The name **Drugs.com** at one time sold for $800,000. The bidding for the name **Loans.com** approached $500,000. An expansion of domain names will allow industries to use terms like .cars or even Internet slang like lol. This expansion has led to a new wave of domain name activity. Companies can register their own domain names. Applications

received include company names (such as **Microsoft**, which would have the name .microsoft) and for city-based domains (such as .nyc and .berlin).

Customer-Related Intangible Assets

Customer-related intangible assets result from interactions with outside parties. Examples include customer lists, order or production backlogs, and both contractual and noncontractual customer relationships.

Example 11.7 Customer List

FACTS Green Market Inc. acquires the customer list of a large newspaper for $6,000,000 on January 1, 2025. This customer database includes names, contact information, order history, and demographic information. Green Market expects to benefit from the information evenly over a 3-year period.

QUESTION What journal entries would you make to record the purchase of the customer list in the first year and the amortization over the 3-year period?

SOLUTION

In this case, the customer list is a limited-life intangible that Green Market should amortize on a straight-line basis. Green Market records the purchase of the customer list and the amortization of the customer list at the end of each year as follows.

To record purchase of customer list (January 1, 2025):

Customer List	6,000,000	
Cash		6,000,000

To record amortization expense (December 31, 2025, 2026, 2027):

Amortization Expense ($6,000,000 ÷ 3)	2,000,000	
Customer List (or Accumulated Amortization)		2,000,000

As indicated, the customer list has a limited life. Therefore, it should be tested for impairment when there are impairment indicators, using the recovery test and then the fair value test.

Example 11.8 Residual Value—Customer List

FACTS Refer to the facts for Green Market Inc. in Example 11.7. Assume now that Green Market determines that it can sell the list for $60,000 to another company at the end of 3 years.

QUESTION What amount of amortization should be recorded for the customer list in this situation?

SOLUTION

Amortization expense would be $1,980,000, as follows.

Cost	$6,000,000
Less: Residual value	60,000
Amortization base	$5,940,000

Amortization expense per period: $1,980,000 ($5,940,000 ÷ 3)

Companies should assume a zero residual value unless the asset's useful life is less than the economic life and reliable evidence is available concerning the residual value. [5]

Artistic-Related Intangible Assets

Artistic-related intangible assets involve ownership rights to plays, literary works, musical works, pictures, photographs, and video and audiovisual material. Copyrights protect these ownership rights. A **copyright** is a federally granted right that all authors, painters,

musicians, sculptors, and other artists have in their creations and expressions. A copyright is granted for the **life of the creator plus 70 years**. It gives the owner or heirs the exclusive right to reproduce and sell an artistic or published work.

Copyrights, while not renewable, can be valuable. At one time, **Disney** faced the loss of its copyright on Mickey Mouse, which could have affected sales of billions of dollars of Mickey-related goods and services (including theme parks). This copyright was so important that Disney and many other big entertainment companies fought all the way to the Supreme Court—and won an extension of copyright lives from 50 to 70 years.

As another example, **Really Useful Group** owns copyrights on the musicals of Andrew Lloyd Webber—*Cats, Phantom of the Opera, Jesus Christ Superstar*, and others. The company has little in the way of tangible assets, yet analysts value it at over $300 million.

- Companies capitalize the costs of acquiring and defending a copyright.
- They amortize any capitalized costs over the useful life of the copyright if less than its legal life (life of the creator plus 70 years).

For example, Really Useful Group should allocate the costs of its copyrights to the years in which it expects to receive the benefits. The difficulty of determining the number of years over which it will receive benefits typically encourages a company like Really Useful Group to write off these costs over a fairly short period of time. Companies must expense the research and development costs that lead to a copyright as those costs are incurred.

Example 11.9
Copyright

FACTS Alozo Inc. purchases a copyright for $500,000, which has a remaining legal life of 40 years. An examination of future cash flows related to this copyright indicates that it will have a useful life of 25 years.

QUESTION What journal entry would you make to record the purchase and over what period would you amortize the copyright?

SOLUTION

The journal entry to record the copyright is as follows.

Copyrights	500,000	
Cash		500,000

As it has a limited-life, the copyright is amortized over 25 years and would be tested for impairment if there are impairment indicators. If the carrying amount of the copyright is not recoverable, then the impairment is measured based on a fair value test.

Contract-Related Intangible Assets

Contract-related intangible assets represent the value of rights that arise from contractual arrangements. Examples are franchise and licensing agreements, construction permits, broadcast rights, and service or supply contracts.

A **franchise** is a contractual arrangement under which the franchisor grants the franchisee the right to sell certain products or services, to use certain trademarks or trade names, or to perform certain functions, usually within a designated geographical area. When you purchase a Prius from a **Toyota** dealer, fill up your tank at the corner **Shell** station, eat lunch at **Subway**, or make reservations at a **Marriott** hotel, you are dealing with franchises.

The franchisor, having developed a unique concept or product, protects its concept or product through a patent, copyright, or trademark or trade name. The franchisee acquires the right to exploit the franchisor's idea or product by signing a franchise agreement.

Another type of franchise, granted by a governmental body, permits the business to use public property in performing its services. Examples are the use of city streets for a bus line or taxi service; the use of public land for telephone, electric, and cable television lines; and the use of airwaves for radio or TV broadcasting. Such operating rights are referred to as **licenses** or **permits**. For example, **Fox**, **CBS**, and **NBC** agreed at one time to pay $27.9 billion for the right to broadcast **NFL** football games over an eight-year period.

Franchises and licenses may be for a definite period of time, for an indefinite period of time, or perpetual.

- The company securing the franchise or license carries an intangible asset account (entitled Franchises or Licenses) on its books, only when it can identify costs with the acquisition of the operating right. (Such costs might be legal fees or an advance lump-sum payment, for example.)
- **A company should amortize the cost of a franchise (or license) with a limited life as an operating expense over the life of the franchise.**
- It should not amortize a franchise with an indefinite life nor a perpetual franchise; the company should instead carry such franchises at cost and test for impairment using the fair value test.

Example 11.10
Broadcast License

FACTS WWKL acquired a broadcasting license with an 8-year term from the Federal Communications Commission. The cost of the license is $400,000. The license may be renewed indefinitely at a minimum cost. The license has been renewed three times, and recent analysis indicates that the license will continue to generate cash flows if the license is renewed.

QUESTION What journal entry would you make to record the license and over what period would you amortize the license?

SOLUTION

The journal entry to record the license is as follows.

Licenses	400,000	
Cash		400,000

The broadcast license cost is not amortized because it is expected that the cash flows will continue indefinitely. The license is tested for impairment annually using the fair value test.

Annual payments made under a franchise or license agreement should be entered as operating expenses in the period in which they are incurred. These payments do not represent an asset since they do not relate to **future rights** to use the property.

Technology-Related Intangible Assets

Technology-related intangible assets relate to innovations or technological advances. Examples are patented technology and trade secrets granted by the U.S. Patent and Trademark Office.

A **patent** gives the holder exclusive right to use, manufacture, and sell a product or process **for a period of 20 years** without interference or infringement by others. Companies such as **Merck** and **Xerox** were founded on patents and built on the exclusive rights thus granted.[2] The two principal kinds of patents are **product patents**, which cover actual physical products, and **process patents**, which govern the process of making products.

If a company like **Qualcomm** purchases a patent from an inventor, the purchase price represents its cost.

- A company can capitalize other costs incurred in connection with securing a patent, as well as attorney fees and other unrecovered costs of a successful legal suit to protect the patent, as part of the patent cost.
- However, it **must expense as incurred** any research and development costs related to the **development** of the product, process, or idea that it subsequently patents. (We discuss accounting for research and development costs in more detail later in this chapter.)

[2]Consider the opposite result. Sir Alexander Fleming, who discovered penicillin, decided not to use a patent to protect his discovery. He hoped that foregoing a patent would help companies produce the medication more quickly. Companies, however, refused to develop it because they did not have the patent shield and therefore were afraid to make the investment.

- Companies should amortize the cost of a patent over its legal life or its useful life (the period in which benefits are received), **whichever is shorter**.

If Qualcomm owns a patent from the date it is granted and expects the patent to be useful during its entire legal life, the company should amortize it over 20 years. If it appears that the patent will be useful for a shorter period of time, say for five years, it should amortize its cost over five years.

Changing demand, new inventions superseding old ones, inadequacy, and other factors often limit the useful life of a patent to less than the legal life. For example, the useful life of pharmaceutical patents is frequently less than the legal life because of the testing and approval period that follows their issuance. A typical drug patent has several years knocked off its 20-year legal life. Why? Because a drug-maker spends one to four years on animal tests, four to six years on human tests, and two to three years for the Food and Drug Administration (FDA) to review the tests. All this time occurs **after** issuing the patent but **before** the product goes on pharmacists' shelves.

As mentioned earlier, companies capitalize the costs of defending copyrights. The accounting treatment for a patent defense is similar. **A company charges all unrecovered legal fees and other costs incurred in successfully defending a patent suit to Patents,** an asset account. Such costs should be amortized along with acquisition cost over the remaining useful life of the patent.

Amortization expense should reflect the pattern, if reliably determined, in which a company uses up the patent.[3] A company may credit amortization of patents directly to the Patents account or to an Accumulated Amortization account.

Example 11.11 Patent

FACTS Harcott Co. incurs $180,000 in legal costs on January 1, 2025, to successfully defend a patent. The patent's useful life after defense is 12 years, to be amortized on a straight-line basis.

QUESTION How should Harcott record the legal fees and the amortization at the end of 2025?

SOLUTION

Harcott makes the following entries to record the legal fees (resulting in a patent) and their amortization.

To record legal fees related to patent (January 1, 2025):

Patents	180,000	
Cash		180,000

To record amortization of patent (December 31, 2025):

Amortization Expense ($180,000 ÷ 12)	15,000	
Patents (or Accumulated Amortization)		15,000

We've indicated that a patent's useful life should not extend beyond its legal life of 20 years. However, companies often make small modifications or additions that lead to a new patent. For example, **Astra Zeneca plc** filed for additional patents on minor modifications to its heartburn drug Prilosec. The effect may be to extend the life of the old patent. If the new patent provides essentially the same benefits, Astra Zeneca can apply the unamortized costs of the old patent to the new patent.[4] Alternatively, if a patent becomes impaired because demand drops for the product, the asset should be written-down or written-off immediately to expense.

Illustration 11.2 provides a summary of various intangible assets.

[3]Companies may compute amortization on a units-of-production basis in a manner similar to that described for depreciation on property, plant, and equipment.

[4]Another classic example is **Eli Lilly**'s drug Prozac (prescribed to treat depression). At one time, this product accounted for 43% of Eli Lilly's sales. However, when the patent on Prozac expired, the company was unable to extend its protection with a second-use patent for the use of Prozac to treat appetite disorders. Sales of the product slipped substantially as generic equivalents entered the market.

ILLUSTRATION 11.2 Intangible Asset Summary

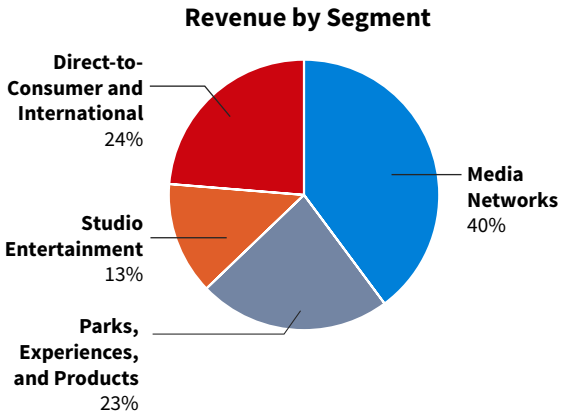
Intangible Asset Related to	Examples	Accounting
Marketing	• Trademark • Trade name—Kleenex • Internet domain name	• No amortization if treated as indefinite life
Customers	• Customer lists • Order/production backlogs • Customer relationships—both contractual and non-contractual	• Amortize over the useful life
Artistic Creations	Copyrights related to: • Music • Literary works • Art and photographs • Movies and videos	• Amortize over the useful life, which is typically shorter than the legal life
Contracts	• Franchises • Licensing agreements—use of airwaves for TV broadcasting	• Amortize if a definite life; do not amortize if indefinite life or perpetual
Technology	• Product patents—smart phones • Process patents—mixing a solution for a chemical	• Amortize over the legal life or useful life, whichever is shorter

Accounting Matters

"It Was All Started by a Mouse"

Walt Disney once said, "I hope we never lose sight of one thing—that it was all started by a mouse." And what a valuable asset Mickey Mouse is! **Disney** is known for staunchly defending its images, brands, and works of art; its business depends on it. In a recent 10-K annual report, the company indicates, "The Company's businesses throughout the world are affected by its ability to exploit and protect against infringement of its intellectual property, including trademarks, trade names, copyrights, patents and trade secrets." With over $10.6 billion in character/franchise intangibles, copyrights, and trademarks on Disney's balance sheet, it is a reasonable conclusion that a good portion of that capitalized amount comes from legal fees spent successfully defending their intangible assets.

How do these intangible assets impact Disney's financial performance? Consider the breakdown of Disney's $65 billion in annual revenue shown in the adjacent chart.



As indicated, direct-to-consumer and media network revenue account for 64% of Disney's total revenue. Certainly, the media content generating this revenue is protected by copyrights, licenses, and broadcast rights.

Parks, experiences and products accounts for 23% of Disney's revenue. Have you ever worn a pair of those adorable mouse ears? You can bet that some portion of the revenue from that sale made its way back to Disney! What makes Disney theme parks so popular? The characters with their lovable trade names and trademarked costumes? What about the patented technology and processes used to make each experience within the theme park unique and exciting?

Finally, 13% of Disney's revenue is produced by its studio entertainment segment. This segment includes motion pictures that Disney produces and copyrights. It includes the production of live entertainment events with licensed music and characters, and uses cutting-edge technology to create engaging visual experiences.

Clearly, Disney's intangible assets have a direct and impactful link to its revenue-producing ability and overall success as a company.

Presentation of Intangible Assets

The reporting of intangible assets is similar to the reporting of property, plant, and equipment. However, contra accounts are not normally shown for intangibles on the balance sheet. As **Illustration 11.3** shows, companies should report as a separate item all intangible assets (including goodwill, discussed in the next section) on the balance sheet.

ILLUSTRATION 11.3
Intangible Asset Disclosures

Harbaugh Company
Balance Sheet (partial)
(in thousands)

Intangible assets (Note C)	$3,840

Income Statement (partial)
(in thousands)

as part of Continuing operations	
Amortization expense	380
Impairment losses (goodwill)	46

Notes to the Financial Statements

Note C: Acquired Intangible Assets

	As of December 31, 2025	
	Gross Carrying Amount	Accumulated Amortization
Amortized intangible assets		
Trademark	$2,000	$ (100)
Customer list	500	(310)
Other	60	(10)
Total	$2,560	$ (420)
Unamortized intangible assets		
Licenses	$1,300	
Trademark	400	
Total	$1,700	

Types of intangibles and carrying values

Aggregate Amortization Expense	
For year ended 12/31/25	$ 380
Estimated Amortization Expense	
For year ended 12/31/26	$ 200
For year ended 12/31/27	90
For year ended 12/31/28	70
For year ended 12/31/29	60
For year ended 12/31/30	50

Current and future expense

- The FASB concluded that since intangible assets differ significantly from other types of assets, additional disclosure benefits users of the balance sheet.
- On the income statement, companies should present amortization expense and impairment losses for intangible assets separately and as part of continuing operations (see Illustration 11.3).
- The notes to the financial statements should include information about acquired intangible assets, including the aggregate amortization expense for each of the succeeding five years. If separate accumulated amortization accounts are not used, accumulated amortization should be disclosed in the notes.

Put It into Practice LO 11.2

Account for Various Types of Intangibles

FACTS Sky Co., organized in 2025, provided you with the following information.

1. Purchased a license for $20,000 on July 1, 2025. The license gives Sky exclusive rights to sell its services in the tri-state region and will expire on July 1, 2033.
2. Purchased a patent on January 2, 2026, for $40,000. It is estimated to have a 5-year life.
3. Costs incurred to develop an exclusive Internet connection process as of June 1, 2026, were $45,000. The process has an indefinite life.
4. On July 1, 2026, legal fees for successful defense of the patent purchased on January 2, 2026, were $11,400.
5. Research and development costs incurred as of September 1, 2026, were $75,000.

INSTRUCTIONS

a. Prepare the journal entries to record all the entries related to the patent during 2026.

b. At December 31, 2026, an impairment test is performed on the license purchased in 2025. It is estimated that the net cash flows to be received from the license will be $13,000, and its fair value is $7,000. Compute the amount of impairment and prepare the impairment journal entry, if any, to be recorded on December 31, 2026.

c. What is the amount to be reported for intangible assets on the balance sheet at December 31, 2025? At December 31, 2026?

SOLUTION

a.

January 2, 2026

Patents	40,000	
Cash		40,000

July 1, 2026

Patents	11,400	
Cash		11,400

December 31, 2026

Amortization Expense	9,267*	
Patents		9,267

*Computation of patent amortization expense:

$40,000 × 12/60 months	$8,000
$11,400 × 6/54 months	1,267
Total	$9,267

b. Computation of impairment loss on the license at December 31, 2026:

Cost of the license	$20,000
Less: Accumulated amortization ($20,000 × 18/96 months)	3,750
Book value	$16,250

Book value of $16,250 is greater than net cash flows of $13,000. Therefore, the license is impaired. The impairment loss is computed as follows.

Book value	$16,250
Fair value	7,000
Loss on impairment	$ 9,250

December 31, 2026

Loss on Impairment	9,250	
Licenses		9,250

c. Intangible assets as of December 31, 2025:

Licenses		$18,750*
*Cost	$20,000	
Less: Accumulated amortization ($20,000 × 6/96)	1,250	
Total	$18,750	

Intangible assets as of December 31, 2026:

Licenses	$ 7,000
Patents ($40,000 + $11,400 − $9,267)	42,133

All the costs to develop the Internet connection process and the research and development costs ($45,000 + $75,000 = $120,000) are expensed as incurred.

11.3 Goodwill

LEARNING OBJECTIVE 3

Explain the accounting issues for recording goodwill.

Earlier, we discussed **UMG**'s $300 million purchase of the copyrights to Bob Dylan's music. That is a great example of how valuable some intangible assets become. However, a company may not know how valuable its internally generated intangible assets are until it is ready to sell them and there is a willing buyer. For example, what is the **Nike** "swoosh" worth? What is the name **Coca-Cola** worth? Selling these trademarks and tradenames would essentially mean selling the entire company.

- While companies may capitalize certain costs incurred in developing specifically identifiable intangible assets such as patents, copyrights, and tradenames, the amounts capitalized are generally insignificant.
- However, companies do record material amounts of intangible assets when purchasing them, particularly in situations involving a business combination (the purchase of another business).

To illustrate, assume that Portofino Company decides to purchase Aquinas Company. In this situation, Portofino measures the assets acquired and the liabilities assumed at fair value. In measuring these assets and liabilities, Portofino must identify all the assets and liabilities of Aquinas. As a result, Portofino may recognize some assets or liabilities not previously recognized by Aquinas. For example, Portofino may recognize intangible assets such as a brand name, patent, or customer list that were not recorded by Aquinas. In this case, Aquinas may not have recognized these assets because they were developed internally and charged to expense.

In many business combinations, the purchasing company records goodwill. **Goodwill is measured as the excess of the cost of the purchase over the fair value of the identifiable net assets (assets less liabilities) purchased.** For example, if Portofino paid $2,000,000 to purchase Aquinas's identifiable net assets (with a fair value of $1,500,000), Portofino records goodwill of $500,000. Goodwill is therefore measured as a residual rather than measured directly. That is why goodwill is sometimes referred to as a **plug**, a **gap filler**, or a **master valuation account**.[5]

Conceptually, goodwill represents the future economic benefits arising from the other assets acquired in a business combination that are not individually identified and separately recognized. It is often called "the most intangible of the intangible assets" because it is identified only with the business as a whole. The only way to sell goodwill is to sell the business.

[5]GAAP **[6]** provides detailed guidance regarding the recognition of identifiable intangible assets in a business combination. With this guidance, companies should recognize more identifiable intangible assets, and less goodwill, in the financial statements as a result of business combinations.

Underlying Concepts

Capitalizing goodwill only when it is purchased in an arm's-length transaction, and not capitalizing any goodwill generated internally, is another example of faithful representation winning out over relevance.

Recording Goodwill

Internally Created Goodwill

Goodwill generated internally should not be capitalized in the accounts. The reason? Measuring the components of goodwill is simply too complex, and associating any costs with future benefits is too difficult. The future benefits of goodwill may have no relationship to the costs incurred in the development of that goodwill. To add to the mystery, goodwill may even exist in the absence of specific costs to develop it. Finally, because no objective transaction with outside parties takes place, a great deal of subjectivity—even misrepresentation—may occur (see **Underlying Concepts**).

Purchased Goodwill

As indicated earlier, **goodwill is recorded only when an entire business is purchased**.

- To record goodwill, a company compares the fair value of the net tangible and identifiable intangible assets with the purchase price of the acquired business.
- The difference is considered goodwill.

Goodwill is the residual—the excess of cost over fair value of the identifiable net assets acquired.

To illustrate, Diversified, Inc. decides that it needs a parts division to supplement its existing tractor distributorship. The president of Diversified is interested in buying Tractorling Co., a small concern in Chicago. **Illustration 11.4** presents the balance sheet of Tractorling.

ILLUSTRATION 11.4 Tractorling Co. Balance Sheet

Tractorling Co.
Balance Sheet
As of December 31, 2025

Assets		Liabilities and Stockholders' Equity	
Cash	$ 25,000	Current liabilities	$ 55,000
Accounts receivable	35,000	Common stock	100,000
Inventory	42,000	Retained earnings	100,000
Property, plant, and equipment, net	153,000		
Total assets	$255,000	Total liabilities and stockholders' equity	$255,000

After considerable negotiation, Tractorling decides to accept Diversified's offer of $400,000. What, then, is the value of the goodwill, if any?

The answer is not obvious. Tractorling's historical-cost-based balance sheet does not disclose the fair values of its identifiable assets. Suppose, though, that as the negotiations progress, Diversified investigates Tractorling's underlying assets to determine their fair values. Such an investigation may be accomplished either through a purchase audit undertaken by Diversified or by an independent appraisal from some other source. The investigation determines the valuations shown in **Illustration 11.5**.

ILLUSTRATION 11.5 Fair Value of Tractorling's Net Assets

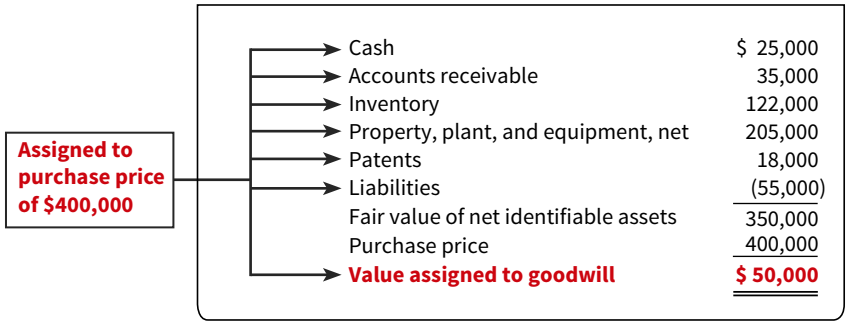
Fair Values	
Cash	$ 25,000
Accounts receivable	35,000
Inventory	122,000
Property, plant, and equipment, net	205,000
Patents	18,000
Liabilities	(55,000)
Fair value of net assets	$350,000

Normally, differences between current fair value and book value are more common among long-term assets than among current assets. Let's take a closer look these differences.

- Cash obviously poses no problems as to value.
- Receivables normally are fairly close to current valuation although they may at times need certain adjustments due to inadequate bad debt provisions.
- The $80,000 difference in Tractorling's inventories ($122,000 − $42,000) could result from a number of factors. The most likely is that the company uses LIFO. Recall that during periods of inflation, LIFO better matches expenses against revenues. However, it also creates a balance sheet distortion because ending inventory consists of older layers costed at lower valuations.
- In many cases, the values of long-term assets such as property, plant, and equipment and intangibles may have increased substantially over the years. This difference could be due to inaccurate estimates of useful lives, continual expensing of small expenditures (say, less than $300), inaccurate estimates of residual values, and the discovery of some unrecorded assets. (For example, in Tractorling's case, analysis determines Patents, not previously recognized, have a fair value of $18,000.)
- Liabilities usually are stated at book value. However, if interest rates have changed since the company incurred the liabilities, a different valuation (such as present value based on expected cash flows) is appropriate. Careful analysis must be made to determine that no unrecorded liabilities are present.

In summary, the investigation determines the fair value of net assets to be $350,000. Why would Diversified pay $400,000? Undoubtedly, Tractorling points to its established reputation, good credit rating, top management team, well-trained employees, and so on. These factors make the value of the business greater than $350,000. Diversified places a premium on the future earning power of these attributes as well as on the basic asset structure of the company today.

Diversified labels the difference between the purchase price of $400,000 and the fair value of net assets of $350,000 as goodwill. Goodwill is viewed as one or a group of unidentifiable values (intangible assets), the cost of which "is measured by the difference between the cost of the group of assets or enterprise acquired and the sum of the assigned costs of individual tangible and identifiable intangible assets acquired less liabilities assumed."[6] This procedure for valuation is called a **master valuation approach**. It assumes goodwill covers all the values that cannot be specifically identified with any identifiable tangible or intangible asset. **Illustration 11.6** shows this approach.



Assigned to purchase price of $400,000
Cash $ 25,000
Accounts receivable 35,000
Inventory 122,000
Property, plant, and equipment, net 205,000
Patents 18,000
Liabilities (55,000)
Fair value of net identifiable assets 350,000
Purchase price 400,000
Value assigned to goodwill $ 50,000

ILLUSTRATION 11.6
Determination of Goodwill—Master Valuation Approach

[6]The FASB expressed concern about measuring goodwill as a residual but noted that there is no real measurement alternative since goodwill is not separable from the company as a whole. [7]

Diversified records this transaction as follows.

Cash	25,000	
Accounts Receivable	35,000	
Inventory	122,000	
Property, Plant, and Equipment	205,000	
Patents	18,000	
Goodwill	50,000	
Liabilities		55,000
Cash		400,000

Companies often identify goodwill on the balance sheet as the **excess of cost over the fair value** of the net assets acquired.[7]

Impairment of Goodwill

Companies that recognize goodwill in a business combination **consider it to have an indefinite life and therefore should not amortize it**. Although goodwill may decrease in value over time, predicting the actual life of goodwill and an appropriate pattern of amortization is extremely difficult. In addition, investors find the amortization charge of little use in evaluating financial performance.

Therefore, companies adjust goodwill's carrying value only when it is impaired. Goodwill is tested for impairment at least annually. The impairment rule for goodwill is a fair value (quantitative) test as follows.

- If the fair value of the reporting unit (including goodwill) is **less than** the carrying value of the reporting unit (including goodwill), there **is an impairment loss.**
- If the fair value of the reporting unit (including goodwill) is **greater than** the carrying value of the reporting unit (including goodwill), there **is no impairment.**

If there is no impairment the company does not have to do anything else. When there is an impairment, because goodwill is the largest intangible asset on the company's balance sheet, the impairment loss is often substantial.

The accounting for goodwill is controversial. Some believe that goodwill's value eventually disappears. Therefore, they argue, companies should charge goodwill to expense over the periods affected, to better match expense with revenues. Others note that the accounting treatment for purchased goodwill and goodwill created internally should be consistent. They point out that companies immediately expense goodwill created internally and should follow the same treatment for purchased goodwill. Though these arguments may have some merit, nonamortization of goodwill combined with an adequate impairment test should provide the most useful financial information to the investment community.[8]

Example 11.12
Goodwill Impairment

FACTS Telling Time Corporation has three divisions. It purchased the Alarm Clock Division 4 years ago for $2 million. Unfortunately, the carrying value of the Alarm Clock Division experienced operating losses over the last three quarters. Management for Telling Time is now reviewing the division for purposes of recognizing an impairment. The following lists the carrying value of the Alarm Clock Division's net assets, including the associated goodwill of $900,000 from the purchase.

[7]Based on a recommendation from the Private Company Council (PCC), the FASB issued guidance [8] that allows private companies to forego separately recognizing and measuring certain intangible assets that are not capable of being sold or licensed independently in a business combination (e.g., customer relationships). An expanded discussion of the PCC and private company alternatives is provided in Appendix A.

[8]Private companies may account for goodwill as a limited-life intangible asset [9] and amortize goodwill on a straight-line basis over a period not to exceed 10 years. Under this alternative, goodwill is tested for impairment similar to other limited-life intangibles. An expanded discussion of this and other private company alternatives is provided in Appendix A.

Cash	$ 200,000
Accounts receivable	300,000
Inventory	700,000
Property, plant, and equipment (net)	800,000
Goodwill	900,000
Accounts and notes payable	(500,000)
Net assets	$2,400,000

Telling Time determines that the fair value of the Alarm Clock Division is $2,800,000.

QUESTION Should Telling Time recognize an impairment in the Alarm Clock Division? Explain and prepare any entries required if there is an impairment.

SOLUTION

Because the fair value of the division exceeds the carrying amount of the net assets of the reporting unit, Telling Time does not recognize any impairment.

What if the fair value of the Alarm Clock Division were less than the carrying amount of the reporting unit? In this situation, Telling Time measures the impairment. To illustrate, assume that the fair value of the Alarm Clock Division is $1,900,000 instead of $2,800,000. Telling Time computes the impairment loss as follows.

Fair value of Alarm Clock Division	$1,900,000
Less: Net assets (including goodwill)	2,400,000
Loss on impairment	$ 500,000

Telling Time makes the following entry to record the impairment.

Loss on Impairment	500,000	
Goodwill		500,000

Following this entry, the carrying value of the goodwill is $400,000.[9]

Goodwill

Beg. bal. 900,000	
	500,000
End. bal. 400,000	

Similar to other indefinite-life intangibles, companies may instead perform an optional qualitative assessment to determine whether it is more likely than not that goodwill is impaired. If the optional qualitative assessment indicates that the fair value of the reporting unit is more likely than not to be greater than the carrying value, the company need not continue with the fair value impairment test.[10]

Analytics in Action: Goodwill Hunting?

Total goodwill impairment by U.S. public companies fell 10% from 2018 to 2019—that's a good sign, right? Well, if we explore the data a bit further, we actually see that the 2018 impairment figure was significantly influenced by one impairment event that accounted for $22.1 billion of the total impairments. If we remove that outlier, total impairments would have **increased** by 25% during the same time period! Financial data can tell us a lot about something like goodwill and its related impairment, but it takes some work (and practice) to find the "right" data and present it in the "right" way to gain the most insights from the data.

Luckily for those who are interested in goodwill impairments, **Duff & Phelps** prepares a comprehensive goodwill impairment study each year that shows data from over 8,800 publicly traded companies to help users gain insights from the data. The study provided the following dashboard, which incorporates industry data and economic trends to better understand the story behind the data. Analytics, such as using information in this dashboard, can be a very powerful tool for managers and investors alike in understanding trends and helping to predict future outcomes.

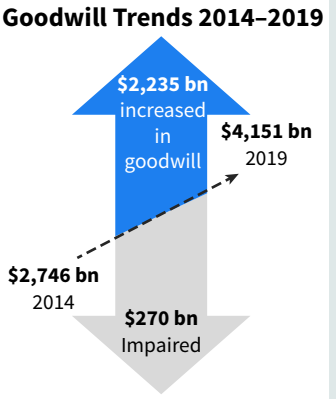
[9] Example 11.12 assumes that the carrying amount equals the fair value of net identifiable assets (excluding goodwill). This is, prior to performing the goodwill impairment text, any impairments of other assets in the reporting unit should have been recorded. **[10]**

[10] This optional assessment examines similar factors as those used in the optional qualitative assessment for other indefinite-life intangibles but are based on events and circumstances related to the reporting unit. **[11]**

Goodwill Impairment Study

Summary Statistics

8,896 Companies	**7.8%** Goodwill to Total Assets (GW/TA)	**1.8%** Goodwill Impaired (GWI/GW ratio)
30.3% Companies with Goodwill	**11.8%** Companies with Goodwill that Recorded a Goodwill Impairment in 2019	**2.0%** Market-to-Book Ratio (median)



Source: Duff & Phelps, *2020 U.S. Goodwill Impairment Study* (February 2021).

Go to the Analytics in Action Activities section at the end of the chapter, which includes Excel-based problems with data sets, to see the relevance and application of data analytics to intermediate accounting topics.

Bargain Purchase

In a few cases, the purchaser in a business combination pays **less than** the fair value of the identifiable net assets. Such a situation is referred to as a **bargain purchase**. A bargain purchase results from a market imperfection. That is, the seller would have been better off to sell the assets individually than in total. However, situations do occur in which the purchase price is less than the value of the net identifiable assets. Some examples include a forced liquidation or distressed sale due to the death of a company founder. In a bargain purchase situation, **the excess amount is recorded as a gain by the purchaser.**

Example 11.13
Bargain Purchase

FACTS Crème Crust is experiencing liquidity problems and must sell its business. Crème Crust's tangible and intangible assets have a fair value of $900,000 and liabilities of $100,000. Meltone Inc. purchases the business for $500,000.

QUESTIONS (a) How would you report this information on Meltone's financial statement? (b) What entry would you make to record the purchase?

SOLUTION

a. Meltone will report on its balance sheet the assets and liabilities at their fair values. On its income statement, it will report a gain on acquisition of $300,000, computed as follows.

Tangible and intangible assets	$900,000
Less: Liabilities	100,000
Net assets	800,000
Less: Purchase price	500,000
Gain on acquisition	$300,000

b. The journal entry for Meltone is as follows.

Assets	900,000	
Liabilities		100,000
Cash		500,000
Gain on Acquisition		300,000

The gain is reported on the income statement in the "Other revenues and gains" section, so it is part of continuing operations.

As indicated in Example 11.13, an economic gain is inherent in a bargain purchase. The purchaser is better off by the amount by which the fair value of what is acquired exceeds the amount paid.

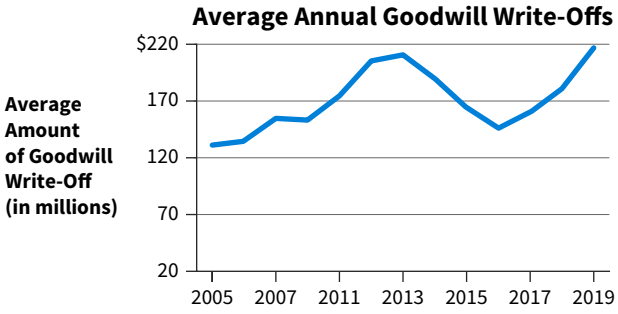
- Some expressed concern that some companies may attempt inappropriate gain recognition by making an intentional error in measurement of the assets or liabilities.
- Such gains typically receive a great deal of scrutiny from auditors and regulatory bodies.
- As a result, the FASB requires companies to disclose the nature of this gain transaction.

Such disclosure will help users to better evaluate the quality of the earnings reported.

Accounting Matters — Goodwill Impairments—Back to the Future

The adjacent chart shows how changes in general market conditions correspond to the ups and downs in goodwill impairments. As indicated, goodwill impairments spiked in the 2008–2012 time period, coinciding with the stock market downturn in the wake of the financial crisis, and have been on the rise in recent years in response to market uncertainty.

A spike in impairments when the market declines is understandable because decreases in stock price are indicators that the fair values of acquired assets have declined below the carrying value. So, what's the problem? Companies do not like the fair value impairment model for goodwill for two reasons: (1) the costly annual fair value test of reporting units in which goodwill resides, and (2) the volatility in income, which occurs when an impairment is recorded (see the chart).



In response to these criticisms, the FASB is considering changes to goodwill accounting, which might reintroduce amortization of goodwill. Such a change would be "Back to the Future," as this approach was GAAP before 2000. The change would reduce the likelihood of impairments because the carrying value of goodwill would be declining over time and be less likely to trigger an impairment charge.

The FASB may face some opposition to this change. Opponents argue that the change deprives investors of the only meaningful information about the consequences of corporate acquisitions, based on research showing that investors find goodwill write-offs as important new information about the performance of past acquisitions. Furthermore, reverting to goodwill accounting based on amortization belies the research showing that both the amortization expense in the income statement and the unamortized goodwill on the balance sheet are often ignored by investors.

Rather than a return to amortization, these opponents are urging the FASB to develop better accounting standards for corporate acquisitions, which will allow investors to track the **consequences** (success or failure) of growth through acquisitions, as compared to **organic** growth (net of acquisitions). This expanded reporting could enable investors and corporate board members to assess the wisdom of managers' acquisitions.

Sources: M. Mauer, "U.S. Accounting Standard-Setter Looks to Tackle Controversial Topics in 2021," *Wall Street Journal* (January 4, 2021); and F. Gu and B. Lev, "Back to the Future: FASB to Reverse Goodwill Accounting," *Seeking Alpha* (February 3, 2021).

Presentation of Goodwill

The reporting of goodwill is similar to the reporting of intangible assets (as shown in Illustration 11.3). As **Illustration 11.7** shows, companies should report goodwill as a separate item.

- On the income statement, companies should present impairment losses as a separate line item in the continuing operations section, unless the goodwill impairment is associated with a discontinued operation.
- The notes to the financial statements should include information about changes in the carrying amount of goodwill during the period.

ILLUSTRATION 11.7 Goodwill Disclosures

Pfizer Inc.
Consolidated Balance Sheet (partial)
(in millions)

Goodwill	$49,577

Notes to Consolidated Financial Statements

Note 1. Basis of Presentation and Significant Accounting Policies (partial)

Goodwill represents the excess of the consideration transferred for an acquired business over the assigned values of its net assets. Goodwill is not amortized.

Impairment methodology

We review our long-lived assets for impairment indicators throughout the year. We perform impairment testing for indefinite-lived intangible assets and goodwill at least annually and for all other long-lived assets whenever impairment indicators are present. When necessary, we record impairments of long-lived assets for the amount by which the fair value is less than the carrying value of these assets. For goodwill, when necessary, we determine the fair value of each reporting unit and record an impairment loss, if any, for the excess of the book value of the reporting unit over the implied fair value.

Note 10. Identifiable Intangible Assets and Goodwill

Goodwill reconciliation

The following summarizes the components and changes in the carrying amount of Goodwill:

millions of dollars	Total
Balance, January 1, 2019	$42,927
Additions	5,411
Other (foreign exchange impact)	(136)
Balance, December 31, 2019	48,202
Additions	727
Other (foreign exchange impact)	648
Balance, December 31, 2020	$ 49,577

Put It into Practice LO 11.3
Account for Goodwill

FACTS On July 1, 2025, James Corporation purchased Devon Company by paying $300,000 cash and issuing a $50,000 note payable to Devon. At July 1, 2025, before the purchase, the balance sheet of Devon Company was as follows.

Cash	$ 50,000	Accounts payable	$200,000
Accounts receivable	90,000	Stockholders' equity	235,000
Inventory	100,000		$435,000
Property, plant, and equipment (net)	185,000		
Trademarks	10,000		
	$435,000		

The recorded amounts for Devon all approximate current values except for property, plant, and equipment (fair value of $205,000), inventory (fair value of $125,000), and trademarks (fair value of $15,000).

INSTRUCTIONS

a. Determine the amount of goodwill to be recorded by James upon acquisition of Devon.

b. Prepare the December 31 entry for James to record amortization expense. The trademark has an estimated useful life of 4 years with a salvage value of $3,000.

c. At the end of the first full year of operations (2026), James conducts an impairment evaluation for the Devon reporting unit. The fair value of the Devon reporting unit is $300,000. The carrying value of the net assets of the Devon unit (including goodwill) is $335,000. Prepare any necessary journal entries given this information.

SOLUTION

a. One way to determine the amount of goodwill is to prepare the journal entry for the acquisition as follows.

Cash	50,000	
Accounts Receivable	90,000	
Inventory (at fair value)	125,000	
Property, Plant, and Equipment (at fair value)	205,000	
Trademarks (at fair value)	15,000	
Goodwill	65,000*	
Accounts Payable		200,000
Notes Payable		50,000
Cash		300,000

* Computation of goodwill

Amount paid: ($300,000 + $50,000)	$350,000
Less: Fair value of identifiable net assets	285,000**
Goodwill	$ 65,000

** $435,000 + $20,000 (Property, Plant, and Equipment) + $25,000 (Inventory) + $5,000 (Trademarks) − $200,000 (Accounts Payable)

Note that the property, plant, and equipment would be recorded at the July 1, 2025, cost to James; accumulated depreciation accounts would not be recorded as new ones and will be started by James after the purchase.

b. The amortization expense is recorded as follows.

Amortization Expense	1,500	
Trademarks [($15,000 − $3,000) × 1/4 × 6/12]		1,500

There is no amortization of goodwill.

c. Computation of possible impairment at December 31, 2026:

Fair value of the reporting unit	$300,000
Carrying value of reporting unit (including goodwill)	(335,000)
Impairment loss	$ 35,000

The goodwill impairment loss is recorded as follows.

Loss on Impairment	35,000	
Goodwill		35,000

11.4 Research and Development Costs

LEARNING OBJECTIVE 4

Describe the accounting and presentation for research and development and similar costs.

Research and development (R&D) costs are not in themselves intangible assets. However, we present the accounting for R&D costs here because R&D activities frequently result in the development of patents or copyrights (such as a new product, process, idea, formula, composition, or literary work) that may provide future value.

Many companies spend considerable sums on research and development. **Illustration 11.8** shows the outlays for R&D made by selected global companies.

ILLUSTRATION 11.8 R&D Outlays, as a Percentage of Sales

Company	Sales (in millions)	R&D/Sales
Pfizer	$41,908	22.44%
Meta Platforms	85,965	21.46
Motorola	7,887	8.71
3M	32,184	5.84
Boeing	58,158	4.26
Kimberly-Clark	19,140	1.44
PepsiCo	70,372	1.02

Global View

IFRS requires capitalization of some development costs. *See the IFRS Insights at the end of the chapter for a discussion of the similarities and differences between IFRS and GAAP.*

Two difficulties arise in accounting for R&D expenditures:

1. Identifying the costs associated with particular activities, projects, or achievements.
2. Determining the magnitude of the future benefits and length of time over which such benefits may be realized.

Because of these latter uncertainties, the FASB has simplified the accounting practice in this area. **Companies must expense all research and development costs when incurred** (see **Global View**). **[12]**

Identifying R&D Activities

Illustration 11.9 shows the definitions for **research activities** and **development activities**. These definitions differentiate research and development costs from other similar costs. **[13]**

ILLUSTRATION 11.9 Research Activities versus Development Activities

Research Activities	Development Activities
Planned search or critical investigation aimed at discovery of new knowledge.	Translation of research findings or other knowledge into a plan or design for a new product or process, or for a significant improvement to an existing product or process whether intended for sale or use.
Examples	**Examples**
Laboratory research aimed at discovery of new knowledge; searching for applications of new research findings.	Conceptual formulation and design of possible product or process alternatives; construction of prototypes and operation of pilot plants.

R&D activities do not include routine or periodic alterations to existing products, production lines, manufacturing processes, and other ongoing operations, even though these alterations may represent improvements. For example, routine ongoing efforts to refine, enrich, or improve the qualities of an existing product are not considered R&D activities.

Accounting for R&D Activities

The costs associated with R&D activities and the accounting treatments for them are as follows.

1. **Materials, equipment, and facilities.** Expense the entire costs, **unless the items have alternative future uses** (in other R&D projects or otherwise). If there are alternative future uses, carry the items as inventory and allocate as consumed, or capitalize and depreciate as used.
2. **Personnel.** Expense as incurred salaries, wages, and other related costs of personnel engaged in R&D.

3. **Purchased intangibles.** Recognize and measure at fair value. After initial recognition, account for in accordance with their nature as either limited-life or indefinite-life intangibles.[11]
4. **Contract services.** Expense the costs of services performed by others in connection with the R&D as incurred.
5. **Indirect costs.** Include a reasonable allocation of indirect costs in R&D costs, except for general and administrative cost, which must be clearly related to be included in R&D. **[15]**

Consistent with item 1 above, if a company owns a research facility that conducts R&D activities and that has alternative future uses (in other R&D projects or otherwise), it should capitalize the facility as an operating asset. The company accounts for depreciation and other costs related to such research facilities as R&D expenses.

To illustrate, assume that Next Century Incorporated develops, produces, and markets laser machines for medical, industrial, and defense uses. **Illustration 11.10** lists the types of expenditures related to its laser-machine activities, along with the recommended accounting treatment.

ILLUSTRATION 11.10 Sample R&D Expenditures and Their Accounting Treatment

Next Century Incorporated

Type of Expenditure	Accounting Treatment	Rationale
1. Construction of long-range research facility for use in current and future projects (three-story, 400,000-square-foot building).	Capitalize and depreciate as R&D expense.	Has alternative future use.
2. Acquisition of R&D equipment for use on current project only.	Expense immediately as R&D.	Research cost.
3. Acquisition of machinery for use on current and future R&D projects.	Capitalize and depreciate as R&D expense.	Has alternative future use.
4. Purchase of materials for use on current and future R&D projects.	Inventory and allocate to R&D projects; expense as consumed.	Has alternative future use.
5. Salaries of research staff designing new laser bone scanner.	Expense immediately as R&D.	Research cost.
6. Research costs incurred under contract with New Horizon, Inc., and billable monthly.	Record as a receivable.	Not R&D cost (reimbursable expense).
7. Material, labor, and overhead costs of prototype laser scanner.	Expense immediately as R&D.	Development cost.
8. Costs of testing prototype and design modifications.	Expense immediately as R&D.	Development cost.
9. Legal fees to obtain patent on new laser scanner.	Capitalize as patent and amortize to overhead as part of cost of goods manufactured.	Direct cost of patent.
10. Executive salaries.	Expense as operating expense.	Not R&D cost (general and administrative expense).
11. Cost of marketing research to promote new laser scanner.	Expense as operating expense.	Not R&D cost (selling expense).
12. Engineering costs incurred to advance the laser scanner to full production stage.	Expense immediately as R&D.	Development cost.
13. Costs of successfully defending patent on laser scanner.	Capitalize as patent and amortize to overhead as part of cost of goods manufactured.	Direct cost of patent.
14. Commissions to sales staff marketing new laser scanner.	Expense as operating expense.	Not R&D cost (selling expense).

[11] If R&D-related intangibles (often referred to as **in-process R&D**) are also acquired in a business combination, they are also recognized and measured at fair value. After initial recognition, these intangible assets are accounted for in accordance with their nature (as either limited-life or indefinite-life intangibles). **[14]**

Costs Similar to R&D Costs

Many costs have characteristics similar to research and development costs. Examples are:

1. Start-up costs for a new operation.
2. Initial operating losses.
3. Advertising costs.
4. Computer software costs.

For the most part, these costs are expensed as incurred, similar to the accounting for R&D costs.

Start-Up Costs

Start-up costs are incurred for one-time activities to start a new operation. Examples include opening a new plant, introducing a new product or service, or conducting business in a new territory. Start-up costs include **organizational costs**, such as legal and state fees incurred to organize a new business entity.

The accounting for start-up costs is straightforward: **Expense start-up costs as incurred.** The profession recognizes that companies incur start-up costs with the expectation of future revenues or increased efficiencies. However, to determine the amount and timing of future benefits is so difficult that a conservative approach—expensing these costs as incurred—is required. **[16]**

Example 11.14
Start-Up Costs

FACTS U.S.-based Hilo Beverage Company decides to construct a new plant in Brazil. This represents Hilo's first entry into the Brazilian market. Hilo plans to introduce the company's major U.S. brands into Brazil on a locally produced basis. The following costs might be involved.

1. Travel-related costs; costs related to employee salaries; and costs related to feasibility studies, accounting, tax, and government affairs.
2. Training of local employees related to product, maintenance, computer systems, finance, and operations.
3. Recruiting, organizing, and training related to establishing a distribution network.

QUESTION How would you account for these costs?

SOLUTION

Hilo Beverage should expense all these start-up costs as incurred. Start-up activities commonly occur at the same time as activities involving the acquisition of assets. For example, as it is incurring start-up costs for the new plant, Hilo probably is also buying or building property, plant, equipment, and inventory. Hilo should not immediately expense the costs of these tangible assets. Instead, it should report them on the balance sheet, using appropriate GAAP reporting guidelines.

Initial Operating Losses

Some contend that companies should be allowed to capitalize initial operating losses incurred in the start-up of a business. They argue that such operating losses are an unavoidable cost of starting a business. However, the accounting and reporting standards are no different for an enterprise trying to establish a new business than they are for long-standing enterprises.

Example 11.15
Initial Operating Losses

FACTS Continuing with Hilo Beverage from Example 11.14, now assume that Hilo lost money in its first year of operations and wishes to capitalize this loss. Hilo's CEO argues that as the company becomes profitable, it will offset these losses in future periods.

QUESTION How would you respond to Hilo's CEO?

SOLUTION

This approach is unsound since losses have no future service potential and therefore cannot be considered an asset. GAAP requires that operating losses during the early years **should not be capitalized.** **[17]**

Advertising Costs

Over the years, **PepsiCo** has hired various musical artists, such as Elton John and Beyoncé, to advertise its products. How should it report such advertising costs related to its star spokespeople? Pepsi Co could expense the costs in various ways:

1. When the artists have completed their singing assignments.
2. The first time the advertising takes place.
3. Over the estimated useful life of the advertising.
4. In an appropriate fashion to each of the three time periods identified above.
5. Over the period revenues are expected to result.

For the most part, Pepsi Co must expense advertising costs as incurred or the first time the advertising takes place. Whichever of these two approaches is followed, the results are essentially the same.

On the other hand, companies record as assets any tangible assets used in advertising, such as billboards or blimps. The rationale is that such assets do have alternative future uses. Again, the profession has taken a conservative approach to recording advertising costs because defining and measuring the future benefits can be so difficult. **[18]**

Computer Software Costs

A special problem arises in distinguishing R&D costs from selling and administrative activities. The FASB's intent was that companies exclude from the definition of R&D activities the acquisition, development, or improvement of a product or process **for use in their selling or administrative activities**. For example, the costs of software incurred by an airline in improving its computerized reservation system or the costs incurred in developing a company's management information system **are not** research and development costs, but should be reported as selling and administrative expenses.

Accounting Matters — Branded

For many companies, developing a strong brand image is as important as developing the products they sell. Now more than ever, companies see the power of a strong brand, enhanced by significant and effective advertising investments. As the following chart indicates, the value of brand investments is substantial. **Apple** heads the list with an estimated brand value of about $323 billion.

The World's 10 Most Valuable Brands

		(in billions)
1.	**Apple**	$323.0
2.	**Amazon**	200.7
3.	**Microsoft**	166.0
4.	**Google**	165.4
5.	**Samsung**	62.3
6.	**Coca-Cola**	56.9
7.	**Toyota**	51.6
8.	**Mercedes-Benz**	49.3
9.	**McDonald's**	42.8
10.	**Disney**	40.8

Generally, you will not find the estimated values of brands recorded in companies' balance sheets. The reason? The subjectivity that goes into estimating a brand's value. In some cases, analysts base an estimate of brand value on opinion polls or on some multiple of ad spending. For example, in estimating the brand values, **Interbrand Corp.** estimates the percentage of the overall future revenues the brand will generate and then discounts the net cash flows, to arrive at a present value.

Some analysts believe that information on brand values is relevant. Others voice valid concerns about the faithful representation of brand value estimates due to subjectivity in the estimates for revenues, costs, and the risk component of the discount rate. The nature of these approach support the subjectivity in brand valuation estimates.

Presentation of Research and Development Costs

Companies should disclose in the financial statements (generally in the notes) the total R&D costs charged to expense each period for which they present an income statement. **Alphabet Inc.**, the parent company of **Google**, reported research and development in its recent income statement, as shown in **Illustration 11.11**.

ILLUSTRATION 11.11 Income Statement Disclosure of R&D Costs

Alphabet Inc.

(in millions)

	Years Ended December 31	
	2019	2020
Revenues	$161,857	$182,527
Costs and expenses		
Cost of revenues	71,896	84,732
Research and development	26,018	27,573
Sales and marketing	18,464	17,946
General and administrative	9,551	11,052
European Commission fines	1,697	0
Total costs and expenses	$127,626	$141,303

In addition, Alphabet provides a discussion about R&D expenditures in its annual report, as shown in **Illustration 11.12.**

ILLUSTRATION 11.12 Alphabet's R&D Disclosure

Alphabet Inc.

Research and Development (in part)

The following table presents our R&D expenses (in millions, except percentages):

	Year Ended December 31,	
	2019	2020
Research and development expenses	$ 26,018	$ 27,573
Research and development expenses as a percentage of revenues	16.1 %	15.1 %

R&D expenses consist primarily of:

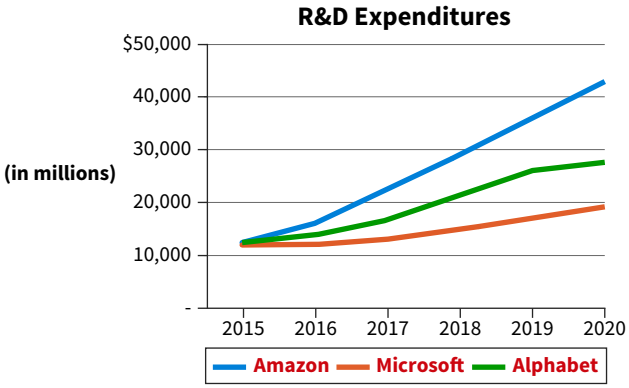
- Compensation expenses for engineering and technical employees responsible for R&D of our existing and new products and services;
- Depreciation expenses;
- Equipment-related expenses; and
- Professional services fees primarily related to consulting and outsourcing services.

Over time, R&D expenses as a percentage of revenues may fluctuate due to certain expenses that are generally less variable in nature and may not correlate to the changes in revenues. In addition, R&D expenses may be affected by a number of factors including continued investment in ads, Android, Chrome, Google Cloud, Google Play, hardware, machine learning, Other Bets, Search and YouTube.

Accounting Matters

"Alexa, Should R&D Costs Be Capitalized?"

Immediately expensing R&D expenditures is a practical solution to a challenging financial reporting issue and represents one of the many trade-offs among relevance, faithful representation, and cost-benefit considerations. Expensing R&D costs offers consistency in practice and uniformity among companies. However, companies make R&D expenditures with the expectation of benefiting in future periods from their innovation, which almost sounds like an asset! Consider the recent R&D expenditures for **Amazon**, **Microsoft**, and **Alphabet** shown in the adjacent chart.



As indicated, R&D expenditures are a significant (and growing) portion of total expenses for some companies, but every dollar spent on R&D does not necessarily turn into a successful product, service, or enhancement. In fact, in a recent letter to shareholders, Amazon declared itself, "the best place in the world to fail." Innovation and failure are inseparable; billions of dollars of failures at Amazon brings with it many successes that translate into profit and market value.

Separating which investments lead to successes versus failures is not practical and could bring a significant amount of subjectivity to the balance sheet if capitalized. As shown in Illustration 11.12, companies must disclose R&D costs in their financial statements which, along with management's discussion in the annual report, provides valuable information to investors and creditors.

research activities 11-26
research and development (R&D) costs 11-25
start-up costs 11-28
trademark, trade name 11-9

Learning Objectives Review

1 Discuss the characteristics, valuation, and amortization of intangible assets.

Intangible assets have two main characteristics: (1) they lack physical existence, and (2) they are not financial instruments. In most cases, intangible assets provide services over a period of years and so are normally classified as long-term assets.

Intangibles are recorded at cost. Cost includes all acquisition costs and expenditures needed to make the intangible asset ready for its intended use. If intangibles are acquired in exchange for stock or other assets, the cost of the intangible is the fair value of the consideration given or the fair value of the intangible received, whichever is more clearly evident. When a company makes a "basket purchase" of several intangibles or a combination of intangibles and tangibles, it should allocate the cost on the basis of fair values.

Intangibles have either a limited useful life or an indefinite useful life. Companies amortize limited-life intangibles. They do not amortize indefinite-life intangibles. Limited-life intangibles should be amortized by systematic charges to expense over their

useful life. The useful life should reflect the period over which these assets will contribute to cash flows. The amount to report for amortization expense should reflect the pattern in which a company consumes or uses up the asset, if it can reliably determine that pattern. Otherwise, use a straight-line approach.

Impairment occurs when the carrying amount of the intangible asset is not recoverable. Companies use a recoverability test and a fair value test to determine impairments for limited-life intangibles. Companies use only a fair value test for indefinite-life intangibles.

2 Discuss the accounting and financial statement presentation for various types of intangible assets.

Major types of intangibles are (1) *marketing-related intangibles,* used in the marketing or promotion of products or services; (2) *customer-related intangibles,* resulting from interactions with outside parties; (3) *artistic-related intangibles,* giving ownership rights to such items as plays and literary works; (4) *contract-related intangibles,* representing the value of rights that arise from contractual arrangements; (5) *technology-related intangibles,* relating to innovations or technological advances; and (6) *goodwill,* arising from business combinations. The accounting for these intangible assets depends on whether they have a limited or indefinite life.

With respect to presentation, on the balance sheet, companies should report all intangible assets other than goodwill as a separate item. Contra accounts are not normally shown. If goodwill is present, it too should be reported as a separate item. On the income statement, companies should report amortization expense and impairment losses in continuing operations. The notes to the financial statements have additional detailed information.

3 Explain the accounting issues for recording goodwill.

Unlike receivables, inventories, and patents that a company can sell or exchange individually in the marketplace, goodwill can be identified only with the company as a whole. **Goodwill is recorded only when an entire business is purchased.** A company should not capitalize goodwill generated internally. The future benefits of goodwill may have no relationship to the costs incurred in the development of that goodwill. Goodwill may exist even in the absence of specific costs to develop it.

To record goodwill, a company compares the fair value of the net tangible and identifiable intangible assets with the purchase price of the acquired business. The difference is considered goodwill. Goodwill is the residual. Goodwill is often identified on the balance sheet as the excess of cost over the fair value of the net assets acquired. Goodwill impairments are based on a fair value test of the reporting unit.

4 Describe the accounting and presentation for research and development and similar costs.

R&D costs are not in themselves intangible assets, but R&D activities frequently result in the development of something a company patents or copyrights. The difficulties in accounting for R&D expenditures are (1) identifying the costs associated with particular activities, projects, or achievements, and (2) determining the magnitude of the future benefits and length of time over which a company may realize such benefits. Because of these latter uncertainties, companies are required to expense all research and development costs when incurred.

Illustration 11.10 shows typical costs associated with R&D activities and the accounting treatment accorded them. Many costs have characteristics similar to R&D costs. Examples are start-up costs, initial operating losses, and advertising costs. For the most part, these costs are expensed as incurred, similar to the accounting for R&D costs. Financial statements must disclose the total R&D costs charged to expense each period for which an income statement is presented.

Enhanced Review and Practice

Go to Wiley Course Resources for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Exercises, Problems, Problem Solution Walkthrough Videos, Data Analytics Activities, and many more assessment tools and resources are available for practice in Wiley Course Resources.

Questions

1. What are the two main characteristics of intangible assets?
2. If intangibles are acquired for stock, how is the cost of the intangible determined?
3. Intangibles have either a limited useful life or an indefinite useful life. How should these two different types of intangibles be amortized?
4. Why does the accounting profession make a distinction between internally created intangibles and purchased intangibles?
5. In 2025, Ghostbusters Corp. spent $420,000 for "goodwill" visits by sales personnel to key customers. The purpose of these visits was to build a solid, friendly relationship for the future and to gain insight into the problems and needs of the companies served. How should this expenditure be reported?
6. What are factors to be considered in estimating the useful life of an intangible asset?

7. What should be the pattern of amortization for a limited-life intangible?

8. **Columbia Sportswear Company** acquired a trademark that is helpful in distinguishing one of its new products. The trademark is renewable every 10 years at minimal cost. All evidence indicates that this trademarked product will generate cash flows for an indefinite period of time. How should this trademark be amortized?

9. Romo Company spent $190,000 developing a new process, $45,000 in legal fees to obtain a patent, and $91,000 to market the process that was patented, all in the year 2025. How should these costs be accounted for in 2025?

10. Izzy Inc. purchased a patent for $350,000 which has an estimated useful life of 10 years. Its pattern of use or consumption cannot be reliably determined. Prepare the entry to record the amortization of the patent in its first year of use.

11. Explain the difference between artistic-related intangible assets and contract-related intangible assets.

12. What is goodwill? What is a bargain purchase?

13. Under what circumstances is it appropriate to record goodwill in the accounts? How should goodwill, properly recorded on the books, be written off in order to conform with generally accepted accounting principles?

14. In examining financial statements, financial analysts often write off goodwill immediately. Comment on this procedure.

15. Braxton Inc. is considering the write-off of a limited-life intangible because of its lack of profitability. Explain to the management of Braxton how to determine whether a write-off is permitted.

16. Last year, Zeno Company recorded an impairment on an intangible asset held for use. Recent appraisals indicate that the asset has increased in value. Should Zeno record this recovery in value?

17. Explain how losses on impaired intangible assets should be reported in income.

18. Simon Company determines that its goodwill is impaired. It finds that the book value of its reporting unit is $1,490,000, including recorded goodwill of $400,000. The fair value of the identifiable assets of the reporting unit is $1,450,000. What is the amount of goodwill impaired?

19. What is the nature of research and development costs?

20. Research and development activities may include (a) personnel costs, (b) materials and equipment costs, and (c) indirect costs. What is the recommended accounting treatment for these three types of R&D costs?

21. Which of the following activities should be expensed currently as R&D costs?

a. Testing in search for or evaluation of product or process alternatives.

b. Engineering follow-through in an early phase of commercial production.

c. Legal work in connection with patent applications or litigation, and the sale or licensing of patents.

22. Indicate the proper accounting for the following items.

a. Organization costs.

b. Advertising costs.

c. Operating losses.

23. In 2024, Austin Powers Corporation developed a new product that will be marketed in 2025. In connection with the development of this product, the following costs were incurred in 2024: research and development costs $400,000, materials and supplies consumed $60,000, and compensation paid to research consultants $125,000. It is anticipated that these costs will be recovered in 2027. What is the amount of research and development costs that Austin Powers should record in 2024 as a charge to expense?

24. Recently, a group of college students decided to incorporate for the purposes of selling a process to recycle the waste product from manufacturing cheese. Some of the initial costs involved were legal fees and office expenses incurred in starting the business, state incorporation fees, and stamp taxes. One student wishes to charge these costs against revenue in the current period. Another wishes to defer these costs and amortize them in the future. Which student is correct?

25. An intangible asset with an estimated useful life of 30 years was acquired on January 1, 2015, for $540,000. On January 1, 2025, a review was made of intangible assets and their expected service lives, and it was determined that this asset had an estimated useful life of 30 more years from the date of the review. What is the amount of amortization for this intangible in 2025?

Brief Exercises

BE11.1 (LO 1) Taylor Swift Corporation purchases a patent from Salmon Company on January 1, 2025, for $54,000. The patent has a remaining legal life of 16 years. Taylor Swift estimates the patent will have a useful life of 10 years, based on expected product innovations in the market. Prepare Taylor Swift's journal entries to record the purchase of the patent and 2025 amortization.

BE11.2 (LO 1) Use the information provided in BE11.1. Assume that at January 1, 2027, the carrying amount of the patent on Taylor Swift's books is $43,200. In January, Taylor Swift spends $24,000 successfully defending a patent suit. Taylor Swift still feels the patent will be useful until the end of 2034. Prepare the journal entries to record the $24,000 expenditure and 2027 amortization.

BE11.3 (LO 1, 2) Stephen Curry, Inc., spent $68,000 in attorney fees while developing the trade name of its new product, the Mean Bean Machine. Prepare the journal entries to record the $68,000 expenditure and the first year's amortization, using an 8-year life.

BE11.4 (LO 1, 2) Gershwin Corporation obtained a franchise from Sonic Hedgehog Inc. for a cash payment of $120,000 on April 1, 2025. The franchise grants Gershwin the right to sell certain products and services for a period of 8 years. Prepare Gershwin's April 1 journal entry and December 31 adjusting entry.

BE11.5 (LO 3) On September 1, 2025, Winans Corporation acquired Aumont Enterprises for a cash payment of $700,000. At the time of purchase, Aumont's balance sheet showed assets of $620,000, liabilities of $200,000, and stockholders' equity of $420,000. The fair value of Aumont's assets is estimated to be $800,000. Compute the amount of goodwill recorded by Winans in the acquisition.

BE11.6 (LO 1) Kenoly Corporation owns a patent that has a carrying amount of $300,000. Kenoly expects future net cash flows from this patent to total $210,000. The fair value of the patent is $110,000. Prepare Kenoly's journal entry, if necessary, to record the loss on impairment.

BE11.7 (LO 3) Waters Corporation purchased Johnson Company 3 years ago and at that time recorded goodwill of $400,000. The Johnson Division's net assets, including the goodwill, have a carrying amount of $800,000. The fair value of the division is estimated to be $1,000,000. Prepare Waters' journal entry, if necessary, to record impairment of the goodwill.

BE11.8 (LO 3) Use the information provided in BE11.7. Assume that the fair value of the division is estimated to be $750,000. Prepare Waters' journal entry, if necessary, to record impairment of the goodwill.

BE11.9 (LO 1, 2) Nieland Industries had one patent recorded on its books as of January 1, 2025. This patent had a book value of $288,000 and a remaining useful life of 8 years. During 2025, Nieland incurred research and development costs of $96,000 and brought a patent infringement suit against a competitor. On December 1, 2025, Nieland received the good news that its patent was valid and that its competitor could not use the process Nieland had patented. The company incurred $85,000 to defend this patent. At what amount should patent(s) be reported on the December 31, 2025, balance sheet, assuming monthly amortization of patents?

BE11.10 (LO 1, 2) Sinise Industries acquired two copyrights during 2025. One copyright related to a textbook that was developed internally at a cost of $9,900. This textbook is estimated to have a useful life of 3 years from September 1, 2025, the date it was published. The second copyright (a history research textbook) was purchased from University Press on December 1, 2025, for $24,000. This textbook has an indefinite useful life. How should these two copyrights be reported on Sinise's balance sheet as of December 31, 2025?

BE11.11 (LO 4) R. Wilson Corporation commenced operations in early 2025. The corporation incurred $60,000 of costs such as fees to underwriters, legal fees, state fees, and promotional expenditures during its formation. Prepare journal entries to record the $60,000 expenditure and 2025 amortization, if any.

BE11.12 (LO 4) Treasure Land Corporation incurred the following costs in 2025.

Cost of laboratory research aimed at discovery of new knowledge	$120,000
Cost of testing in search for product alternatives	100,000
Cost of engineering activity required to advance the design of a product to the manufacturing stage	210,000
	$430,000

Prepare the necessary 2025 journal entry or entries for Treasure Land.

BE11.13 (LO 4) Indicate whether the following items are capitalized or expensed in the current year.

a. Purchase cost of a patent from a competitor.

b. Research and development costs.

c. Organizational costs.

d. Costs incurred internally to create goodwill.

Exercises

E11.1 (LO 1, 4) (Classification Issues—Intangibles) The following is a list of items that could be included in the intangible assets section of the balance sheet.

1. Investment in a subsidiary company.
2. Timberland.
3. Cost of engineering activity required to advance the design of a product to the manufacturing stage.
4. Lease prepayment (6 months' rent paid in advance).
5. Cost of equipment obtained.

6. Cost of searching for applications of new research findings.
7. Costs incurred in the formation of a corporation.
8. Operating losses incurred in the start-up of a business.
9. Training costs incurred in start-up of new operation.
10. Purchase cost of a franchise.
11. Goodwill generated internally.
12. Cost of testing in search for product alternatives.
13. Goodwill acquired in the purchase of a business.
14. Cost of developing a patent.
15. Cost of purchasing a patent from an inventor.
16. Legal costs incurred in securing a patent.
17. Unrecovered costs of a successful legal suit to protect the patent.
18. Cost of conceptual formulation of possible product alternatives.
19. Cost of purchasing a copyright.
20. Research and development costs.
21. Long-term receivables.
22. Cost of developing a trademark.
23. Cost of purchasing a trademark.

Instructions

a. Indicate which items on the list above would generally be reported as intangible assets in the balance sheet.

b. Indicate how, if at all, the items not reportable as intangible assets would be reported in the financial statements.

E11.2 (LO 1, 2) (Classification Issues—Intangibles) Presented below is selected information related to Martin Burke Inc. at year-end. All these accounts have debit balances.

Cable television franchises	Film contract rights
Music copyrights	Customer lists
Research and development costs	Prepaid expenses
Goodwill	Covenants not to compete
Cash	Brand names
Discount on notes payable	Notes receivable
Accounts receivable	Investments in affiliated companies
Property, plant, and equipment	Organization costs
Internet domain name	Land

Instructions

Identify which items should be classified as an intangible asset. For those items not classified as an intangible asset, indicate where they would be reported in the financial statements.

E11.3 (LO 1, 3, 4) Excel (Classification Issues—Intangible Assets) Joni Hyde Inc. has the following amounts reported in its general ledger at the end of the current year.

Organization costs	$24,000
Trademarks	15,000
Discount on bonds payable	35,000
Deposits with advertising agency for ads to promote goodwill of company	10,000
Excess of cost over fair value of net identifiable assets of acquired subsidiary	75,000
Cost of equipment acquired for research and development projects; the equipment has an alternative future use	90,000
Costs of developing a secret formula for a product that is expected to be marketed for at least 20 years	80,000

Instructions

a. On the basis of the information above, compute the total amount to be reported by Hyde for intangible assets on its balance sheet at year-end.

b. If an item is not to be included in intangible assets, explain its proper treatment for reporting purposes.

E11.4 (LO 1, 2, 4) (Intangible Amortization) The following is selected information for Alatorre Company.

1. Alatorre purchased a patent from Vania Co. for $1,000,000 on January 1, 2023. The patent is being amortized over its remaining legal life of 10 years, expiring on January 1, 2033. During 2025, Alatorre determined that the economic benefits of the patent would not last longer than 6 years from the date of acquisition. What amount should be reported in the balance sheet for the patent, net of accumulated amortization, at December 31, 2025?
2. Alatorre bought a franchise from Alexander Co. on January 1, 2024, for $400,000. The carrying amount of the franchise on Alexander's books on January 1, 2024, was $400,000. The franchise agreement had an estimated useful life of 30 years. Because Alatorre must enter a competitive bidding at the end of 2026, it is unlikely that the franchise will be retained beyond 2033. What amount should be amortized for the year ended December 31, 2025?
3. On January 1, 2025, Alatorre incurred organization costs of $275,000. What amount of organization expense should be reported in 2025?
4. Alatorre purchased the license for distribution of a popular consumer product on January 1, 2025, for $150,000. It is expected that this product will generate cash flows for an indefinite period of time. The license has an initial term of 5 years but by paying a nominal fee, Alatorre can renew the license indefinitely for successive 5-year terms. What amount should be amortized for the year ended December 31, 2025?

Instructions

Answer the questions asked about each of the factual situations.

E11.5 (LO 1, 2, 4) (Correct Intangible Assets Account) As the recently appointed auditor for Bryan Corporation, you have been asked to examine selected accounts before the 6-month financial statements of June 30, 2025, are prepared. The controller for Bryan Corporation mentions that only one account is kept for intangible assets. The account is shown below.

Intangible Assets

		Debit	Credit	Balance
Jan. 4	Research and development costs	940,000		940,000
Jan. 5	Legal costs to obtain patent	75,000		1,015,000
Jan. 31	Payment of 7 months' rent on property leased by Bryan	91,000		1,106,000
Feb. 11	Premium on common stock		250,000	856,000
March 31	Unamortized bond discount on bonds due March 31, 2045	84,000		940,000
April 30	Promotional expenses related to start-up of business	207,000		1,147,000
June 30	Operating losses for first 6 months	241,000		1,388,000

Instructions

Prepare the entry or entries necessary to correct this account. Assume that the patent has a useful life of 10 years.

E11.6 (LO 1, 2, 4) Excel (Recording and Amortization of Intangibles) Marshall Company, organized in 2024, has set up a single account for all intangible assets. The following summary discloses the debit entries that have been recorded during 2025.

1/2/25	Purchased patent (8-year life)	$ 350,000
4/1/25	Purchase goodwill (indefinite life)	360,000
7/1/25	Purchased franchise with 10-year life; expiration date 7/1/35	450,000
8/1/25	Payment of copyright (5-year life)	156,000
9/1/25	Research and development costs	215,000
		$1,531,000

Instructions

Prepare the necessary entries to clear the Intangible Assets account and to set up separate accounts for distinct types of intangibles. Make the entries as of December 31, 2025, recording any necessary amortization and reflecting all balances accurately as of that date. (Use straight-line amortization.)

E11.7 (LO 1, 2) (Accounting for Trade Name) In early January 2024, Outkast Corporation applied for a trade name, incurring legal costs of $16,000. In January 2025, Outkast incurred $7,800 of legal fees in a successful defense of its trade name.

Instructions

a. Compute 2024 amortization, 12/31/24 book value, 2025 amortization, and 12/31/25 book value if the company amortizes the trade name over 10 years.

b. Compute the 2025 amortization and the 12/31/25 book value, assuming that at the beginning of 2025, Outkast determines that the trade name will provide no future benefits beyond December 31, 2028.

c. Ignoring the response for part (b), compute the 2026 amortization and the 12/31/26 book value, assuming that at the beginning of 2026, based on new market research, Outkast determines that the fair value of the trade name is $15,000. Estimated total future cash flows from the trade name is $16,000 on January 3, 2026.

E11.8 (LO 1, 2, 4) (Accounting for Patents, Franchises, and R&D) Carter Company has provided information on intangible assets as follows.

A patent was purchased from Ford Company for $2,000,000 on January 1, 2024. Carter estimated the remaining useful life of the patent to be 10 years. The patent was carried in Ford's accounting records at a net book value of $2,000,000 when Ford sold it to Carter.

During 2025, a franchise was purchased from Polo Company for $480,000. In addition, 5% of revenue from the franchise must be paid to Polo. Revenue from the franchise for 2025 was $2,500,000. Carter estimates the useful life of the franchise to be 10 years and takes a full year's amortization in the year of purchase.

Carter incurred research and development costs in 2025 as follows.

Materials and equipment	$142,000
Personnel	189,000
Indirect costs	102,000
	$433,000

Carter estimates that these costs will be recouped by December 31, 2028. The materials and equipment purchased have no alternative uses.

On January 1, 2025, because of recent events in the field, Carter estimates that the remaining life of the patent purchased on January 1, 2024, is only 5 years from January 1, 2025.

Instructions

a. Prepare a schedule showing the intangibles section of Carter's balance sheet at December 31, 2025. Show supporting computations in good form.

b. Prepare a schedule showing the income statement effect (related to expenses) for the year ended December 31, 2025, as a result of the facts above. Show supporting computations in good form.

(AICPA adapted)

E11.9 (LO 1, 2, 4) (Accounting for Patents) During 2021, Winston Corporation spent $170,000 in research and development costs. As a result, a new product called the New Age Piano was patented. The patent was obtained on October 1, 2021, and had a legal life of 20 years and a useful life of 10 years. Legal costs of $18,000 related to the patent were incurred as of October 1, 2021.

Instructions

a. Prepare all journal entries required in 2021 and 2022 as a result of the transactions above.

b. On June 1, 2023, Winston spent $9,480 to successfully prosecute a patent infringement suit. As a result, the estimate of useful life was extended to 12 years from June 1, 2023. Prepare all journal entries required in 2023 and 2024.

c. In 2025, Winston determined that a competitor's product would make the New Age Piano obsolete and the patent worthless by December 31, 2026. Prepare all journal entries required in 2025 and 2026.

E11.10 (LO 1, 2, 4) (Accounting for Patents) Tones Industries has the following patents on its December 31, 2024, balance sheet.

Patent Item	Initial Cost	Date Acquired	Useful Life at Date Acquired
Patent A	$30,600	3/1/21	17 years
Patent B	$15,000	7/1/22	10 years
Patent C	$14,400	9/1/23	4 years

The following events occurred during the year ended December 31, 2025.

1. Research and development costs of $245,700 were incurred during the year.
2. Patent D was purchased on July 1 for $36,480. This patent has a useful life of 9½ years.

3. As a result of reduced demands for certain products protected by Patent B, a possible impairment of Patent B's value may have occurred at December 31, 2025. The controller for Tones estimates the expected future cash flows from Patent B will be as follows.

Year	Expected Future Cash Flows
2026	$2,000
2027	2,000
2028	2,000

The proper discount rate to be used for these flows is 8%. (Assume that the cash flows occur at the end of the year.)

Instructions

a. Compute the total carrying amount of Tones' patents on its December 31, 2024, balance sheet.

b. Compute the total carrying amount of Tones' patents on its December 31, 2025, balance sheet.

E11.11 (LO 3) (Accounting for Goodwill) Fred Moss, owner of Moss Interiors, is negotiating for the purchase of Zweifel Galleries. The following balance sheet of Zweifel is given in an abbreviated form as follows.

Zweifel Galleries
Balance Sheet
As of December 31, 2025

Assets		Liabilities and Stockholders' Equity		
Cash	$100,000	Accounts payable		$ 50,000
Land	70,000	Notes payable (long-term)		300,000
Buildings (net)	200,000	Total liabilities		350,000
Equipment (net)	175,000	Common stock	$200,000	
Copyrights (net)	30,000	Retained earnings	25,000	225,000
Total assets	$575,000	Total liabilities and stockholders' equity		$575,000

Moss and Zweifel agree that:

1. Land is undervalued by $30,000.
2. Equipment is overvalued by $5,000.

Zweifel agrees to sell the gallery to Moss for $350,000.

Instructions

Prepare the entry to record the purchase of Zweifel Galleries on Moss's books.

E11.12 (LO 1, 2, 3) (Accounting for Goodwill) On July 1, 2025, Brigham Corporation purchased Young Company by paying $250,000 cash and issuing a $100,000 note payable to Steve Young. At July 1, 2025, the balance sheet of Young Company was as follows.

Cash	$ 50,000	Accounts payable	$200,000
Accounts receivable	90,000	Stockholders' equity	235,000
Inventory	100,000		$435,000
Land	40,000		
Buildings (net)	75,000		
Equipment (net)	70,000		
Trademarks	10,000		
	$435,000		

The recorded amounts all approximate current values except for land (fair value of $60,000), inventory (fair value of $125,000), and trademarks (fair value of $15,000).

Instructions

a. Prepare the July 1 entry for Brigham Corporation to record the purchase.

b. Prepare the December 31 entry for Brigham Corporation to record amortization of intangibles. The trademark has an estimated useful life of 4 years with a residual value of $3,000.

E11.13 (LO 1, 2) (Copyright Impairment) Presented below is information related to a copyright owned by Mare Company at December 31, 2025.

Cost	$8,600,000
Carrying amount	4,300,000
Expected future net cash flows	4,000,000
Fair value	3,200,000

Assume that Mare Company will continue to use this copyright in the future. As of December 31, 2025, the copyright is estimated to have a remaining useful life of 10 years.

Instructions

a. Prepare the journal entry (if any) to record the impairment of the asset at December 31, 2025. The company does not use accumulated amortization accounts.

b. Prepare the journal entry to record amortization expense for 2026 related to the copyright.

c. The fair value of the copyright at December 31, 2026, is $3,400,000. Prepare the journal entry (if any) necessary to record the increase in fair value.

E11.14 (LO 3) (Goodwill Impairment) Presented below is net asset information related to the Carlos Division of Santana, Inc.

Carlos Division Net Assets As of December 31, 2025 (in millions)	
Cash	$ 50
Accounts receivable	200
Property, plant, and equipment (net)	2,600
Goodwill	200
Less: Notes payable	(2,700)
Net assets	$ 350

The purpose of the Carlos Division is to develop a nuclear-powered aircraft. If successful, traveling delays associated with refueling could be substantially reduced. Many other benefits would also occur. To date, management has not had much success and is deciding whether a write-down at this time is appropriate. Management estimated its future net cash flows from the project to be $400 million. Management has also received an offer to purchase the division for $335 million (deemed an appropriate fair value). All identifiable assets' and liabilities' book and fair value amounts are the same.

Instructions

a. Prepare the journal entry (if any) to record the impairment at December 31, 2025.

b. At December 31, 2026, it is estimated that the division's fair value increased to $345 million. Prepare the journal entry (if any) to record this increase in fair value.

E11.15 (LO 4) (Accounting for Organization Costs) Angelou Corporation was organized in 2024 and began operations at the beginning of 2025. The company is involved in interior design consulting services. The following costs were incurred prior to the start of operations.

Attorney fees in connection with organization of the company	$15,000
Purchase of drafting and design equipment	10,000
Costs of meetings of incorporators to discuss organizational activities	7,000
State filing fees to incorporate	1,000
	$33,000

Instructions

a. Compute the total amount of organization costs incurred by Angelou.

b. Prepare the journal entry to record organization costs for 2025.

E11.16 (LO 2, 4) (Accounting for R&D Costs) Price Company from time to time embarks on a research program when a special project seems to offer possibilities. In 2024, the company expends $325,000 on a research project, but by the end of 2024 it is impossible to determine whether any benefit will be derived from it.

Instructions

a. What account should be charged for the $325,000, and how should it be shown in the financial statements?

b. The project is completed in 2026, and a successful patent is obtained. The R&D costs to complete the project are $110,000. The administrative and legal expenses incurred in obtaining patent number 472-1001-84 in 2025 total $16,000. The patent has an expected useful life of 5 years. Record these costs in journal entry form. Also, record patent amortization (full year) in 2025.

c. In 2026, the company successfully defends the patent in extended litigation at a cost of $47,200, thereby extending the patent life to December 31, 2033. What is the proper way to account for this cost? Also, record patent amortization (full year) in 2026.

d. Additional engineering and consulting costs incurred in 2026 required to advance the design of a product to the manufacturing stage total $60,000. These costs enhance the design of the product considerably. Discuss the proper accounting treatment for this cost.

E11.17 (LO 4) (Accounting for R&D Costs) More Company incurred the following costs during the current year in connection with its research and development activities.

Cost of equipment acquired that will have alternative uses in future R&D projects over the next 5 years (uses straight-line depreciation)	$280,000
Materials consumed in R&D projects	59,000
Consulting fees paid to outsiders for R&D projects	100,000
Personnel costs of persons involved in R&D projects	128,000
Indirect costs reasonably allocable to R&D projects	50,000
Materials purchased for future R&D projects	34,000

Instructions

Compute the amount to be reported as research and development expense by More on its current year income statement. Assume equipment is purchased at the beginning of the year.

Problems

P11.1 (LO 1, 2, 3, 4) Groupwork (Correct Intangible Assets Account) Reichenbach Co., organized in 2024, has set up a single account for all intangible assets. The following summary discloses the debit entries that have been recorded during 2025 and 2026.

Intangible Assets

7/1/25	8-year franchise; expiration date 6/30/33	$ 48,000
10/1/25	Advance payment on laboratory space (2-year lease)	24,000
12/31/25	Net loss for 2025 including state incorporation fee, $1,000, and related legal fees of organizing, $5,000 (all fees incurred in 2025)	16,000
1/2/26	Patent purchased (10-year life)	84,000
3/1/26	Cost of developing a secret formula (indefinite life)	75,000
4/1/26	Goodwill purchased (indefinite life)	278,400
6/1/26	Legal fee for successful defense of patent purchased above	12,650
9/1/26	Research and development costs	160,000

Instructions

Prepare the necessary entries to clear the Intangible Assets account and to set up separate accounts for distinct types of intangibles. Make the entries as of December 31, 2026, recording any necessary amortization and reflecting all balances accurately as of that date. (Ignore income tax effects.)

P11.2 (LO 1, 2, 4) Excel (Accounting for Patents) Fields Laboratories holds a valuable patent (No. 758-6002-1A) on a precipitator that prevents certain types of air pollution. Fields does not manufacture or sell the products and processes it develops. Instead, it conducts research and develops products and processes which it patents, and then assigns the patents to manufacturers on a royalty basis. Occasionally it sells a patent. The history of Fields patent number 758-6002-1A is as follows.

Date	Activity	Cost
2016–2017	Research conducted to develop precipitator	$384,000
Jan. 2018	Design and construction of a prototype	87,600
March 2018	Testing of models	42,000
Jan. 2019	Fees paid engineers and lawyers to prepare patent application; patent granted June 30, 2019	59,500
Nov. 2020	Engineering activity necessary to advance the design of the precipitator to the manufacturing stage	81,500
Dec. 2021	Legal fees paid to successfully defend precipitator patent	42,000
April 2022	Research aimed at modifying the design of the patented precipitator	43,000
July 2026	Legal fees paid in unsuccessful patent infringement suit against a competitor	34,000

Fields assumed a useful life of 17 years when it received the initial precipitator patent. On January 1, 2024, it revised its useful life estimate downward to 5 remaining years. Amortization is computed for a full year if the cost is incurred prior to July 1, and no amortization for the year if the cost is incurred after June 30. The company's year ends December 31.

Instructions

Compute the carrying value of patent No. 758-6002-1A on each of the following dates:

a. December 31, 2019.

b. December 31, 2023.

c. December 31, 2026.

P11.3 (LO 1, 2, 4) (Accounting for Franchise, Patents, and Trademark) Information concerning Sandro Corporation's intangible assets is as follows.

1. On January 1, 2025, Sandro signed an agreement to operate as a franchisee of Hsian Copy Service, Inc. for an initial franchise fee of $75,000. Of this amount, $15,000 was paid when the agreement was signed, and the balance is payable in 4 annual payments of $15,000 each, beginning January 1, 2026. The agreement provides that the down payment is not refundable and no future services are required of the franchisor. The present value at January 1, 2025, of the 4 annual payments discounted at 14% (the implicit rate for a loan of this type) is $43,700. The agreement also provides that 5% of the revenue from the franchise must be paid to the franchisor annually. Sandro's revenue from the franchise for 2025 was $900,000. Sandro estimates the useful life of the franchise to be 10 years. (*Hint:* You may want to refer to Chapter 18 to determine the proper accounting treatment for the franchise fee and payments.)
2. Sandro incurred $65,000 of experimental and development costs in its laboratory to develop a patent that was granted on January 2, 2025. Legal fees and other costs associated with registration of the patent totaled $17,600. Sandro estimates that the useful life of the patent will be 8 years.
3. A trademark was purchased from Shanghai Company for $36,000 on July 1, 2022. Expenditures for successful litigation in defense of the trademark totaling $10,200 were paid on July 1, 2025. Sandro estimates that the useful life of the trademark will be 20 years from the date of acquisition.

Instructions

a. Prepare a schedule showing the intangible assets section of Sandro's balance sheet at December 31, 2025. Show supporting computations in good form.

b. Prepare a schedule showing all expenses resulting from the transactions that would appear on Sandro's income statement for the year ended December 31, 2025. Show supporting computations in good form.

(AICPA adapted)

P11.4 (LO 3) Groupwork (Goodwill, Impairment) On July 31, 2025, Mexico Company paid $3,000,000 to acquire all of the common stock of Conchita Incorporated, which became a division (a reporting unit) of Mexico. Conchita reported the following balance sheet at the time of the acquisition.

Current assets	$ 800,000	Current liabilities	$ 600,000
Noncurrent assets	2,700,000	Long-term liabilities	500,000
Total assets	$3,500,000	Stockholders' equity	2,400,000
		Total liabilities and stockholders' equity	$3,500,000

It was determined at the date of the purchase that the fair value of the identifiable net assets of Conchita was $2,750,000. Over the next 6 months of operations, the newly purchased division experienced operating losses. In addition, it now appears that it will generate substantial losses for the foreseeable future. At December 31, 2025, Conchita reports the following balance sheet information.

Current assets	$ 450,000
Noncurrent assets (including goodwill recognized in purchase)	2,400,000
Current liabilities	(700,000)
Long-term liabilities	(500,000)
Net assets	$1,650,000

Finally, it is determined that the fair value of the Conchita Division is $1,850,000.

Instructions

a. Compute the amount of goodwill recognized, if any, on July 31, 2025.

b. Determine the impairment loss, if any, to be recorded on December 31, 2025.

c. Assume that fair value of the Conchita Division is $1,600,000 instead of $1,850,000. Determine the impairment loss, if any, to be recorded on December 31, 2025.

d. Prepare the journal entry to record the impairment loss, if any, and indicate where the loss would be reported in the income statement.

P11.5 (LO 1, 2, 3, 4) Excel (Comprehensive Intangible Assets) Montana Matt's Golf Inc. was formed on July 1, 2024, when Matt Magilke purchased the Old Master Golf Company. Old Master provides video golf instruction at kiosks in shopping malls. Magilke plans to integrate the instructional business into his golf equipment and accessory stores. Magilke paid $770,000 cash for Old Master. At the time, Old Master's balance sheet reported assets of $650,000 and liabilities of $200,000 (thus stockholders' equity was $450,000). The fair value of Old Master's assets is estimated to be $800,000. Included in the assets is the Old Master trade name with a fair value of $10,000 and a copyright on some instructional books with a fair value of $24,000. The trade name has a remaining life of 5 years and can be renewed at nominal cost indefinitely. The copyright has a remaining life of 40 years.

Instructions

a. Prepare the intangible assets section of Montana Matt's Golf Inc. at December 31, 2024. How much amortization expense is included in Montana Matt's income for the year ended December 31, 2024? Show all supporting computations.

b. Prepare the journal entry to record amortization expense for 2025. Prepare the intangible assets section of Montana Matt's Golf Inc. at December 31, 2025. (No impairments are required to be recorded in 2025.)

c. At the end of 2026, Magilke is evaluating the results of the instructional business. Due to fierce competition from online and television (e.g., the Golf Channel), the Old Master reporting unit has been losing money. The fair value of the Old Master reporting unit is $420,000. Magilke has collected the following information related to the company's intangible assets.

Intangible Asset	Expected Cash Flows (undiscounted)	Fair Values
Trade names	$ 9,000	$ 3,000
Copyrights	30,000	25,000

Prepare the journal entries required, if any, to record impairments on Montana Matt's intangible assets. Assume that any amortization for 2026 has been recorded and that the carrying value of the reporting unit is $500,000 (which reflects recognition of any impairments other than goodwill). Show supporting computations.

P11.6 (LO 2, 4) (Accounting for R&D Costs) During 2023, Wright Tool Company purchased a building site for its proposed research and development laboratory at a cost of $60,000. Construction of the building was started in 2023. The building was completed on December 31, 2024, at a cost of $320,000 and was placed in service on January 2, 2025. The estimated useful life of the building for depreciation purposes was 20 years. The straight-line method of depreciation was to be employed, and there was no estimated residual value.

Management estimates that about 50% of the projects of the research and development group will result in long-term benefits (i.e., at least 10 years) to the corporation. The remaining projects either benefit the current period or are abandoned before completion. A summary of the number of projects and the direct costs incurred in conjunction with the research and development activities for 2025 appears below.

	Number of Projects	Salaries and Employee Benefits	Other Expenses (excluding Building Depreciation Charges)
Completed projects with long-term benefits	15	$ 90,000	$50,000
Abandoned projects or projects that benefit the current period	10	65,000	15,000
Projects in process—results indeterminate	5	40,000	12,000
Total	30	$195,000	$77,000

Upon recommendation of the research and development group, Wright Tool Company acquired a patent for manufacturing rights at a cost of $88,000. The patent was acquired on April 1, 2024, and has an economic life of 10 years.

Instructions

If generally accepted accounting principles were followed, how would the items above relating to research and development activities be reported on the following financial statements?

a. The company's income statement for 2025.

b. The company's balance sheet as of December 31, 2025.

Be sure to give account titles and amounts, and briefly justify your presentation.

(CMA adapted)

Using Your Judgement

Financial Reporting Problem: The Procter & Gamble Company (P&G)

UYJ11.1 The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

a. Does P&G report any intangible assets, especially goodwill, in its 2020 financial statements and accompanying notes?

b. How much research and development (R&D) cost was expensed by P&G in 2019 and 2020? What percentage of sales revenue and net income did P&G spend on R&D in 2019 and 2020?

Comparative Analysis Case: The Coca-Cola Company and PepsiCo, Inc.

UYJ11.2 The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

a. **1.** What amounts for intangible assets were reported in their respective balance sheets by Coca-Cola and PepsiCo at year-end 2020?

2. What percentage of total assets is each of these reported amounts at year-end 2020?

3. What was the change in the amount of intangibles from 2019 to 2020 for Coca-Cola and PepsiCo?

b. **1.** On what basis and over what periods of time did Coca-Cola and PepsiCo amortize their intangible assets?

2. What were the amounts of accumulated amortization reported by Coca-Cola and PepsiCo at the end of 2019 and 2020?

3. What was the composition of the infinite-life and indefinite-life intangible assets reported by Coca-Cola and PepsiCo at the end of 2020?

Financial Statement Analysis Case: Merck and Johnson & Johnson

UYJ11.3 **Merck** and **Johnson & Johnson** are two leading producers of healthcare products. Each has considerable assets, and each expends considerable funds each year toward the development of new products. The development of a new healthcare product is often very expensive, and risky. New products frequently must undergo considerable testing before approval for distribution to the public. For example, it took Johnson & Johnson 4 years and $200 million to develop its 1-DAY ACUVUE® contact lenses. Below are some basic data compiled from the financial statements of these two companies (all dollars in millions).

	Johnson & Johnson	Merck
Total assets	$53,317	$42,573
Total revenue	47,348	22,939
Net income	8,509	5,813
Research and development expense	5,203	4,010
Intangible assets	11,842	2,765

Instructions

a. What kinds of intangible assets might a healthcare products company have? Does the composition of these intangibles matter to investors—that is, would it be perceived differently if all of Merck's intangibles were goodwill than if all of its intangibles were patents?

b. Suppose the president of Merck has come to you for advice. He has noted that by eliminating research and development expenditures the company could have reported $4 billion more in net income. He is frustrated because much of the research never results in a product, or the products take years to develop. He says shareholders are eager for higher returns, so he is considering eliminating research and development expenditures for at least a couple of years. What would you advise?

c. The notes to Merck's financial statements note that Merck has goodwill of $1.1 billion. Where does recorded goodwill come from? Is it necessarily a good thing to have a lot of goodwill on a company's books?

Financial Statement Analysis Case: Analysis of Goodwill

UYJ11.4 As a new intern for the local branch office of a national brokerage firm, you are excited to get an assignment that allows you to use your accounting expertise. Your supervisor provides you with the spreadsheet below, which contains data for the most recent quarter for three companies that the firm has been recommending to its clients as "buys." Each of the companies' returns on assets has outperformed their industry cohorts in the past. But, given recent challenges in their markets, there is concern that the companies may experience operating challenges and lower earnings. (All numbers in millions, except return on assets.)

	A	B	C	D	E
1	**Company**	**Fair Value of Company**	**Book Value (Net Assets Including Goodwill)**	**Carrying Value of Goodwill**	**Return on Assets**
2	**Sprint Nextel**	$36,361	$51,271	$30,718	3.5%
3	**Washington Mutual**	11,742	23,941	9,062	2.4
4	**E* Trade Financial**	1,639	4,104	2,035	5.6

Sheet1

Instructions

a. The fair value for each of these companies is lower than the corresponding book value. What implications does this have for each company's future prospects?

b. To date, none of these companies has recorded goodwill impairments. Your supervisor suspects that they will need to record impairments in the near future, but he is unsure about the goodwill impairment rules. Is it likely that these companies will recognize impairments? Explain.

c. Estimate the amount of goodwill impairment for each company and indicate how to record the impairment.

d. Discuss the effects of your entries in part (c) on your evaluation of these companies based on the return on assets ratio.

Accounting, Analysis, and Principles

UYJ11.5 On January 2, 2025, Raconteur Corp. reported the following intangible assets: (1) copyright with a carrying value of $15,000, and (2) a trade name with a carrying value of $8,500. The trade name has a remaining life of 5 years and can be renewed at nominal cost indefinitely. The copyright has a remaining life of 10 years.

At December 31, 2025, Raconteur assessed the intangible assets for possible impairment and developed the following information.

	Estimated Undiscounted Expected Future Cash Flows	Estimated Fair Value
Copyright	$20,000	$16,000
Trade name	10,000	5,000

Accounting

Prepare any journal entries required for Raconteur's intangible assets at December 31, 2025.

Analysis

Many stock analysts indicate a preference for less-volatile operating income measures. Such measures make it easier to predict future income and cash flows, using reported income measures. How does the accounting for impairments of intangible assets affect the volatility of operating income?

Principles

Many accounting issues involve a trade-off between the primary characteristics of relevant and representationally faithful information. How does the accounting for intangible asset impairments reflect this trade-off?

Developing Your Professional Skills

Critical-Thinking Cases

CT11.1 (LO 4) (Accounting for Pre-Opening Costs) After securing lease commitments from several major stores, Auer Shopping Center, Inc. was organized and built a shopping center in a growing suburb.

The shopping center would have opened on schedule on January 1, 2025, if it had not been struck by a severe tornado in December. Instead, it opened for business on October 1, 2025. All of the additional construction costs that were incurred as a result of the tornado were covered by insurance.

In July 2024, in anticipation of the scheduled January opening, a permanent staff had been hired to promote the shopping center, obtain tenants for the uncommitted space, and manage the property.

A summary of some of the costs incurred in 2024 and the first nine months of 2025 follows.

	2024	January 1, 2025 through September 30, 2025
Interest on mortgage bonds	$720,000	$540,000
Cost of obtaining tenants	300,000	360,000
Promotional advertising	540,000	557,000

The promotional advertising campaign was designed to familiarize shoppers with the center. Had it been known in time that the center would not open until October 2025, the 2024 expenditure for promotional advertising would not have been made. The advertising had to be repeated in 2025.

All of the tenants who had leased space in the shopping center at the time of the tornado accepted the October occupancy date on condition that the monthly rental charges for the first 9 months of 2025 be canceled.

Instructions

Explain how each of the costs for 2024 and the first 9 months of 2025 should be treated in the accounts of the shopping center corporation. Give the reasons for each treatment.

(AICPA adapted)

CT11.2 (LO 1, 2) Writing (Accounting for Patents) On June 30, 2025, your client, Ferry Company, was granted two patents covering plastic cartons that it had been producing and marketing profitably for the past 3 years. One patent covers the manufacturing process, and the other covers the related products.

Ferry executives tell you that these patents represent the most significant breakthrough in the industry in the past 30 years. The products have been marketed under the registered trademarks Evertight, Duratainer, and Sealrite. Licenses under the patents have already been granted by your client to other manufacturers in the United States and abroad, and are producing substantial royalties.

On July 1, Ferry commenced patent infringement actions against several companies whose names you recognize as those of substantial and prominent competitors. Ferry's management is optimistic that these suits will result in a permanent injunction against the manufacture and sale of the infringing products as well as collection of damages for loss of profits caused by the alleged infringement.

The financial vice president has suggested that the patents be recorded at the discounted value of expected net royalty receipts.

Instructions

a. What is the meaning of "discounted value of expected net receipts"? Explain.

b. How would such a value be calculated for net royalty receipts?

c. What basis of valuation for Ferry's patents would be generally accepted in accounting? Give supporting reasons for this basis.

d. Assuming no practical problems of implementation and ignoring generally accepted accounting principles, what is the preferable basis of valuation for patents? Explain.

e. What would be the preferable theoretical basis of amortization? Explain.

f. What recognition, if any, should be made of the infringement litigation in the financial statements for the year ending September 30, 2025? Discuss.

(AICPA adapted)

CT11.3 (LO 4) Writing (Accounting for Research and Development Costs) Cuevas Co. is in the process of developing a revolutionary new product. A new division of the company was formed to develop, manufacture, and market this new product. As of year-end (December 31, 2025), the new product has not been manufactured for resale. However, a prototype unit was built and is in operation.

Throughout 2025, the new division incurred certain costs. These costs include design and engineering studies, prototype manufacturing costs, administrative expenses (including salaries of administrative

personnel), and market research costs. In addition, approximately $900,000 in equipment (with an estimated useful life of 10 years) was purchased for use in developing and manufacturing the new product. Approximately $315,000 of this equipment was built specifically for the design development of the new product. The remaining $585,000 of equipment was used to manufacture the pre-production prototype and will be used to manufacture the new product once it is in commercial production.

Instructions

a. How are "research" and "development" defined in the authoritative literature (GAAP)?

b. Briefly indicate the practical and conceptual reasons for the conclusion reached by the Financial Accounting Standards Board on accounting and reporting practices for research and development costs.

c. In accordance with GAAP, how should the various costs of Cuevas described above be recorded on the financial statements for the year ended December 31, 2025?

(AICPA adapted)

CT11.4 (LO 4) Ethics (Accounting for Research and Development Costs) Czeslaw Corporation's research and development department has an idea for a project it believes will culminate in a new product that would be very profitable for the company. Because the project will be very expensive, the department requests approval from the company's controller, Jeff Reid.

Reid recognizes that corporate profits have been down lately and is hesitant to approve a project that will incur significant expenses that cannot be capitalized due to the requirements of the authoritative literature. He knows that if they hire an outside firm that does the work and obtains a patent for the process, Czeslaw Corporation can purchase the patent from the outside firm and record the expenditure as an asset. Reid knows that the company's own R&D department is first-rate, and he is confident they can do the work well.

Instructions

Answer the following questions.

a. Who are the stakeholders in this situation?

b. What are the ethical issues involved?

c. What should Reid do?

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE11.1 Access the Codification glossary ("Master Glossary") to answer the following.

a. What is the definition provided for an intangible asset?

b. What is the definition of goodwill?

c. What is the definition of research and development (R&D)?

CE11.2 Your friend Harry does not understand the concept of an indefinite-life intangible asset. He wonders, "Does this mean the life is infinite?" What does the authoritative literature say about indefinite-life intangible assets?

CE11.3 What guidance does the Codification provide concerning the disclosure of research and development (R&D) costs?

CE11.4 What is the nature of the authoritative guidance for advertising costs for entertainment companies?

Codification Research Case

King Company is contemplating the purchase of a smaller company, which is a distributor of King's products. Top management of King is convinced that the acquisition will result in significant synergies in its selling and distribution functions. The financial management group (of which you are a part) has been asked to prepare some analysis of the effects of the acquisition on the combined company's financial statements. This is the first acquisition for King, and some of the senior staff insist that based on their recollection of goodwill accounting, any goodwill recorded on the acquisition will result in a "drag" on future earnings for goodwill amortization. Other younger members on the staff argue that goodwill accounting has changed. Your supervisor asks you to research this issue.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

a. Identify the accounting literature that addresses goodwill and other intangible assets.

b. Define goodwill.

c. Is goodwill subject to amortization? Explain.

d. What is the quantitative impairment test? Are defined taxes considered in the test? Explain.

Additional Professional Resources

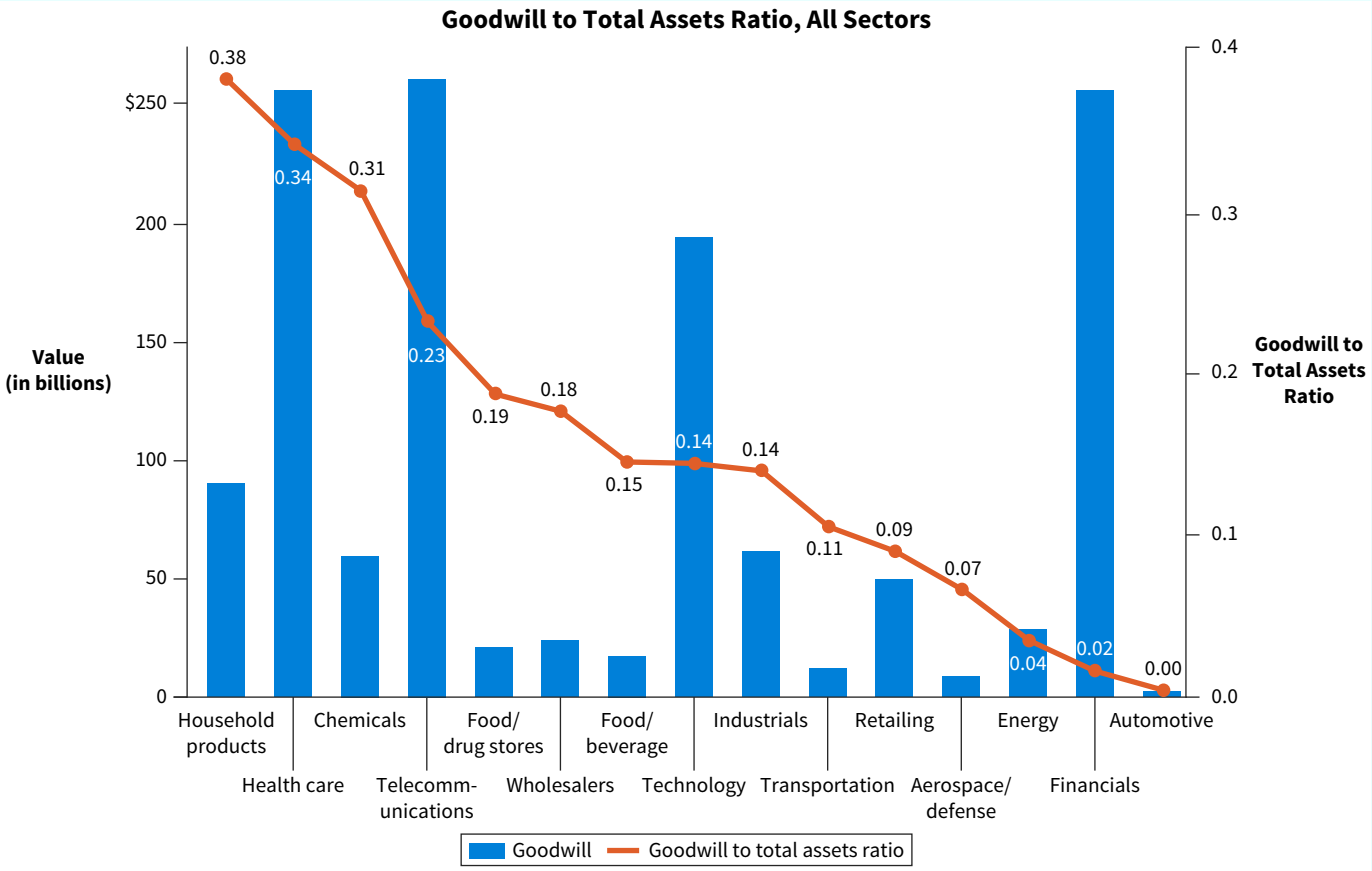
Go to Wiley Course Resources for other career-readiness resources, such as career coaching, internship opportunities, and CPAexcel prep.

Analytics in Action Activities

Using Data Visualizations to Understand Trends in Goodwill

DA11.1 For some companies, goodwill can represent a significant portion of their total assets. Understanding trends in goodwill over time and across different industries can help managers accurately value goodwill on their balance sheet and report any potential impairments.

Using data visualizations like the following graph can help managers easily track these trends in goodwill over time and benchmark against other industries.



Required

For this exercise, you will assume the role of a financial analyst charged with understanding goodwill for purposes of impairment testing. To help you better understand goodwill behaviors, you will use a dashboard of visualizations to answer questions about goodwill balances across different industry sectors and specific companies.

Go to Wiley Course Resources for complete details and instructions.

DA11.2 Data visualizations not only allow us to compare and contrast various financial metrics, like goodwill relative to total assets, but they allow managers to formulate insights around the behavior of an item like goodwill and how that will impact the financial statements.

Required

Using the data visualizations from DA11.1, you will consider what factors may have contributed to changes in the goodwill balances for select companies and the impact of those changes on their financial statements.

Go to Wiley Course Resources for complete details and instructions.

Using Data Analytics for Goodwill Ratio Analysis

Excel

DA11.3 Evaluating trends in financial statement metrics over time and benchmarking those results against other companies can provide helpful insights into a company's own financial outlook. Excel allows us to pull publicly available financial data from other companies, calculate ratios, and even graph those results to visualize important relationships among the data.

Required

In this exercise, you will have access to financial data from more than 20 public companies across different industries. Using Excel, you will calculate various ratios related to each company's goodwill, sort the results, and create a report that summarizes your analysis.

Go to Wiley Course Resources for complete details and instructions.

IFRS Insights

LEARNING OBJECTIVE 5

Compare the accounting for intangible assets under GAAP and IFRS.

There are some significant differences between IFRS and GAAP in the accounting for both intangible assets and impairments. IFRS related to intangible assets is presented in *IAS 38* ("Intangible Assets"). IFRS related to impairments is found in *IAS 36* ("Impairment of Assets"). Following are the key similarities and differences between GAAP and IFRS related to intangible assets.

Similarities

- Like GAAP, under IFRS intangible assets (1) lack physical substance and (2) are not financial instruments. In addition, under IFRS an intangible asset is identifiable. To be identifiable, an intangible asset must either be separable from the company (can be sold or transferred) or it arises from a contractual or legal right from which economic benefits will flow to the company. Fair value is used as the measurement basis for intangible assets under IFRS, if it is more clearly evident.
- With issuance of a converged statement on business combinations (*IFRS 3* and *SFAS No. 141—Revised*), IFRS and GAAP are very similar for intangibles acquired in a business combination. That is, companies recognize an intangible asset separately from goodwill if the intangible represents contractual or legal rights or is capable of being separated or divided and sold, transferred, licensed, rented, or exchanged. In addition, under both GAAP and IFRS, companies recognize acquired in-process research and development (IPR&D) as a separate intangible asset if it meets the definition of an intangible asset and its fair value can be measured reliably.
- As in GAAP, under IFRS the costs associated with research and development are segregated into the two components. Costs in the research phase are always expensed under both IFRS and GAAP.

Differences

- IFRS permits revaluation of limited-life intangible assets. Revaluations are not permitted for goodwill and other indefinite-life intangible assets.
- IFRS permits some capitalization of internally generated intangible assets (e.g., brand value) if it is probable there will be a future benefit and the amount can be reliably measured. GAAP requires expensing of all costs associated with internally generated intangibles.
- IFRS requires an impairment test at each reporting date for long-lived assets and intangibles, and records an impairment if the asset's carrying amount exceeds its recoverable amount. The recoverable amount is the higher of the asset's fair value less costs to sell and its value-in-use. **Value-in-use** is the future cash flows to be derived from the particular assets, discounted to present value. Under GAAP, impairment loss is measured as the excess of the carrying amount over the asset's fair value.
- IFRS allows reversal of impairment losses when there has been a change in economic conditions or in the expected use of limited-life intangibles. (Reversals of goodwill impairments are not allowed.) Under GAAP, impairment losses cannot be reversed for assets to be held and used; the impairment loss results in a new cost basis for the asset. IFRS and GAAP are similar in the accounting for impairments of assets held for disposal.
- Under IFRS, costs in the development phase of a research and development project are capitalized once technological feasibility (referred to as **economic viability**) is achieved.

CHAPTER 12

© Sarath maroli / Shutterstock

Current Liabilities and Contingencies

WHAT are current liabilities?

Current liabilities are defined as "obligations whose liquidation is reasonably expected to require use of existing resources properly classified as current assets or the creation of other current liabilities." Commonly reported current liabilities are those related to payables (e.g., accounts, notes, and income taxes) and unearned revenues (e.g., gift cards and customer advances).

Target Corporation
(dollars in millions)

		Feb. 1, 2020
Current assets		$12,902
Long-term assets		29,877
Total assets		$42,779
Current liabilities		
Accounts payable	**$9,920**	
Accrued and other current liabilities	**4,406**	
Current portion of long-term debt	**161**	
Total current liabilities		**14,487**
Noncurrent (Long-term) liabilities		16,459
Total liabilities		30,946
Total stockholders' equity		11,833
Total liabilities and stockholders' equity		$42,779

WHY is information about current liabilities important?

Investors and creditors are interested in a company's liquidity, which is the ability of a company to pay its current liabilities on time. Short-term liquidity ratios, such as the current ratio (current assets ÷ current liabilities), are therefore calculated when analyzing a company. For example, as indicated, Target's current ratio is less than 1 ($12,902 ÷ $14,487 = .89). This liquidity ratio indicates that Target has current liabilities (due in the next year) in excess of current assets, which could signal less-than-adequate liquidity. In general, the greater a company's liquidity, the lower its risk of failure.

HOW do we account for current liabilities?

Current liabilities are usually recorded and reported in financial statements at their full maturity value. Because of the short time periods involved, frequently less than one year, the difference between the present value of a current liability and the maturity value is usually not large. Companies record unearned revenues as current liabilities until the performance obligation is satisfied. Liabilities for contingencies are recorded when future payments are both reasonably estimable and probable.

Chapter Roadmap

LEARNING OBJECTIVES	TOPICS	REVIEW AND PRACTICE
LO 12.1 Describe the nature, valuation, and reporting of current liabilities in the form of payables.	**12.1 Current Liabilities** • Payable transactions • Employee-related payables	Examples **12.1** Accounts Payable **12.2** Interest-Bearing Note Payable **12.3** Zero-Interest-Bearing Note **12.4** Sales Taxes Payable **12.5** Income Taxes Payable **12.6** Unemployment Taxes **12.7** Employee-Related Liabilities **12.8** Vacation Pay **12.9** Bonus Payable Put It into Practice **LO 12.1** Record Payables
LO 12.2 Describe the nature, valuation, and reporting of current liabilities in the form of unearned revenues.	**12.2 Unearned Revenues** • Ticket revenue • Gift cards • Customer advances	Examples **12.10** Unearned Ticket Revenue **12.11** Gift Cards **12.12** Customer Advances Put It into Practice **LO 12.2** Record Unearned Revenues
LO 12.3 Explain the accounting for loss and gain contingencies.	**12.3 Contingencies** • Loss contingencies • Gain contingencies	Examples **12.13** Guarantee **12.14** Expropriation **12.15** Lawsuit **12.16** Assurance-Type Warranty **12.17** Warranties **12.18** Consideration Payable **12.19** Gain Contingency Put It into Practice **LO 12.3** Account for Contingencies
LO 12.4 Indicate how to present and analyze liabilities and contingencies.	**12.4 Presentation and Decision Analysis** • Presentation • Analysis	Example **12.20** Classification of Debt

Go to the **Review and Practice** section at the end of the chapter for a targeted summary review. Multiple-choice questions with annotated solutions, as well as additional exercises and practice problem with solutions, are also available in Wiley Course Resources.

12.1 Current Liabilities

LEARNING OBJECTIVE 1

Describe the nature, valuation, and reporting of current liabilities in the form of payables.

Many of you probably have an obligation to make a rent payment, a tuition payment, or a car payment. If you have one of these obligations (or something similar), you have a **liability** because you owe money to another party. Companies also have liabilities, such as accounts payable, notes payable, and salaries payable. In some cases, companies have difficulty determining whether they have a liability or not. Consider these examples:

- Astra Inc. reports as a liability "anticipated losses from pending transactions."
- Henlow Co. may be sued by a customer who was injured on Henlow's property. If sued, Henlow's attorney believes it is possible that the company may lose the suit.

What do you think? Should either of these companies record a liability? The answer is no, and here is why. For a liability to be recorded, it must meet all three of these conditions.

1. Probable future sacrifices of economic benefits (cash, goods, services).
2. Arises from present obligation (it is unavoidable).
3. The present obligation arises from a past transaction or event (occurred in the past).[1]

Using these criteria, Astra Inc. should not record a liability because "anticipated losses" have not yet occurred.

Pending transactions mean that the condition that might cause the loss has not taken place. So where is the liability? Where is the obligation? Henlow also does not have to record a liability because Henlow's attorney believes it is only possible and not probable that Henlow will lose the case. In addition, Henlow does not have a present obligation because the injured party has not yet sued.

Because liabilities involve future disbursements of assets or services, one of their most important features is the date on which they are payable. A company must satisfy currently maturing obligations in the ordinary course of business to continue operating. Liabilities with a more distant due date do not, as a rule, represent a claim on the company's current resources. They are therefore in a slightly different category. This feature gives rise to the basic division of liabilities into (1) current liabilities and (2) long-term debt.

Current liabilities are the obligations that a company reasonably expects to liquidate either through the use of current assets or the creation of other current liabilities. **[1]** (See the FASB Codification References near the end of the chapter.) This concept includes:

1. Payables resulting from the acquisition of goods and services, such as accounts payable, wages payable, taxes payable, and so on.
2. Collections received in advance for the delivery of goods or performance of services, such as unearned rent revenue or unearned subscriptions revenue.
3. Other liabilities whose liquidation will take place within the operating cycle, such as the portion of long-term bonds to be paid in the current period or short-term obligations arising from the purchase of equipment or other assets.

[1] "Elements of Financial Statements of Business Enterprises," *Statement of Financial Accounting Concepts No. 6* (Stamford, Conn.: FASB, 1980).

Payable Transactions

Accounts Payable

Accounts payable, or **trade accounts payable**, are balances owed to others for goods, supplies, or services purchased on open account. Accounts payable arise because of the time lag between the receipt of services or acquisition of assets and the payment for them. The terms of the sale (e.g., 2/10, n/30 or 1/10, E.O.M.) usually state this period of extended credit, which is commonly 30 to 60 days.

Example 12.1
Accounts Payable

FACTS Assume that **Target** purchases $800,000 of merchandise from **Clorox** to sell in its stores, terms 2/10, net30.

QUESTION What is the entry that Target should make to record the purchase of these goods, assuming it uses the perpetual inventory system?

SOLUTION

To record goods purchased on account:

Inventory	800,000	
Accounts Payable		800,000

Most companies record liabilities for purchases of goods upon receipt of the goods. If control has passed to the purchaser before receipt of the goods, the purchaser should record the transaction at the time of transfer of control.

- A company must pay special attention to transactions occurring near the end of one accounting period and at the beginning of the next.
- A company also needs to make sure that the record of goods received (the inventory) agrees with the liability (accounts payable), and that it records both in the proper period.

Measuring the amount of an account payable is straightforward. The invoice received from the vendor or creditor specifies the due date and the exact outlay in money that is necessary to settle the account. The only calculation that may be necessary concerns the amount of a purchase discount, if one is offered. We show the entries related to accounts payable and purchase discounts in Chapter 7.

Notes Payable

Notes payable are written promises to pay a certain sum of money on a specified future date. They may arise from purchases, financing, or other transactions. Some industries require notes (often referred to as **trade notes payable**) as part of the sales/purchases transaction instead of the normal extension of credit. Notes payable to banks or loan companies generally arise from cash loans. Companies classify notes as short-term or long-term, depending on the payment due date. Notes may also be interest-bearing or zero-interest-bearing.

Example 12.2
Interest-Bearing Note Payable

FACTS Assume that **Wells Fargo** agrees to lend $100,000 to **EatStreet** on March 1, 2025, if EatStreet signs a $100,000, 6%, 4-month note. Therefore, the principal and interest on the note would be due on July 1, 2025.

QUESTION What are the entries that EatStreet needs to make to record the note from March 1, 2025, through maturity?

SOLUTION

To record issuance of a 6%, 4-month note to Wells Fargo:

March 1

Cash	100,000	
Notes Payable		100,000

If EatStreet prepares financial statements semiannually, it makes the following adjusting entry to recognize interest expense and interest payable of $2,000 ($100,000 × .06 × 4/12) at June 30.

June 30

Interest Expense	2,000	
Interest Payable		2,000

If EatStreet prepares financial statements monthly, its adjusting entry at the end of each month is $500 ($100,000 × .06 × 1/12).

At maturity (July 1), EatStreet must pay the face value of the note ($100,000) plus $2,000 interest ($100,000 × .06 × 4/12). EatStreet records payment of the note and accrued interest as follows.

July 1

Notes Payable	100,000	
Interest Payable	2,000	
Cash		102,000

Zero-Interest-Bearing Note Payable

A company may issue a zero-interest-bearing note instead of an interest-bearing note. A zero-interest-bearing note does not explicitly state an interest rate on the face of the note. **Interest is still charged, however.** At maturity, the borrower must pay back an amount greater than the cash received at the issuance date. In other words, the borrower receives in cash the present value of the note. The present value equals the face value of the note at maturity minus the interest or discount charged by the lender for the term of the note. In essence, the bank takes its fee "upfront" rather than on the date the note matures.

Example 12.3
Zero-Interest-Bearing Note

FACTS Assume that **EatStreet** issues a $102,000, 4-month, zero-interest-bearing note to **Wells Fargo**. The present value of the note is $100,000.[2]

QUESTION What is the entry to record the note on March 1?

SOLUTION

To record the issuance of a 4-month, zero-interest-bearing note to Wells Fargo:

March 1

Cash	100,000	
Discount on Notes Payable	2,000	
Notes Payable		102,000

EatStreet credits the Notes Payable account for the face value of the note, which is $2,000 more than the actual cash received. It debits the difference between the cash received and the face value of the note to Discount on Notes Payable.

Discount on Notes Payable is a contra account to Notes Payable and therefore is subtracted from Notes Payable on the balance sheet. Illustration 12.1 shows the balance sheet presentation on March 1.

[2]This example uses a bank discount rate of 5.96%, with monthly compounding, to determine the present value.

Current liabilities		
Notes payable	$102,000	
Less: Discount on notes payable	2,000	$100,000

ILLUSTRATION 12.1
Balance Sheet Presentation of Discount

The amount of the discount, $2,000 in this case, represents the total cost of borrowing $100,000 for 4 months. That is, the Discount on Notes Payable balance **represents interest expense for the 4-month period.**

- EatStreet should not debit Interest Expense for $2,000 on March 1 because that would imply all of the interest expense occurred in March.
- Instead, EatStreet is going to allocate the balance in the Discount on Notes Payable account to interest expense over the 4-month period.

We are going to discuss the Discount on Notes Payable account and this allocation process later in Chapter 13 when we revisit issues related to notes payable.

Accounting Matters — Is It a Liability?

In response to the global health pandemic in 2020, the Federal Government executed the Cares Act, which included over $500 billion of government loans to businesses under the Paycheck Protection Program (PPP). Under the PPP, these loans were eligible for forgiveness, but only if certain criteria were met.

And those criteria seemed to be a moving target! With little guidance, some companies reported the funds received as revenue or a reduction of expense on their income statement, while others were reporting a liability. Said David Zion, head of accounting and tax research at the **Zion Research Group**, "Normally, what sounds like a pretty easy thing to answer—is this a debt or not?—can become very complicated."

To ensure transparency, standard-setters have strongly encouraged recipients of these funds to bolster their note disclosures to help users understand where the amounts are reflected in the financial statements. "If different companies treat this differently, we would view it as being a symptom of the lack of guidance, and not that anybody's trying to confuse investors," said Eric Kuby, chief investment officer of **North Star**.

Source: "Companies Unclear on How to Account for Coronavirus Aid," *Wall Street Journal* (June 14, 2020).

Sales Taxes Payable

When you shop at retailers like **Walmart**, **Best Buy**, and **Gap**, you must pay sales taxes on the goods you purchase. What happens to those sales tax dollars once they are collected by the retailer? Once the retailer collects from you, the retailer now owes the sales tax amount to the various state and local taxing authorities. The key word there is "owes," which means a liability has been created.

As Illustration 12.2 shows, the retailer is acting as a collection agent for the government and must remit the sales tax dollars to the government after they are collected. The Sales Taxes Payable account should reflect the liability for sales taxes due various governments.

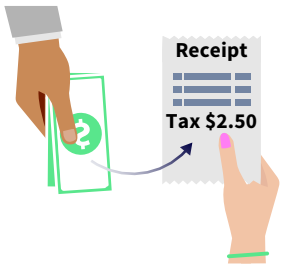
The following entry illustrates use of the Sales Taxes Payable account on a sale of $3,000 when a 4% sales tax is in effect.

Cash	3,120	
Sales Revenue		3,000
Sales Taxes Payable (3,000 × .04)		120

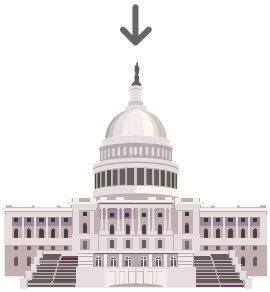
A key factor to note is that with sales to customers, sales tax is an expense for the customer, **not** the retailer. In the journal entry above, there is a liability for the retailer, Sales Taxes Payable, but not an expense.

Many companies do not separate the sales tax and the amount of the sale at the time of sale. Instead, the company credits both amounts in total in the Sales Revenue account. Then, to reflect correctly the actual amount of sales and the liability for sales taxes, the company would debit (reduce) the Sales Revenue account for the amount of the sales taxes due the government and would credit (increase) the Sales Taxes Payable account for the same amount.

ILLUSTRATION 12.2
The Sales Taxes Payable Process



Customer pays sales tax to retailer.



Retailer remits sales tax dollars to the government after they are collected.

Example 12.4
Sales Taxes Payable

FACTS Marshal Co.'s Sales Revenue account balance of $150,000 includes sales taxes of 4%.

QUESTION What is the entry to record sales taxes payable?

SOLUTION

The amount recorded in the Sales Revenue account is comprised of the sales amount plus sales tax of 4% of the sales amount. Sales therefore are $144,230.77 ($150,000 ÷ 1.04*), and the sales tax liability is $5,769.23 ($144,230.77 × 0.04; or $150,000 − $144,230.77). The following entry would record the amount due the taxing unit.

Sales Revenue	5,769.23	
Sales Taxes Payable		5,769.23

*To arrive at this amount, given x = sales revenue, use the following equation.

$$x + .04x = \$150{,}000$$
$$1.04x = \$150{,}000$$
$$x = \$150{,}000 \div 1.04$$

Income Taxes Payable

Since corporations are considered separate, legal entities, they must pay income tax on their annual earnings just like you and me. Federal or state income tax varies in proportion to the amount of annual income.

- Using the best information and advice available, a business must prepare an income tax return and compute the income taxes payable resulting from the operations of the current period.
- Corporations should classify as a current liability the taxes payable on taxable income, as computed on the tax return.

Unlike a corporation, proprietorships and partnerships are not taxable entities. Because the individual proprietor and the members of a partnership are subject to personal income taxes on their share of the business's taxable income, income tax liabilities do not appear on the financial statements of proprietorships and partnerships.

Example 12.5
Income Taxes Payable

FACTS Margo Company reports taxable income of $300,000, and its tax rate is 20%.

QUESTION What is the entry to record income taxes payable?

SOLUTION

In this case, Margo's income taxes payable is $60,000 ($300,000 × .20) and is recorded as follows.

Income Tax Expense	60,000	
Income Taxes Payable		60,000

The Income Taxes Payable balance will be remitted to the government throughout the year, usually on a quarterly basis.

Differences between taxable income under the tax laws and accounting income under generally accepted accounting principles (GAAP) sometimes occur. Because of these differences, the amount of income taxes payable to the government in any given year may differ substantially from income tax expense as reported on the financial statements. Chapter 18 is devoted solely to income tax matters and presents an extensive discussion of this complex topic.

Employee-Related Payables

A major cost for most companies is salary and wages for its employees. In addition to salaries and wages, companies also incur related fringe benefit costs such as:

- Payments related to Social Security and unemployment insurance.
- Healthcare coverage and retirement benefits.
- Compensated absences for vacations, sick leave, holidays, parental leave, and jury duty.

Fringe benefits can be substantial as companies continue to examine the value of benefit packages for attracting the best employees. In considering your own employment, you should understand the entire compensation package—salaries, wages, and benefits—in making your job decision.

Companies report as a current liability amounts owed to employees for salaries or wages at the end of an accounting period. In addition, they also report as current liabilities the following items related to employee compensation.

1. Payroll deductions.
2. Compensated absences.
3. Bonuses.

Payroll Deductions

If you have ever received a paycheck, then you know your employer withholds money from your paycheck, as shown in **Illustration 12.3**. In accounting, these withholdings are referred to as payroll deductions.

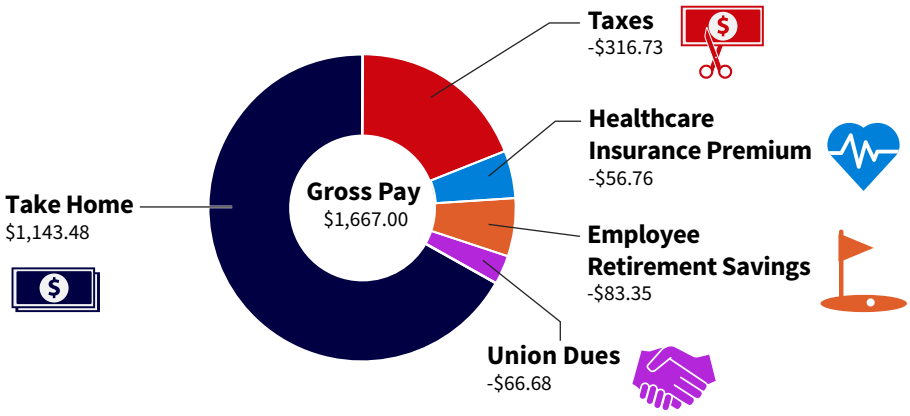


ILLUSTRATION 12.3
Payroll Deductions

- The most common types of payroll deductions are taxes, healthcare insurance premiums, employee retirement savings, and union dues.
- Just like in our discussion of sales taxes, the company is acting as an agent to collect the payroll deductions from you and then remits the amounts to the proper government agency or organization.

If the company has not remitted the amounts deducted to the proper authority by the end of the accounting period, it should recognize these deductions as current liabilities.

Social Security Taxes Social Security legislation provides federal **Old Age, Survivor, and Disability Insurance (OASDI)** benefits for certain individuals and their families. Funds for these payments come from taxes levied on both the employer **and** the employee. The government taxes both the employer and the employee at the same rate, which is currently 6.2% based on the employee's gross pay up to a $142,800 annual limit. The OASDI tax is usually referred to as **FICA (the Federal Insurance Contribution Act)**, which is probably what you see on your paycheck being withheld.

6.2%	+	6.2%	=	12.4%
Amount of employee's gross pay deducted		Employer's matching contribution		Total contribution for Social Security

In addition, the federal health insurance program for the aged—popularly known as **Medicare**—alleviates the high cost of medical care for those over age 65. A tax, paid by both the employee and the employer at the rate of 1.45% on the employee's total compensation, finances the Basic Plan, which provides for hospital and other institutional services.[3]

- The combination of FICA and the federal Medicare tax is commonly referred to as the **Social Security tax**.
- The combined rate for these taxes, 7.65% on an employee's wages to $142,800 and 1.45% in excess of $142,800, changes intermittently by acts of Congress.

Companies should report the amount of unremitted employee and employer Social Security tax on gross wages paid as a current liability.

Income Tax Withholding and Other Payroll Deductions Federal and some state income tax laws require employers to withhold from each employee's pay the applicable income tax due on those wages. The employer computes the amount of income tax to withhold according to a government-prescribed formula or withholding tax table. That amount depends on the length of the pay period and each employee's taxable wages, marital status, and claimed dependents.

The Social Security and income taxes are required to be deducted from an employee's gross pay. As indicated earlier, there are other optional items that employees may choose to have withheld from their paychecks, such as premiums for health, life, and dental insurance, contributions to a retirement plan such as a 401K, and union dues if an employee is eligible to be a member of a union. Just like with the required tax withholdings, the employer is simply acting as a collection agent and will remit the withheld amounts to the various organizations, such as the health insurance company, the retirement plan trustee, and the union organization. **These amounts are not an expense for the employer, but rather a current liability to the employer until the amounts are remitted to the various organizations.**

Unemployment Taxes Payroll taxes levied by the federal government in cooperation with state governments provides a system of unemployment insurance. The federal-state unemployment programs provide financial assistance to eligible workers who may have been laid off through no fault of their own. All employers who meet the following criteria are subject to the **Federal Unemployment Tax Act (FUTA)**.

- Those who paid wages of $1,500 or more during any calendar quarter in the year or preceding year, or
- Those who employed at least one individual on at least one day in each of 20 weeks during the current or preceding calendar year.

In general, only employers pay the unemployment tax. Therefore, it is **not** a payroll deduction for employees. The unemployment tax is an expense for the employer and is debited to Payroll Tax Expense, which is included in operating expenses on the income statement. The employer credits a current liability for the amount of the unemployment tax until the amount is remitted to the various government agencies.

State unemployment compensation laws differ both from the federal law and among various states. Therefore, employers must refer to the unemployment tax laws in each state in which they pay wages and salaries. However, all states provide for some form of **merit rating**, which reduces the state contribution rate.

- Employers who display by their benefit and contribution experience that they provide steady employment may receive this reduction—if the size of the state fund is adequate.
- In order not to penalize an employer who has earned a reduction in the state contribution rate, federal law allows a credit of 5.4%, even when the effective state contribution rate is less than 5.4%.

[3]Under provisions of the Affordable Care Act, the Medicare rate for some high-income taxpayers may be higher.

Here is how it works:

1. The rate of this tax is **6%** on the first $7,000 of compensation paid to each employee during the calendar year.
2. The employer receives a tax credit not to exceed **5.4%** for contributions paid to a state plan for unemployment compensation.
3. Thus, if an employer is subject to a state unemployment tax (SUTA) of 5.2%, **it pays only 0.8% tax to the federal government (6% − 5.2%)**

Example 12.6 Unemployment Taxes

FACTS Central Perk Coffee has a taxable payroll of $100,000. It is subject to a federal unemployment rate of 6% and a state contribution rate of 5.7%. However, its stable employment experience reduces the company's state rate to 1%.

QUESTION What is the amount of Central Perk's unemployment taxes?

SOLUTION

Central Perk computes its federal and state unemployment taxes as follows.

State unemployment tax (SUTA) (.01 × $100,000)	$1,000
Federal unemployment tax (FUTA) [(.060 − .054) × $100,000]	600
Total federal and state unemployment tax	$1,600

The accounting for employee-related liabilities is presented in Example 12.7.

Example 12.7 Employee-Related Liabilities

FACTS Assume a weekly payroll of $10,000 entirely subject to FICA and Medicare (7.65%), federal (0.8%) and state (4%) unemployment taxes, with income tax withholding of $1,320 and union dues of $88 deducted.

QUESTION What is the entry to record salaries and wages and the related payroll taxes?

SOLUTION

To record salaries and wages paid and the employee payroll deductions:

Salaries and Wages Expense	10,000	
Withholding Taxes Payable		1,320
FICA Taxes Payable ($10,000 × .0765)		765
Union Dues Payable		88
Cash		7,827

To record employer payroll taxes:

Payroll Tax Expense	1,245	
FICA Taxes Payable		765
FUTA Taxes Payable ($10,000 × .008)		80
SUTA Taxes Payable ($10,000 × .04)		400

In Example 12.7, total FICA Taxes Payable is $1,530 ($765 + $765), representing both the employee and employer share of the tax. When the employer remits the amounts to the various agencies, the payable accounts are debited and cash is credited. At the end of the period, any unremitted taxes payable accounts would be grouped together and listed as Payroll Taxes Payable in the current liabilities section of the employer's balance sheet.

Illustration 12.4 summarizes payroll deductions and liabilities.

ILLUSTRATION 12.4
Summary of Payroll Liabilities

Item	Whose Expense	
Income tax withholding FICA taxes—employee share Union dues	Employee	Employer reports these amounts as liabilities until remitted.
FICA taxes—employer share Federal unemployment State unemployment	Employer	

Compensated Absences

We commented earlier about the significance of fringe benefits as part of the overall pay package. One important type of fringe benefit involves compensated absences. **Compensated absences** are paid absences from employment for such items as vacations, illness, holidays, and jury duties. Generally, the two most significant fringe benefits related to compensated absences are vacation pay and sick pay. Companies should accrue a liability for the cost of compensation for future absences if **all of the following conditions** exist (see **Underlying Concepts**). **[2]**

Underlying Concepts

These four conditions not only align with the definition of a liability but also with the expense recognition principle, which requires that a company report the expense for services in the period consumed.

1. The employer's obligation relating to employees' rights to receive compensation for future absences is attributable to employees' services **already rendered**.
2. The obligation relates to the rights that **vest or accumulate**.
3. Payment of the compensation is **probable**.
4. The amount can be **reasonably estimated**. **[3]**

If an employer meets conditions (1), (2), and (3) but does not accrue a liability because of a failure to meet condition (4), it should disclose that fact.

Vested Rights **Vested rights** exist when an employer has an obligation to make payment to an employee even after terminating his or her employment. Thus, vested rights are not contingent on an employee's future service. For example, assume that you earn four days of vacation pay as of December 31, the end of your employer's fiscal year. Company policy is that you will be paid for this vacation time even if you terminate employment. In this situation, your four days of vacation pay are vested, and your employer must accrue the vested amount.

Accumulated Rights If we assume that your vacation days are not vested but that you can carry the four days over into later periods, then you have **accumulated rights**. Although the rights are not vested, they are accumulated rights for which the employer must make an accrual. However, the amount of the accrual is adjusted to allow for estimated forfeitures due to turnover.

Companies should recognize the expense and related liability for compensated absences in the year earned by employees. For example, if new employees receive rights to two weeks' paid vacation at the beginning of their second year of employment, a company considers the vacation pay to be earned during the first year of employment.

Current or Estimated Rate What salary or wage rate should a company use to accrue the compensated absence cost—the current rate or an estimated future rate? GAAP is silent on this subject. Therefore, companies will likely use the current rather than future salary or wage rate. The future rate is less certain and raises time value of money issues.

Example 12.8
Vacation Pay

FACTS Assume that **PupJoy** began operations on January 1, 2025. The company employs 10 individuals and pays each $480 per week. Employees earned 20 unused vacation weeks in 2025. In 2026, the employees used the vacation weeks, but now they each earn $540 per week.

QUESTION What are the entries for the vacation pay that was accrued in 2025 and paid in 2026?

SOLUTION

To record accrual of vacation pay:

December 31, 2025

Salaries and Wages Expense	9,600	
Salaries and Wages Payable ($480 × 20)		9,600

To record payment of vacation pay:

During 2026

Salaries and Wages Payable	9,600	
Salaries and Wages Expense	1,200	
Cash ($540 × 20)		10,800

At December 31, 2025, the company reports on its balance sheet a liability of $9,600. In 2026, the use of the vacation weeks extinguishes the liability.

Note that PupJoy records the difference between the amount of cash paid and the reduction in the liability account as an adjustment to Salaries and Wages Expense in the period when paid. This difference arises because it accrues the liability account at the rates of pay in effect during the period when employees **earned** the compensated time.

The cash paid, however, depends on the rates in effect during the period when employees **used** the compensated time. If PupJoy used the future rates of pay to compute the accrual in 2025, then the cash paid in 2026 would equal the liability.

Sick Pay A modification of the general rules relates to the issue of **sick pay** as follows.

- If sick pay benefits vest, a company must accrue them.
- If sick pay benefits accumulate but do not vest, a company may choose whether to accrue them or not.

Companies may administer compensation designated as sick pay in one of two ways.

1. In some companies, employees receive sick pay only if illness causes their absence. Therefore, these companies may or may not accrue a liability because its payment depends on future employee illness.
2. Other companies allow employees to accumulate unused sick pay and take compensated time off from work even when not ill. For this type of sick pay, a company must accrue a liability because the company will pay it, regardless of whether employees become ill.

To attract talented employees, employers—small and large—therefore include some form of health insurance, as well as payment for compensated absences in the total compensation plan.

What if you are the entrepreneurial, self-employed type? It is important to recognize the all-in costs of such pay and packages. That is, if you are self-employed, you must earn substantially more per hour to pay your own benefit costs **plus** your share of FICA taxes. So, you may like the idea of being your own boss but lack of access to more affordable group insurance, payment for FICA taxes as both an employer and employee, and lack of retirement contributions are not in your favor.[4]

Accounting Matters — Salary, Benefits, and Gen Z

Back in Chapter 4, we talked about some limitations of the balance sheet, namely, there is no reliable way to measure the value of a strong workforce. And while good talent may not meet the definition of an asset, that does not stop companies from investing time and resources on recruiting, and keeping, talented employees.

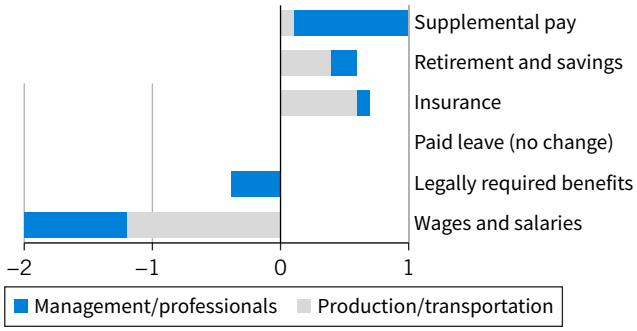
[4] "How Much Do I Have to Make as an Entrepreneur or Contractor to Replace My Day Job Income?" *Financial Sumarai* (accessed October 28, 2020).

However, what attracts good employees has changed over time (as indicated in the adjacent chart). Now, it's not always about salary and wages, but increasingly about culture (ping pong, anyone?), work-life balance, and growth. In a recent survey of undergraduate and graduate accounting students, less than 30% of respondents ranked salary in their top four factors they look for in an internship employer.

The results showed that Gen Zs are looking for more in an employer than just a paycheck; rather, they want an employer who will invest in their development to advance their careers as well as provide good health insurance.

This is not to say that salary doesn't matter at all. With a seemingly not-so-temporary shift to remote work arrangements, many employees are taking their talent out of higher-priced cities and into the country where cost of living is significantly lower. But this shift is coming with a downward salary adjustment. While geographic-based wage rates is nothing new, taking a 10% pay cut for doing the same job has led some workers, especially in the tech industry, to cry foul. Employers will have to continually balance the value of a talented, committed workforce, along with the costs incurred, salary or otherwise, to keep their employees happy and engaged.

Total Compensation by Type and Percentage-Point Change



Source: Labor Department.

Sources: "Silicon Valley Pay Cuts Ignite Tech-Industry Covid-19 Tensions," *Wall Street Journal* (October 11, 2020); "Gen Z Considers This Benefit More Important Than Salary," *Entrepreneur.com* (June 30, 2020); and "What It Takes for Accounting Firms to Recruit Gen Z," *Journal of Accountancy* (December 1, 2019).

Bonus Agreements

Many companies give a **bonus** to certain or all employees in addition to their regular salaries or wages. Frequently, the bonus amount depends on the company's yearly profit. For example, employees at **Ford Motor Company** share in the success of the company's operations on the basis of a complicated formula using net income as its primary basis for computation. A company may consider bonus payments to employees as additional wages and should include them as an expense in determining the net income for the year.

Example 12.9
Bonus Payable

FACTS Palmer Inc. shows income for the year 2025 of $100,000. It will pay out bonuses of $10,700 in January 2026.

QUESTION What are the entries for the bonus plan in 2025 and 2026?

SOLUTION

Adjusting entry to record the bonuses:

December 31, 2025

Salaries and Wages Expense	10,700	
Salaries and Wages Payable		10,700

To record the bonus paid:

During January 2026

Salaries and Wages Payable	10,700	
Cash		10,700

Palmer should show the expense account in the income statement as an operating expense. The liability, Salaries and Wages Payable, is usually payable within a short period of time. Companies should include it as a current liability in the balance sheet.

Although some companies have complex plans for determining bonus plans, research suggests that simpler plans are better. In addition, participants in these bonus arrangements want plans they can have some control over, such as net income (an internal measure), rather than a factor such as total return to stockholders (an external measure).

Put It into Practice LO 12.1
Record Payables

FACTS Presented below are selected transactions of Bonazza Corporation for the current month ending December 31.

1. On December 1, borrowed $90,000 by signing a $90,000, 8%, 6-month note.
2. Bonazza uses the perpetual inventory system and the gross method of accounting for purchase discounts. On December 2, Bonazza purchased $40,000 of inventory items, term 2/10, net 30 FOB shipping point. On December 10, Bonazza paid for the goods and related freight costs of $1,200.
3. During December, cash sales total $800,000. A 5% sales tax on these sales, collected in addition to the $800,000, must be remitted to the state by the fifteenth day of the following month.
4. For December, gross salary and wages totaled $100,000. All earnings are subject to 7.65% FICA taxes, 4% state unemployment tax and 0.6% federal unemployment taxes, income tax withholding is $18,000. In addition, it is determined that it owes employees $6,000 in accrued vacation wages.

INSTRUCTIONS Prepare entries for these transactions, including any end of month adjusting entries that may be required.

SOLUTION

1. To record issuance of notes payable:

December 1		
Cash	90,000	
Notes Payable		90,000

To record interest for the month:

December 31		
Interest Expense	600	
Interest Payable ($90,000 × .08 × 1/12)		600

2. To record the purchase of inventory:

December 2		
Inventory	40,000	
Accounts Payable		40,000

To record payment of accounts payable:

December 10		
Accounts Payable	40,000	
Purchase Discount ($40,000 × .02)		800
Cash		39,200

To record payment for freight costs:

December 10		
Inventory	1,200	
Cash		1,200

3. To record sales tax collected:

During December		
Cash	840,000	
Sales Revenue		800,000
Sales Taxes Payable ($800,000 × .05)		40,000

4. To record salary and wages expense:

During December		
Salaries and Wages Expense	100,000	
Withholding Taxes Payable		18,000
FICA Taxes Payable ($100,000 × .0765)		7,650
Cash		74,350

To record accrued vacation pay:

Salaries and Wages Expense	6,000	
Salaries and Wages Payable		6,000

To record employer taxes payable:

Payroll Tax Expense	12,250	
FICA Taxes Payable ($100,000 × .0765)		7,650
FUTA Taxes Payable ($100,000 × .006)		600
SUTA Taxes Payable ($100,000 × .04)		4,000

12.2 Unearned Revenues

LEARNING OBJECTIVE 2

Describe the nature, valuation, and reporting of current liabilities in the form of unearned revenues.

A magazine publisher such as **Condé Nast** receives payment when a customer subscribes to *The New Yorker*. An airline company such as **American Airlines** sells tickets for future flights. And software companies like **Microsoft** issue coupons that allow customers to upgrade to the next version of its software. How do these companies account for **unearned (deferred) revenues** that they receive before delivering goods or rendering services?

- When a company receives an advance payment, it debits Cash and credits a current liability account identifying the source of the unearned revenue.
- When a company recognizes revenue, it debits the unearned revenue account and credits an appropriate revenue account.

Illustration 12.5 shows specific unearned revenue and revenue accounts used in selected types of businesses.

ILLUSTRATION 12.5 Unearned Revenue and Revenue Accounts

Type of Business	Account Title	
	Unearned (Deferred) Revenue (Balance Sheet)	Revenue (Income Statement)
Airline	Unearned Ticket Revenue	Passenger Revenue
Magazine publisher	Unearned Subscription Revenue	Subscription Revenue
Hotel	Unearned Rent Revenue	Rent Revenue
Retailers	Unearned Gift Card Revenue	Sales Revenue

The balance sheet reports obligations for any commitments that are redeemable in goods and services. The income statement reports revenues related to performance obligations satisfied during the period.

Ticket Revenue

Your college football team is set to have a great season, and student season tickets are a hot item. So, when you receive the application for season tickets, you are more than willing to send in payment of $240 for the home game package of five home games. When you receive the link to the tickets, you have an asset and the university has an unearned revenue until the game is held.

Example 12.10
Unearned Ticket Revenue

FACTS On August 6, Allstate University sells 10,000 season football tickets at $50 each for its five-game home schedule. Its first game will be played on September 7.

QUESTION What are the entries for Allstate on August 6 and September 7?

SOLUTION

To record sale of 10,000 season tickets:

August 6

Cash	500,000	
Unearned Ticket Revenue (10,000 × $50)		500,000

To record ticket revenue for first game:

September 7

Unearned Ticket Revenue (2,000 × $50)	100,000	
Ticket Revenue		100,000

As subsequent games are played, Allstate satisfies a performance obligation and records ticket revenue (and reduces Unearned Ticket Revenue).

In Example 12.10, Allstate reports Unearned Ticket Revenue as a current liability in the balance sheet as the school has a performance obligation to complete the home football season, which is generally four months long. As the school recognizes revenue, it reclassifies the amount from Unearned Ticket Revenue to Ticket Revenue. Unearned revenue is material for some companies. In the airline industry, for example, tickets sold for future flights represent almost 50% of total current liabilities.

Gift Cards

What is the most popular gift that you can give someone for a birthday? One hint-- it is not Airpods, a gaming device, or clothing. The answer is a gift card. Gift cards are big business. For example, **Starbucks** recently reported a gift card liability of $1.3 billion, **Amazon.com** reported a similar liability of $4.7 billion, and **Chipotle** reported a $105.4 million liability.

Gift cards are used by companies to attract new customers and to improve sales. For example, when Amazon sells a gift card to you, it is receiving a nonrefundable payment for goods and services that your gift-card recipient will have the right to receive in the future. As a result, Amazon does not report gift card revenue on the date you buy the card, but rather reports a liability because it has not satisfied its performance obligation to the person you give the card. Amazon then recognizes revenue related to the gift cards using the proportion of the gift cards redeemed divided by the number of gift cards estimated to be redeemed.

Example 12.11
Gift Cards

FACTS In March 2025, Haven Retailer sells 10 gift cards at $200 per gift card, or $2,000 (10 × $200). In April 2025, six of the gift cards are redeemed. Haven estimates that cost of goods sold will be 70% of the sales price, or $140 per gift card. The remaining four cards are expected to be redeemed in May 2025. Thus, 60% (6/10) of the revenue is recognized in April, and 40% (4/10) is recognized as revenue in May.

QUESTION What are the entries for the gift cards when issued and redeemed?

SOLUTION

To record sale of 10 gift cards:

March 2025

Cash (10 × $200)	2,000	
Unearned Gift Card Revenue		2,000

Unearned Gift Cards Revenue			
		3/25	2,000
4/25	1,200		
5/25	800		
			0

Sales Revenue			
		4/25	1,200
		5/25	800
			2,000

To record redemption of 6 gift cards:

April 2025

Unearned Gift Card Revenue	1,200	
Sales Revenue (6 × $200)		1,200
Cost of Goods Sold	840	
Inventory (6 × $200 × .70)		840

To record redemption of 4 remaining gift cards:

May 2025

Unearned Gift Card Revenue	800	
Sales Revenue (4 × $200)		800
Cost of Goods Sold	560	
Inventory (4 × $200 × .70)		560

In this case, Haven recognizes total gross profit of $600 ($2,000 − $840 − $560) on the sale of its gift cards.

One problem that complicates the accounting for gift cards is that you may never use the gift card (this situation is often referred to as **breakage** or forfeiture; your friends may have a less technical term for it). **Starbucks**, for example, recently recognized $60.5 million of breakage revenue, which is essentially expense-free revenue. Here is a summary:

1	2	3
If Haven estimates that it will have 20% breakage, it expects two gift cards (2 × $200 = $400) will not be redeemed.	Haven also expects $1,600 of gift cards or $1,600 ($2,000 − $400) will be redeemed.	Haven recognizes this breakage revenue ($400) as well as gift card revenue in proportion to customer redemptions of the gift cards.

For example, when customers redeem six of the eight gift cards, Haven recognizes 75% (6 ÷ 8) of the expected revenue from the redeemed gift cards as well as the breakage revenue. You use 75% because Haven estimates that only eight of the cards will be redeemed, not 10. Therefore, when it redeems six of the gift cards, it should recognize 75% of the expected breakage revenue (six cards redeemed divided by eight total cards expected to be redeemed). The entry to record the transaction in April is as follows.

Unearned Gift Card Revenue	1,500	
Sales Revenue (.75 × $1,600)		1,200
Sales Revenue (Breakage) (.75 × $400)		300

In addition, the entry to record cost of good related to this redemption is as follows.

Cost of Goods Sold	840	
Inventory (.70 × $1,200)		840

Haven does not recognize any cost of goods sold related to breakage because these gift cards are not used.

In May, when the last two gift cards are redeemed, it recognizes 25% (2 ÷ 8) of the expected revenue from the redeemed gift cards and breakage.

You should recognize that legal requirements for unredeemed gift cards vary among jurisdictions. A company should not recognize estimated breakage as revenue if unredeemed amounts must be remitted to a governmental entity in accordance with unclaimed property laws.

Customer Advances

Companies sometimes receive from a customer a deposit prior to providing a service or goods to the customer. In this situation, the company debits Cash and credits Unearned Revenue—Customer Advances. When the good or service is subsequently provided, the company debits Unearned Revenue—Customer Advances and credits the appropriate Revenue account.

Example 12.12 Customer Advances

FACTS Assume that **Ethan Allen** agrees to sell custom-made couches to Central Perk for all of its coffee shops. Ethan Allen requires Central Perk to provide a down payment of $300,000 before it designs and manufactures the couches to Central Perk's specifications. The total price for the couches is $2,000,000. The down payment is made on December 10, 2025, and the couches are completed and delivered to Central Perk's locations on March 4, 2026. Central Perk pays the remaining $1,700,000 ($2,000,000 − $300,000) due on the couches on March 4, 2026.

QUESTION What are the entries that Ethan Allen should make for this arrangement? (Ignore Cost of Goods Sold.)

SOLUTION

To record receipt of customer advance:

December 10, 2025

Cash	300,000	
Unearned Revenue—Customer Advances		300,000

Ethan Allen reports a current liability of $300,000 related to this advance on the December 31, 2025, balance sheet.

To record sale of couches:

March 4, 2026

Cash	1,700,000	
Unearned Revenue—Customer Advances	300,000	
Sales Revenue		2,000,000

In some cases, an advance payment is refundable. A **refundable deposit** refers to cash collected from a customer that a company expects to return after a specified period or when certain conditions are satisfied. For example, a company like **Alltel Corp.** often requires a deposit on equipment that customers use to connect to the Internet or to access its other services. Alltel also may receive deposits from customers as guarantees for possible damage to property. Additionally, some companies require their employees to make deposits for the return of keys or other company property. Following the receipt of the cash, the company classifies the refundable deposit as a liability on the balance sheet.

To illustrate, say you are renting an apartment where the landlord requires a security deposit of $800 to cover damages to the apartment on September 1, 2025. When the landlord receives the $800, it makes the following entry.

Cash	800	
Refundable Deposit Liability		800

We of course assume that the apartment is immaculate at the end of the lease. As a result, the landlord returns your security deposit and makes the following entry.

Refundable Deposit Lability	800	
Cash		800

The classification of customer advances and deposits as current or noncurrent liabilities depends on the time between the date of the receipt of the cash and the termination of the relationship that required the advance or deposit.

Put It into Practice LO 12.2

Record Unearned Revenues

FACTS Presented below are selected transactions of Congo Corporation for the current month ending December 31.

1. Congo publishes a magazine related to possible vacations in Africa and sells subscriptions to customers. In December, Congo sold and received $22,000 in subscriptions to customers. The magazine will be issued in February of next year.
2. In December, Congo sold 100 gift cards at $10 per gift card; 30 of the gift cards are redeemed by year-end. Congo estimates that 40 of the gift cards will not be redeemed.
3. In December, Congo rented out a portion of its office space. It received a security deposit of $5,000 which will be returned at the end of next year.

INSTRUCTIONS Prepare entries for Congo's transactions. (Ignore Cost of Goods Sold.)

SOLUTION

1. To record unearned subscription revenue:

Cash	22,000	
Unearned Subscription Revenue		22,000

2. To record unearned gift card revenue:

Cash	1,000	
Unearned Gift Card Revenue ($10 × 100)		1,000

To record revenue on gift cards redeemed:

Unearned Gift Card Revenue	300	
Sales Revenue ($10 × 30)		300

To record gift card revenue on gift card breakage:

Unearned Gift Card Revenue	200	
Sales Revenue ($10 × 40 × .50)		200

Congo estimates that it will have 40% breakage (40 gift cards will not be redeemed, totaling $400). It therefore expects 60 cards to be redeemed, not 100. When Congo records 30 of the gift cards redeemed as revenue, it also recognizes one-half (30 ÷ 60) of the revenue from expected breakage. Recall that you use 50% because Congo recognizes that customers will redeem only 60 cards, not 100. Therefore, when it redeems 30 of the gift cards, it recognizes one-half of the expected breakage revenue. Similarly, when it redeems the remaining 30 cards (according to expectations), it will recognize the remaining revenue from breakage ($10 × 40 × .50).

3. To record a liability for refundable deposits:

Cash	5,000	
Refundable Deposit Liability		5,000

12.3 Contingencies

LEARNING OBJECTIVE 3

Explain the accounting for loss and gain contingencies.

Companies often are involved in situations where uncertainty exists about whether an obligation to transfer cash or other assets has arisen and/or the amount that will be required to settle the obligation. For example:

- **Apple** may be a defendant in a lawsuit, and any payment is contingent upon the outcome of a settlement or an administrative or court proceeding.
- **Ford Motor Company** provides a warranty for a car it sells, and any payments are contingent on the number of cars that qualify for benefits under the warranty.
- **PepsiCo, Inc.** acts as a guarantor on supply contracts for their independent bottlers, any payment is contingent on nonpayment by the independent bottler.

Broadly, these situations are called contingencies. A **contingency** is "an existing condition, situation, or set of circumstances involving uncertainty as to possible loss **(loss contingency)** or gain **(gain contingency)** to an enterprise that will ultimately be resolved when one or more future events occur or fail to occur" (see **Global View**). **[4]**

Global View

IFRS uses the term *provisions* to refer to estimated liabilities. *See the IFRS Insights at the end of the chapter for a discussion of the similarities and differences between IFRS and GAAP.*

Loss Contingencies

Loss contingencies involve possible losses. A liability incurred as a result of a loss contingency is by definition a contingent liability. **Contingent liabilities** depend on the occurrence of one or more future events to confirm either the amount payable, the payee, the date payable, or its existence. That is, these factors depend on a contingency.

Likelihood of Loss

When a loss contingency exists, the likelihood that the future event or events will confirm the incurrence of a liability can range from probable to remote. The FASB uses the terms **probable**, **reasonably possible**, and **remote** to identify three areas within that range and assigns the following meanings:

- **Probable**. The future event or events are likely to occur.
- **Reasonably possible**. The chance of the future event or events occurring is more than remote but less than likely.
- **Remote**. The chance of the future event or events occurring is slight.

Use of the terms probable, reasonably possible, and remote to classify contingencies involves judgment and subjectivity. **Illustration 12.6** lists examples of loss contingencies and the general accounting treatment accorded them.

Companies should accrue an estimated loss from a loss contingency only if **both** of the following conditions are met:

1. Information available prior to the issuance of the financial statements indicates that it is **probable that a liability has been incurred** at the date of the financial statements.
2. The amount of the loss can be **reasonably estimated**.

ILLUSTRATION 12.6 Accounting Treatment of Loss Contingencies

Usually Accrued

Loss related to:

- Obligations related to product warranties and product defects.
- Premiums offered to customers.

Not Accrued

Loss related to:

- Risk of loss or damage of enterprise property by fire, explosion, or other hazards.
- General or unspecified business risks.

May Be Accrued*

Loss related to:

- Threat of expropriation of assets.
- Pending or threatened litigation.
- Actual or possible claims and assessments.**
- Guarantees of indebtedness of others.
- Agreements to repurchase receivables (or the related property) that have been sold.

*Should be accrued when both criteria—probable and reasonably estimable—are met. If the loss is either probable or estimable but not both, and if there is at least a reasonable possibility that a company may have incurred a liability, it should disclose in the notes both the nature of the contingency and an estimate of the possible loss.

**Estimated amounts of losses incurred prior to the balance sheet date but settled subsequently should be accrued as of the balance sheet date.

To record a contingency loss, companies debit a loss account and credit a liability. To record a liability, a company does not need to know the exact payee nor the exact date payable. **What a company must know is whether it is probable that it incurred a liability.**

Example 12.13 Loss Contingency—Guarantee

FACTS You are the accountant for Good Person Company. Your company believes that it has the responsibility to help in its community and therefore is a big supporter of the **Boys and Girls Club**. Suppose that a few years ago, the Boys and Girls Club borrowed $3 million from Atlas Bank to build a gymnasium to improve the club's recreational activities. Good Person agreed to guarantee the borrowing, indicating that if the Boys and Girls Club defaulted on the loan, Good Person will pay the remainder of the debt due at the settlement date. Unfortunately, the club defaulted on the loan, and Good Person estimates that its contingent liability on the loan will be $1,800,000 at the settlement date.

QUESTION What is the entry, if any, to record the loss contingency?

SOLUTION

To record the contingent liability for the guarantee:

Loss on Loan Guaranty	1,800,000	
Guarantee Liability		1,800,000

In this case, a contingent **liability is recorded** in the accounts because it is probable that the future event (payment by Good Person) will occur, and the amount of the **liability** can be reasonably estimated. This means that a loss would be **recorded** (debit) and a **liability** established (credit) in advance of the settlement.

Let's take one more example in which a contingent liability is not recorded, but a reduction of an asset occurs due to an expropriation. An **expropriation** occurs when a government claims privately owned property against the wishes of its owners.

Example 12.14 Loss Contingency—Expropriation

FACTS The government has decided to expropriate one of Macklin Manufacturing's plants to build a new airport. The book value of Macklin's asset is $20,000,000, and the company determines the following.

1. It is probable that it will receive $12,000,000 in compensation.
2. The expropriation is imminent.

QUESTION What is the entry, if any, to record a contingency for this expropriation?

SOLUTION

To record the contingent loss:

Loss on Plant Assets	8,000,000	
Plant Assets ($20,000,000 − $12,000,000)		8,000,000

Macklin should accrue the estimated loss with a debit to a loss account which decreases income. However, if the estimate of the loss is uncertain and involves a range of values, then the best estimate within the range should be used. If no amount within the range is a better estimate, the minimum amount within the range should be used.[5]

Accountants express concern over the diversity that now exists in the interpretation of "probable," "reasonably possible," and "remote." Current practice relies heavily on the exact language used in responses received from lawyers (such language is necessarily biased and protective rather than predictive). As a result, accruals and disclosures of contingencies vary considerably in practice. Some of the more common loss contingencies are:

- Litigation, claims, and assessments.
- Guarantee and warranty costs.
- Consideration payable (e.g., premiums and coupons).

Illustration 12.7 provides examples of contingencies as reported in companies' financial statements.

ILLUSTRATION 12.7 Risks Disclosed by Companies

Tesla, Inc.	We may become subject to product liability claims, which could harm our financial condition and liquidity if we are not able to successfully defend or insure against such claims.
Activision Blizzard, Inc.	We may be involved in legal proceedings that have a negative impact on our business. We may be subject to intellectual property claims.
The Walt Disney Company	The success of our businesses is highly dependent on the existence and maintenance of intellectual property rights in the entertainment products and services we create.
General Mills, Inc.	Global health developments and economic uncertainty resulting from the COVID-19 pandemic could materially and adversely affect our business, financial condition, and results of operations.

Companies do not record or report in the notes to the financial statements general risk contingencies inherent in business operations (e.g., the possibility of war, strike, uninsurable catastrophes, or a business recession) (see Underlying Concepts).

Underlying Concepts

In accordance with the full disclosure principle, companies provide supplementary information in addition to their financial statements and footnotes that is significant enough to influence the judgement of an informed user.

[5] When no amount within the range is a better estimate than any other amount, the company accrues the dollar amount at the low end of the range and discloses the dollar amount at the high end of the range. Unfortunately, in many cases, zero may arguably be the low point of the range, resulting in no liability being recognized. [5], [6]

Litigation, Claims, and Assessments

Companies must consider the following three factors, among others, in determining whether to record a liability with respect to **pending or threatened litigation** and actual or possible **claims** and **assessments**.

1. The **time period** in which the underlying cause of action occurred.
2. The **probability** of an unfavorable outcome.
3. The ability to make a **reasonable estimate** of the amount of loss.

To report a loss and a liability in the financial statements, **the cause for litigation must have occurred on or before the date of the financial statements**. Sometimes, the company becomes aware of the existence or possibility of a lawsuit or claim **after** the date of the financial statements but **before** they are issued. As long as the cause for litigation or claim occurred on or **before the date of the financial statements**, the company has to account for it. To evaluate the probability of an unfavorable outcome, a company considers the following.

- The nature of the litigation.
- The progress of the case.
- The opinion of legal counsel.
- Its own and others' experience in similar cases.
- Any management response to the lawsuit.

Example 12.15
Loss Contingency—Lawsuit

FACTS Assume that an employee filed a $1,000,000 lawsuit on November 30, 2025, against **Kroger Supermarkets** for damages suffered when the employee slipped and suffered a serious injury at one of the company's facilities. Kroger's lawyers believe that the company will not lose the lawsuit, putting the probability of future payments at less than 50%.

QUESTION Should Kroger recognize a liability for legal claims at December 31, 2025?

SOLUTION

Although a past obligating event has occurred (the injury leading to the filing of the lawsuit), **it is not probable** that Kroger will have to pay any damages. Kroger therefore does not need to record a liability (an accrual). If, on the other hand, Kroger's lawyer determined that it is probable that the company will lose the lawsuit, and a reasonable amount can be estimated, then Kroger should accrue the liability at December 31, 2025.

Companies can seldom predict the outcome of pending litigation with any assurance. And, even if evidence available at the balance sheet date does not favor the company, it is hardly reasonable to expect the company to publish in its financial statements a dollar estimate of the probable negative outcome. Such specific disclosures might weaken the company's position in the dispute and encourage the plaintiff to intensify its efforts.

With respect to **unfiled suits** and **unasserted claims and assessments**, a company must determine:

- The degree of **probability** that a suit may be filed or a claim or assessment may be asserted.
- The **probability** of an unfavorable outcome.

For example, assume that the **Federal Trade Commission** investigates Nawtee Company for restraint of trade and institutes enforcement proceedings. Private claims of treble (triple) damages for compensation often follow such proceedings. In this case, Nawtee must determine the probability of the claims being asserted **and** the probability of triple damages being awarded.

If both are probable, if the loss is reasonably estimable, and if the cause for action is dated on or before the date of the financial statements, then Nawtee should accrue the liability.[6]

Warranty Costs

A **warranty (product guarantee)** is a promise made by a seller to a buyer to make good on a deficiency of quantity, quality, or performance in a product. Manufacturers commonly use it as a sales promotion technique. Automakers, for instance, "hyped" their sales by extending their new-car warranty to seven years or 100,000 miles. For a specified period of time following the date of sale to the consumer, the manufacturer may promise to bear all or part of the cost of replacing defective parts, to perform any necessary repairs or servicing without charge, to refund the purchase price, or even to "double your money back."

Warranties and guarantees entail future costs. These additional costs, sometimes called "after costs" or "post-sale costs," are frequently significant.

- Although the future cost is indefinite as to amount, due date, and even customer, the company has a performance obligation for which a liability should be recognized.
- The estimated amount of the liability includes all the costs the company will incur related to the correction of defects or deficiencies required under the warranty provisions.

As indicated in Chapter 3, warranty costs are a classic example of a loss contingency. Companies often provide one of two types of warranties to customers:

1. Warranty that the product meets agreed-upon specifications in the contract at the time the product is sold. This type of warranty is included in the sales price of a company's product and is often referred to as an **assurance-type warranty**.
2. Warranty that provides an additional service beyond the assurance-type warranty. This warranty is not included in the sales price of the product and is referred to as a **service-type warranty**. As a result, it is recorded as a separate performance obligation.

Assurance-Type Warranty Companies do not record a separate performance obligation for assurance-type warranties. This type of warranty is nothing more than a quality guarantee that the good or service is free from defects at the point of sale. These types of obligations should be expensed in the period the goods are provided or services performed. In addition, the company should record a warranty liability. The estimated amount of the liability includes all the costs that the company will incur in the future due to the correction of defects or deficiencies required under the warranty provisions.

Example 12.16
Assurance-Type Warranty

FACTS Candy Machinery Company begins production of a new vending machine in July 2025 and sells 100 of these machines for $5,000 cash by year-end for a total sales revenue of $500,000 (100 × $5,000). Each vending machine is under warranty for one year. Candy Machinery estimates, based on past experience with similar machines, that the warranty cost will average $200 per unit for a total expected warranty expense of $20,000 (100 × $200). Further, as a result of parts replacements and services performed in compliance with machinery warranties, it incurs $4,000 in warranty costs in 2025 and $16,000 in 2026 related to the 2025 sales.

QUESTION What are the entries for the sale and the related warranty costs for 2025 and 2026?

[6]Companies need not disclose contingencies involving an unasserted claim or assessment when no claimant has come forward unless (1) it is considered probable that a claim will be asserted, and (2) there is a reasonable possibility that the outcome will be unfavorable. The FASB recently had a project to develop disclosures that are sufficient to enable users of financial statements to assess the likelihood, timing, and amount of future cash flows associated with loss contingencies. This project and its proposed recommendations were extremely controversial. Although the SEC continues to focus on these disclosures, the FASB has now removed the project from its active agenda.

SOLUTION

To recognize sales of vending machines:

July–December 2025

Cash	500,000	
Sales Revenue ($5,000 × 100)		500,000

To record payment for warranty costs incurred in 2025:

July–December 2025

Warranty Expense	4,000	
Cash, Inventory, Accrued Payroll		4,000

The adjusting entry to record estimated warranty expense and warranty liability for expected warranty claims is as follows.

December 31, 2025

Warranty Expense	16,000	
Warranty Liability ($20,000 − $4,000)		16,000

As a consequence of this adjusting entry at December 31, 2025, the balance sheet reports a warranty liability (current) of $16,000 ($20,000 – $4,000). The income statement for 2025 reports sales revenue of $500,000 and warranty expense of $20,000.

To record payment for warranty costs incurred in 2026 related to 2025 vending machine sales:

January 1–December 31, 2026

Warranty Liability	16,000	
Cash, Inventory, Accrued Payroll		16,000

At the end of 2026, no warranty liability is reported for the machinery sold in 2025.

Warranty Expense

During 2025 4,000	
12/31/25 16,000	
12/31/25 Bal. 20,000	

100 machines × $200 estimated warranty per machine = $20,000 total warranty expense

Service-Type Warranty A warranty is sometimes sold separately from the product. For example, when you purchase a TV, you are entitled to an assurance-type warranty. You also will undoubtedly be offered an extended warranty on the product at an additional cost, referred to as a service-type warranty. In most cases, service-type warranties provide the customer a service beyond fixing defects that existed at the time of sale.

Companies record a service-type warranty as a separate performance obligation. For example, in the case of the TV, the seller recognizes the sale of the TV with the assurance-type warranty separately from the sale of the service-type warranty.

- The sale of the service-type warranty is usually recorded in an Unearned Warranty Revenue account.
- Companies then recognize revenue on a straight-line basis over the period the service-type warranty is in effect.

Companies only defer and amortize costs that vary with and are directly related to the sale of the contracts (mainly commissions). Companies expense employees' salaries and wages, advertising, and general and administrative expenses because these costs occur even if the company did not sell the service-type warranty.

Example 12.17
Warranties

FACTS You purchase a car from Hamlin Auto for $30,000 on January 2, 2025. Hamlin estimates the assurance-type warranty costs on the car to be $700 (Hamlin will pay for repairs for the first 36,000 miles or 3 years, whichever comes first). You also purchase for $900 a service-type warranty for an additional 3 years or 36,000 miles. Hamlin incurs warranty costs related to the assurance-type warranty of $500 in 2025 and expects costs of $100 in 2026 and 2027. Hamlin records revenue on the service-type warranty on a straight-line basis.

QUESTION What are the necessary entries for Hamlin in 2025 and 2028?

SOLUTION

To record the sale of the car and related warranties:

January 2, 2025

Cash ($30,000 + $900)	30,900	
Unearned Warranty Revenue		900
Sales Revenue		30,000

To record warranty costs incurred in 2025:

January 2–December 31, 2025

Warranty Expense	500	
Cash, Inventory, Accrued Payroll		500

The adjusting entry to record estimated warranty expense and warranty liability for expected assurance warranty claims is as follows.

December 31, 2025

Warranty Expense	200	
Warranty Liability		200

As a consequence of this adjusting entry at December 31, 2025, the balance sheet reports a warranty liability of $200 for the assurance-type warranty costs in 2026 and 2025. The income statement for 2025 reports sales revenue of $30,000 and warranty expense of $700.

To record revenue recognized in 2028 on the service-type warranty:

January 1–December 31, 2028

Unearned Warranty Revenue ($900 ÷ 3)	300	
Warranty Revenue		300

Warranty costs under the service-type warranty will be expensed as incurred in 2028–2030.

Consideration Payable

Companies often make payments (provide consideration) to their customers as part of a revenue arrangement. Consideration paid or payable may indicate discounts, volume rebates, free products, or services. For example, numerous companies offer premiums (either on a limited or continuing basis) to customers in return for box tops, certificates, coupons, labels, or wrappers. The **premium** may be silverware, dishes, a small appliance, a toy, or free transportation.

Printed coupons that can be redeemed for a cash discount on items purchased are also extremely popular. Another popular marketing innovation is the **cash rebate**, which the buyer can obtain by returning the store receipt, a rebate coupon, and Universal Product Code (UPC label) or "bar code" to the manufacturer.

Companies offer premiums, coupon offers, and rebates to stimulate sales. And to the extent that the premiums reflect a material right promised to the customer, a performance obligation exists and should be recorded as a liability (see **Underlying Concepts**). However, the period that benefits is not necessarily the period in which the company pays the premium.

- At the end of the accounting period, many premium offers may be outstanding and must be redeemed when presented in subsequent periods.

Underlying Concepts

Do you remember the principles for expense and revenue recognition? The **expense recognition principle** requires that companies report the related expense in the period in which the expense is incurred. According to the **revenue recognition principle**, revenue is recorded in the period in which the performance obligation is satisfied.

- To reflect the existing current liability, the company estimates the number of outstanding premium offers that customers will present for redemption.
- The company then charges the cost of premium offers to Premium Expense. It credits the outstanding obligations to an account titled Premium Liability. [7]

Example 12.18
Consideration Payable

FACTS Fluffy Cake Mix Company sells boxes of cake mix for $3 per box. In addition, Fluffy Cake Mix offers its customers a large durable mixing bowl in exchange for $1 and 10 box tops. The mixing bowl costs Fluffy Cake Mix $2, and the company estimates that customers will redeem 60% of the box tops. The premium offer began in June 2025. During 2025, Fluffy Cake Mix purchased 20,000 mixing bowls at $2, sold 300,000 boxes of cake mix for $3 per box, and redeemed 60,000 box tops.

QUESTION What entries should Fluffy Cake Mix record in 2025?

SOLUTION

To record purchase of 20,000 mixing bowls at $2 per bowl in 2025:

Premium Inventory (20,000 mixing bowls × $2)	40,000	
Cash		40,000

To record the sale of the cake mix boxes in 2025:

Cash (300,000 boxes of cake mix × $3)	900,000	
Sales Revenue		900,000

To record the actual redemption of 60,000 box tops, the receipt of $1 per 10 box tops, and the delivery of the mixing bowls:

Cash [(60,000 ÷ 10) × $1]	6,000	
Premium Expense ($12,000 − $6,000)	6,000	
Premium Inventory [(60,000 ÷ 10) × $2]		12,000

The adjusting entry to record additional premium expense and the estimated premium liability at December 31, 2025, is as follows.

Premium Expense	12,000	
Premium Liability		12,000*

*Computation of Premium Liability at 12/31/25:

Total box tops sold in 2025	300,000
Estimated redemptions (in percent)	× .60
Total estimated redemptions	180,000
Cost of estimated redemptions [(180,000 box tops ÷ 10) × ($2 − $1)]	$18,000
Redemptions to date	(6,000)
Liability at 12/31/25	$12,000

The December 31, 2025, balance sheet of Fluffy Cake Mix reports Premium Inventory of $28,000 ($40,000 − $12,000) as a current asset and Premium Liability of $12,000 ($18,000 − $6,000) as a current liability. The 2025 income statement reports $18,000 premium expense as a selling expense.

Gain Contingencies

Gain contingencies are claims or rights to receive assets (or have a liability reduced) whose existence is uncertain but which may become valid eventually. The typical gain contingencies are:

- Possible receipts of monies from gifts, donations, and asset sales.
- Possible refunds from the government in tax disputes.
- Pending court cases with a probable favorable outcome.

Companies follow a conservative policy in this area; **they do not record gain contingencies.**[8]

Example 12.19
Gain Contingency

FACTS High-Tech is a plaintiff in a class action lawsuit against a drug manufacturer. The lawsuit is finally settled in High-Tech's favor, and the settlement amount is put in escrow to be divided among various plaintiffs and their attorneys. Presently, there is no agreement as to how to allocate the money among the plaintiffs

QUESTION Should High-Tech record a gain for this contingency?

SOLUTION

High-Tech has a gain contingency because the amount of cash is to be received is not yet known. However, any possible gain related to the lawsuit **should not be recorded** in the financial statements because the company should not recognize revenue before its realization. However, if the settlement amount to be paid to High-Tech is known and the settlement funds will be a paid out shortly, High-Tech should record a receivable for the amount to be received and a gain reported in the financial statements.

There are two items you should know regarding disclosure of gain contingencies:

1. A company discloses gain contingencies in the notes only when a high probability exists for realizing them.
2. It is unusual to find information about contingent gains in the financial statements and the accompanying notes.

Illustration 12.8 presents an example of a gain contingency disclosure.

BMC Industries, Inc.

Note 13: Legal Matters

In the first quarter, a U.S. District Court in Miami, Florida, awarded the Company a $5.1 million judgment against Barth Industries (Barth) of Cleveland, Ohio and its parent, Nesco Holdings, Inc. (Nesco). The judgment relates to an agreement under which Barth and Nesco were to help automate the plastic lens production plant in Fort Lauderdale, Florida. **The Company has not recorded any income relating to this judgment because Barth and Nesco have filed an appeal.**

ILLUSTRATION 12.8 Disclosure of Gain Contingency

Put It into Practice LO 12.3
Account for Contingencies

FACTS Preferred Travel has the following transactions that may or may not require recognition of contingencies.

1. During the year, Preferred Travel sold high-end travel accessories to customers who purchased its vacation packages. Preferred Travel offers a 2-year assurance warranty for these accessories. The company sold the items for $400,000 and estimates that warranty costs will be 5% of the amount sold. During the current year, it spent $8,000 in servicing warranty claims.
2. Preferred Travel also sold specific vacation packages related to fishing expeditions. The company sold 3,000 of these vacation packages at a cost of $500 per package. When the customer purchases one of these vacation packages, the customer also receives a coupon giving customer the right to a child's tackle box which has a value of $10. The customer must also remit $1 with the coupon to receive the tackle box. During the year, customers returned 800 coupons. It is estimated that 60% of customers will send in their coupon. The tackle box cost Preferred Travel $4; during the year, 2,500 tackle boxes were purchased by Preferred Travel for possible disbursement.

3. As a result of uninsured accidents during the year, personal injury suits for $350,000 and $60,000 have been filed against the company. It is the judgment of legal counsel that an unfavorable outcome is unlikely in the $60,000 case but that an unfavorable verdict approximating $250,000 (reliably estimated) will probably result in the $350,000 case.
4. Preferred Travel is involved with one of its suppliers who failed to provide proper safeguards for its customers during a recent trip. As a result, a substantial number of its customers decided to return home in the middle of the trip and demanded refunds which amounted to $200,000. Preferred Travel paid the $200,000 but has now sued the supplier. The attorney for Preferred Travel believes that Preferred Travel will win the lawsuit indicating that the company's chances are at least 70%.

INSTRUCTIONS Prepare all the entries necessary to record the above transactions as they occurred and any adjusting journal entries relative to the transactions. For simplicity, assume that adjusting entries are recorded only once a year on December 31. If no entry is required, indicate what should be reported relative to each situation in the financial statements and accompanying notes.

SOLUTION

1. To record sales of accessories:

Cash	400,000	
Sales Revenue		400,000

To record payment for warranty costs incurred during period:

Warranty Expense	8,000	
Cash, Inventory, Accrued Payroll		8,000

To record adjusting entry to record estimated warranty expense and estimated warranty liability claims:

Warranty Expense	12,000	
Warranty Liability [(.05 × $400,000) − $8,000]		12,000

2. To record the sale of vacation packages:

Cash	1,500,000	
Sales Revenue ($500 × 3,000)		1,500,000

To record purchase of premiums:

Premium Inventory	10,000	
Cash ($4 × 2,500)		10,000

To record premiums redeemed and cash received during year:

Cash ($1 × 800)	800	
Premium Expense ($3,200 − $800)	2,400	
Premium Inventory ($4 × 800)		3,200

To record a liability for premiums at year-end:

Premium Expense	3,000	
Premium Liability [($4 − $1) × 1,000]		3,000

Computation of Premium Expense and Premium Liability at year-end:

Total vacation packages sold	3,000	
Estimated redemptions	× .60	
Total estimated redemptions	1,800	
Cost of estimated redemptions [1,800 × ($4 − $1)]		$5,400
Redemptions to date		2,400
Liability		$3,000

3. **To record liability loss:**

Lawsuit Loss	250,000	
Lawsuit Liability		250,000

A loss and a liability have been recorded for $250,000 because (1) information is available prior to the issuance of the financial statements that indicates it is probable that a liability had been incurred at the date of the financial statements, and (2) the amount is reasonably estimable. That is, the occurrence of the uninsured accidents during the year plus the outstanding injury suits and the attorney's estimate of probable loss required recognition of a loss contingency. The $60,000 legal case should not be recorded, as the loss is unlikely to occur.

4. No entry required. While Preferred Travel has a gain contingency because the amount of cash to be received is not yet known, any possible gain related to the lawsuit **should not be recorded** in the financial statements. This is because the company should not recognize revenue on a gain contingency until realized. This contingency should be disclosed in the notes to the financial statements. Therefore, Preferred Travel should disclose that it is involved in a lawsuit and that the outcome is expected to be favorable.

12.4 Presentation and Decision Analysis

LEARNING OBJECTIVE 4

Indicate how to present and analyze liabilities and contingencies.

Presentation of Current Liabilities

Warren Buffett once made the following observation: "only when the tide goes out do you discover who's been swimming naked." His statement is certainly correct today as the Covid-19 pandemic has caused well-known companies like **Hertz**, **Nieman Marcus**, **Pier One**, and **JC Penney** to declare bankruptcy. These companies declared bankruptcy because they did not have the liquidity and financial flexibility necessary to survive a significant downturn in the economy. As you analyze financial statements, you should understand that current liabilities:

- Are usually reported in financial statements at their full maturity value.
- May be listed in the financial statements in order of maturity, in order of amount, or in order of liquidation preference.
- Are usually presented as the first classification in the liabilities and stockholders' equity section of the balance sheet.

Illustration 12.9 presents an excerpt of **Best Buy Co.**'s financial statements that is representative of the reports of most companies.

ILLUSTRATION 12.9 Best Buy
Current Liabilities

Best Buy
(dollars in millions)

	Feb. 1, 2020
Current assets (including Cash, $2,249; Accounts receivable, $1,149; and Short term investments, $118)	$8,857
Current liabilities	
Accounts payable	$5,288
Unredeemed gift card liabilities	281
Deferred revenue	501
Accrued compensation and related expenses	410
Accrued liabilities	906
Current portion of operating lease liabilities	660
Current portion of long term debt	14
Total current liabilities	$8,060

Additional Presentation and Disclosure

The notes to the financial statements also are useful for helping to understand a company's liquidity and financial flexibility. The following note disclosures are common.

- Companies should identify **secured liabilities**, indicating the assets pledged as security.
- **Current maturities of long-term debt** should be classified as current liabilities. **Best Buy**, for example, reports the current portion of long-term debt of $14 million in its current liability section (Illustration 12.9). Companies exclude long-term debts maturing currently from current liabilities if they are to be either:
  1. Retired by assets accumulated for this purpose that properly have not been shown as current assets.
  2. Refinanced, or retired from the proceeds of a new debt issue.
  3. Converted into capital stock.

In these situations, the use of current assets or the creation of other current liabilities does not occur. Therefore, classification as a current liability is inappropriate.

A company should disclose the plan for liquidation of such a debt either parenthetically or by a note to the financial statements. When only a part of a long-term debt is to be paid within the next 12 months, as in the case of serial bonds that it retires through a series of annual installments, **the company reports the maturing portion of long-term debt as a current liability** and the remaining portion as a long-term debt. An exception to this reporting is when a company will pay a current maturing obligation from assets classified as long-term.

Finally, undoubtedly some of you have taken out loans to pay for your education. If your loans are due on demand (referred to as a callable loan), you would probably consider it a current liability. If you did, your interpretation would be correct. Similarly, a company should classify as current any liability that is **due on demand** (callable by the creditor) or will be due on demand within a year (or operating cycle, if longer).

Liabilities often become callable by the creditor when there is a violation of the debt agreement. For example, most debt agreements specify a given level of equity to debt be maintained, or specify that working capital must be of a minimum amount. If the company violates an agreement, it must classify the debt as current because it is a reasonable expectation that existing working capital will be used to satisfy the debt. Only if a company can show that it is **probable** that it will cure (satisfy) the violation within the grace period specified in the agreements can it classify the debt as noncurrent. [9]

Short-Term Obligations Expected to Be Refinanced

Short-term obligations are debts scheduled to mature within one year after the date of a company's balance sheet or within its operating cycle, whichever is longer.

- Some short-term obligations are expected to be refinanced on a long-term basis.
- These short-term obligations will not require the use of working capital during the next year (or operating cycle, if longer).[7]

At one time, the accounting profession generally supported the exclusion of short-term obligations from current liabilities if they were "expected to be refinanced." But the profession provided no specific guidelines, so companies determined whether a short-term obligation was "expected to be refinanced" based solely on management's **intent** to refinance on a long-term basis. Classifications were not clear-cut. For example, a company might obtain a five-year bank loan but handle the actual financing with 90-day notes, which it must keep turning over (renewing). In this case, is the loan a long-term debt or a current liability?

Refinancing Criteria The accounting profession has developed criteria for determining the circumstances under which short-term obligations may be properly excluded from current liabilities. **Both** of the following conditions must be met.

1. The company must **intend to refinance** the obligation on a long-term basis.
2. The company must **demonstrate an ability** to consummate the refinancing. **[10]**

Intention to refinance on a long-term basis means that the company intends to refinance the short-term obligation so that it will not require the use of working capital during the next fiscal year (or operating cycle, if longer). The company demonstrates the **ability** to consummate the financing either by:

a. **Actually refinancing** the short-term obligation by issuing a long-term obligation or equity securities after the date of the balance sheet but before it is issued.

b. Entering into a **financing agreement** that clearly permits the company to refinance the debt on a long-term basis on terms that are readily determinable.

If an actual refinancing occurs, the portion of the short-term obligation to be excluded from current liabilities may not exceed the proceeds from the new obligation or equity securities used to retire the short-term obligation.

For example, **Montavon Winery** had $3,000,000 of short-term debt. Subsequent to the balance sheet date but before issuing the balance sheet, the company issued 100,000 shares of common stock, intending to use the proceeds to liquidate the short-term debt at its maturity. If Montavon's net proceeds from the sale of the 100,000 shares total $2,000,000, it can exclude from current liabilities only $2,000,000 of the short-term debt.

An additional question is whether a company should exclude from current liabilities a short-term obligation if it is paid off after the balance sheet date and replaced by long-term debt before the balance sheet is issued.

Example 12.20
Classification of Debt

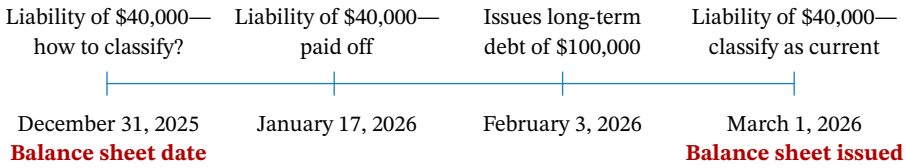
FACTS Marquart Company pays off debt of $40,000 on January 17, 2026. On February 17, 2026, Marquart issues long-term debt of $100,000. Marquart's financial statements, dated December 31, 2025, are to be issued March 1, 2026.

QUESTION Should Marquart exclude the $40,000 short-term debt from current liabilities in its 2025 balance sheet?

[7] **Refinancing a short-term obligation on a long-term basis** means either replacing it with a long-term obligation or equity securities, or renewing, extending, or replacing it with short-term obligations for an uninterrupted period extending beyond one year (or the operating cycle, if longer) from the date of the company's balance sheet.

SOLUTION

Marquart should not exclude this debt from current liabilities. Here's why: Repayment of the short-term obligation required the use of **existing** current assets **before** the company obtained funds through long-term financing, as shown in the following timeline.



Therefore, unlike the Montavon refinancing through the issuance of stock, Marquart has neither an actual refinancing nor a refinancing agreement in place to pay the debt on a long-term basis. As a result, Marquart must include the short-term obligations in current liabilities at the balance sheet date.

Analysis of Current Liabilities

The distinction between current liabilities and long-term debt is important. It provides information about the liquidity of the company. Liquidity regarding a liability is the expected time to elapse before its payment. In other words, a liability soon to be paid is a current liability.

- A liquid company is better able to withstand a financial downturn.
- Also, it has a better chance of taking advantage of investment opportunities that develop.

Analysts use certain basic ratios such as net cash flow provided by operating activities to current liabilities, and the turnover ratios for receivables and inventory, to assess liquidity. Two other ratios used to examine liquidity are the current ratio and the acid-test ratio.

Current Ratio

The **current ratio** is the ratio of total current assets to total current liabilities, as follows.

$$\text{Current Ratio} = \frac{\text{Current Assets}}{\text{Current Liabilities}}$$

What are the most common types of current assets that would be in the numerator? Cash, short-term investments, accounts receivable, inventory, and perhaps prepaid expenses. The ratio shows how many times the current assets can cover, or be used to extinguish, the current liabilities. Clearly, the company wants the numerator to be more than the denominator. Sometimes it is called the **working capital ratio** because working capital is the excess of current assets over current liabilities.

The current ratio does not reflect that some of the current assets in the numerator may be hard to convert to cash to pay current liabilities. The best example is inventory.

- With inventories, especially raw materials and work in process, there is a question of how long it will take to transform them into the finished product and what ultimately will be realized in the sale of the merchandise.
- Eliminating the inventories, along with any prepaid expenses, from the amount of current assets might provide better information for short-term creditors.

Therefore, some analysts use the acid-test ratio in place of the current ratio.

Acid-Test Ratio

Many analysts favor an **acid-test** or **quick ratio** that relates total current liabilities to cash, short-term investments, and receivables, as follows.

$$\text{Acid-Test Ratio} = \frac{\text{Cash} + \text{Short-Term Investments} + \text{Accounts Receivable (net)}}{\text{Current Liabilities}}$$

As you can see, the acid-test ratio does not include inventories or prepaid expenses.

To illustrate the computation of these two ratios, we use the information for **Best Buy** from Illustration 12.9. **Illustration 12.10** shows the computation of the current and acid-test ratios for Best Buy.

$$\text{Current Ratio} = \frac{\text{Current Assets}}{\text{Current Liabilities}} = \frac{\$8{,}857}{\$8{,}060} = 1.10 \text{ times}$$

$$\text{Acid-Test Ratio} = \frac{\text{Cash} + \text{Short-Term Investments} + \text{Accounts Receivable (Net)}}{\text{Current Liabilities}} = \frac{\$3{,}516}{\$8{,}060} = 0.44 \text{ times}$$

ILLUSTRATION 12.10
Computation of Current and Acid-Test Ratios for **Best Buy**

From this information, it appears that Best Buy's current position is adequate.

Here are additional important points to consider when analyzing **Best Buy**'s current liabilities.

- **Unearned (deferred) revenue.** Best Buy has some deferred revenue. Deferred revenue amounts increase current liabilities and decrease both the current ratio and acid test ratio, but there is a silver lining here as deferred revenue will increase revenue in the future. Take **Microsoft** as an example. Microsoft had a current liability entitled short-term unearned revenue of over $435 billion recently. Is that good or bad? It increases current liabilities but at the same time it indicates that Microsoft will have increasing operating revenue in the future.
- **Interest rate environment.** It is also important to understand the interest rate environment related to current liabilities. **General Electric Capital** at one time used considerable short-term debt to refinance its debt. Interest rates were low, but analysts expressed concern that perhaps GE should use more long-term debt and make sure that it locked in low rates for a much longer period. That situation is particularly appropriate today as Covid-19 concerns have driven down long-term rates.
- **Working capital position** Best Buy has an adequate current ratio (greater than 1), but it may be missing some opportunities related to additional growth. For example, **Walmart** at one time adopted a policy of extending its payment to vendors which increased accounts payable substantially. Although its current ratio decreased as a result, the excess cash was used for various profitable projects which increased its income.

Accounting Matters — I'll Pay You Later

If you compared the liquidity for **Best Buy** and **Walmart**, Best Buy appears to be the more liquid company. However, a closer look at the elements of working capital may suggest a different story. This is because Walmart and other retailers like **Tesco** could be using a strategy adopted recently to extend the period of time for paying their vendors.

By pushing out payments to suppliers to three and four months, companies can pursue any number of other projects. For example, **Mondelez** is buying back stock. **Kellogg's** is in the middle of a restructuring. **Procter & Gamble**'s recent move to extend its payment terms to 75 days added about $1 billion to its cash flow. These strategies result in higher current

liabilities and lower liquidity ratios. So while Walmart looks less liquid, its strategy may pay off in the form of lower overall financing costs.

Suppliers, however, may not share the same enthusiasm for extended payment terms. Receiving payments later is often crippling for suppliers, especially smaller businesses that have little cushion. In Britain, the Marketing Agencies Association called on its member advertising agencies to "strike" in April against **Anheuser-Busch InBev** after the company began seeking new terms. Those included acceptance of a payment period longer than 120 days and a request for pro bono work. On the other hand, offsetting these costs for suppliers in arrangements with powerful retailers are longer-term contracts and more consistency in order volumes.

Desperate times call for desperate measures? During the global pandemic when retailers could barely keep items on the shelf, they needed their suppliers to be financially healthy. As a result, a number of retailers made changes to their supply-chain financing program to allow qualified suppliers to get payments earlier in hopes of keeping the suppliers afloat, and the supply chain intact.

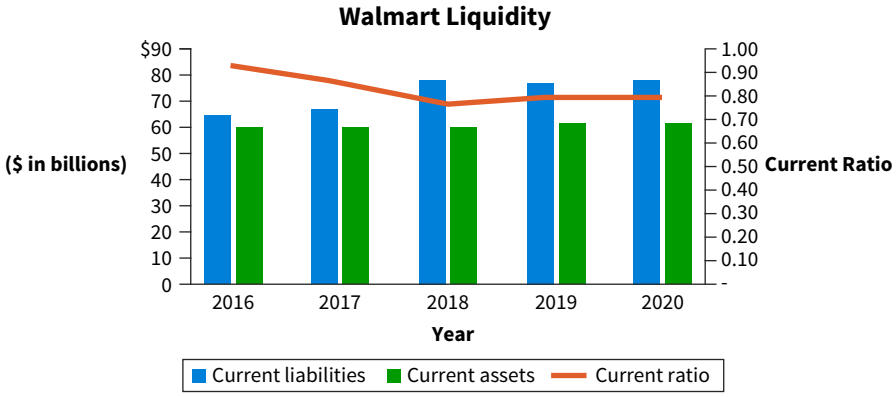
Either way, according to one accounting analyst, "the additional financing costs that suppliers incur because they aren't being paid promptly work their way back into higher prices for consumers." In addition, this makes it difficult for investors to compare companies, if some are able to squeeze suppliers and others do not. Those with power in the supply chain, like Walmart, may appear less liquid. So to make valid comparisons of liquidity ratios, you need to know something about the company's supply chain strategy.

Ram, "Tesco Probe Raises Concerns that Retailers Dominate Supply Chain Balance of Power Still Favours Large Supermarkets at Expense of Suppliers," *Financial Times* (January 31, 2016).

Analytics in Action: Current Ratio Analysis Can Lead to Innovation

As you know, the current ratio offers a glimpse into a company's ability to meet its current obligations. A current ratio greater than one is often desired as it means a company has sufficient current assets on hand to liquidate current liabilities. So, what does it mean when a company's current ratio is less than one? What is typically a red flag might actually be a sign of innovative business practices.

Take **Walmart** as an example. As the graph shows, Walmart's current ratio has consistently been lower than one. How does the company make this work? With a lot of data! That is, companies like Walmart are able to pull granular data out of their accounting systems and, using sophisticated software tools, analyze that data to make business decisions. In Walmart's situation, it revised its supplier agreements to more closely align payment terms with the supplier's average total days of on-hand inventory. Tailoring the timing of payments to suppliers may therefore result in a current ratio of less than one, but it is a creative way to effectively manage working capital.



Go to the Analytics in Action Activities section at the end of the chapter, which includes Excel-based problems with data sets, to see the relevance and application of data analytics to intermediate accounting topics.

Learning Objectives Review

1 Describe the nature, valuation, and reporting of current liabilities in the form of payables.

Current liabilities are **obligations whose liquidation a company reasonably expects to require the use of current assets or the creation of other current liabilities.** Theoretically, liabilities should be measured by the present value of the future outlay of cash required to liquidate them. In practice, companies usually record and report current liabilities at their full maturity value.

There are several **types of current liabilities**, such as (1) accounts payable, (2) notes payable, (3) taxes payable, and (4) employee-related liabilities. The employee-related liabilities are (1) payroll deductions, (2) compensated absences, and (3) bonus agreements.

2 Describe the nature, valuation, and reporting of current liabilities in the form of unearned revenues.

Unearned revenues arise when a company receives payment before delivering goods or rendering services. When a company receives an advance payment, it debits Cash and credits a current liability account identifying the source of the unearned revenue. The company recognizes revenue by debiting the unearned revenue account and crediting a revenue account. Common unearned revenues relate to tickets and subscriptions, gift cards, and customer advances and deposits.

3 Explain the accounting for loss and gain contingencies.

A company should accrue an estimated loss from a **loss contingency** by charging expense and recording a liability only if *both* of the following conditions are met: (1) information available prior to the issuance of the financial statements indicates that it is probable that a liability has been incurred at the date of the financial statements, and (2) the amount of the loss can be reasonably estimated. If the loss is either probable or estimable but not both, and if there is at least a reasonable possibility that a company may have incurred a liability, it should disclose in the notes both the nature of the contingency and an estimate of the possible loss.

The following factors must be considered in **determining whether to record a liability** with respect to pending or threatened litigation and actual or possible claims and assessments: (1) the time period in which the underlying cause for action occurred, (2) the probability of an unfavorable outcome, and (3) the ability to reasonably estimate the amount of loss.

If it is probable that customers will make claims under **warranties** relating to goods or services that have been sold and it can reasonably estimate the costs involved, the company uses the accrual method. It charges warranty costs under assurance-type warranties to operating expense in the year of sale.

Premiums, coupon offers, and rebates are made to stimulate sales. Companies should charge their costs to expense in the period of the sale that benefits from the premium plan.

Gain contingencies are not recorded. Instead, they are disclosed in the notes only when the probabilities are high that a gain contingency will occur.

4 Indicate how to present and analyze liabilities and contingencies.

The current liability accounts are usually presented as the first classification in the liabilities and stockholders' equity section of the balance sheet. Within the current liabilities section, companies may list the accounts in order of maturity, in descending order of amount, or in order of liquidation preference. Detail and supplemental information concerning current liabilities should be sufficient to meet the requirement of full disclosure.

Companies present in current liabilities the current maturities of long-term debt and callable debt due within one year. A short-term obligation is excluded from current liabilities if both the following

conditions are met: (1) the company must intend to refinance the obligation on a long-term basis, **and** (2) it must demonstrate an ability to consummate the refinancing.

Two ratios used to analyze liquidity are the **current and acid test ratios**.

Enhanced Review and Practice

Exercises, Problems, Data Analytics Activities, Problem Solution Walkthrough Videos, and many more assessment tools and resources are available for practice in Wiley Course Resources.

Questions

1. Distinguish between a current liability and a long-term debt.
2. Assume that your friend Will Morris, who is a music major, asks you to define and discuss the nature of a liability. Assist him by preparing a definition of a liability and by explaining to him what you believe are the elements or factors inherent in the concept of a liability.
3. Why is the liabilities section of the balance sheet of primary significance to bankers?
4. How are current liabilities related by definition to current assets? How are current liabilities related to a company's operating cycle?
5. How is present value related to the concept of a liability?
6. What is the nature of a "discount" on notes payable?
7. What are compensated absences?
8. Under what conditions must an employer accrue a liability for the cost of compensated absences?
9. Under what conditions is an employer required to accrue a liability for sick pay? Under what conditions is an employer permitted, but not required, to accrue a liability for sick pay?
10. Faith Battle operates a health food store, and she has been the only employee. Her business is growing, and she is considering hiring some additional staff to help her in the store. Explain to her the various payroll deductions that she will have to account for, including their potential impact on her financial statements, if she hires additional staff.
11. How does unearned revenue arise? Why can it be classified properly as a current liability? Give several examples of business activities that result in unearned revenues.
12. What is a gift card? How does the accounting for a gift card reflect the application of the revenue recognition principle?
13. What is gift card breakage? Briefly describe the accounting for gift card breakage.
14. Leon Wight, a newly hired loan analyst, is examining the current liabilities of a corporate loan applicant. He observes that unearned revenues have declined in the current year compared to the prior year. Is this a positive indicator about the client's liquidity? Explain.
15. Define (a) a contingency and (b) a contingent liability.
16. Under what conditions should a contingent liability be recorded?
17. Distinguish between a determinable current liability and a contingent liability. Give two examples of each type.
18. How are the terms "probable," "reasonably possible," and "remote" related to contingent liabilities?
19. Grant Company has had a record-breaking year in terms of growth in sales and profitability. However, market research indicates that it will experience operating losses in two of its major businesses next year. The controller has proposed that the company record a provision for these future losses this year, since it can afford to take the charge and still show good results. Advise the controller on the appropriateness of this charge.
20. Explain the accounting for an assurance-type warranty.
21. Explain the accounting for a service-type warranty.
22. Southeast Airlines Inc. awards members of its Flightline program a second ticket at half price, valid for 2 years anywhere on its flight system, when a full-price ticket is purchased. How would you account for the full-fare and half-fare tickets?
23. Pacific Airlines Co. awards members of its Frequent Fliers Club one free round-trip ticket, anywhere on its flight system, for every 50,000 miles flown on its planes. How would you account for the free ticket award?
24. Should a liability be recorded for risk of loss due to lack of insurance coverage? Discuss.
25. What factors must be considered in determining whether or not to record a liability for pending litigation? For threatened litigation?
26. Within the current liabilities section, how do you believe the accounts should be listed? Defend your position.
27. How does the acid-test ratio differ from the current ratio? How are they similar?
28. When should liabilities for each of the following items be recorded on the books of an ordinary business corporation?
    a. Acquisition of goods by purchase on credit.
    b. Officers' salaries.
    c. Special bonus to employees.
    d. Dividends.
    e. Purchase commitments.
29. How should a debt callable by the creditor be reported in the debtor's financial statements?
30. Under what conditions should a short-term obligation be excluded from current liabilities?
31. What evidence is necessary to demonstrate the ability to consummate the refinancing of short-term debt?

Brief Exercises

BE12.1 (LO 1) Roley Corporation uses a periodic inventory system and the gross method of accounting for purchase discounts. On July 1, Roley purchased $60,000 of inventory, terms 2/10, n/30, FOB shipping point. Roley paid freight costs of $1,200. On July 3, Roley returned damaged goods and received credit of $6,000. On July 10, Roley paid for the goods. Prepare all necessary journal entries for Roley.

BE12.2 (LO 1) Upland Company borrowed $40,000 on November 1, 2025, by signing a $40,000, 9%, 3-month note. Prepare Upland's November 1, 2025, entry; the December 31, 2025, annual adjusting entry; and the February 1, 2026, entry.

BE12.3 (LO 1) Takemoto Corporation borrowed $60,000 on November 1, 2025, by signing a $61,350, 3-month, zero-interest-bearing note. Prepare Takemoto's November 1, 2025, entry; the December 31, 2025, annual adjusting entry; and the February 1, 2026, entry.

BE12.4 (LO 1) Dillons Corporation made credit sales of $30,000 which are subject to 6% sales tax. The corporation also made cash sales which totaled $20,670 including the 6% sales tax. (a) Prepare the entry to record Dillons' credit sales. (b) Prepare the entry to record Dillons' cash sales.

BE12.5 (LO 1) Lexington Corporation's weekly payroll of $24,000 included FICA taxes withheld of $1,836, federal taxes withheld of $2,990, state taxes withheld of $920, and insurance premiums withheld of $250. Prepare Lexington's journal entry to record the weekly payroll.

BE12.6 (LO 1) Kasten Inc. provides paid vacations to its employees. At December 31, 2025, 30 employees have each earned 2 weeks of vacation time. The employees' average salary is $500 per week. Prepare Kasten's December 31, 2025, adjusting entry.

BE12.7 (LO 1) Mayaguez Corporation provides its officers with bonuses based on net income. For 2025, the bonuses total $350,000 and are paid on February 15, 2026. Prepare Mayaguez's December 31, 2025, adjusting entry and the February 15, 2026, entry.

BE12.8 (LO 2) Sport Pro Magazine sold 12,000 annual subscriptions on August 1, 2025, for $18 each. Prepare Sport Pro's August 1, 2025, journal entry and the December 31, 2025, annual adjusting entry, assuming the magazines are published and delivered monthly.

BE12.9 (LO 2) Rio Grande Taco Palace sells 200 gift cards at $50 per gift card and 100 of the gift cards are redeemed by year-end. Prepare the journal entries. (Ignore Cost of Goods Sold and possible breakage.)

BE12.10 (LO 2) Refer to the facts BE12.9. Rio Grande estimates that it will have 10% breakage on its gift cards. Prepare the entry for the gift card redemption and the expected breakage for the gift cards in the current year. (Ignore Cost of Goods Sold.)

BE12.11 (LO 2) Brown University Student Housing Inc. requires all tenants to pay a $500 security deposit, which will be returned at the end of the lease, less any repair costs on the apartment. Brown rented 275 apartments in the current month. Prepare the entry to record the security deposits collected.

BE12.12 (LO 3) Scorcese Inc. is involved in a lawsuit at December 31, 2025. (a) Prepare the December 31 entry assuming it is probable that Scorcese will be liable for $900,000 as a result of this suit. (b) Prepare the December 31 entry, if any, assuming it is *not* probable that Scorcese will be liable for any payment as a result of this suit.

BE12.13 (LO 3) Buchanan Company recently was sued by a competitor for patent infringement. Attorneys have determined that it is probable that Buchanan will lose the case and that a reasonable estimate of damages to be paid by Buchanan is $300,000. In light of this case, Buchanan is considering establishing a $100,000 self-insurance allowance. What entry(ies), if any, should Buchanan record to recognize this loss contingency?

BE12.14 (LO 3) Streep Factory provides a 2-year warranty with one of its products which was first sold in 2025. Streep sold $1,000,000 of products subject to the warranty. Streep expects $125,000 of warranty costs over the next 2 years. In 2025, Streep spent $70,000 servicing warranty claims. Prepare Streep's journal entry to record the sales (ignore Cost of Goods Sold) and the December 31 adjusting entry, assuming the expenditures are inventory costs.

BE12.15 (LO 3) Leppard Corporation sells smart home systems. The corporation also offers its customers a 4-year warranty contract. During 2025, Leppard sold 20,000 warranty contracts at $99 each. The corporation spent $180,000 servicing warranties during 2025. Prepare Leppard's journal entries for (a) the sale of contracts, (b) the cost of servicing the warranties, and (c) the recognition of warranty revenue. Assume the service costs are inventory costs.

BE12.16 (LO 3) Wynn Company offers a set of building blocks to customers who send in 3 UPC codes from Wynn cereal, along with 50¢. The block sets cost Wynn $1.10 each to purchase and 60¢ each to mail to customers. During 2025, Wynn sold 1,200,000 boxes of cereal. The company expects 30% of the UPC codes to be sent in. During 2025, 120,000 UPC codes were redeemed. Prepare Wynn's December 31, 2025, adjusting entry.

BE12.17 (LO 4) At December 31, 2025, Burr Corporation owes $500,000 on a note payable due February 15, 2026. (a) If Burr had restructured the note on December 15, 2025, such that Burr has the contractual right to defer payment of $250,000 of the note until February 15, 2027, how much of the $500,000 should be reported as a current liability at December 31, 2025? (b) If Burr pays off the note on February 15, 2026, and then borrows $1,000,000 on a long-term basis on March 1, how much of the $500,000 should be reported as a current liability at December 31, 2025, the end of the fiscal year? Burr issues the balance sheet on March 1, 2026.

Exercises

E12.1 (LO 1) (Balance Sheet Classification of Various Liabilities) How would each of the following items be reported on the balance sheet?

a. Accrued vacation pay.
b. Estimated taxes payable.
c. Service warranties on appliance sales.
d. Customer advance on an order.
e. Employee payroll deductions unremitted.
f. Unpaid bonus to officers.
g. Deposit received from customer to guarantee performance of a contract.
h. Sales taxes payable.
i. Gift certificates sold to customers but not yet redeemed.
j. Premium offers outstanding.
k. Discount on notes payable.
l. Personal injury claim pending (probable but not estimable).
m. Current maturities of long-term debts to be paid from current assets.
n. Amounts received for gift cards.

E12.2 (LO 1) Excel **(Accounts and Notes Payable)** The following are selected 2025 transactions of Astin Corporation.

Sept. 1	Purchased inventory from Encino Company on account for $50,000. Astin records purchases gross and uses a periodic inventory system.
Oct. 1	Issued a $50,000, 12-month, 8% note to Encino in payment of account.
Oct. 1	Borrowed $50,000 from the Shore Bank by signing a 12-month, zero-interest-bearing $54,000 note.

Instructions

a. Prepare journal entries for the selected transactions above.
b. Prepare adjusting entries at December 31.
c. Compute the total net liability to be reported on the December 31 balance sheet for:
  1. The interest-bearing note.
  2. The zero-interest-bearing note.

E12.3 (LO 1) (Compensated Absences) Broderick Company began operations on January 2, 2025. It employs 9 individuals who work 8-hour days and are paid hourly. Each employee earns 10 paid vacation days and 6 paid sick days annually. Vacation days may be taken after January 15 of the year following the year in which they are earned. Sick days may be taken as soon as they are earned; unused sick days accumulate. Additional information is as follows.

Actual Hourly Wage Rate		Vacation Days Used by Each Employee		Sick Days Used by Each Employee	
2025	2026	2025	2026	2025	2026
$10	$11	0	9	4	5

Broderick Company has chosen to accrue the cost of compensated absences at rates of pay in effect during the period when earned and to accrue sick pay when earned.

Instructions

a. Prepare journal entries to record transactions related to compensated absences during 2025 and 2026.

b. Compute the amounts of any liability for compensated absences that should be reported on the balance sheet at December 31, 2025 and 2026.

E12.4 (LO 1) Excel (Compensated Absences) Assume the facts in E12.3 except that Broderick Company has chosen not to accrue paid sick leave until used, and has chosen to accrue vacation time at expected future rates of pay without discounting. The company used the following projected rates to accrue vacation time.

Year in Which Vacation Time Was Earned	Projected Future Pay Rates Used to Accrue Vacation Pay
2025	$10.75
2026	11.60

Instructions

a. Prepare journal entries to record transactions related to compensated absences during 2025 and 2026.

b. Compute the amounts of any liability for compensated absences that should be reported on the balance sheet at December 31, 2025 and 2026.

E12.5 (LO 1) (Adjusting Entry for Sales Tax) During the month of June, Rowling Boutique recorded cash sales of $233,200 and credit sales of $153,700, both of which include the 6% sales tax that must be remitted to the state by July 15.

Instructions

Prepare the adjusting entry that should be recorded to fairly present the June 30 financial statements.

E12.6 (LO 1) (Payroll Tax Entries) The payroll of YellowCard Company for September 2025 is as follows.

Total payroll was $480,000, of which $110,000 is exempt from Social Security tax because it represented amounts paid in excess of $142,800 to certain employees. The amount paid to employees in excess of $7,000 (the maximum for both federal and state unemployment taxes) was $400,000. Income taxes in the amount of $80,000 were withheld, as was $9,000 in union dues. The state unemployment tax is 3.5%, but YellowCard Company is allowed a credit of 2.3% by the state for its unemployment experience. Also, assume that the current FICA tax is 7.65% on an employee's wages to $142,800 and 1.45% in excess of $142,800. The federal unemployment tax rate is 0.8% after state credit.

Instructions

Prepare the necessary journal entries if the wages and salaries paid and the employer payroll taxes are recorded separately.

E12.7 (LO 1) (Payroll Tax Entries) Green Day Hardware's payroll for November is summarized below.

		Amount Subject to Payroll Taxes		
			Unemployment Tax	
Payroll	Wages Due	FICA	Federal	State
Factory	$120,000	$120,000	$40,000	$40,000
Sales	32,000	32,000	4,000	4,000
Administrative	36,000	36,000	—	—
Total	$188,000	$188,000	$44,000	$44,000

At this point in the year, some employees have already received wages in excess of those to which payroll taxes apply. Assume that the state unemployment tax is 2.5%. The FICA rate is 7.65% on an employee's wages to $142,800 and 1.45% in excess of $142,800. Of the $188,000 wages subject to FICA tax, $20,000 of the sales wages is in excess of $142,800. Federal unemployment tax rate is 0.8% after credits. Income tax withheld amounts to $16,000 for factory, $7,000 for sales, and $6,000 for administrative.

Instructions

a. Prepare a schedule showing the employer's total cost of wages for November by function. (Round all computations to nearest dollar.)

b. Prepare the journal entries to record the factory, sales, and administrative payrolls including the employer's payroll taxes.

E12.8 (LO 2) (Unearned Revenues) Caratini Company sells custom-made windows to Bryant Inc. for a new office building. The sale price for the windows is $275,000. Caratini requires customers to provide a down payment of 15% before it designs and manufactures the windows to customer specifications. Bryant makes the down payment on December 10, 2025, and the windows are completed and delivered on April 3, 2026.

Instructions

a. Prepare the entry for Caratini when it receives the down payment.

b. Prepare the entry (or entries) for Caratini on April 3, 2026. The cost of the windows is $200,000.

E12.9 (LO 2) (Unearned Revenues) Presented below are selected transactions of Lombardino Restaurant for the month ending August 31, 2025.

a. Lombardino sells 80 gift cards at $75 per gift card and 50 of the gift cards are redeemed by year end. It is estimated that 10 of the gift cards will not be redeemed.

b. Lombardino accepted a reservation for its private dining room for a rehearsal dinner in September. It received a security deposit of $300, which will be returned after the dinner is held.

Instructions

Prepare entries for the Lombardino transactions.

E12.10 (LO 3) (Warranties) Soundgarden Company sold 200 color laser copiers on July 10, 2025, for $4,000 apiece, together with a 1-year warranty. Maintenance on each copier during the warranty period is estimated to be $330.

Instructions

Prepare entries to record the sale of the copiers, the related warranty costs, and any accrual on December 31, 2025. Actual warranty costs (inventory) incurred in 2025 were $17,000.

E12.11 (LO 3) (Warranties) Early in 2025, Crow Equipment sold 500 Rollomatics at $6,000 each. During 2025, Crow spent $20,000 servicing the 2-year assurance warranties that accompany the Rollomatic. All sales transactions are on a cash basis.

Instructions

a. Prepare 2025 entries for Crow. Assume that Crow estimates the total cost of servicing the warranties in the second year will be $35,000.

b. Prepare 2025 entries for Crow assuming that the warranties are not an integral part of the sale (a service-type warranty). Assume that of the sales total, $56,000 relates to sales of warranty contracts. Warranty costs incurred in 2025 were $20,000. Estimate revenues to be recognized on a straight-line basis.

E12.12 (LO 3) (Premium Entries) No Doubt Company includes one coupon in each box of soap powder that it packs, and 10 coupons are redeemable for a premium (a kitchen utensil). In 2025, No Doubt Company purchased 8,800 premiums at 80 cents each and sold 110,000 boxes of soap powder at $3.30 per box; 44,000 coupons were presented for redemption in 2025. It is estimated that 60% of the coupons will eventually be presented for redemption.

Instructions

Prepare all the entries that would be made relative to sales of soap powder and to the premium plan in 2025.

E12.13 (LO 3) (Contingencies) Presented below are three independent situations. Answer the question at the end of each situation.

1. During 2025, Salt-n-Pepa Inc. became involved in a tax dispute with the IRS. Salt-n-Pepa's attorneys have indicated that they believe it is probable that Salt-n-Pepa will lose this dispute. They also believe that Salt-n-Pepa will have to pay the IRS between $900,000 and $1,400,000. After the 2025 financial statements were issued, the case was settled with the IRS for $1,200,000. What amount, if any, should be reported as a liability for this contingency as of December 31, 2025?

2. On October 1, 2025, Jackson Chemical was identified as a potentially responsible party by the Environmental Protection Agency. Jackson's management along with its counsel have concluded that it is probable that Jackson will be responsible for damages, and a reasonable estimate of these damages is $5,000,000. Jackson's insurance policy of $9,000,000 has a deductible clause of $500,000. How should Jackson Chemical report this information in its financial statements at December 31, 2025?

3. Etheridge Inc. had a manufacturing plant in Sudan, which was destroyed in the civil war. It is not certain who will compensate Etheridge for this destruction, but Etheridge has been assured by governmental officials that it will receive a definite amount for this plant. The amount of the compensation will be less than the fair value of the plant, but more than its book value. How should the contingency be reported in the financial statements of Etheridge Inc.?

E12.14 (LO 3) Groupwork (Premiums) The following are three independent situations.

1. Hairston Rewards Inc. provides rewards services to licensees. Hairston records service revenue related to rewards (granted as reward vouchers, which can be redeemed at a variety of retailers) and recognizes the cost of redemptions in the year vouchers are sold to licensees. Hairston's past experience indicates that only 80% of the vouchers sold to licensees will be redeemed. Hairston's liability for stamp redemptions was $13,000,000 at December 31, 2024. Additional information for 2025 is as follows.

Service revenue from vouchers sold to licensees	$9,500,000
Cost of redemptions (vouchers sold prior to 1/1/25)	6,000,000

   If all the vouchers sold in 2025 were presented for redemption in 2026, the redemption cost would be $5,200,000. What amount should Hairston report as a liability for voucher redemptions at December 31, 2025?

2. In packages of its products, Burnitz Inc. includes coupons that may be presented at retail stores to obtain discounts on other Burnitz products. Retailers are reimbursed for the face amount of coupons redeemed plus 10% of that amount for handling costs. Burnitz honors requests for coupon redemption by retailers up to 3 months after the consumer expiration date. Burnitz estimates that 60% of all coupons issued will ultimately be redeemed. Information relating to coupons issued by Burnitz during 2025 is as follows.

Consumer expiration date	12/31/25
Total face amount of coupons issued	$800,000
Total payments to retailers as of 12/31/25	330,000

   What amount should Burnitz report as a liability for unredeemed coupons at December 31, 2025?

3. Roland Company sold 700,000 boxes of pie mix under a new sales promotional program. Each box contains one coupon, which submitted with $4.00, entitles the customer to a baking pan. Roland pays $6.00 per pan and $0.50 for handling and shipping. Roland estimates that 70% of the coupons will be redeemed, even though only 250,000 coupons had been processed during 2025. What amount should Roland report as a liability for unredeemed coupons at December 31, 2025?

(AICPA adapted)

E12.15 (LO 4) (Refinancing of Short-Term Debt) On December 31, 2025, McDaniel Company had $1,200,000 of short-term debt in the form of notes payable due February 2, 2026. On January 21, 2026, the company issued 25,000 shares of its common stock for $38 per share, receiving $950,000 proceeds after brokerage fees and other costs of issuance. On February 2, 2026, the proceeds from the stock sale, supplemented by an additional $250,000 cash, are used to liquidate the $1,200,000 debt. The December 31, 2025, balance sheet is issued on February 23, 2026.

Instructions

Show how the $1,200,000 of short-term debt should be presented on the December 31, 2025, balance sheet, including note disclosure.

E12.16 (LO 4) (Refinancing of Short-Term Debt) On December 31, 2025, Holmes Company has $7,000,000 of short-term debt in the form of notes payable to Gotham State Bank due in 2026. On December 28, 2025, Holmes enters into a refinancing agreement with Gotham that will permit it to borrow up to 60% of the gross amount of its accounts receivable. Receivables are expected to range between a low of $6,000,000 in May to a high of $8,000,000 in October during the year 2026. The interest cost of the maturing short-term debt is 15%, and the new agreement calls for a fluctuating interest at 1% above the prime rate on notes due in 2030. Holmes's December 31, 2025, balance sheet is issued on February 15, 2026.

Instructions

Prepare a partial balance sheet for Holmes at December 31, 2025, showing how its $7,000,000 of short-term debt should be presented, including footnote disclosure.

E12.17 (LO 4) (Financial Statement Impact of Liability Transactions) Presented below is a list of possible transactions.

1. Purchased inventory for $80,000 on account (assume perpetual system is used).
2. Issued an $80,000 note payable in payment on account (see item 1 above).
3. Recorded accrued interest on the note from item 2 above.
4. Borrowed $100,000 from the bank by signing a 6-month, $112,000, zero-interest-bearing note.
5. Recognized 4 months' interest expense on the note from item 4 above.
6. Recorded cash sales of $75,260, which includes 6% sales tax.
7. Recorded wage expense of $35,000. The cash paid was $25,000; the difference was due to various amounts withheld.
8. Recorded employer's payroll taxes.
9. Accrued accumulated vacation pay.
10. Recorded bonuses due to employees.
11. Sold gift cards totaling $7,000.
12. Recorded a contingent loss on a lawsuit that the company will probably lose.
13. Accrued warranty expense.
14. Paid warranty costs that were accrued in item 13 above.
15. Recorded sales of product and related service-type warranties.
16. Paid warranty costs under contracts from item 15 above.
17. Recognized warranty revenue (see item 15 above).
18. Recorded estimated liability for premium claims outstanding.

Instructions

Set up a table using the format shown below and analyze the effect of the 18 transactions on the financial statement categories indicated.

#	Assets	Liabilities	Stockholders' Equity	Net Income
1				

Use the following code:

I: Increase D: Decrease NE: No effect

E12.18 (LO 4) (Ratio Computations and Discussion) Sprague Company has been operating for several years, and on December 31, 2025, presented the following balance sheet.

Sprague Company
Balance Sheet
December 31, 2025

Cash	$ 40,000	Accounts payable	$ 80,000
Receivables	75,000	Mortgage payable	140,000
Inventory	95,000	Common stock ($1 par)	150,000
Plant assets (net)	220,000	Retained earnings	60,000
	$430,000		$430,000

The net income for 2025 was $25,000. Assume that total assets are the same in 2024 and 2025.

Instructions

Compute each of the following ratios. For each of the four, indicate the manner in which it is computed and its significance as a tool in the analysis of the financial soundness of the company (round answers to two decimal points).

a. Current ratio.
b. Acid-test ratio.
c. Debt to assets ratio.
d. Return on assets.

E12.19 (LO 4) (Ratio Computations and Analysis) Prior Company's condensed financial statements provide the following information.

Prior Company
Balance Sheet

	Dec. 31, 2025	Dec. 31, 2024
Cash	$ 52,000	$ 60,000
Accounts receivable (net)	198,000	80,000
Short-term investments	80,000	40,000
Inventory	440,000	360,000
Prepaid expenses	3,000	7,000
Total current assets	$ 773,000	$ 547,000
Property, plant, and equipment (net)	857,000	853,000
Total assets	$1,630,000	$1,400,000
Current liabilities	240,000	160,000
Bonds payable	400,000	400,000
Common stockholders' equity	990,000	840,000
Total liabilities and stockholders' equity	$1,630,000	$1,400,000

Income Statement
For the Year Ended 2025

Sales revenue	$1,640,000
Cost of goods sold	(800,000)
Gross profit	840,000
Selling and administrative expenses	(440,000)
Interest expense	(40,000)
Net income	$ 360,000

Instructions

a. Determine the following for 2025 (round answers to two decimal points).

1. Current ratio at December 31.

2. Acid-test ratio at December 31.

3. Accounts receivable turnover.

4. Inventory turnover.

5. Return on assets.

6. Profit margin on sales.

b. Prepare a brief evaluation of the financial condition of Prior Company and of the adequacy of its profits.

E12.20 (LO 4) (Ratio Computations and Effect of Transactions) Presented below is information related to Carver Inc.

Carver Inc.
Balance Sheet
December 31, 2025

Cash		$ 45,000	Notes payable (short-term)	$ 50,000
Receivables	$110,000		Accounts payable	32,000
Less: Allowance	15,000	95,000	Accrued liabilities	5,000
Inventory		170,000	Common stock (par $5)	260,000
Prepaid insurance		8,000	Retained earnings	141,000
Land		20,000		
Equipment (net)		150,000		
		$488,000		$488,000

Carver Inc. Income Statement For the Year Ended December 31, 2025		
Sales revenue		$1,400,000
Cost of goods sold		
Inventory, Jan. 1, 2025	$200,000	
Purchases	790,000	
Cost of goods available for sale	990,000	
Inventory, Dec. 31, 2025	(170,000)	
Cost of goods sold		820,000
Gross profit on sales		580,000
Operating expenses		170,000
Net income		$ 410,000

Instructions

a. Compute the following ratios or relationships of Carver Inc. Assume that the ending account balances are representative unless the information provided indicates differently.

1. Current ratio.
2. Inventory turnover.
3. Accounts receivable turnover.
4. Earnings per share.
5. Profit margin on sales.
6. Return on assets on December 31, 2025.

b. Indicate for each of the following transactions whether the transaction would improve, weaken, or have no effect on the current ratio of Carver Inc. at December 31, 2025.

1. Write off an uncollectible account receivable, $2,200.
2. Purchase additional capital stock for cash.
3. Pay $40,000 on notes payable (short-term).
4. Collect $23,000 on accounts receivable.
5. Buy equipment on account.
6. Give an existing creditor a short-term note in settlement of account.

Problems

P12.1 (LO 1) Groupwork (Current Liability Entries and Adjustments) Described below are certain transactions of Edwardson Corporation. The company uses the periodic inventory system.

1. On February 2, the corporation purchased goods from Martin Company for $70,000 subject to cash discount terms of 2/10, n/30. Purchases and accounts payable are recorded by the corporation at net amounts after cash discounts. The invoice was paid on February 26.
2. On April 1, the corporation bought a truck for $50,000 from General Motors Company, paying $4,000 in cash and signing a 1-year, 12% note for the balance of the purchase price.
3. On May 1, the corporation borrowed $83,000 from Chicago National Bank by signing a $92,000 zero-interest-bearing note due 1 year from May 1.

Instructions

a. Make all the journal entries necessary to record the transactions above using appropriate dates.

b. Edwardson Corporation's year-end is December 31. Assuming that no adjusting entries relative to the transactions above have been recorded, prepare any adjusting journal entries concerning interest that are necessary to present fair financial statements at December 31. Assume straight-line amortization of discounts.

P12.2 (LO 1, 2) Excel (Liability Entries and Adjustments) Listed below are selected transactions of Schultz Department Store for the current year ending December 31.

1. On December 5, the store received $500 from the Selig Players as a deposit to be returned after certain furniture to be used in stage production was returned on January 15.

2. During December, cash sales totaled $798,000, which includes the 5% sales tax that must be remitted to the state by the fifteenth day of the following month.
3. On December 10, the store purchased for cash three delivery trucks for $120,000. The trucks were purchased in a state that applies a 5% sales tax.
4. The store sold 25 gift cards for $100 per card. At year-end, 20 of the gift cards are redeemed. Schultz expects three of the cards to expire unused.

Instructions

Prepare all the journal entries necessary to record the transactions noted above as they occurred and any adjusting journal entries relative to the transactions that would be required to present fair financial statements at December 31. Date each entry. For simplicity, assume that adjusting entries are recorded only once a year on December 31. (Ignore Cost of Goods Sold.)

P12.3 (LO 1) (Payroll Tax Entries) Cedarville Company pays its office employee payroll weekly. Below is a partial list of employees and their payroll data for August. Because August is their vacation period, vacation pay is also listed.

Employee	Earnings to July 31	Weekly Pay	Vacation Pay to Be Received in August
Mark Hamill	$4,200	$200	–
Karen Robbins	3,500	150	$300
Brent Kirk	2,700	110	220
Alec Guinness	7,400	250	–
Ken Sprouse	8,000	330	660

Assume that the federal income tax withheld is 10% of wages. Union dues withheld are 2% of wages. Vacations are taken the second and third weeks of August by Robbins, Kirk, and Sprouse. The state unemployment tax rate is 2.5% and the federal is 0.8%, both on a $7,000 maximum. The FICA rate is 7.65% on employee and employer on a maximum of $142,800 per employee. In addition, a 1.45% rate is charged both employer and employee for an employee's wages in excess of $142,800.

Instructions

Make the journal entries necessary for each of the four August payrolls. The entries for the payroll and for the company's liability are made separately. Also make the entry to record the monthly payment of accrued payroll liabilities.

P12.4 (LO 1) Excel (Payroll Tax Entries) The following is a payroll sheet for Otis Imports for the month of September 2025. The company is allowed a 1% unemployment compensation rate by the state; the federal unemployment tax rate is 0.8% and the maximum for both is $7,000. Assume a 10% federal income tax rate for all employees and a 7.65% FICA tax on employee and employer on a maximum of $142,800. In addition, 1.45% is charged both employer and employee for an employee's wages in excess of $142,800 per employee.

Name	Earnings to Aug. 31	September Earnings	Income Tax Withholding	FICA	Unemployment Tax	
					State	Federal
B.D. Williams	$ 6,800	$ 800				
D. Raye	6,500	700				
K. Baker	7,600	1,100				
F. Lopez	13,600	1,900				
A. Daniels	131,300	13,000				
B. Kingston	136,300	16,000				

Instructions

a. Complete the payroll sheet and make the necessary entry to record the payment of the payroll.
b. Make the entry to record the payroll tax expenses of Otis Imports.
c. Make the entry to record the payment of the payroll liabilities created. Assume that the company pays all payroll liabilities at the end of each month.

P12.5 (LO 3) Groupwork (Warranties) Brooks Corporation sells computers under a 2-year warranty contract that requires the corporation to replace defective parts and to provide the necessary repair labor. During 2025, the corporation sells for cash 400 computers at a unit price of $2,500. On the basis of past experience, the 2-year warranty costs are estimated to be $155 for parts and $185 for labor per unit. (For simplicity, assume that all sales occurred on December 31, 2025.) The warranty is not sold separately from the computer.

Instructions

a. Record any necessary journal entries in 2025.

b. What liability relative to these transactions would appear on the December 31, 2025, balance sheet and how would it be classified?

c. In 2026, the actual warranty costs to Brooks Corporation were $21,400 for parts and $39,900 for labor. Record any necessary journal entries in 2026.

P12.6 (LO 3) (Extended Warranties) Dos Passos Company sells televisions at an average price of $900 and also offers to each customer a separate 3-year warranty contract for $90 that requires the company to perform periodic services and to replace defective parts. During 2025, the company sold 300 televisions and 270 warranty contracts for cash. It estimates the 3-year warranty costs as $20 for parts and $40 for labor, and accounts for warranties separately. Assume sales occurred on December 31, 2025, and straight-line recognition of warranty revenues occurs.

Instructions

a. Record any necessary journal entries in 2025.

b. What liability relative to these transactions would appear on the December 31, 2025, balance sheet and how would it be classified?

In 2026, Dos Passos Company incurred actual costs relative to 2025 television warranty sales of $2,000 for parts and $4,000 for labor.

c. Record any necessary journal entries in 2026 relative to 2025 television warranties.

d. What amounts relative to the 2025 television warranties would appear on the December 31, 2026, balance sheet and how would they be classified?

P12.7 (LO 3) (Warranties) Alvarado Company sells a machine for $7,400 with a 12-month warranty agreement that requires the company to replace all defective parts and to provide the repair labor at no cost to the customers. With sales being made evenly throughout the year, the company sells 600 machines in 2025 (warranty expense is incurred half in 2025 and half in 2026). As a result of product testing, the company estimates that the total warranty cost is $390 per machine ($170 parts and $220 labor).

Instructions

Assuming that actual warranty costs are incurred exactly as estimated, what journal entries would be made relative to the following facts?

a. Sale of machinery and warranty expense incurred in 2025.

b. Warranty accrual on December 31, 2025.

c. Warranty costs incurred in 2026.

d. What amount, if any, is disclosed in the balance sheet as a liability for future warranty costs as of December 31, 2025?

P12.8 (LO 3) (Premium Entries) To stimulate the sales of its Alladin breakfast cereal, Loptien Company places 1 coupon in each box. Five coupons are redeemable for a premium consisting of a children's hand puppet. In 2026, the company purchases 40,000 puppets at $1.50 each and sells 480,000 boxes of Alladin at $3.75 a box. From its experience with other similar premium offers, the company estimates that 40% of the coupons issued will be mailed back for redemption. During 2026, 115,000 coupons are presented for redemption.

Instructions

Prepare the journal entries that should be recorded in 2026 relative to the premium plan.

P12.9 (LO 3, 4) (Premium Entries and Financial Statement Presentation) Sycamore Candy offers an MP3 download (seven-single medley) as a premium for every five candy bar wrappers presented by customers together with $2.50. The candy bars are sold by the company to distributors for 30¢ each. The purchase price of each download code to the company is $2.25. In addition, it costs 50¢ to distribute each code. The results of the premium plan for the years 2025 and 2026 are as follows. (All purchases and sales are for cash.)

	2025	2026
MP3 codes purchased	250,000	330,000
Candy bars sold	2,895,400	2,743,600
Wrappers redeemed	1,200,000	1,500,000
2025 wrappers expected to be redeemed in 2026	290,000	
2026 wrappers expected to be redeemed in 2027		350,000

Instructions

a. Prepare the journal entries that should be made in 2025 and 2026 to record the transactions related to the premium plan of the Sycamore Candy.

b. Indicate the account names, amounts, and classifications of the items related to the premium plan that would appear on the balance sheet and the income statement at the end of 2025 and 2026.

P12.10 (LO 3) Writing (Loss Contingencies: Entries and Essay) On November 24, 2025, 26 passengers on Windsor Airlines Flight No. 901 were injured upon landing when the plane skidded off the runway. Personal injury suits for damages totaling $9,000,000 were filed on January 11, 2026, against the airline by 18 injured passengers. The airline carries no insurance. Legal counsel has studied each suit and advised Windsor that it is probable that it will pay 60% of the damages claimed. The financial statements for the year ended December 31, 2025, were issued February 27, 2026.

Instructions

a. Prepare any disclosures and journal entries required by the airline in preparation of the December 31, 2025, financial statements.

b. Ignoring the November 24, 2025, accident, what liability due to the risk of loss from lack of insurance coverage should Windsor Airlines record or disclose? During the past decade, the company has experienced at least one accident per year and incurred average damages of $3,200,000. Discuss fully.

P12.11 (LO 3) Writing (Loss Contingencies: Entries and Essays) Polska Corporation, in preparation of its December 31, 2025, financial statements, is attempting to determine the proper accounting treatment for each of the following situations.

1. As a result of uninsured accidents during the year, personal injury suits for $700,000 and $120,000 have been filed against the company. It is the judgment of Polska's legal counsel that an unfavorable outcome is unlikely in the $120,000 case but that an unfavorable verdict approximating $500,000 (reliably estimated) will probably result in the $700,000 case.
2. Polska owns a subsidiary in a foreign country that has a book value of $5,725,000 and an estimated fair value of $9,500,000. The foreign government has communicated to Polska its intention to expropriate the assets and business of all foreign investors. On the basis of settlements other firms have received from this same country, Polska expects to receive 40% of the fair value of its properties as final settlement.
3. Polska's chemical product division consisting of five plants is uninsurable because of the special risk of injury to employees and losses due to fire and explosion. The year 2025 is considered one of the safest (luckiest) in the division's history because no loss due to injury or casualty was suffered. Having suffered an average of three casualties a year during the rest of the past decade (ranging from $60,000 to $700,000), management is certain that next year the company will probably not be so fortunate.

Instructions

a. Prepare the journal entries that should be recorded as of December 31, 2025, to recognize each of the situations above.

b. Indicate what should be reported relative to each situation in the financial statements and accompanying notes. Explain why.

P12.12 (LO 3) (Warranties and Premiums) Garison Music Emporium carries a wide variety of musical instruments, sound reproduction equipment, recorded music, and sheet music. Garison uses two sales promotion techniques—warranties and premiums—to attract customers.

Musical instruments and sound equipment are sold with a 1-year warranty for replacement of parts and labor. The estimated warranty cost, based on past experience, is 1% of sales.

The premium is offered on the recorded and sheet music. Customers receive a coupon for each dollar spent on recorded music or sheet music. Customers may exchange 200 coupons and $20 for an MP3 player. Garison pays $32 for each player and estimates that 60% of the coupons given to customers will be redeemed.

Garison's total sales for 2025 were $7,200,000—$5,700,000 from musical instruments and sound reproduction equipment and $1,500,000 from recorded music and sheet music. Replacement parts and labor for warranty work totaled $94,000 during 2025 ($44,000 of the work is related to pre-2025 sales). A total of 6,500 players used in the premium program were purchased during the year and there were 1,200,000 coupons redeemed in 2025.

The balances in the accounts related to warranties and premiums on January 1, 2025, were as shown below.

Premium Inventory	$37,600
Premium Liability	44,800
Warranty Liability	56,000

Instructions

Garison Music Emporium is preparing its financial statements for the year ended December 31, 2025. Determine the amounts that will be shown on the 2025 financial statements for the following.

a. Warranty Expense.
b. Warranty Liability.
c. Premium Expense.
d. Premium Inventory.
e. Premium Liability.

(CMA adapted)

P12.13 (LO 3) Writing Groupwork **(Liability Errors)** You are the independent auditor engaged to audit Millay Corporation's December 31, 2025, financial statements. Millay manufactures household appliances. During the course of your audit, you discovered the following contingent liabilities.

1. Millay began production of a new dishwasher in June 2025 and, by December 31, 2025, sold 120,000 to various retailers for $500 each. Each dishwasher is under a 1-year warranty. The company estimates that its warranty expense per dishwasher will amount to $25. At year-end, the company had already paid out $1,000,000 in warranty expenses. Millay's income statement shows warranty expenses of $1,000,000 for 2025.
2. In response to your attorney's letter, Morgan Sondgeroth, Esq., has informed you that Millay has been cited for dumping toxic waste into the Kishwaukee River. Clean-up costs and fines amount to $2,750,000. Although the case is still being contested, Sondgeroth is certain that Millay will most probably have to pay the fine and clean-up costs. No disclosure of this situation was found in the financial statements.
3. Millay is the defendant in a patent infringement lawsuit by Megan Drabek over Millay's use of a hydraulic compressor in several of its products. Sondgeroth claims that, if the suit goes against Millay, the loss may be as much as $5,000,000. However, Sondgeroth believes the loss of this suit to be only reasonably possible. Again, no mention of this suit is made in the financial statements.

As presented, these contingencies are not reported in accordance with GAAP, which may create problems in issuing a favorable audit report. You feel the need to note these problems in the work papers.

Instructions

Heading each page with the name of the company, balance sheet date, and a brief description of the problem, write a brief narrative for each of the above issues in the form of **a memorandum** to be incorporated in the audit work papers. Explain what led to the discovery of each problem, what the problem really is, and what you advised your client to do (along with any appropriate journal entries) in order to bring these contingencies in accordance with GAAP.

P12.14 (LO 3) **(Warranty and Coupon Computation)** Schmitt Company must make computations and adjusting entries for the following independent situations at December 31, 2026.

1. Its line of amplifiers carries a 3-year warranty against defects. On the basis of past experience, the estimated warranty costs related to dollar sales are first year after sale—2% of sales revenue; second year after sale—3% of sales revenue; and third year after sale—5% of sales revenue. Sales and actual warranty expenditures for the first 3 years of business were:

	Sales Revenue	Warranty Expenditures
2024	$ 800,000	$ 6,500
2025	1,100,000	17,200
2026	1,200,000	62,000

Instructions

Compute the amount that Schmitt should report as a liability in its December 31, 2026, balance sheet. Assume that all sales are made evenly throughout each year with warranty expenses also evenly spaced relative to the rates above.

2. With some of its products, Schmitt includes coupons that are redeemable in merchandise. The coupons have no expiration date and, in the company's experience, 40% of them are redeemed. The liability for unredeemed coupons at December 31, 2025, was $9,000. During 2026, coupons worth $30,000 were issued, and merchandise worth $8,000 was distributed in exchange for coupons redeemed.

Instructions

Compute the amount of the liability that should appear on the December 31, 2025, balance sheet.

(AICPA adapted)

Using Your Judgment

Financial Reporting Problem: The Procter & Gamble Company (P&G)

UYJ12.1 The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to these financial statements and the accompanying notes to answer the following questions.

a. What was P&G's 2020 short-term debt and related weighted-average interest rate on this debt?

b. What was P&G's 2020 working capital, acid-test ratio, and current ratio? Comment on P&G's liquidity.

c. What types of commitments and contingencies has P&G's reported in its financial statements? What is management's reaction to these contingencies?

Comparative Analysis Case: The Coca-Cola Company and PepsiCo, Inc.

UYJ12.2 The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

a. How much working capital do each of these companies have at the end of 2020?

b. Compute each company's (a) current cash debt coverage, (b) cash debt coverage, (c) current ratio, (d) acid-test ratio, (e) accounts receivable turnover, and (f) inventory turnover for 2020. Comment on each company's overall liquidity.

c. What types of loss or gain contingencies do these two companies have at the end of 2020?

Financial Statement Analysis Case: Northland Cranberries

UYJ12.3 Despite being a publicly traded company only since 1987, **Northland Cranberries** of Wisconsin Rapids, Wisconsin, is one of the world's largest cranberry growers. During its short life as a publicly traded corporation, it has engaged in an aggressive growth strategy. As a consequence, the company has taken on significant amounts of both short-term and long-term debt. The following information is taken from recent annual reports of the company.

	Current Year	Prior Year
Current assets	$ 6,745,759	$ 5,598,054
Total assets	107,744,751	83,074,339
Current liabilities	10,168,685	4,484,687
Total liabilities	73,118,204	49,948,787
Shareholders' equity	34,626,547	33,125,552
Net sales	21,783,966	18,051,355
Cost of goods sold	13,057,275	8,751,220
Interest expense	3,654,006	2,393,792
Income tax expense	1,051,000	1,917,000
Net income	1,581,707	2,942,954

Instructions

a. Evaluate the company's liquidity by calculating and analyzing working capital and the current ratio.

b. The discussion of the company's liquidity, shown below, was provided by the company in the Management Discussion and Analysis section of the company's annual report. Comment on whether you agree with management's statements, and what might be done to remedy the situation.

The lower comparative current ratio in the current year was due to $3 million of short-term borrowing then outstanding which was incurred to fund the Yellow River Marsh acquisitions last year. As a result of the extreme seasonality of its business, the company does not believe that its current ratio or its underlying stated working capital at the current, fiscal year-end is a meaningful indication of the Company's liquidity. As of March 31 of each fiscal year, the Company has historically carried no significant amounts of inventories and by such date all of the Company's accounts receivable from its crop sold for processing under the supply agreements have been paid in cash, with the resulting cash received from such payments used to reduce indebtedness. The Company utilizes its revolving bank credit facility, together with cash generated from operations, to fund its working capital requirements throughout its growing season.

Financial Statement Analysis Case: Mohican Company

UYJ12.4 Presented below is the current liabilities section and related note of Mohican Company.

	(dollars in thousands)	
	Current Year	**Prior Year**
Current liabilities		
Current portion of long-term debt	$ 15,000	$ 10,000
Short-term debt	2,668	405
Accounts payable	29,495	42,427
Accrued warranty	16,843	16,741
Accrued marketing programs	17,512	16,585
Other accrued liabilities	35,653	33,290
Accrued and deferred income taxes	16,206	17,348
Total current liabilities	$133,377	$136,796

Notes to Consolidated Financial Statements

Note 1 (in part): Summary of Significant Accounting Policies and Related Data

Accrued Warranty The company provides an accrual for future warranty costs based upon the relationship of prior years' sales to actual warranty costs.

Instructions

Answer the following questions.

a. What is the difference between the cash basis and the accrual basis of accounting for warranty costs?

b. Under what circumstance, if any, would it be appropriate for Mohican Company to recognize deferred revenue on warranty contracts?

c. If Mohican Company recognized deferred revenue on warranty contracts, how would it recognize this revenue in subsequent periods?

Financial Statement Analysis Case: BOP Clothing Co.

UYJ12.5 As discussed in the chapter, an important consideration in evaluating current liabilities is a company's operating cycle. The operating cycle is the average time required to go from cash to cash in generating revenue. To determine the length of the operating cycle, analysts use two measures: the average days to sell inventory (*inventory days*) and the average days to collect receivables (*receivable days*). The inventory-days computation measures the average number of days it takes to move an item from raw materials or purchase to final sale (from the day it comes in the company's door to the point it is converted to cash or an account receivable). The receivable-days computation measures the average number of days it takes to collect an account.

Most businesses must then determine how to finance the period of time when the liquid assets are tied up in inventory and accounts receivable. To determine how much to finance, companies first determine accounts payable days—how long it takes to pay creditors. Accounts payable days measures the number of days it takes to pay a supplier invoice. Consider the following operating cycle worksheet for BOP Clothing Co.

	2024	2025
Cash	$ 45,000	$ 30,000
Accounts receivable	250,000	325,000
Inventory	830,000	800,000
Accounts payable	720,000	775,000
Purchases	1,100,000	1,425,000
Cost of goods sold	1,145,000	1,455,000
Sales	1,750,000	1,950,000
Operating Cycle		
Inventory days[1]	264.6	200.7
Receivable days[2]	52.1	60.8
Operating cycle	316.7	261.5
Less: Accounts payable days[3]	238.9	198.5
Days to be financed	77.8	63.0
Working capital	$ 405,000	$ 380,000
Current ratio	1.56	1.49
Acid-test ratio	0.41	0.46

[1]Inventory days = (Inventory × 365) ÷ Cost of goods sold
[2]Receivable days = (Accounts receivable × 365) ÷ Sales
[3]Accounts payable days = (Accounts payable × 365) ÷ Purchases

Purchases = Cost of goods sold + Ending inventory − Beginning inventory.
The ratios above assume that other current assets and liabilities are negligible.

These data indicate that BOP has reduced its overall operating cycle (to 261.5 days) as well as the number of days to be financed with sources of funds other than accounts payable (from 78 to 63 days). Most businesses cannot finance the operating cycle with accounts payable financing alone, so working capital financing, usually short-term interest-bearing loans, is needed to cover the shortfall. In this case, BOP would need to borrow less money to finance its operating cycle in 2025 than in 2024.

Instructions

a. Use the BOP analysis to briefly discuss how the operating cycle data relate to the amount of working capital and the current and acid-test ratios.

b. Select two other real companies that are in the same industry and complete the operating cycle worksheet, along with the working capital and ratio analysis. Briefly summarize and interpret the results. To simplify the analysis, you may use ending balances to compute turnover ratios.

(Adapted from Operating Cycle Worksheet)

Accounting, Analysis, and Principles

UYJ12.6 YellowCard Company manufactures accessories for Apple products. It had the following selected transactions during 2025.

1. YellowCard provides a 2-year warranty on its docking stations, which it began selling in 2025. During 2025, YellowCard spent $6,000 servicing warranty claims. At year-end, YellowCard estimates that an additional $45,000 will be spent in the future to service warranties related to 2025 sales.
2. YellowCard has a $200,000 loan outstanding from First Trust Corp. The loan is set to mature on February 28, 2026. For several years, First Trust has agreed to extend the loan, as long as YellowCard makes all its quarterly interest payments (interest is due on the last days of each February, May, August, and November) and maintains an acid-test ratio (also called "quick ratio") of at least 1.25. First Trust has provided YellowCard a contractual right indicating that First Trust will extend the loan another 12 months, providing YellowCard has made interest payments.
3. On November 1, 2025, Yellowcard received an advance payment of $24,000 for design and manufacture of specialized iPhone holders that will mount on bicycles. The total invoice price for the order is $92,000.Yellowcard receives the remaining invoice price in cash when the adapters are delivered to the customer in March 2026 (with a total cost of $55,000).

(*Note:* For any part of this problem requiring an interest or discount rate, use 10%.)

Accounting

Prepare all 2025 journal entries relating to (a) YellowCard's warranties, (b) YellowCard's loan from First Trust Corp., and (c) the delivery of the special-order iPhone stands in March 2026.

Analysis

Describe how the transactions above affect ratios that might be used to assess YellowCard's liquidity. How important is the commitment letter that YellowCard has from First Trust Corp. to these ratios?

Principles

YellowCard is contemplating offering an extended warranty. If customers pay an additional $50 at the time of product purchase, YellowCard would extend the warranty an additional two years. Would the extended warranty meet the definition of a liability under current generally accepted accounting principles? Briefly explain.

Developing Your Professional Skills

Critical-Thinking Cases

CT12.1 (LO 1) (Nature of Liabilities) Presented below is the current liabilities section of Micro Corporation.

	($000)	
	2026	**2025**
Current liabilities		
Notes payable	$ 68,713	$ 7,700
Accounts payable	179,496	101,379
Compensation to employees	60,312	31,649
Accrued liabilities	158,198	77,621
Income taxes payable	10,486	26,491
Current maturities of long-term debt	16,592	6,649
Total current liabilities	$493,797	$251,489

Instructions

Answer the following questions.

a. What are the essential characteristics that make an item a liability?

b. How does one distinguish between a current liability and a long-term liability?

c. What are accrued liabilities? Give three examples of accrued liabilities that Micro might have.

d. What is the theoretically correct way to value liabilities? How are current liabilities usually valued?

e. Why are notes payable reported first in the current liabilities section?

f. What might be the items that comprise Micro's liability for "Compensation to employees"?

CT12.2 (LO 1, 2) (Current versus Noncurrent Classification) Rodriguez Corporation includes the following items in its liabilities at December 31, 2025.

1. Notes payable, $25,000,000, due June 30, 2026.
2. Deposits from customers on equipment ordered by them from Rodriguez, $6,250,000.
3. Salaries and wages payable, $3,750,000, due January 14, 2026.

Instructions

Indicate in what circumstances, if any, each of the three liabilities above would be excluded from current liabilities.

CT12.3 (LO 3) Writing (Loss Contingencies) On February 1, 2026, one of the huge storage tanks of Viking Manufacturing exploded. Windows in houses and other buildings within a one-mile radius of the explosion were severely damaged, and a number of people were injured. As of February 15, 2026 (when the December 31, 2025, financial statements were completed and sent to the publisher for printing and public distribution), no suits had been filed or claims asserted against the company as a consequence of the explosion. The company fully anticipates that suits will be filed and claims asserted for injuries and damages. Because the casualty was uninsured and the company is considered at fault, Viking Manufacturing will have to cover the damages from its own resources.

Instructions

Discuss fully the accounting treatment and disclosures that should be accorded the casualty and related contingent losses in the financial statements dated December 31, 2025.

CT12.4 (LO 3) (Loss Contingency) Presented below is a note disclosure for Matsui Corporation.

> **Litigation and Environmental:** The Company has been notified, or is a named or a potentially responsible party in a number of governmental (federal, state and local) and private actions

associated with environmental matters, such as those relating to hazardous wastes, including certain sites which are on the United States EPA National Priorities List ("Superfund"). These actions seek clean-up costs, penalties and/or damages for personal injury or to property or natural resources.

In 2025, the Company recorded a pre-tax charge of $56,229,000, included in the "Other expense (income)—net" caption of the Company's consolidated income statements, as an additional provision for environmental matters. These expenditures are expected to take place over the next several years and are indicative of the Company's commitment to improve and maintain the environment in which it operates. At December 31, 2020, environmental accruals amounted to $69,931,000, of which $61,535,000 are considered noncurrent and are included in the "Deferred credits and other liabilities" caption of the Company's consolidated balance sheets.

While it is impossible at this time to determine with certainty the ultimate outcome of environmental matters, it is management's opinion, based in part on the advice of independent counsel (after taking into account accruals and insurance coverage applicable to such actions) that when the costs are finally determined they will not have a material adverse effect on the financial position of the Company.

Instructions

Answer the following questions.

a. What conditions must exist before a loss contingency can be recorded in the accounts?

b. Suppose that Matsui Corporation could not reasonably estimate the amount of the loss, although it could establish with a high degree of probability the minimum and maximum loss possible. How should this information be reported in the financial statements?

c. If the amount of the loss is uncertain, how would the loss contingency be reported in the financial statements?

CT12.5 (LO 3) (Warranties and Loss Contingencies) The following two independent situations involve loss contingencies.

Part 1: Benson Company sells two products, Grey and Yellow. Each carries a 1-year warranty.

1. Product Grey—Product warranty costs, based on past experience, will normally be 1% of sales.
2. Product Yellow—Product warranty costs cannot be reasonably estimated because this is a new product line. However, the chief engineer believes that product warranty costs are likely to be incurred.

Instructions

How should Benson report the estimated product warranty costs for each of the two types of merchandise above? Discuss the rationale for your answer. Do not discuss disclosures that should be made in Benson's financial statements or notes.

Part 2: Constantine Company is being sued for $4,000,000 for an injury caused to a child as a result of alleged negligence while the child was visiting the Constantine Company plant in March 2020. The suit was filed in July 2020. Constantine's lawyer states that it is probable that Constantine will lose the suit and be found liable for a judgment costing anywhere from $400,000 to $2,000,000. However, the lawyer states that the most probable judgment is $1,000,000.

Instructions

How should Constantine report the suit in its 2020 financial statements? Discuss the rationale for your answer. Include in your answer disclosures, if any, that should be made in Constantine's financial statements or notes. (AICPA adapted)

CT12.6 (LO 3) Ethics (Warranties) The Dotson Company, owner of Bleacher Mall, charges Rich Clothing Store a rental fee of $600 per month plus 5% of yearly profits over $500,000. Matt Rich, the owner of the store, directs his accountant, Ron Hamilton, to increase the estimate of bad debt expense and warranty costs in order to keep profits at $475,000.

Instructions

Answer the following questions.

a. Should Hamilton follow his boss's directive?

b. Who is harmed if the estimates are increased?

c. Is Matt Rich's directive ethical?

CT12.7 (LO 4) Writing (Refinancing of Short-Term Debt) Dumars Corporation reports in the current liability section of its balance sheet at December 31, 2025 (its year-end), short-term obligations of $15,000,000, which includes the current portion of 12% long-term debt in the amount of $10,000,000 (matures in March 2026). Management has stated its intention to refinance the 12% debt whereby no portion of it will mature during 2026. The date of issuance of the financial statements is March 25, 2026.

Instructions

a. Is management's intent enough to support long-term classification of the obligation in this situation?

b. Assume that Dumars Corporation issues $13,000,000 of 10-year debentures to the public in January 2026 and that management intends to use the proceeds to liquidate the $10,000,000 debt maturing in March 2026. Furthermore, assume that the debt maturing in March 2026 is paid from these proceeds prior to the issuance of the financial statements. Will this have any impact on the balance sheet classification at December 31, 2025? Explain your answer.

c. Assume that Dumars Corporation, on December 15, 2025, entered into a financing agreement with a commercial bank that permits Dumars Corporation to borrow at any time through 2027 up to $15,000,000 at the bank's prime rate of interest. Borrowings under the financing agreement mature 3 years after the date of the loan. The agreement is not cancelable except for violation of a provision with which compliance is objectively determinable. No violation of any provision exists at the date of issuance of the financial statements. Assume further that the current portion of long-term debt does not mature until August 2026. In addition, management has the contractual right to refinance the $10,000,000 obligation under the terms of the financial agreement with the bank, which is expected to be financially capable of honoring the agreement.

1. Given these facts, should the $10,000,000 be classified as current on the balance sheet at December 31, 2025?
2. Is disclosure of the refinancing method required?

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE12.1 Access the glossary ("Master Glossary") to answer the following.

a. What is the definition of "current liabilities"?

b. What does it mean if something is "reasonably possible"?

c. What is a warranty?

CE12.2 What are three examples of estimates that are used in accounting that are not contingencies? Can you explain why they are not considered contingencies?

CE12.3 Under what conditions must an employer accrue a liability for employees' compensation for future absences?

Codification Research Case

Pleasant Co. manufactures specialty bike accessories. The company is known for product quality, and it has offered one of the best warranties in the industry on its higher-priced products—a lifetime guarantee, performing all the warranty work in its own shops. The warranty on these products is included in the sales price.

Due to the recent introduction and growth in sales of some products targeted to the low-price market, Pleasant is considering partnering with another company to do the warranty work on this line of products, if customers purchase a service contract at the time of original product purchase. Pleasant has called you to advise the company on the accounting for this new warranty arrangement.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

a. Identify the accounting literature that addresses the accounting for the type of separately priced extended warranty that Pleasant is considering.

b. When are warranty contracts considered separately priced?

c. When shall a loss be recognized on an extended warranty.

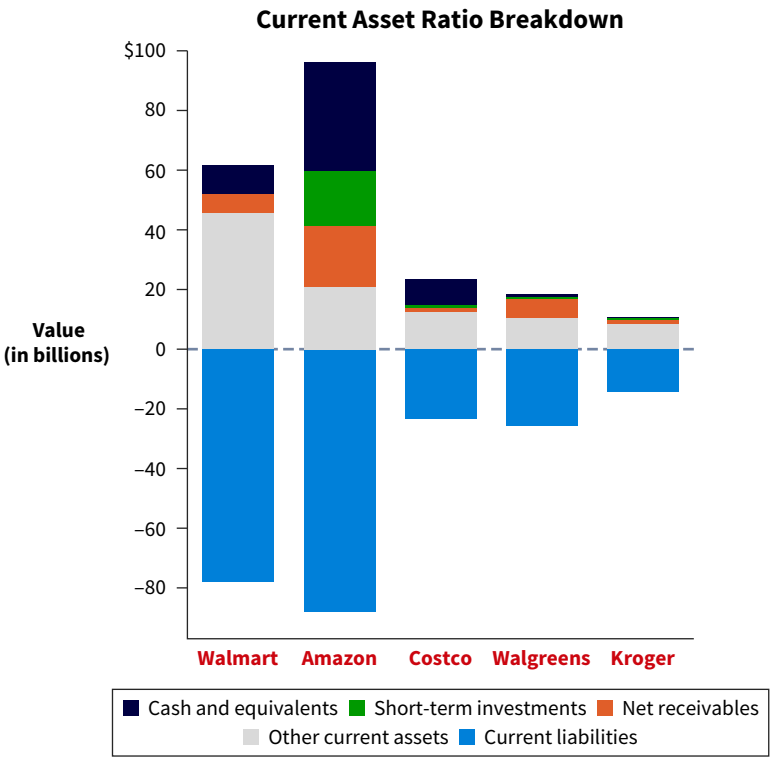
Analytics in Action Activities

Using Data Visualizations to Benchmark Liquidity Metrics

DA12.1 How much cash should we keep on hand? How long can we delay payment to our vendors? What is a "good" current ratio? These are common questions that companies must consider when evaluating their liquidity. Benchmarking metrics against other companies in the same industry can be helpful when making decisions around effective management of working capital.

The following graph breaks down the components of the current ratio for several companies in the retail industry, offering a visual of current liabilities compared to liquid assets on hand.



Required

Using data visualizations, you will benchmark several common liquidity measures for the retail industry and consider what insights this provides for effective working capital management.

Go to Wiley Course Resources for complete details and instructions.

DA12.2 The visualizations in DA12.1 can be used to compare liquidity measures among companies in the same industry, but they can also be used to help inform business strategies.

Required

Using the dashboard of data visualizations for companies in the retail industry, you will consider what the results mean for those companies and what tactics a company could use to enhance its liquidity.

Go to Wiley Course Resources for complete details and instructions.

Using Data Analytics to Gain Company Insights

DA12.3 Public companies issue quarterly and annual financial data. Investors and creditors can track this data over time and benchmark the data against other companies or industries. Comparing financial metrics across different companies in the same industry can offer insights into the financial health of a company and perhaps even strategic priorities of management.

Required

Using Excel, you will calculate financial ratios for several companies in the retail industry. Using these ratios, you will answer questions about what insights you gained from the analysis.

Go to Wiley Course Resources for complete details and instructions.

IFRS Insights

LEARNING OBJECTIVE 5

Compare the accounting procedures for current liabilities and contingencies under GAAP and IFRS.

IFRS and GAAP have similar definitions for liabilities. IFRS related to reporting and recognition of liabilities is found in *IAS 1* ("Presentation of Financial Statements") and *IAS 37* ("Provisions, Contingent Liabilities, and Contingent Assets"). Following are the key similarities and differences between GAAP and IFRS related to current liabilities and contingencies.

Similarities

- Similar to U.S. practice, IFRS requires that companies present current and non-current liabilities on the face of the statement of financial position (balance sheet), with current liabilities generally presented in order of liquidity. However, many companies using IFRS present non-current liabilities before current liabilities on the statement of financial position.
- The basic definition of a liability under GAAP and IFRS is very similar. In a more technical way, liabilities are defined by the IASB as a present obligation of the entity arising from past events, the settlement of which is expected to result in an outflow from the entity of resources embodying economic benefits. Liabilities may be legally enforceable via a contract or law but need not be. That is, they can arise due to normal business practices or customs.
- IFRS requires that companies classify liabilities as current or non-current on the face of the statement of financial position (balance sheet), except in industries where a presentation based on liquidity would be considered to provide more useful information (such as financial institutions).
- Under IFRS, short-term obligations expected to be refinanced can be classified as non-current if the refinancing is completed by the financial statement date. GAAP now also uses the balance sheet date.

Differences

- Under IFRS, the measurement of a provision related to a contingency is based on the best estimate of the expenditure required to settle the obligation. If a range of estimates is predicted and no amount in the range is more likely than any other amount in the range, the "midpoint" of the range is used to measure the liability. In GAAP, the minimum amount in a range is used.
- Both IFRS and GAAP prohibit the recognition of liabilities for future losses. However, IFRS permits recognition of a restructuring liability, once a company has committed to a restructuring plan. GAAP has additional criteria (i.e., related to communicating the plan to employees) before a restructuring liability can be established.
- IFRS uses the term *provisions* to refer to estimated liabilities. Under IFRS, contingencies are not recorded but are often disclosed. The accounting for provisions under IFRS and estimated liabilities under GAAP are very similar.
- GAAP uses the term *contingency* in a different way than IFRS. Contingent liabilities are not recognized in the financial statements under IFRS, whereas under GAAP, a contingent liability is sometimes recognized.
- Under IFRS, short-term obligations expected to be refinanced can be classified as non-current if the refinancing is completed by the financial statement date. GAAP allows reclassification as non-current if the financing occurs before financial statements are issued.

CHAPTER 13

© Sarath maroli / Shutterstock

Long-Term Liabilities

WHAT are long-term liabilities?

As indicated in Chapter 12, current liabilities are defined as "obligations whose liquidation is reasonably expected to require use of existing resources properly classified as current assets or the creation of other current liabilities." However, because no explicit definition of a noncurrent (long-term) liability is provided in current GAAP, many use the following approach: "If it does not meet the definition of a current liability, it must be long-term." This is to be applied to all long-term liabilities, the most common of which are bonds payable (long-term debt) and long-term notes payable (including mortgages payable).

Target Corporation
(dollars in millions)

Current assets	$12,902
Long-term assets	29,877
Total assets	$42,779
Current liabilities	$14,487
Noncurrent (long-term) liabilities	16,459
Total liabilities	30,946
Total stockholders' equity	11,833
Total liabilities and stockholders' equity	$42,779

WHY is information about long-term liabilities important?

Long-term creditors and stockholders are interested in a company's long-run solvency, particularly its ability to pay interest as it comes due and to repay the face value of the debt (bonds and notes payable) at maturity. The amounts reported in the balance sheet, along with note disclosures indicating the nature of the liabilities, maturity dates, interest rates, and so on, are the means through which this important information is provided. For example, consider the adjacent data from **Target**'s recent annual report.

Target has total liabilities of $30,946 (in millions). Its debt-to-assets ratio is therefore 72.3% ($30,946 ÷ $42,779). This means that Target is using liabilities to fund 72% of the assets it uses in operations, with the majority represented by long-term obligations (mostly bonds and notes payable). To make sense of what this really means, we might track this metric over time or compare it to the percentage of assets that **Walmart** funds with liabilities. Either way, it is easy to see why investors and creditors need good accounting information about long-term liabilities.

HOW do we account for long-term liabilities?

Accounting for notes and bonds is quite similar; they are reported at the present value of future cash flows. The accounting for long-term notes payable parallels accounting for long-term notes receivable, as was presented in Chapter 6. Notes and bonds payable are sometimes issued at amounts different than their face value. As a result, the interest expense recorded will include the effects of amortization of discounts or premiums. Also, companies have the option to record fair value for most financial assets and liabilities, including bonds and notes payable. Many believe that fair value is more relevant because it reflects the current cash equivalent value of financial instruments.

Chapter Roadmap

LEARNING OBJECTIVES	TOPICS	REVIEW AND PRACTICE
LO 13.1 Describe the nature of bonds and indicate the accounting for bond issuances.	**13.1 Bonds Payable** • Issuing bonds • Types of bonds • Valuation and accounting • Effective-interest method	Examples 13.1 Bond Pricing 13.2 Entries for Bond Issued at Par 13.3 Discount Amortization 13.4 Premium Amortization 13.5 Bonds Issued Between Interest Dates 13.6 Bonds Issued Between Interest Dates with Amortization 13.7 Pricing Bonds—Discount 13.8 Effective-Interest Amortization Put It into Practice LO 13.1 Record Bond Issue and Interest Payments

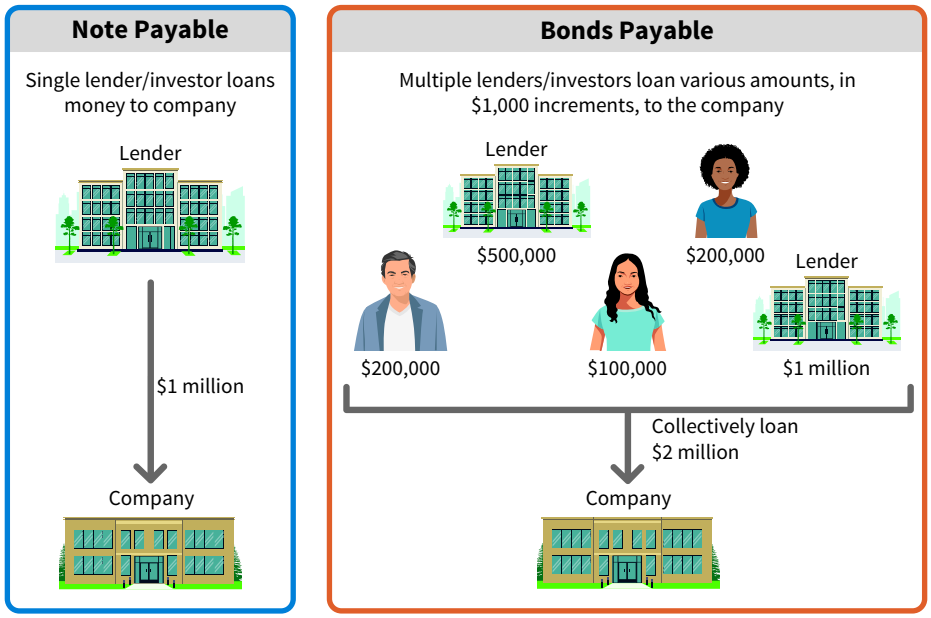
13.1 Bonds Payable

LEARNING OBJECTIVE 1

Describe the nature of bonds and indicate the accounting for bond issuances.

As indicated in the chapter preview, long-term (noncurrent) liabilities are obligations that do not meet the definition of a current liability. The most common long-term liabilities are long-term notes and bonds payable. **Illustration 13.1** shows the difference between a note payable and bonds payable.

ILLUSTRATION 13.1 Note versus Bonds Payable



- **Note payable**. When a single lender or investor loans money to a company, a note payable is created. The note is a legal document that specifies the important features of the note, such as the amount, maturity date, and the rate of interest to be paid. As indicated in illustration 13.1, one lender is loaning $1 million to the company.
- **Bonds payable**. A bond is a type of note payable in which the amount is divided into smaller pieces, usually $1,000 each. With more units, the company can issue bonds to more investors and raise more money, as compared to a single note payable to a single lender or investor. In Illustration 13.1, the company receives a total of $2 million from the bond issue. With smaller units, investors small and large can invest in the bonds. The contract governing a bond issue is called the **bond indenture**. It establishes the details of the bonds such as the amounts authorized to be issued, interest rate, due dates, and other important details.

Keep in mind that a lender or a bondholder is **not** an owner in the company like a stockholder. A lender or bondholder receives regular interest payments from the company, not dividends. At the maturity date of the notes or bonds payable, the company will pay back the amount borrowed to the lender or investors. Now let's cover how to account for notes and bonds payable, starting with bonds.

Issuing Bonds

A bond represents a promise to pay the following.

- A sum of money at a designated maturity date. The sum of money is the amount borrowed and is called the face value. It can also be called the par value, maturity value, or principal value.
- Periodic interest at a specified rate on the face value.

Individual bonds are evidenced by a paper certificate and typically have a $1,000 face value. Companies usually make bond interest payments semiannually, although the interest rate is generally expressed as an annual rate. The main purpose of bonds is to borrow for the long term when the amount of capital needed is too large for one lender to supply.

A company may sell an entire bond issue to an investment bank, which acts as a selling agent in the process of marketing the bonds. An investment bank will participate in the bond issue in one of two ways:

1. **Firm underwriting**. The investment bank will sell the bonds on behalf of the company and will guarantee a certain sum to the company. Therefore, the investment bank takes on the risk of selling the bonds for whatever price it can get.
2. **Best-efforts underwriting**. The investment bank will sell the bonds and receive a commission on the proceeds of the sale. No guarantees are made to the company.

Alternatively, the issuing company may sell the bonds directly to a large institution, financial or otherwise, without the aid of an underwriter. This is called private placement. Once the bonds are issued, they can be traded among investors in the organized public securities markets.

Types of Bonds

We define some of the more common types of bonds found in practice in Illustration 13.2.

ILLUSTRATION 13.2 Types of Bonds

Type of Bond	Characteristics
Secured	Bonds backed by a pledge of some sort of collateral. Mortgage bonds are secured by a claim on real estate. Collateral trust bonds are secured by stocks and bonds of other corporations.
Unsecured	Bonds not backed by collateral are **unsecured**. A **debenture bond** is unsecured. A "junk bond" is unsecured and also very risky, and therefore pays a high interest rate.
Term	Bonds that mature on a single date.
Serial	Bonds that mature in installments. Serially maturing bonds are frequently used by school or sanitary districts, municipalities, or other local taxing bodies that receive money through a special levy.
Callable	Bonds that give the issuer the right to call and redeem the bonds prior to maturity.
Convertible	Bonds that are convertible into other securities (usually common stock) of the corporation for a specified time after issuance.
Deep-discount (zero-interest debenture)	Bonds that are sold at a discount that provide the investor's total interest payoff at maturity.
Revenue	Bonds on which interest is paid from specified revenue sources; most frequently issued by airports, school districts, counties, toll-road authorities, and governmental bodies.
Income	Bonds that pay no interest unless the issuing company is profitable.

Valuation and Accounting for Bonds Payable

The issuance and marketing of bonds to the public does not happen overnight. It usually takes weeks or even months and is comprised of the following steps.

1. The issuing company arranges for underwriters that will help market and sell the bonds.
2. The company obtains the SEC's approval of the bond issue, undergoes audits, and issues a prospectus (a document that describes the features of the bond and related financial information).
3. The company has the bond certificates printed.

The issuing company establishes the terms of a bond indenture well in advance of the actual sale of the bonds. Between the time the company sets these terms and the time it issues the bonds, the market conditions and the financial position of the issuing corporation may change significantly. Such changes affect the marketability of the bonds and their selling price.

The selling price of a bond issue is impacted by several factors such as the supply and demand of buyers and sellers, relative risk, market conditions, and the state of the economy. Perhaps the biggest factor that impacts bond selling price is the relationship between the interest rate stated on the bonds and the market rate of interest at the time the bonds are issued. It's important that you understand these two interest rates:

1. **Stated (coupon or nominal) rate**. This is the interest rate written in the terms of the bond indenture. The issuer of the bonds sets this rate, which represents the amount of interest that will be paid on the face value of the bonds. This interest rate is fixed and will not change over the life of the bonds.
2. **Market (or effective) rate (effective yield)**. This is the prevailing interest rate in the investing markets for bonds with similar characteristics. It is driven by many factors, including the risk of the company, government policy, central bank interest rates, and the state of the economy. This interest rate fluctuates up or down over time.

To show you how these interest rates impact bond selling price, look at the information in **Illustration 13.3**.[1]

ILLUSTRATION 13.3 Interest Rate Impacts on Bond Price

	Stated Rate		Market Rate	Impact on Bond Price $1,000 Face Value
Situation 1	4%	<	5%	Bonds issued at a **discount** < $1,000
Situation 2	4%	>	3%	Bonds issued at a **premium** > $1,000

In Situation 1 in Illustration 13.3, the stated rate of interest on a $1,000 face value bond is 4%. If you invest in that bond, you will receive 4% interest, or $40 (.04 × $1,000) each year. At the time the bonds are issued, the current market rate of interest is 5%. That means you can earn a greater return on alternative investments of equal risk. So, what would you do? Invest in the bonds that earn 4% or invest in something else where you can earn 5%? You would invest elsewhere and earn 5%, and so would other investors!

However, if the bonds were offered at a discounted price, less than $1,000, then would you invest in the 4% bond? Sure, because although you would pay less than $1,000 for the bond, you would be repaid the full-face value of $1,000 at the maturity date. Therefore, to compensate for the lower stated interest rate, the bonds will sell at a **discount** to entice investors to purchase them.

[1]It is generally the case that the stated rate of interest on bonds is set in rather precise decimals (such as 6.875%). Companies usually attempt to align the stated rate as closely as possible with the market or effective rate at the time of issue.

Now look at Situation 2 in Illustration 13.3. The stated rate is still 4%, but this time the market rate is lower at 3%. How do the bonds look now? Would you want to invest in them? Of course you would, and so would many other investors. These bonds would be in high demand since the interest rate paid on the bonds is higher than the current market rate. Because these bonds are in high demand, the selling price will increase to greater than face value. The bonds will sell at a **premium**, or greater than $1,000, but at the maturity date you would be repaid only the face amount of $1,000. To summarize:

- When the stated rate is less than the market rate, bonds will sell at a discount.
- When the stated rate is greater than the market rate, bonds will sell at a premium.

Later in the chapter, we will discuss allocating, or amortizing, the discount or premium to interest expense over the term of the bonds. We can determine the actual selling price of a bond by calculating the **present value of its expected future cash flows**. The cash flows consist of:

1. Interest payments over the bond term calculated at the stated rate.
2. The principal, or face value, that will be paid at the maturity date.

The present value of these cash flows is calculated using the market rate of interest at the time the bonds are sold. Therefore, the rate of interest actually earned by the bondholders will be the market rate.

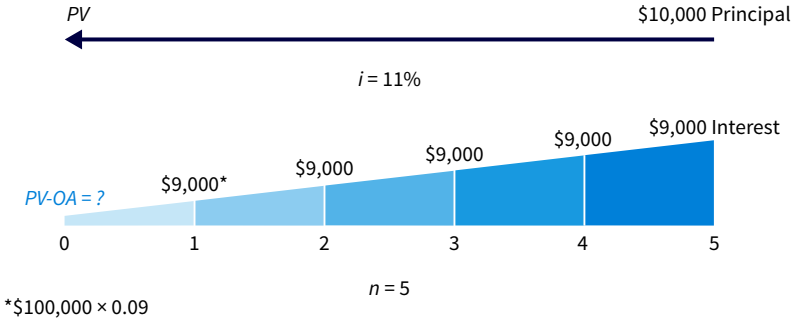
Example 13.1
Pricing of a Bond

FACTS Real-Tech, a developer of augmented reality software, issues $100,000 in bonds, due in 5 years with 9% interest payable annually at year-end. At the time of issue, the market rate for such bonds is 11%.

QUESTION What is the price of the bond? That is, what is the **present value of the bond issue?**

SOLUTION

The following time diagram depicts both the interest and the principal cash flows.



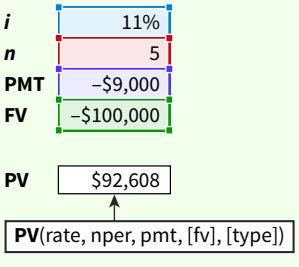
*$100,000 × 0.09

The actual principal and interest cash flows are discounted at an 11% rate for five periods, as follows.

Present value of the principal:	
$100,000 × .59345 (Table 5.2 $_{i = 11\%, n = 5}$)	$59,345.00
Present value of the interest payments:	
$9,000 × 3.69590 (Table 5.4 $_{i = 11\%, n = 5}$)	33,263.10
Present value (selling price) of the bonds	$92,608.10

By paying $92,608.10 for the bonds at the date of issue, investors actually earn an effective rate or yield of 11% over the 5-year term of the bonds because they paid less than face value. The discount on these bonds of $7,391.90 ($100,000 − $92,608.10) represents additional earnings to the investor. At the maturity date, investors are repaid the full face value of $100,000.

Excel Solution



Selling prices for corporate bonds can be found online. The price at which the bonds sell is typically stated as a **percentage** of the face or par value of the bonds. For example, the Real-Tech bonds in Example 13.1 sold for 92.6 (92.6% of par). If Real-Tech had received $102,000, then the bonds would have sold for 102 (102% of par).

Accounting Matters — What Is My Bond Worth?

When bonds are issued, they are valued at the present value of future cash flows, discounted at a market rate of interest. At the date of issuance, the carrying value of the bond is equal to the fair value. Is that always true? No, market interest rates change over time, impacting the fair value of the bond.

At any given time, investors can review corporate bonds listings online to see the coupon (interest) rate, maturity date, price and yield, as follows.

Issuer	Maturity	Amount ($ millions)	Price	Coupon	Yield
Walmart	4/22/2044	1,000	108.25	4.30	2.85
Apple	9/11/2029	1,750	108.16	2.20	1.33

The above information is for one of the bond issues of **Walmart** and **Apple**. Walmart's bond pays a coupon rate of 4.3% and yields 2.85%, while Apple pays a coupon rate of 2.20% and yields 1.33%. What does this mean? Both bonds are trading at a premium, approximately 108% of their par value. The yield reflects the effective rate of interest. With a lower yield, Apple's bonds are deemed less risky by the market than those of Walmart.

Recall that bond yields are impacted by a variety of factors, including the term of the bond, the issuers' ability to call the bond before maturity, and the relative riskiness of the issuing company, as well as by general economic factors such as market interest rates. The following table lists the relative sensitivity of bond prices to changes in interest rates for three different bond funds.

Bond Price Changes in Response to Interest Rate Changes	1% Interest Rate Increase	1% Interest Rate Decrease
Short-term fund (2–5 years)	−2.5%	+2.5%
Intermediate-term fund (5 years)	−5.0	+5.0
Long-term fund (10 years)	−10.0	+10.0

Source: The Vanguard Group.

Changes in bond value affect the issuer and investor alike, so it is important to understand the factors that impact the value over time.

Bonds Issued at Par on Interest Date

When the stated rate and market rate are equal at the time bonds are issued, no premium or discount exists. When this happens, we say the bonds are "issued at par." Also, if bonds are issued on an interest payment date, no interest is accrued. The company simply records the cash proceeds and the face value of the bonds.

Example 13.2 Entries for Bond Issued at Par

FACTS In order to fund improvements to their brewing process, GreenTea Company issues at par 10-year term bonds with a par value of $800,000, dated January 1, 2025, and bearing interest at an annual rate of 10% payable semiannually on January 1 and July 1.

QUESTION What entries does GreenTea make in 2025 related to this bond issue if the market rate of interest is 10%?

SOLUTION

GreenTea makes the following entries in 2025.

To record issuance of bonds:

January 1, 2025

Cash	800,000	
Bonds Payable		800,000

To record the first semiannual interest payment:

July 1, 2025

Interest Expense ($800,000 × .10 × 6/12)	40,000	
Cash		40,000

To record accrued interest expense:

December 31, 2025

Interest Expense	40,000	
Interest Payable		40,000

To verify the price of the bond:

Present value of the principal: \$800,000 × .37689 (Table 5.2 $_{i = 5\%, n = 20}$)	\$301,512
Present value of the interest payments: \$40,000 × 12.46221 (Table 5.4 $_{i = 5\%, n = 20}$)	498,488
Present value (selling price) of the bonds	\$800,000

Excel Solution

i	5%
n	10
PMT	–\$40,000
FV	–\$800,000
PV	\$800,000

PV(rate, nper, pmt, [fv], [type])

Bonds Issued at Discount or Premium on Interest Date

Continuing with Example 13.2, if GreenTea Company issues the \$800,000 of bonds on January 1, 2025, at 97 (meaning 97% of par), it records the following issuance.

Cash (\$800,000 × .97)	776,000	
Discount on Bonds Payable	24,000	
Bonds Payable		800,000

Notice that bonds payable is always recorded at face value, even if the bonds are issued at a discount or premium. Recall from our earlier discussion that because of its relation to interest, **companies amortize the discount and charge it to interest expense over the period of time that the bonds are outstanding**. The **straight-line method** amortizes a constant amount each interest period, in this case 20 interest periods.[2]

Example 13.3 Straight-Line Amortization—Discount

FACTS Consider the bond discount of \$24,000 on the GreenTea bonds in the above section.

QUESTION What entries does GreenTea make in 2025 to record interest expense and amortize discount on the bonds?

SOLUTION

GreenTea records the semiannual interest payments for the first year as follows.

July 1, 2025

Interest Expense	41,200	
Discount on Bonds Payable (\$24,000 ÷ 20)		1,200
Cash (\$800,000 × .10 × 6/12)		40,000

December 31, 2025

Interest Expense	41,200	
Discount on Bonds Payable (\$24,000 ÷ 20)		1,200
Interest Payable (\$800,000 × .10 × 6/12)		40,000

Discount on Bonds Payable

1/1/25	24,000		
		7/1/25	1,200
		12/31/25	1,200
12/31/25	21,600		

[2]The effective-interest method is preferred for amortization of discount or premium. To keep these initial illustrations simple, we have chosen to use the straight-line method.

In Example 13.3, at the end of the first year, 2025, the balance in the Discount on Bonds Payable account is $21,600 ($24,000 − $1,200 − $1,200). Over the term of the bonds, the balance in Discount on Bonds Payable will decrease by the same amount until it has a zero balance at the maturity date of the bonds. The GreenTea Premium on Bonds Payable is accounted for in a manner similar to that for Discount on Bonds Payable.

Example 13.4 Straight-Line Amortization—Premium

FACTS GreenTea dates and sells 10-year bonds with a par value of $800,000 on January 1, 2025, at 103.

QUESTION What entries does GreenTea make in 2025 to record issuance, interest expense, and premium amortization on the bonds?

SOLUTION

GreenTea makes the following entries for these bonds.

To record issuance of bonds priced at 103:

	January 1, 2025		
	Cash ($800,000 × 1.03)	824,000	
	Premium on Bonds Payable		24,000
	Bonds Payable		800,000

To record semiannual payment:

	July 1, 2025		
	Interest Expense	38,800	
	Premium on Bonds Payable ($24,000 ÷ 20)	1,200	
	Cash ($800,000 × .10 × 6/12)		40,000

To record accrued interest expense:

	December 31, 2025		
	Interest Expense	38,800	
	Premium on Bonds Payable ($24,000 ÷ 20)	1,200	
	Interest Payable ($800,000 × .10 × 6/12)		40,000

Premium on Bonds Payable

		1/1/25	24,000
7/1/25	1,200		
12/31/25	1,200		
		12/31/25	21,600

Amortization of a discount increases interest expense relative to cash interest. Amortization of a premium decreases interest expense relative to cash interest.

The issuer may call, or redeem, some bonds at a stated price after a certain date. This call feature gives the issuing corporation the opportunity to reduce its bonded indebtedness or take advantage of lower interest rates. **Whether callable or not, a company must amortize any premium or discount over the bond's life because early redemption (call of the bond) is not a certainty.**

Bonds Issued Between Interest Dates

Companies make bond interest payments on dates specified in the bond indenture. When companies issue bonds on dates other than the interest payment dates, **buyers of the bonds will pay the seller the interest accrued from the last interest payment date to the date of issue**. The purchasers of the bonds, in effect, pay the bond issuer in advance for that portion of the full interest payment to which they are not entitled because they have not held the bonds for that period. **Then, on the next interest payment date, purchasers will receive the full interest payment.**

Example 13.5 Bonds Issued Between Interest Dates

FACTS On March 1, 2025, GreenTea Company issues 10-year bonds at par, dated January 1, 2025, with a par value of $800,000. These bonds have an annual interest rate of 6%, payable semiannually on January 1 and July 1.

QUESTION What entries does GreenTea make in March and July 2025 to record issuance and interest expense for the bonds?

SOLUTION

Because GreenTea issues the bonds between interest dates, it records the bond issuance at **par plus accrued interest** as follows.

To record issuance of bonds:

March 1, 2025

Cash	808,000	
Bonds Payable		800,000
Interest Expense (or Payable) ($800,000 × .06 × 2/12)		8,000

To record interest expense:

July 1, 2025

Interest Expense	24,000	
Cash ($800,000 × .06 × 6/12)		24,000

As indicated, the purchaser pays in advance 2 months' interest. On July 1, 2025, 4 months after the date of purchase, GreenTea pays the purchaser 6 months' interest. After the July 1 entry, the Interest Expense account now contains a debit balance of $16,000, which represents the proper amount of interest expense—4 months at 6% on $800,000.

Interest Expense

		3/1/25	8,000
7/1/25	24,000		
Bal.	16,000		

Example 13.5 was simplified by having the January 1, 2025, bonds issued on March 1, 2025, **at par**. Let's look at an example when the bonds are issued between interest dates at either a discount or premium.

Example 13.6 Bonds Issued Between Interest Dates with Amortization

FACTS Refer to the bonds issued in Example 13.5, except now assume that the 6% bonds were issued at 102.

QUESTION What entries does GreenTea make in March and July 2025 to record issuance and interest expense for the bonds?

SOLUTION

The entries in this situation would be as follows.

To record issuance of bonds:

March 1, 2025

Cash [($800,000 × 1.02) + ($800,000 × .06 × 2/12)]	824,000	
Bonds Payable		800,000
Premium on Bonds Payable ($800,000 × .02)		16,000
Interest Expense (Payable)		8,000

To record interest expense:

July 1, 2025

Interest Expense	23,457.63	
Premium on Bonds Payable [($16,000 ÷ 118) × 4]	542.37	
Cash ($800,000 × .06 × 6/12)		24,000.00

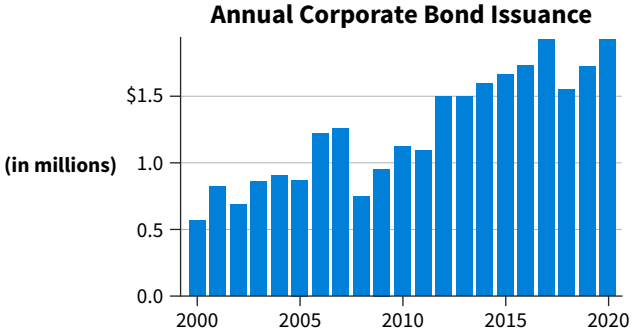
As indicated, GreenTea amortizes the premium **from the date of sale** (March 1, 2025), resulting in amortization over 118 months [(12 × 10 years) – 2 months]. Total interest expense for the first interest period is $15,457.63 ($23,457.63 − $8,000), which reflects interest for the 4 months that the bonds are outstanding.

Interest Expense

		3/1/25	8,000
7/1/25	23,457.63		
Bal.	15,457.63		

Accounting Matters — Hot, Hot, Hot

Now that you know how to account for debt issuance, do you think this is knowledge you will put to good use? Probably, if recent bond market data are any indicator. As the following chart shows, companies are issuing corporate debt at a record pace.

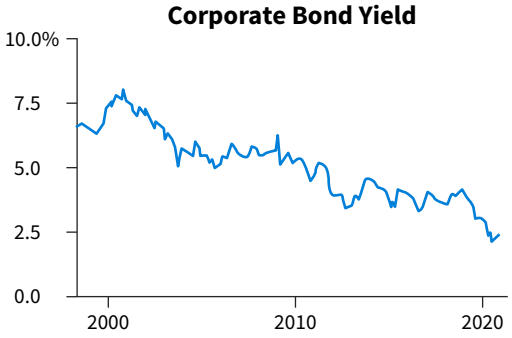


Source: Refinitiv.

Why such a hot corporate debt market? For one thing, low interest rates have fallen consistently since the financial crisis of 2008, as shown in the bond yield chart on the right. In addition, banks have cut back lending in the wake of the Covid-19 slowdown.

For some high-rated (less-risky) companies, it can be riskier to borrow from a bank than the bond markets. The reason? High-rated companies tend to rely on short-term commercial paper, backed by undrawn loans, to fund working capital but are left stranded when these markets freeze up.

As a result, many companies are now financing with longer-term bonds instead. In fact, nonfinancial companies, such as **Boeing**, **Apple**, **Nike**, and **Carnival Cruise Line**, all used the hot bond market to increase long-term borrowings, lock in low interest rates, and take advantage of investor demand. In some cases, they are redeeming previously issued debt, which had higher interest rates, thereby reducing the net cost of borrowing.



Source: Moody's.

The hot bond market is also humming along for lower-quality (higher-risk) companies. With such low investment-grade bond yields, riskier company debt with higher yields might be attractive to investors "chasing yields." The concern here is that some companies are racking up debt even as earnings remain depressed. Many companies hardest hit by the Covid-19 pandemic have been pushed to secure bond deals against their assets. That may spell trouble down the road. Hopefully, the hot bond market will work out for both the investor and the company in the long run.

Effective-Interest Method

Global View

IFRS requires the use of the effective-interest method. GAAP permits the use of the straight-line method if not materially different than the effective-interest method. *See the IFRS Insights at the end of the chapter for a discussion of the similarities and differences between IFRS and GAAP.*

The preferred procedure for amortization of a discount or premium is the **effective-interest method** (also called **present value amortization**) (see **Global View**). You were first introduced to this method in Chapter 6 when accounting for notes receivable. Under the effective-interest method, companies:

1. Compute bond interest expense by multiplying the **carrying value** of the bonds at the beginning of the period by the effective-interest rate. The carrying value (or book value or amortized cost) is the face amount minus any unamortized discount **or** plus any unamortized premium.

2. Determine the bond discount or premium amortization next by comparing the bond interest expense with the interest (cash) to be paid.

Illustration 13.4 depicts the computation of the amortization.

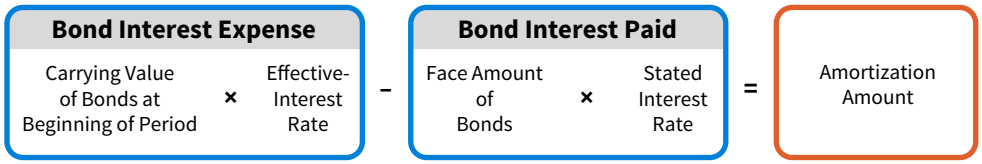


ILLUSTRATION 13.4 Bond Discount and Premium Amortization Computation

The effective-interest method produces a periodic interest expense equal to **a constant percentage of the carrying value of the bonds**. Since the percentage is the effective rate of interest incurred by the borrower at the time of issuance, the effective-interest method provides a move relevant measure of interest expense than the straight-line method. Both the effective-interest and straight-line methods result in the **same total amount of interest expense over the term of the bonds**. However, when the annual amounts are materially different, GAAP requires use of the effective-interest method. [1] (See the FASB Codification References near the end of the chapter.)

In addition, the issuance of bonds involves engraving and printing costs, legal and accounting fees, commissions, promotion costs, and other similar charges. These costs should be recorded as a reduction to the carrying value of the bond payable and then amortized into expense over the life of the bond through an adjustment to the effective-interest rate. [2] For example, if the face value of the bond is $100,000 and issue costs are $1,000, then the bond payable (net of the bond issue costs) is recorded at $99,000. Thus, the effective-interest rate will be higher, based on the reduced carrying value. *For all homework, assume issue costs are part of bond issue proceeds, unless otherwise indicated.*

Bonds Issued at a Discount

The pricing of a bond issued at a discount is presented in Example 13.7

Example 13.7
Pricing of Bonds Issued at a Discount

FACTS Evermaster Corporation issued $100,000 of 8% term bonds on January 1, 2025, due on January 1, 2030, with interest payable each July 1 and January 1. Investors require an effective-interest rate of 10%.

QUESTION What amount will investors pay for the Evermaster bonds, and what amount of discount will Evermaster record when the bonds are issued?

SOLUTION

Evermaster computes the price of the bonds at $92,278 and the discount of $7,722 as shown in the following calculation.

Maturity value of bonds payable		$100,000
Present value of $100,000 due in 5 years at 10%, interest payable semiannually (Table 5.2 $_{i=5\%,\,n=10}$; $100,000 × .61391)	$61,391	
Present value of $4,000 interest payable semiannually for 5 years at 10% annually (Table 5.4 $_{i=5\%,\,n=10}$; $4,000 × 7.72173)	30,887	
Proceeds from sale of bonds		92,278
Discount on bonds payable		$ 7,722

Because the investors required an effective-interest rate of 10%, investors paid $92,278 for the $100,000 of bonds, creating a $7,722 discount. *Note:* The semiannual interest payment is fixed at $4,000 ($100,000 × .08 × 6/12). Remember, since interest payments are made semiannually, you must adjust the effective-interest rate and the number of periods to calculate the present value.

Excel Solution

11	1/1/29	4,000	4,864	864	98,141
12	7/1/29	4,000	4,907	907	99,048
13	1/1/30	4,000	4,952	952	100,000
14		$40,000	$47,722	$7,722	
15	[a]$100,000 × .04; [b]$92,278 × .05; [c]$4,614 – $4,000; [d]$92,278 + $614				

In Illustration 13.5, total interest at the end of the bond term is greater than cash interest paid. This will always be the case when bonds are issued at a discount. Now let's look at the journal entries for Evermaster.

Example 13.8 Entries for Effective-Interest Amortization—Discount

FACTS Refer to the amortization schedule for the bonds in Illustration 13.5.

QUESTION What entries are recorded in 2025 for the Evermaster bonds?

SOLUTION

Evermaster makes the following entries for the bonds issued at a discount.

Issuance of bonds at discount:

January 1, 2025

Cash	92,278	
Discount on Bonds Payable	7,722	
Bonds Payable		100,000

First interest payment and amortization of discount:

July 1, 2025

Interest Expense	4,614	
Discount on Bonds Payable		614
Cash		4,000

Interest expense accrued at year-end and amortization of discount:

December 31, 2025

Interest Expense	4,645	
Discount on Bonds Payable		645
Interest Payable		4,000

As you can see from Example 13.8, the balance of discount on bonds payable will **decrease** over the term of the bonds and will be fully amortized at the end of the bond term. A bond discount means the company borrowed less ($92,278) than the face amount of the bond, but it has to pay back the full-face value ($100,000). Therefore, the company's actual (effective) interest rate, 10%, is higher than the stated rate of 8%.

Although it carries a debit balance, Discount on Bonds Payable is **not an asset**. It does not provide any future economic benefit. Conceptually, Discount on Bonds Payable is a liability valuation account, or a **contra account**.[3] It reduces the face amount of the related liability on the balance sheet so that the bonds are reported at their carrying value on the balance sheet. On December 31, 2025, Evermaster would report the bonds on its balance sheet as shown in Illustration 13.6.

Evermaster Corporation
Balance Sheet
December 31, 2025

Current liabilities		
Interest payable (to be paid on 1/1/26)		$ 4,000
Long-term liabilities		
Bonds payable	$100,000	
Discount on bonds payable	(6,463)	93,537

ILLUSTRATION 13.6 Balance Sheet Presentation of Bonds Issued at a Discount

In Illustration 13.6, the December 31, 2025, carrying value on the balance sheet ($93,537) matches the carrying value in the amortization table for 1/1/26 in Illustration 13.5. These values should match since two interest payment periods have occurred and been recorded by Evermaster.

Bonds Issued at a Premium

Now assume that for the previous bond issue by Evermaster Corporation, investors are willing to accept an effective-interest rate of 6%. In that case, they would pay $108,530 or a premium of $8,530, computed as shown in Illustration 13.7.

Maturity value of bonds payable		$100,000
Present value of $100,000 due in 5 years at 6%, interest payable semiannually (Table 5.2 $_{i=3\%, n=10}$); ($100,000 × .74409)	$74,409	
Present value of $4,000 interest payable semiannually for 5 years at 6% annually (Table 5.4 $_{i=3\%, n=10}$); ($4,000 × 8.53020)	34,121	
Less: Proceeds from sale of bonds		108,530
Premium on bonds payable		$ 8,530

ILLUSTRATION 13.7 Computation of Premium on Bonds Payable

11	1/1/29	4,000	3,085	915	101,914
12	7/1/29	4,000	3,057	943	100,971
13	1/1/30	4,000	3,029	971	100,000
14		$40,000	$31,470	$8,530	
15	[a]$100,000 × .04; [b]$108,530 × .03; [c]$4,000 − 3,256%; [d]$92,278 + $614				

Sheet1

Evermaster records the following entries for the bonds in 2025.

Issuance of bonds at premium:

January 1, 2025

Cash	108,530	
Premium on Bonds Payable		8,530
Bonds Payable		100,000

First interest payment and amortization of premium:

July 1, 2025

Interest Expense	3,256	
Premium on Bonds Payable	744	
Cash		4,000

Interest expense accrued at year-end and amortization of premium:

December 31, 2025

Interest Expense	3,234	
Premium on Bonds Payable	766	
Interest Payable		4,000

As indicated, the balance of premium on bonds payable will **decrease** over the term of the bonds and will be fully amortized at the end of the bond term. A bond premium means the company borrowed more ($108,530) than the face amount of the bond, but it only has to pay back the face value ($100,000). Therefore, the company's actual (effective) interest rate, 6%, is lower than the stated rate of 8%.

Conceptually, Premium on Bonds Payable is also a liability valuation account. However, it is referred to as an **adjunct account** because it increases the face amount of the related liability so the bonds are reported at their carrying value on the balance sheet. On

December 31, 2025, Evermaster would report the bonds on its balance sheet as shown in **Illustration 13.9**.

ILLUSTRATION 13.9 Balance Sheet Presentation of Bonds Issued at a Premium

Evermaster Corporation
Balance Sheet
December 31, 2025

Current liabilities		
Interest payable (to be paid on 1/1/26)		$ 4,000
Long-term liabilities		
Bonds payable	$100,000	
Premium on bonds payable	7,020	107,020

In Illustration 13.9, notice the December 31, 2025, carrying value on the balance sheet ($107,020) matches the carrying value in the amortization table for 1/1/26 in Illustration 13.8. These values should match since two interest payment periods have occurred and been recorded by Evermaster.

Accruing Interest

In our previous examples, the interest payment dates and the date the financial statements were issued were essentially the same. For example, when Evermaster sold bonds at a premium, the two interest payment dates coincided with the financial reporting dates. However, what happens if Evermaster wishes to report financial statements at the end of February 2025? In this case, the company **prorates** the premium by the appropriate number of months, to arrive at the proper interest expense, as shown in **Illustration 13.10**.

ILLUSTRATION 13.10 Computation of Interest Expense

Interest accrual ($4,000 × 2/6)	$1,333.33
Premium amortized ($744 × 2/6)	(248.00)
Interest Expense (Jan.–Feb.)	$1,085.33

Evermaster records this accrual as follows.

Interest Expense	1,085.33	
Premium on Bonds Payable	248.00	
Interest Payable		1,333.33

If the company prepares financial statements six months later, it follows the same procedure. That is, the premium amortized would be as shown in **Illustration 13.11**.

ILLUSTRATION 13.11 Computation of Premium Amortization

Premium amortized (March–June) ($744 × 4/6)	$496.00
Premium amortized (July–August) ($766 × 2/6)	255.33
Premium amortized (March–August)	$751.33

The interest-accrual computation is much simpler if the company uses the straight-line method. For example, the total premium is $8,530, which Evermaster allocates

evenly over the five-year period. Thus, premium amortization per month is $142.17 ($8,530 ÷ 60 months).

Put It into Practice LO 13.1

Record Bond Issue and Interest Payments

FACTS On January 1, 2025, Peloton Company sold 12% bonds having a maturity value of $500,000 for $537,907.40. The market rate of interest at the time of issuance is 10%. The bonds are dated January 1, 2025, and mature January 1, 2030, with interest payable December 31 of each year. Peloton Company allocates interest and unamortized discount or premium on the effective-interest basis.

INSTRUCTIONS

(Round answers to the nearest cent.)

a. Verify the price for the bonds and prepare the journal entry at the date of the bond issuance.

b. Prepare a schedule of interest expense and bond amortization for 2025–2027.

c. Prepare the journal entry to record the interest payment and the amortization for 2025.

d. Prepare the journal entry to record the interest payment and the amortization for 2027.

SOLUTION

a.

$500,000 × .62092 (Table 5.2 $_{i = 10\%, n = 5}$)	$310,460.00

13.2 Extinguishment of Debt

LEARNING OBJECTIVE 2

Describe the accounting for the extinguishment of debt.

How do companies record the payment of debt—often referred to as **extinguishment of debt**? If the bonds (or any other form of debt security) are outstanding to maturity, the answer is straightforward. The issuing company:

- Does not compute any gains or losses.
- Will have fully amortized any premium or discount at the date the bonds mature.

As a result, the carrying value will equal the maturity (face) value of the bond. As the maturity value will also equal the bond's face value at that time, no gain or loss exists.

In some cases, a company extinguishes debt **before** its maturity date.[4] The amount paid on extinguishment before maturity is called the **reacquisition price**. The difference between the reacquisition price and the carrying value of the bonds on the date of reacquisition will trigger a gain or loss from extinguishment, as follows.

Reacquisition Price < Carrying Value = Gain on Extinguishment
Reacquisition Price > Carrying Value = Loss on Extinguishment

At the time of reacquisition, **the unamortized premium or discount must be amortized up to the reacquisition date**.

Example 13.9 Debt Extinguishment

FACTS On January 1, 2018, General Bell Corp. issued at 95, bonds with a par value of $800,000, due in 20 years. Eight years after the issue date, General Bell calls the entire issue at 101 and extinguishes it.[5] At that time, the unamortized discount balance (based on straight-line amortization) is $24,000.

QUESTION What entry does General Bell make to record the extinguishment (redemption) of the bonds?

SOLUTION

The loss on redemption is computed as follows.

Reacquisition price ($800,000 × 1.01)		$808,000
Net carrying amount of bonds redeemed:		
Face value	$800,000	
Less: Unamortized discount ($40,000* × 12/20)	24,000	776,000
Loss on redemption		$ 32,000

*[$800,000 × (1 − .95)]

[4]Some companies have attempted to extinguish debt through an in-substance defeasance. **In-substance defeasance** is an arrangement whereby a company provides for the future repayment of a long-term debt issue by placing purchased securities in an irrevocable trust. The company pledges the principal and interest of the securities in the trust to pay off the principal and interest of its own debt securities as they mature. However, it is not legally released from its primary obligation for the debt that is still outstanding. This practice is not considered an extinguishment of debt, and therefore the company does not record a gain or loss.

[5]The issuer of callable bonds must generally exercise the call on an interest date. Therefore, the amortization of any discount or premium will be up-to-date, and there will be no accrued interest. If the purchase is not made on an interest date, the discount or premium must be amortized, and the interest payable must be accrued from the last interest date to the date of purchase.

General Bell records the extinguishment of the bonds as follows.

Bonds Payable	800,000	
Loss on Redemption of Bonds	32,000	
Discount on Bonds Payable		24,000
Cash		808,000

Note that it is often advantageous for the issuer to extinguish the **entire** outstanding bond issue and replace it with a new bond issue bearing a lower rate of interest. Companies like **Apple** and **The Walt Disney Company** took advantage of low interest rates recently to refinance some of their outstanding debt. The replacement of an existing issuance with a new one is called **refunding**. Whether the early extinguishment of bonds is a nonrefunding or a refunding situation, a company should report the difference (gain or loss) in the income statement of the period of redemption.

Accounting Matters

Are All Bonds Created Equal?

Investor demand for different types of bonds will change over time. However one thing is for certain: if there is demand, bond issuers will get creative to meet it! Would you believe that several governments, and even companies like **The Walt Disney Company** and **The Coca-Cola Company**, have issued 100-year bonds? Investors, like pension funds with significant long-term obligations, scooped up these long-term bonds to bolster their long-term investment assets.

Another trend in bond issuance is that of environmental, social, governance (ESG) bonds, sometime referred to as green bonds. Broadly defined, green bonds are used to fund projects that have a positive environmental or climate impact. As shown in the adjacent chart, the issuance of green bonds reached record levels in 2020 and shows no sign of slowing down. **Anheuser-Busch InBev SA** recently signed a first-of-its-kind $10.1 billion debt facility that will allow it to lower the interest rate if it meets certain sustainability targets, such as increasing recycled content in packaging, cutting carbon emissions, and improving water efficiencies in its breweries.

Put It into Practice LO 13.2

Record Debt Extinguishment

FACTS J.J. Watt, Inc. had outstanding $6,000,000 of 11% bonds (interest payable July 31 and January 31) due in 10 years. Since issuance, market interest rates have declined, and Watt wants to reissue the debt at these lower rates. On July 1, it issued $9,000,000 of 10%, 15-year bonds (interest payable July 1 and January 1) at 98. A portion of the proceeds was used to call the 11% bonds (with unamortized discount of $120,000) at 102 on August 1.

INSTRUCTIONS

Prepare the journal entries necessary to record issuance of the new 10% bonds and the refunding of the 11% bonds.

SOLUTION

To record issuance of 10% bonds:

July 1

Cash ($9,000,000 × .98)	8,820,000	
Discount on Bonds Payable (.02 × $9,000,000)	180,000	
Bonds Payable		9,000,000

To record retirement of 11% bonds:

August 1

Bonds Payable	6,000,000	
Loss on Redemption of Bonds	240,000*	
Cash ($6,000,000 × 1.02)		6,120,000
Discount on Bonds Payable		120,000

*Reacquisition price		$6,120,000
Less: Net carrying amount of bonds redeemed		
Face value	$6,000,000	
Less: Unamortized bond discount	120,000	5,880,000
Loss on redemption		$ 240,000

13.3 Long-Term Notes Payable

LEARNING OBJECTIVE 3

Explain the accounting for long-term notes payable.

The difference between current notes payable and **long-term notes payable** is the maturity date. As discussed in Chapter 12, short-term notes payable are those that companies expect to pay within a year or the operating cycle, whichever is longer. Long-term notes are similar in substance to bonds in that both have fixed maturity dates and carry either a stated or implicit interest rate. However, as discussed earlier, notes do not trade as readily as bonds in the organized public securities markets. Noncorporate and small corporate enterprises issue notes as their long-term instruments. Larger corporations issue both long-term notes and bonds.

Accounting for notes and bonds is quite similar.

- Like a bond, a note is valued at the present value of its future interest and principal cash flows.
- The company amortizes any discount or premium over the life of the note, just as it would the discount or premium on a bond.[6]
- Companies compute the present value of an interest-bearing note, record its issuance, and amortize any discount or premium and accrual of interest in the same way that they do for bonds (as shown earlier in this chapter).

[6]All payables that represent commitments to pay money at a determinable future date are subject to present value measurement techniques, except for the following specifically excluded types:

1. Normal accounts payable due within one year.
2. Security deposits, retainages, advances, or progress payments.
3. Transactions between parent and subsidiary.
4. Obligations payable at some indeterminable future date. [3]

As you might expect, accounting for long-term notes payable parallels accounting for long-term notes receivable as was presented in Chapter 6.

Notes Issued at Face Value

In Chapter 6, we discussed the recognition of a $10,000, three-year note Scandinavian Imports issued at face value to Fjords Unlimited. In this transaction, the stated rate and the effective rate were both 10%. The time diagram and present value computation in Chapter 6 (see Illustration 6.11) for Fjords Unlimited are the same for the issuer of the note, Scandinavian Imports, in recognizing a note payable. Because the present value of the note and its face value are the same, $10,000, Scandinavian recognizes no premium or discount. It records the issuance of the note as follows.

Cash	10,000	
Notes Payable		10,000

Scandinavian Imports recognizes the interest incurred each year as follows.

Interest Expense ($10,000 × .10)	1,000	
Cash		1,000

Notes Not Issued at Face Value

Zero-Interest-Bearing Notes

If a company issues a zero-interest-bearing (non-interest-bearing) note solely for cash, it measures the note's present value by the cash received.[7] The implicit interest rate is the **rate that equates the cash received with the amounts to be paid in the future**. The issuing company records the difference between the face amount and the present value (cash received) as **a discount and amortizes that amount to interest expense over the life of the note**.

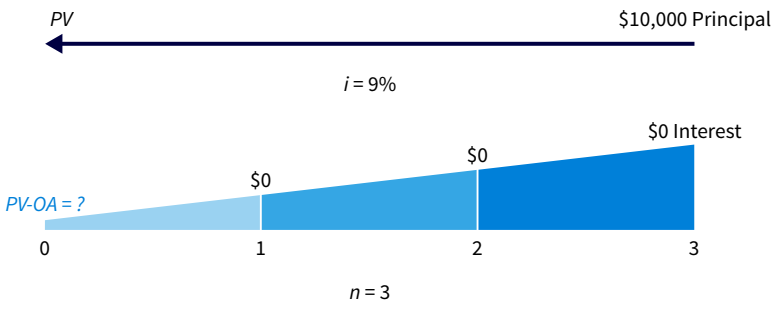
Example 13.10 Zero-Interest-Bearing Note

FACTS Turtle Cove Company issued the 3-year, $10,000, zero-interest-bearing note to Jeremiah Company illustrated in Chapter 6 (notes receivable). The implicit rate that equated the total cash to be paid ($10,000 at maturity) to the present value of the future cash flows ($7,721.80 cash proceeds at date of issuance) was 9%. (The present value of $1 for 3 periods at 9% is .77218.)

QUESTION What is the time diagram and entry to record issuance of the note?

SOLUTION

The time diagram for this note with a single cash flow is as follows.



Excel Solution

i	9%
n	3
PMT	$0
FV	−$10,000
PV	$7,721.80

PV(rate, nper, pmt, [fv], [type])

[7] Although we use the term "note" throughout this discussion, the basic principles and methodology apply equally to other long-term debt instruments.

Turtle Cove records issuance of the note as follows.

Cash	7,721.80	
Discount on Notes Payable	2,278.20	
Notes Payable		10,000.00

Turtle Cove will amortize the discount and recognize interest expense annually using the **effective-interest method** as shown in Example 13.11.

Example 13.11 Entries for Zero-Interest-Bearing Note

FACTS Refer to the zero-interest bearing note issued by Turtle Cove in Example 13.10.

QUESTIONS (a) What is the 3-year amortization schedule, using effective-interest amortization? (b) What is the entry to record interest expense for the first year of the note?

SOLUTION

a. The 3-year discount amortization and interest expense schedule is as follows (This schedule is similar to the note receivable schedule of Jeremiah Company in Illustration 6.10.)

	A	B	C	D	E
1	**Schedule of Note Discount Amortization Effective-Interest Method 0% Note Discounted at 9%**				
2		**Cash Interest Paid**	**Interest Expense**	**Discount Amortized**	**Carrying Value of Note**
3	Date of issue				$ 7,721.80
4	End of year 1	$-0-	$ 694.96[a]	$ 694.96[b]	8,416.76[c]
5	End of year 2	-0-	757.51	757.51	9,174.27
6	End of year 3	-0-	825.73[d]	825.73	10,000.00
7		$-0-	$2,278.20	$2,278.20	
8	[a]$7,721.80 × .09; [b]$694.96 – $0; [c]$7,721.80 + $694.96; [d]$ .05 adjustment to compensate for rounding				

Discount on Notes Payable

Beg. bal.	2,278.20	Yr 1	694.96
		Yr 2	757.51
		Yr 3	825.73
	0		

b. Turtle Cove records interest expense at the end of the first year using the effective-interest method as follows.

Interest Expense ($7,721.80 × .09)	694.96	
Discount on Notes Payable		694.96

The total amount of the discount, $2,278.20 in Example 13.11 represents the interest expense that Turtle Cove will incur on the note over the 3 years. At the end of year 1, the note payable would be reported on the balance sheet at its carrying value of $8,416.76. Similar to what we saw on the interest revenue side of this transaction in Chapter 6, the interest expense reported by Turtle Cove increases each year as the carrying value of the note increases.

Interest-Bearing Notes

The zero-interest-bearing note above is an example of the extreme difference between the stated rate and the effective rate. In many cases, the difference between these rates is not so great. Let's look at an example of an interest-bearing note payable.

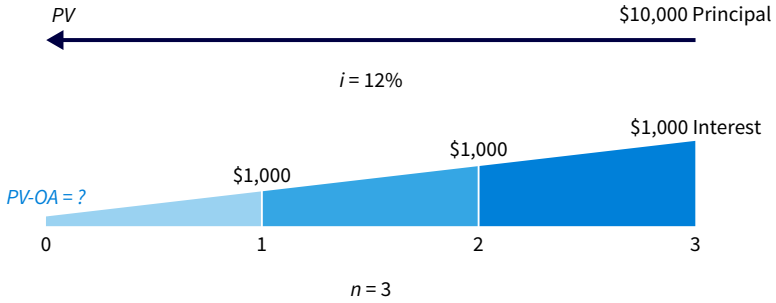
Example 13.12
Interest-Bearing Note

FACTS Marie Co. issued for cash a $10,000, three year note bearing interest at 10% to Morgan Corp. (This is the same note example presented in Chapter 6.) The market rate of interest for a note of similar risk is 12%.

QUESTION What is the time diagram and entry to record issuance of the note?

SOLUTION

The time diagram for this note is as follows.



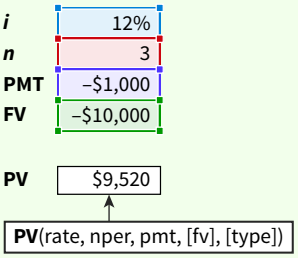
The present value of the note is computed as follows.

Present value of the principal [$10,000 × .71178 (Table 5.2 $_{i=12\%, n=3}$)]	$7,118
Present value of the interest [$1,000 × 2.40183 (Table 5.4 $_{i=12\%, n=3}$)]	2,402
Present value of the note	$9,520

In this case, because the effective rate of interest (12%) is greater than the stated rate (10%), the present value of the note ($9,520) is less than the face value ($10,000). That is, the note is exchanged at a **discount**. Marie Co. records the issuance of the note as follows.

Cash	9,520	
Discount on Notes Payable	480	
Notes Payable		10,000

Excel Solution



Marie Co. then amortizes the discount and recognizes interest expense annually using the **effective-interest method**.

Example 13.13
Entries for Interest-Bearing Note

FACTS Refer to the interest-bearing note issued by Marie Co. in Example 13.12.

QUESTIONS (a) What is the 3-year the amortization schedule, using effective-interest amortization? (b) What is the entry to record interest expense for the first year of the note?

SOLUTION

a. The 3-year discount amortization and interest expense schedule is as follows.

	A	B	C	D	E
1	**Schedule of Note Discount Amortization Effective-Interest Method 10% Note Discounted at 12%**				
2		**Cash Interest Paid**	**Interest Expense**	**Discount Amortized**	**Carrying Value of Note**
3	Date of issue				$ 9,520
4	End of year 1	$1,000[a]	$1,142[b]	$142[c]	9,662[d]
5	End of year 2	1,000	1,159	159	9,821
6	End of year 3	1,000	1,179	179	10,000
7		$3,000	$3,480	$480	
8	[a]$10,000 × .10; [b]$9,520 × .12; [c]1,142 – $1,000; [d]$9,520 + $142				

Discount on Notes Receivable

Beg. bal.	480	Yr 1	142
		Yr 2	159
		Yr 3	179
	0		

b. Marie Co. records payment of the annual interest and amortization of the discount for the first year as follows (amounts per amortization schedule).

Interest Expense	1,142	
Discount on Notes Payable		142
Cash		1,000

The total amount of the discount, $480 in this case, will be amortized over the 3 years. At the end of year 1, the note payable would be reported on the balance sheet at its carrying value of $9,662.

As shown in Example 13.13, when the present value is less than the face value, a company exchanges the note at a discount. It does so by recording the discount as a debit and amortizing it using the effective-interest method over the life of the note as annual increases in the amount of interest expense recognized.

Special Notes Payable Situations

Notes Issued for Property, Goods, or Services

Sometimes, companies may receive property, goods, or services in exchange for a note payable. When exchanging the debt instrument for property, goods, or services in a bargained transaction entered into at arm's length, the stated interest rate is presumed to be fair unless any of the following occur.

1. No interest rate is stated.
2. The stated interest rate is unreasonable.
3. The stated face amount of the debt instrument is materially different from the current cash sales price for the same or similar items or from the current fair value of the debt instrument.

In these circumstances, the company measures the present value of the debt instrument by the fair value of the property, goods, or services or by an amount that reasonably approximates the fair value of the note. [4] If there is **no stated rate of interest**, **the amount of interest is the difference between the face amount of the note and the fair value of the property**.

Example 13.14
Note Issued for Goods or Services

FACTS Scenic Development Company sells land having a cash sale price of $200,000 to Health Spa, Inc. In exchange for the land, Health Spa gives a 5-year, $293,866, zero-interest-bearing note. The $200,000 cash sale price represents the present value of the $293,866 note discounted at 8% for 5 years.

QUESTIONS (a) Should both parties record the transaction on the sale date at the face amount of the note, which is $293,866? Explain. (b) What entries do Health Spa and Scenic Development make at the exchange date?

SOLUTION

a. No. If they did, Health Spa's Land account and Scenic's sales would be overstated by $93,866 (the interest for 5 years at an effective rate of 8%). Similarly, interest revenue to Scenic and interest expense to Health Spa for the 5-year period would be understated by $93,866.

b. Given that the difference between the cash sale price of $200,000 and the $293,866 face amount of the note represents interest at an effective rate of 8%, the transaction is recorded as follows.

Health Spa, Inc. (Buyer)		
Land	200,000	
Discount on Notes Payable	93,866	
Notes Payable		293,866

Scenic Development Company (Seller)		
Notes Receivable	293,866	
Discount on Notes Receivable		93,866
Sales Revenue		200,000

In Example 13.14, Health Spa amortizes annually a portion of the discount of $93,866 as a charge to interest expense during the five-year life of the note. Scenic Development records interest revenue totaling $93,866 over the five-year period by also amortizing the discount. The effective-interest method is typically used.

Choice of Interest Rate

In note transactions, the effective or market interest rate is either evident or determinable by other factors involved in the exchange, such as the fair value of what is given or received. But, if a company cannot determine the fair value of the property, goods, services, or other rights, and if the note has no ready market, the problem of determining the present value of the note is more difficult.

- To estimate the present value of a note under such circumstances, a company must approximate an applicable interest rate that may differ from the stated interest rate.
- This process of interest-rate approximation is called **imputation**, and the resulting interest rate is called an **imputed interest rate**.

The prevailing rates for similar instruments of issuers with similar credit ratings affect the choice of a rate. Other factors, such as restrictive covenants, collateral, payment schedule, and the existing prime interest rate, also play a part. Companies determine the imputed interest rate when they issue a note. Any subsequent changes in prevailing interest rates are ignored.

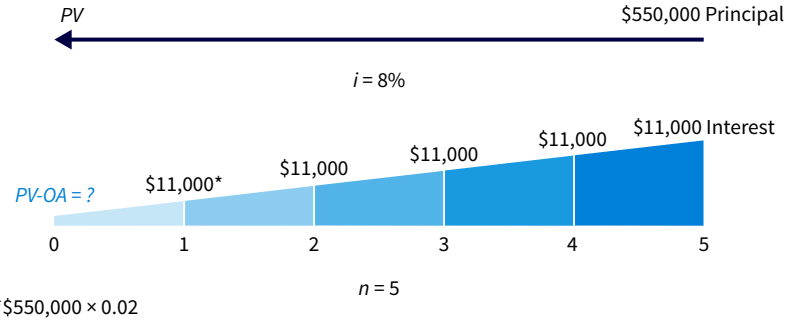
Example 13.15 Imputed Value of a Note

FACTS On December 31, 2025, Wunderlich Company issued a promissory note to Brown Interiors Company for architectural services related to its building. The note has a face value of $550,000, a due date of December 31, 2030, and bears a stated interest rate of 2%, payable at the end of each year. Interest paid each period is therefore $11,000 ($550,000 × .02). Wunderlich cannot readily determine the fair value of the architectural services, nor is the note readily marketable. On the basis of Wunderlich's credit rating, the absence of collateral, the prime interest rate at that date, and the prevailing interest on Wunderlich's other outstanding debt, the company imputes an 8% interest rate in this situation.

QUESTION What is the present value of the note and the imputed fair values of the services received by Wunderlich?

SOLUTION

The time diagram depicting both cash flows is as follows.



*$550,000 × 0.02

The present value of the note and the imputed fair value of the architectural services are determined as follows.

Face value of the note		$550,000
Present value of $550,000 due in 5 years at 8% interest payable annually (Table 5.2 $_{i = 8\%, n = 5}$); ($550,000 × .68058)	$374,319	
Present value of $11,000 interest payable annually for 5 years at 8%; (Table 5.4 $_{i = 8\%, n = 5}$); ($11,000 × 3.99271)	43,920	
Present value of the note		(418,239)
Discount on notes payable		$131,761

The accounting for the Wunderlich note is presented in Example 13.16.

Example 13.16 Entries and Amortization for Note Exchanged for Services

FACTS Refer to the note exchanged for services in Example 13.15.

QUESTIONS (a) What is the entry to record the issuance of the note? (b) What is the amortization schedule for the note and the entry required for the note in 2026?

SOLUTION

a. Wunderlich records issuance of the note in payment for the architectural services as follows.

December 31, 2025

Buildings	418,239	
Discount on Notes Payable	131,761	
Notes Payable		550,000

b. The 5-year amortization schedule is as follows.

	A	B	C	D	E
1	**Schedule of Bond Discount Amortization Effective-Interest Method 2% Note Discounted at 8% (imputed)**				
2	**Date**	**Cash Paid**	**Interest Expense**	**Discount Amortized**	**Carrying Value of Note**
3	12/31/2025				$418,239
4	12/31/2026	$11,000[a]	$ 33,459[b]	$ 22,459[c]	440,698[d]
5	12/31/2027	11,000	35,256	24,256	464,954
6	12/31/2028	11,000	37,196	26,196	491,150
7	12/31/2029	11,000	39,292	28,292	519,442
8	12/31/2030	11,000	41,558[e]	30,558	550,000
9		$55,000	$186,761	$131,761	
10	[a]$550,0000 × .02; [b]$418,239 × .08; [c]$33,459 − $11,000; [d]$418,239 + 22,459; [e]$3 adjustment due to rounding				

Wunderlich records payment of the first year's interest and amortization of the discount as follows.

December 31, 2026

Interest Expense	33,459	
Discount on Notes Payable		22,459
Cash		11,000

On Wunderlich's balance sheet at December 31, 2026, the note payable would be listed at carrying value of $440,698.

Excel Solution

i	8%
n	5
PMT	−$11,000
FV	−$550,000
PV	$418,241*

PV(rate, nper, pmt, [fv], [type])

*Difference due to rounding.

Mortgage Notes Payable

The most common form of long-term notes payable is a mortgage note payable, or installment note.

- A **mortgage note payable** is a promissory note secured by a document called a mortgage that pledges title to property as security for the loan.
- The borrower is required to make regular payments, or installments, on the principal over the term of the mortgage note payable.

Individuals, proprietorships, and partnerships use mortgage notes payable more frequently than do corporations.

The borrower usually receives cash for the face amount of the mortgage note. In that case, the face amount of the note is the true liability, and no discount or premium is involved. When the lender assesses "points," however, the total amount received by the borrower is less than the face amount of the note. Points, in mortgage financing, are the same as the original issue discount of bonds. Points raise the effective-interest rate above the rate specified in the note. A **point** is 1% of the face value of the note.

Example 13.17 Mortgage (Installment) Note

FACTS On December 31, 2025, Morning Brew purchased a new building for its corporate headquarters, borrowing $102,049, agreeing to pay $40,000 down and then paying the balance by making four equal installments of $20,000 each December 31. After considering mortgage points on the borrowing, an interest rate of 11% is imputed.

QUESTIONS What are the journal entries (a) on the date the note is issued, and (b) for the note on December 31, 2026, and December 31, 2029? (Assume that the effective-interest method is used for amortization purposes.)

SOLUTION

a. The entry at issuance of the installment note is as follows.

December 31, 2025		
Buildings	102,049	
Discount on Notes Payable	17,951	
Notes Payable		80,000
Cash		40,000

To record the building at the present value of the note plus the immediate cash payment:

PV of $20,000 annuity at 11% for 4 years ($20,000 × 3.10245)	$ 62,049
Down payment	40,000
Cost of the building	$102,049

Excel Solution

i	11%
n	4
PMT	–$20,000
FV	$0
PV	$62,049

PV(rate, nper, pmt, [fv], [type])

b. The amortization schedule for the installment note is as follows.

	A	B	C	D	E
1	**December 31, 2025 Schedule of Installment (Mortgage) Note Amortization**				
2	**Date**	**Cash Paid**	**Interest Expense**	**Decrease Carrying Value**	**Carrying Value of Note**
3	12/31/2025				$62,049
4	12/31/2026	$20,000	$6,825[a]	$13,175[b]	48,874[c]
5	12/31/2027	20,000	5,376	14,624	34,250
6	12/31/2028	20,000	3,768	16,232	18,018
7	12/31/2029	20,000	1,982	18,018	–
8	[a]$62,049 × .11; [b]$20,000 – $6,825; [c]$62,049 – $13,175				

The related journal entries are as follows.

December 31, 2026		
Notes Payable	20,000	
Cash		20,000
Interest Expense	6,825	
Discount on Notes Payable		6,825
December 31, 2029		
Notes Payable	20,000	
Cash		20,000
Interest Expense	1,982	
Discount on Notes Payable		1,982

As indicated in the amortization schedule and the journal entries in Example 13.17, each payment of $20,000 is comprised of interest expense and principal reduction, such that the installment note is amortized to zero at the maturity date. The company reports the reduction in principal for the next year as a current liability, and it classifies the remaining unpaid principal balance as a long-term liability on the balance sheet. For example, at December 31, 2026, the total liability is $48,874. Of that amount, $14,624 is current and $34,250 ($48,874 − $14,624) is long-term.

On the balance sheet, Morning Brew should report the mortgage note payable as a liability using a title such as "Mortgage Payable" or "Notes Payable—Secured," with a brief disclosure of the property pledged in the notes to the financial statements.

Lenders have partially replaced the traditional **fixed-rate mortgage** with alternative mortgage arrangements. Most lenders offer **variable-rate mortgages** (also called **floating-rate** or **adjustable-rate** mortgages) featuring interest rates tied to changes in the fluctuating market rate. Generally, the variable-rate lenders adjust the interest rate at either one- or three-year intervals, pegging the adjustments to changes in the prime rate or the U.S. Treasury bond rate.

Put It into Practice LO 13.3

Record Notes Payable

FACTS On January 1, 2025, Feucht Farms Inc. makes the two following acquisitions.

1. Purchases a barn by issuing a 6%, 8-year promissory note having a maturity value of $250,000 (interest payable annually). The company has to pay 11% interest for funds from its bank.
2. Purchases land having a fair value of $200,000 by issuing a 5-year, zero-interest-bearing promissory note in the face amount of $337,012.

INSTRUCTIONS

a. Record the two journal entries that should be recorded by Feucht Farms for the two purchases on January 1, 2025.

b. Record the interest at the end of the first year on both notes using the effective-interest method.

SOLUTION

a. 1. **January 1, 2025**

Buildings		185,674.30	
Discount on Notes Payable		64,325.70*	
Notes Payable			250,000.00

2. **January 1, 2025**

Land**		200,000.00	
Discount on Notes Payable		137,012.00	
Notes Payable			337,012.00

*Computation of the discount on notes payable:

Maturity value		$ 250,000.00
Present value of $250,000 due in 8 years at 11%—$250,000 × .43393 (Table 5.2 $_{i=11\%, n=8}$)	$108,482.50	
Present value of $15,000 ($250,000 × .06) payable annually for 8 years at 11% —$15,000 × 5.14612 (Table 5.4 $_{i=11\%, n=8}$)	77,191.80	
Present value of the note		(185,674.30)
Discount		$ 64,325.70

**The $200,000 capitalized land cost represents the present value of the note discounted for 5 years at 11%. Therefore, the carrying value of the note at January 1, 2025 is $200,000.

b. 1.

Interest Expense ($185,674.30 × .11)		20,424.17	
Discount on Notes Payable			5,424.17
Cash ($250,000 × .06)			15,000.00

2.

Interest Expense		22,000.00

13.4 Reporting and Analyzing Liabilities

LEARNING OBJECTIVE 4

Indicate how to present and analyze long-term debt.

Fair Value Option

As indicated earlier, noncurrent liabilities, such as bonds and notes payable, are generally measured at amortized cost or carrying value. However, companies have the option to record fair value in their accounts for most financial assets and liabilities, including bonds and notes payable. [5]

- The FASB believes that fair value measurement for financial instruments, including financial liabilities, provides more relevant and understandable information than amortized cost.
- The FASB considers fair value to be more relevant because it reflects the current cash equivalent value of financial instruments.

Fair Value Measurement

If companies choose the **fair value option**, noncurrent liabilities, such as bonds and notes payable, are reported at fair value. In addition, companies report unrealized holding gains or losses as part of net income or in other comprehensive income, depending on the circumstances. An unrealized holding gain or loss is the net change in the fair value of the liability from one period to another, exclusive of interest expense recognized. As a result, the company reports the liability at fair value at each reporting date.

Fair Value (Net Income) If a general change in interest rates occurs (for example, the Federal Reserve changes the long–term interest rates on government bonds), the fair value of a company's financial liabilities changes as well.

Example 13.18
Fair Value Option

FACTS Edmonds Company has issued $500,000 of 6% bonds at face value on May 1, 2025. Edmonds chooses the fair value option for these bonds. At December 31, 2025, the value of the bonds is now $480,000 because interest rates in the market have increased to 8%.

QUESTION What entry does Edmonds make to record the change in fair value?

SOLUTION

Edmonds makes the following entry.

December 31, 2025

Bonds Payable	20,000	
Unrealized Holding Gain or Loss—Income ($500,000 – $480,000)		20,000

The value of the debt securities falls because the bond is paying less than market rate for similar securities. As the journal entry indicates, the value of the bonds declined. This decline leads to a reduction in the bond liability and a resulting unrealized holding gain for the company, which is reported as part of net income.

The value of Edmonds' debt in Example 13.18 declined because market interest rates increased. Investors would rather invest in other bonds that have higher interest rates. It should be emphasized that Edmonds must continue to value the bonds payable at fair value in all subsequent periods.

Fair Value (Other Comprehensive Income) With the Edmonds bonds, we assumed that the decline in value of the bonds was due to a market interest rate increase. In other situations, the decline may occur because the bonds become more likely to default. That is, **if the creditworthiness of Edmonds Company declines, the value of its debt also declines**. If its creditworthiness declines, its bond investors are receiving a lower rate relative to investors with similar-risk investments. How to report these changes is controversial.

Some support reporting changes in the fair value for a decline in creditworthiness in income, noting that the debtholders' loss is the shareholders' gain. That is, the shareholders' claims on the assets of the company increase when the value of the debtholders' claims declines. Others question how Edmonds can record a gain when its creditworthiness is becoming worse. The FASB requires that the credit-risk portion of gains or losses on a financial liability be reported in other comprehensive income which flows through to the equity section of the balance sheet.

Example 13.19
Fair Value Option — Credit Deterioration

FACTS Refer to the Edmonds Company bonds in Example 13.18. Assume that the Edmonds Company fair value change on its bonds is due to its credit rating dropping from AA to BB.

QUESTION What entry does Edmonds make to record the change in fair value, under these conditions?

SOLUTION

Edmonds makes the following entry to record the fair value change in other comprehensive income.

December 31, 2025		
Bonds Payable	20,000	
Unrealized Holding Gain or Loss—Equity		20,000

As indicated, unrealized gains and losses due to changes in credit risk will **not** affect net income, but instead are reported as other comprehensive income.

When the Edmonds bonds in Example 13.19 mature or are extinguished, any accumulated other comprehensive gains and losses due to changes in creditworthiness are reclassified to net income.

Presentation and Decision Analysis

Companies that have large amounts and numerous issues of long-term debt frequently report only one amount in the balance sheet, supported with comments and schedules in the accompanying notes. Long-term debt that **matures within one year** should be reported as a current liability, unless using noncurrent assets to accomplish extinguishment. However, the company should disclose the method it will use in its liquidation. **[6]**, **[7]**

Off-Balance-Sheet Financing

What do **Krispy Kreme**, **Cisco**, **Enron**, and **Adelphia Communications** have in common? They all have been accused of using off-balance-sheet financing to minimize the

reporting of debt on their balance sheets. **Off-balance-sheet financing** is an attempt to borrow monies in such a way to prevent recording the obligations. It has become an issue of extreme importance. Many allege that Enron, in one of the largest corporate failures on record, hid a considerable amount of its debt off the balance sheet. As a result, any company that uses off-balance-sheet financing today risks investors dumping the company's stock. Consequently, the company's share price will suffer. Nevertheless, a considerable amount of off-balance-sheet financing continues to exist. As one writer noted, "The basic drives of humans are few: to get enough food, to find shelter, and to keep debt off the balance sheet."

Different Forms Off-balance-sheet financing can take many different forms. Here are two examples.

1. **Non-consolidated subsidiary**. Under GAAP, a parent company does not have to consolidate a subsidiary company that is less than 50% owned. In such cases, the parent does not report the assets and liabilities of the subsidiary. All the parent reports on its balance sheet is the investment in the subsidiary. As a result, users of the financial statements may not understand that the subsidiary has considerable debt for which the parent may ultimately be liable if the subsidiary runs into financial difficulty.
2. **Special-purpose entity (SPE)**. A company creates a **special-purpose entity (SPE)** to perform a special project. To illustrate, assume that Clarke Company decides to build a new plant. However, management does not want to report the plant or the borrowing used to fund the construction on its balance sheet. It therefore creates an SPE, the purpose of which is to build the plant. The SPE finances and builds the plant. In return, Clarke guarantees that it or some outside party will purchase all the products produced by the plant. As a result, Clarke might not report the asset or liability on its books. The accounting rules in this area are complex.

Rationale Why do companies engage in off-balance-sheet financing?

- A major reason is that many believe that **removing debt enhances the quality of the balance sheet** and permits credit to be obtained more readily and at less cost.
- Loan covenants often limit the amount of debt a company may have. As a result, the company uses off-balance-sheet financing because **these types of commitments might not be considered in computing the debt limitation**.
- Some argue that the asset side of the balance sheet is severely understated. For example, companies that use LIFO costing for inventories and depreciate assets on an accelerated basis will often have carrying amounts for inventories and property, plant, and equipment that are much lower than their fair values. As an offset to these lower values, some believe that part of the debt does not have to be reported. In other words, **if companies report assets at fair values**, less pressure would undoubtedly exist for off-balance-sheet financing arrangements.

Whether the arguments above have merit is debatable. The general idea of "out of sight, out of mind" may not be true in accounting. Many users of financial statements indicate that they factor these off-balance-sheet financing arrangements into their computations when assessing debt-to-equity relationships. Similarly, many loan covenants also attempt to account for these complex arrangements. Nevertheless, many companies still believe that benefits will accrue if they omit certain obligations from the balance sheet.

As a response to off-balance-sheet financing arrangements, the FASB has increased disclosure requirements. This response is consistent with an "efficient markets" philosophy: The important question is not whether the presentation is off-balance-sheet or not, but whether the items are disclosed at all. In addition, the SEC, in response to the Sarbanes-Oxley Act, now requires companies to provide related information in their management discussion and analysis sections. Specifically, companies must disclose (1) all contractual obligations in a tabular format and (2) contingent liabilities and commitments in either a textual or tabular format.

Illustration 13.12 shows **Best Buy Co.**'s tabular disclosure of its contractual obligations.

ILLUSTRATION 13.12 Note Disclosure of Contractual Obligations

Best Buy Co.
Contractual Obligations

The following table presents information regarding our contractual obligations by fiscal year ($ in millions):

		Payments due by period			
Contractual Obligations	**Total**	**Less than 1 year**	**1–3 years**	**3–5 years**	**More than 5 years**
Long-term debt obligations	$1,150	$–0–	$650	$–0–	$500
Interest payments	159	$50	32	26	51
Financing lease obligations	43	15	18	5	5
Operating lease obligations	3,060	738	1,199	667	456
Purchase obligations	2,090	1,977	86	23	4
Unrecognized tax benefits	318	0	0	0	0
Deferred compensation	22	0	0	0	0
Total	$6,842	$2,780	$1,985	$721	$1,016

Note For additional information refer to Note 5, Derivative Instruments: Note 6, Debt; Note 10, Leases; Note 11, Income Taxes and Note 13, Contingencies and Commitments, of the Notes to Consolidated Financial Statements, included in Item 8, Financial Statements and Supplementary Data, of this Annual Report on Form 10-K.

We believe that recording more obligations on the balance sheet will enhance financial reporting. Given the problems with companies such as **Enron**, **Dynegy**, **Williams Company**, **Chesapeake Energy**, and **Calpine**, and the Sarbanes-Oxley requirements, we expect that less off-balance-sheet financing will occur in the future.[8]

Note Disclosures

Note disclosures generally indicate the nature of the liabilities, maturity dates, interest rates, call provisions, conversion privileges, restrictions imposed by the creditors, and assets designated or pledged as security. Companies should show any assets pledged as security for the debt in the assets section of the balance sheet. The fair value of the long-term debt should also be disclosed if it is practical to estimate fair value. Finally, companies must disclose future payments for sinking fund requirements and maturity amounts of long-term debt during each of the next five years. The future payments for the sinking fund and long-term debt can be combined and reported as one amount in the notes.

Long-term debt generally has various **covenants** or **restrictions** that protect both lenders and borrowers. Some examples or covenants or restrictions include:

- Call provisions.
- Property pledged as collateral.

[8]As discussed in Chapter 20, the FASB addressed a major source of off-balance-sheet financing—operating leases—with issuance of new guidance (ASU 2016-2, Leases), which requires that payments on all leases (including operating leases) with terms longer than one year be reported as liabilities on the balance sheet. Nonetheless, it is unlikely that the FASB will be able to stop all types of off-balance-sheet transactions. Financial engineering is the "Holy Grail" of Wall Street. Developing new financial instruments and arrangements to sell and market to customers is not only profitable but also adds to the prestige of the investment firms that create them. Thus, new financial products will continue to appear that will test the ability of the FASB to develop appropriate accounting standards for them.

- Sinking fund requirements.
- Working capital and dividend restrictions.
- Limitations concerning the assumption of additional debt.

Although covenants can provide adequate protection to the long-term debtholder, many bondholders suffer considerable losses when companies add more debt to the capital structure.

Companies should describe these features in the body of the financial statements or the notes if important for a complete understanding of the financial position and the results of operations. These disclosures aid financial statement users in evaluating the amounts and timing of future cash flows. **Illustration 13.13** shows an example of the type of information provided for **Target Corporation**.

ILLUSTRATION 13.13 Long-Term Debt Disclosure

Target Corporation
(dollars in millions)

	February 3, 2020	January 28, 2019
Total current assets	$12,902	$12,519
Current liabilities		
Accounts payable	$ 9,920	$ 9,761
Accrued and other current liabilities	4,406	4,201
Current portion of long-term debt and other borrowings	161	1,052
Total current liabilities	14,487	15,014
Total noncurrent liabilities	16,459	14,979

19. Notes Payable and Long-Term Debt (in part)

At February 1, 2020, the carrying value and maturities of our debt portfolio were as follows:

Debt Maturities (millions)	February 1, 2020 Rate(*a*)	Balance
Due 2020–2024	3.8%	$ 2,205
Due 2025–2029	3.3	2,180
Due 2030–2034	4.2	1,305
Due 2035–2039	6.8	1,109
Due 2040–2044	4.0	1,466
Due 2045–2049	3.7	1,727
Total notes and debentures		9,992
Swap valuation adjustments		137
Finance lease obligations		1,370
Less: Amounts due within one year		(161)
Long-term debt and other borrowings		$11,338

(*a*) Reflects the weighted-average stated interest rate as of year-end.

Required principal payments on notes and debentures over the next five years are as follows:

Required Principal Payments

(millions)	2020	2021	2022	2023	2024
Total required principal payments	$94	$1,056	$63	$----	$1,000

Note that if the company has any off-balance-sheet financing, it must provide extensive note disclosure. [8]

Decision Analysis of Long-Term Debt

Long-term creditors and stockholders are interested in a company's long-run solvency, particularly its ability to pay interest as it comes due and to repay the face value of the debt at maturity. Debt to assets and times interest earned are two ratios that provide information about debt-paying ability and long-run solvency.

Debt to Assets Ratio The **debt to assets ratio** measures the percentage of the total assets provided by creditors. To compute it, divide total debt (both current and long-term liabilities) by total assets, as follows.

$$\text{Debt to Assets Ratio} = \frac{\text{Total Liabilities}}{\text{Total Assets}}$$

The higher the percentage of total liabilities to total assets, the greater the risk that the company may be unable to meet its maturing obligations.

Times Interest Earned The **times interest earned** ratio indicates the company's ability to meet interest payments as they come due. It is computed by dividing the sum of net income, interest expense, and income tax expense by interest expense.

$$\text{Times Interest Earned} = \frac{\text{Net Income} + \text{Interest Expense} + \text{Income Tax Expense}}{\text{Interest Expense}}$$

To illustrate these ratios, we use data from **Target**'s 2020 annual report. Target has total liabilities of $30,946 ($14,487 + $16,459) million, total assets of $42,779 million, interest expense of $477 million, income taxes of $921 million, and income of $3,281 million. We compute Target's debt to assets and times interest earned ratios as shown in **Illustration 13.14**.

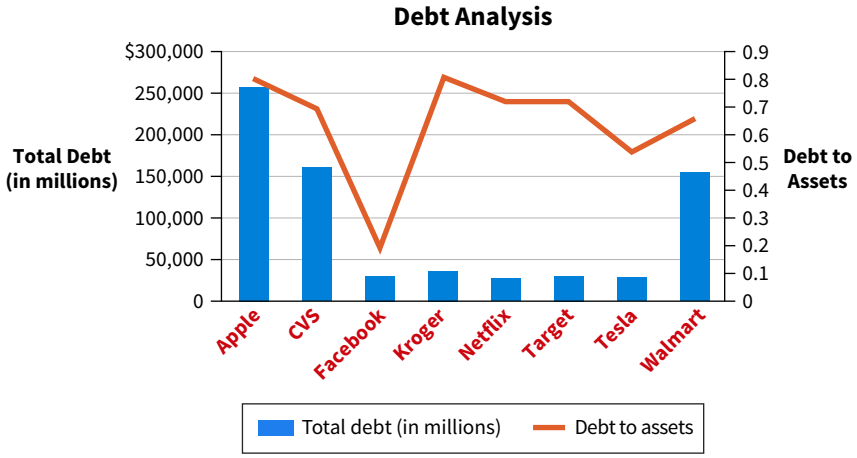
ILLUSTRATION 13.14
Computation of Long-Term Debt Ratios for Target

	2020	2019
Debt to assets	$\frac{\$30,946}{\$42,779} = 72.3\%$	$\frac{\$29,993}{\$41,290} = 72.6\%$
Time intereset earned	$\frac{(\$3,281 + \$477 + \$921)}{\$477} = 9.81$	$\frac{(\$2,937 + \$461 + \$746)}{\$461} = 8.99$

Even though Target has a relatively high debt to assets ratio of 72.3%, its interest coverage of 9.81 times indicates it can easily meet its interest payments as they come due. Additionally, the debt to assets ratio is relatively consistent year over year while the interest coverage metric has improved.

Analytics in Action: Helping to Put Debt into Perspective

Analyzing a company's long-term debt takes much more than simply looking at its balance sheet. As shown in the following chart, total debt levels can vary quite substantially across different companies. If we look just at **Apple**'s debt levels without any other data, we may conclude that it is holding too much debt, especially relative to the other companies listed. But when we pull in the debt to assets ratio, that metric is much more consistent across each company.



Debt isn't necessarily a bad thing either; companies may borrow to fund innovation or business expansion. In Apple's case, it is using some of its cash to fund share repurchases to get cash back in the hands of its shareholders. With low interest rates, it may be earning more on its cash invested than what it costs the company to borrow.

Using analytics allows users to pull financial data from many companies and benchmark across industries and track trends over time, allowing investors and creditors to truly understand a company's financial position.

Go to the Analytics in Action Activities section at the end of the chapter, which includes Excel-based problems with data sets, to see the relevance and application of data analytics to intermediate accounting topics.

APPENDIX **13A**

Troubled-Debt Restructuring

LEARNING OBJECTIVE *5

Describe the accounting for a debt restructuring.

Practically every day, the *Wall Street Journal* runs a story about some company in financial difficulty. In most troubled-debt situations, the creditor usually first recognizes a loss on impairment. Subsequently, the creditor either modifies the terms of the loan or the debtor settles the loan on terms unfavorable to the creditor. In unusual cases, the creditor forces the debtor into bankruptcy in order to ensure the highest possible collection on the loan. **Illustration 13A.1** shows this continuum.

ILLUSTRATION 13A.1 Usual Progression in Troubled-Debt Situations

To illustrate, consider the case of **Huffy Corp.**, a name that adorned the first bicycle of many American children. Before its bankruptcy, Huffy's creditors likely recognized a loss on impairment. Subsequently, the creditors either modified the terms of the loan or settled it on terms unfavorable to the creditor. Finally, the creditors forced Huffy into bankruptcy, and the suppliers received a 30 % equity stake in Huffy. These terms helped ensure the highest possible collection on the Huffy loan.

We discussed the accounting for note receivable impairments in Appendix 6B. The purpose of this appendix is to explain how creditors and debtors report information in financial statements related to troubled-debt restructurings.

A **troubled-debt restructuring** occurs when a creditor "for economic or legal reasons related to the debtor's financial difficulties grants a concession to the debtor that it would not otherwise consider." **[9]** Thus, a troubled-debt restructuring does not apply to modifications of a debt obligation that reflect general economic conditions leading to a reduced interest rate. Nor does it apply to the refunding of an old debt with new debt having an effective-interest rate approximately equal to that of similar debt issued by nontroubled debtors.

A troubled-debt restructuring involves one of two basic types of transactions:

1. Settlement of debt at less than its carrying amount.
2. Continuation of debt with a modification of terms.

Settlement of Debt

In addition to using cash, settling a debt obligation can involve either a transfer of noncash assets (real estate, receivables, or other assets) or the issuance of the debtor's stock. In these situations, **the creditor should account for the noncash assets or equity interest received at their fair value**.

The debtor must determine the excess of the carrying amount of the payable over the fair value of the assets or equity transferred (gain). Likewise, the creditor must determine the excess of the receivable over the fair value of those same assets or equity interests transferred (loss). The debtor recognizes a gain equal to the amount of the excess. The creditor normally charges the excess (loss) against Allowance for Doubtful Accounts. In addition, the debtor recognizes a gain or loss on disposition of assets to the extent that the fair value of those assets differs from their carrying amount (book value).

Transfer of Assets

Assume that American City Bank loaned $20,000,000 to Union Mortgage Company. Union Mortgage, in turn, invested these monies in residential apartment buildings. However, because of low occupancy rates, it cannot meet its loan obligations. American City Bank agrees to accept from Union Mortgage real estate with a fair value of $16,000,000 in full settlement of the $20,000,000 loan obligation. The real estate has a carrying value of $21,000,000 on the books of Union Mortgage. American City Bank (creditor) records this transaction as follows.

Land	16,000,000	
Allowance for Doubtful Accounts	4,000,000	
Notes Receivable (from Union Mortgage)		20,000,000

The bank records the real estate at fair value. Further, it makes a charge to Allowance for Doubtful Accounts to record the bad debt write-off.

Union Mortgage (debtor) records this transaction as follows.

Notes Payable (to American City Bank)	20,000,000	
Loss on Disposal of Land	5,000,000	
Land		21,000,000
Gain on Restructuring of Debt		4,000,000

Union Mortgage has a loss on the disposition of real estate in the amount of $5,000,000 (the difference between the $21,000,000 book value and the $16,000,000 fair value). It should show

this as an ordinary loss on the income statement. In addition, it has a gain on restructuring of debt of $4,000,000 (the difference between the $20,000,000 carrying amount of the note payable and the $16,000,000 fair value of the real estate).

Granting of Equity Interest

Assume that American City Bank agrees to accept from Union Mortgage 320,000 shares of common stock ($10 par) that has a fair value of $16,000,000, in full settlement of the $20,000,000 loan obligation. American City Bank (creditor) records this transaction as follows.

Equity Investments	16,000,000	
Allowance for Doubtful Accounts	4,000,000	
Notes Receivable (from Union Mortgage)		20,000,000

It records the stock as an investment at the fair value at the date of restructure.

Union Mortgage (debtor) records this transaction as follows.

Notes Payable (to American City Bank)	20,000,000	
Common Stock (320,000 × $10)		3,200,000
Paid-in Capital in Excess of Par— Common Stock		12,800,000
Gain on Restructuring of Debt		4,000,000

It records the stock issued in the normal manner. It records the difference between the par value and the fair value of the stock as additional paid-in capital.

Modification of Terms

In some cases, a debtor's serious short-run cash flow problems will lead it to request one or a combination of the following modifications:

1. Reduction of the stated interest rate.
2. Extension of the maturity date of the face amount of the debt.
3. Reduction of the face amount of the debt.
4. Reduction or deferral of any accrued interest.

The creditor's loss is based on expected cash flows discounted at the historical effective rate of the loan. [10] The debtor calculates its gain based on **undiscounted amounts**. As a consequence, **the gain recorded by the debtor will not equal the loss recorded by the creditor under many circumstances**.[9]

Two examples demonstrate the accounting for a troubled-debt restructuring by debtors and creditors:

1. The debtor does not record a gain.
2. The debtor does record a gain.

In both instances, the creditor has a loss.

[9] In response to concerns expressed about this nonsymmetric treatment, the FASB stated that it did not address debtor accounting because expansion of the scope of the statement would delay its issuance. By basing the debtor calculation on undiscounted amounts, the amount of gain (if any) recognized by the debtor is reduced at the time the modification of terms occurs. If fair value was used, the gain recognized would be greater. The result of this approach is to spread the unrecognized gain over the life of the new agreement. We believe that this accounting is inappropriate and hopefully will change as more fair value measurements are introduced into the financial statements.

Example 1—No Gain for Debtor

This example demonstrates a restructuring in which the debtor records no gain.[10] On December 31, 2024, Morgan National Bank enters into a debt restructuring agreement with Resorts Development Company, which is experiencing financial difficulties. The bank restructures a $10,500,000 loan receivable issued at par (interest paid to date) by:

1. Reducing the principal obligation from $10,500,000 to $9,000,000;
2. Extending the maturity date from December 31, 2024, to December 31, 2028; and
3. Reducing the interest rate from 12% to 8%.

Debtor Calculations

The total future cash flow, after restructuring of $11,880,000 ($9,000,000 of principal plus $2,880,000 of interest payments[11]), exceeds the total pre-restructuring carrying amount of the debt of $10,500,000. Consequently, **Resorts Development the debtor) records no gain nor makes any adjustment** to the carrying amount of the payable. As a result, Resorts Development (debtor) makes no entry at the date of restructuring.

Resorts Development (the debtor) must compute a new effective-interest rate in order to record interest expense in future periods. The new effective-interest rate equates the present value of the future cash flows specified by the new terms with the pre-restructuring carrying amount of the debt. In this case, Resorts Development computes the new rate by relating the pre- restructure carrying amount ($10,500,000) to the total future cash flow ($11,880,000). The rate necessary to discount the total future cash flow ($11,880,000), to a present value equal to the remaining balance ($10,500,000), is 3.46613%.[12]

On the basis of the effective rate of 3.46613%, Resorts Development prepares the schedule shown in **Illustration 13A.2**.

	A	B	C	D	E
1	**Resorts Development Co. (Debtor)**				
2	**Date**	**Cash Paid (8%)**	**Interest Expense (3.46613%)**	**Reduction of Carrying Value**	**Carrying Value of Note**
3	12/31/2024				$10,500,000
4	12/31/2025	$ 720,000[a]	$ 363,944[b]	$ 356,056[c]	10,143,944[d]
5	12/31/2026	720,000	351,602	368,398	9,775,546
6	12/31/2027	720,000	338,833	381,167	9,394,379
7	12/31/2028	720,000	325,621	394,379	9,000,000
8		$2,880,000	$1,380,000	$1,500,000	
9	[a]$9,000,000 × .08; [b]$10,500,000 × .0346613; [c]$720,000 − $363,944; [d]$10,500,000 − $356,056				

ILLUSTRATION 13A.2 Schedule Showing Reduction of Carrying Amount of Note

Excel Solution

n	4
PMT	$720,000
PV	−$10,500,000
FV	$9,000,000
Rate	3.466%

RATE(nper, pmt, pv, [fv], [type], [guess])

[10]Note that the examples given for restructuring assume the creditor made no previous entries for impairment. In actuality, it is likely that the creditor would have already made an entry when the loan initially became impaired. Restructuring would, therefore, simply require an adjustment of the initial estimated bad debt by the creditor. Recall, however, that the debtor makes no entry upon impairment.

[11]Total interest payments are $9,000,000 × .08 × 4 years = $2,880,000.

[12]An accurate interest rate i can be found by using the formulas given at the tops of Tables 5.2 and 5.4 to set up the following equation.

$$\$10{,}500{,}000 = \frac{1}{(1+i)^4} \times \$9{,}000{,}000 + \frac{1-\frac{1}{(1+i)^4}}{i} \times \$720{,}000$$

Solving algebraically for i, we find that $i = 3.46613\%$.

Thus, on December 31, 2025 (date of first interest payment after restructure), the debtor makes the following entry.

December 31, 2025

Notes Payable	356,056	
Interest Expense	363,944	
Cash		720,000

The debtor makes a similar entry (except for different amounts for debits to Notes Payable and Interest Expense) each year until maturity. At maturity, Resorts Development makes the following entry.

December 31, 2028

Notes Payable	9,000,000	
Cash		9,000,000

Creditor Calculations

Morgan National Bank (creditor) must calculate its loss based on the expected future cash flows discounted at the historical effective rate of the loan. It calculates this loss as shown in **Illustration 13A.3**.

ILLUSTRATION 13A.3 Computation of Loss to Creditor on Restructuring

Pre-restructure carrying amount		$10,500,000
Present value of restructured cash flows:		
Present value of $9,000,000 due in 4 years at 12%, interest payable annually (Table 5.2 $i = 12\%, n = 4$; $9,000,000 × .63552)	$5,719,680	
Present value of $720,000 interest payable annually for 4 years at 12% (Table 5.4 $i = 12\%, n = 4$; $720,000 × 3.03735)	2,186,892	
Present value of restructured cash flows		(7,906,572)
Loss on restructuring		$2,593,428

Excel Solution

*Difference due to rounding.

As a result, Morgan National Bank records bad debt expense as follows (assuming no establishment of an allowance balance from recognition of an impairment).

Bad Debt Expense	2,593,428	
Allowance for Doubtful Accounts		2,593,428

In subsequent periods, Morgan National Bank reports interest revenue based on the historical effective rate. **Illustration 13A.4** provides the following interest and amortization information.

9	[a]$9,000,000 × .08; [b]$7,906,572 × .12; [c]$948,789 – $720,000; [d]$7,906,572 + $228,789; [e]$28 adjustment due to rounding				

Sheet1

On December 31, 2025, Morgan National Bank makes the following entry.

December 31, 2025		
Cash	720,000	
Allowance for Doubtful Accounts	228,789	
Interest Revenue		948,789

Morgan National Bank makes a similar entry (except for different amounts debited to Allowance for Doubtful Accounts and credited to Interest Revenue) each year until maturity. At maturity, the company makes the following entry.

December 31, 2028		
Cash	9,000,000	
Allowance for Doubtful Accounts	1,500,000	
Notes Receivable		10,500,000

Example 2—Gain for Debtor

If the pre-restructure carrying amount exceeds the total future cash flows as a result of a modification of the terms, the debtor records a gain. To illustrate, assume the facts in the previous example except that Morgan National Bank reduces the principal to $7,000,000 (and extends the maturity date to December 31, 2028, and reduces the interest from 12% to 8%). The total future cash flow is now $9,240,000 ($7,000,000 of principal plus $2,240,000 of interest[13]), which is $1,260,000 ($10,500,000 − $9,240,000) less than the pre-restructure carrying amount of $10,500,000.

Under these circumstances, Resorts Development (debtor) reduces the carrying amount of its payable $1,260,000 and records a gain of $1,260,000. On the other hand, Morgan National Bank (creditor) debits its Bad Debt Expense for $4,350,444. **Illustration 13A.5** shows this computation.

Pre-restructure carrying amount		$10,500,000
Present value of restructured cash flows:		
Present value of $7,000,000 due in 4 years at 12%, interest payable annually (Table 5.2 $i = 12\%, n = 4$; $7,000,000 × .63552)	$4,448,640	
Present value of $560,000 interest payable annually for 4 years at 12% (Table 5.4 $i = 12\%, n = 4$; $560,000 × 3.03735)	1,700,916	(6,149,556)
Creditor's loss on restructuring		$ 4,350,444

ILLUSTRATION 13A.5
Computation of Loss to Creditor on Restructuring

Excel Solution

i	12%
n	4
PMT	−$560,000
FV	−$7,000,000
PV	$6,149,542*

PV(rate, nper, pmt, [fv], [type])

* Difference due to rounding.

Illustration 13A.6 shows the entries to record the gain and loss on the debtor's and creditor's books at the date of restructure, December 31, 2024.

ILLUSTRATION 13A.6 Debtor and Creditor Entries to Record Gain and Loss on Note

December 31, 2024 (date of restructure)					
Resorts Development Co. (Debtor)			**Morgan National Bank (Creditor)**		
Notes Payable	1,260,000		Bad Debt Expense	4,350,444	
Gain on Restructuring of Debt		1,260,000	Allowance for Doubtful Accounts		4,350,444

For Resorts Development (debtor), because the new carrying value of the note ($10,500,000 − $1,260,000 = $9,240,000) equals the sum of the undiscounted cash flows ($9,240,000), the imputed interest rate is 0%. Consequently, all of the future cash flows reduce the principal balance, and the company recognizes no interest expense.

[13] Total interest payments are $7,000,000 × .08 × 4 = $2,240,000.

Morgan National reports the interest revenue in the same fashion as the previous example—that is, using the historical effective-interest rate applied toward the newly discounted value of the note. Illustration 13A.7 shows interest computations.

7	12/31/2028	560,000	809,981[e]	249,981[e]	7,000,000
8	Total	$2,240,000	$3,090,444	$850,444	
9	[a]$7,000,000 × .08; [b]$6,149,556 × .12; [c]$737,947 – $560,000; [d]$6,149,556 + $177,947; [e]$21 adjustment due to rounding				

The journal entries in Illustration 13A.8 demonstrate the accounting by debtor and creditor for periodic interest payments and final principal payment.

ILLUSTRATION 13A.8 Debtor and Creditor Entries to Record Periodic Interest and Final Principal Payments

Resorts Development Co. (Debtor)			Morgan National Bank (Creditor)		
December 31, 2025 (date of first interest payment following restructure)					
Notes Payable	560,000		Cash	560,000	
Cash		560,000	Allowance for Doubtful Accounts	177,947	
			Interest Revenue		737,947
December 31, 2026, 2027, and 2028 (dates of 2nd, 3rd, and last interest payments)					
(Debit and credit same accounts as 12/31/25 using applicable amounts from appropriate amortization schedules.)					
December 31, 2028 (date of principal payment)					
Notes Payable	7,000,000		Cash	7,000,000	
Cash		7,000,000	Allowance for Doubtful Accounts	3,500,000	
			Notes Receivable		10,500,000

Concluding Remarks

The accounting for troubled debt is complex because the accounting standards allow for use of different measurement standards to determine the loss or gain reported. In addition, the assets and liabilities reported are sometimes not stated at historical cost or fair value, but at amounts adjusted for certain events but not others. This cumbersome accounting demonstrates the need for adoption of a comprehensive fair-value model for financial instruments that is consistent with finance concepts for pricing these financial instruments.

Learning Objectives Review

1 Describe the nature of bonds and indicate the accounting for bond issuances.

Incurring long-term debt is often a formal procedure. The bylaws of corporations usually require approval by the board of directors and the stockholders before corporations can issue bonds or can make other long-term debt arrangements. Generally, long-term debt has various covenants or restrictions. The covenants and other terms of the agreement between the borrower and the lender are stated in the bond indenture or note agreement.

Various types of bond issues are (1) secured and unsecured bonds; (2) term, serial, and callable bonds; (3) convertible, commodity-backed, and deep-discount bonds; (4) registered and bearer (coupon) bonds; and (5) income and revenue bonds. The variety in the types of bonds results from attempts to attract capital from different investors and risk-takers and to satisfy the cash flow needs of the issuers.

The market values a bond at the present value of its future cash flows, which consist of interest and principal. The rate used to compute the present value of these cash flows is the interest rate that provides an acceptable return on an investment commensurate with the issuer's risk characteristics. The interest rate written in the terms of the bond indenture and ordinarily appearing on the bond certificate is the stated, coupon, or nominal rate. The issuer of the bonds sets the rate and expresses it as a percentage of the face value (also called the par value, principal amount, or maturity value) of the bonds. If the rate employed by the buyers differs from the stated rate, the present value of the bonds computed by the buyers will differ from the face value of the bonds. The difference between the face value and the present value of the bonds is either a discount or premium.

The discount (premium) is amortized and charged (credited) to interest expense over the life of the bonds. Amortization of a discount increases bond interest expense, and amortization of a premium decreases bond interest expense. The profession's preferred procedure for amortization of a discount or premium is the effective-interest method. **Under the effective-interest method,** (1) bond interest expense is computed by multiplying the carrying value of the bonds at the beginning of the period by the effective-interest rate; then, (2) the bond discount or premium amortization is determined by comparing the bond interest expense with the interest to be paid.

2 Describe the accounting for the extinguishment of debt.

At the time of **extinguishment (reacquisition, redemption, or refunding)** of long-term debt, the unamortized premium or discount must be amortized up to the reacquisition date. The reacquisition price is the amount paid on extinguishment or redemption before maturity, including any call premium and expense of reacquisition. On any specified date, the net carrying amount of the debt is the amount payable at maturity, adjusted for unamortized premium or discount. Any excess of the net carrying amount over the reacquisition price is a gain from extinguishment. The excess of the reacquisition price over the net carrying amount is a loss from extinguishment. Gains and losses on extinguishments are recognized currently in income.

3 Explain the accounting for long-term notes payable.

Accounting procedures for notes payable and bonds are similar. Like a bond, a note is valued at the present value of its expected future interest and principal cash flows, with any discount or premium being similarly amortized over the life of the note. Whenever the face amount of the note does not reasonably represent the present value of the consideration in the exchange, a company must evaluate the entire arrangement in order to properly record the exchange and the subsequent interest.

4 Indicate how to present and analyze long-term debt.

Companies have the **option to record fair value** in their accounts for most financial assets and liabilities, including noncurrent liabilities. Fair value measurement for financial instruments, including financial liabilities, provides more relevant and understandable information than amortized cost. If companies choose the fair value option, noncurrent liabilities, such as bonds and notes payable, are recorded at fair value, with unrealized holding gains or losses reported as part of net income. An unrealized holding gain or loss is the net change in the fair value of the liability from one period to another, exclusive of interest expense recognized. Fair value gains due to credit deterioration are recorded in other comprehensive income.

Off-balance-sheet financing is an attempt to borrow funds in such a way to prevent recording obligations. Examples of off-balance-sheet arrangements are (1) non-consolidated subsidiaries and (2) special-purpose entities.

Companies that have large amounts and numerous issues of long-term debt frequently report only one amount in the balance sheet and support this with comments and schedules in the accompanying notes. Any assets pledged as security for the debt should be shown in the assets section of the balance sheet. Long-term debt that matures within one year should be reported as a current liability, unless redemption is to be accomplished with other than current assets. If a company plans to refinance the debt, convert it into stock, or retire it from a bond retirement fund, it should continue to report it as noncurrent, accompanied with a note explaining the method it will use in the debt's liquidation. Disclosure is required of future payments for sinking fund requirements and maturity amounts of long-term debt during each of the next five years. Debt to assets and times interest earned are two ratios that provide information about debt-paying ability and long-run solvency.

*5 Describe the accounting for a debt restructuring.

There are two types of debt settlements: (1) transfer of noncash assets, and (2) granting of equity interest. Creditors and debtors record losses and gains on settlements based on fair values. For accounting purposes, there are also two types of restructurings with continuation of debt with modified terms: (1) the carrying amount of debt is less than the future cash flows, and (2) the carrying amount of debt exceeds the total future cash flows. Creditors record losses on these restructurings based on the expected future cash flows discounted at the historical effective-interest rate. The debtor determines its gain based on undiscounted cash flows.

Enhanced Review and Practice

Go to Wiley Course Resources for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Exercises, Problems, Problem Solution Walkthrough Videos, Data Analytics Activities, and many more assessment tools and resources are available for practice in Wiley Course Resources.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

(*Unless instructed otherwise, round all answers to the nearest dollar.*)

Questions

1. (a) From what sources might a corporation obtain funds through long-term debt? (b) What is a bond indenture? What does it contain? (c) What is a mortgage?

2. **Potlatch Corporation** has issued various types of bonds such as term bonds, income bonds, and debentures. Differentiate between term bonds, mortgage bonds, debenture bonds, income bonds, callable bonds, registered bonds, bearer or coupon bonds, convertible bonds, commodity-backed bonds, and deep discount bonds.

3. Distinguish between the following interest rates for bonds payable:
   - **a.** Yield rate.
   - **b.** Nominal rate.
   - **c.** Stated rate.
   - **e.** Effective rate.
   - **d.** Market rate.

4. Distinguish between the following values relative to bonds payable:
   - **a.** Maturity value.
   - **b.** Face value.
   - **c.** Market (fair) value.
   - **d.** Par value.

5. Under what conditions of bond issuance does a discount on bonds payable arise? Under what conditions of bond issuance does a premium on bonds payable arise?

6. How should Discount on Bonds Payable be reported on the financial statements? Premium on Bonds Payable?

7. What are the two methods of amortizing discount and premium on bonds payable? Explain each.

8. Zopf Company sells its bonds at a premium and applies the effective-interest method in amortizing the premium. Will the annual interest expense increase or decrease over the life of the bonds? Explain.

9. **Briggs and Stratton** recently issued debt with issue costs of $5.1 million. How should the costs of issuing these bonds be accounted for and classified in the financial statements?

10. Will the amortization of Discount on Bonds Payable increase or decrease Bond Interest Expense? Explain.

11. What is the "call" feature of a bond issue? How does the call feature affect the amortization of bond premium or discount?

12. Why would a company wish to reduce its bond indebtedness before its bonds reach maturity? Indicate how this can be done and the correct accounting treatment for such a transaction.

13. How are gains and losses from extinguishment of a debt classified in the income statement? What disclosures are required of such transactions?

14. What is done to properly record a transaction involving the issuance of a non-interest-bearing long-term note in exchange for property?

15. How is the present value of a non-interest-bearing note computed?

16. When is the stated interest rate of a debt instrument presumed to be fair?

17. What are the considerations in imputing an appropriate interest rate?

18. Differentiate between a fixed-rate mortgage and a variable-rate mortgage.

19. What is the fair value option? Briefly describe the controversy of applying the fair value option to financial liabilities.

20. Pierre Company has a 12% note payable with a carrying value of $20,000. Pierre applies the fair value option to this note. Given an increase in market interest rates, the fair value of the note is $22,600. Prepare the entry to record the fair value option for this note, assuming (a) no change in credit risk, and (b) the change is due to a change in credit risk.

21. What disclosures are required relative to long-term debt and sinking fund requirements?

22. What is off-balance-sheet financing? Why might a company be interested in using off-balance-sheet financing?

23. What are some forms of off-balance-sheet financing?

24. Explain how a non-consolidated subsidiary can be a form of off-balance-sheet financing.

*25. What are the types of situations that result in troubled debt?

*26. What are the general rules for measuring gain or loss by both creditor and debtor in a troubled-debt restructuring involving a settlement?

*27. **a.** In a troubled-debt situation, why might the creditor grant concessions to the debtor?

b. What type of concessions might a creditor grant the debtor in a troubled-debt situation?

*28. What are the general rules for measuring and recognizing gain or loss by both the debtor and the creditor in a troubled-debt restructuring involving a modification of terms?

*29. What is meant by "accounting symmetry" between the entries recorded by the debtor and creditor in a troubled-debt restructuring involving a modification of terms? In what ways is the accounting for troubled-debt restructurings non-symmetrical?

*30. Under what circumstances would a transaction be recorded as a troubled-debt restructuring by only one of the two parties to the transaction?

Brief Exercises

BE13.1 (LO 1) Whiteside Corporation issues $500,000 of 9% bonds, due in 10 years, with interest payable semiannually. At the time of issue, the market rate for such bonds is 10%. Compute the issue price of the bonds.

BE13.2 (LO 1) The Colson Company issued $300,000 of 10% bonds on January 1, 2025. The bonds are due January 1, 2030, with interest payable each July 1 and January 1. The bonds are issued at face value. Prepare Colson's journal entries for (a) the January issuance, (b) the July 1 interest payment, and (c) the December 31 adjusting entry.

BE13.3 (LO 1) Assume the bonds in BE13.2 were issued at 98. Prepare the journal entries for (a) January 1, (b) July 1, and (c) December 31. Assume The Colson Company records straight-line amortization semiannually.

BE13.4 (LO 1) Assume the bonds in BE13.2 were issued at 103. Prepare the journal entries for (a) January 1, (b) July 1, and (c) December 31. Assume The Colson Company records straight-line amortization semiannually.

BE13.5 (LO 1) Devers Corporation issued $400,000 of 6% bonds on May 1, 2025. The bonds were dated January 1, 2025, and mature January 1, 2028, with interest payable July 1 and January 1. The bonds were issued at face value plus accrued interest. Prepare Devers's journal entries for (a) the May 1 issuance, (b) the July 1 interest payment, and (c) the December 31 adjusting entry.

BE13.6 (LO 1) On January 1, 2025, JWS Corporation issued $600,000 of 7% bonds, due in 10 years. The bonds were issued for $559,224, and pay interest each July 1 and January 1. JWS uses the effective-interest method. Prepare the company's journal entries for (a) the January 1 issuance, (b) the July 1 interest payment, and (c) the December 31 adjusting entry. Assume an effective-interest rate of 8%.

BE13.7 (LO 1) Assume the bonds in BE13.6 were issued for $644,636 and the effective-interest rate is 6%. Prepare the company's journal entries for (a) the January 1 issuance, (b) the July 1 interest payment, and (c) the December 31 adjusting entry.

BE13.8 (LO 1) Teton Corporation issued $600,000 of 7% bonds on November 1, 2025, for $644,636. The bonds were dated November 1, 2025, and mature in 10 years, with interest payable each May 1 and November 1. Teton uses the effective-interest method with an effective rate of 6%. Prepare Teton's December 31, 2025, adjusting entry.

BE13.9 (LO 2) On January 1, 2025, Henderson Corporation redeemed $500,000 of bonds at 99. At the time of redemption, the unamortized premium was $15,000. Prepare the corporation's journal entry to record the reacquisition of the bonds.

BE13.10 (LO 3) Coldwell, Inc. issued a $100,000, 4-year, 10% note at face value to Flint Hills Bank on January 1, 2025, and received $100,000 cash. The note requires annual interest payments each December 31. Prepare Coldwell's journal entries to record (a) the issuance of the note and (b) the December 31 interest payment.

BE13.11 (LO 3) Samson Corporation issued a 4-year, $75,000, zero-interest-bearing note to Brown Company on January 1, 2025, and received cash of $47,664. The implicit interest rate is 12%. Prepare Samson's journal entries for (a) the January 1 issuance and (b) the December 31 recognition of interest.

BE13.12 (LO 3) McCormick Corporation issued a 4-year, $40,000, 5% note to Greenbush Company on January 1, 2025, and received a computer that normally sells for $31,495. The note requires annual interest payments each December 31. The market rate of interest for a note of similar risk is 12%. Prepare McCormick's journal entries for (a) the January 1 issuance and (b) the December 31 interest.

BE13.13 (LO 3) Shlee Corporation issued a 4-year, $60,000, zero-interest-bearing note to Garcia Company on January 1, 2025, and received cash of $60,000. In addition, Shlee agreed to sell merchandise to Garcia at an amount less than regular selling price over the 4-year period. The market rate of interest for similar notes is 12%. Prepare Shlee Corporation's January 1 journal entry.

BE13.14 (LO 4) Shonen Knife Corporation has elected to use the fair value option for one of its notes payable. The note was issued at an effective rate of 11% and has a carrying value of $16,000. At year-end, Shonen Knife's borrowing rate (credit risk) has declined; the fair value of the note payable is now $17,500. (a) Determine the unrealized holding gain or loss on the note. (b) Prepare the entry to record any unrealized holding gain or loss.

BE13.15 (LO 4) At December 31, 2025, Hyasaki Corporation has the following account balances:

Bonds payable, due January 1, 2034	$2,000,000
Discount on bonds payable	88,000
Interest payable	80,000

Show how the above accounts should be presented on the December 31, 2025, balance sheet, including the proper classifications.

Exercises

E13.1 (LO 1) (Classification of Liabilities) Presented below are various account balances of K.D. Lang Inc.

a. Unamortized premium on bonds payable, of which $3,000 will be amortized during the next year.

b. Bank loans payable of a winery, due March 10, 2029. (The product requires aging for 5 years before sale.)

c. Serial bonds payable, $1,000,000, of which $200,000 are due each July 31.

d. Amounts withheld from employees' wages for income taxes.

e. Notes payable due January 15, 2028.

f. Credit balances in customers' accounts arising from returns and allowances after collection in full of account.

g. Bonds payable of $2,000,000 maturing June 30, 2026.

h. Overdraft of $1,000 in a bank account. (No other balances are carried at this bank.)

i. Deposits made by customers who have ordered goods.

Instructions

Indicate whether each of the items above should be classified on December 31, 2025, as a current liability, a long-term liability, or under some other classification. Consider each one independently from all others;

that is, do not assume that all of them relate to one particular business. If the classification of some of the items is doubtful, explain why in each case.

E13.2 (LO 1) (Classification) The following items are found in the financial statements.

a. Discount on bonds payable.
b. Interest expense (credit balance).
c. Unamortized bond issue costs.
d. Gain on repurchase of debt.
e. Mortgage payable (payable in equal amounts over next 3 years).
f. Debenture bonds payable (maturing in 5 years).
g. Notes payable (due in 4 years).
h. Premium on bonds payable.
i. Bonds payable (due in 3 years).

Instructions

Indicate how each of these items should be classified in the financial statements.

E13.3 (LO 1) (Entries for Bond Transactions) Presented below are two independent situations.

1. On January 1, 2025, Simon Company issued $200,000 of 9%, 10-year bonds at par. Interest is payable quarterly on April 1, July 1, October 1, and January 1.
2. On June 1, 2025, Garfunkel Company issued $100,000 of 12%, 10-year bonds dated January 1 at par plus accrued interest. Interest is payable semiannually on July 1 and January 1.

Instructions

For each of these two independent situations, prepare journal entries to record the following.

a. The issuance of the bonds.
b. The payment of interest on July 1.
c. The accrual of interest on December 31.

E13.4 (LO 1) Excel (Entries for Bond Transactions—Straight-Line) Celine Dion Company issued $600,000 of 10%, 20-year bonds on January 1, 2025, at 102. Interest is payable semiannually on July 1 and January 1. Dion Company uses the straight-line method of amortization for bond premium or discount.

Instructions

Prepare the journal entries to record the following.

a. The issuance of the bonds.
b. The payment of interest and the related amortization on July 1, 2025.
c. The accrual of interest and the related amortization on December 31, 2025.

E13.5 (LO 1) Excel (Entries for Bond Transactions—Effective-Interest) Assume the same information as in E13.4, except that Celine Dion Company uses the effective-interest method of amortization for bond premium or discount. Assume an effective yield of 9.7705%.

Instructions

Prepare the journal entries to record the following. (Round to the nearest dollar.)

a. The issuance of the bonds.
b. The payment of interest and related amortization on July 1, 2025.
c. The accrual of interest and the related amortization on December 31, 2025.

E13.6 (LO 1) (Amortization Schedule—Straight-Line) Devon Harris Company sells 10% bonds having a maturity value of $2,000,000 for $1,855,816. The bonds are dated January 1, 2025, and mature January 1, 2030. Interest is payable annually on January 1.

Instructions

Set up a schedule of interest expense and discount amortization under the straight-line method. (Round answers to the nearest cent.)

E13.7 (LO 1) (Amortization Schedule—Effective-Interest) Assume the same information as in E13.6.

Instructions

Set up a schedule of interest expense and discount amortization under the effective-interest method. (*Hint:* The effective-interest rate must be computed.)

E13.8 (LO 1) Groupwork (Determine Proper Amounts in Account Balances) Presented below are two independent situations.

a. George Gershwin Co. sold $2,000,000 of 10%, 10-year bonds at 104 on January 1, 2025. The bonds were dated January 1, 2025, and pay interest on July 1 and January 1. If Gershwin uses the straight-line method to amortize bond premium or discount, determine the amount of interest expense to be reported on July 1, 2025, and December 31, 2025.

b. Ron Kenoly Inc. issued $600,000 of 9%, 10-year bonds on June 30, 2025, for $562,500. This price provided a yield of 10% on the bonds. Interest is payable semiannually on December 31 and June 30. If Kenoly uses the effective-interest method, determine the amount of interest expense to record if financial statements are issued on October 31, 2025.

E13.9 (LO 1) Groupwork (Entries and Questions for Bond Transactions) On June 30, 2025, Mischa Auer Company issued $4,000,000 face value of 13%, 20-year bonds at $4,300,920, a yield of 12%. Auer uses the effective-interest method to amortize bond premium or discount. The bonds pay semiannual interest on June 30 and -December 31.

Instructions

(Round answers to the nearest cent.)

a. Prepare the journal entries to record the following transactions.

1. The issuance of the bonds on June 30, 2025.

2. The payment of interest and the amortization of the premium on December 31, 2025.

3. The payment of interest and the amortization of the premium on June 30, 2026.

4. The payment of interest and the amortization of the premium on December 31, 2026.

b. Show the proper balance sheet presentation for the liability for bonds payable on the December 31, 2026, balance sheet.

c. Provide the answers to the following questions.

1. What amount of interest expense is reported for 2026?

2. Will the bond interest expense reported in 2026 be the same as, greater than, or less than the amount that would be reported if the straight-line method of amortization were used?

3. Determine the total cost of borrowing over the life of the bond.

4. Will the total bond interest expense for the life of the bond be greater than, the same as, or less than the total interest expense if the straight-line method of amortization were used?

E13.10 (LO 1) (Entries for Bond Transactions) On January 1, 2025, Aumont Company sold 12% bonds having a maturity value of $500,000 for $537,907.37, which provides the bondholders with a 10% yield. The bonds are dated January 1, 2025, and mature January 1, 2030, with interest payable December 31 of each year. Aumont Company allocates interest and unamortized discount or premium on the effective-interest basis.

Instructions

(Round answers to the nearest cent.)

a. Prepare the journal entry at the date of the bond issuance.

b. Prepare a schedule of interest expense and bond amortization for 2025–2027.

c. Prepare the journal entry to record the interest payment and the amortization for 2025.

d. Prepare the journal entry to record the interest payment and the amortization for 2027.

E13.11 (LO 1) (Information Related to Various Bond Issues) Karen Austin Inc. has issued three types of debt on January 1, 2025, the start of the company's fiscal year.

a. $10 million, 10-year, 15% unsecured bonds, interest payable quarterly. Bonds were priced to yield 12%.

b. $25 million par of 10-year, zero-coupon bonds at a price to yield 12% per year.

c. $20 million, 10-year, 10% mortgage bonds, interest payable annually to yield 12%.

Instructions

Prepare a schedule that identifies the following items for each bond: (1) maturity value, (2) number of interest periods over life of bond, (3) stated rate per each interest period, (4) effective-interest rate per each interest period, (5) payment amount per period, and (6) present value of bonds at date of issue.

E13.12 (LO 1, 2) (Entry for Redemption of Bond) On January 2, 2020, Banno Corporation issued $1,500,000 of 10% bonds at 97 due December 31, 2029. Interest on the bonds is payable annually each December 31. The discount on the bonds is also being amortized on a straight-line basis over the 10 years. (Straight-line is not materially different in effect from the preferable "interest method.")

The bonds are callable at 101 (i.e., at 101% of face value), and on January 2, 2025, Banno called $900,000 face value of the bonds and redeemed them.

Instructions

Ignoring income taxes, compute the amount of loss, if any, to be recognized by Banno as a result of retiring the $900,000 of bonds in 2025 and prepare the journal entry to record the redemption.

(AICPA adapted)

E13.13 (LO 1, 2) (Entries for Redemption and Issuance of Bonds) Matt Perry, Inc. had outstanding $6,000,000 of 11% bonds (interest payable July 31 and January 31) due in 10 years. On July 1, it issued $9,000,000 of 10%, 15-year bonds (interest payable July 1 and January 1) at 98. A portion of the proceeds was used to call the 11% bonds (with unamortized discount of $120,000) at 102 on August 1.

Instructions

Prepare the journal entries necessary to record issue of the new bonds and the refunding of the bonds.

E13.14 (LO 1, 2) (Entries for Redemption and Issuance of Bonds) On June 30, 2017, County Company issued 12% bonds with a par value of $800,000 due in 20 years. They were issued at 98 and were callable at 104 at any date after June 30, 2025. Because of lower interest rates and a significant change in the company's credit rating, it was decided to call the entire issue on June 30, 2026, and to issue new bonds. New 10% bonds were sold in the amount of $1,000,000 at 102; they mature in 20 years. County Company uses straight-line amortization. Interest payment dates are December 31 and June 30.

Instructions

a. Prepare journal entries to record the redemption of the old issue and the sale of the new issue on June 30, 2026.

b. Prepare the entry required on December 31, 2026, to record the payment of the first 6 months' interest and the amortization of premium on the bonds.

E13.15 (LO 1, 2) (Entries for Redemption and Issuance of Bonds) Day Company had bonds outstanding with a maturity value of $300,000. On April 30, 2025, when these bonds had an unamortized discount of $10,000, they were called in at 104. To pay for these bonds, Day had issued other bonds a month earlier bearing a lower interest rate. The newly issued bonds had a life of 10 years. The new bonds were issued at 103 (face value $300,000).

Instructions

Ignoring interest, compute the gain or loss and prepare the two entries record this refunding transaction.

(AICPA adapted)

E13.16 (LO 3) (Entries for Zero-Interest-Bearing Notes) On January 1, 2025, Carter Company makes the two following acquisitions.

1. Purchases land having a fair value of $200,000 by issuing a 5-year, zero-interest-bearing promissory note in the face amount of $337,012.
2. Purchases equipment by issuing a 6%, 8-year promissory note having a maturity value of $250,000 (interest payable annually).

The company has to pay 11% interest for funds from its bank.

Instructions

(Round answers to the nearest cent.)

a. Record the two journal entries that should be recorded by Carter Company for the two purchases on January 1, 2025.

b. Record the interest at the end of the first year on both notes using the effective-interest method.

E13.17 (LO 3) (Imputation of Interest) Presented below are two independent situations.

a. On January 1, 2025, Wright Inc. purchased land that had an assessed value of $350,000 at the time of purchase. A $550,000, zero-interest-bearing note due January 1, 2028, was given in exchange. There was no established exchange price for the land, nor a ready fair value for the note. The interest rate charged on a note of this type is 12%. Determine at what amount the land should be recorded at January 1, 2025, and the interest expense to be reported in 2025 related to this transaction.

b. On January 1, 2025, Field Furniture borrowed $5,000,000 (face value) from Sinise Co., a major customer, through a zero-interest-bearing note due in 4 years. Because the note was zero-interest-bearing, Field Furniture agreed to sell furniture to this customer at lower than market price. A 10% rate of interest is normally charged on this type of loan. Prepare the journal entry to record this transaction and determine the amount of interest expense to report for 2025.

E13.18 (LO 3) (Imputation of Interest with Right) On January 1, 2025, Avery Co. borrowed and received $400,000 from a major customer evidenced by a zero-interest-bearing note due in 3 years. As consideration for the zero-interest-bearing feature, Avery agrees to supply the customer's inventory needs for the loan period at lower than the market price. The appropriate rate at which to impute interest is 8%.

Instructions

a. Prepare the journal entry to record the initial transaction on January 1, 2025. (Round all computations to the nearest dollar.)

b. Prepare the journal entry to record any adjusting entries needed at December 31, 2025. Assume that the sales of Avery's product to this customer occur evenly over the 3-year period.

E13.19 (LO 4) (Fair Value Option) Fallen Company commonly issues long-term notes payable to its various lenders. Fallen has had a pretty good credit rating such that its effective borrowing rate is quite low (less than 8% on an annual basis). Fallen has elected to use the fair value option for the long-term notes issued to Barclay's Bank and has the following data related to the carrying and fair value for these notes. Any changes in fair value are due to changes in market rates, not credit risk.

	Carrying Value	Fair Value
December 31, 2025	$54,000	$54,000
December 31, 2026	44,000	42,500
December 31, 2027	36,000	38,000

Instructions

a. Prepare the journal entry at December 31 (Fallen's year-end) for 2025, 2026, and 2027, to record the fair value option for these notes.

b. At what amount will the note be reported on Fallen's 2026 balance sheet?

c. What is the effect of recording the fair value option on these notes on Fallen's 2027 net income?

d. Assuming that general market interest rates have been stable over the period, does the fair value data for the notes indicate that Fallen's creditworthiness has improved or declined in 2027? Explain.

E13.20 (LO 4) (Long-Term Debt Disclosure) At December 31, 2025, Redmond Company has outstanding three long-term debt issues. The first is a $2,000,000 note payable which matures June 30, 2028. The second is a $6,000,000 bond issue which matures September 30, 2029. The third is a $12,500,000 sinking fund debenture with annual sinking fund payments of $2,500,000 in each of the years 2027 through 2031.

Instructions

Prepare the required note disclosure for the long-term debt at December 31, 2025.

***E13.21 (LO 5) (Settlement of Debt)** Strickland Company owes $200,000 plus $18,000 of accrued interest to Moran State Bank. The debt is a 10-year, 10% note. During 2025, Strickland's business deteriorated due to a faltering regional economy. On December 31, 2025, Moran State Bank agrees to accept an old machine and cancel the entire debt. The machine has a cost of $390,000, accumulated depreciation of $221,000, and a fair value of $180,000.

Instructions

a. Prepare journal entries for Strickland Company and Moran State Bank to record this debt settlement.

b. How should Strickland report the gain or loss on the disposition of machine and on restructuring of debt in its 2025 income statement?

c. Assume that, instead of transferring the machine, Strickland decides to grant 15,000 shares of its common stock ($10 par) which has a fair value of $180,000 in full settlement of the loan obligation. If Moran State Bank treats Strickland's stock as a trading investment, prepare the entries to record the transaction for both parties.

***E13.22 (LO 5) (Term Modification without Gain—Debtor's Entries)** On December 31, 2025, American Bank enters into a debt restructuring agreement with Barkley Company, which is now

experiencing financial trouble. The bank agrees to restructure a 12%, issued at par, $3,000,000 note receivable by the following modifications:

1. Reducing the principal obligation from $3,000,000 to $2,400,000.
2. Extending the maturity date from December 31, 2025, to January 1, 2029.
3. Reducing the interest rate from 12% to 10%.

Barkley pays interest at the end of each year. On January 1, 2029, Barkley Company pays $2,400,000 in cash to American Bank.

Instructions

a. Will the gain recorded by Barkley be equal to the loss recorded by American Bank under the debt restructuring? Explain.

b. Can Barkley Company record a gain under the term modification mentioned above? Explain.

c. Assuming that the interest rate Barkley should use to compute interest expense in future periods is 1.4276%, prepare the interest payment schedule of the note for Barkley Company after the debt restructuring.

d. Prepare the interest payment entry for Barkley Company on December 31, 2027.

e. What entry should Barkley make on January 1, 2029?

***E13.23 (LO 5) (Term Modification without Gain—Creditor's Entries)** Using the same information as in E13.22, answer the following questions related to American Bank (creditor).

Instructions

a. What interest rate should American Bank use to calculate the loss on the debt restructuring?

b. Compute the loss that American Bank will suffer from the debt restructuring. Prepare the journal entry to record the loss.

c. Prepare the interest receipt schedule for American Bank after the debt restructuring.

d. Prepare the interest receipt entry for American Bank on December 31, 2027.

e. What entry should American Bank make on January 1, 2029?

***E13.24 (LO 5) (Term Modification with Gain—Debtor's Entries)** Use the same information as in E13.22 above except that American Bank reduced the principal to $1,900,000 rather than $2,400,000. On January 1, 2029, Barkley pays $1,900,000 in cash to American Bank for the principal.

Instructions

a. Can Barkley Company record a gain under this term modification? If yes, compute the gain for Barkley Company.

b. Prepare the journal entries to record the gain on Barkley's books.

c. What interest rate should Barkley use to compute its interest expense in future periods? Will your answer be the same as in E13.22 above? Why or why not?

d. Prepare the interest payment schedule of the note for Barkley Company after the debt restructuring.

e. Prepare the interest payment entries for Barkley Company on December 31, of 2026, 2027, and 2028.

f. What entry should Barkley make on January 1, 2029?

***E13.25 (LO 5) (Term Modification with Gain—Creditor's Entries)** Using the same information as in E13.22 and E13.24, answer the following questions related to American Bank (creditor).

Instructions

a. Compute the loss American Bank will suffer under this new term modification. Prepare the journal entry to record the loss on American's books.

b. Prepare the interest receipt schedule for American Bank after the debt restructuring.

c. Prepare the interest receipt entry for American Bank on December 31, 2026, 2027, and 2028.

d. What entry should American Bank make on January 1, 2029?

***E13.26 (LO 5) (Debtor/Creditor Entries for Settlement of Troubled Debt)** Gottlieb Co. owes $199,800 to Ceballos Inc. The debt is a 10-year, 11% note. Because Gottlieb Co. is in financial trouble, Ceballos Inc. agrees to accept some land and cancel the entire debt. The property has a book value of $90,000 and a fair value of $140,000.

Instructions

a. Prepare the journal entry on Gottlieb's books for debt restructure.

b. Prepare the journal entry on Ceballos's books for debt restructure.

*E13.27 (LO 5) **(Debtor/Creditor Entries for Modification of Troubled Debt)** Vargo Corp. owes $270,000 to First Trust. The debt is a 10-year, 12% note due December 31, 2025. Because Vargo Corp. is in financial trouble, First Trust agrees to extend the maturity date to December 31, 2027, reduce the principal to $220,000, and reduce the interest rate to 5%, payable annually on December 31.

Instructions

a. Prepare the journal entries on Vargo's books on December 31, 2025, 2026, 2027.

b. Prepare the journal entries on First Trust's books on December 31, 2025, 2026, 2027.

Problems

P13.1 (LO 1) Groupwork **(Analysis of Amortization Schedule and Interest Entries)** The following amortization and interest schedule reflects the issuance of 10-year bonds by Capulet Corporation on January 1, 2019, and the subsequent interest payments and charges. The company's year-end is December 31, and financial statements are prepared once yearly.

Amortization Schedule

Year	Cash	Interest	Amount Unamortized	Carrying Value
1/1/2019			$5,651	$94,349
2019	$11,000	$11,322	5,329	94,671
2020	11,000	11,361	4,968	95,032
2021	11,000	11,404	4,564	95,436
2022	11,000	11,452	4,112	95,888
2023	11,000	11,507	3,605	96,395
2024	11,000	11,567	3,038	96,962
2025	11,000	11,635	2,403	97,597
2026	11,000	11,712	1,691	98,309
2027	11,000	11,797	894	99,106
2028	11,000	11,894		100,000

Instructions

a. Indicate whether the bonds were issued at a premium or a discount and how you can determine this fact from the schedule.

b. Indicate whether the amortization schedule is based on the straight-line method or the effective-interest method, and how you can determine which method is used.

c. Determine the stated interest rate and the effective-interest rate.

d. On the basis of the schedule above, prepare the journal entry to record the issuance of the bonds on January 1, 2019.

e. On the basis of the schedule above, prepare the journal entry or entries to record the bond transactions and accruals for 2019. (Interest is paid January 1.)

f. On the basis of the schedule above, prepare the journal entry or entries to record the bond transactions and accruals for 2026. Capulet Corporation does not use reversing entries.

P13.2 (LO 1, 2) Excel **(Issuance and Redemption of Bonds)** Venezuela Co. is building a new hockey arena at a cost of $2,500,000. It received a downpayment of $500,000 from local businesses to support the project, and now needs to borrow $2,000,000 to complete the project. It therefore decides to issue $2,000,000 of 10.5%, 10-year bonds. These bonds were issued on January 1, 2024, and pay interest annually on each January 1. The bonds yield 10%.

Instructions

a. Prepare the journal entry to record the issuance of the bonds on January 1, 2024.

b. Prepare a bond amortization schedule up to and including January 1, 2028, using the effective-interest method.

c. Assume that on July 1, 2027, Venezuela Co. redeems half of the bonds at a cost of $1,065,000 plus accrued interest. Prepare the journal entry to record this redemption.

P13.3 (LO 1, 3) (Negative Amortization) Good-Deal Inc. developed a new sales gimmick to help sell its inventory of new automobiles. Because many new car buyers need financing, Good-Deal offered a low downpayment and low car payments for the first year after purchase. It believes that this promotion will bring in some new buyers.

On January 1, 2025, a customer purchased a new $33,000 automobile, making a downpayment of $1,000. The customer signed a note indicating that the annual rate of interest would be 8% and that quarterly payments would be made over 3 years. For the first year, Good-Deal required a $400 quarterly payment to be made on April 1, July 1, October 1, and January 1, 2026. After this one-year period, the customer was required to make regular quarterly payments that would pay off the loan as of January 1, 2028.

Instructions

a. Prepare a note amortization schedule for the first year.

b. Indicate the amount the customer owes on the contract at the end of the first year.

c. Compute the amount of the new quarterly payments.

d. Prepare a note amortization schedule for these new payments for the next 2 years.

e. What do you think of the new sales promotion used by Good-Deal?

P13.4 (LO 1, 2, 4) (Issuance and Redemption of Bonds; Income Statement Presentation) Holiday Company issued its 9%, 25-year mortgage bonds in the principal amount of $3,000,000 on January 2, 2011, at a discount of $150,000, which it proceeded to amortize by charges to expense over the life of the issue on a straight-line basis. The indenture securing the issue provided that the bonds could be called for redemption in total but not in part at any time before maturity at 104% of the principal amount, but it did not provide for any sinking fund.

On December 18, 2025, the company issued its 11%, 20-year debenture bonds in the principal amount of $4,000,000 at 102, and the proceeds were used to redeem the 9%, 25-year mortgage bonds on January 2, 2026. The indenture securing the new issue did not provide for any sinking fund or for redemption before maturity.

Instructions

a. Prepare journal entries to record the issuance of the 11% bonds and the redemption of the 9% bonds.

b. Indicate the income statement treatment of the gain or loss from redemption and the note disclosure required.

P13.5 (LO 1, 2) Excel (Comprehensive Bond Problem) In each of the following independent cases, the company closes its books on December 31.

1. Sanford Co. sells $500,000 of 10% bonds on March 1, 2025. The bonds pay interest on September 1 and March 1. The due date of the bonds is September 1, 2028. The bonds yield 12%. Give entries through December 31, 2026.
2. Titania Co. sells $400,000 of 12% bonds on June 1, 2025. The bonds pay interest on December 1 and June 1. The due date of the bonds is June 1, 2029. The bonds yield 10%. On October 1, 2026, Titania buys back $120,000 worth of bonds for $126,000 (includes accrued interest). Give entries through December 1, 2027.

Instructions

For the two cases prepare all of the relevant journal entries from the time of sale until the date indicated. Use the effective-interest method for discount and premium amortization (construct amortization tables where applicable). Amortize premium or discount on interest dates and at year-end. (Assume that no reversing entries were made.)

P13.6 (LO 1, 2) Groupwork (Issuance of Bonds between Interest Dates, Straight-Line, Redemption) Presented below are selected transactions on the books of Simonson Corporation.

May 1, 2025	Bonds payable with a par value of $900,000, which are dated January 1, 2025, are sold at 106 plus accrued interest. They are coupon bonds, bear interest at 12% (payable annually at January 1), and mature January 1, 2035. (Use the Interest Expense account for accrued interest.)
Dec. 31, 2025	Adjusting entries are made to record the accrued interest on the bonds, and the amortization of the proper amount of premium. (Use straight-line amortization.)
Jan. 1, 2026	Interest on the bonds is paid.

April 1, 2026	Bonds with par value of $360,000 are called at 102 plus accrued interest, and redeemed. (Bond premium is to be amortized only at the end of each year.)
Dec. 31, 2026	Adjusting entries are made to record the accrued interest on the bonds, and the proper amount of premium amortized.

Instructions

(Round to two decimal places.)
Prepare journal entries for the transactions above.

P13.7 (LO 1, 2) (Entries for Life Cycle of Bonds) On April 1, 2025, Seminole Company sold 15,000 of its 11%, 15-year, $1,000 face value bonds at 97. Interest payment dates are April 1 and October 1, and the company uses the straight-line method of bond discount amortization. On March 1, 2026, Seminole took advantage of favorable prices of its stock to extinguish 6,000 of the bonds by issuing 200,000 shares of its $10 par value common stock. At this time, the accrued interest was paid in cash. The company's stock was selling for $31 per share on March 1, 2026.

Instructions

Prepare the journal entries needed on the books of Seminole Company to record the following.

a. April 1, 2025: issuance of the bonds.

b. October 1, 2025: payment of semiannual interest.

c. December 31, 2025: accrual of interest expense.

d. March 1, 2026: extinguishment of 6,000 bonds. (No reversing entries made.)

P13.8 (LO 3) (Entries for Zero-Interest-Bearing Note) On December 31, 2025, Faital Company acquired a computer from Plato Corporation by issuing a $600,000 zero-interest-bearing note, payable in full on December 31, 2029. Faital Company's credit rating permits it to borrow funds from its several lines of credit at 10%. The computer is expected to have a 5-year life and a $70,000 salvage value.

Instructions

(Round answers to the nearest cent.)

a. Prepare the journal entry for the purchase on December 31, 2025.

b. Prepare any necessary adjusting entries relative to depreciation (use straight-line) and amortization (use effective-interest method) on December 31, 2026.

c. Prepare any necessary adjusting entries relative to depreciation and amortization on December 31, 2027.

P13.9 (LO 3) (Entries for Zero-Interest-Bearing Note; Payable in Installments) Sabonis Cosmetics Co. purchased machinery on December 31, 2024, paying $50,000 down and agreeing to pay the balance in four equal installments of $40,000 payable each December 31. An assumed interest of 8% is implicit in the purchase price.

Instructions

Prepare the journal entries that would be recorded for the purchase and for the payments and interest on the following dates. (Round answers to the nearest cent.)

a. December 31, 2024.

b. December 31, 2025.

c. December 31, 2026.

d. December 31, 2027.

e. December 31, 2028.

P13.10 (LO 1, 2, 4) Groupwork (Comprehensive Problem: Issuance, Classification, Reporting) The following are four independent situations.

a. On March 1, 2026, Wilke Co. issued at 103 plus accrued interest $4,000,000, 9% bonds. The bonds are dated January 1, 2026, and pay interest semiannually on July 1 and January 1. In addition, Wilke Co. incurred $27,000 of bond issuance costs. Compute the net amount of cash received by Wilke Co. as a result of the issuance of these bonds.

b. On January 1, 2025, Langley Co. issued 9% bonds with a face value of $700,000 for $656,992 to yield 10%. The bonds are dated January 1, 2025, and pay interest annually. What amount is reported for interest expense in 2025 related to these bonds, assuming that Langley used the effective-interest method for amortizing bond premium and discount?

c. Tweedie Building Co. has a number of long-term bonds outstanding at December 31, 2025. These long-term bonds have the following sinking fund requirements and maturities for the next 6 years.

	Sinking Fund	Maturities
2026	$300,000	$100,000
2027	100,000	250,000
2028	100,000	100,000
2029	200,000	—
2030	200,000	150,000
2031	200,000	100,000

Indicate how this information should be reported in the financial statements at December 31, 2025.

d. In the long-term debt structure of Beckford Inc., the following three bonds were reported: mortgage bonds payable $10,000,000; collateral trust bonds $5,000,000; bonds maturing in installments, secured by plant equipment $4,000,000. Determine the total amount, if any, of debenture bonds outstanding.

P13.11 (LO1) Writing (Effective-Interest Method) Samantha Cordelia, an intermediate accounting student, is having difficulty amortizing bond premiums and discounts using the effective-interest method. Furthermore, she cannot understand why GAAP requires that this method be used instead of the straight-line method. She has come to you with the following problem, looking for help.

On June 30, 2025, Hobart Company issued $2,000,000 face value of 11%, 20-year bonds at $2,171,600, a yield of 10%. Hobart Company uses the effective-interest method to amortize bond premiums or discounts. The bonds pay semiannual interest on June 30 and December 31. Prepare an amortization schedule for four periods.

Instructions

Using the data above for illustrative purposes, write a short memo (1–1.5 pages double-spaced) to Samantha, explaining what the effective-interest method is, why it is preferable, and how it is computed. (Do not forget to include an amortization schedule, referring to it whenever necessary.)

***P13.12 (LO 5) (Debtor/Creditor Entries for Continuation of Troubled Debt)** Daniel Perkins is the sole shareholder of Perkins Inc., which is currently under protection of the U.S. bankruptcy court. As a "debtor in possession," he has negotiated the following revised loan agreement with United Bank. Perkins Inc.'s $600,000, 12%, 10-year note was refinanced with a $600,000, 5%, 10-year note.

Instructions

a. What is the accounting nature of this transaction?

b. Prepare the journal entry to record this refinancing:

1. On the books of Perkins Inc.

2. On the books of United Bank.

c. Discuss whether generally accepted accounting principles provide the proper information useful to managers and investors in this situation.

***P13.13 (LO 5) (Restructure of Note Under Different Circumstances)** Halvor Corporation is having financial difficulty and therefore has asked Frontenac National Bank to restructure its $5 million note outstanding. The present note has 3 years remaining and pays a current rate of interest of 10%. The present market rate for a loan of this nature is 12%. The note was issued at its face value.

Instructions

The following are four independent situations. Prepare the journal entry that Halvor and Frontenac National Bank would make for each of these restructurings.

a. Frontenac National Bank agrees to take an equity interest in Halvor by accepting common stock valued at $3,700,000 in exchange for relinquishing its claim on this note. The common stock has a par value of $1,700,000.

b. Frontenac National Bank agrees to accept land in exchange for relinquishing its claim on this note. The land has a book value of $3,250,000 and a fair value of $4,000,000.

c. Frontenac National Bank agrees to modify the terms of the note, indicating that Halvor does not have to pay any interest on the note over the 3-year period.

d. Frontenac National Bank agrees to reduce the principal balance due to $4,166,667 and require interest only in the second and third year at a rate of 10%.

***P13.14 (LO 5) (Debtor/Creditor Entries for Continuation of Troubled Debt with New Effective Interest)** Crocker Corp. owes D. Yaeger Corp. a 10-year, 10% note in the amount of $330,000 plus $33,000 of accrued interest. The note is due today, December 31, 2025. Because Crocker Corp. is in

financial trouble, D. Yaeger Corp. agrees to forgive the accrued interest, $30,000 of the principal, and to extend the maturity date to December 31, 2028. Interest at 10% of revised principal will continue to be due on 12/31 each year.

Assume the following present value factors for 3 periods.

	2¼%	2⅜%	2½%	2⅝%	2¾%	3%
Single sum	.93543	.93201	.92859	.92521	.92184	.91514
Ordinary annuity of 1	2.86989	2.86295	2.85602	2.84913	2.84226	2.82861

Instructions

a. Compute the new effective-interest rate for Crocker Corp. following restructure. (*Hint:* Find the interest rate that establishes approximately $363,000 as the present value of the total future cash flows.)

b. Prepare a schedule of debt reduction and interest expense for the years 2025 through 2028.

c. Compute the gain or loss for D. Yaeger Corp. and prepare a schedule of receivable reduction and interest revenue for the years 2025 through 2028.

d. Prepare all the necessary journal entries on the books of Crocker Corp. for the years 2025, 2026, and 2027.

e. Prepare all the necessary journal entries on the books of D. Yaeger Corp. for the years 2025, 2026, and 2027.

Using Your Judgment

Financial Reporting Problem: The Procter & Gamble Company (P&G)

UYJ13.1 The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G's 2020 financial statements and the accompanying notes to answer the following questions.

a. What cash outflow obligations related to the repayment of long-term debt does P&G have over the next 5 years?

b. P&G indicates that it believes that it has the ability to meet business requirements in the foreseeable future. Prepare an assessment of its liquidity, solvency, and financial flexibility using ratio analysis.

Comparative Analysis Case: The Coca-Cola Company and PepsiCo Inc.

UYJ13.2 The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

a. Compute the debt to assets and the times interest earned ratios for these two companies. Comment on the quality of these two ratios for both Coca-Cola and PepsiCo.

b. What is the difference between the fair value and the historical cost (carrying amount) of each company's debt at year-end 2020? Why might a difference exist in these two amounts?

c. Both companies have debt issued in foreign countries. Speculate as to why these companies may use foreign debt to finance their operations. What risks are involved in this strategy, and how might they adjust for this risk?

Financial Statement Analysis Case: Commonwealth Edison Co.

UYJ13.3 The following article appeared in the *Wall Street Journal*.

Giant Commonwealth Edison Issue Hits Resale Market With $70 Million Left Over

NEW YORK—Commonwealth Edison Co.'s slow-selling new $9^{1/4}$% bonds were tossed onto the resale market at a reduced price with about $70 million still available from the $200 million offered Thursday, dealers said.

The Chicago utility's bonds, rated double-A by Moody's and double-A-minus by Standard & Poor's, originally had been priced at 99.803, to yield 9.3% in 5 years. They were marked down yesterday the equivalent of about $5.50 for each $1,000 face amount, to about 99.25, where their yield jumped to 9.45%.

Instructions

a. How will the development above affect the accounting for **Commonwealth Edison**'s bond issue?

b. Provide several possible explanations for the markdown and the slow sale of Commonwealth Edison's bonds.

Accounting, Analysis, and Principles

UYJ13.4 The following information is taken from the 2025 annual report of Bugant, Inc. Bugant's fiscal year ends December 31 of each year. Bugant's December 31, 2025, balance sheet is as follows.

Bugant, Inc. Balance Sheet December 31, 2025	
Assets	
Cash	$ 450
Inventory	1,800
Total current assets	2,250
Plant and equipment	2,000
Accumulated depreciation	(160)
Total assets	$4,090
Liabilities	
Bonds payable (net of discount)	$1,426
Stockholders' equity	
Common stock	1,500
Retained earnings	1,164
Total liabilities and stockholders' equity	$4,090

Note X: Long Term Debt:
On January 1, 2024, Bugant issued bonds with face value of $1,500 and a coupon rate equal to 10%. The bonds were issued to yield 12% and mature on January 1, 2029.

Additional information concerning 2026 is as follows.

1. Sales were $3,500, all for cash.
2. Purchases were $2,000, all paid in cash.
3. Salaries were $700, all paid in cash.
4. Property, plant, and equipment was originally purchased for $2,000 and is depreciated straight-line over a 25-year life with no salvage value.
5. Ending inventory was $1,900.
6. Cash dividends of $100 were declared and paid by Bugant.
7. Ignore taxes.
8. The market rate of interest on bonds of similar risk was 12% during all of 2026.
9. Interest on the bonds is paid semiannually each June 30 and December 31.

Accounting

Prepare a balance sheet for Bugant, Inc. at December 31, 2026, and an income statement for the year ending December 31, 2026. Assume semiannual compounding of the bond interest.

Analysis

Use common ratios for analysis of long-term debt to assess Bugant's long-run solvency. Has Bugant's solvency changed much from 2025 to 2026? Bugant's net income in 2025 was $550 and interest expense was $169.

Principles

The FASB and the IASB allow companies the option of recognizing in their financial statements the fair values of their long-term debt. That is, companies have the option to change the balance sheet value of their long-term debt to the debt's fair value and report the change in value as a gain or loss in income. In terms of the qualitative characteristics of accounting information (Chapter 1), briefly describe the potential trade-off(s) involved in reporting long-term debt at its fair value.

Developing Your Professional Skills

Critical-Thinking Cases

CT13.1 (LO 1, 4) (Bond Theory: Balance Sheet Presentations, Interest Rate, Premium) On January 1, 2025, Nichols Company issued for $1,085,800 its 20-year, 11% bonds that have a maturity value of $1,000,000 and pay interest semiannually on January 1 and July 1. The following are three presentations of the long-term liability section of the balance sheet that might be used for these bonds at the issue date.

1. Bonds payable (maturing January 1, 2045)	$1,000,000
Unamortized premium on bonds payable	85,800
Total bond liability	$1,085,800
2. Bonds payable—principal (face value $1,000,000 maturing January 1, 2045)	$ 142,050[a]
Bonds payable—interest (semiannual payment $55,000)	943,750[b]
Total bond liability	$1,085,800
3. Bonds payable—principal (maturing January 1, 2045)	$1,000,000
Bonds payable—interest ($55,000 per period for 40 periods)	2,200,000
Total bond liability	$3,200,000

[a]The present value of $1,000,000 due at the end of 40 (6-month) periods at the yield rate of 5% per period.
[b]The present value of $55,000 per period for 40 (6-month) periods at the yield rate of 5% per period.

Instructions

a. Discuss the conceptual merit(s) of each of the date-of-issue balance sheet presentations shown above for these bonds.

b. Explain why investors would pay $1,085,800 for bonds that have a maturity value of only $1,000,000.

c. Assuming that a discount rate is needed to compute the carrying value of the obligations arising from a bond issue at any date during the life of the bonds, discuss the conceptual merit(s) of using for this purpose:

1. The coupon or nominal rate.

2. The effective or yield rate at date of issue.

d. If the obligations arising from these bonds are to be carried at their present value computed by means of the current market rate of interest, how would the bond valuation at dates subsequent to the date of issue be affected by an increase or a decrease in the market rate of interest?

(AICPA adapted)

CT13.2 (LO 1, 2, 4) (Bond Theory: Price, Presentation, and Redemption) On March 1, 2025, Sealy Company sold its 5-year, $1,000 face value, 9% bonds dated March 1, 2025, at an effective annual interest rate (yield) of 11%. Interest is payable semiannually, and the first interest payment date is September 1, 2025. Sealy uses the effective-interest method of amortization. The bonds can be called by Sealy at 101 at any time on or after March 1, 2026.

Instructions

a. **1.** How would the selling price of the bond be determined?

2. Specify how all items related to the bonds would be presented in a balance sheet prepared immediately after the bond issue was sold.

b. What items related to the bond issue would be included in Sealy's 2025 income statement, and how would each be determined?

c. Would the amount of bond discount amortization using the effective-interest method of amortization be lower in the second or third year of the life of the bond issue? Why?

d. Assuming that the bonds were called in and redeemed on March 1, 2026, how should Sealy report the redemption of the bonds on the 2026 income statement?

(AICPA adapted)

CT13.3 (LO 1, 2, 4) Writing (Bond Theory: Amortization and Gain or Loss Recognition)

Part I: The appropriate method of amortizing a premium or discount on issuance of bonds is the effective-interest method.

Instructions

a. What is the effective-interest method of amortization and how is it different from and similar to the straight-line method of amortization?

b. How is amortization computed using the effective-interest method, and why and how do amounts obtained using the effective-interest method differ from amounts computed under the straight-line method?

Part II: Gains or losses from the early extinguishment of debt that is refunded can theoretically be accounted for in three ways:

1. Amortized over remaining life of old debt.

2. Amortized over the life of the new debt issue.

3. Recognized in the period of extinguishment.

Instructions

a. Develop supporting arguments for each of the three theoretical methods of accounting for gains and losses from the early extinguishment of debt.

b. Which of the methods above is generally accepted and how should the appropriate amount of gain or loss be shown in a company's financial statements?

(AICPA adapted)

CT13.4 (LO 4) Writing (Off-Balance-Sheet Financing) Matt Ryan Corporation is interested in building its own soda can manufacturing plant adjacent to its existing plant in Partyville, Kansas. The objective would be to ensure a steady supply of cans at a stable price and to minimize transportation costs. However, the company has been experiencing some financial problems and has been reluctant to borrow any additional cash to fund the project. The company is not concerned with the cash flow problems of making payments, but rather with the impact of adding additional long-term debt to its balance sheet.

The president of Ryan, Andy Newlin, approached the president of the Aluminum Can Company (ACC), its major supplier, to see if some agreement could be reached. ACC was anxious to work out an arrangement, since it seemed inevitable that Ryan would begin its own can production. The Aluminum Can Company could not afford to lose the account.

After some discussion, a two-part plan was worked out. First, ACC was to construct the plant on Ryan's land adjacent to the existing plant. Second, Ryan would sign a 20-year purchase agreement. Under the purchase agreement, Ryan would express its intention to buy all of its cans from ACC, paying a unit price which at normal capacity would cover labor and material, an operating management fee, and the debt service requirements on the plant. The expected unit price, if transportation costs are taken into consideration, is lower than current market. If Ryan did not take enough production in any one year and if the excess cans could not be sold at a high enough price on the open market, Ryan agrees to make up any cash shortfall so that ACC could make the payments on its debt. The bank will be willing to make a 20-year loan for the plant, taking the plant and the purchase agreement as collateral. At the end of 20 years, the plant is to become the property of Ryan.

Instructions

a. What are project financing arrangements using special-purpose entities?

b. What are take-or-pay contracts?

c. Should Ryan record the plant as an asset together with the related obligation?

d. If not, should Ryan record an asset relating to the future commitment?

e. What is meant by off-balance-sheet financing?

CT13.5 (LO 1, 4) Ethics (Bond Issue) Donald Lennon is the president, founder, and majority owner of Wichita Medical Corporation, an emerging medical technology products company. Wichita is in dire need of additional capital to keep operating and to bring several promising products to final development, testing, and production. Donald, as owner of 51% of the outstanding stock, manages the company's operations. He places heavy emphasis on research and development and long-term growth. The other principal stockholder is Nina Friendly who, as a nonemployee investor, owns 40% of the stock. Nina would like to deemphasize the R & D functions and emphasize the marketing function to maximize short-run sales and profits from existing products. She believes this strategy would raise the market price of Wichita's stock.

All of Donald's personal capital and borrowing power is tied up in his 51% stock ownership. He knows that any offering of additional shares of stock will dilute his controlling interest because he won't be able to participate in such an issuance. But, Nina has money and would likely buy enough shares to gain control of Wichita. She then would dictate the company's future direction, even if it meant replacing Donald as president and CEO.

The company already has considerable debt. Raising additional debt will be costly, will adversely affect Wichita's credit rating, and will increase the company's reported losses due to the growth in interest expense. Nina and the other minority stockholders express opposition to the assumption of additional debt, fearing the company will be pushed to the brink of bankruptcy. Wanting to maintain his control and to preserve the direction of "his" company, Donald is doing everything to avoid a stock issuance and is contemplating a large issuance of bonds, even if it means the bonds are issued with a high effective-interest rate.

Instructions

a. Who are the stakeholders in this situation?

b. What are the ethical issues in this case?

c. What would you do if you were Donald?

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE13.1 Access the glossary (Master Glossary) to answer the following.

a. What does the term "callable obligation" mean?

b. What is an imputed interest rate?

c. What is a long-term obligation?

d. What is the definition of "effective-interest rate"?

CE13.2 What guidance does the Codification provide on the disclosure of long-term obligations?

CE13.3 Describe how a company would classify debt that includes covenants. What conditions must exist in order to depart from the normal rule?

CE13.4 A company proposes to include in its SEC registration statement a balance sheet showing its subordinate debt as a portion of stockholders' equity. Will the SEC allow this? Why or why not?

Codification Research Case

Wie Company has been operating for just 2 years, producing specialty golf equipment for women golfers. To date, the company has been able to finance its successful operations with investments from its principal owner, Michelle Wie, and cash flows from operations. However, current expansion plans will require some borrowing to expand the company's production line.

As part of the expansion plan, Wie will acquire some used equipment by signing a zero-interest-bearing note. The note has a maturity value of $50,000 and matures in 5 years. A reliable fair value measure for the equipment is not available, given the age and specialty nature of the equipment. As a result, Wie's accounting staff is unable to determine an established exchange price for recording the equipment (nor

the interest rate to be used to record interest expense on the long-term note). They have asked you to conduct some accounting research on this topic.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

a. Identify the authoritative literature that provides guidance on the zero-interest-bearing note. Use some of the examples to explain how the standard applies in this setting.

b. How is present value determined when an established exchange price is not determinable and a note has no ready market? What is the resulting interest rate often called?

c. Where should a discount or premium appear in the financial statements?

Additional Professional Resources

Go to Wiley Course Resources for other career-readiness resources, such as career coaching, internship opportunities, and CPAexcel prep.

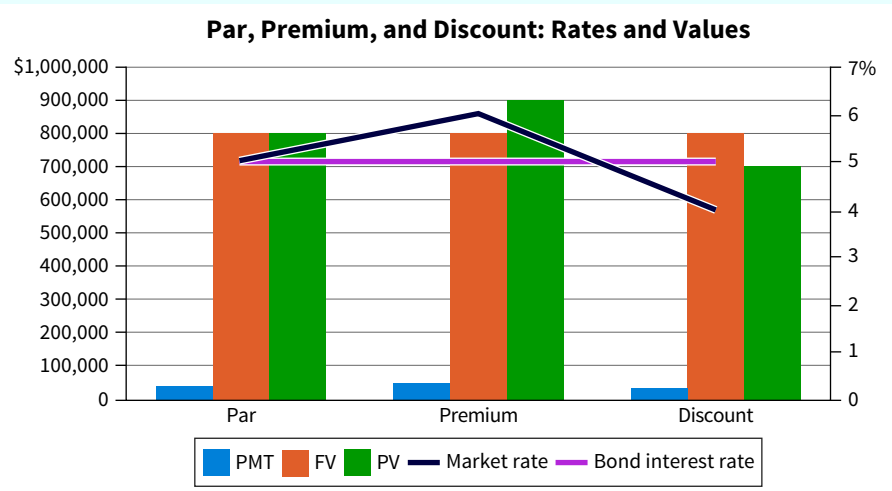
Analytics in Action Activities

Using Data Analytics to Understand the Financial Impact of Bonds over Time

DA13.1 When a company decides to issue bonds, it must consider a variety of factors, including the bond term, interest rate, and face value of the issuance. The value of the bonds will also be affected by the issuing company's credit rating and overall economic factors.

Excel

With so many factors to consider, it is helpful to use a tool like Excel to perform a what-if analysis to calculate the initial value of a bond under different scenarios. For example, the following graph offers an easy visual of the value of bonds issued at par or at a premium or discount.



Required

Using Excel formulas, you will calculate the proceeds of a bond issue under different scenarios, graph the results, and provide insights from your calculations.

Go to Wiley Course Resources for complete details and instructions.

DA13.2 Once a company issues a bond, it needs to understand the financial impact of the bond over time. Using Excel formulas allows us to very quickly create an amortization schedule and even graph the impact of a bond issue through its maturity.

Excel

Required

Provided with the details of a bond issue, you are asked to use Excel formulas to calculate the issue price of the bonds, prepare and graph the bond discount amortization schedule, and then discuss the financial impact of the bond over time.

Go to Wiley Course Resources for complete details and instructions.

IFRS Insights

LEARNING OBJECTIVE 6

Compare the accounting procedures for long-term liabilities under GAAP and IFRS.

As indicated in Chapter 12, IFRS and GAAP have similar definitions of liabilities. Following are the key similarities and differences between GAAP and IFRS related to long-term liabilities.

Similarities

- As indicated in our earlier discussions, GAAP and IFRS have similar liability definitions, and liabilities are classified as current and non-current.
- Much of the accounting for bonds and long-term notes is the same for GAAP and IFRS.
- Under GAAP and IFRS, bond issue costs are netted against the carrying amount of the bonds.

Differences

- Under GAAP, companies are permitted to use the straight-line method of amortization for bond discount or premium, provided that the amount recorded is not materially different than that resulting from effective-interest amortization. However, the effective-interest method is preferred and is generally used. Under IFRS, companies must use the effective-interest method.
- Under IFRS, companies do not use premium or discount accounts but instead show the bond at its net amount. For example, if a $100,000 bond was issued at 97, under IFRS a company would record:

Cash	97,000	
Bonds Payable		97,000

- GAAP uses the term *troubled-debt restructurings* and has developed specific guidelines related to that category of loans. IFRS generally assumes that all restructurings will be accounted for as extinguishments of debt.
- IFRS requires a liability and related expense or cost be recognized when a contract is onerous. Under GAAP, losses on onerous contracts are generally not recognized under GAAP unless addressed by industry or transaction-specific requirements.

Additional IFRS Resources

Additional IFRS Insights with assessment are available online at Wiley Course Resources. For those who want more IFRS coverage, *Intermediate Accounting*, *IFRS Fourth Edition* exists as another resource.

CHAPTER 14

© Sarath maroli / Shutterstock

Stockholders' Equity

WHAT is stockholders' equity?

Stockholders' equity is the difference between the assets of a company and its liabilities: **Assets − Liabilities = Stockholders' Equity.** Stockholders' equity is often referred to as shareholders' equity, owners' equity, corporate capital, net assets, or simply equity. The components of stockholders' equity are generally as follows.

Common Stock, Preferred Stock, and Additional Paid-in Capital	Retained Earnings	Treasury Stock	Accumulated Other Comprehensive Income
Amounts raised when an entity issues stock or other equity-classified instruments	Accumulated earnings of an entity in excess of its distribution to its shareholders	Common stock repurchased from an entity's shareholders	Certain transactions and events from nonowner sources

Source: Adapted from KPMG, *Debt and Equity Financing Handbook* (October 2020), p. 316.

WHY is information about stockholders' equity important?

Did you know that **Apple**, **Microsoft**, **Tesla**, and **Amazon** have stock valuations that are often greater than the gross domestic product (GDP) of many countries? With the financial importance of these corporations, investors, creditors, management, and regulators must understand the type of equity financing (common and preferred stock) used, the type of distributions (dividends and treasury stock) made, and the company's use of internal funding through reinvested earnings. Let's take a look at Amazon's recent stockholders' equity section.

Amazon.com, Inc.
Balance Sheet (partial)
For the Year Ended December 31, 2020
(in $ millions, except for per share data)

Stockholders' equity	
Preferred stock, $0.01 par value (authorized shares — 500, issued and outstanding 0)	$ 0
Common stock, $0.01 par value, authorized shares — 5,000 (issued shares 527, outstanding 503)	5
Treasury stock, at cost	(1,837)
Additional paid-in capital	42,865
Accumulated other comprehensive income (loss)	(180)
Retained earnings	52,551
Total stockholders' equity	$93,404

With this information, coupled with other related information in the financial statements, shareholders can determine Amazon's return on stockholders' equity (ROE), which measures profitability from the shareholders' viewpoint. As Amazon grows, its stockholders' equity should also grow, which generally is a good sign of the company's health. In Amazon's case, that is certainly true, even though it is reducing its equity by buying back treasury stock. On the other hand, there is a wide variance between Amazon's book value of stockholders' equity, $93,404 million, and the total fair value of its stock—Amazon's market value on December 31, 2020, was $1,599,153 million! This difference illustrates the value that investors place on nonfinancial measures such as customer satisfaction, innovation, or sustainability efforts.

HOW do we account for components of stockholders' equity?

The issuance of common stock and preferred stock provide the starting point for recording information in stockholders' equity. Stock issued in combination with other securities, stock issued to purchase property or services, and preferred stock that is redeemable or convertible are examples of situations that develop in reporting these transactions. Distributions related to cash dividends, stock dividends, and treasury stock must also be accounted for to ensure that the stockholders' equity section is reported correctly.

Chapter Roadmap

LEARNING OBJECTIVES	TOPICS	REVIEW AND PRACTICE
LO 14.1 Describe the corporate form and the issuance of shares of stock.	**14.1 Corporate Capital** • Characteristics of a corporation • Forming a corporation • Components of equity • Common stock • Preferred stock	Examples **14.1** Common Stock **14.2** No-Par Stock **14.3** No-Par Stock with Stated Value **14.4** Proportional Allocation of Proceeds **14.5** Incremental Allocation of Proceeds **14.6** Issuance Costs **14.7** Preferred Stock **14.8** Convertible Preferred Stock Put It into Practice LO 14.1 Record Stock Issuances
LO 14.2 Describe the accounting and reporting for reacquisition of shares.	**14.2 Reacquisition of Shares** • Treasury stock • Purchase • Sale • Retirement	Examples **14.9** Purchase Treasury Stock **14.10** Presentation of Treasury Stock **14.11** Sell Treasury Stock Above Cost **14.12** Sell Treasury Stock Below Cost **14.13** Sell Treasury Stock, Reduce Retained Earnings **14.14** Retire Treasury Stock Put It into Practice LO 14.2 Record Treasury Stock Transactions
LO 14.3 Explain the accounting and reporting issues related to dividends.	**14.3 Dividend Policy** • Financial condition and dividend distributions • Types of dividends • Stock dividends and stock splits	Examples **14.15** Economics of Dividends **14.16** Cash Dividend **14.17** Dividends in Arrears **14.18** Property Dividends **14.19** Liquidating Dividend **14.20** Small Stock Dividend **14.21** Large Stock Dividend Put It into Practice LO 14.3 Record Dividends
LO 14.4 Indicate how to present and analyze stockholders' equity.	**14.4 Presentation and Decision Analysis** • Presentation • Decision analysis	

Go to the **Review and Practice** section at the end of the chapter for a targeted summary review. Multiple-choice questions with annotated solutions, as well as additional exercises and practice problem with solutions, are also available in Wiley Course Resources.

14.1 Corporate Capital

LEARNING OBJECTIVE 1

Describe the corporate form and the issuance of shares of stock.

Of the three **primary forms of business organization**—the proprietorship, the partnership, and the corporation—the corporation is by far the leader in terms of the aggregate amount of resources controlled, goods and services produced, and people employed. All of the Fortune 500 largest industrial firms are corporations. Let's take a look at the corporate form and its advantages and disadvantages.

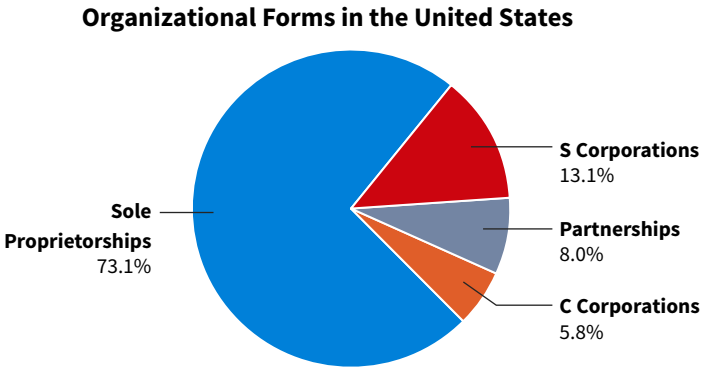
Characteristics of a Corporation

Corporations are either a C corporation or an S corporation. The **C** and **S** are subsections within the Internal Revenue Service (IRS) code used to differentiate these two corporate forms. Corporations like **Exxon**, **General Electric**, and **Home Depot** are C corporations. The main differences between these two forms of ownership are as follows.

- **Taxation**. Stockholders of a C corporation face a double tax. First, a C corporation must pay income tax on its earnings. Second, if the C corporation pays dividends to the stockholders, then the stockholders must pay income tax on the dividends. This results in earnings being taxed at the corporate level and again at the individual stockholder level, a double tax. In an S corporation, the corporation pays no income tax, but the taxable income from the corporation is taxed directly to the S corporation stockholders.
- **Number of stockholders**. A C corporation does not have any restrictions on the number of its stockholders. An S corporation is limited to 100 stockholders.

Illustration 14.1 shows the percentage of organization forms in the United States, including S corporations and C corporations. Note that the sole proprietorship is by far the most popular in the United States (and in the rest of the world). It is typically the first organizational form chosen because it is easy to form and allows the owner to completely control the business.

ILLUSTRATION 14.1
Organizational Forms of Business



Source: *taxfoundation.org* (Census Bureau).

Although Illustration 14.1 indicates that the number of C corporations is small, this form dominates in terms of other measurements. For example, C corporations are the largest in revenues, total assets, and market value. If you calculate the total market capitalization (stock price times number of shares outstanding) of the C corporations in the United States, you would find that it exceeds our GDP. Other statistics demonstrate the size of these corporations:

- **Apple**'s market capitalization of over $2.3 trillion is one-half of Russia's GDP.

- **Microsoft**'s market capitalization of $1.8 trillion is greater than the total GDP of eight Eastern European countries.
- **Amazon**'s market capitalization of $1.6 trillion is greater than the total GDP of nine South American countries.

Advantages of the Corporate Form

Why is the C corporation so popular for large corporations? The answer is that the corporate form has several advantages over other forms of ownership. You probably learned these advantages in your first course in accounting, but **Illustration 14.2** provides a quick summary in case you missed that chapter.

ILLUSTRATION 14.2 Advantages of Corporations

Feature	Explanation
Limited liability	If you invest in a corporation like **Johnson & Johnson**, the most you can generally lose is your investment—the value of your stock. Any losses, debt, negligence, or lawsuits that relate to the corporation are not your responsibility.
Separate legal entity	A corporation acts as a separate party in its own name rather than in the name of its stockholders, one of the main reasons why shareholders have limited liability. Corporations can enter contracts and guarantees, borrow money, and get into legal disputes as a separate entity.
Ease of capital formation	If a company needs to raise capital, it can issue shares of stock. Shareholders can then determine their ownership interest in the company. If a company has one class of shares divided into 1,000 shares and you own 500 shares, you own 50% of the company. If you hold 10 shares, you own 1% of the shares outstanding. Shares trade in marketplaces, and therefore the owner of the shares can determine the value of the shares when needed. A wealth of information is generally available to help investors make their financial decisions about buying or selling shares of stock.
Unlimited life	Because corporations generally have a perpetual life, companies like **Disney**, **Verizon**, or **PayPal** will not be affected by changes in ownership. As a stockholder, you do not need to worry that the corporation will end if the current management is replaced or if other stockholders sell their shares.
Transferability of ownership	Ownership in a corporation is typically easily transferable. If you have shares in **Google**, you may sell them to others without obtaining the consent of the company or other stockholders. Each share is your personal property that you may dispose of as you see fit.
Professional management	Although you may technically own a part of the corporation, it is unlikely that you will be involved in the day-to-day activities of the organization. Professional managers can be hired who have the skill and knowledge to run it. You may not be a microbiologist, but you are able to invest in biotech companies like **Moderna** or **Merck**.

Disadvantages of the Corporate Form

There are also disadvantages to the corporate form, as **Illustration 14.3** indicates.

ILLUSTRATION 14.3 Disadvantages of Corporations

Feature	Explanation
Taxation	As discussed earlier, stockholders are subject to double taxation.
Formation	Forming a corporation requires substantial documentation and is expensive and time-consuming. Also, corporation laws require more formalities in how a corporation is managed. For example, shareholder and director meetings are required in which proper notice must be given and minutes kept. Corporation laws also tend to have stricter recordkeeping requirements.
Regulation	Corporations are heavily regulated by the government. For example, they must report their activities to the state in which incorporated and to the states in which they do business. In addition, the federal government is often involved in issues such as anti-trust, privacy, and environmental concerns.
Separation from management	One of the advantages of a corporation is that professional managers, in coordination with the board of directors, manage the company. Generally, the objectives of the stockholder are the same as management. Unfortunately, management may in some cases use questionable accounting to enhance their compensation or even engage in fraudulent activities.

In addition to classifying corporations as C or S, two common ways to classify corporations are as follows.

1. **Purpose**. A corporation may be organized for the purpose of making a profit, such as **Starbucks**, **Target**, and **Meta Platforms** (previously **Facebook**). Not-for-profit corporations are organized for charitable, medical, or educational purposes, such as the **Salvation Army** and the **American Heart Association**.
2. **Ownership**. Classification by ownership differentiates publicly held and privately held corporations. A **publicly held corporation**, such as **IBM**, **Caterpillar**, and **Apple**, may have thousands of stockholders. Its stock is regularly traded on national securities exchange such as the New York Stock Exchange or NASDAQ. A **privately held corporation** usually has only a few stockholders and does not offer its stock for sale to the general public. Privately held companies tend to be smaller, but **Cargill Inc.** (which trades in grain and other commodities) is one of the largest companies in the United States, and it is privately held.

Forming a Corporation

The corporate organization form seems to have a lot going for it. But how do you go about forming a corporation? Let's look at a company, Snowflake Inc., which wants to incorporate, or form a corporation. It follows this process.

Snowflake submits articles of incorporation in the state in which incorporation is desired. **Articles of incorporation** are a set of legal documents that contain general information about the business, such as name, location, address, names of directors, and areas of operation.

After fulfilling these requirements, the state issues a corporate charter, thereby recognizing Snowflake as a legal entity subject to state law.

The corporate charter is a document that describes the name and purpose of the corporation, the type and number of shares authorized, the names of the individuals who are forming the corporation, and the number of shares these individuals agree to purchase. Regardless of the number of states in which Snowflake has operating divisions, it is incorporated in one state.

Snowflake's headquarters is in San Mateo, California, but it is incorporated in Delaware. Why Delaware? Delaware's annual report to its citizens and stakeholders identifies the three reasons why Snowflake and other companies choose Delaware:

1. **Near total flexibility.** For example, corporate filings are quickly processed and board requirements less stringent.
2. **Lack of structural formalities.** A high level of corporate legal cases in Delaware have led to precedents that lead to less uncertainty regarding outcomes.
3. **Favorable tax advantages.** Delaware has no state income tax.

Delaware's approach is working as evidenced by the following.

- Over 65% of the Fortune 500 largest corporations are incorporated in Delaware. Examples are **Walmart**, **Coca Cola**, **Berkshire Hathaway**, and **General Electric**.

- Over 89% of the companies that had an initial public offering (IPO) recently incorporated in Delaware. Examples are **Uber Technologies**, **Lyft Inc.**, **Pinterest**, and **Slack Technologies**.
- Over 1.5 million entities are incorporated in Delaware, which exceeds its 1 million population![1]

Each state has its own laws governing the incorporation of businesses. The accounting for stockholders' equity follows the provisions of these state laws.

In many cases, states have adopted the principles contained in the Model Business Corporate Act prepared by the American Bar Association. State laws are complex and vary both in their provisions and in their definitions of certain terms. Some laws fail to define technical terms. As a result, terms often mean one thing in one state and another thing in a different state. These problems may be further compounded because legal authorities often interpret the effects and restrictions of the laws differently.

Accounting Matters

Getting In on the Ground Floor

Special purpose acquisition companies (SPACs) are hot. In early 2021, there were over 295 SPAC deals, raising over $93 billion (approximately 70% of all initial public offerings (IPOs)). This continues the steady growth in SPAC activity over the past several years, as shown in the adjacent chart.

What is a SPAC? A SPAC—often referred to as a blank-check company—is a shell company that has a listing on a stock exchange. SPACs provide a way for start-up companies, which generally do not have a good history of operating performance, to gain access to the stock market. When the SPAC and start-up company merge, the start-up is able to go public. In at least 15 recent deals, the start-up company had no revenue in the year before the SPAC transaction. Such financial performance almost always precludes going public through the traditional IPO route.

Start-ups going public through SPACs can make rosy projections about future results with less risk of facing lawsuits compared to disclosing those figures in a traditional IPO. In a SPAC, investor groups pool their money and then look for a company that meets their interests. In a number of cases, investing groups include sophisticated hedge fund managers and celebrities like former basketball star Shaquille O'Neal, former speaker of the house Paul Ryan, and singer Ciara.

So what's not to like? SPACs give start-ups a route to an IPO and investors a chance to get in on the ground floor of a promising company. But, the danger for investors is that the rosy projections sometimes do not pan out. For example, **Fisker Inc.**, an electric-car company that went public via a SPAC, recently told investors that it projected revenue of $13.2 billion in 2025. While it has yet to generate any revenue, it has ridden a wave of investor enthusiasm to a market capitalization of more than $4 billion. Or consider **Nikola Corp.**, an electric-truck maker, which had annual revenue of less than $500,000 when it went public via a SPAC. Its shares slid shortly after the transaction, after a short seller accused it of fraud and authorities launched investigations.

Some critics say investing in these so-called blank-check companies may not be worth the risk. In fact, SPACs have a poor record of delivering returns. As shown in the adjacent chart, of 107 SPACs that have gone public since 2015 and executed deals, the average return on their common stock has been a loss of 1.4%. During the same period, the average return of companies that went public via IPOs was 49%. So, the SPAC boom could end badly for smaller investors who do not understand the risks. As one accounting analyst remarked, "These types of very speculative companies should not be sold to retail investors at such an early stage."

Components of Stockholders' Equity

What makes up stockholders' equity? In your introductory course in accounting, you learned that:

Assets = Liabilities + Stockholders' Equity

or

Assets − Liabilities = Stockholders' Equity

Stockholders' equity is often referred to as shareholders' equity, owners' equity, corporate capital or simply equity. As indicated, stockholders' equity is the difference between the assets and the liabilities of the company. That is, the owners' or stockholders' interest in a company like **The Walt Disney Company** is a **residual interest**.[2] **Stockholders' (owners') equity** represents the cumulative net contributions by stockholders plus retained earnings and accumulated comprehensive income.

As a residual interest, stockholders' equity has no existence apart from the assets and liabilities of Disney—stockholders' equity equals net assets. Stockholders' equity is not a claim to specific assets but a claim against a portion of the total assets. Its amount is not specified or fixed; it depends on Disney's profitability. Stockholders' equity grows if the company is profitable. It shrinks, or may disappear entirely if Disney loses money.

Let's look at the stockholders' equity section of **Paylocity Holding Corporation** (a cloud-based provider of payroll and human capital management software solutions), shown in **Illustration 14.4**, to understand the components of stockholders' equity.

ILLUSTRATION 14.4 Stockholders' Equity Section

Paylocity Holding Corporation
Balance Sheet (partial)
As of June 30, 2020
(in thousands, except per share data)

Preferred stock, $0.001 par value, 5,000 shares authorized, no shares issued and outstanding	$ – 0 –	Contributed capital
Common stock, $0.001 par value, 155,000 shares authorized; 53,792 shares issued and outstanding.	54	Contributed capital
Additional paid-in capital	227,907	Contributed capital
Retained earnings	164,272	Earned capital
Accumulated other comprehensive income	675	Earned capital
Total stockholders' equity	$392,908	

Paylocity stockholders' equity section indicates that it has authorization for both the issuance of preferred stock and common stock. In Paylocity's case, it has not issued any preferred stock at this point but has issued 53,792 shares of common shares. The combination of the preferred stock and the common stock is often referred to as the **capital stock** of the company. In addition, Paylocity has additional paid-in capital of $227,907,000 which indicates when the common stock was issued, it sold above par value. As indicated in Illustration 14.4, the two primary components of stockholders' equity are contributed capital and earned capital.

[2] "Elements of Financial Statements," *Statement of Financial Accounting Concepts No. 6* (Stamford, Conn.: FASB, 1985), par. 60.

The first two categories of equity, capital stock and additional paid-in capital, constitute contributed (paid-in) capital.

- **Contributed (paid-in) capital** is the total amount paid in on capital stock—the amount provided by stockholders to the corporation for use in the business.
- Contributed capital includes items such as the par value of all outstanding stock and additional paid-in capital.

Earned capital is the capital that develops from profitable operations. It consists of all undistributed income that remains invested in the company.

- **Retained earnings** represents the earned capital of the company.
- **Accumulated other comprehensive income** reflects the aggregate amount of the other comprehensive income items. It includes such items as unrealized gains and losses on available-for-sale debt investments and unrealized gains and losses on certain derivative transactions.[3]

Common Stock

Whether it be **Best Buy**, **Columbia Sportswear**, or **Door Dash**, one class of stock in these companies must represent the basic ownership interest. That class is called common stock. **Common stock** is the residual corporate interest that bears the risk of loss and receives the benefit of success. The key characteristics of common stock are shown in **Illustration 14.5**.

ILLUSTRATION 14.5
Characteristics of Common Stock

Characteristic	Description
Voting	Right to vote in election of board of directors at annual meeting and on actions that require stockholder approval.
Residual claim	Owners are paid with assets that remain after all other claims (liabilities) have been paid.
Preemptive right	Right to acquire a proportionate share of new issues of common stock. Without this right, existing stockholders might find their ownership interest reduced, or diluted, by the issuance of additional stock without their knowledge and at prices unfavorable to them.
Term	Common stock is usually perpetual in nature—it generally does not have a maturity or redemption date.
Dividends	The right to receive dividends when approved by the board of directors. Common stockholders' dividends may vary from period to period and are not guaranteed.

If a corporation has only one authorized issue of stock, that issue is common stock, whether so designated in the charter or not. In some cases, companies may offer two or more classes of common stock to grant certain preferences to certain groups of common stockholders. These preferences generally involve voting rights or dividend payments. Many of the dual structures involve technology companies whose founder(s) are reluctant to give up control but need the cash from investors to sustain operations.

For example, the two founders of **Lyft Inc** (the ride-sharing company) were able to maintain control of their company even though the founders owned only 7% of the stock. Lyft created a second class of shares that granted the founders 20 votes for each share owned, in contrast to other investors who only receive one vote per share. Controversy surrounds the

[3]Chapter 16 contains an expanded discussion of accumulated other comprehensive income. Many companies report treasury stock as part of the stockholders' equity section. The accounting and reporting for treasury stock is discussed later in this chapter.

issuance of dual-class stock. Some object to a small group of investors having the voting rights when most of the capital is provided by general stockholders. Others argue that dual-class stock enables investors to invest in high-growth and innovative companies which may lead to superior profits in the long-run.

Accounting Matters — A Class (B) Act

Dual-class shares can be found in approximately 10% of companies' financial statements. **Alphabet**, **Meta Platforms** (previously **Facebook**), and **Under Armour** are three notable companies with multi-tiered shares. Each of the three companies have Class A shares with 1 vote per share, and Class B shares with 10 votes per share. Class A shares trade publicly, while Class B shares do not. In each instance, the company founder(s) control a majority of the vote through holdings in the Class B shares, as shown in the adjacent table.

	% of Class A Shares (Votes) Controlled by Class B Shareholders	Class B Shares Controlled by Founder(s)
Alphabet	60.38%	85.3%
Meta Platforms	64.72%	89.1%
Under Armour	64.62%	64.7%

Some trading exchanges impose rules to protect non-controlling investors. For example, the **Financial Times Stock Exchange (FTSE)** requires family owners to hold no more than 50% of voting shares. For many retail investors, voting rights are not that important. However, investors must carefully compare the apparent bargain prices for some classes of shares—they may end up as second-class citizens with no voting rights.

Sources: 2021 proxy statements for Alphabet, Meta Platforms, and Under Armour.

Issuance of Common Stock

In issuing common stock, companies follow these procedures.

1. The state of incorporation must authorize the stock, generally in a certificate of incorporation or charter. No entry is made in the general ledger accounts when the stock authorization is received from the state.
2. The corporation offers shares for sale, entering into contracts to sell stock.
3. After receiving amounts for the stock, the corporation issues shares and prepares the appropriate journal entries.

Par Value Stock The par value of a stock has no relationship to its fair value. The par value associated with most capital stock issuances is very low. For example, **PepsiCo**'s par value is 1⅔¢, **Hershey**'s is $1, and **Meta Platforms**' is $0.000006.[4]

A company uses two accounts to record the issuance of common stock:

1. **Common Stock**. This account reflects the par value of issued shares. A company credits this account when it originally issues the shares. It makes no additional entries in this account unless it issues additional shares or retires them.
2. **Paid-in Capital in Excess of Par—Common Stock (also called Additional Paid-in Capital)**. The **Paid-in Capital in Excess of Par—Common Stock** account indicates any excess over par value paid in by stockholders in return for the shares issued to them. Once paid in, the excess over par becomes a part of a company's additional paid-in capital. The individual stockholder has no greater claim on the excess paid in than all other holders of the same class of shares.

[4]Companies rarely, if ever, issue stock at a value below par value. If issuing stock below par, the company records the discount as a debit to Additional Paid-in Capital. In addition, the corporation may call on the original purchaser or the current holder of the shares issued below par to pay in the amount of the discount to prevent creditors from sustaining a loss upon liquidation of the corporation.

Example 14.1 illustrates how these accounts are used.

Example 14.1
Issue Common Stock

FACTS Assume that **TripNerd** issued 4,000 shares of stock with a par value of $1 for $10 per share.

QUESTION What entry would TripNerd make to record this transaction?

SOLUTION

The stock was issued for $10 per share, which is $9 greater than the par value. The entry to record the issuance is as follows.

Cash (4,000 × $10)	40,000	
Common Stock (4,000 × $1)		4,000
Paid-in Capital in Excess of Par—Common Stock (4,000 × $9)		36,000

No-Par Stock Many states permit the issuance of common stock without par value, called **no-par stock**. One of the reasons for allowing no-par stock is to avoid confusion over the relationship, or lack of relationship, between the par value and fair value. However, a major disadvantage of no-par stock is that some states levy a high tax on these issues. In addition, issuance of no-par stock **avoids the contingent liability** (see footnote 4) that might occur if the corporation issued par value stock at a discount.

Corporations sell no-par shares, like par value shares, for whatever price they will bring. Since there is no par value, there is no need for the Paid-in Capital in Excess of Par account. The exact amount received represents the credit to common stock.

Example 14.2
Issue No-Par Stock

FACTS Refer to the facts in Example 14.1. Assume now that **TripNerd** issued 4,000 shares of no-par stock for $10 per share.

QUESTION What entry would TripNerd make to record this transaction?

SOLUTION

TripNerd makes the following entry.

Cash (4,000 × $10)	40,000	
Common Stock (no-par value)		40,000

If TripNerd issues another 500 shares for $11 per share, it would make this entry:

Cash (500 × $11)	5,500	
Common Stock (no-par value)		5,500

True no-par stock should be carried in the accounts at issue price, but some states require that no-par stock have a **stated value**. The stated value is a minimum value. Essentially, stated value stock creates the same issues as par value stock.

If no-par stock has a stated value of $5 per share but sells for $11, the amount in excess of $5 is recorded as additional paid-in capital. No-par value stock with a low stated value permits a new corporation to begin its operations with additional paid-in capital that may exceed its stated capital.

Example 14.3
Issue No-Par Stock with Stated Value

FACTS Refer to the facts in Example 14.2. Assume now that **TripNerd** issued 4,000 shares of stock with a stated value of $1 for $10 per share.

QUESTION What entry would TripNerd make to record this transaction?

SOLUTION

TripNerd makes the following entry.

Cash (4,000 × $10)	40,000	
Common Stock (4,000 × $1)		4,000
Paid-in Capital in Excess of Stated Value—Common Stock (4,000 × $9)		36,000

TripNerd accounts for no-par stock with a stated value as if it were par value stock with par equal to the stated value.

Stock Issued with Other Securities (Lump-Sum Sales) Generally, corporations like **Groupon** or **Beyond Meats** sell classes of stock separately from one another. The reason is to track the proceeds relative to each class. Occasionally, a corporation issues two or more classes of securities for a single payment or lump sum (e.g., in the acquisition of another company). The accounting problem in **lump-sum sales** is how to allocate the proceeds among the several classes of securities. Companies use one of two methods of allocation: (1) the proportional method and (2) the incremental method.

Proportional Method If the fair value or other sound basis for determining relative value is available for each class of security, **the company allocates the lump sum received among the classes of securities on a proportional basis.**

Example 14.4
Proportional Allocation of Proceeds

FACTS Twilla Inc. issues 1,000 shares of $1 stated value common stock having a fair value of $20 per share, and 1,000 shares of $1 par value preferred stock having a fair value of $12 per share, for a lump sum of $30,000.

QUESTIONS (a) How would Twilla allocate the proceeds between the two classes of stock under the proportional method and (b) what entry would Twilla make to record this transaction?

SOLUTION

a. Twilla allocates the $30,000 to the two classes of shares as follows.

Fair value of common (1,000 × $20)	$20,000
Fair value of preferred (1,000 × $12)	12,000
Aggregate fair value	$32,000

$$\text{Allocated to common: } \frac{\$20,000}{\$32,000} \times \$30,000 = \$18,750$$

$$\text{Allocated to preferred: } \frac{\$12,000}{\$32,000} \times \$30,000 = \$11,250$$

Total allocation	$30,000

b. The entry to record this transaction is as follows.

Cash	30,000	
Common Stock (1,000 × $1)		1,000
Paid-in Capital in Excess of Par—Common Stock ($18,750 − $1,000)		17,750
Preferred Stock (1,000 × $1)		1,000
Paid-in Capital in Excess of Stated Value—Preferred Stock ($11,250 − $1,000)		10,250

Incremental Method In instances where a company cannot determine the fair value of all classes of securities, it may use the incremental method. It uses the fair value of the securities as a basis for those classes that it knows, and allocates the remainder of the lump sum to the class for which it does not know the fair value.

Example 14.5 Incremental Allocation of Proceeds

FACTS Refer to the facts in Example 14.4. However, the preferred shares now have no established fair value.

QUESTIONS (a) How would Twilla allocate the proceeds between the two classes of stock under the incremental method? (b) What entry would Twilla make to record the transaction?

SOLUTION

a. The allocation between the common and preferred stock is as follows.

Lump-sum receipt	$30,000
Allocated to common (1,000 × $20)	(20,000)
Balance allocated to preferred	$10,000

b. The entry to record this transaction is as follows.

Cash	30,000	
Common Stock (1,000 shares × $1)		1,000
Paid-in Capital in Excess of Par—Common Stock ($20,000 − $1,000)		19,000
Preferred Stock (1,000 shares × $1)		1,000
Paid-in Capital in Excess of Stated Value—Preferred Stock ($10,000 − $1,000)		9,000

In Example 14.5, if Twilla cannot determine fair value for any of the classes of stock involved in a lump-sum exchange, it may need to use other approaches. It may rely on an expert's appraisal. Or, if the company knows that one or more of the classes of securities issued will have a determinable fair value in the near future, it may use a best estimate basis with the intent to adjust later, upon establishment of the future fair value.

Stock Issued in Noncash Transactions Accounting for the issuance of shares of common stock for property or services involves an issue of valuation. **The general rule: Companies should record stock issued for services or property other than cash at either the fair value of the stock issued or the fair value of the noncash consideration received, whichever is more clearly determinable.**

If a company can readily determine both, and the transaction results from an arm's-length exchange (or an exchange in which the buyers and sellers act independently and do not have any relationship), there will probably be little difference in their fair values. In such cases, the basis for valuing the exchange should not matter.

If a company cannot readily determine either the fair value of the stock it issues or the property or services it receives, it should employ an appropriate valuation technique. Depending on available data, the valuation may be based on market transactions involving comparable assets or the use of discounted expected future cash flows. Companies should avoid the use of the book, par, or stated values as a basis of valuation for these transactions.

The transactions shown in **Illustration 14.6** indicate the journal entries that Marlowe Company would record under various circumstances for the issuance of 10,000 shares of $10 par value common stock in exchange for a patent.

ILLUSTRATION 14.6 Common Stock Issuance

Marlowe cannot readily determine the fair value of the patent, but it knows the fair value of the stock is $140,000.

Patents	140,000	
Common Stock (10,000 shares × $10 per share)		100,000
Paid-in Capital in Excess of Par—Common Stock		40,000

Marlowe cannot readily determine the fair value of the stock, but it determines the fair value of the patent is $150,000.

Patents	150,000	
Common Stock (10,000 shares × $10 per share)		100,000
Paid-in Capital in Excess of Par—Common Stock		50,000

Marlowe cannot readily determine the fair value of the stock nor the fair value of the patent. An independent consultant values the patent at $125,000 based on discounted expected cash flows.

Patents	125,000	
Common Stock (10,000 shares × $10 share)		100,000
Paid-in Capital in Excess of Par—Common Stock		25,000

In corporate law, the board of directors has the power to set the value of noncash transactions. However, boards sometimes abuse this power. The issuance of stock for property or services has resulted in cases of overstated corporate capital through intentional overvaluation of the property or services received.

- The overvaluation of the stockholders' equity resulting from inflated asset values creates **watered stock**. The corporation should eliminate the "water" by simply writing down the overvalued assets.
- If, as a result of the issuance of stock for property or services, a corporation undervalues the recorded assets, it creates **secret reserves**.

An understated corporate structure (secret reserve) may also result from other methods: excessive depreciation or amortization charges, expensing capital expenditures, excessive write-downs of inventories or receivables, or any other understatement of assets or overstatement of liabilities. An example of a liability overstatement is an excessive provision for estimated product warranties that ultimately results in an understatement of stockholders' equity, thereby creating a secret reserve.

Costs of Issuing Stock

When a company like **Walgreens** issues common stock, it should report direct costs incurred to sell stock, such as underwriting costs, accounting and legal fees, printing costs, and taxes, as a reduction of the amounts received. Walgreens therefore debits issue costs to Paid-in Capital in Excess of Par—Common Stock because they are unrelated to corporate operations. In effect, **issue costs are a cost of financing**. As such, issue costs should reduce the proceeds received from the sale of the stock.

Walgreens should expense the management salaries and other indirect costs related to the stock issue because it is difficult to establish a relationship between these costs and the sale proceeds. In addition, Walgreens expenses recurring costs, primarily registrar and transfer agents' fees, which result from maintaining the shareholders' records and transfer fee arrangements.

Example 14.6
Issuance Costs

FACTS SteadyShot recently issued 1,000,000 shares of $1 par value common stock at a total price of $8,000,000. Costs incurred in issuing the stock are underwriter fees $500,000, printing fees $29,000, external legal fees $250,000, travel costs of $25,000 related to roadshows to sell these shares to potential investors, and $50,000 of indirect costs from SteadyShot's internal legal and accounting teams working on the stock issue.

QUESTION What entry would SteadyShot make to record this transaction?

SOLUTION

The underwriting fees, printing fees, external legal fees, and travel costs related to selling these shares, totaling $804,000 ($500,000 + $29,000 + $250,000 + $25,000), should reduce the additional paid-in capital related to issuance of the common stock. The entry to record the issuance of SteadyShot's stock should be recorded as follows.

Cash	8,000,000	
Common Stock (1,000,000 shares × $1)		1,000,000
Paid-in Capital in Excess of Par—Common Stock		7,000,000

The amount charged to the paid-in capital is as follows.

Paid-in Capital in Excess of Par—Common Stock	804,000	
Cash		804,000

The internal legal and accounting costs for working on the issuance should be expensed because these costs would have been incurred even if SteadyShot had not issued common stock.

Preferred Stock

Preferred stock is a special class of shares that possess certain preferences, characteristics, or features not possessed by common stock. The characteristics listed in **Illustration 14.7** are those most often associated with preferred stock issues.

ILLUSTRATION 14.7 Preferred Stock Characteristics

Characteristics	Description
Dividends	Preferred stockholders receive dividends before common stockholders. In many cases, if a dividend is not paid each year, it is required to be paid in a future period before common stock receives any dividend (referred to as the cumulative feature).
Nonvoting	Preferred stockholders generally do not have voting rights like common stockholders.
Liquidation	If the company liquidates, preferred stockholders have a claim on the company's assets after creditors' claims are paid and therefore before common stock claims are paid.
Term	Preferred stock is generally perpetual or redeemable by the owner because of some specific event. In limited cases, the preferred stock is mandatorily redeemable and is reported as a liability.

Why do companies like **Bank of America**, **AT&T**, or **Nike** issue preferred stock? In many cases, companies use the monies for special projects, such as additional research and development or to help fund an acquisition (see **Global View**). Another reason is that preferred stock is generally considered equity and not debt. As a result, it does not increase a company's debt-to-equity ratio while also giving less control to outsiders than common stock. Similarly, if a company misses a dividend payment on a preferred stock, it is not considered in default. If the company uses bond financing and misses an interest payment, it is often considered a default.

- Companies usually issue preferred stock with a par value, expressing the dividend preference as a **percentage of the par value**. For example, holders of 8% preferred stock with a $100 par value are entitled to an annual dividend of $8 per share ($100 × .08). This stock is commonly referred to as 8% preferred stock.
- In the case of no-par preferred stock, a corporation expresses a dividend preference as a **specific dollar amount** per share, for example, $7 per share. This stock is commonly referred to as $7 preferred stock.

The accounting for preferred stock at issuance is similar to that for common stock. A corporation uses separate accounts for preferred stock and allocates proceeds between the par value of the preferred stock and additional paid-in capital.

Global View

The U.S. system of corporate governance and finance depends to a large extent on equity financing and the widely dispersed ownership of shares traded in highly liquid markets. The Japanese system relies more on debt financing, interlocking stock ownership, and banker/director and worker/shareholder rights. *See the IFRS Insights section at the end of the chapter for a discussion of the similarities and differences between IFRS and GAAP.*

Example 14.7
Preferred Stock Issuance

FACTS State Bank issues 10,000 shares of $10 par value preferred stock for $12 cash per share.

QUESTION How would State Bank record this transaction?

SOLUTION

State Bank records the issuance as follows.

Cash (10,000 shares × $12)	120,000	
Preferred Stock (10,000 shares × $10)		100,000
Paid-in Capital in Excess of Par—Preferred Stock (10,000 × $2)		20,000

Reporting Preferred Stock

Preferred stock generally has no maturity date. Therefore, no legal obligation exists to pay the preferred stockholder.

- As a result, companies generally report preferred stock as the first item in the stockholders' equity section of the balance sheet.
- They report any excess over par value as part of additional paid-in capital.
- Similar to dividends on common stock, preferred dividends are considered a distribution of income and not an expense.

Companies must disclose the pertinent rights of the preferred stock outstanding in the notes to the financial statements. **[1]** (See the FASB Codification References near the end of the chapter.)

Features of Preferred Stock

A corporation may attach whatever preferences or restrictions, in whatever combination it desires, to a preferred stock issue, as long as it does not specifically violate its state incorporation law. Also, it may issue more than one class of preferred stock. We discuss the most common features attributed to preferred stock next.

Cumulative Preferred Stock **Cumulative preferred stock** requires that if a corporation fails to pay a dividend in any year, it must make it up in a later year before paying any dividends to common stockholders. If the directors fail to declare a dividend at the normal date for dividend action, the dividend is said to have been "passed."

- Any passed dividend on cumulative preferred stock constitutes a **dividend in arrears**.
- Because no liability exists until the board of directors declares a dividend, a corporation does not record a dividend in arrears as a liability but discloses it in a note to the financial statements.

A corporation seldom issues noncumulative preferred stock because a passed dividend is lost forever to the preferred stockholder. As a result, this stock issue would be less marketable.

Participating Preferred Stock Holders of **participating preferred stock** share ratably with the common stockholders in any profit distributions beyond the prescribed rate. For example, 5% preferred stock, if fully participating, will receive not only its 5% return, but also dividends at the same rates as those paid to common stockholders if paying amounts in excess of 5% of par or stated value to common stockholders. Although seldom used, examples of companies that have issued participating preferred stock are **LTV Corporation**, **Southern California Edison**, and **Allied Products Corporation**.

Convertible Preferred Stock **Convertible preferred stock** allows stockholders, at their option, to exchange preferred shares for common stock at a predetermined ratio. The convertible preferred stockholder not only enjoys a preferred claim on dividends but also has the option of converting into a common stockholder with unlimited participation in earnings.

Companies consider convertible preferred stock as a part of stockholders' equity. When stockholders exercise the conversion option on convertible preferred stock, there is no theoretical justification for the company to recognize a gain or loss. Instead, the company **employs the book value method**: debit Preferred Stock, along with any related Paid-in Capital in Excess of Par—Preferred Stock and credit Common Stock and Paid-in Capital in Excess of Par—Common Stock (if an excess exists).

Example 14.8 Convertible Preferred Stock

FACTS Marinelli Corporation has outstanding par value of convertible preferred stock of $400,000 and related Paid-in Capital in Excess of Par—Preferred Stock $60,000. Stockholders convert the preferred stock into no-par common stock, which is presently reported at $1,000,000. The fair value of the convertible preferred stock is $600,000.

QUESTION How would Marinelli record the conversion of this preferred stock?

SOLUTION

The entry to record this conversion is as follows.

Preferred Stock	400,000	
Paid-in Capital in Excess of Par—Preferred Stock	60,000	
Common Stock		460,000

The Preferred Stock and related Paid-in Capital in Excess of Par accounts are debited at their book value. Common stock does not have a par value so the entire amount is credited to Common Stock. Marinelli does not record any gain or loss when dealing with stockholders in their capacity as business owners.

Callable Preferred Stock

Callable preferred stock permits the corporation, at its option, to call or redeem the outstanding preferred shares at specified future dates and at stipulated prices. Many preferred issues are callable.

- The corporation usually sets the call or redemption price slightly above the original issuance price and commonly states it in terms related to the par value.
- The callable feature permits the corporation to use the capital obtained through the issuance of such stock until the need has passed or it is no longer advantageous.
- An issuer may issue callable preferred shares to gain additional flexibility over its cost of capital.

For example, if market rates decrease, the issuer can call the preferred shares and issue a new instrument at a lower cost of capital.

The existence of a call price or prices tends to set a ceiling on the market price of the preferred shares unless they are convertible into common stock. When a corporation calls preferred stock, it must pay any dividends in arrears.

Redeemable Preferred Stock

In some cases, issuance of preferred stock has features more like debt (legal obligation to pay) than an equity instrument (no legal obligation to pay). **Redeemable preferred stock** allows the stockholder to redeem it at any time. In other words, the stockholder can "return" the stock to the company and be paid a set amount for the return of the stock. For example, assume that Ocean Bank issues $2 million of preferred stock to **Surf Station, Inc.**, which is redeemable by Surf Station at any time. In this situation, the preferred stock has characteristics of both debt and equity:

- **Debt characteristic**. Surf Station, the preferred stockholder, can demand payment at any time (legal obligation to pay).
- **Equity characteristic**. The date of redemption is not known (no legal obligation to pay).

Preferred stock with a redemption feature, like that issued by Ocean Bank, is reported **neither as debt nor equity** on the balance sheet but is reported **between** debt and equity in a temporary section, often referred to as the mezzanine or temporary equity section. **Illustration 14.8** shows how **Alabama Power** reports some of its preferred stock.

ILLUSTRATION 14.8 Redeemable Preferred Stock Mezzanine Reporting

Alabama Power
Balance Sheet (partial)
December 30, 2020
(in $ millions)

Total Liabilities	20,702
Redeemable Preferred Stock:	
Cumulative redeemable preferred stock	
$100 par or stated value — 4.20% to 4.92%	
(Authorized —3.9 million shares; Outstanding — 0.5 million shares)	48
$1 par value — 5.00%	
(Authorized — 27.5 million shares; Outstanding — 10 million shares: $25 stated value)	243
Total redeemable preferred stock (annual dividend requirement — $15 million)	291

What happens if we assume that Ocean Bank issues $2 million of preferred stock that is redeemable by Surf Station on a certain date or upon an event that is certain to happen? In this case, Ocean Bank reports this preferred stock as a liability because it has a legal obligation to pay at a certain point in time. This type of preferred stock is often referred to as a **mandatorily redeemable preferred stock**. **Illustration 14.9** summarizes the classifications for preferred stock, depending on the nature of the redemption feature of the preferred stock.

ILLUSTRATION 14.9 Redeemable Preferred Stock Classification

Permanent Equity	Temporary Equity (Mezzanine)	Liability
Preferred stock is not redeemable.	Preferred stock is redeemable at the preferred stockholder's option, but timing is uncertain.	Preferred stock classified as debt when the issuer must redeem the preferred stock by a certain date or upon an event that is certain to happen.

In summary, mandatorily redeemable preferred stock leaves the company with no ability to avoid payment in assets sometime in the future. To be classified as permanent equity, redemption needs to be solely within the control of the issuer. If not, it should be classified as temporary equity. [2]

Put It into Practice LO 14.1
Record Stock Issuances

FACTS Stengel Company was organized on March 1, 2025. It is authorized to issue 20,000 shares of 5%, $100 par value preferred stock, and 1,500,000 shares of no-par common stock with a stated value of $1 per share. The following stock transactions were completed during the first year.

March 1	Issued 80,000 shares of common stock for cash at $5 per share.
March 10	Issued 5,000 shares of preferred stock for cash at $112 per share.
April 1	Issued 24,000 shares of common stock for land. The asking price of the land was $90,000; the fair value of the land was $70,000.
August 1	Issued 10,000 shares of common stock to attorneys in payment of their bill of $35,000 for services rendered in helping the company organize.
November 1	Issued 10,000 shares of common stock and 1,000 shares of preferred stock for a lump sum of $280,000. The fair value of the common stock is $120,000. The fair value of the preferred stock cannot be determined.

INSTRUCTIONS

Prepare the journal entries to record the above transactions.

SOLUTION

March 1		
Cash (80,000 × $5)	400,000	
Common Stock (80,000 × $1)		80,000
Paid-in Capital in Excess of Stated Value—Common Stock (80,000 × $4)		320,000
March 10		
Cash (5,000 × $112)	560,000	
Preferred Stock (5,000 × $100)		500,000
Paid-in Capital in Excess of Par—Preferred Stock (5,000 × $12)		60,000
April 1		
Land	70,000	
Common Stock (24,000 × $1)		24,000
Paid-in Capital in Excess of Stated Value—Common Stock ($70,000 − $24,000)		46,000
August 1		
Organization Expense	35,000	
Common Stock (10,000 × $1)		10,000
Paid-in Capital in Excess of Stated Value—Common Stock ($35,000 − $10,000)		25,000
November 1		
Cash	280,000	
Common Stock (10,000 × $1)		10,000
Paid-in Capital in Excess of Stated Value—Common Stock ($120,000 − $10,000)		110,000
Preferred Stock (1,000 × $100)		100,000
Paid-in Capital in Excess of Par—Preferred Stock [($280,000 − $10,000 − $110,000 − $100,000]		60,000

14.2 Reacquisition of Shares

LEARNING OBJECTIVE 2

Describe the accounting and reporting for reacquisition of shares.

Treasury Stock

Here is a question for you: of the four alternatives below, which has involved the largest amount of expenditures by companies between 2010–2020?

1. Make investments in research and development, and property, plant, and equipment.
2. Pay dividends to shareholders.
3. Acquire other companies.
4. Buy back shares of stock.

If you read the title to this section, you probably answered buybacks (the purchase of treasury stock)—and you would be right! It has been estimated that companies have spent over $3 trillion during the recent five-year period (by the way, trillion has 12 zeros, i.e., $3,000,000,000,000!), as shown in **Illustration 14.10**.

Illustration 14.11 lists some of the reasons why companies buy back their shares.

ILLUSTRATION 14.11 Reasons for Buybacks

Reason	Explanation
Stock is undervalued	**Berkshire Hathaway**'s Warren Buffett approach is to time buybacks to pay less than the stock's intrinsic value (its true worth). By doing so, the remaining shareholders will receive additional returns in the marketplace because there are less shares outstanding.
Dividend commitment	Buybacks give companies more flexibility in making distributions, or dividends. If a company like **General Electric** commits to a given dividend per year, it is often reluctant to cut that dividend because it sends a signal to the market that the company may be in trouble. Buybacks provide more flexibility to a company as to whether a distribution in any given year should be made.
Dilution issues	Buybacks help to prevent dilution of ownership of existing stockholders. **Honeywell Inc.** reported that it would use part of its purchase of one million shares for employee stock compensation plans rather than issuing new stock to executives and employees.
Maintain control	A company may want to reduce its shares if it is concerned about a hostile takeover. If it has more control over the shares, it makes it more difficult on the possible unfriendly acquirer.
Changes performance metrics	Companies often buy back shares to increase various financial metrics, such as earnings per share and return on equity. For example, by buying back shares, companies increase earnings per share because the denominator in the earnings per share computation is reduced. If a company has earnings of $1,000 and 1,000 shares outstanding, its earnings per share is $1. If it buys back 200 shares, its earnings per share is $1.25. This metric makes the company look better although the earnings of the company have not changed. Other metrics such as return on equity and return on assets also are positively affected by buybacks.

The variety of buyback reasons explain buyback activity in recent years. Many view stock buybacks as a way for companies to re-invest in themselves. Each buyback decreases the amount of shares outstanding, with the company re-absorbing the portion of ownership that was previously distributed among investors. In other words, buybacks are somewhat analogous to buying out a business partner—they allow the remaining partners to own a higher share of the company. And in most cases, the company stock price responds in a positive way. For example, 86% of the buyback companies in Illustration 14.10 had returns that exceeded market benchmarks, like the return on the **S&P 500** Index.[5]

[5] D. Zion, "Buybacks, Who's Bad (or Good)?" *Zion Research Group* (January 29, 2021).

After reacquiring shares, a company may either retire them or hold them in the treasury for reissue. If not retired, these shares are referred to as **treasury stock** (**treasury shares**). Technically, treasury stock is a corporation's own stock, reacquired after having been issued and fully paid.

Treasury stock is not an asset; it is a contra stockholders' equity account. When a company purchases treasury stock, a reduction occurs in both assets and stockholders' equity. It is inappropriate to imply that a corporation can own a part of itself. Keep these three points in mind:

1. A corporation may later sell treasury stock to obtain funds, but that does not make treasury stock a balance sheet asset.
2. When a corporation buys back some of its own outstanding stock, it has not acquired an asset; it reduces net assets because cash is used for the buyback (see **Underlying Concepts**).
3. The possession of treasury stock does not give the corporation the right to vote, to exercise preemptive rights as a stockholder, to receive cash dividends, or to receive assets upon corporate liquidation.

Underlying Concepts

As we indicated in Chapter 1, an asset should have probable future economic benefits. Treasury stock simply reduces common stock outstanding.

To summarize, **treasury stock is essentially the same as unissued capital stock.** No one advocates classifying unissued capital stock as an asset in the balance sheet.

Purchase of Treasury Stock

Companies can choose from two general methods of handling treasury stock in the accounts:

1. **Cost method**. As the name implies, a company will debit the Treasury Stock account for the reacquisition cost of the stock. On the balance sheet, this account is a deduction from the total paid-in capital **and** retained earnings.
2. **Par (stated) value method**. Under this method, all transactions in treasury shares are recorded at their par value. On the balance sheet, treasury stock is reported as a deduction from capital stock only.

Both methods are generally acceptable, but the cost method enjoys more widespread use. We will focus on the accounting for the cost method.

The cost method derives its name from the fact that a company maintains the Treasury Stock account at the **cost** of the shares purchased.[6] The company debits the Treasury Stock account for the cost of the shares acquired. Upon reissuance of the shares, it credits the account for this same cost.

Example 14.9
Purchase Treasury Stock

FACTS Pacific Company issued 100,000 shares of $1 par value common stock at a price of $10 per share. In addition, it has retained earnings of $300,000. The stockholders' equity section on December 31, 2024, before purchase of treasury stock is as follows.

Stockholders' equity	
Paid-in capital	
Common stock, $1 par value, 100,000 shares issued and outstanding	$ 100,000
Additional paid-in capital (100,000 × $9)	900,000
Total paid-in capital	1,000,000
Retained earnings	300,000
Total stockholders' equity	$1,300,000

On January 20, 2025, Pacific acquires 10,000 shares of its stock at $11 per share.

QUESTION How would Pacific record the repurchase of these shares?

[6] If making numerous acquisitions of blocks of treasury shares at different prices, a company may use inventory costing methods—such as specific identification, average-cost, or FIFO—to identify the cost at date of reissuance.

SOLUTION

Pacific records the repurchase of shares as follows.

Treasury Stock	
1/20/25 110,000	

January 20, 2025		
Treasury Stock (10,000 shares × $11)	110,000	
Cash		110,000

Note in Example 14.9 that Pacific debited Treasury Stock for the cost of the shares purchased. The original issue price of the common stock, $10, does not affect the entry to record the acquisition of the treasury stock. The original paid-in capital account, Common Stock, is not affected because the number of issued shares does not change. The same is true for the Paid-in Capital in Excess of Par—Common Stock account.

Example 14.10 Stockholders' Equity with Treasury Stock

FACTS Refer to the Pacific Company share repurchase in Example 14.9.

QUESTION How will the repurchase affect stockholders' equity?

SOLUTION

Pacific's stockholders' equity after repurchase of shares is as follows.

Stockholders' equity	
Paid-in capital	
Common stock, $1 par value, 100,000 shares issued and 90,000 outstanding	$ 100,000
Additional paid-in capital	900,000
Total paid-in capital	1,000,000
Retained earnings	300,000
Total paid–in capital and retained earnings	1,300,000
Less: Cost of treasury stock (10,000 shares)	110,000
Total stockholders' equity	$1,190,000

Pacific subtracts the cost of the treasury stock from the total of common stock, additional paid-in capital, and retained earnings. Treasury Stock is a contra account that has a normal debit balance. It therefore reduces stockholders' equity.

In Example 14.10, Pacific discloses both the number of shares issued (100,000) and the number in the treasury (10,000). The difference is the number of shares of stock outstanding (90,000). The term **outstanding stock** means the number of shares of issued stock that stockholders own.

Many states require a corporation to restrict retained earnings for the cost of treasury stock purchased. The restriction keeps intact the corporation's legal capital that it temporarily holds as treasury stock. When the corporation sells the treasury stock, it lifts the restriction.

Sale of Treasury Stock

Companies usually reissue or retire treasury stock. When reissuing treasury shares, the accounting for the sale depends on the price.

- If the selling price of the treasury stock equals its cost, the company records the sale by debiting Cash and crediting Treasury Stock.
- In cases where the selling price of the treasury stock is not equal to cost, then accounting for treasury stock sold **above cost** differs from the accounting for treasury stock sold **below cost**.

In the second case, when treasury stock is sold either above or below cost, both total assets and stockholders' equity will increase.

Sale of Treasury Stock Above Cost

When the selling price of treasury stock is **above** its cost, a company credits the difference to Paid-in Capital from Treasury Stock.

Example 14.11
Sell Treasury Stock Above Cost

FACTS As indicated in Example 14.9, Pacific acquired 10,000 shares of its treasury stock at $11 per share. It now sells 1,000 of the treasury shares at $15 per share on March 10, 2025.

QUESTION How would Pacific record the sale of the treasury shares?

SOLUTION

Pacific records the sale of treasury shares as follows.

March 10, 2025

Cash (1,000 × $15)	15,000	
Treasury Stock (1,000 × $11)		11,000
Paid-in Capital from Treasury Stock (1,000 × $4)		4,000

The Treasury Stock account is credited at the cost of the treasury stock of $11. Any excess over that cost is credited to a paid-in capital account for treasury stock. After this sale of treasury stock, Pacific has 9,000 shares of treasury stock left (10,000 shares – 1,000 shares).

Treasury Stock

1/20/25 110,000	3/10/25 11,000
99,000	

Paid-in Capital from Treasury Stock

	3/10/25 4,000

In Example 14.11, were you thinking that Pacific should record a gain since the treasury stock was sold for more than what the company paid for it? There are two reasons why Pacific **does not** credit $4,000 to Gain on Sale of Treasury Stock.

1. Gains on sales occur when selling **assets**; treasury stock is not an asset.
2. A gain or loss should not be recognized from stock transactions with its own stockholders.

Pacific should not include paid-in capital arising from the sale of treasury stock in the measurement of net income. Instead, it lists paid-in capital from treasury stock separately on the balance sheet, as a part of paid-in capital.

Sale of Treasury Stock Below Cost

When a corporation sells treasury stock **below** its cost, it usually **debits** the excess of the cost over selling price to Paid-in Capital from Treasury Stock, if there is a balance in that account.

Example 14.12
Sell Treasury Stock Below Cost

FACTS From Example 14.9, Pacific acquired 10,000 shares of its treasury stock at $11 per share. Pacific now sells an additional 1,000 shares of treasury stock on March 21 at $8 per share.

QUESTION How would Pacific record the sale of the treasury shares?

SOLUTION

Pacific records the sale of treasury shares as follows.

March 21, 2025

Cash (1,000 × $8)	8,000	
Paid-in Capital from Treasury Stock (1,000 × $3)	3,000	
Treasury Stock (1,000 × $11)		11,000

Since the Paid-in Capital from Treasury Stock account had a balance of $4,000, Pacific debits the entire $3,000 excess of cost over selling price to that account. After this sale of treasury stock, Pacific has 8,000 shares of treasury stock left (9,000 shares – 1,000 shares).

Treasury Stock

1/20/25 110,000	3/10/25 11,000
99,000	3/21/25 11,000
88,000	

Paid-in Capital from Treasury Stock

	3/10/25 4,000
3/21/25 3,000	
	1,000

We can make several observations based on the two sale entries in Examples 14.11 and 14.12 (sale above cost and sale below cost).

1. Pacific credits Treasury Stock **at cost** in each entry. Again, that's why this method is the cost method.
2. Pacific uses Paid-in Capital from Treasury Stock for the difference between the cost and the resale price of the shares.
3. Neither entry affects the original paid-in capital account, Common Stock.

What happens if Pacific sells treasury stock at below cost, and the balance in Paid-in Capital from Treasury Stock is not large enough to cover the difference? Once the credit balance in Paid-in Capital from Treasury Stock is eliminated, the corporation debits any additional excess of cost over selling price to Retained Earnings.

Example 14.13
Sell Treasury Stock Below Cost, Reduce Retained Earnings

FACTS Continuing the Pacific example, assume that Pacific sells an additional 1,000 shares at $8 per share on April 10. The balance in the Paid-in Capital from Treasury Stock account (before the April 10 sale) is as follows.

Paid-in Capital from Treasury Stock

3/21/21	3,000	3/10/21	4,000
		Bal.	1,000

QUESTIONS (a) What entry would Pacific make to record the sale of the treasury shares and (b) using the information from Example 14.11 and the treasury stock transactions through April 10, 2025, how would you prepare Pacific's stockholders' equity section?

SOLUTION

a. Pacific records the sale of shares as follows.

April 10, 2025

Cash (1,000 × $8)	8,000	
Paid-in Capital from Treasury Stock*	1,000	
Retained Earnings (remainder)	2,000	
Treasury Stock (1,000 × $11)		11,000

* To eliminate remaining balance.

Pacific debits $1,000 of the excess to Paid-in Capital from Treasury Stock because that is all that remains in that account. It debits the remainder to Retained Earnings. After this sale of treasury stock, Pacific has 7,000 shares of treasury stock left (8,000 shares – 1,000 shares).

b. Pacific's stockholders' equity section after the April 10 transaction is as follows.

Stockholders' equity	
Paid-in capital	
Common stock, $1 par value, 100,000 shares issued and 93,000 outstanding	$ 100,000
Additional paid-in capital—common stock	900,000
Total paid-in capital	1,000,000
Retained earnings ($300,000 − $2,000)	298,000
Total paid-in capital and retained earnings	1,298,000
Less: Cost of treasury stock (7,000 shares)	77,000
Total stockholders' equity	$1,221,000

Treasury Stock

1/20/25	110,000		
		3/10/25	11,000
	99,000		
		3/21/25	11,000
	88,000		
		4/10/25	11,000
	77,000		

Paid-in Capital from Treasury Stock

		3/10/25	4,000
3/21/25	3,000		
			1,000
4/10/25	1,000		
			0

In Example 14.13, pay close attention to the number of shares of common stock outstanding. The number of shares issued remains at 100,000 shares, but the number of shares outstanding is only 93,000 shares. Remember, the 7,000 shares of treasury stock are **not** outstanding because they are **not** owned by shareholders.

Retiring Treasury Stock

The board of directors may approve the retirement of treasury shares. This decision results in cancellation of the treasury stock and a reduction in the number of shares of issued stock. Retired treasury shares have the status of authorized and unissued shares. The accounting effects are similar to the sale of treasury stock except that corporations debit the **paid-in capital accounts applicable to the retired shares** instead of cash.

Example 14.14
Retire Treasury Stock

FACTS Continuing the Pacific example, after the sale of treasury shares on April 10, 2025, the company decides to retire the remaining 7,000 treasury shares on April 15, 2025.

QUESTION What entry would Pacific make to record the retirement of the treasury shares?

SOLUTION

Pacific records the retirement as follows.

March 1, 2025		
Common Stock (7,000 × $1 par)	7,000	
Paid-in Capital in Excess of Par—Common Stock ($9 × 7,000)	63,000	
Retained Earnings (remainder)	7,000	
Treasury Stock (7,000 shares × $11)		77,000

Originally, Pacific sold the shares at $9 above the par value of $1 (see Example 14.9). As a result, it debits Common Stock and Paid-in Capital in Excess of Par—Common Stock to reverse the $10 per share at retirement. The difference between the cost of the remaining treasury shares and their original issue value is debited to Retained Earnings because the Paid-in Capital from Treasury Stock has a zero balance.

Note that depending on where Pacific incorporates, a state may require a debit (or credit) to Paid-in Capital in Excess of Par and not to Retained Earnings when recording the retirement. *For homework, follow the approach shown in this example.*

Accounting Matters — Buybacks—Good or Bad?

Companies have ramped up repurchases of their own stock. Providing a look into the individual companies engaged in share buybacks shown in Illustration 14.10, here is what the top five companies in the S&P 500 spent repurchasing shares in the 12-month period ending March 2020.

Fiscal 2020	
Company	**Buybacks ($ billion)**
Apple	$76.6
Alphabet	23.9
Microsoft	21.8
JPMorgan Chase	25.4
Bank of America	28.2

Is this good or bad news for investors? Maybe neither. While it might appear that companies are getting better at timing their purchases (when prices are falling), they also buy shares for reasons that go beyond giving a boost to shareholders—everything from mergers and acquisitions to eliminating the dilution impact of equity compensation.

The conventional wisdom is that companies that buy back shares believe their shares are undervalued. Thus, analysts view the buyback announcement as an important piece of inside information about future company prospects. On the other hand, buybacks can actually hurt businesses and their shareholders over the long run. For example, drug-makers **Merck**, **Pfizer**, and **Amgen** spent heavily on stock repurchases, possibly at the expense of research and development. And whether the buyback is a good thing appears to depend a lot on why the company did the buyback and what the repurchased shares were used for.

Sources: Adapted from B. Levisohn, "Beware All Those Buybacks," *Wall Street Journal* (September 29–30, 2012), p. B9; A. Bary, "Why the Buyback Boom Is Bullish for Investors," *Barron's* (May 12, 2018); and *S&P Buyback File* (June 24, 2020).

Put It into Practice LO 14.2
Record Treasury Stock Transactions

FACTS In 2025, Zetas Corporation entered into the following transactions.

March 4	Issued 200,000 shares of $1 par value common stock for $1,000,000.
September 10	Bought back 2,000 shares at a price of $6 per share.
October 15	Sold 1,000 of the treasury shares for $8 per share.
November 20	Retired the shares remaining in treasury.

INSTRUCTIONS

Prepare entries for these transactions using the cost method.

SOLUTION

To issue the Zetas stock:

March 4, 2025

Cash	1,000,000	
Common Stock (200,000 × $1)		200,000
Paid-in Capital in Excess of Par—Common Stock [200,000 × ($5 − $1)]		800,000

To record the purchase of the stock:

September 10, 2025

Treasury Stock	12,000	
Cash (2,000 × $6)		12,000

To record the sale of treasury shares:

October 15, 2025

Cash ($8 × 1,000)	8,000	
Paid-in Capital from Treasury Stock (1,000 × $2)		2,000
Treasury Stock (1,000 × $6)		6,000

To record the retirement of the treasury shares:

November 20, 2025

Common Stock (1,000 × $1)	1,000	
Paid-in Capital in Excess of Par—Common Stock [1,000 × ($5 − $1)]	4,000	
Paid-in Capital from Treasury Stock	2,000	
Retained Earnings		1,000
Treasury Stock		6,000

14.3 Dividend Policy

LEARNING OBJECTIVE 3

Explain the accounting and reporting issues related to dividends.

Dividend payouts can be important signals to the market. A dividend check provides proof that at least some portion of a company's profits is genuine. As one analyst noted, "Companies with the ability to grow dividends over time tend to be durable businesses with strong cash flow and relatively predictable earnings. . . . So you're more likely to get a return on your investment year in and year out."[7]

[7]The share of U.S. and European companies expected to increase dividends in 2018 is forecast to reach its highest level in at least a decade—a boost for investors facing resurgent stock volatility, rising interest rates, and geopolitical risk. Among big listed companies in the United States and Europe, about 71% and 83%, respectively, are expected to increase dividends in 2018, the highest share in at least a decade, according to research by **JPMorgan**. See J. Sindreu, "Firms Poised to Jack Up Dividends," *Wall Street Journal* (April 19, 2018).

Determining the proper amount of dividends to pay is a difficult financial management decision. Companies paying dividends are extremely reluctant to reduce or eliminate their dividend. They fear that the securities market might negatively view this action. As a consequence, dividend-paying companies will make every effort to continue to do so. In addition, the type of shareholder the company has (taxable or nontaxable, retail investor or institutional investor) plays a large role in determining dividend policy.

Very few companies pay dividends in amounts equal to their legally available retained earnings. The major reasons are as follows.

1. **To maintain agreements (bond covenants)** with specific creditors, to retain all or a portion of the earnings, in the form of assets, to build up additional protection against possible loss.
2. **To meet state corporation requirements**, that earnings equivalent to the cost of treasury shares purchased be restricted against dividend declarations.
3. **To retain assets** that would otherwise be paid out as dividends, to finance growth or expansion. This is sometimes called internal financing, reinvesting earnings, or "plowing" the profits back into the business.
4. **To smooth out dividend payments** from year to year by accumulating earnings in good years and using such accumulated earnings as a basis for dividends in bad years.
5. **To build up a cushion or buffer** against possible losses or errors in the calculation of profits.

The reasons above are self-explanatory except for the second. The laws of some states require that the corporation restrict its legal capital from distribution to stockholders, to protect against loss for creditors.[8] The applicable state law determines the legality of a dividend.

Financial Condition and Dividend Distributions

Effective management of a company requires attention to more than the legality of dividend distributions. Management must also consider economic conditions, most importantly, liquidity.

Example 14.15 Economics of Dividends

FACTS Miracle Pod is a company that records daily podcasts. Its balance sheet, consisting only of recording equipment, is as follows.

Recording equipment	$500,000	Capital stock	$400,000
		Retained earnings	100,000
	$500,000		$500,000

QUESTION Does the company have sufficient funds to pay dividends?

SOLUTION

Miracle Pod has positive retained earnings. Unless restricted, it can declare a dividend of $100,000. But because all its assets are property, plant, and equipment used in operations, payment of a cash dividend of $100,000 would require the sale of its recording equipment or borrowing.

Even if a balance sheet shows current assets, as the following shows, the question remains as to whether the company needs its cash for other purposes.

Cash	$100,000	Current liabilities		$ 60,000
Recording equipment	460,000	Capital stock	$400,000	
	$560,000	Retained earnings	100,000	500,000
				$560,000

Here, the existence of current liabilities strongly implies that Miracle Pod needs some of the cash to meet current debts as the company matures. In addition, day-to-day cash requirements for payrolls and other expenditures not included in current liabilities also require cash.

[8] If the corporation buys its own outstanding stock, it reduces its capital and distributes assets to stockholders. If permitted, the corporation could, by purchasing treasury stock at any price desired, return to the stockholders their investments and leave creditors with little or no protection against loss.

As Example 14.15 demonstrates, before declaring a dividend, management must therefore consider the **availability of funds to pay the dividend**. A company should not pay a dividend unless both the present and future financial position warrant the distribution.

The SEC encourages companies to disclose their dividend policy in their annual report. Here are two situations when disclosure is important:

1. A company has earnings but fails to pay dividends.
2. A company does not expect to pay dividends in the foreseeable future.

The SEC encourages companies that consistently pay dividends to indicate whether they intend to continue this practice in the future.

Types of Dividends

Companies generally base dividend distributions either on accumulated profits (that is, retained earnings) or on some other capital item such as additional paid-in capital. The types of dividends are:

1. Cash dividends.
2. Property dividends or dividends in kind.
3. Liquidating dividends.

These types of dividends **reduce the total stockholders' equity** in the corporation because the corporation is paying out assets.

Cash Dividends

The board of directors of a corporation votes on the declaration of **cash dividends**. Upon approval of the resolution, the board declares a dividend. Before paying it, however, the company must prepare a current list of stockholders. For this reason, there is usually a time lag between declaration and payment. **Illustration 14.12** shows the timeline of dividend events.

ILLUSTRATION 14.12 Timeline of Dividend Events

Date of declaration	The date the board of directors approves a resolution to pay a dividend. On this date, the declared cash dividend becomes a liability, so a journal entry is made. Because payment is generally required very soon, it is usually a current liability.
Date of record	The date a corporation determines the current stockholders. Stockholders on the date of record receive the dividend. No journal entry is required on the date of record.[9]
Date of payment	The date dividend checks are mailed or deposited electronically to stockholders. A journal entry is made to record the payment of cash and reduction of the liability.

[9]Theoretically, the ex-dividend date is the day after the date of record. However, to allow time for transfer of the shares, the stock exchanges generally advance the ex-dividend date two to four days. Therefore, the party who owns the stock on the day prior to the expressed ex-dividend date receives the dividends. The party who buys the stock on and after the ex-dividend date does not receive the dividend. Between the declaration date and the ex-dividend date, the market price of the stock includes the dividend.

Example 14.16
Cash Dividend

FACTS Roadway Freight Corp. on June 10 declared a cash dividend of 50¢ a share on 1.8 million shares payable July 16 to all stockholders of record June 24.

QUESTION What are the entries to record the declaration and payment of the cash dividend?

SOLUTION

At date of declaration:

June 10		
Retained Earnings (Cash Dividends Declared)	900,000	
Dividends Payable (1.8 million × $0.50)		900,000

At date of record:

June 24		
No entry		

At date of payment:

July 16		
Dividends Payable	900,000	
Cash		900,000

A company may declare dividends in one of two ways:

1. **An amount per share.** This is demonstrated in Example 14.16 in which Roadway Freight declared a 50¢ dividend per share.
2. **As a percentage of par value**. Dividends on preferred stock are typically expressed as a percentage of par value. For example, if preferred stock has a 6% dividend, the 6% is multiplied by the total par value of outstanding shares to determine the total dividend.

Recall that one of the common preferences attached to preferred stock is that it is cumulative in nature, meaning that if a company does not declare a dividend in a year, those dividends are in arrears. At the next declaration, the company must pay their preferred shareholders the current year dividend plus any dividends in arrears.

Example 14.17
Dividend in Arrears

FACTS Assume that **Citigroup** declared a dividend on December 31, 2025, on its 500,000 shares of $1 par value, 7%, cumulative preferred shares outstanding. Citigroup did not declare any dividends in 2024.

QUESTION What amount of dividend will be paid to Citigroup's preferred shareholders as a result of the dividend declared on December 31, 2025?

SOLUTION

Citigroup will pay its preferred shareholders the dividend from 2025 and the dividends in arrears from 2024 as follows.

Dividend calculation:	500,000 shares × $1 par = $500,000 par value outstanding	
	$500,000 par value × .07 dividend rate = $35,000 annual dividend	
Preferred dividend paid:	2024 dividends in arrears	$35,000
	2025 dividends	35,000
		$70,000

Remember, **companies do not declare or pay cash dividends on treasury stock.**

Dividend policies vary among corporations. Some companies, such as **JPMorgan Chase**, **Clorox Co.**, and **Tootsie Roll Industries**, take pride in a long, unbroken string of quarterly dividend payments. They would lower or pass the dividend only if forced to do so by a sustained decline in earnings or a critical shortage of cash.

"Growth" companies, on the other hand, pay little or no cash dividends because their policy is to expand as rapidly as internal and external financing permit. For example, **Questcor Pharmaceuticals Inc.** has never paid cash dividends to its common stockholders. These investors hope that the price of their shares will appreciate in value. The investors will then realize a profit when they sell their shares. Many companies focus more on increasing share price, stock repurchase programs, and corporate earnings than on dividend payout.

Property Dividends

Dividends payable in assets of the corporation other than cash are called **property dividends** or **dividends in kind**. Property dividends may be merchandise, real estate, or investments, or whatever form the board of directors designates. **Ranchers Exploration and Development Corp.** reported one year that it would pay a fourth-quarter dividend in gold bars instead of cash. Because of the obvious difficulties of divisibility of units and delivery to stockholders, the most common property dividend is in the form of securities of other companies that the distributing corporation holds as an investment.

For example, after ruling that **DuPont**'s 23% stock interest in **General Motors (GM)** violated antitrust laws, the Supreme Court ordered DuPont to divest itself of the GM stock within 10 years. The stock represented 63 million shares of GM's 281 million shares then outstanding. DuPont could not sell the shares in one block of 63 million. Further, it could not sell 6 million shares annually for the next 10 years without severely depressing the value of the GM stock. DuPont solved its problem by declaring a property dividend and distributing the GM shares as a dividend to its own stockholders.

- When declaring a property dividend, the corporation should **restate at fair value the property it will distribute**, **recognizing any gain or loss** as the difference between the property's fair value and carrying value at date of declaration.
- The corporation may then record the declared dividend as a debit to Retained Earnings (or Property Dividends Declared) and a credit to Property Dividends Payable, at an amount equal to the fair value of the distributed property.
- Upon distribution of the dividend, the corporation debits Property Dividends Payable and credits the account containing the distributed asset (restated at fair value).

Example 14.18
Property Dividend

FACTS Trendler, Inc. transferred to stockholders some of its equity investments costing $1,250,000 by declaring a property dividend on December 28, 2024, to be distributed on January 30, 2025, to stockholders of record on January 15, 2025. At the date of declaration, the securities have a fair value of $2,000,000.

QUESTION What entries should Trendler make to record the property dividend?

SOLUTION

At date of declaration:

December 28, 2024		
Equity Investments	750,000	
Gain on Investment ($2,000,000 − $1,250,000)		750,000
Retained Earnings (Property Dividends Declared)	2,000,000	
Property Dividends Payable		2,000,000

At date of distribution:

January 30, 2025		
Property Dividends Payable	2,000,000	
Equity Investments		2,000,000

Liquidating Dividends

The natural expectation of any stockholder who receives a dividend is that the corporation has operated successfully. As a result, the stockholder is receiving a share of its profits. Some corporations may use paid-in capital as a basis for dividends. Without proper disclosure of this fact, stockholders may erroneously believe the corporation has been operating at a profit. To avoid this type of deception, intentional or unintentional, a clear statement of the source of every dividend should accompany the dividend check.

- Dividends based on other than retained earnings are sometimes described as **liquidating dividends**.
- This term implies that such dividends are a return of the stockholder's investment rather than of profits. In other words, **any dividend not based on earnings reduces corporate paid-in capital and to that extent, it is a liquidating dividend**.

As indicated in Chapter 10, companies in the extractive industries may pay dividends equal to the total of accumulated income and depletion. The portion of these dividends in excess of accumulated income represents a return of part of the stockholder's investment.

Example 14.19
Liquidating Dividend

FACTS McChesney Mines Inc. issued a "dividend" to its common stockholders of $1,200,000. The cash dividend announcement noted that stockholders should consider $900,000 as income and the remainder a return of capital.

QUESTION How should McChesney Mines record the dividend?

SOLUTION

At date of declaration:

Retained Earnings	900,000	
Paid-in Capital in Excess of Par—Common Stock	300,000	
Dividends Payable		1,200,000

Note the liquidating portion, $300,000, is debited to Paid-in Capital in Excess of Par.

At date of payment:

Dividends Payable	1,200,000	
Cash		1,200,000

In some cases, management simply decides to cease business and declares a liquidating dividend. In these cases, liquidation may take place over a number of years to ensure an orderly and fair sale of assets. For example, when **Overseas National Airways** dissolved, it agreed to pay a liquidating dividend to its stockholders over a period of years equivalent to $8.60 per share. Each liquidating dividend payment reduces paid-in capital.

Stock Dividends and Stock Splits

What if a company has been profitable but wants to conserve cash or perhaps lacks sufficient cash to pay a cash dividend? Another way to "reward" stockholders is with a stock dividend or a stock split.

Stock Dividends

If management wishes to "capitalize" part of the earnings (i.e., reclassify amounts from earned to contributed capital) and thus retain earnings in the business on a permanent basis, it may issue a stock dividend. In this case, **the company distributes no assets**. Each stockholder maintains exactly the same proportionate interest in the corporation and the same total book value after the company issues the stock dividend. Of course, the book value per share is lower because each stockholder holds more shares.

A **stock dividend** therefore is the issuance by a corporation of its own stock to its stockholders on a pro rata basis, without receiving any consideration. In recording a stock dividend, some believe that the company should transfer the **par value of the stock issued** as a dividend from retained earnings to capital stock. Others believe that it should transfer the **fair value of the stock issued**—its market value at the declaration date—from retained earnings to capital stock and additional paid-in capital.

Underlying Concepts

By requiring fair value, the intent was to punish companies that used stock dividends. This approach violates the neutrality concept (that is, that standards-setting should be even-handed).

The fair value position was adopted, at least in part, in order to influence the stock dividend policies of corporations. Evidently in 1941, both the **New York Stock Exchange** and many in the accounting profession regarded periodic stock dividends as objectionable. They believed that the term dividend when used with a distribution of additional stock was misleading because investors' net assets did not increase as a result of this "dividend." As a result, these groups decided to make it more difficult for corporations to sustain a series of such stock dividends out of their accumulated earnings, by requiring the use of fair value when it substantially exceeded book value (see **Underlying Concepts**).[10]

- When the stock dividend is less than 20–25% of the common shares outstanding at the time of the dividend declaration, the company is therefore required to transfer the **fair value** of the stock issued from retained earnings. Stock dividends of less than 20–25% are often referred to as **small (ordinary) stock dividends**.
- This method of handling stock dividends is justified on the grounds that "many recipients of stock dividends look upon them as distributions of corporate earnings and usually in an amount equivalent to the fair value of the additional shares received." **[3]**

We consider this argument unconvincing. It is generally agreed that stock dividends are not income to the recipients. Therefore, sound accounting should not recommend procedures simply because some recipients think they are income.[11]

Example 14.20 Small Stock Dividend

FACTS Vine Corporation has outstanding 1,000 shares of $1 par value common stock and retained earnings of $50,000. If Vine declares a 10% stock dividend, it issues 100 additional shares to current stockholders (1,000 shares outstanding × .10). The fair value of the stock at the time of the stock dividend is $130 per share.

QUESTION What entries should Vine make to record the stock dividend at the date of declaration and at the date of distribution?

SOLUTION

At date of declaration:

Retained Earnings (100 × $130)	13,000	
Common Stock Dividend Distributable (100 × $1)		100
Paid-in Capital in Excess of Par—Common Stock (100 × $129)		12,900

If Vine prepares a balance sheet between the dates of declaration and distribution, it reports the Common Stock Dividend Distributable account in the stockholders' equity section as an addition to common stock.

At date of distribution:

Common Stock Dividend Distributable	100	
Common Stock		100

[10] This was perhaps the earliest instance of "economic consequences" affecting an accounting pronouncement. The Committee on Accounting Procedure described its action as required by "proper accounting and corporate policy." See Stephen A. Zeff, "The Rise of 'Economic Consequences'," *The Journal of Accountancy* (December 1978), pp. 53–66.

[11] One study concluded that **small** stock dividends do not always produce significant amounts of extra value on the date after issuance (ex date) and that **large** stock dividends almost always fail to generate extra value on the ex-dividend date. Taylor W. Foster III and Don Vickrey, "The Information Content of Stock Dividend Announcements," *The Accounting Review,* Vol. LIII, No. 2 (April 1978), pp. 360–370.

Looking at the journal entries in Example 14.20, notice that only stockholders' equity accounts are used.

- Retained Earnings is **decreased** by the fair value of the shares, and capital stock accounts are **increased** by the fair value of the shares.
- **The net effect on total stockholders' equity is zero.**
- **The journal entries merely indicate a reclassification of stockholders' equity from the Retained Earnings section to the Contributed Capital section.**

To continue with our Vine Corporation example, the stockholders' equity information is shown in **Illustration 14.13**. Before the 10% stock dividend, Vine has total stockholders' equity of $150,000 consisting of Common Stock of $1,000, Paid-in Capital in Excess of Par of $99,000 and Retained Earnings of $50,000. Assume there are three shareholders in Vine as noted in Illustration 14.13. Take a moment and study the impact on stockholders' equity after the date of declaration journal entry is made, and again after the date of distribution journal entry is made.

ILLUSTRATION 14.13 Effects of a Small (10%) Stock Dividend

Before dividend	
Common stock, 1,000 shares at $1 par	$ 1,000
Paid-in capital in excess of par—common stock	99,000
Retained earnings	50,000
Total stockholders' equity	$150,000
Stockholders' interests	
A. 400 shares, 40% interest, book value	$ 60,000
B. 500 shares, 50% interest, book value	75,000
C. 100 shares, 10% interest, book value	15,000
1,000 shares total	$150,000
After declaration but before distribution of 10% stock dividend	
If fair value ($130) is used as basis for entry:	
Common stock, 1,000 shares at $1 par	$ 1,000
Common stock distributable, 100 shares at $1 par	100
Paid-in capital in excess of par—common stock	111,900
Retained earnings ($50,000 − $13,000)	37,000
Total stockholders' equity	$150,000
After declaration and distribution of 10% stock dividend	
If fair value ($130) is used as basis for entry:	
Common stock, 1,100 shares at $1 par	$ 1,100
Paid-in capital in excess of par—common stock	111,900
Retained earnings ($50,000 − $13,000)	37,000
Total stockholders' equity	$150,000
Stockholders' interests	
A. 440 shares, 40% interest, book value	$ 60,000
B. 550 shares, 50% interest, book value	75,000
C. 110 shares, 10% interest, book value	15,000
1,100 shares total	$150,000

In reviewing Illustration 14.13, do you notice that total stockholders' equity does not change after the stock dividend? There are now 1,100 shares outstanding, but the total stockholders' equity is still $150,000. And what about the effect on the shareholders? Let's look at stockholder A. Before the stock dividend, stockholder A has 400 shares or 40% of the outstanding stock (400 ÷ 1,000). In a 10% stock dividend, stockholder A receives 40 additional shares (400 × .10) for a total of 440 shares. With 440 shares, stockholder A still has a 40% interest in Vine (440 ÷ 1,100) after the stock dividend.

Some state statutes specifically prohibit the issuance of stock dividends on treasury stock. In those states that permit treasury shares to participate in the distribution accompanying a

stock dividend or stock split, the planned use of the treasury shares influences corporate practice. For example, if a corporation issues treasury shares in connection with employee stock options, the treasury shares may participate in the distribution because the corporation usually adjusts the number of shares under option for any stock dividends or splits. But no useful purpose is served by issuing additional shares to the treasury stock without a specific purpose, since they are essentially equivalent to authorized but unissued shares.

Now let's consider a **large stock dividend**, which is a distribution of 25% or more of the common shares outstanding. Distributing significantly more shares in the market will have the effect of decreasing the market price of the stock. However, it cannot be predicted with certainty how much the market price will decrease. Therefore, corporations use par value when recording the journal entries for a large stock dividend.

Example 14.21
Large Stock Dividend

FACTS Rockland Steel, Inc. issued a large stock dividend by declaring a 30% stock dividend on November 20, distributable December 29 to stockholders of record December 12. At the date of declaration, 1,000,000 shares, par value $10, are outstanding and with a fair value of $200 per share.

QUESTIONS What entry would Rockland make at (a) the date of declaration and (b) the date of distribution?

SOLUTION

a. At date of declaration:

November 20

Retained Earnings	3,000,000	
Common Stock Dividend Distributable		3,000,000

Computations: 1,000,000 shares	300,000 additional shares
× .30 dividend	× $10 par value
300,000	$3,000,000

b. At date of distribution:

December 29

Common Stock Dividend Distributable	3,000,000	
Common Stock		3,000,000

Again, only stockholders' equity accounts are used in Example 14.21. As we saw with the small stock dividend, **the journal entries merely indicate a reclassification of stockholders' equity from the Retained Earnings section to the Contributed Capital section.** The net effect of small and large dividends on total stockholders' equity is zero.

Stock Splits

If a company has undistributed earnings over several years and accumulates a sizable balance in retained earnings, the market value of its outstanding shares likely increases significantly. Stock issued at prices less than $50 a share can easily attain a market price in excess of $200 a share over time. The higher the market price of a stock, however, the less readily some investors can purchase it.

- The managements of many corporations believe that better public relations depend on wider ownership of the corporation's stock.
- Therefore, they target a market price sufficiently low to be within range of the majority of potential investors.
- To reduce the market price of shares, corporations can execute a **stock split**.

For example, **Qualcomm**'s stock had risen above $500 per share. Qualcomm then split its stock 4-for-1, which means 1 share becomes 4 shares. The split creates more shares in the market which decreases the market price, and the stock becomes more affordable for some investors.

One classic case is **Coca-Cola**. Coca-Cola has split its stock 11 times. If it had not done all of these splits, one of Coke's original shares would be worth **$10.3 million.** From an accounting standpoint, there is **no journal entry for a stock split**. If there is no journal entry, that means there is no change to any accounts, therefore total stockholders' equity does not change. However, the number of shares increases in proportion to the split.

Illustration 14.14 shows the stockholders' equity section before and after a 2-for-1 stock split. The number of shares doubles and the par value is halved. Notice the account balances do not change.

ILLUSTRATION 14.14 Effects of a Stock Split

Stockholders' Equity Before 2-for-1 Split		Stockholders' Equity After 2-for-1 Split	
Common stock, 1,000 shares at $100 par	$100,000	Common stock, 2,000 shares at $50 par	$100,000
Retained earnings	50,000	Retained earnings	50,000
	$150,000		$150,000

Stock Split and Stock Dividend Differentiated

From a legal standpoint, a stock split differs from a stock dividend. How? A stock split increases the number of shares outstanding and decreases the par or stated value per share. **A stock dividend, although it increases the number of shares outstanding, does not decrease the par value; thus, it increases the total par value of outstanding shares.**

As discussed, the reasons for issuing a stock dividend are numerous and varied.

- Stock dividends can be primarily a publicity gesture **because many consider stock dividends as dividends**.
- The corporation may simply wish to retain profits in the business by capitalizing a part of retained earnings. In such a situation, it makes a transfer on declaration of a stock dividend from earned capital to contributed capital.

A corporation may also use a stock dividend, like a stock split, to increase the marketability of the stock, although marketability is often a secondary consideration.

If the stock dividend is large, it has the same effect on market price as a stock split. **Whenever corporations issue additional shares for the purpose of reducing the unit market price, then the distribution more closely resembles a stock split than a stock dividend. This effect usually results only if the number of shares issued is more than 20–25% of the number of shares previously outstanding.** **[4]** Recall that a stock dividend of more than 20–25% of the number of shares previously outstanding is called a large stock dividend.[12] Such a distribution should not be called a stock dividend but instead "a split-up effected in the form of a dividend" or "stock split-up."

- Since a split-up effected in the form of a dividend does not alter the par value per share, companies generally are required to transfer the par value amount from retained earnings.
- In other words, companies transfer from retained earnings to capital stock **the par value of the stock issued**, as opposed to a transfer of the market price of the shares issued as in the case of a small stock dividend.[13]

For example, **Brown Group, Inc.** at one time authorized a 2-for-1 split, effected in the form of a stock dividend. As a result of this authorization, it distributed approximately 10.5 million

[12]The SEC has added more precision to the 20–25% rule. Specifically, the SEC indicates that companies should consider distributions of 25% or more as a "split-up effected in the form of a dividend." Companies should account for distributions of less than 25% as a stock dividend. The SEC more precisely defined GAAP here. As a result, public companies follow the SEC rule.

[13]Often, a company records a split-up effected in the form of a dividend as a debit to Paid-in Capital instead of Retained Earnings to indicate that this transaction should affect only paid-in capital accounts. No reduction of retained earnings is required except as indicated by legal requirements. *For homework purposes, assume that the debit is to Retained Earnings.*

shares, and transferred more than $39 million representing the par value of the shares issued from Retained Earnings to the Common Stock account.

Illustration 14.15 summarizes and compares the effects in the balance sheet and related items of various types of dividends and stock splits.

ILLUSTRATION 14.15 Effects of Dividends and Stock Splits on Financial Statement Elements

[a]Market price of shares. [b]Par or stated value of shares. [c]Excess of market price over par.

Accounting Matters — Splitsville

Guessing which companies might be next to split their shares is a hobby of investors. When companies' per share prices get high, some look to lower their per share prices to make them more attractive to individual investors. It's a bit of an old-fashioned development, but one that investors are still conditioned to monitor. There's no question that stocks with the highest per share prices would be the logical place to consider for possible splits.

On the other hand, certain large companies are taking a different approach. The godfather of the no-split camp is **Berkshire Hathaway**'s chairman Warren Buffett. Berkshire's Class A shares were recently selling in excess of $250,000 per share. Buffett said he didn't want to split the shares for people who found such a move a good reason for buying the stock. His point—people who buy for non-value reasons are likely to sell for non-value reasons. The table in the next column lists some companies that recently have split their stock.

Some companies executed reverse stock splits in which, say, five shares are consolidated into one. Thus, a stock previously trading at $5 per share would be part of an unsplit share trading at $25. Unsplitting might avoid some of the negative consequences of a low trading price. The downside to this strategy is that analysts might view reverse splits as additional bad news about the direction of the stock price. For example, **Webvan**, a failed Internet grocer, did a 1-for-25 reverse split just before it entered bankruptcy. And struggling **Tenet Healthcare** executed a 1-for-4 reverse split in combination with a debt restructuring, in order to get its stock price into a more favorable trading range.

Company	Ratio
Lee Enterprises	1-10
Bragg Gaming Group	1-10
High Tide, Inc.	1-15
Trade Desk, Inc.	10-1
Trex	2-1
Sherwin-Williams	3-1

Put It into Practice LO 14.3

Record Dividends

FACTS Bronson Company had the following dividend transactions. It has 2 million outstanding common shares with a $10 par value.

a. Declared a cash dividend of $1 per share on its 2 million outstanding common shares ($10 par value). The dividend was declared on August 1, 2025, payable on September 9, 2025, to all stockholders of record on August 15, 2025.

b. Bronson owns shares of Cole Corporation stock. At December 31, 2024, the securities were carried in Bronson's accounting records at their cost of $875,000, which equals their fair value. On September 21, 2025, when the fair value of the securities was $1,200,000, Cole declared a property dividend whereby the Cole securities are to be distributed on October 23, 2025, to stockholders of record on October 8, 2025.

c. On December 1, 2025, Bronson declares a 5% stock dividend when the fair value of the stock is $35 per share. The distribution date is December 20, 2025.

d. Use the information in part (c), but assume Bronson declared a 100% stock dividend rather than a 5% stock dividend.

INSTRUCTIONS

Prepare all journal entries for these transactions, at dates of declaration, record, and distribution, as needed.

SOLUTION

a. Entries for the cash dividend are as follows.

August 1, 2025		
Retained Earnings (2,000,000 × $1)	2,000,000	
Dividends Payable		2,000,000
August 15, 2025		
No entry.		
September 9, 2025		
Dividends Payable	2,000,000	
Cash		2,000,000

b. Entries for the property dividend are as follows.

September 21, 2025		
Equity Investments	325,000	
Gain or Investment ($1,200,000 – $875,000)		325,000
Retained Earnings	1,200,000	
Property Dividends Payable		1,200,000
October 8, 2025		
No entry.		
October 23, 2025		
Property Dividends Payable	1,200,000	
Equity Investments		1,200,000

c. Entries for the 5% stock dividend are as follows.

December 1, 2025		
Retained Earnings*	3,500,000	
Common Stock Dividend Distributable**		1,000,000
Paid-in Capital in Excess of Par—Common Stock		2,500,000

*2,000,000 × .05 × $35 (fair value of the stock is used for small stock dividends)
**2,000,000 × .05 × $10

December 20, 2025		
Common Stock Dividend Distributable	1,000,000	
Common Stock		1,000,000

d. Entries for the 100% stock dividend are as follows.

December 1, 2025		
Retained Earnings	20,000,000	
Common Stock Dividend Distributable (2,000,000 × $10)		20,000,000

Par value of the stock is used for large stock dividends.

December 20, 2025		
Common Stock Dividend Distributable	20,000,000	
Common Stock		20,000,000

14.4 Presentation and Decision Analysis of Stockholders' Equity

LEARNING OBJECTIVE 4

Indicate how to present and analyze stockholders' equity.

Presentation

Balance Sheet

Illustration 14.16 shows a comprehensive stockholders' equity section from the balance sheet of Frost Company that includes most of the equity items we discussed in this chapter.

ILLUSTRATION 14.16
Comprehensive Stockholders' Equity Presentation

Frost Company
Stockholders' Equity
December 31, 2025

Capital stock		
Preferred stock, $100 par value, 7% cumulative, 100,000 shares authorized, 30,000 shares issued and outstanding		$ 3,000,000
Common stock, no-par, stated value $10 per share, 500,000 shares authorized, 400,000 shares issued		4,000,000
Common stock dividend distributable, 20,000 shares		200,000
Total capital stock		7,200,000
Additional paid-in capital		
Excess over par—preferred	$150,000	
Excess over stated value—common	840,000	990,000
Total paid-in capital		8,190,000
Retained earnings		4,360,000
Total paid-in capital and retained earnings		12,550,000
Less: Cost of treasury stock (2,000 shares, common)		190,000
Accumulated other comprehensive loss		360,000
Total stockholders' equity		$12,000,000

Frost should disclose the pertinent rights and privileges of the various securities outstanding. For example, companies must disclose all of the following (if appropriate): dividend and liquidation preferences, participation rights, call prices and dates, conversion or exercise prices and pertinent dates, sinking fund requirements, unusual voting rights, and significant terms of contracts to issue additional shares. Liquidation preferences should be disclosed in the equity section of the balance sheet, rather than in the notes to the financial statements, to emphasize the possible effect of this restriction on future cash flows. [5]

Disclosure of Restrictions on Retained Earnings

Many corporations restrict retained earnings or dividends, without any formal journal entries. Such restrictions are **best disclosed by note**. Parenthetical notations are sometimes used, but restrictions imposed by bond indentures and loan agreements commonly require an extended explanation. Notes provide a medium for more complete explanations and free the financial statements from abbreviated notations. The note disclosure should reveal the source of the

restriction, pertinent provisions, and the amount of retained earnings subject to restriction, or the amount not restricted.

Restrictions may be based on the retention of a certain retained earnings balance, the ability to maintain certain working capital requirements, additional borrowing, and other considerations. The example from the annual report of **Alberto-Culver Company** in **Illustration 14.17** shows a note disclosing potential restrictions on retained earnings and dividends.

Alberto-Culver Company

Note 3 (In part): The $200 million revolving credit facility, the term note, and the receivables agreement impose restrictions on such items as total debt, working capital, dividend payments, treasury stock purchases, and Interest expense. At year-end, the company was in compliance with these arrangements, and $220 million of consolidated retained earnings was not restricted as to the payment of dividends.

ILLUSTRATION 14.17 Disclosure of Restrictions on Retained Earnings and Dividends

Statement of Stockholders' Equity

The **statement of stockholders' equity** is frequently presented in the following basic format.

1. Balance at the beginning of the period.
2. Additions.
3. Deductions.
4. Balance at the end of the period.

Companies must disclose changes in the separate accounts comprising stockholders' equity, to make the financial statements sufficiently informative. Such changes may be disclosed in separate statements or in the basic financial statements or notes.

A **columnar format** for the presentation of changes in stockholders' equity items in published annual reports is gaining in popularity. **Illustration 14.18** shows the statement of stockholders' equity for Frost Company.

ILLUSTRATION 14.18 Columnar Format for Statement of Stockholders' Equity

Frost Company
For the Fiscal Year Ended December 31, 2025
(in $ thousands)

	Preferred Stock	APIC—Preferred Stock	Common Stock	APIC—Common Stock	Stock Div. Distrib.	Ret. Earni.	AOCI (Loss)	Treasury Stock	Total Equity
Bal., 12/31/24	$ 3,000.0	$ 150.0	$4,000.0	$840.0	$ 0.0	$3,980.9	$(403.2)	$(160.0)	$11,407.7
Unrealized gain							43.2		43.2
Stock dividend					200.0	(200.0)			0.0
Dividends on preferred						(121.0)			(121.0)
Dividends on common						(140.0)			(140.0)
Repurchase common stock								(30.0)	(30.0)
Net income (loss)						840.1			840.1
Bal., 12/31/25	$ 3,000.0	$ 150.0	$4,000.0	$840.0	$200.0	$4,360.0	$(360.0)	$(190.0)	$12,000.0

APIC: Additional paid-in capital.

AOCI: Accumulated other comprehensive income.

Preferred stock: $100 par value, 7% cumulative, 100,000 shares authorized, 30,000 shares issued and outstanding.

Common stock: No-par, stated value $10 per share, 500,000 shares authorized, 400,000 shares issued, 380,000 outstanding (20,000 treasury shares). Common stock dividend distributable, 20,000 shares issued in 2025.

Decision Analysis

Analysts use stockholders' equity ratios to evaluate a company's profitability and long-term solvency. In this section, we will use financial data from the insurance company **Allstate**'s annual report to illustrate three common ratios.

(in millions)	2020	2019	2018
Net income	$ 5,576	$ 4,847	
Preferred dividends	115	169	
Common dividends	680	658	
Common stockholders' equity	28,247	23,750	19,382
Preferred stockholders' equity	1,970	2,248	1,930

Return on Common Stockholders' Equity

The **return on common stockholders' equity**, often referred to as **return on equity (ROE)**, measures profitability from the common stockholders' viewpoint.

- This ratio shows how many dollars of net income the company earned for each dollar invested by the owners.
- ROE also helps investors judge the worthiness of a stock when the overall market is not doing well.

For example, **Best Buy** shares at one time dropped nearly 40%. But a review of its ROE during this period and since shows a steady return of 20-22% while the overall market ROE declined from 16% to 8%. More importantly, Best Buy and other stocks, such as **3M** and **Procter & Gamble**, recovered their lost market value, while other stocks with less robust ROEs stayed in the doldrums.

The formula for ROE is:

$$\text{ROE} = \frac{\text{Net Income} - \text{Preferred Dividends}}{\text{Average Common Stockholders' Equity}}$$

We can calculate Allstate's ROE as follows.

$$\text{2020: } \frac{\$5{,}576 - \$115}{(\$28{,}247 + \$23{,}750) \div 2} = 21.01\% \qquad \text{2019: } \frac{\$4{,}847 - \$169}{(\$23{,}750 + \$19{,}382) \div 2} = 21.69\%$$

Financial ratios like ROE are not as meaningful if we have nothing to compare them to. For Allstate, it is helpful to compare its ROE over time, noting that the ratio remained relatively stable from 2019 to 2020. Additionally, it is helpful to compare ratios to other companies in the same industry. For example, **Progressive**, another insurance company, had a ROE of 34%.

When preferred stock is present, income available to common stockholders equals net income less preferred dividends. Similarly, the amount of common stock equity used in this ratio equals **total stockholders' equity less the par value of preferred stock**.

Companies can improve return on common stockholders' equity through the prudent use of debt or preferred stock financing. **Trading on the equity** describes the practice of using borrowed money or issuing preferred stock in hopes of obtaining a higher rate of return on the money used.

- Shareholders win if return on the assets is higher than the cost of financing these assets.
- When this happens, the return on common stockholders' equity will exceed the return on total assets.

In short, the company is "trading on the equity at a gain."

In this situation, the money obtained from bondholders or preferred stockholders earns enough to pay the interest or preferred dividends and leaves a profit for the common stockholders. On the other hand, if the cost of the financing is higher than the rate earned on the assets, the company is trading on equity at a loss and stockholders lose.

Payout Ratio

Another ratio of interest to investors, the **payout ratio**, is the ratio of cash dividends to net income. The payout ratio is calculated as follows.

$$\text{Payout Ratio} = \frac{\text{Cash Dividends Paid to Common Stockholders}}{\text{Net Income Available to Common Stockholders}}$$

Note this ratio focuses on dividends paid to common stockholders only. If preferred stock is outstanding, then preferred stock dividends must be subtracted from net income to arrive at net income available to common stockholders.

We can calculate Allstate's payout ratio as follows.

$$2020: \frac{\$680}{\$5{,}576 - \$115} = 12.45\% \qquad 2019: \frac{\$658}{\$4{,}847 - \$169} = 14.07\%$$

Allstate paid out 12.45% of the income available to common shareholders as a dividend in 2020, a slight decrease from 2019.

Book Value per Share

A much-used basis for evaluating net worth is found in the book value or equity value per share of stock. **Book value per share** of stock is the amount each share would receive if the company were liquidated **on the basis of amounts reported on the balance sheet**. However, the figure loses much of its relevance if the valuations on the balance sheet fail to approximate fair value of the assets. Book value per share is calculated as follows.

$$\text{Book Value per Share} = \frac{\text{Common Stockholders' Equity}}{\text{Outstanding Common Shares}}$$

Allstate reports 304 and 319 million shares of common stock outstanding for 2020 and 2019, respectively. We can calculate Allstate's book value per share as follows.

$$2020: \frac{\$28{,}247}{304} = \$92.92 \qquad 2019: \frac{\$23{,}750}{319} = \$74.45$$

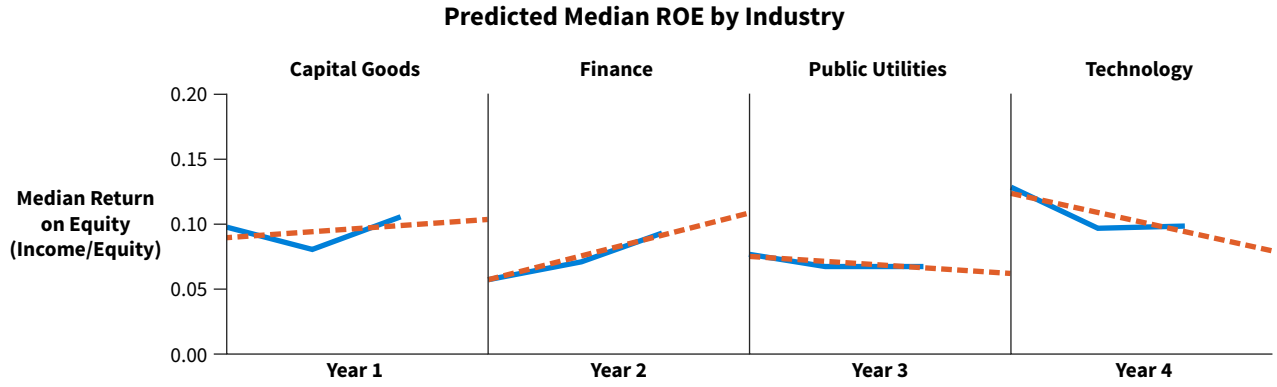
This tells us that if Allstate were to liquidate its balance sheet, common shareholders would get approximately $93 for each share they own. Investors can use this ratio to understand if a stock is undervalued by comparing the book value per share to the market price per share. At December 31, 2020, Allstate's common stock was trading at $109.93 per share, indicating that Allstate was not undervalued at that time.

Analytics in Action: Track Those Ratios!

Financial ratios can be a powerful tool when analyzing a company, especially if we are able to track those ratios over time and benchmark against industry averages. The more data, the better! And to help with all this data, some companies are devoted to pulling financial statement and other data from public company filings and making it available for investors and analysts.

Using machine learning, financial data can be pulled from public reports and standardized for use as benchmark data. This isn't limited to financial data either. Using artificial intelligence, these companies can analyze vast amounts of financial text included in public documents to gain insights on a company's cultural values, beliefs and strategies, competitive advantages, and more.

Using benchmark financial data, investors could create visualizations like the following charts. Showing historical ROE by industry with a trendline (dashes) helps investors to forecast future results.



Go to the Analytics in Action Activities section at the end of the chapter, which includes Excel-based problems with data sets, to see the relevance and application of data analytics to intermediate accounting topics.

APPENDIX **14A**

Dividend Preferences and Book Value per Share

LEARNING OBJECTIVE *5

Explain the different types of preferred stock dividends and their effect on book value per share.

Dividend Preferences

Illustrations 14A.1 to 14A.4 indicate the **effects** of various **dividend preferences** on dividend distributions to common and preferred stockholders. Assume that in 2025, Mason Company is to distribute $50,000 as cash dividends, its outstanding common stock has a par value of $400,000, and its 6% preferred stock has a par value of $100,000. Mason would distribute dividends to each class, employing the assumptions given, as follows.

1. If the preferred stock is noncumulative and nonparticipating:

ILLUSTRATION 14A.1 Dividend Distribution, Noncumulative and Nonparticipating Preferred

	Preferred	Common	Total
6% of $100,000	$6,000		$ 6,000
The remainder to common		$44,000	44,000
Totals	$6,000	$44,000	$50,000

2. If the preferred stock is cumulative and nonparticipating, and Mason Company did not pay dividends on the preferred stock in the preceding two years:

ILLUSTRATION 14A.2 Dividend Distribution, Cumulative and Nonparticipating Preferred, with Dividends in Arrears

	Preferred	Common	Total
Dividends in arrears, 6% of $100,000 for 2 years	$12,000		$12,000
Current year's dividend, 6% of $100,000	6,000		6,000
The remainder to common		$32,000	32,000
Totals	$18,000	$32,000	$50,000

3. If the preferred stock is noncumulative and is fully participating:[14]

ILLUSTRATION 14A.3 Dividend Distribution, Noncumulative and Fully Participating Preferred

	Preferred	Common	Total
Current year's dividend, 6%	$ 6,000	$24,000	$30,000
Participating dividend of 4%	4,000	16,000	20,000
Totals	$10,000	$40,000	$50,000

The participating dividend was determined as follows:		
Current year's dividend:		
Preferred, 6% of $100,000 =	$ 6,000	
Common, 6% of $400,000 =	24,000	$30,000
Amount available for participation ($50,000 − $30,000)		$20,000
Par value of stock that is to participate ($100,000 + $400,000)		$500,000
Rate of participation ($20,000 ÷ $500,000)		4%
Participating dividend:		
Preferred, 4% of $100,000		$ 4,000
Common, 4% of $400,000		16,000
		$20,000

4. If the preferred stock is cumulative and is fully participating, and Mason Company did not pay dividends on the preferred stock in the preceding two years:

ILLUSTRATION 14A.4 Dividend Distribution, Cumulative and Fully Participating Preferred, with Dividends in Arrears

	Preferred	Common	Total
Dividends In arrears, 6% of $100,000 for 2 years	$12,000		$12,000
Current year's dividend, 6%	6,000	$24,000	30,000
Participating dividend, 1.6% ($8,000 ÷ $500,000)	1,600	6,400	8,000
Totals	$19,600	$30,400	$50,000

[14]When preferred stock is participating, there may be different agreements as to how the participation feature is to be executed. However, in the absence of any specific agreement the following procedure is recommended:

a. After the preferred stock is assigned its current year's dividend, the common stock will receive a "like" percentage of par value outstanding. In example (3) shown in Illustration 14A.3, this amounts to 6% of $400,000.

b. In example (3), shown in Illustration 14A.3, the remainder of the declared dividend is $20,000. We divide this amount by total par value ($500,000) to find the rate of participation to be applied to each class of stock. In this case, the rate of participation is 4% ($20,000 ÷ $500,000), which we then multiply by the par value of each class of stock to determine the amount of participation.

Book Value per Share

Book value per share in its simplest form is computed as net assets divided by outstanding common shares at the end of the year. The computation of book value per share becomes more complicated if a company has preferred stock in its capital structure. For example, if preferred dividends are in arrears, if the preferred stock is participating, or if preferred stock has a redemption or liquidating value higher than its carrying amount, the company must allocate retained earnings between the preferred and common stockholders in computing book value.

To illustrate, assume that the situation shown in **Illustration 14A.5** exists.

ILLUSTRATION 14A.5
Computation of Book Value per Share—No Dividends in Arrears

Stockholders' equity	Preferred	Common
Preferred stock, 5%	$300,000	
Common stock		$400,000
Excess of issue price over par of common stock		37,500
Retained earnings		162,582
Totals	$300,000	$600,082
Common shares outstanding		4,000
Book value per share		$150.02

The situation in Illustration 14A.5 assumes that no preferred dividends are in arrears and that the preferred is not participating. Now assume that the same facts exist except that the 5% preferred is cumulative, participating up to 8%, and that dividends for three years before the current year are in arrears. **Illustration 14A.6** shows how to compute the book value of the common stock, assuming that no action has yet been taken concerning dividends for the current year.

ILLUSTRATION 14A.6
Computation of Book Value per Share—with Dividends in Arrears

Stockholders' equity	Preferred	Common
Preferred stock, 5%	$300,000	
Common stock		$400,000
Excess of issue price over par of common stock		37,500
Retained earnings:		
Dividends in arrears (3 years at 5% a year)	45,000	
Current year requirement at 5%	15,000	20,000
Participating—additional 3%	9,000	12,000
Remainder to common		61,582
Totals	$369,000	$531,082
Shares outstanding		4,000
Book value per share		$132.77

In connection with the book value computation, the analyst must know how to handle the following items: the number of authorized and unissued shares; the number of treasury shares on hand; any commitments with respect to the issuance of unissued shares or the reissuance of treasury shares; and the relative rights and privileges of the various types of stock authorized. As an example, if the liquidating value of the preferred stock is higher than its carrying amount, the liquidating amount should be used in the book value computation.

Review and Practice

Key Terms Review

accumulated other comprehensive income 14-7
Additional Paid-in Capital 14-8
book value per share 14-39
callable preferred stock 14-15

treasury stock 14-19
watered stock 14-12

Learning Objectives Review

1 Describe the corporate form and the issuance of shares of stock.

Among the **specific characteristics of the corporate form** that affect accounting are the (1) influence of state corporate law, (2) use of the capital stock or share system, and (3) development of a variety of ownership interests. In the absence of restrictive provisions, each share of stock carries the right to share proportionately in (1) profits and losses, (2) management (the right to vote for directors), (3) corporate assets upon liquidation, and (4) any new issues of stock of the same class (called the preemptive right).

Stockholders' or owners' equity is classified into two categories: contributed capital and earned capital. Contributed capital (paid-in capital) describes the total amount paid in on capital stock. Put another way, it is the amount that stockholders invested in the corporation for use in the business. Contributed capital includes items such as the par value of all outstanding capital stock and premiums less any discounts on issuance. Earned capital is the capital that develops if the business operates profitably; it consists of all undistributed income that remains invested in the company (retained earnings and accumulated other comprehensive income).

Accounts are kept for the following **different types of stock.** *Par value stock:* (a) preferred stock or common stock, (b) paid-in capital in excess of par or additional paid-in capital, and (c) discount on stock. *No-par stock:* common stock or common stock and additional paid-in capital, if stated value used.

Stock issued in combination with other securities (lump-sum sales): The two methods of allocation available are (a) the proportional method and (b) the incremental method. **Stock issued in noncash transactions:** When issuing stock for services or property other than cash, the company should record the property or services at either the fair value of the stock issued, or the fair value of the noncash consideration received, whichever is more clearly determinable.

Preferred stock is a special class of shares that possesses certain preferences or features not possessed by the common stock. The features that are most often associated with preferred stock issues are (1) preference as to dividends, (2) preference as to assets in the event of liquidation, (3) convertible into common stock, (4) callable at the option of the corporation, and (5) nonvoting. At issuance, the accounting for preferred stock is similar to that for common stock. When convertible preferred stock is converted, a company uses the book value method. It debits Preferred Stock, along with any related Paid-in Capital in Excess of Par—Preferred Stock and credits Common Stock and Paid-in Capital in Excess of Par—Common Stock (if an excess exists).

2 Describe the accounting and reporting for reacquisition of shares.

The cost method is generally used in accounting for treasury stock. This method derives its name from the fact that a company maintains the Treasury Stock account at the cost of the shares purchased. Under the cost method, a company debits the Treasury Stock account for the cost of the shares acquired and credits it for this same cost upon reissuance. The price received for the stock when originally issued does not affect the entries to record the acquisition and reissuance of the treasury stock.

3 Explain the accounting and reporting issues related to dividends.

The state incorporation laws normally provide information concerning the legal restrictions related to the payment of dividends. Corporations rarely pay dividends in an amount equal to the legal limit. This is due, in part, to the fact that companies use assets

represented by undistributed earnings to finance future operations of the business. If a company is considering declaring a dividend, it must ask two preliminary questions. (1) Is the condition of the corporation such that the dividend is **legally permissible**? (2) Is the condition of the corporation such that a dividend is **economically sound**?

Dividends are of the following types: (1) cash dividends, (2) property dividends, (3) liquidating dividends (dividends based on other than retained earnings), and (4) stock dividends (the issuance by a corporation of its own stock to its stockholders on a pro rata basis, but without receiving consideration).

Generally accepted accounting principles require that the accounting for **small stock dividends** (less than 20–25%) rely on the fair value of the stock issued. When declaring a common stock dividend, a company debits Retained Earnings at the fair value of the stock it distributes. The entry includes a credit to Common Stock Dividend Distributable at par value times the number of shares, with any excess credited to Paid-in Capital in Excess of Par—Common Stock. If the number of shares issued exceeds 20–25% of the shares outstanding **(large stock dividend)**, it debits Retained Earnings at par value and credits Common Stock Distributable—there is no additional paid-in capital.

A **stock dividend** is a capitalization of retained earnings that reduces retained earnings and increases certain contributed capital accounts. The par value per share and total stockholders' equity remain unchanged with a stock dividend, and all stockholders retain their same proportionate share of ownership. A **stock split** results in an increase or decrease in the number of shares outstanding, with a corresponding decrease or increase in the par or stated value per share. No accounting entry is required for a stock split.

4 Indicate how to present and analyze stockholders' equity.

The stockholders' equity section of a balance sheet includes capital stock, additional paid-in capital, and retained earnings. A company might also present additional items such as treasury stock and accumulated other comprehensive income. Companies often provide a statement of stockholders' equity. Common ratios that use stockholders' equity amounts are **return on common stockholders' equity**, **payout ratio**, and **book value per share**.

***5 Explain the different types of preferred stock dividends and their effect on book value per share.**

The dividend preferences of preferred stock affect the dividends paid to stockholders. Preferred stock can be (1) cumulative or noncumulative, and (2) fully participating, partially participating, or nonparticipating. If preferred dividends are in arrears, if the preferred stock is participating, or if preferred stock has a redemption or liquidation value higher than its carrying amount, allocate retained earnings between preferred and common stockholders in computing book value per share.

Enhanced Review and Practice

Go to Wiley Course Resources for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Exercises, Problems, Problem Solution Walkthrough Videos, Data Analytics Activities, and many more assessment tools and resources are available for practice in Wiley Course Resources.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

Questions

1. In the absence of restrictive provisions, what are the basic rights of stockholders of a corporation?
2. Why is a preemptive right important?
3. Distinguish between common and preferred stock.
4. Why is the distinction between paid-in capital and retained earnings important?
5. Explain each of the following terms: authorized capital stock, unissued capital stock, issued capital stock, outstanding capital stock, and treasury stock.
6. What is meant by par value, and what is its significance to stockholders?
7. Describe the accounting for the issuance for cash of no-par value common stock at a price in excess of the stated value of the common stock.
8. Explain the difference between the proportional method and the incremental method of allocating the proceeds of lump-sum sales of capital stock.
9. What are the different bases for stock valuation when assets other than cash are received for issued shares of stock?
10. Explain how underwriting costs and accounting and legal fees associated with the issuance of stock should be recorded.
11. What features or rights may alter the character of preferred stock?
12. Dagwood Inc. recently noted that its 4% preferred stock and 4% participating preferred stock, which are both cumulative, have priority as to dividends up to 4% of their par value. Its participating preferred stock participates equally with the common stock in any dividends in excess of 4%. What is meant by the term participating? Cumulative?

13. Where in the financial statements is preferred stock normally reported?

14. For what reasons might a corporation purchase its own stock?

15. Discuss the propriety of showing:

a. Treasury stock as an asset.

b. "Gain" or "loss" on sale of treasury stock as additions to or deductions from income.

c. Dividends received on treasury stock as income.

16. List possible sources of additional paid-in capital.

17. Satchel Inc. purchases 10,000 shares of its own previously issued $10 par common stock for $290,000. Assuming the shares are held in the treasury with intent to reissue, what effect does this transaction have on (a) net income, (b) total assets, (c) total paid-in capital, and (d) total stockholders' equity?

18. Indicate how each of the following accounts should be classified in the stockholders' equity section.

a. Common Stock.

b. Retained Earnings.

c. Paid-in Capital in Excess of Par—Common Stock.

d. Treasury Stock.

e. Paid-in Capital from Treasury Stock.

f. Paid-in Capital in Excess of Stated Value—Common Stock.

g. Preferred Stock.

19. What factors influence the dividend policy of a company?

20. What are the principal considerations of a board of directors in making decisions involving dividend declarations? Discuss briefly.

21. Dividends are sometimes said to have been paid "out of retained earnings." What is the error, if any, in that statement?

22. Distinguish among: cash dividends, property dividends, liquidating dividends, and stock dividends.

23. Describe the accounting entry for a stock dividend, if any. Describe the accounting entry for a stock split, if any.

24. Stock splits and stock dividends may be used by a corporation to change the number of shares of its stock outstanding.

a. What is meant by a stock split effected in the form of a dividend?

b. From an accounting viewpoint, explain how the stock split effected in the form of a dividend differs from an ordinary stock dividend.

c. How should a stock dividend that has been declared but not yet issued be classified in a balance sheet? Why?

25. The following comment appeared in the notes of Colorado Corporation's annual report: "Such distributions, representing proceeds from the sale of Sarazan, Inc., were paid in the form of partial liquidating dividends and were in lieu of a portion of the Company's ordinary cash dividends." How would a partial liquidating dividend be accounted for in the financial records?

26. This comment appeared in the annual report of MacCloud Inc.: "The Company could pay cash or property dividends on the Class A common stock without paying cash or property dividends on the Class B common stock. But if the Company pays any cash or property dividends on the Class B common stock, it would be required to pay at least the same dividend on the Class A common stock." How is a property dividend accounted for in the financial records?

27. For what reasons might a company restrict a portion of its retained earnings?

28. How are restrictions of retained earnings reported?

*29. McNabb Corp. had $100,000 of 7%, $20 par value preferred stock and 12,000 shares of $25 par value common stock outstanding throughout 2025.

a. Assuming that total dividends declared in 2025 were $64,000, and that the preferred stock is not cumulative but is fully participating, common stockholders should receive 2025 dividends of what amount?

b. Assuming that total dividends declared in 2025 were $64,000, and that the preferred stock is fully participating and cumulative with preferred dividends in arrears for 2024, preferred stockholders should receive 2025 dividends totaling what amount?

c. Assuming that total dividends declared in 2025 were $30,000, that the preferred stock is cumulative, nonparticipating, and was issued on January 1, 2024, and that $5,000 of preferred dividends were declared and paid in 2024, the common stockholders should receive 2025 dividends totaling what amount?

Brief Exercises

BE14.1 (LO 1) Buttercup Corporation issued 300 shares of $10 par value common stock for $4,500. Prepare Buttercup's journal entry.

BE14.2 (LO 1) Swarten Corporation issued 600 shares of no-par common stock for $8,200. Prepare Swarten's journal entry if (a) the stock has no stated value, and (b) the stock has a stated value of $2 per share.

BE14.3 (LO 1, 2) Wilco Corporation has the following account balances at December 31, 2025.

Common stock, $5 par value	$ 510,000
Treasury stock	90,000
Retained earnings	2,340,000
Paid-in capital in excess of par—common stock	1,320,000

Prepare Wilco's December 31, 2025, stockholders' equity section.

BE14.4 (LO 1) Ravonette Corporation issued 300 shares of $10 par value common stock and 100 shares of $50 par value preferred stock for a lump sum of $13,500. The common stock has a market price of $20 per share, and the preferred stock has a market price of $90 per share. Prepare the journal entry to record the issuance.

BE14.5 (LO 1) On February 1, 2025, Buffalo Corporation issued 3,000 shares of its $5 par value common stock for land worth $31,000. Prepare the February 1, 2025, journal entry.

BE14.6 (LO 1) Moonwalker Corporation issued 2,000 shares of its $10 par value common stock for $60,000. Moonwalker also incurred $1,500 of costs associated with issuing the stock. Prepare Moonwalker's journal entry to record the issuance of the company's stock.

BE14.7 (LO 1) Hinges Corporation issued 500 shares of $100 par value preferred stock for $61,500. Prepare Hinges's journal entry.

BE14.8 (LO 2) Sprinkle Inc. has outstanding 10,000 shares of $10 par value common stock. On July 1, 2025, Sprinkle reacquired 100 shares at $87 per share. On September 1, Sprinkle reissued 60 shares at $90 per share. On November 1, Sprinkle reissued 40 shares at $83 per share. Prepare Sprinkle's journal entries to record these transactions using the cost method.

BE14.9 (LO 2) Arantxa Corporation has outstanding 20,000 shares of $5 par value common stock. On August 1, 2025, Arantxa reacquired 200 shares at $80 per share. On November 1, Arantxa reissued the 150 shares at $70 per share. Arantxa had no previous treasury stock transactions. Prepare Arantxa's journal entries to record these transactions using the cost method.

BE14.10 (LO 2) Refer to the information in BE14.9. Prepare the entry to retire the treasury shares remaining following the November 1, 2025, reissuance. The shares were initially issued for $50 per share.

BE14.11 (LO 3) Woolford Inc. declared a cash dividend of $1.00 per share on its 2 million outstanding shares. The dividend was declared on August 1, payable on September 9 to all stockholders of record on August 15. Prepare all journal entries necessary on those three dates.

BE14.12 (LO 3) Cole Inc. owns shares of Marlin Corporation stock. At December 31, 2025, the securities were carried in Cole's accounting records at their cost of $875,000, which equals their fair value. On September 21, 2026, when the fair value of the securities was $1,200,000, Cole declared a property dividend whereby the Marlin securities are to be distributed on October 23, 2026, to stockholders of record on October 8, 2026. Prepare all journal entries necessary on those three dates.

BE14.13 (LO 3) Graves Mining Company declared, on April 20, a dividend of $500,000 payable on June 1. Of this amount, $125,000 is a return of capital. Prepare the April 20 and June 1 entries for Graves.

BE14.14 (LO 3) Green Day Corporation has outstanding 400,000 shares of $10 par value common stock. The corporation declares a 5% stock dividend when the fair value of the stock is $65 per share. Prepare the journal entries for Green Day Corporation for both the date of declaration and the date of distribution.

BE14.15 (LO 3) Use the information from BE14.14, but assume Green Day Corporation declared a 100% stock dividend rather than a 5% stock dividend. Prepare the journal entries for both the date of declaration and the date of distribution.

***BE14.16 (LO 5)** Nottebart Corporation has outstanding 10,000 shares of $100 par value, 6% preferred stock and 60,000 shares of $10 par value common stock. The preferred stock was issued in January 2025, and no dividends were declared in 2025 or 2026. In 2027, Nottebart declares a cash dividend of $300,000. How will the dividend be shared by common and preferred stockholders if the preferred is (a) noncumulative and (b) cumulative?

Exercises

E14.1 (LO 1) Excel **(Recording the Issuances of Common Stock)** During its first year of operations, Collin Raye Corporation had the following transactions pertaining to its common stock.

Jan. 10	Issued 80,000 shares for cash at $6 per share.
Mar. 1	Issued 5,000 shares to attorneys in payment of a bill for $35,000 for services rendered in helping the company to incorporate.
July 1	Issued 30,000 shares for cash at $8 per share.
Sept. 1	Issued 60,000 shares for cash at $10 per share.

Instructions

a. Prepare the journal entries for these transactions, assuming that the common stock has a par value of $5 per share.

b. Prepare the journal entries for these transactions, assuming that the common stock is no-par with a stated value of $3 per share.

E14.2 (LO 1) (Recording the Issuance of Common and Preferred Stock) Kathleen Battle Corporation was organized on January 1, 2025. It is authorized to issue 10,000 shares of 8%, $100 par value preferred stock, and 500,000 shares of no-par common stock with a stated value of $1 per share. The following stock transactions were completed during the first year.

Jan. 10	Issued 80,000 shares of common stock for cash at $5 per share.
Mar. 1	Issued 5,000 shares of preferred stock for cash at $108 per share.
Apr. 1	Issued 24,000 shares of common stock for land. The asking price of the land was $90,000; the fair value of the land was $80,000.
May 1	Issued 80,000 shares of common stock for cash at $7 per share.
Aug. 1	Issued 10,000 shares of common stock to attorneys in payment of their bill of $50,000 for services rendered in helping the company organize.
Sept. 1	Issued 10,000 shares of common stock for cash at $9 per share.
Nov. 1	Issued 1,000 shares of preferred stock for cash at $112 per share.

Instructions

Prepare the journal entries to record the above transactions.

E14.3 (LO 1, 2) (Stock Issued for Land) Twenty-five thousand shares reacquired by Elixir Corporation for $53 per share were exchanged for undeveloped land that has an appraised value of $1,700,000. At the time of the exchange, the common stock was trading at $62 per share on an organized exchange.

Instructions

a. Prepare the journal entry to record the acquisition of land assuming that the purchase of the stock was originally recorded using the cost method.

b. Briefly identify the possible alternatives (including those that are totally unacceptable) for quantifying the cost of the land and briefly support your choice.

E14.4 (LO 1) (Lump-Sum Sale of Stock with Bonds) Faith Evans Corporation is a regional company which is an SEC registrant. The corporation's securities are thinly traded on NASDAQ. Faith Evans Corp. has issued 10,000 units. Each unit consists of a $500 par, 12% subordinated debenture and 10 shares of $5 par common stock. The units were sold to outside investors for cash at $880 per unit. Prior to this sale, the 2-week ask price of common stock was $40 per share. Twelve percent is a reasonable market yield for the debentures, and therefore the par value of the bonds is equal to the fair value.

Instructions

a. Prepare the journal entry to record Evans' transaction, under the following conditions.

1. Employing the incremental method.
2. Employing the proportional method, assuming the recent price quote on the common stock reflects fair value.

b. Briefly explain which method is, in your opinion, the better method.

E14.5 (LO 1) (Lump-Sum Sales of Stock with Preferred Stock) Coldplay Inc. issues 500 shares of $10 par value common stock and 100 shares of $100 par value preferred stock for a lump sum of $100,000.

Instructions

a. Prepare the journal entry for the issuance when the market price of the common shares is $165 each and market price of the preferred is $230 each. (Round to nearest dollar.)

b. Prepare the journal entry for the issuance when only the market price of the common stock is known and it is $170 per share.

E14.6 (LO 1, 2) (Stock Issuances and Repurchase) Lindsey Hunter Corporation is authorized to issue 50,000 shares of $5 par value common stock. During 2025, Lindsey Hunter took part in the following selected transactions.

a. Issued 5,000 shares of stock at $45 per share, less costs related to the issuance of the stock totaling $7,000.

b. Issued 1,000 shares of stock for land appraised at $50,000. The stock was actively traded on a national stock exchange at approximately $46 per share on the date of issuance.

c. Purchased 500 shares of treasury stock at $43 per share. The treasury shares purchased were issued in 2021 at $40 per share.

d. Retired the treasury shares purchased in part (c).

Instructions

Prepare the journal entries to record these transactions using the cost method.

E14.7 (LO 2) (Effect of Treasury Stock Transactions on Financials) Joe Dumars Company has outstanding 40,000 shares of $5 par common stock which had been issued at $30 per share. Joe Dumars then entered into the following transactions.

1. Purchased 5,000 treasury shares at $45 per share.
2. Resold 2,000 of the treasury shares at $49 per share.
3. Resold 500 of the treasury shares at $40 per share.

Instructions

Use the following code to indicate the effect each of the three transactions has on the financial statement categories listed in the table below, assuming Joe Dumars Company uses the cost method (I = Increase; D = Decrease; NE = No effect).

	Assets	Liabilities	Stockholders' Equity	Paid-in Capital	Retained Earnings	Net Income
1.						
2.						
3.						

E14.8 (LO 1, 2) (Correcting Entries for Equity Transactions) Pistons Inc. recently hired a new accountant with extensive experience in accounting for partnerships. Because of the pressure of the new job, the accountant was unable to review what he had learned earlier about corporation accounting. During the first month, he made the following entries for the corporation's capital stock.

May	2	Cash	192,000	
		Capital Stock		192,000
		(Issued 12,000 shares of $5 par value common stock at $16 per share)		
	10	Cash	600,000	
		Capital Stock		600,000
		(Issued 10,000 shares of $30 par value preferred stock at $60 per share)		
	15	Capital Stock	15,000	
		Cash		15,000
		(Purchased 1,000 shares of common stock for the treasury at $15 per share)		
	31	Cash	8,500	
		Capital Stock		5,000
		Gain on Sale of Stock		3,500
		(Sold 500 shares of treasury stock at $17 per share)		

Instructions

On the basis of the explanation for each entry, prepare the entries that should have been made for the capital stock transactions.

E14.9 (LO 1, 3) (Preferred Stock Entries and Dividends) Otis Thorpe Corporation has 10,000 shares of $100 par value, 8%, preferred stock and 50,000 shares of $10 par value common stock outstanding at December 31, 2025.

Instructions

Answer the questions in each of the following independent situations.

a. If the preferred stock is cumulative and dividends were last paid on the preferred stock on December 31, 2022, (1) what are the dividends in arrears on December 31, 2025, and (2) how should these dividends be reported?

b. If the preferred stock is convertible into seven shares of $10 par value common stock and 4,000 shares are converted, what entry is required for the conversion assuming the preferred stock was issued at par value?

c. If the preferred stock was issued at $107 per share, how should the preferred stock be reported in the stockholders' equity section?

E14.10 (LO 2, 4) (Analysis of Equity Data and Equity Section Preparation) For a recent 2-year period, the balance sheet of Santana Dotson Company showed the following stockholders' equity data at December 31 (in millions).

	2025	2024
Additional paid-in capital	$ 931	$ 817
Common stock	545	540
Retained earnings	7,167	5,226
Treasury stock	1,564	918
Total stockholders' equity	$7,079	$5,665
Common stock shares issued	218	216
Common stock shares authorized	500	500
Treasury stock shares	34	27

Instructions

a. Answer the following questions.

1. What is the par value of the common stock?

2. What is the cost per share of treasury stock at December 31, 2025, and at December 31, 2024?

b. Prepare the stockholders' equity section at December 31, 2025.

E14.11 (LO 3, 4) (Equity Items on the Balance Sheet) The following are selected transactions that may affect stockholders' equity.

1. Recorded accrued interest earned on a note receivable.

2. Declared a cash dividend.

3. Declared and distributed a stock split.

4. Approved a retained earnings restriction.

5. Recorded the expiration of insurance coverage that was previously recorded as prepaid insurance.

6. Paid the cash dividend declared in item 2 above.

7. Recorded accrued interest expense on a note payable.

8. Declared a stock dividend.

9. Distributed the stock dividend declared in item 8.

Instructions

Indicate the effect each of the nine transactions has on the financial statement elements listed using the following headings. Use the following code: I = Increase, D = Decrease, NE = No effect.

Item	Assets	Liabilities	Stockholders' Equity	Paid-in Capital	Retained Earnings	Net Income

E14.12 (LO 3) (Cash Dividend and Liquidating Dividend) Lotoya Davis Corporation has 10 million shares of common stock issued and outstanding. On June 1, the board of directors voted an 80 cents per share cash dividend to stockholders of record as of June 14, payable June 30.

Instructions

a. Prepare the journal entry for each of the dates above assuming the dividend represents a distribution of earnings.

b. How would the entry differ if the dividend were a liquidating dividend?

E14.13 (LO 3) (Stock Split and Stock Dividend) The common stock of Alexander Hamilton Inc. is currently selling at $120 per share. The directors wish to reduce the share price and increase share volume prior to a new issue. The per share par value is $10; book value is $70 per share. Nine million shares are issued and outstanding.

Instructions

Prepare the necessary journal entries assuming the following.

a. The board votes a 2-for-1 stock split.

b. The board votes a 100% stock dividend.

c. Briefly discuss the accounting and securities market differences between these two methods of increasing the number of shares outstanding.

E14.14 (LO 3) (Entries for Stock Dividends and Stock Splits) The stockholders' equity accounts of G.K. Chesterton Company have the following balances on December 31, 2025.

Common stock, $10 par, 300,000 shares issued and outstanding	$3,000,000
Paid-in capital in excess of par—common stock	1,200,000
Retained earnings	5,600,000

Shares of G.K. Chesterton Company stock are currently selling on the Midwest Stock Exchange at $37.

Instructions

Prepare the appropriate journal entries for each of the following cases.

a. A stock dividend of 5% is declared and issued.

b. A stock dividend of 100% is declared and issued.

c. A 2-for-1 stock split is declared and issued.

E14.15 (LO 3) Excel (Dividend Entries) The following data were taken from the balance sheet accounts of Masefield Corporation on December 31, 2024.

Current assets	$540,000
Debt investments (trading)	624,000
Common stock (par value $10)	500,000
Paid-in capital in excess of par	150,000
Retained earnings	840,000

Instructions

Prepare the required journal entries for the following unrelated items.

a. A 5% stock dividend is declared and distributed at a time when the market price per share is $39.

b. The par value of the common stock is reduced to $2 with a 5-for-1 stock split.

c. A dividend is declared January 5, 2025, and paid January 25, 2025, in bonds held as an investment. The bonds have a book value of $100,000 and a fair value of $135,000.

E14.16 (LO 4) (Computation of Retained Earnings) The following information has been taken from the ledger accounts of Isaac Stern Corporation.

Total income since incorporation	$317,000
Total cash dividends paid	60,000
Total value of stock dividends distributed	30,000
Gains on treasury stock transactions	18,000
Unamortized discount on bonds payable	32,000

Instructions

Determine the current balance of retained earnings.

E14.17 (LO 4) (Stockholders' Equity Section) Bruno Corporation's post-closing trial balance at December 31, 2025, is as follows.

Bruno Corporation Post-Closing Trial Balance December 31, 2025		
	Dr.	**Cr.**
Accounts payable		$ 310,000
Accounts receivable	$ 480,000	
Accumulated depreciation—buildings		185,000
Additional paid-in capital in excess of par—common		1,300,000
From treasury stock		160,000
Allowance for doubtful accounts		30,000
Bonds payable		300,000
Buildings	1,450,000	
Cash	190,000	
Common stock ($1 par)		200,000
Dividends payable (preferred stock—cash)		4,000
Inventory	560,000	
Land	400,000	
Preferred stock ($50 par)		500,000
Prepaid expenses	40,000	
Retained earnings		301,000
Treasury stock (common at cost)	170,000	
Totals	$3,290,000	$3,290,000

At December 31, 2025, Bruno had the following number of common and preferred shares.

	Common	**Preferred**
Authorized	600,000	60,000
Issued	200,000	10,000
Outstanding	190,000	10,000

The dividends on preferred stock are $4 cumulative. In addition, the preferred stock has a preference in liquidation of $50 per share.

Instructions

Prepare the stockholders' equity section of Bruno's balance sheet at December 31, 2025.

(AICPA adapted)

E14.18 (LO 2, 3, 4) Groupwork (Dividends and Stockholders' Equity Section) Anne Cleves Company reported the following amounts in the stockholders' equity section of its December 31, 2024, balance sheet.

Preferred stock, 10%, $100 par (10,000 shares authorized, 2,000 shares issued)	$200,000
Common stock, $5 par (100,000 shares authorized, 20,000 shares issued)	100,000
Additional paid-in capital	125,000
Retained earnings	450,000
Total	$875,000

During 2025, Cleves took part in the following transactions concerning stockholders' equity.

1. Paid the annual 2024 $10 per share dividend on preferred stock and a $2 per share dividend on common stock. These dividends had been declared on December 31, 2024.
2. Purchased 1,700 shares of its own outstanding common stock for $40 per share. Cleves uses the cost method.
3. Reissued 700 treasury shares for land valued at $30,000.
4. Issued 500 shares of preferred stock at $105 per share.
5. Declared a 10% stock dividend on the outstanding common stock when the stock is selling for $45 per share.

6. Issued the stock dividend.
7. Declared the annual 2025 $10 per share dividend on preferred stock and the $2 per share dividend on common stock. These dividends are payable in 2026.

Instructions

a. Prepare journal entries to record the transactions described above.

b. Prepare the December 31, 2025, stockholders' equity section. Assume 2025 net income was $330,000.

E14.19 (LO 4) (Comparison of Alternative Forms of Financing) Shown below is the liabilities and stockholders' equity section of the balance sheet for Jana Kingston Company and Mary Ann Benson Company. Each has assets totaling $4,200,000.

Jana Kingston Co.		Mary Ann Benson Co.	
Current liabilities	$ 300,000	Current liabilities	$ 600,000
Long-term debt, 10%	1,200,000	Common stock ($20 par)	2,900,000
Common stock ($20 par)	2,000,000	Retained earnings (cash dividends, $328,000)	700,000
Retained earnings (cash dividends, $220,000)	700,000		$4,200,000
	$4,200,000		

For the year, each company has earned the same income before interest and taxes.

	Jana Kingston Co.	Mary Ann Benson Co.
Income before interest and taxes	$1,200,000	$1,200,000
Interest expense	120,000	–0–
	1,080,000	1,200,000
Income taxes (20%)	216,000	240,000
Net income	$ 864,000	$ 960,000

At year-end, the market price of Kingston's stock was $101 per share, and Benson's was $63.50.

Instructions

a. Which company is more profitable in terms of return on total assets?

b. Which company is more profitable in terms of return on common stockholders' equity?

c. Which company has the greater net income per share of stock? Neither company issued or reacquired shares during the year.

d. From the point of view of net income, is it advantageous to the stockholders of Jana Kingston Co. to have the long-term debt outstanding? Why?

e. What is the book value per share for each company?

E14.20 (LO 4) (Trading on the Equity Analysis) Presented below is information from the annual report of Emporia Plastics, Inc.

Operating income	$ 532,150
Bond interest expense	135,000
	397,150
Income taxes	183,432
Net income	$ 213,718
Bonds payable	$1,000,000
Common stock	875,000
Retained earnings	375,000

Instructions

a. Compute the return on common stockholders' equity and the rate of interest paid on bonds. (Assume balances for debt and equity accounts approximate averages for the year.)

b. Is Emporia Plastics, Inc. trading on the equity successfully? Explain.

***E14.21 (LO 5) (Preferred Dividends)** The outstanding capital stock of Cleary Corporation consists of 2,000 shares of $100 par value, 8% preferred, and 5,000 shares of $50 par value common.

Instructions

Assuming that the company has retained earnings of $90,000, all of which is to be paid out in dividends, and that preferred dividends were not paid during the 2 years preceding the current year, state how much each class of stock should receive under each of the following conditions.

a. The preferred stock is noncumulative and nonparticipating.

b. The preferred stock is cumulative and nonparticipating.

c. The preferred stock is cumulative and participating. (Round dividend rate percentages to four decimal places.)

***E14.22 (LO 5) (Preferred Dividends)** Matt Schmidt Company's ledger shows the following balances on December 31, 2025.

7% Preferred stock—$10 par value, outstanding 20,000 shares	$ 200,000
Common stock—$100 par value, outstanding 30,000 shares	3,000,000
Retained earnings	630,000

Instructions

Assuming that the directors decide to declare total dividends in the amount of $366,000, determine how much each class of stock should receive under each of the conditions stated below. One year's dividends are in arrears on the preferred stock.

a. The preferred stock is cumulative and fully participating.

b. The preferred stock is noncumulative and nonparticipating.

c. The preferred stock is noncumulative and is participating in distributions in excess of a 10% dividend rate on the common stock.

***E14.23 (LO 5) (Preferred Stock Dividends)** Cajun Company has outstanding 2,500 shares of $100 par, 6% preferred stock and 15,000 shares of $10 par value common. The following schedule shows the amount of dividends paid out over the last 4 years.

Instructions

Allocate the dividends to each type of stock under assumptions (a) and (b). Express your answers in per share amounts using the format shown below.

		Assumptions			
		(a) Preferred, Noncumulative, and Nonparticipating		(b) Preferred, Cumulative, and Fully Participating	
Year	Paid-Out	Preferred	Common	Preferred	Common
2023	$13,000				
2024	26,000				
2025	57,000				
2026	76,000				

***E14.24 (LO 5) (Computation of Book Value per Share)** Morgan Sondgeroth Inc. began operations in January 2023 and reported the following results for each of its 3 years of operations.

2023	$260,000 net loss
2024	40,000 net loss
2025	800,000 net income

At December 31, 2025, Morgan Sondgeroth Inc. capital accounts were as follows.

8% cumulative preferred stock, par value $100; authorized, issued, and outstanding 5,000 shares	$500,000
Common stock, par value $1.00; authorized 1,000,000 shares; issued and outstanding 750,000 shares	$750,000

Morgan Sondgeroth Inc. has never paid a cash or stock dividend. There has been no change in the capital accounts since Sondgeroth began operations. The state law permits dividends only from retained earnings.

Instructions

a. Compute the book value of the common stock at December 31, 2025.

b. Compute the book value of the common stock at December 31, 2025, assuming that the preferred stock has a liquidating value of $106 per share.

Problems

P14.1 (LO 1, 2, 3, 4) Excel Groupwork (Equity Transactions and Statement Preparation) On January 5, 2025, Phelps Corporation received a charter granting the right to issue 5,000 shares of $100 par value, 8% cumulative and nonparticipating preferred stock, and 50,000 shares of $10 par value common stock. It then completed these transactions.

Jan. 11	Issued 20,000 shares of common stock at $16 per share.
Feb. 1	Issued to Sanchez Corp. 4,000 shares of preferred stock for the following assets: equipment with a fair value of $50,000; a factory building with a fair value of $160,000; and land with an appraised value of $270,000.
July 29	Purchased 1,800 shares of common stock at $17 per share. (Use cost method.)
Aug. 10	Sold the 1,800 treasury shares at $14 per share.
Dec. 31	Declared a $0.25 per share cash dividend on the common stock and declared the preferred dividend.
Dec. 31	Closed the Income Summary account. There was a $175,700 net income.

Instructions

a. Record the journal entries for the transactions listed above.

b. Prepare the stockholders' equity section of Phelps Corporation's balance sheet as of December 31, 2025.

P14.2 (LO 2, 4) (Treasury Stock Transactions and Presentation) Clemson Company had the following stockholders' equity as of January 1, 2025.

Common stock, $5 par value, 20,000 shares issued	$100,000
Paid-in capital in excess of par—common stock	300,000
Retained earnings	320,000
Total stockholders' equity	$720,000

During 2025, the following transactions occurred.

Feb. 1	Clemson repurchased 2,000 shares of treasury stock at a price of $19 per share.
Mar. 1	800 shares of treasury stock repurchased above were reissued at $17 per share.
Mar. 18	500 shares of treasury stock repurchased above were reissued at $14 per share.
Apr. 22	600 shares of treasury stock repurchased above were reissued at $20 per share.
May 1	Remaining treasury shares are retired.

Instructions

a. Prepare the journal entries to record the treasury stock transactions in 2025, assuming Clemson uses the cost method.

b. Prepare the stockholders' equity section as of April 30, 2025. Net income for the first 4 months of 2025 was $130,000.

P14.3 (LO 1, 2, 3, 4) (Equity Transactions and Statement Preparation) Hatch Company has two classes of capital stock outstanding: 8%, $20 par preferred and $5 par common. At December 31, 2025, the following accounts were included in stockholders' equity.

Preferred Stock, 150,000 shares	$ 3,000,000
Common Stock, 2,000,000 shares	10,000,000
Paid-in Capital in Excess of Par—Preferred Stock	200,000
Paid-in Capital in Excess of Par—Common Stock	27,000,000
Retained Earnings	4,500,000

The following transactions affected stockholders' equity during 2026.

Jan. 1	30,000 shares of preferred stock issued at $22 per share.
Feb. 1	50,000 shares of common stock issued at $20 per share.
June 1	2-for-1 stock split (par value reduced to $2.50).
July 1	30,000 shares of common treasury stock purchased at $10 per share. Hatch uses the cost method.
Sept. 15	10,000 shares of treasury stock reissued at $11 per share.
Dec. 31	The preferred dividend is declared, and a common dividend of 50¢ per share is declared.
Dec. 31	Net income is $2,100,000.

Instructions

Prepare the stockholders' equity section for Hatch Company at December 31, 2026. Show all supporting computations.

P14.4 (LO 1) (Stock Transactions—Lump Sum) Seles Corporation's charter authorized issuance of 100,000 shares of $10 par value common stock and 50,000 shares of $50 par value preferred stock. The following transactions involving the issuance of shares of stock were completed. Each transaction is independent of the others.

1. Issued a $10,000, 9% bond payable at par and gave as a bonus one share of preferred stock, which at that time was selling for $106 a share.
2. Issued 500 shares of common stock for equipment. The equipment had been appraised at $7,100; the seller's book value was $6,200. The most recent market price of the common stock is $16 a share.
3. Issued 375 shares of common and 100 shares of preferred for a lump sum amounting to $10,800. The common had been selling at $14 and the preferred at $65.
4. Issued 200 shares of common and 50 shares of preferred for equipment. The common had a fair value of $16 per share; the equipment has a fair value of $6,500.

Instructions

Record the transactions listed above in journal entry form.

P14.5 (LO 2) Excel (Treasury Stock—Cost Method) Before Gordon Corporation engages in the following treasury stock transactions, its general ledger reflects, among others, the following account balances (par value of its stock is $30 per share).

Paid-in Capital in Excess of Par—Common Stock	Common Stock	Retained Earnings
$99,000	$270,000	$80,000

Instructions

Record the treasury stock transactions (given below) under the cost method of handling treasury stock; use the FIFO method for purchase-sale purposes.

a. Bought 380 shares of treasury stock at $40 per share.

b. Bought 300 shares of treasury stock at $45 per share.

c. Sold 350 shares of treasury stock at $42 per share.

d. Sold 110 shares of treasury stock at $38 per share.

P14.6 (LO 2, 3, 4) Groupwork (Treasury Stock—Cost Method—Equity Section Preparation) Washington Company has the following stockholders' equity accounts at December 31, 2025.

Common Stock ($100 par value, authorized 8,000 shares)	$480,000
Retained Earnings	294,000

Instructions

a. Prepare entries in journal form to record the following transactions, which took place during 2026.

1. 280 shares of outstanding stock were purchased at $97 per share. (These are to be accounted for using the cost method.)
2. A $20 per share cash dividend was declared.
3. The dividend declared in (2) above was paid.
4. The treasury shares purchased in (1) above were resold at $102 per share.
5. 500 shares of outstanding stock were purchased at $105 per share.
6. 350 of the shares purchased in (5) above were resold at $96 per share.

b. Prepare the stockholders' equity section of Washington Company's balance sheet after giving effect to these transactions, assuming that the net income for 2026 was $94,000. State law requires restriction of retained earnings for the amount of treasury stock.

P14.7 (LO 3) (Cash Dividend Entries) The books of Conchita Corporation carried the following account balances as of December 31, 2025.

Cash	$ 195,000
Preferred Stock (6% cumulative, nonparticipating, $50 par)	300,000
Common Stock (no-par value, 300,000 shares issued)	1,500,000
Paid-in Capital in Excess of Par—Preferred Stock	150,000
Treasury Stock (common 2,800 shares at cost)	33,600
Retained Earnings	105,000

The company decided not to pay any dividends in 2025.

The board of directors, at their annual meeting on December 21, 2026, declared the following: "The current year dividends shall be 6% on the preferred and $.30 per share on the common. The dividends in arrears shall be paid by issuing 1,500 shares of treasury stock." At the date of declaration, the preferred is selling at $80 per share, and the common at $12 per share. Net income for 2026 is estimated at $77,000.

Instructions

a. Prepare the journal entries required for the dividend declaration and payment, assuming that they occur simultaneously.

b. Could Conchita Corporation give the preferred stockholders 2 years' dividends and common stockholders a 30 cents per share dividend, all in cash?

P14.8 (LO 3) Groupwork (Dividends and Splits) Myers Company provides you with the following condensed balance sheet information.

Assets		Liabilities and Stockholders' Equity		
Current assets	$ 40,000	Current and long-term liabilities		$100,000
Equity investments	60,000	Stockholders' equity		
Equipment (net)	250,000	Common stock ($5 par)	$ 20,000	
Intangibles	60,000	Paid-in capital in excess of par	110,000	
Total assets	$410,000	Retained earnings	180,000	310,000
		Total liabilities and stockholders' equity		$410,000

Instructions

For each of the following transactions, indicate the dollar impact (if any) on the following five items: (1) total assets, (2) common stock, (3) paid-in capital in excess of par, (4) retained earnings, and (5) stockholders' equity. (Each situation is independent.)

a. Myers declares and pays a $0.50 per share cash dividend.

b. Myers declares and issues a 10% stock dividend when the market price of the stock is $14 per share.

c. Myers declares and issues a 30% stock dividend when the market price of the stock is $15 per share.

d. Myers declares and distributes a property dividend. Myers gives one share of its equity investment (ABC stock) for every two shares of Myers Company stock held. Myers owns 10,000 shares of ABC. ABC is selling for $10 per share on the date the property dividend is declared.

e. Myers declares a 2-for-1 stock split and issues new shares.

P14.9 (LO 1, 2, 3, 4) (Stockholders' Equity Section of Balance Sheet) The following is a summary of all relevant transactions of Vicario Corporation since it was organized in 2025.

In 2025, 15,000 shares were authorized and 7,000 shares of common stock ($50 par value) were issued at a price of $57. In 2026, 1,000 shares were issued as a stock dividend when the stock was selling for $60. Three hundred shares of common stock were bought in 2027 at a cost of $64 per share. These 300 shares are still in the company treasury.

In 2026, 10,000 preferred shares were authorized and the company issued 5,000 of them ($100 par value) at $113. Some of the preferred stock was reacquired by the company and later reissued for $4,700 more than it cost the company.

The corporation has earned a total of $610,000 in net income after income taxes and paid out a total of $312,600 in cash dividends since incorporation.

Instructions

Prepare the stockholders' equity section of the balance sheet in proper form for Vicario Corporation as of December 31, 2027. Account for treasury stock using the cost method.

P14.10 (LO 3) Writing (Stock Dividends and Stock Split) Oregon Inc. $10 par common stock is selling for $110 per share. Four million shares are currently issued and outstanding. The board of directors wishes to stimulate interest in Oregon common stock before a forthcoming stock issue but does not wish to distribute capital at this time. The board also believes that too many adjustments to the stockholders' equity section, especially retained earnings, might discourage potential investors.

The board has considered three options for stimulating interest in the stock:

1. A 20% stock dividend.
2. A 100% stock dividend.
3. A 2-for-1 stock split.

Instructions

Acting as financial advisor to the board, you have been asked to report briefly on each option and, considering the board's wishes, make a recommendation. Discuss the effects of each of the foregoing options.

P14.11 (LO 3, 4) (Stock and Cash Dividends) Earnhart Corporation has outstanding 3,000,000 shares of common stock with a par value of $10 each. The balance in its Retained Earnings account at January 1, 2025, was $24,000,000, and it then had Paid-in Capital in Excess of Par—Common Stock of $5,000,000. During 2025, the company's net income was $4,700,000. A cash dividend of $0.60 a share was declared on May 5, 2025, and was paid June 30, 2025, and a 6% stock dividend was declared on November 30, 2025, and distributed to stockholders of record at the close of business on December 31, 2025. You have been asked to advise on the proper accounting treatment of the stock dividend.

The existing stock of the company is quoted on a national stock exchange. The market price of the stock has been as follows.

October 31, 2025	$31
November 30, 2025	34
December 31, 2025	38

Instructions

a. Prepare the journal entry to record the declaration and payment of the cash dividend.

b. Prepare the journal entry to record the declaration and distribution of the stock dividend.

c. Prepare the stockholders' equity section (including schedules of retained earnings and additional paid-in capital) of the balance sheet of Earnhart Corporation for the year 2025 on the basis of the foregoing information. Draft a note to the financial statements setting forth the basis of the accounting for the stock dividend, and add separately appropriate comments or explanations regarding the basis chosen.

P14.12 (LO 1, 2, 3, 4) (Analysis and Classification of Equity Transactions) Penn Company was formed on July 1, 2023. It was authorized to issue 300,000 shares of $10 par value common stock and 100,000 shares of 8%, $25 par value, cumulative and nonparticipating preferred stock. Penn Company has a July 1–June 30 fiscal year.

The following information relates to the stockholders' equity accounts of Penn Company.

Common Stock

Prior to the 2025–2026 fiscal year, Penn Company had 110,000 shares of outstanding common stock issued as follows.

1. 85,000 shares were issued for cash on July 1, 2023, at $31 per share.
2. On July 24, 2023, 5,000 shares were exchanged for a plot of land which cost the seller $70,000 in 2017 and had a fair value (based on recent land sales) of $220,000 on July 24, 2023.
3. 20,000 shares were issued on March 1, 2024, for $42 per share.

During the 2025–2026 fiscal year, the following transactions regarding common stock took place.

November 30, 2025	Penn purchased 2,000 shares of its own stock on the open market at $39 per share. Penn uses the cost method for treasury stock.
December 15, 2025	Penn declared a 5% stock dividend for stockholders of record on January 15, 2026, to be issued on January 31, 2026. Penn was having a liquidity problem and could not afford a cash dividend at the time. Penn's common stock was selling at $52 per share on December 15, 2025.
June 20, 2026	Penn sold 500 shares of its own common stock that it had purchased on November 30, 2025, for $21,000.

Preferred Stock

Penn issued 40,000 shares of preferred stock at $44 per share on July 1, 2024.

Cash Dividends

Penn has followed a schedule of declaring cash dividends in December and June, with payment being made to stockholders of record in the following month. The cash dividends which have been declared since inception of the company through June 30, 2026, are shown below.

Declaration Date	Common Stock	Preferred Stock
12/15/24	$0.30 per share	$1.00 per share
6/15/25	$0.30 per share	$1.00 per share
12/15/25	—	$1.00 per share

No cash dividends were declared during June 2026 due to the company's liquidity problems.

Retained Earnings

As of June 30, 2025, Penn's retained earnings account had a balance of $690,000. For the fiscal year ending June 30, 2026, Penn reported net income of $40,000.

Instructions

Prepare the stockholders' equity section of the balance sheet, including appropriate notes, for Penn Company as of June 30, 2026, as it should appear in its annual report to the shareholders.

(CMA adapted)

Using Your Judgment

Financial Reporting Problem: The Procter & Gamble Company (P&G)

UYJ14.1 The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

a. What is the par or stated value of P&G's preferred stock?

b. What is the par or stated value of P&G's common stock?

c. What percentage of P&G's authorized common stock was issued at June 30, 2020?

d. How many shares of common stock were outstanding at June 30, 2020, and June 30, 2019?

e. What was the dollar amount effect of dividends on P&G's stockholders' equity?

f. What is P&G's return on common stockholders' equity for 2020 and 2019?

g. What is P&G's payout ratio for 2020 and 2019?

h. What was the market price range (high/low) of P&G's common stock during the quarter ended June 30, 2020?

Comparative Analysis Case: The Coca-Cola Company and PepsiCo, Inc.

UYJ14.2 The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online. Stock price data can be found in the company's annual 10K, filed at the SEC.

Instructions

Use the companies' financial information to answer the following questions.

a. What is the par or stated value of Coca-Cola's and PepsiCo's common or capital stock?

b. What percentage of authorized shares was issued by Coca-Cola at December 31, 2020, and by PepsiCo at December 31, 2020?

c. How many shares are held as treasury stock by Coca-Cola at December 31, 2020, and by PepsiCo at December 31, 2020?

d. How many Coca-Cola common shares are outstanding at December 31, 2020? How many PepsiCo shares of capital stock are outstanding at December 31, 2020?

e. What amounts of cash dividends per share were declared by Coca-Cola and PepsiCo in 2020? What were the dollar amount effects of the cash dividends on each company's stockholders' equity?

f. What are Coca-Cola's and PepsiCo's return on common/capital stockholders' equity for 2020? Which company gets the higher return on the equity of its shareholders?

g. What are Coca-Cola's and PepsiCo's payout ratios for 2020?

Financial Statement Analysis Case: Kellogg Company

UYJ14.3 **Kellogg Company** is the world's leading producer of ready-to-eat cereal products. In recent years, the company has taken numerous steps aimed at improving its profitability and earnings per share. Presented below are some basic facts for Kellogg for a recent year.

(in millions)	Current Year	Prior Year
Net sales	$14,792	$14,580
Net income	1,807	632
Total assets	15,474	15,153
Total liabilities	11,867	12,302
Common stock, $0.25 par value	105	105
Capital in excess of par value	626	678
Retained earnings	6,749	6,689
Treasury stock, at cost	2,999	3,470
Number of shares outstanding (in millions)	363	358

Instructions

a. What are some of the reasons that management purchases its own stock?

b. Explain how earnings per share might be affected by treasury stock transactions.

c. Calculate the debt to assets ratio for the current year and the prior year, and discuss the implications of the change.

Financial Statement Analysis Case: Wiebold, Inc.

UYJ14.4 The following note related to stockholders' equity was reported in **Wiebold, Inc.**'s annual report.

> On February 1, the Board of Directors declared a 3-for-2 stock split, distributed on February 22 to shareholders of record on February 10. Accordingly, all numbers of common shares, except unissued shares and treasury shares, and all per share data have been restated to reflect this stock split.
>
> On the basis of amounts declared and paid, the annualized quarterly dividends per share were $0.80 in the current year and $0.75 in the prior year.

Instructions

a. What is the significance of the date of record and the date of distribution?

b. Why might Wiebold have declared a 3-for-2 for stock split?

c. What impact does Wiebold's stock split have on (1) total stockholders' equity, (2) total par value, (3) outstanding shares, and (4) book value per share?

Accounting, Analysis, and Principles

UYJ14.5 On January 1, 2025, Agassi Corporation had the following stockholders' equity accounts.

Common Stock ($10 par value, 60,000 shares issued and outstanding)	$600,000
Paid-in Capital in Excess of Par—Common Stock	500,000
Retained Earnings	620,000

During 2025, the following transactions occurred.

Jan. 15	Declared and paid a $1.05 cash dividend per share to stockholders.
Apr. 15	Declared and distributed a 10% stock dividend. The market price of the stock was $14 per share.
May 15	Reacquired 2,000 common shares at a market price of $15 per share.
Nov. 15	Reissued 1,000 shares held in treasury at a price of $18 per share.
Dec. 31	Determined that net income for the year was $370,000.

Accounting

Journalize the above transactions. (Include entries to close net income to Retained Earnings.) Determine the ending balances for Paid-in Capital, Retained Earnings, and Stockholders' Equity.

Analysis

Calculate the payout ratio and the return on common stockholders' equity.

Principles

R. Federer is examining Agassi's financial statements and wonders whether the "gains" or "losses" on Agassi's treasury stock transactions should be included in income for the year. Briefly explain whether, and the conceptual reasons why, gains or losses on treasury stock transactions should be recorded in income.

Developing Your Professional Skills

Critical-Thinking Cases

CT14.1 (LO 1) (Preemptive Rights and Dilution of Ownership) Wallace Computer Company is a small, closely held corporation. Eighty percent of the stock is held by Derek Wallace, president. Of the remainder, 10% is held by members of his family and 10% by Kathy Baker, a former officer who is now retired. The balance sheet of the company at June 30, 2025, was substantially as shown below.

Assets		Liabilities and Stockholders' Equity	
Cash	$ 22,000	Current liabilities	$ 50,000
Other	450,000	Common stock	250,000
	$472,000	Retained earnings	172,000
			$472,000

Additional authorized common stock of $300,000 par value had never been issued. To strengthen the cash position of the company, Wallace issued common stock with a par value of $100,000 to himself at par for cash. At the next stockholders' meeting, Baker objected and claimed that her interests had been injured.

Instructions

a. Which stockholder's right was ignored in the issue of shares to Derek Wallace?

b. How may the damage to Baker's interests be repaired most simply?

c. If Derek Wallace offered Baker a personal cash settlement and they agreed to employ you as an impartial arbitrator to determine the amount, what settlement would you propose? Present your calculations with sufficient explanation to satisfy both parties.

CT14.2 (LO 1) (Issuance of Stock for Land) Martin Corporation is planning to issue 3,000 shares of its own $10 par value common stock for two acres of land to be used as a building site.

Instructions

a. What general rule should be applied to determine the amount at which the land should be recorded?

b. Under what circumstances should this transaction be recorded at the fair value of the land?

c. Under what circumstances should this transaction be recorded at the fair value of the stock issued?

d. Assume Martin intentionally records this transaction at an amount greater than the fair value of the land and the stock. Discuss this situation.

CT14.3 (LO 1, 2, 3) Writing (Conceptual Issues—Equity) Statements of Financial Accounting Concepts set forth financial accounting and reporting objectives and fundamentals that will be used by the Financial Accounting Standards Board in developing standards. *Concepts Statement No. 6* defines various elements of financial statements.

Instructions

Answer the following questions based on *SFAC No. 6.*

a. Define and discuss the term "equity."

b. What transactions or events change owners' equity?

c. Define "investments by owners" and provide examples of this type of transaction. What financial statement element other than equity is typically affected by owner investments?

d. Define "distributions to owners" and provide examples of this type of transaction. What financial statement element other than equity is typically affected by distributions?

e. What are examples of changes within owners' equity that do not change the total amount of owners' equity?

CT14.4 (LO 3) (Stock Dividends and Splits) The directors of Merchant Corporation are considering the issuance of a stock dividend. They have asked you to discuss the proposed action by answering the following questions.

Instructions

a. What is a stock dividend? How is a stock dividend distinguished from a stock split (1) from a legal standpoint, and (2) from an accounting standpoint?

b. For what reasons does a corporation usually declare a stock dividend? A stock split?

c. Discuss the amount, if any, of retained earnings to be capitalized in connection with a stock dividend.

(AICPA adapted)

CT14.5 (LO 3) (Stock Dividends) Kulikowski Inc., a client, is considering the authorization of a 10% common stock dividend to common stockholders. The financial vice president of Kulikowski wishes to discuss the accounting implications of such an authorization with you before the next meeting of the board of directors.

Instructions

a. The first topic the vice president wishes to discuss is the nature of the stock dividend to the recipient. Discuss the case against considering the stock dividend as income to the recipient.

b. The other topic for discussion is the propriety of issuing the stock dividend to all "stockholders of record" or to "stockholders of record exclusive of shares held in the name of the corporation as treasury stock." Discuss the case against issuing stock dividends on treasury shares.

(AICPA adapted)

CT14.6 (LO 2, 3) (Stock Dividend, Cash Dividend, and Treasury Stock) Mask Company has 30,000 shares of $10 par value common stock authorized and 20,000 shares issued and outstanding. On August 15, 2025, Mask purchased 1,000 shares of treasury stock for $18 per share. Mask uses the cost method to account for treasury stock. On September 14, 2025, Mask sold 500 shares of the treasury stock for $20 per share.

In October 2025, Mask declared and distributed 1,950 shares as a stock dividend from unissued shares when the market price of the common stock was $21 per share.

On December 20, 2025, Mask declared a $1 per share cash dividend, payable on January 10, 2026, to shareholders of record on December 31, 2025.

Instructions

a. How should Mask account for the purchase and sale of the treasury stock, and how should the treasury stock be presented in the balance sheet at December 31, 2025?

b. How should Mask account for the stock dividend, and how would it affect the stockholders' equity at December 31, 2025? Why?

c. How should Mask account for the cash dividend, and how would it affect the balance sheet at December 31, 2025? Why?

(AICPA adapted)

CT14.7 (LO 2) Ethics (Treasury Stock—Ethics) Lois Kenseth, president of Sycamore Corporation, is concerned about several large stockholders who have been very vocal lately in their criticisms of her leadership. She thinks they might mount a campaign to have her removed as the corporation's CEO. She decides that buying them out by purchasing their shares could eliminate them as opponents, and she is confident they would accept a "good" offer. Kenseth knows the corporation's cash position is decent, so it has the cash to complete the transaction. She also knows the purchase of these shares will increase earnings per share, which should make other investors quite happy. (Earnings per share is calculated by dividing net income available for the common shareholders by the weighted-average number of shares outstanding. Therefore, if the number of shares outstanding is decreased by purchasing treasury shares, earnings per share increases.)

Instructions

Answer the following questions.

a. Who are the stakeholders in this situation?

b. What are the ethical issues involved?

c. Should Kenseth authorize the transaction?

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following.

Provide Codification references for your responses.

CE14.1 Access the glossary ("Master Glossary") to answer the following.

a. What is a "convertible security"?

b. What is a "stock dividend"?

c. What is a "stock split"?

d. What are "participation rights"?

CE14.2 At what percentage point can the issuance of additional shares still qualify as a stock dividend, as opposed to a stock split?

CE14.3 A company plans to issue shares and wants to know the SEC's stance on the accounting treatment for the costs of issuing stock. Can these costs be deferred, or must they be expensed immediately?

CE14.4 If a company chooses to purchase its own shares and then either (1) retires the repurchased shares and issues additional shares, or (2) resells the repurchased shares, can a gain or loss be recognized by the company? Why or why not?

Codification Research Case

Recall from Chapter 12 that Hincapie Co. (a specialty bike-accessory manufacturer) is expecting growth in sales of some products targeted to the low-price market. Hincapie is contemplating a preferred stock issue to help finance this expansion in operations. The company is leaning toward participating preferred stock because ownership will not be diluted, but the investors will get an extra dividend if the company does well. The company management wants to be certain that its reporting of this transaction is transparent to its current shareholders and wants you to research the disclosure requirements related to its capital structure.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

a. Identify the authoritative literature that addresses disclosure of information about capital structure.

b. Find definitions of the following:

1. Securities.
2. Participation rights.
3. Preferred stock.

c. What information about securities must companies disclose? Discuss how Hincapie should report the proposed preferred stock issue.

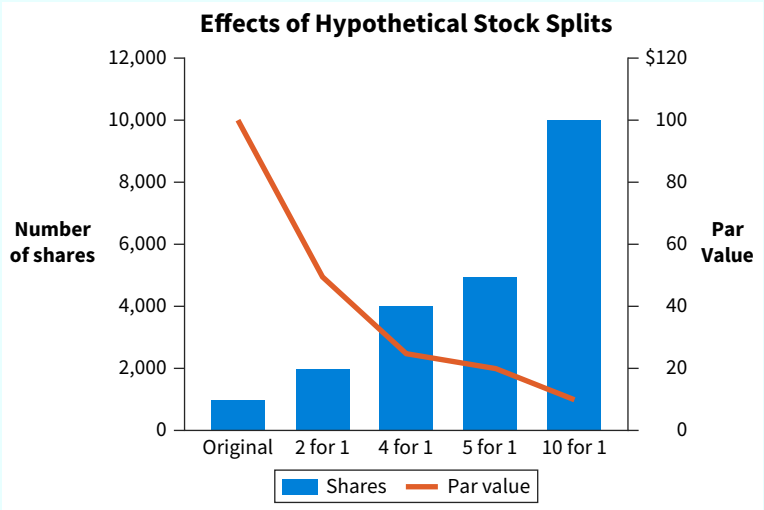
Analytics in Action Activities

Using Data Visualizations to Understand Accounting Concepts

DA14.1 We have all been there—you have read and reread the chapter a few times, but something just is not clicking. Maybe a visualization would help? There are many useful applications for data analytics and visualizations, including helping us understand intermediate accounting topics.

Excel

For example, say you are having a hard time understanding the impact of stock splits—because there is no journal entry, what is actually happening? Here, with even a small amount of data, we can use Excel to visualize the impact of stock splits on the number of shares and par value, as the following shows, to help us see what is really going on!



Required

For this exercise, you will use formulas and charts in Excel to create a visualization showing the impact to the shares outstanding and par value under different stock-split scenarios. You will then analyze the chart and discuss the relationship between number of shares, par value, and total common stock outstanding for the various scenarios.

Go to Wiley Course Resources for complete details and instructions.

DA14.2 Beyond using data visualizations to help us understand accounting concepts, we can use these tools to understand external financial data. Investors have access to a significant amount of data related to public companies, including information on dividends. Do firms with higher institutional investors pay more in dividends? This may be hard to answer by looking at a large table with a lot of data, but a visualization may help!

Excel

Required

For this exercise, you are given financial data on the dividends, market capitalization, and institutional holdings of firms in almost 100 different industries. You are asked to first format the data and create a chart that compares total dividends to institutional holdings across the various industries. Using your chart and some additional statistical analysis using formulas in Excel, you will summarize your insights on the data as to whether there appears to be a relationship between institutional holdings and total dividends.

Go to Wiley Course Resources for complete details and instructions.

IFRS Insights

LEARNING OBJECTIVE 6

Compare the accounting procedures for stockholders' equity under GAAP and IFRS.

The primary IFRS related to stockholders' equity are *IAS 1* ("Presentation of Financial Statements"), *IAS 32* ("Financial Instruments: Presentation"), and *IAS 39* ("Financial Instruments: Recognition and Measurement"). Following are the key similarities and differences between GAAP and IFRS related to stockholders' equity.

Similarities

- The accounting for the issuance of shares and purchase of treasury stock are similar under both IFRS and GAAP.
- The accounting for declaration and payment of dividends and the accounting for stock splits are similar under both IFRS and GAAP.

Differences

- Major differences relate to terminology used, introduction of concepts such as revaluation surplus, and presentation of stockholders' equity information.
- Many countries have different investor groups than the United States. For example, in Germany, financial institutions like banks are not only the major creditors but often are the largest shareholders as well. In the United States and the United Kingdom, many companies rely on substantial investment from private investors.
- The accounting for treasury share retirements differs between IFRS and GAAP. Under GAAP, a company has three options: (1) charge the excess of the cost of treasury shares over par value to retained earnings, (2) allocate the difference between paid-in capital and retained earnings, or (3) charge the entire amount to paid-in capital. Under IFRS, the excess may have to be charged to paid-in capital, depending on the original transaction related to the issuance of the shares.
- The statement of changes in equity is usually referred to as the statement of stockholders' equity (or shareholders' equity) under GAAP.
- Both IFRS and GAAP use the term retained earnings. However, IFRS relies on the term "reserve" as a dumping ground for other types of equity transactions, such as other comprehensive income items as well as various types of unusual transactions related to convertible debt and share option contracts. GAAP relies on the account Accumulated Other Comprehensive Income (Loss). We also use this account in the discussion below, as it appears this account is gaining prominence within the IFRS literature.
- Under IFRS, it is common to report "revaluation surplus" related to increases or decreases in items such as property, plant, and equipment; mineral resources; and intangible assets. The term surplus is generally not used in GAAP. In addition, unrealized gains on the above items are not reported in the financial statements under GAAP.

Additional IFRS Resources

Additional IFRS Insights with assessment are available online at Wiley Course Resources. For those who want more IFRS coverage, *Intermediate Accounting, IFRS Fourth Edition* exists as another resource.

CHAPTER 15

© Sarath maroli / Shutterstock

Dilutive Securities and Earnings per Share

WHAT are dilutive securities?

Dilutive securities provide investors with an **option** to become a common shareholder. When investors use their option to become common shareholders, the company issues more common shares, which results in **dilution** of the ownership stakes of existing shareholders. Some examples of dilutive securities include convertible bonds, convertible preferred stock, stock options, restricted-stock, and warrants.

Tesla, Inc.
Statement of Cash Flows
(in millions) (partial)

Cash Flows from Financing Activities	**Year Ended 12/31/20**
Proceeds from issuances of common stock in public offerings, net of issuance costs	$ 12,269
Proceeds from issuances of convertible and other debt	9,713
Repayments of convertible and other debt	(11,623)
Proceeds from exercises of stock options and other stock issuances	417
Purchase of convertible note hedges [$(476) in 2019]	—
Proceeds from issuance of warrants ($174 in 2019)	—

WHY is understanding the accounting for dilutive securities important?

Just about all companies issue both debt and equity as part of their capital structure. Companies must determine the proper financial instruments to issue to achieve an optimal balance of liquidity, solvency, and financial flexibility. For example, should a company issue regular or convertible debt, regular or convertible preferred stock, or common stock? Should a company compensate employees using cash, stock options, or other types of compensation? Presented to the left is an example of **Tesla**'s cash flows from financing activities, which shows the types of financial instruments it uses in its capital structure.

In addition, Tesla explains the effect that its dilutive securities have on its earning per share computations in the following schedule.

	Year Ended 12/21/20
Weighted average shares used in computing net income (loss) per share of common stock, basic	933
Add: Stock-based awards	66
Convertible senior notes	47
Warrants	37
Weighted average shares used in computing net income (loss) per share of common stock, diluted	1,083

As indicated, the weighted-average shares outstanding would **increase** by 150 million shares if the stock-based awards, convertible senior notes, and warrants were converted into shares of common stock.

HOW do we account for dilutive securities and their effect on earnings per share?

Debate continues about the accounting for dilutive securities. The profession has decided that convertible debt should generally be reported as debt and not equity. Stock warrants sold with debt may or may not be reported as debt or equity, depending on the characteristics of the stock warrant. As you learned in Chapter 14, the classification of preferred stock is often determined by whether the preferred stock is redeemable by either the holder or the issuer. In addition, principles have been established as to how to account for stock options and restricted-stock plans used to compensate employees. The profession also has developed guidelines as to how to report these securities in the computation of earnings per share.

Chapter Roadmap

LEARNING OBJECTIVES	TOPICS	REVIEW AND PRACTICE
LO 15.1 Describe the accounting for the issuance, conversion, and retirement of convertible securities.	**15.1 Dilutive Securities** • Convertible debt • Convertible preferred stock	Examples **15.1** Convertible Bond Issue **15.2** Conversion of Convertible Bond **15.3** Induced Conversion **15.4** Conversion of Convertible Preferred Stock
LO 15.2 Contrast the accounting for stock warrants with stock rights.	**15.2 Stock Warrants** • Warrants and other securities • Stock rights	Examples **15.5** Detachable Warrants **15.6** Proportional Method **15.7** Incremental Method Put It into Practice LOs 15.1 and 15.2 Account for Dilutives
LO 15.3 Describe the accounting and reporting for stock compensation plans.	**15.3 Stock Compensation Plans** • Stock options • Restricted-stock plans • Employee stock-purchase plans • Trends • Disclosure of compensation plans	Examples **15.8** Stock Compensation **15.9** Restricted-Stock Award **15.10** Restricted-Stock Forfeiture **15.11** Restricted-Stock Units **15.12** Restricted-Stock Units—No Vesting **15.13** Stock-Purchase Plan Put It into Practice LO 15.3 Implement Stock Compensation
LO 15.4 Compute basic earnings per share.	**15.4 Basic Earnings per Share** • Simple structure	Examples **15.14** Weighted-Average Shares Outstanding **15.15** Stock Dividend **15.16** Stock Repurchases **15.17** Stock Split Put It into Practice LO 15.4 Compute Basic EPS
LO 15.5 Compute diluted earnings per share.	**15.5 Diluted Earnings per Share** • Convertible securities • Options and warrants • Contingent issues • Antidilution • Presentation and disclosure • Summary	Examples **15.18** Diluted EPS Numerator **15.19** Diluted EPS Denominator **15.20** Diluted EPS Conversion Rate **15.21** Convertible Preferred Stock **15.22** Incremental Shares **15.23** Treasury-Stock Method **15.24** Contingent Issue **15.25** Antidilution Put It into Practice LO 15.5 Compute Diluted EPS

Go to the **Review and Practice** section at the end of the chapter for a targeted summary review. Multiple-choice questions with annotated solutions, as well as additional exercises and practice problem with solutions, are also available in Wiley Course Resources.

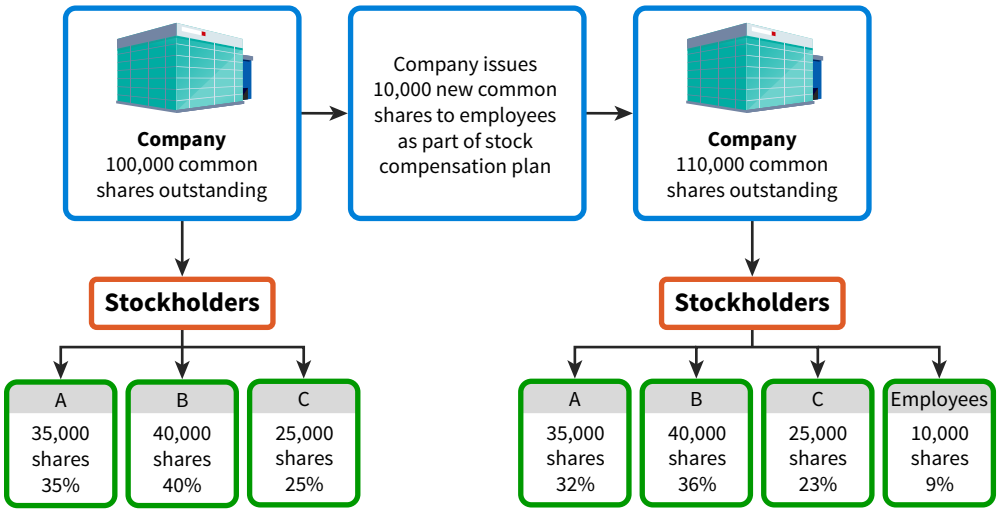
15.1 Dilutive Securities

LEARNING OBJECTIVE 1

Describe the accounting for the issuance, conversion, and retirement of convertible securities.

You've probably heard the term "dilution" in the context of chemistry and mixing liquids. Any liquid can be "diluted" by adding water to it to make it thinner or weaker. What does dilution mean in an accounting and finance context? It refers to the situation when more common shares are issued, the ownership stake of existing shareholders is "diluted," or decreased. Illustration 15.1 provides an example.

ILLUSTRATION 15.1 Dilution of Ownership



As Illustration 15.1 shows, the company had 100,000 shares of common stock outstanding with three shareholders before issuance of the new shares. You can see that Stockholder B had the largest ownership stake with 40%. After issuing the additional 10,000 shares to its employees, 110,000 shares are outstanding. What happened to Stockholder B's ownership stake? It decreased to 36% (40,000 shares ÷ 110,000 shares). With the issuance of additional shares, more shares are outstanding, and the ownership stakes of Stockholders A, B, and C are therefore diluted (reduced). As we will see later in the chapter, increasing the number of shares outstanding will also decrease, or dilute, an important accounting metric—earnings per share.

Dilutive securities are any financial instruments that have the potential to **increase** the number of common shares outstanding. There are a variety of dilutive securities that companies can issue. In this chapter, we cover convertible bonds, convertible preferred stock, stock options and other employee compensation plans, and warrants.

There has been significant controversy over the accounting for some dilutive securities. The biggest debate is whether some dilutive securities should be reported as debt or equity, or both. Remember, for an item to be classified as a liability, it must have a key characteristic—the **obligation** to pay the holder of the security in the future. As we discuss these dilutive securities, think about the characteristics of each one and how it may resemble debt, equity, or both.[1]

[1]The FASB has a project on distinguishing liabilities from equity (including convertible debt) with the objective of improving understandability and reducing complexity (without loss of information for users). Go to the FASB website (click on Projects and then Technical Agenda) for more details.

Convertible Debt

Convertible debt are bonds (or notes) that have the added feature of being able to convert into common stock during some specified period (generally five years). Why have companies like **Airbnb**, **Ford Motor Company**, and **Twitter** recently issued convertible bonds as this method of financing?

- **To lower interest costs.** Generally, convertible debt offers a lower interest rate to investors because investors place a value on the conversion feature. For example, Ford's recent convertible debt has a zero-interest rate attached to its convertibles. If Ford decided to issue straight debt with no conversion feature, its interest cost would be much higher. Ford does not have to pay any interest because investors are betting that Ford will continue to sell cars profitably and make great inroads into the electric vehicle market.
- **To manage capital structure.** Issuers often have a call feature attached to the convertible debt (as you learned in Chapter 13). This feature enables the issuer to have some control over its capital structure if its debt to equity becomes too high. A good example of managing its capital structure is **Tesla**, which issued convertibles in 2013, 2014, 2017, and 2019. It funded part of its growth using these securities by calling these bonds at certain points, thereby reducing its debt to equity ratio. This process enabled Tesla to receive funds at a low interest rate as it invested in its electric car business. Many fast-growing, high-tech companies use convertibles to fund their expansion.

Why would an investor be interested in convertible debt?

- **Equity gain.** In a rising stock market, convertible investors may participate in the capital appreciation. For example, if you had purchased Tesla 2014 convertibles, held them to maturity, and converted them to Tesla common stock, you earned a return in excess of 800% and may no longer have to worry about how to pay for college!
- **Principal and interest protection.** Convertibles provide protection when the stock market is declining because the convertible can provide interest income and principal recovery. As one financial expert noted, it is a way to get equity exposure with principal protection. For example, if you were an investor in Ford's convertible bond, you may not receive any interest, but it is likely you will recover your principal even if Ford experiences sales problems related to its electric car expansion.[2]

At Time of Issuance

The **value** of a convertible bond is comprised of two components:

Value of Debt Component + Value of Equity Component = Value of Convertible Bond

Yet, the convertible bond is recorded by the issuing company as a straight debt issue, just like you learned in Chapter 13. That is, none of the proceeds received on a convertible bond issuance are recorded as equity (see **Global View**). Any discount or premium on the convertible bond is recorded and amortized to its maturity date.

Global View

IFRS requires that the issuer of convertible debt record the liability and equity components separately. *See the IFRS Insights at the end of the chapter for a discussion of the similarities and differences between IFRS and GAAP.*

[2] As with any investment, a buyer has to be careful. For example, **Wherehouse Entertainment Inc.**, which had 6¼% convertibles outstanding, was taken private in a leveraged buyout. As a result, the convertible was suddenly as risky as a junk bond of a highly leveraged company with a coupon of only 6¼%. As one holder of the convertibles noted, "What's even worse is that the company will be so loaded down with debt that it probably won't have enough cash flow to make its interest payments. And the convertible debt we hold is subordinated to the rest of Wherehouse's debt." These types of situations make convertibles less attractive and lead to the introduction of takeover protection covenants in some convertible bond offerings. Or, sometimes convertibles are permitted to be called at par, and therefore the conversion premium may be lost.

Example 15.1
Convertible Bond Issue

FACTS Lindor Company issues 50 convertible bonds with a 5-year life with a face value of $1,000 each to Hernandez Inc. The bonds sold at 102. Each bond is convertible into 40 shares of Lindor's $1 par value common stock. The fair value of Lindor's equity component at date of issuance is $200 for each bond.

QUESTION What entry would Lindor make to record the issuance of the convertible debt?

SOLUTION

To record the issuance of the convertible debt:

Cash ($1,000 × 1.02 × 50)	51,000	
Bonds Payable ($1,000 × 50)		50,000
Premium on Bonds Payable (.02 × $50,000)		1,000

Lindor ignores any value related to the equity feature at the date of issuance. Therefore, Lindor does not record the fair value of its equity component. Because Lindor records the convertible bond as a straight debt issue, the premium on the convertible debt will be amortized and reduces interest expense over the 5-year period.

Why is the equity portion of the convertible debt ignored for accounting purposes? The reasoning is that the convertible bondholder cannot sell the conversion right while retaining the debtholder rights. The two choices are mutually exclusive as the convertible security will either be converted into common stock or sold for cash. In other words, the convertible bondholder cannot exercise the option to convert unless the holder foregoes the right to redemption or vice versa.

At Time of Conversion

Continuing with Example 15.1, if Hernandez converts its convertible bonds into common stock, Lindor should use the book value method to record the conversion. The book value method records the common stock issued for the bonds at the carrying amount (book value) of the bonds.

Example 15.2
Conversion of Convertible Bond

FACTS Refer to the information in Example 15.1. Hernandez decides to convert its 50 convertible bonds into common stock at the end of the second year. At that time, the remaining premium on the convertible bonds is $580. In addition, at the time of conversion, the fair value of Lindor's common stock is now $1,300 per share.

QUESTION How should Lindor record the conversion?

SOLUTION

To record conversion into common stock:

Bonds Payable	50,000	
Premium on Bonds Payable	580	
Common Stock (50 × 40 × $1)		2,000
Paid-in Capital in Excess of Par—Common Stock		48,580

In Example 15.2, notice that Paid-in Capital in Excess of Par—Common Stock is credited for the difference between the carrying value of the bond and the par value of the stock issued. Lindor recognizes **no gain or loss upon conversion,** and the fair value per share of common stock at the time of conversion is irrelevant to the journal entry. Support for the book value approach is based on the argument that an agreement was established at the date of the issuance either to pay a stated amount of cash at maturity **or** to issue a stated number of shares of equity securities. Therefore, when Hernandez converts the debt to equity in accordance with the preexisting contract terms, it is simply an exchange of one security, bonds, for another, common stock.

Induced Conversions

Sometimes the issuer wishes to encourage prompt conversion of its convertible debt to equity securities to reduce interest costs or to improve its debt-to-equity ratio. The issuer may offer some form of additional consideration (such as cash or common stock), called a "sweetener," to **induce conversion**. This sweetener is recorded as an expense.

Example 15.3
Induced Conversion

FACTS Graze, Inc. has outstanding $1,000,000 face value convertible bonds convertible into 100,000 shares of $1 par value common stock. Graze wishes to reduce its annual interest cost. To do so, Graze agrees to pay the holders of its convertible bonds an additional $80,000 if they will convert.

QUESTION Assuming conversion occurs, how should Graze record this transaction?

SOLUTION

To record induced conversion:

Debt Conversion Expense	80,000	
Bonds Payable	1,000,000	
Common Stock (100,000 × $1)		100,000
Paid-in Capital in Excess of Par—Common Stock		900,000
Cash		80,000

Graze records the additional $80,000 as **an expense of the current period** and not as a reduction of equity. The expense is reported in the "Other gains and losses" section of the income statement.

Some argue that the cost of a conversion inducement is a cost of obtaining equity capital. As a result, they contend companies should recognize the cost of conversion as a cost of (a reduction of) the equity capital acquired and not as an expense. However, the FASB indicated that when an issuer makes an additional payment to encourage conversion, the payment is for a service (bondholders converting at a given time) and should be reported as an expense.

Extinguishment of Convertible Debt

As indicated earlier, the method for recording the **issuance** of convertible bonds follows that used in recording straight debt issues. The same holds true for **extinguishment** of convertible debt. If the debt is extinguished, or paid off, before its maturity date, the company records a gain or loss for the difference between the reacquisition price of the debt and its carrying value. The gain or loss is reported in the income statement as an Other gain or loss.

Convertible Preferred Stock

As discussed in Chapter 14, **convertible preferred stock** includes an option for the holder to convert preferred shares into a fixed number of common shares. Recording the issuance of convertible preferred stock is the same as recording the issue of non-convertible preferred stock.

- Convertible preferred stock is part of stockholders' equity, not liabilities (unless mandatory redemption exists).
- Remember, convertible bonds are liabilities, so be careful and do not confuse convertible preferred stock with convertible bonds.

When convertible preferred stock is converted to common stock, a company uses the **book value method**. It debits Preferred Stock, along with any related Paid-in Capital in Excess of Par—Preferred Stock, and it credits Common Stock and Paid-in Capital in Excess of Par—Common Stock (if an excess exists). Just like with the convertible bonds, no gain or loss is recognized for the conversion transaction. Also, the current market value of both the convertible preferred stock and the common stock is irrelevant for purposes of recording the transaction.

Example 15.4 Conversion of Convertible Preferred Stock

FACTS Middleton Enterprises issued 1,000 shares of common stock (par value $2) upon conversion of 1,000 shares of preferred stock (par value $1) that was originally issued at $4 per share. The current market value of the common stock is $5 per share.

QUESTION How would Middleton record this transaction?

SOLUTION

To record conversion of convertible preferred stock:

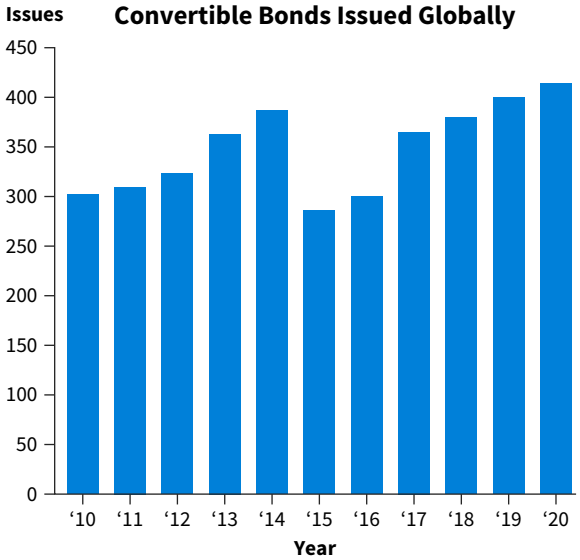
Convertible Preferred Stock (1,000 × $1)	1,000	
Paid-in Capital in Excess of Par—Preferred Stock (1,000 × $3)	3,000	
Common Stock (1,000 × $2)		2,000
Paid-in Capital in Excess of Par—Common Stock		2,000

The conversion entry differs when the par value of the common stock issued **exceeds** the book value of the preferred stock. In that situation, the company debits Retained Earnings for the difference. The rationale for the debit to Retained Earnings is that the company (the issuer) has offered the preferred stockholders an **additional return** to facilitate their conversion to common stock. Many states, however, require that this charge simply reduce additional paid-in capital from other sources.

Accounting Matters

How Low Can You Go?

What do **Tesla**, **Twitter**, **Etsy**, **Airbnb**, and **Expedia Group** all have in common? They are part of the wave of U.S. companies that have recently raised capital in the convertible bond market. And quite a wave it is. As indicated in the following chart, global convertible bond issues are on an upward trend. In the United States, companies issued $54.3 billion worth of convertible bonds through May 2021. This is on top of a record-setting 2020, with U.S. companies issuing $111.2 billion worth of convertible bonds.



Source: Refinitiv.

One-third of the convertible bonds issued in the first half of 2021 were issued at 0% interest, with an overall average interest rate on the bonds of 1.41%. The issuers of these bonds only need to convert the bonds into stock if their share price rises, on average, 39%, typically within a five-year period. Expedia Group issued $1 billion in 0% convertible debt—and its stock price must rise a whopping 72.5% for investors to convert their bonds into shares of stock. With a rebounding travel industry, this could be a win-win for issuers and investors alike as investors are willing to accept such a low interest rate for the prospect of cashing in on rising stock prices.

How likely is it that investors will see a return on convertible bonds? There are a lot of factors that impact whether a convertible will be "in the money." And investors in Tesla's convertible bonds know that all too well. Investors in Tesla's 1.25% 7-year convertible bonds issued in 2014 saw the stock appreciate 1,346% by 2021, thrusting the convertibles well above the conversion threshold. Tesla has issued 11.1 million shares to holders of the bonds with another $419 million of bonds eligible for conversion into more than $3.9 billion worth of stock!

Investors in Tesla's .25%, 5-year convertible bonds, also issued in 2014, were not so lucky. Those bonds matured when Tesla's stock was well below the conversion price, allowing Tesla to raise inexpensive capital with no dilution to its equity!

Sources: M. Farrell, "Convertible-Bond Sales Are Soaring in 2021—Often at 0% Interest," *Wall Street Journal* (May 8, 2021); E. Benmelech, "The End of Tesla's Convertible Era?" *Forbes* (March 1, 2021); and C. Ostroff and P. Davies, "Investors Binge on Convertible Bonds as Issuance Soars," *Wall Street Journal* (November 2, 2020).

15.2 Stock Warrants

LEARNING OBJECTIVE 2

Contrast the accounting for stock warrants with stock rights.

A stock **warrant** is a security that gives investors the **option** to purchase a company's stock at a specific price over a specific period. Warrants are typically included as a "sweetener" to investors to purchase a company's bond issuance. What are the advantages of including warrants with a bond issue?

- Investors like stock warrants because they provide an opportunity to share in the future growth of the company or to sell the warrants in the market.
- Companies use stock warrants to reduce the cost of financing (pay a lower interest rate) and to encourage investors to purchase their stock at some time over the life of the stock warrants.

The option in a stock warrant is like the conversion privilege in a convertible bond. Warrants, if exercised, become common stock and usually have a dilutive effect like the conversion of convertible securities. However, a difference between a convertible security and warrants is that upon exercise of the warrants, there is an exchange of cash. The holder of a warrant usually must pay a certain amount of money to obtain the shares. With convertible securities, the holder merely exchanges the convertible security for common shares.

Stock Warrants Issued with Other Securities

When stock warrants are issued with bonds, the stock warrants may be detachable or nondetachable.

- **Detachable**. Warrants may be sold separately from the bonds.
- **Nondetachable**. Warrants can only be sold with the bond.

Bonds sold with nondetachable warrants are often referred to as "synthetic convertibles" because they have similar attributes as a convertible bond, as follows.

Debt + Nondetachable Stock Warrants = Synthetic Convertible Debt

Nondetachable warrants **do not require an allocation of the proceeds between the bonds and the warrants**. Like the accounting for convertible bonds, companies record the entire proceeds from nondetachable warrants as bonds payable.

What about a detachable warrant?

Example 15.5
Detachable Warrants

FACTS Chen Company issues 10 bonds with a total par value of $10,000 and detachable stock warrants, which provide the right to buy 500 shares of Chen common stock over the next 5 years at $20 per share (the $20 is often referred to as the strike price).

QUESTION What are the alternatives that you, the investor, have related to these detachable stock warrants?

SOLUTION

Given that the stock warrants are **detachable**, you can sell the stock warrants to another investor and continue to hold the bonds, or you can sell the bonds but not the stock warrants. If you keep the stock warrants, you can exercise the stock warrants and receive shares in the company. Recall that if the stock warrants are **nondetachable**, the stock warrants cannot be sold separately. Therefore, both the bond and stock warrants must be sold together.

A company should allocate the proceeds from the sale of debt with detachable stock warrants **between the two securities**. [1] (See the FASB Codification References near the end of the chapter.) The profession takes the position that two separable instruments are involved: (1) a bond and (2) a warrant giving the holder the right to purchase common stock at a certain price. Investors and companies can trade detachable warrants separately from the debt. This allows companies to more efficiently determine the fair value of the equity and debt components.

Two methods are available to determine how much of the proceeds from the sale should be allocated to each security:

1. The proportional method.
2. The incremental method.

Proportional Method

At one time, **AT&T** issued bonds with detachable five-year warrants to buy one share of common stock (par value $5) at $25. At the time, a share of AT&T stock was selling for approximately $50. These warrants enabled AT&T to price its bond offering at par with an interest rate quite a bit lower than prevailing rates at that time. To account for the proceeds from this offering, AT&T would place a value on the two securities:

1. The value of the bonds without the warrants.
2. The value of the warrants.

The **proportional method** then allocates the proceeds using the proportion of the two amounts, based on fair values.

Example 15.6 Proportional Method—Detachable Warrants

FACTS Durant Company issues 10,000 bonds (par $1,000). Each bond has a detachable warrant allowing the holder to purchase one share of $5 par common stock at $25 per share. The total issue price was $10,000,000. Soon after the issue, the bonds sold for 99 without the warrants. The market price of the warrants at that time was $30.

QUESTION How would Durant allocate the proceeds between the bonds and warrants?

SOLUTION

The allocation between the bonds and warrants is as follows.

Fair value of bonds (without warrants) ($10,000,000 × .99)		$ 9,900,000
Fair value of warrants (10,000 × $30)		300,000
Aggregate fair value		$10,200,000
Allocated to bonds:	$\frac{\$9,900,000}{\$10,200,000} \times \$10,000,000 =$	$ 9,705,882
Allocated to warrants:	$\frac{\$300,000}{\$10,200,000} \times \$10,000,000 =$	294,118
Total allocation		$10,000,000

In this situation, the bonds sell at a discount (less than par value). Durant records the sale as follows.

Cash	9,705,882	
Discount on Bonds Payable	294,118	
Bonds Payable		10,000,000

In addition, Durant sells warrants and credits the proceeds to paid-in capital. It makes the following entry.

Cash	294,118	
Paid-in Capital—Stock Warrants		294,118

The allocation of the issue price relies either on an estimate of fair value of each security, generally as established by an investment banker, or on the relative fair value of the bonds and the warrants soon after the company issues and trades them.

In Example 15.6, Durant could have recorded the sale of the bonds and warrants as one combined entry. We show them separately to emphasize that the purchaser of the bond is buying not only a bond but also a possible future claim on common stock in the form of the stock warrant.

Continuing with the Durant example, suppose a few months later that the market price of Durant's common stock is $35 per share. Would it be favorable for the investors to exercise their warrants and purchase common stock for $25 per share? Absolutely! They can purchase the stock at $25 per share when other investors have to pay market price of $35. Assume the investors exercise all 10,000 warrants. Durant receives cash, issues common stock, and makes the following entry.

Cash (10,000 × $25)	250,000	
Paid-in Capital—Stock Warrants	294,118	
Common Stock (10,000 × $5)		50,000
Paid-in Capital in Excess of Par—Common Stock		494,118

Notice that Paid-in Capital—Stock Warrants is debited since all warrants are exercised. If only half of the warrants are exercised, then Paid-in Capital—Stock Warrants is debited for half.

What if investors do not exercise the warrants before they expire? For example, it would not make sense to exercise them if the market price of the stock is less than the exercise price of the warrants. In that case, the entry would be as follows.

Paid-in Capital—Stock Warrants	294,118	
Paid-in Capital—Expired Stock Warrants		294,118

The additional paid-in capital remains in the company, but it is reclassified as expired stock warrants.

Incremental Method

In instances where a company cannot determine the fair value of either the warrants or the bonds, it applies the **incremental method**, as used in lump-sum security purchases (explained in Chapter 14). The company uses the security for which it can determine the fair value and allocates the remainder of the proceeds to the other security.

Example 15.7 Incremental Method—Detachable Warrants

FACTS Refer to the Durant Company detachable warrants in Example 15.6. Assume that the fair value of the Durant warrants is $300,000, but the company cannot determine the fair value of the bonds without the warrants.

QUESTION How would Durant allocate the proceeds between the bonds and warrants in this situation?

SOLUTION

The allocation between the bonds and warrants is as follows.

Lump-sum receipt	$10,000,000
Allocated to the warrants	(300,000)
Balance allocated to bonds	$ 9,700,000

Durant makes the following journal entries.

Cash	9,700,000	
Discount on Bonds Payable	300,000	
Bonds Payable		10,000,000
Cash	300,000	
Paid-in Capital—Stock Warrants		300,000

Rights to Subscribe to Additional Shares

If the directors of a corporation decide to issue new shares of stock, the old stockholders generally have the right to purchase newly issued shares in proportion to their holdings. This **preemptive privilege**, referred to as a **stock right**, saves existing stockholders from suffering a dilution of voting rights without their consent. Also, it may allow them to purchase stock somewhat below its fair value. Unlike the warrants issued with other securities, the warrants issued for stock rights are of short duration. A certificate is issued that represents the stock right. The certificate provides the following details.

- **The number of shares the holder of the right may purchase.** Each share of stock owned ordinarily gives the owner one stock right.
- **The price at which the new shares may be purchased.** The price is normally less than the current market price of such shares, which gives the rights a value in themselves.

From the time they are issued until they expire, holders of stock rights may purchase and sell them like any other security.

No journal entry is required when a company issues stock rights to existing stockholders because no stock has been issued and no cash has been received. The company does note in its records the number of rights issued to existing stockholders to ensure it has additional unissued stock registered for issuance in case the rights are exercised.

If holders exercise the stock rights, a cash payment of some type usually is involved. The company uses the same journal entry (debiting Cash and crediting Common Stock) as for the regular issuance of common stock.

Put It into Practice LOs 15.1 and 15.2

Account for Dilutive Securities

FACTS Clinger Company issued $2,000,000 of 5%, 10-year convertible bonds on April 1, 2025, at 98. The bonds pay interest on October 1 and April 1. Bond discount is amortized semiannually on a straight-line basis. On April 1, 2026, $1,500,000 of these bonds were converted into 30,000 shares of $2 par value common stock.

INSTRUCTIONS

a. Prepare the entry to record the issuance of the bonds on April 1, 2025.

b. Prepare the entry (entries) to record the conversion on April 1, 2026. (Book value method is used.) Assume that the entry to record amortization of the bond discount and interest payment has been made.

c. Assume now that instead of convertible bonds, Clinger issued $2,000,000 bonds without a conversion feature at 102 on April 1, 2025. Each $1,000 face value bond was issued with one detachable stock warrant. Shortly after issuance, the bonds were selling at 98. The warrants had a fair value of $30. Prepare the entry to record the issuance of the bonds and warrants.

SOLUTION

a.	Cash ($2,000,000 × .98)	1,960,000	
	Discount on Bonds Payable	40,000	
	Bonds Payable		2,000,000
b.	Bonds Payable	1,500,000	
	Discount on Bonds Payable		27,000*
	Common Stock (30,000 × $2)		60,000
	Paid-in Capital in Excess of Par		1,413,000

Discount amortization per interest payment period: $40,000 ÷ 20 periods = $2,000

*Unamortized discount on 100% of the bonds ($40,000 − $4,000)	$36,000
× % of bonds converted ($1,500,000 ÷ $2,000,000)	.75
Unamortized discount on converted bonds	$27,000
Carrying value of converted bonds ($1,500,000 − $27,000)	$1,473,000
Less: Par value of common stock	60,000
Paid-in capital in excess of par	$1,413,000

c.	Cash ($2,000,000 × 1.02)	2,040,000	
	Discount on Bonds Payable ($2,000,000 − $1,979,406)	20,594	
	Bonds Payable		2,000,000
	Paid-in Capital—Stock Warrants		60,594*

*Fair Value of Each Security	Fair Value	Relative Fair Value	Proceeds	Allocation of Proceeds
Bonds (no warrants)	$1,960,000 ($2,000,000 × .98)	($1,960,000 ÷ $2,020,000) ×	$2,040,000	$1,979,406
Warrants	60,000 (2,000 × $30)	($60,000 ÷ $2,020,000) ×	$2,040,000	60,594
	$2,020,000			$2,040,000

Discount on Bonds Payable

4/1/25	40,000	10/1/25	2,000
		4/1/26	2,000
		Bal.	36,000

15.3 Stock Compensation Plans

LEARNING OBJECTIVE 3

Describe the accounting and reporting for stock compensation plans.

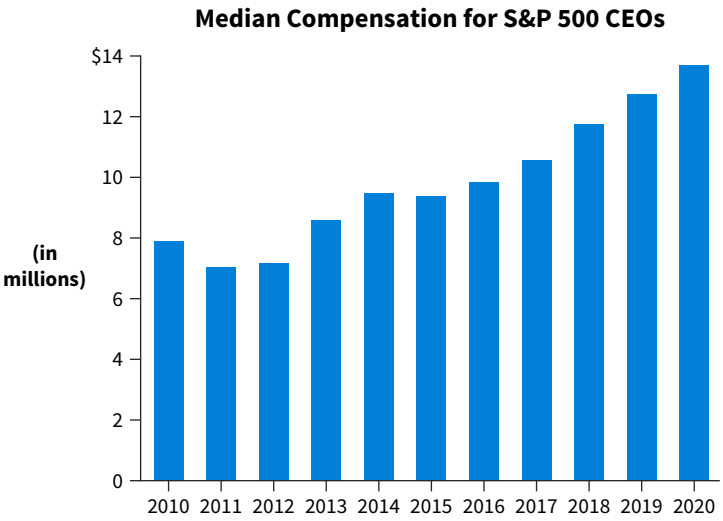
Effective compensation programs do the following.

1. Base compensation on employee and company performance.
2. Motivate employees to high levels of performance.
3. Help retain executives and allow for recruitment of new talent.
4. Maximize the employee's after-tax benefit and minimize the employer's after-tax cost.
5. Use performance criteria over which the employee has control.

Straight cash-compensation plans (salary and perhaps a bonus), though important, are oriented to the short run. Many companies recognize they need a longer-term compensation plan in addition to the cash component.

Long-term compensation plans attempt to develop company loyalty among key employees by giving them "a piece of the action"—that is, an equity interest. These plans, generally referred to as **stock-based compensation plans**, come in many forms. For example, consider the median compensation for S&P 500 CEOs shown in **Illustration 15.2**, much of which is in the form of stock-based compensation.

ILLUSTRATION 15.2 Trends and Magnitude of CEO Compensation



Company	Stock Compensation (in millions)	Stock Compensation as % of Revenue
Snap	$ 686.0	40%
Uber	4,596.0	33
Snowflake	78.4	30
Workday	859.6	24
Atlassian	313.4	19
ServiceNow	662.2	19
Zoom Video	73.1	12
Autodesk	362.4	11
Salesforce	1,785.0	10
Shopify	158.5	10

Sources: T. Francis and K. Broughton, "CEO Pay Surged in a Year of Upheaval and Leadership Challenges," *Wall Street Journal* (April 11, 2021); and FactSet and M. Cherney, "These Companies Pay the Most in Stock Compensation," *Barrons* (October 26, 2020).

To understand the substantial level of stock compensation offered by individual companies, Illustration 15.2 also presents the top 10 companies listed on Nasdaq and the NYSE, with a market value over $50 billion ranked by stock compensation as a percentage of revenue.

The companies shown in Illustration 15.2 are all emerging high-tech companies with high cash burn rates. As such, the best way for these companies to attract and compensate employees is by giving them a part of the action—in short, company stock. The ratio of stock compensation would be much different in well-established companies like **IBM**, **ExxonMobil**, or **Home Depot**. Indeed, the stock-based pay of the five key executives for S&P 500 companies accounted for just 1.5% of the companies' pretax income.

Stock Options

Stock options are a popular form of stock-based compensation. **Stock options** give key employees the **option** to purchase common stock at a given price over an extended period of time. Typically, there is a **service period**, or **vesting period**, over which the employees must work before they can use, or exercise, their stock options.

Suppose that as an employee of Hurdle Inc., you receive options to purchase 10,000 shares of Hurdle's common stock. The options have an exercise price of $20 and are good for 10 years. The service period is three years, which means that you cannot exercise your options until the three-year service period has ended. Let's discuss these options from your perspective by addressing some common questions listed in **Illustration 15.3**.

ILLUSTRATION 15.3 Stock Options from an Employee's Perspective

Questions from an Employee's Perspective	Answers
Is the company giving you stock?	No, the company is giving you the **option** to purchase stock at a specified price. You are not obligated to use the options. But if you do, you must pay for the stock at the specified exercise price of $20 per share.
When would it make sense for you to exercise your options?	Once the three-year service period has ended and you are vested in the options, the key factor in your decision to exercise your options is the market price of the stock. • Suppose the current market price of the stock is $30. Does it make sense for you to exercise your options? Yes! You can purchase the stock for $20, sell it for $30, and realize a gain on the transaction. Alternatively, you can hold the stock and hope the market price continues to increase and sell at a later date for even more earnings. • Suppose the current market price of the stock is $18. Does it make sense for you to exercise your options? No! You could purchase the stock cheaper in the market rather than exercising your options.
Are your options transferable?	No, you cannot sell or trade your options because they were granted to you as part of your unique compensation package.
Do your options expire?	Yes, options typically have an expiration date. If the market price of the stock never goes above the exercise price of the options, then you would not exercise, and they would expire.

Let's look at the options from the company's perspective. The date that Hurdle grants options to employees is called the **grant date**. Typically, the option exercise price is equal to or slightly greater than the market price of the stock on the grant date. Hurdle hopes that employees will be incentivized to higher levels of performance, which will add value to the company and increase the market price of Hurdle's stock. From an accounting standpoint, should Hurdle recognize an expense related to these stock options?

The answer is yes. This is because the options you received do have value. If the stock price goes above $20 any time in the next 10 years and you exercise the options, you may earn substantial compensation. For example, if at the end of the fourth year, the market price of the stock is $30 and you exercise your options, you earn $100,000 [10,000 options × ($30 − $20)], ignoring income taxes.

GAAP requires that companies recognize compensation cost using the **fair value method**. [2] The FASB position is that companies should base the accounting for the cost of employee services on the fair value of compensation paid.[3] This amount is presumed to be a measure of the value of the services received. The concept of fair value therefore applies to stock options as well as restricted-stock plans.

Accounting for Stock Options

In accounting for stock options, there are two main accounting issues:

1. **Determining compensation expense**. As mentioned, under the fair value method, companies compute total compensation expense based on the fair value of the options expected to vest on the date they grant the options to the employee(s) (i.e., the **grant date**). Public companies estimate fair value by using an option-pricing model, with some adjustments for the unique factors of employee stock options. No adjustments occur after the grant date in response to subsequent changes in the stock price—either up or down.
2. **Allocating compensation expense over an appropriate period**. In general, a company recognizes compensation expense in the periods in which its employees perform the service—the **service period**. Unless otherwise specified, the service period is the vesting period—the time between the grant date and the vesting date.[4] Thus, the company

[3] Under the fair value method, companies **use an acceptable option-pricing model to value the options at the grant date**. An option-pricing model is a statistical model that considers many factors that determine an option's underlying value, such as the volatility of the underlying stock, expected dividends over the option's life, and the expected life of the options. A commonly used model is based on the Black-Scholes formula. You can learn more about option-pricing models in an advanced finance course, *but for purposes of this course, the fair value of the stock options will be provided to you*.

[4] "To vest" means "to earn the rights to." An employee's award becomes vested at the date that the employee's right to receive or retain shares of stock or cash under the award is no longer contingent on remaining in the service of the employer.

determines total compensation cost at the grant date and allocates it to the periods benefited by its employees' services.

No journal entry is made on the grant date. The compensation expense is recorded as the employees perform services over the vesting period.

Example 15.8 Stock Compensation

FACTS On November 1, 2024, the stockholders of Dunder Mifflin Paper Company approve a plan that grants the company's five executives the options to purchase 2,000 shares each of the company's $1 par value common stock. The company grants the options on January 1, 2025. The executives may exercise the options at any time within the next 10 years after the 2-year service period. The option price per share is $60, and the market price of the stock at the date of grant is $70 per share. Under the fair value method, the company computes total compensation expense by applying the Black-Scholes option-pricing model. The fair value option-pricing model determines Dunder Mifflin's total compensation expense to be $220,000.

QUESTIONS How would you record (a) the grant of the options and (b) the compensation expense in 2025 and 2026?

SOLUTION

a. To record the granting of the option on January 1, 2025:

No entry is needed.

b. The service period is 2 years; therefore, compensation expense is allocated evenly over the 2-year period. To record compensation expense for 2025 (December 31, 2025):

Compensation Expense	110,000	
Paid-in Capital—Stock Options ($220,000 ÷ 2)		110,000

To record compensation expense for 2026 (December 31, 2026):

Compensation Expense	110,000	
Paid-in Capital—Stock Options		110,000

As indicated, compensation expense is allocated evenly over the 2-year service period.

Paid-in Capital—Stock Options

	12/31/25 110,000
	12/31/26 110,000
	Bal. 220,000

Exercise Once the service period is complete, employees can exercise the options. Continuing with Example 15.8, if Dunder Mifflin's executives exercise 2,000 of the 10,000 options (20% of the options) on June 1, 2028 (three years and five months after date of grant), the company records the following journal entry.

June 1, 2028

Cash (2,000 × $60)	120,000	
Paid-in Capital—Stock Options (.20 × $220,000)	44,000	
Common Stock (2,000 × $1)		2,000
Paid-in Capital in Excess of Par—Common Stock		162,000

Paid-in Capital—Stock Options

	12/31/25 110,000
	12/31/26 110,000
	Bal. 220,000
6/1/28 44,000	
	Bal. 176,000

Expiration Remember, the options have an expiration date. Some employees may let their options expire, or it may never be favorable for employees to exercise their options. If Dunder Mifflin's executives fail to exercise the remaining stock options before their expiration date, the company transfers the balance in the Paid-in Capital—Stock Options account to a more properly titled paid-in capital account, such as Paid-in Capital—Expired Stock Options. Dunder Mifflin records this transaction at the date of expiration as follows.

Paid-in Capital—Stock Options

	2025 110,000
	2026 110,000
	12/31/26 Bal. 220,000
6/1/28 44,000	
	176,000
1/1/35 176,000	
	0

January 1, 2035 (expiration date)

Paid-in Capital—Stock Options	176,000	
Paid-in Capital—Expired Stock Options (.80 × $220,000)		176,000

Paid-in Capital—Expired Stock Options

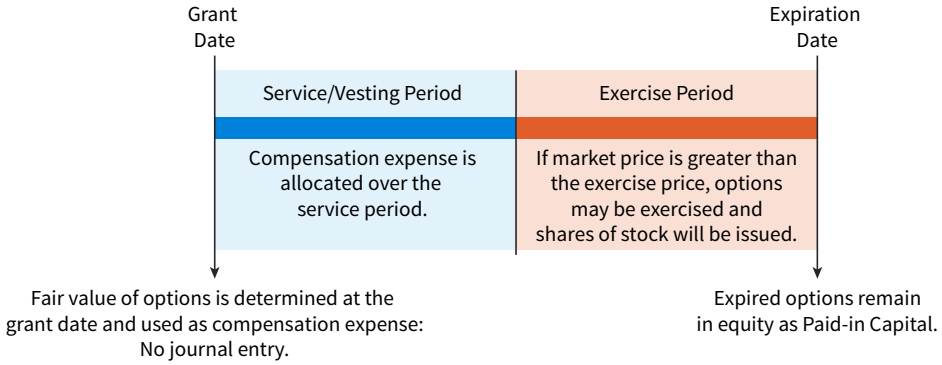
	1/1/35 176,000
	176,000

Notice that no adjustment is made to compensation expense when the options expire. The executives still provided services during the service period, therefore, the company incurred compensation expense.

Forfeiture What happens if the employee leaves the company and **does not satisfy the service requirements?** The employee forfeits the stock options. In this case, the company should adjust the estimate of compensation expense recorded in the current period (as a change in estimate). A company records this change in estimate by debiting Paid-in Capital—Stock Options and crediting Compensation Expense for the amount of cumulative compensation expense recorded to date, which decreases compensation expense in the period of forfeiture.

Summary of Stock Options

Illustration 15.4 presents a summary of the key dates for the accounting for a stock option plan.



Grant Date
Expiration Date
Service/Vesting Period
Exercise Period
Compensation expense is allocated over the service period.
If market price is greater than the exercise price, options may be exercised and shares of stock will be issued.
Fair value of options is determined at the grant date and used as compensation expense: No journal entry.
Expired options remain in equity as Paid-in Capital.

ILLUSTRATION 15.4 Summary of Stock Option Accounting

Accounting Matters — What's the Debate About?

GAAP requires companies to calculate compensation expense related to employee stock options based on the fair value of the options on the date they were granted. However, the fair model was not always GAAP.

Before the fair value method, companies used the intrinsic-value method, which measured compensation expense based on what the employee would receive today if the option was immediately exercised, or the difference between the market price and exercise price of the stock on the grant date. What's the problem? On the grant date, the market and exercise price are often the same! Under the intrinsic-value method, companies would issue stock options and avoid recording any compensation expense.

As you can imagine, many companies were less than excited about the adoption of the fair value model, as it would add a significant expense to their income statement simply as a result of an accounting change. But the stock options **did** have value. Smaller technology companies were very vocal in their opposition to the fair value method, arguing that stock options were the only way they could attract top executives.

While the FASB was in the crosshairs of significant debate, reasonable heads did prevail. Warren Buffett, a prominent supporter of the fair value method, reported that when making portfolio decisions, he would often adjust reported earnings per share by 5 to 10% to account for stock-option compensation expense. As data in the following table show, Buffett's adjustments were conservative.

Company	Reported Diluted EPS	If Option Expensed*	Decline in Diluted EPS
Home Depot	$1.88	$1.78	5%
Merck	3.03	2.79	8
IBM	4.32	3.74	13
Amazon.com	0.08	0.07	13
McDonald's	1.15	0.98	15
Adobe	1.10	0.33	70
Yahoo	0.37	0.05	86
Apple	0.19	(0.27)	loss

* The Black-Scholes method was used by all companies to calculate the options expense.

Source: N. Apostolou and D. Crumbley, "Accounting for Stock Options Update on the Continuing Conflict," *The CPA Journal Online* (August 2005).

Restricted-Stock Plans

Another form of stock compensation are restricted-stock plans. In a **restricted-stock plan**, the company transfers stock (or units) to employees subject to an agreement that the stock cannot be sold, transferred, or pledged until vesting occurs. Restricted-stock plans are subject to forfeiture if the conditions of vesting are not met.[5] Restricted-stock plans are of two types: (1) **restricted-stock awards** and (2) **restricted-stock units**. The accounting for these two plans follows the same principles used to record stock options.

Determine the total compensation expense based on the fair value of the stock (units) on the date it is granted.

Recognize compensation in the periods in which the employees perform service.

Make no adjustments to compensation expense due to changes in the fair value of the stock (units) after the grant date.

From an accounting point of view, a restricted-stock award plan transfers stock to the employee at the grant date. In a restricted-stock unit plan, the employee receives a commitment from the company to transfer stock at the time vesting conditions are met. This commitment is represented by units that become stock when vesting occurs, similar to a stock option when exercised.

Restricted-Stock Award

On the grant date, the company issues stock to the employees, which results in a journal entry crediting common stock and the related paid-in capital in excess of par account if the stock has a par value. The company debits a contra stockholders' equity account called **Unearned Compensation** for the total fair value of the restricted-stock plan. The Unearned Compensation account represents the cost of employee services yet to be performed.

Example 15.9
Restricted-Stock Award

FACTS On January 1, 2025, Sparks, Inc. issues 1,000 shares of restricted stock to its CEO, Lisa Leslie. Sparks' stock has a fair value of $20 per share on January 1, 2025. Additional information is as follows.

1. The service period related to the restricted stock is 5 years.
2. Vesting occurs if Leslie stays with the company for a 5-year period.
3. The par value of the stock is $1 per share.

QUESTION What entries should Sparks make on January 1, 2025, and December 31, 2025?

SOLUTION

To record the granting of the restricted-stock award:

	January 1, 2025	
Unearned Compensation (1,000 × $20)	20,000	
Common Stock (1,000 × $1)		1,000
Paid-in Capital in Excess of Par—Common Stock (1,000 × $19)		19,000

[5]Most companies base vesting on future service for a period of generally three to five years. Vesting may also be conditioned on some performance target such as revenue, net income, cash flows, or some combination of these three factors. The employee also collects dividends on the restricted stock, and these dividends generally must be repaid if forfeiture occurs.

The credits to Common Stock and Paid-in Capital in Excess of Par—Common Stock indicate that Sparks has issued shares of stock. The debit to Unearned Compensation (often referred to as Deferred Compensation Expense) identifies the total compensation expense the company will recognize over the 5-year period. **Unearned Compensation represents the cost of services yet to be performed, which is not an asset.** Consequently, the company reports Unearned Compensation in stockholders' equity in the balance sheet, as a contra equity account (similar to the reporting of treasury stock at cost).

To record compensation expense of $4,000 ($20,000 ÷ 5 years):

December 31, 2025

Compensation Expense	4,000	
Unearned Compensation		4,000

Sparks records compensation expense of $4,000 for each of the next 4 years (2026, 2027, 2028, and 2029).

Unearned Compensation

1/1/25	20,000		
		12/31/25	4,000
		12/31/26	4,000
12/31/26 Bal.	12,000		
		2/3/27	12,000
	0		

In Example 15.9, what happens if Leslie leaves the company before the five years has elapsed? In this situation, Leslie forfeits her rights to the stock. Sparks reverses the compensation expense already recorded, debits the common stock accounts reflecting Leslie's forfeiture, and removes the remaining balance of Unearned Compensation.

Example 15.10 Restricted-Stock Forfeiture

FACTS Refer to Example 15.9. Lisa Leslie leaves the company on February 3, 2027 (before any expense has been recorded during 2027).

QUESTION What entry would you make to account for this forfeiture?

SOLUTION

To record the restricted-stock forfeiture:

Common Stock (1,000 × $1)	1,000	
Paid-in Capital in Excess of Par—Common Stock	19,000	
Compensation Expense ($4,000 × 2)		8,000
Unearned Compensation		12,000

In this situation, Sparks reverses the compensation expense of $8,000 recorded through 2026.

Compensation Expense

12/31/25	4,000		
12/31/26	4,000		
	8,000		
		2/3/27	8,000
	0		

In Sparks' restricted-stock plan in Example 15.10, vesting never occurred because Leslie left the company before she met the service requirement. Similar to the forfeiture of stock options, because Leslie was never vested, she had to forfeit her shares. Therefore, the company must reverse compensation expense recorded to date.

Restricted-Stock Units

What if Sparks uses restricted-stock units?

Example 15.11 Restricted-Stock Units

FACTS On January 1, 2025, Sparks, Inc. issues 1,000 shares of restricted-stock units to its CEO, Lisa Leslie. Each unit has a fair value of $20 per share, which is equal to the fair value of one share of stock. Additional information is as follows.

1. The service period related to the restricted stock units is 5 years.
2. Vesting occurs if Leslie stays with the company for 5 years.
3. The par value of the stock is $1 per share.

QUESTION What entries should Sparks make on January 1, 2025, and December 31, 2025, to record the issuance of these restricted-stock units?

SOLUTION

The total compensation expense is $20,000 (1,000 shares × $20). Sparks does not make any entry on January 1, 2025, because Sparks only provides a promise to provide these units if Leslie meets the vesting requirements. Unlike the restricted-stock award, no shares of stock are issued on January 1, 2025. On December 31, 2025, Sparks records compensation expense of $4,000 ($20,000 ÷ 5 years) as follows.

Compensation Expense	4,000	
Paid-in Capital—Restricted-Stock Units		4,000

Sparks records compensation expense of $4,000 for each of the next 4 years (2026, 2027, 2028, and 2029).

Comparing Examples 15.9 and 15.11, the compensation expense is the same for both the restricted-stock award and the restricted-stock units. For the restricted-stock units, assuming that Leslie meets the vesting requirements, Sparks transfers common stock to Leslie and makes the following entry on December 31, 2029.

Paid-in Capital—Restricted-Stock Units (1,000 × $20)	20,000	
Common Stock (1,000 × $1)		1,000
Paid-in Capital in Excess of Par—Common Stock		19,000

What if Leslie leaves the company before completing the service period? Just as before, she forfeits her rights to receive the stock and the company reverses compensation expense that was previously recorded.

Example 15.12
Restricted-Stock Units—No Vesting

FACTS Refer to the information in Example 15.11. Lisa Leslie leaves the company on February 1, 2027, before any expense has been recorded during 2027.

QUESTION What entry would you make to record this forfeiture?

SOLUTION

To record the restricted-stock unit forfeiture:

Paid-in Capital—Restricted-Stock Units	8,000	
Compensation Expense		8,000

In this situation, Sparks reverses the compensation expense of $8,000 recorded through 2026, similar to the accounting for the restricted-stock and stock-option plans.

Employee Stock-Purchase Plans

Employee stock-purchase plans (ESPPs) generally permit employees to purchase stock at a discounted price for a short period of time. The company often uses such plans to secure equity capital or to induce widespread ownership of its common stock among employees. These plans are considered compensatory unless they satisfy **all three** of the following conditions.

1. Substantially all full-time employees may participate on an equitable basis.
2. The discount from market is small. That is, the discount does not exceed the per share amount of costs avoided by not having to raise cash in a public offering. If the amount of the discount is 5% or less, no compensation needs to be recorded.
3. The plan offers no substantive option feature.

Example 15.13
Stock-Purchase Plan

FACTS Assume that **Publix Super Markets**' stock-purchase plan allowed all employees to purchase its stock at a 5% reduction from market price for a short period of time.

QUESTION How should the reduction in price to the employees affect compensation expense?

SOLUTION

The reduction from market price is not considered compensatory. Why? Because the per share amount of the costs avoided by not having to raise the cash in a public offering equals 5%. Publix does not need to record compensation expense related to this employee stock-purchase plan.

Companies that offer their employees a **compensatory** ESPP should record the compensation expense over the service life of the employees. It will be difficult for some companies to claim that their ESPPs are non-compensatory (and therefore not record compensation expense) unless they change their discount policy, which in the past often was 15%. If they change their discount policy to 5%, participation in these plans will undoubtedly be lower.

Trends in Stock Compensation Plans

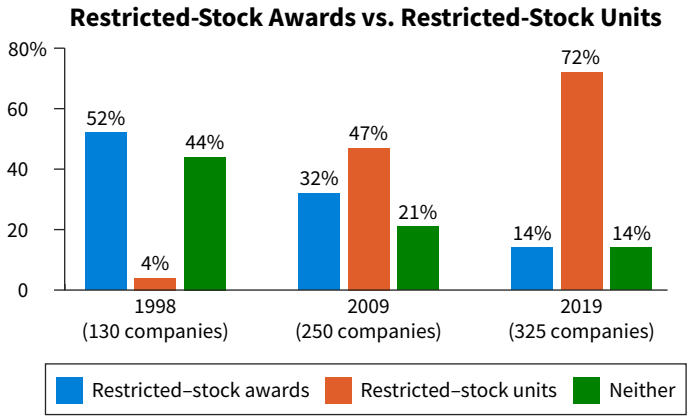
Since the FASB mandated the fair value method for expensing of stock options, companies now rely more on restricted-stock plans than options to compensate employees. The major advantages of restricted-stock plans are as follows.

1. **Restricted stock never becomes completely worthless.** In contrast, if the stock market price does not exceed the exercise price for a stock option, the options are worthless. The restricted stock, however, still has value.
2. **Restricted stock generally results in less dilution to existing stockholders.** Restricted-stock awards are usually one-half to one-third the size of stock options. For example, if a company issues stock options on 1,000 shares, an equivalent restricted-stock offering might be 333 to 500 shares. The reason for the difference is that at the end of the vesting period, the restricted stock will have value, whereas the stock options may not. As a result, fewer shares are involved in restricted-stock plans. Therefore, less dilution results if the stock price rises.
3. **Restricted stock better aligns the employee incentives with the companies' incentives.** The holder of restricted stock is essentially a stockholder and should be more interested in the long-term objectives of the company. In contrast, the recipients of stock options often have a short-run focus, which leads to taking risks to hype the stock price for short-term gain to the detriment of the long-term.

Movement to Restricted-Stock Units

Within the restricted-stock plans, there has been a major shift to the restricted-stock unit plans, as indicated in **Illustration 15.5**.

ILLUSTRATION 15.5 Growth of Restricted-Stock Unit Plans



Source: AYCO–Goldman Sachs, *Compensation and Benefits Digest* (October 11, 2019).

Reasons for this shift to restricted-stock units include administrative convenience and lower cost. For example, the accounting and administration for restricted-stock units only results in an accounting entry. In a restricted-stock awards plan, actual stock is issued, which counts as outstanding stock and increases the number of shares outstanding. In addition, the restricted-stock awards involve more dilution initially than restricted-stock units. Tax considerations also can have an effect.

Time-Based versus Performance Vesting

Companies often have relied on time-based vesting (often referred to as pay-for-pulse vesting, in that employees simply need to keep their job to vest) rather than performance-based vesting. Performance-based vesting plans use such measures as total stockholder return; cash flows; environmental, social, governance (ESG) performance; and earnings to determine the compensation expense. Performance-based vesting is growing in popularity as it allows employees to align themselves with the long-term goals of the company.

Regardless of the type of plan, required expense recognition of compensation related to stock options and restricted stock represents a significant improvement in financial reporting. By leaving stock-based compensation expense out of income, reported income is biased. Biased reporting not only raises concerns about the credibility of companies' reports but also of financial reporting in general. Even good companies get tainted by the biased reporting of a few "bad apples." If we write standards to achieve some social, economic, or public policy goal, financial reporting loses its credibility.

Disclosure of Compensation Plans

Companies must fully disclose the status of their compensation plans at the end of the periods presented. To meet these objectives, companies must make extensive disclosures. Specifically, a company with one or more share-based payment arrangements must disclose information that enables users of the financial statements to understand:

1. The nature and terms of such arrangements that existed during the period and the potential effects of those arrangements on shareholders.
2. The effect on the income statement of compensation cost arising from share-based payment arrangements.
3. The method of estimating the fair value of the goods or services received, or the fair value of the equity instruments granted (or offered to grant), during the period.
4. The cash flow effects resulting from share-based payment arrangements.

Illustration 15.6 presents the type of information disclosed for compensation plans.

ILLUSTRATION 15.6 Stock-Option Plan Disclosure

Stock-Option Plan

The Company has a share-based compensation plan. The compensation cost that has been charged against income for the plan was $29.4 million, and $28.7 million for 2025 and 2024, respectively.

The Company's 2025 Employee Share-Option Plan (the Plan), which is shareholder-approved, permits the grant of share options and shares to its employees for up to 8 million shares of common stock. The Company believes that such awards better align the interests of its employees with those of its shareholders. Option awards are generally granted with an exercise price equal to the market price of the Company's stock at the date of grant; those option awards generally vest based on 5 years of continuous service and have 10-year contractual terms. Share awards generally vest over five years. Certain option and share awards provide for accelerated vesting if there is a change in control (as defined by the Plan).

Description of plan

The fair value of each option award is estimated on the date of grant using an option valuation model based on the assumptions noted in the following table.

	2025	2024
Expected volatility	25%–40%	24%–38%
Weighted-average volatility	33%	30%
Expected dividends	1.5%	1.5%
Expected term (in years)	5.3–7.8	5.5–8.0
Risk-free rate	6.3%–11.2%	6.0%–10.0%

Valuation model assumptions

A summary of option activity under the Plan as of December 31, 2025, and changes during the year then ended are presented below.

Options	Shares (000)	Weighted-Average Exercise Price	Weighted-Average Remaining Contractual Term	Aggregate Intrinsic Value ($000)
Outstanding at January 1, 2025	4,660	$42		
Granted	950	60		
Exercised	(800)	36		
Forfeited or expired	(80)	59		
Outstanding at December 31, 2025	4,730	$47	6.5	$85,140
Exercisable at December 31, 2025	3,159	$41	4.0	$75,816

Option plan activity and balances

The weighted-average grant-date fair value of options granted during the years 2025 and 2024 was $19.57 and $17.46, respectively. The total intrinsic value of options exercised during the years ended December 31, 2025 and 2024, was $25.2 million, and $20.9 million, respectively.

As of December 31, 2025, there was $25.9 million of total unrecognized compensation cost related to nonvested share-based compensation arrangements granted under the Plan. That cost is expected to be recognized over a weighted-average period of 4.9 years. The total fair value of shares vested during the years ended December 31, 2025 and 2024, was $22.8 million and $21 million, respectively.

Option expense

Restricted-Stock Awards

The Company also has a restricted-stock plan. The Plan is intended to retain and motivate the Company's Chief Executive Officer over the term of the award and to bring his total compensation package closer to median levels for Chief Executive Officers of comparable companies. The fair value of grants during the year was $1,889,000, or $35.68 per share, equivalent to 92% of the market price of a share of the Company's Common Stock on the date the award was granted.

Restricted-stock activity for the year ended 2025 is as follows.

	Shares	Price
Outstanding at December 31, 2024	57,990	—
Granted	149,000	$12.68
Vested	(19,330)	—
Forfeited	—	—
Outstanding at December 31, 2025	187,660	

Restricted- stock plan details

Put It into Practice LO 15.3

Implement Stock Compensation

FACTS The following are transactions that Harden Company is evaluating related to compensation for its employees.

1. Issue 100,000 shares of restricted stock to its employees on January 1, 2025. Harden will not permit the employees to sell their units over the vesting period of 4 years. The employees must stay with the company for 4 years. Otherwise, the stock is forfeited.
2. Issue 1,000,000 stock options to its employees on January 1, 2025. The fair value of the options is determined to be $2 as determined by the Black-Sholes option pricing model. The exercise price of the options is $13.The options will vest over 4 years (the service period is 4 years).
3. Issue 120,000 restricted-stock units to its employees on January 1, 2025. Vesting occurs after 5 years. If the employees fail to stay with the company for 5 years, the stock units are forfeited.

The par value of the Harden common stock is $1 per share. Harden's share price on January 1, 2025, is $12; its share price on December 31, 2025, is $8 per share.

INSTRUCTIONS

a. Prepare journal entries for each compensation plan on January 1, 2025.

b. Prepare journal entries for each compensation plan on December 31, 2025.

c. Assuming that employees holding stock options exercise their options on January 15, 2029, prepare the journal entry for the exercise (the market price is $20 per share).

d. Prepare the journal entry on January 2, 2026, if one of the employees holding 2,000 restricted-stock units resigned as of December 31, 2025.

SOLUTION

a. **January 1, 2025**

1.	Unearned Compensation ($12 × 100,000)	1,200,000	
	Common Stock ($1 × 100,000)		100,000
	Paid-in Capital in Excess of Par—Common Stock		1,100,000

2. and 3.

No entry

b. **December 31, 2025**

1.	Compensation Expense [($12 × 100,000) ÷ 4]	300,000	
	Unearned Compensation		300,000
2.	Compensation Expense [(1,000,000 × $2) ÷ 4]	500,000	
	Paid-in Capital—Stock Options		500,000
3.	Compensation Expense [($12 × 120,000) ÷ 5]	288,000	
	Paid-in Capital—Restricted-Stock Units		288,000

c. **January 15, 2029**

Cash ($13 × 1,000,000)	13,000,000	
Paid-in Capital—Stock Options (4 × $500,000)	2,000,000	
Common Stock ($1 × 1,000,000)		1,000,000
Paid-in Capital in Excess of Par—Common Stock		14,000,000

d. **June 2, 2026**

Paid-in Capital—Restricted-Stock Units	4,800	
Compensation Expense [($12 × 2,000) ÷ 5]		4,800

15.4 Basic Earnings per Share

LEARNING OBJECTIVE 4

Compute basic earnings per share.

Stockholders and potential investors widely use **earnings per share (EPS)** in evaluating the profitability of a company. As a result, EPS receives much attention by the financial press. Recall from Chapter 3 that EPS indicates the income earned by **each share of common stock**. In general, the higher the EPS, the better.

Because of the importance of EPS information, most companies must report this information on the face of the income statement. [3] The exception, due to cost-benefit considerations, is nonpublic companies. Generally, companies report EPS information below net income in the income statement. **Illustration 15.7** shows Oscar Co.'s income statement presentation of EPS assuming Oscar has net income of $300,000 and a weighted average of 100,000 shares of common stock outstanding for the year. The resulting EPS is $3.00 ($300,000 ÷ 100,000).

Net income	$300,000
Earnings per share	$3.00

ILLUSTRATION 15.7 Income Statement Presentation of EPS

When the income statement contains discontinued operations, companies should disclose EPS for continuing and discontinued operations as shown in **Illustration 15.8**.

Earnings per share:	
Income from continuing operations	$4.00
Loss from discontinued operations, net of tax	0.60
Net income	$3.40

ILLUSTRATION 15.8 Income Statement Presentation of EPS Components

These disclosures enable the user of the financial statements to recognize the effects on EPS of income from continuing operations, as distinguished from income or loss from discontinued operations.[6]

Earnings per Share—Simple Capital Structure

The calculation of a corporation's EPS is driven by its capital structure. There are two general types of capital structure:

- **Simple capital structure**. If a corporation has only common stock outstanding, then it has a simple capital structure. The corporation can also have preferred stock outstanding, but it **cannot** have a conversion feature in which the preferred stock can be converted to common stock and still have a simple capital structure.
- **Complex capital structure**. If a corporation has any type of dilutive security outstanding, such as convertible bonds, convertible preferred stock, stock warrants, or stock options, then it automatically has a complex capital structure.

[6]Companies should present, either on the face of the income statement or in the notes to the financial statements, per share amounts for discontinued operations.

This section focuses on the computation of EPS for a simple capital structure. The calculation involves net income plus the following two items:

1. Preferred stock dividends.
2. Weighted-average number of shares outstanding.

Preferred Stock Dividends

EPS relates to earnings per **common share**. If a company has preferred stock shareholders, a portion of earnings may be distributed to the preferred stock shareholders in the form of preferred stock dividends. Therefore, a company must **subtract the current-year preferred stock dividend from net income to arrive at income available to common stockholders**. The formula for computing EPS is as follows.

$$\text{Earnings per Share} = \frac{\text{Net Income} - \text{Preferred Dividends}}{\text{Weighted-Average Common Shares Outstanding}}$$

Recall that preferred stock can be cumulative or noncumulative. This designation impacts the numerator of EPS as follows.

- **Cumulative preferred stock**. Most preferred stock is cumulative and typically a dividend is declared each year. **But even if a dividend is not declared, it is always subtracted in the EPS numerator.** The rationale is that dividends in arrears on cumulative preferred stock will eventually be paid in the future when the corporation declares a dividend. When a company has dividends in arrears and ultimately declares a dividend, the year the dividend is declared, they will still only subtract that year's dividend from net income (dividends in arrears from previous years had already been deducted from net income during the previous year's EPS calculation).
- **Noncumulative preferred stock**. The dividend for noncumulative preferred stock is subtracted in the EPS numerator **only if it is declared during the year**. If no dividend is declared, then it is not included in the EPS calculation. The rationale is that passed dividends on noncumulative preferred stock will not be paid in the future and therefore do not impact earnings available to common stockholders.

It's important to note that the focus is on the **declaration** of dividends, not the actual payment of dividends. For **noncumulative** preferred stock, as long as dividends are **declared** during the year, the dividend is subtracted in the EPS numerator.

In reporting earnings per share information, a company must determine income available to common stockholders. To do so, the company subtracts dividends on preferred stock from each of the intermediate components of income (income from continuing operations) and finally from net income.

- If a company declares dividends on preferred stock and a net loss occurs, **the company adds the preferred dividend to the loss** (thus increasing the amount of the loss) for purposes of computing the loss per share.
- If the preferred stock is cumulative and the company has net income but declares no dividend in the current year, it subtracts **an amount equal to the dividend that it should have declared for the current year only**.
- If the stock is cumulative and the company reports a net loss, but declares no dividend in the current year, it **adds** an amount equal to the dividend to the net loss.

The company should also include dividends in arrears in the previous years' presentations.

Weighted-Average Number of Shares Outstanding

In all computations of EPS, the **weighted-average number of shares outstanding** during the period constitutes the basis for the per share amounts reported. Shares issued or purchased during the period affect the amount outstanding. Companies must **weight the shares by the fraction of the period they are outstanding**. The rationale for this approach is to find the equivalent number of whole shares outstanding for the year.

Example 15.14
Weighted-Average Shares Outstanding

FACTS Franks Inc. has changes in its common stock shares outstanding for the period as follows.

Date	Share Changes	Shares Outstanding
January 1	Beginning balance	90,000
April 1	Issued 30,000 shares for cash	30,000
		120,000
July 1	Purchased 39,000 shares for the treasury	(39,000)
		81,000
November 1	Issued 60,000 shares for cash	60,000
December 31	Ending balance	141,000

QUESTION How would you compute Franks' weighted-average number of shares outstanding?

SOLUTION

Franks computes the weighted-average number of shares outstanding as follows.

Dates Outstanding	(A) Shares Outstanding	(B) Fraction of Year	(C) Weighted Shares (A × B)
Jan.1–Mar. 31	90,000	3/12	22,500
Apr. 1–June 30	120,000	3/12	30,000
July 1–Oct. 31	81,000	4/12	27,000
Nov. 1–Dec. 31	141,000	2/12	23,500
Weighted-average number of shares outstanding		12/12	103,000

As indicated, 90,000 shares were outstanding for 3 months, which is equivalent to 22,500 whole shares for the entire year. Because Franks issued additional shares on April 1, it must weight these shares for the time outstanding. When the company purchased 39,000 shares for the treasury on July 1, it reduced the shares outstanding. Therefore, from July 1 to October 31, only 81,000 shares were outstanding, which is equivalent to 27,000 shares. The issuance of 60,000 shares increases shares outstanding for the last 2 months of the year. Notice that the actual shares outstanding at year-end, 141,000, is different from the weighted-average shares outstanding, 103,000.

Stock Dividends and Stock Splits You learned about stock dividends and stock splits in Chapter 14. Recall that stock dividends and stock splits do not:

- Change total stockholders' equity.
- Increase or decrease a company's assets.
- Change an individual stockholders' ownership percentage.

Essentially, stock dividends and stock splits take the existing shares of a company and cut them into smaller pieces. For purposes of calculating the weighted-average number of shares, a company must treat stock dividends and stock splits as if they happened at the beginning of the period.

Example 15.15
Stock Dividend—Shares Outstanding

FACTS Koepke Corporation had 100,000 shares outstanding on January 1 and issued a 25% stock dividend on June 30. No other common stock activity occurred for the rest of the year.

QUESTION How would you compute Koepke's weighted-average number of shares outstanding for the year?

SOLUTION

For purposes of computing a weighted-average for the current year, Koepke assumes the additional 25,000 shares outstanding as a result of the stock dividend to be outstanding since the beginning of the year. Thus, the weighted-average for the year for Koepke is 125,000 shares.

As shown in Example 15.15, Koepke restated the shares outstanding before the stock dividend to compute the weighted-average number of common shares. Restating allows valid comparisons of EPS between periods before and after the stock split or stock dividend. Now let's look at a more complex example with Koepke Corporation.

Example 15.16
Stock Repurchases—Shares Outstanding

FACTS Koepke Corporation had changes in its common stock shares during the year as follows.

Date	Share Changes	Shares Outstanding
January 1	Beginning balance	100,000
March 1	Issued 20,000 shares for cash	20,000
		120,000
June 1	60,000 additional shares (50% stock dividend)	60,000
		180,000
November 1	Issued 30,000 shares for cash	30,000
December 31	Ending balance	210,000

QUESTION How should Koepke compute the weighted-average number of shares outstanding for the year?

SOLUTION

Koepke computes the weighted-average number of shares outstanding as follows.

Dates Outstanding	(A) Shares Outstanding	(B) Restatement	(C) Fraction of Year	(D) Weighted Shares A × B × C
Jan. 1–Feb. 28	100,000	1.50	2/12	25,000
Mar. 1–May 31	120,000	1.50	3/12	45,000
June 1–Oct. 31	180,000		5/12	75,000
Nov. 1–Dec. 31	210,000		2/12	35,000
Weighted-average number of shares outstanding				180,000

Koepke must restate the shares outstanding **prior** to the stock dividend by 50%. That is accomplished by multiplying the outstanding shares by 1.50. The company adjusts the shares outstanding from January 1 to May 31 for the stock dividend, so that it now states these shares on the same basis as shares issued after the stock dividend. Koepke does not restate shares issued after the stock dividend because they are on the new basis.

If a company executes a stock split, **the same type of treatment applies**. For example, in a 2-for-1 stock split, the shares outstanding **prior** to the split would be doubled, or multiplied by 2. If a stock dividend or stock split occurs **after** the end of the year but before issuing the financial statements, a company must restate the weighted-average number of shares outstanding for the year (and any other years presented in comparative form).

Example 15.17
Stock Split—Shares Outstanding

FACTS Brooks Enterprises computes its weighted-average number of shares as 100,000 for the year ended December 31, 2025. On January 15, 2026, before issuing the financial statements, the company splits its stock 3 for 1.

QUESTION What is Brooks' weighted-average number of shares after the stock split?

SOLUTION

In this case, the weighted-average number of shares used in computing earnings per share for 2025 is now 300,000 shares (100,000 × 3). If providing earnings per share information for 2024 as comparative information, Brooks must also adjust it for the stock split.

Put It into Practice LO 15.4
Compute Basic EPS

FACTS Bryson Corporation has income from continuing items of $580,000 and a gain on discontinued operations, net of tax, of $240,000. In addition, it has declared preferred dividends of $1 per share on 100,000 shares of preferred stock outstanding. The changes in Bryson's common stock shares outstanding during 2025 are as follows.

Date	Share Changes	Shares Outstanding
January 1	Beginning balance	180,000
May 1	Purchased 30,000 shares for the treasury	(30,000)
		150,000
July 1	Additional shares due to 3-for-1 stock split	300,000
		450,000
December 31	Issued 50,000 shares for cash	50,000
December 31	Ending balance	500,000

INSTRUCTIONS

a. Compute Bryson's earnings per share.

b. Indicate the presentation of earnings per share on the face of the income statement.

SOLUTION

a. To compute the earnings per share information, Bryson determines the weighted-average number of shares outstanding as follows.

Dates Outstanding	(A) Shares Outstanding	(B) Restatement	(C) Fraction of Year	(D) Weighted Shares A × B × C
Jan. 1–Apr. 30	180,000	3	4/12	180,000
May 1–June 30	150,000	3	2/12	75,000
July 1–Dec. 31	450,000		6/12	225,000
Weighted-average number of shares outstanding				480,000

In computing the weighted-average number of shares, the company ignores the shares sold on December 31, 2025, because they have not been outstanding during the year. Since Bryson has discontinued operations, EPS must be calculated separately for income from continuing operations and the discontinued operations. The preferred stock dividends are subtracted from income from continuing operations to arrive at **income available to common shareholders**. The preferred stock dividends do not impact the gain from discontinued operations. The calculations are as follows.

Income from continuing operations: $\dfrac{\$580{,}000 - \$100{,}000}{480{,}000 \text{ weighted shares}} = \$1.00$

Gain on discontinued operations, net of tax: $\dfrac{\$240{,}000}{480{,}000 \text{ weighted shares}} = \$0.50$

b. Bryson must disclose the per share amount for the discontinued operations (net of tax) either on the face of the income statement or in the notes to the financial statements. The income and per share information are reported on the face of Bryson's income statement as follows.

Income from continuing operations	$580,000
Gain on discontinued operations, net of tax	240,000
Net income	$820,000
Earnings per share:	
Income from continuing operations	$1.00
Discontinued operations, net of tax	0.50
Net income	$1.50

15.5 Diluted Earnings per Share

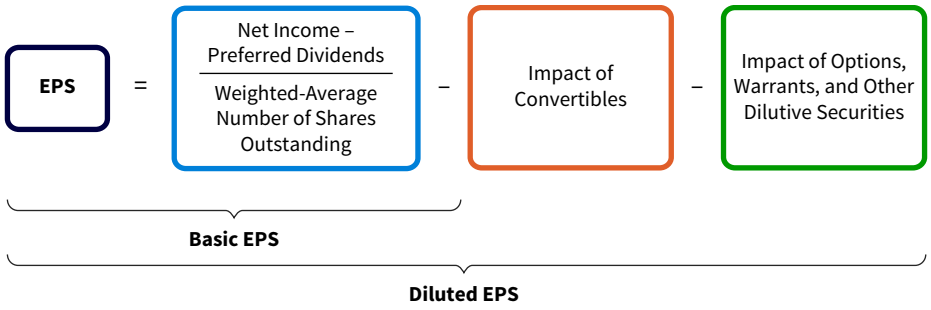
LEARNING OBJECTIVE 5

Compute diluted earnings per share.

The EPS discussion to this point applies to **basic EPS** for a simple capital structure. One problem with a **basic EPS** computation is that it fails to recognize the potential impact of a corporation's dilutive securities. As discussed earlier, **dilutive securities** are securities that can be converted to common stock.[7] Upon conversion or exercise by the holder, the dilutive securities reduce (dilute) earnings per share. This adverse effect on EPS can be significant and, more importantly, **unexpected** unless financial statements call attention to their potential dilutive effect.

As discussed, a complex capital structure exists when a corporation has convertible securities, options, warrants, or other rights that upon conversion or exercise could dilute earnings per share. When a company has a complex capital structure, **it generally reports both basic and diluted earnings per share**. Computing diluted EPS is similar to computing basic EPS. **Illustration 15.9** shows the relationship between basic EPS and diluted EPS.

ILLUSTRATION 15.9 Relationship Between Basic and Diluted EPS



Some securities are antidilutive.

- **Antidilutive securities** are securities that upon conversion or exercise **increase** earnings per share (or reduce the loss per share).
- Companies with complex capital structures will not report diluted EPS if the securities in their capital structure are antidilutive.

[7] Issuance of these types of securities is typical in mergers and compensation plans.

The purpose of presenting both basic and diluted EPS is to inform financial statement users of situations that will likely occur (basic EPS) and also to provide "worst case" dilutive situations (dilutive EPS). If the securities are antidilutive, the likelihood of conversion or exercise is considered remote. Thus, companies that have only antidilutive securities must report only the basic EPS number. We illustrated the computation of basic EPS in the prior section.

Diluted EPS—Convertible Securities

At conversion, companies exchange convertible securities for common stock. Companies measure the dilutive effects of potential conversion on EPS using the **if-converted method**. For convertible bonds, this method assumes:

1. The bonds were converted at the beginning of the period, or at the time of issuance of the bonds if issued during the period.
2. The elimination of related interest, net of tax. If bonds are converted to common stock, then the company does not pay interest on the bonds. Therefore, interest expense, net of tax, **is added back to net income** in the numerator of EPS.

As a result, the additional shares assumed issued increase the **denominator**—the weighted-average number of shares outstanding. The amount of interest expense, net of tax associated with those potential common shares, increases the **numerator**—net income.

Example 15.18
Diluted EPS Numerator—If-Converted Method

FACTS Mayfield Corporation has net income of $210,000 for the year and a weighted-average number of common shares outstanding during the period of 100,000 shares. The basic EPS is therefore $2.10 ($210,000 ÷ 100,000).

The company has two convertible debenture bond issues outstanding.

- A 6% issue sold at par (total $1,000,000) in a prior year and convertible into 30,000 common shares.
- A 10% issue sold at par (total $1,000,000) on April 1 of the current year and convertible into 36,000 common shares.

QUESTION What is the adjusted net income for the numerator of Mayfield's diluted EPS? The tax rate is 20%.

SOLUTION

To determine the numerator for diluted EPS, Mayfield adds back the interest on the if-converted securities, less the related tax effect, as follows.

Net income for the year	$210,000
Add: Adjustment for interest (net of tax)	
6% debentures ($60,000 × [1 − 0.20])	48,000
10% debentures ($100,000 × 9/12 × [1 − 0.20])	60,000
Adjusted net income	$318,000

To summarize:

- The 6% convertible bonds were issued in a prior year, so they would be outstanding for the entire current year. Because the if-converted method assumes conversion as of the beginning of the year, Mayfield assumes that it pays no interest on the convertible bonds during the year. The interest on the 6% convertibles is $60,000 for the year ($1,000,000 × .06). Net income will be higher if interest is added back; therefore, the increased tax expense is $12,000 ($60,000 × 0.20). The interest added back, net of taxes, is $48,000 [$60,000 − $12,000, or simply $60,000 × (1 − 0.20)].
- Mayfield issues the 10% convertible bonds after the beginning of the year, on April 1. In other words, it considers these shares to have been outstanding from April 1 to the end of the year. As a result, the interest adjustment to the numerator for these bonds includes the interest for only 9 months. The interest added back on the 10% convertible is $60,000 [$1,000,000 × 0.10 × 9/12 year × (1 − 0.20)]. The final item in the calculation shows the adjusted net income. This amount becomes the numerator for Mayfield's computation of diluted EPS.

Continuing with Example 15.18, what about the denominator for Mayfield's diluted EPS?

Example 15.19
Diluted EPS Denominator—If-Converted Method

FACTS Refer to the data in Example 15.18 for Mayfield Corporation.

QUESTIONS (a) What is the weighted-average shares outstanding in the denominator of Mayfield's diluted EPS, and (b) how will Mayfield's EPS be reported in its income statement?

SOLUTION

a. Mayfield calculates the weighted-average number of shares outstanding as follows.

Weighted-average number of shares outstanding	100,000
Add: Shares assumed to be issued	
6% debentures (as of beginning of year)	30,000
10% debentures (as of date of issue, April 1; 9/12 × 36,000)	27,000
Weighted-average number of shares adjusted for dilutive securities	157,000

As indicated, the process starts with the weighted-average shares from basic EPS and then increases the denominator for the number of shares assumed to be issued if the bonds are converted. Notice the shares related to the 10% bonds are weighted by 9/12 since they were issued on April 1 of the current year. This number of shares (157,000) becomes the denominator for Mayfield's computation of diluted earnings per share.

b. In its income statement, Mayfield reports basic and diluted EPS as follows.

Net income for the year	$210,000
Earnings per Share (Note X)	
Basic earnings per share ($210,000 ÷ 100,000)	$2.10
Diluted earnings per share ($318,000 ÷ 157,000)	$2.03

Because diluted EPS, $2.03, is less than basic EPS, $2.10, we know the convertible bonds are dilutive.

Other Factors

Examples 15.18 and 15.19 assumed that Mayfield sold its bonds at the face amount. If it instead sold the bonds at a premium or discount, the company must make sure they are adding back interest expense, net of tax, to net income. Recall that interest expense is cash interest plus or minus discount or premium amortization.

Another consideration is the conversion rate on a dilutive security may change during the period in which the security is outstanding. For the diluted EPS computation in such a situation, the **company uses the most dilutive conversion rate available**.

Example 15.20
Diluted EPS Conversion Rate—If-Converted Method

FACTS Curry Company issued a convertible bond on January 1, 2024, with a conversion rate of 10 common shares for each bond starting January 1, 2026. Beginning January 1, 2029, the conversion rate is 12 common shares for each bond. Beginning January 1, 2033, it is 15 common shares for each bond.

QUESTION What conversion rate should you use to compute Curry's diluted EPS?

SOLUTION

In computing diluted EPS in 2024, Curry uses the conversion rate of 15 shares to one bond, which is the most dilutive conversion rate.

A final issue relates to preferred stock. For example, assume that Mayfield's 6% convertible debentures were instead 6% convertible **preferred stock**. The preferred stock would be convertible into common shares, so Mayfield includes the common shares in the denominator of diluted EPS. The company does **not** subtract preferred dividends from net income in computing the numerator. Why not? Because the preferred stock is assumed to be converted as of the beginning of the year, so there would be no preferred stock dividend for the year. The company uses net income as the numerator—it computes **no tax effect** because preferred dividends generally are not tax-deductible.

Example 15.21
Convertible Preferred Stock

FACTS Curry Company had 100,000 shares of $5 par, 6% cumulative preferred stock outstanding all year. Each share of preferred stock is convertible into 7 shares of common stock. Curry Company had net income of $1,500,000 and 300,000 shares of common stock outstanding all year.

QUESTION What is the basic and diluted EPS for Curry Company?

SOLUTION

$$\text{Basic EPS: } \frac{\$1{,}500{,}000 - \$30{,}000^*}{300{,}000} = \$4.90$$

*$500,000 (100,000 shares × $5 par) × .06

$$\text{Diluted EPS: } \frac{\$1{,}500{,}000}{300{,}000 + 700{,}000^*} = \$1.50$$

*100,000 × 7

Diluted EPS—Options and Warrants

A company includes in diluted EPS stock options and warrants outstanding (whether or not presently exercisable), unless they are antidilutive. Remember, when evaluating for EPS, the options and warrants have not actually been exercised. For purposes of calculating diluted EPS, a company **assumes** options and warrants are exercised if they are dilutive.

Companies use the **treasury-stock method** to include options and warrants in diluted EPS. As with the if-converted method, the treasury-stock method **assumes** the options or warrants are exercised at the beginning of the year or the date of issue, if later. The treasury-stock method has three steps as follows.

Calculate the cash proceeds the company will receive if all options or warrants are exercised at the exercise price.

Assume the company will use the cash proceeds to purchase common stock for the treasury. We assume the company pays the market price to purchase the treasury shares. As a result, the cash proceeds will not be sufficient to buy back all the shares needed to issue to the option or warrant holders. Why? Because the options or warrants are dilutive, which means the exercise price is **less than** the market price of the stock.

Calculate the number of **incremental shares** that would be issued to the option or warrant holders. Take the total number of shares to be issued to option or warrant holders and subtract the number of treasury shares from Step 2 to arrive at the incremental shares. The incremental shares will be added to the denominator of diluted EPS.

Only the incremental shares are considered dilutive. The incremental shares are essentially an issuance of new shares of stock. With dilutive options and warrants, there is **no impact to the numerator of diluted EPS**. The only impact is the addition of the incremental shares in the denominator.[8]

Example 15.22 Incremental Shares—Treasury-Stock Method

FACTS Enzo Inc. has 1,500 options outstanding at an exercise price of $30 for a common share, and a common stock average market price per share of $50.

QUESTION What are the incremental shares outstanding, applying the treasury-stock method?

SOLUTION

The stock options are dilutive because the exercise price ($30) is **less than** the average market price ($50). Follow the three steps of the treasury-stock method to determine the incremental shares.

1. Calculate cash proceeds to the company if options are exercised: 1,500 options × $30 = $45,000
2. Assume cash proceeds are used to purchase treasury stock at the average market price:

$$\frac{\$45{,}000}{\$50} = 900 \text{ shares}$$

3. Calculate the number of incremental shares:

$$1{,}500 \text{ shares} - 900 \text{ treasury shares} = 600 \text{ incremental shares}$$

The 600 incremental shares are added to the denominator of diluted EPS.

For both options and warrants, exercise is assumed only if the average market price of the stock exceeds the exercise price during the reported period.[9] As a practical matter, a simple average of the weekly or monthly prices is adequate, so long as the prices do not fluctuate significantly.

Example 15.23 Treasury-Stock Method

FACTS McIlroy Industries, Inc. has net income for the period of $220,000. The weighted-average number of shares outstanding for the period was 100,000 shares. The number of shares related to options outstanding (although not exercisable at this time), at an option price of $20 per share, is 5,000 shares. The average market price of the common stock during the year was $28.

QUESTION How should McIlroy compute its basic and diluted EPS?

[8]Generally, it is easy to determine if options and warrants are antidilutive by comparing the exercise price to the average market price of the stock. If the exercise price is **greater than** the average market price, the option or warrant is antidilutive. Why? Because it does not make sense to exercise the options or warrants because it would be cheaper to purchase the stock directly from the market.

[9]The incremental number of shares may be more simply computed:

$$\frac{\text{Market Price} - \text{Option Price}}{\text{Market Price}} \times \text{Number of Options} = \text{Number of Shares}$$

$$\frac{\$50 - \$30}{\$50} \times 1{,}500 \text{ options} = 600 \text{ shares}$$

SOLUTION

The computation of basic and diluted EPS, using the treasury-stock method, is as follows.

	Basic Earnings per Share	Diluted Earnings per Share	
Number of shares related to options		5,000	
Price per share		× $20	
Proceeds upon exercise of options		$100,000	
Average market price of common stock		$28	
Treasury shares that could be repurchased with proceeds ($100,000 ÷ $28)		3,571	
Excess of shares under option over the treasury shares that could be repurchased (5,000 − 3,571)—potential common incremental shares		1,429	
Average number of common shares outstanding	100,000	100,000	
Total average number of common shares outstanding and potential common shares	100,000 (A)	101,429	(C)
Net income for the year	$220,000 (B)	$220,000	(D)
Earnings per share	$2.20 (B ÷ A)	$2.17	(D ÷ C)

Diluted EPS ($2.17) is less than basic EPS ($2.20), confirming that the options are dilutive.

Contingent Issue Agreement

In business combinations, the acquirer may promise to issue additional shares—referred to as **contingent shares**—under certain conditions. Sometimes companies issue these contingent shares as a result of a **passage-of-time condition** or upon the attainment of a **certain earnings or market price level**. If this passage-of-time condition occurs during the current year or if companies meet the earnings or market price **by the end of the year**, companies consider the contingent shares as outstanding for the computation of diluted earnings per share.[10]

Example 15.24
Contingent Issue

FACTS Watts Corporation purchased Cardoza Company and agreed to give Cardoza's stockholders 20,000 additional shares in 2028 if Cardoza's net income in 2027 is $90,000 or more. In 2026, Cardoza's net income is $100,000.

QUESTION Should Cordoza include the contingent shares in computing earnings per share?

SOLUTION

Because Cardoza has already attained the 2027 stipulated earnings of $90,000 in 2026, in computing diluted earnings per share for 2026, Watts would include the 20,000 contingent shares in the shares-outstanding computation.

Antidilution Revisited

In computing diluted EPS, a company must consider the aggregate of all dilutive securities. But first it must determine which potentially dilutive securities are in fact individually dilutive and which are antidilutive. **A company should exclude any security that is antidilutive**.

[10]In addition to contingent issuances of stock, other situations that might lead to dilution are the issuance of participating securities and two-class common shares. The reporting of these types of securities in EPS computations is beyond the scope of this text.

Recall that including antidilutive securities in EPS computations increases EPS (or reduces net loss per share).

- With options or warrants, whenever the exercise price **exceeds** the market price, the security is antidilutive.
- Convertible debt is antidilutive if the addition to income of the interest (net of tax) causes a greater percentage increase in income (numerator) than conversion of the bonds causes a percentage increase in common and potentially dilutive shares (denominator).

In other words, convertible debt is antidilutive if conversion of the security causes common stock earnings to increase by a greater amount per additional common share than EPS was before the conversion.

Example 15.25
Antidilution

FACTS Stricker Corporation has a 6%, $1,000,000 debt issue that is convertible into 10,000 common shares. Net income for the year is $210,000, the weighted-average number of common shares outstanding is 100,000 shares, and the tax rate is 20%.

QUESTION Should Stricker include the effects of the convertible debt in its computation of diluted EPS?

SOLUTION

In this situation, assumed conversion of the debt into common stock at the beginning of the year requires adjustments of net income and the weighted-average number of shares outstanding, as follows.

Net income for the year	$210,000	Average number of shares outstanding	100,000
Add: Adjustment for interest (net of tax) on 6% debentures [$60,000 × (1 − 0.20)]	48,000	Add: Shares issued upon assumed conversion of debt	10,000
Adjusted net income	$258,000	Average number of common and potential common shares outstanding	110,000

Basic EPS = $210,000 ÷ 100,000 = $2.10

Diluted EPS = $258,000 ÷ 110,000 = $2.35 = **Antidilutive**

As a shortcut, Stricker can also identify the convertible debt as antidilutive by comparing the EPS resulting from conversion, $4.80 ($48,000 additional earnings ÷ 10,000 additional shares), with EPS before inclusion of the convertible debt, $2.10. Since $4.80 is greater than $2.10, the convertible bonds are antidilutive.

Companies should ignore antidilutive securities in all calculations and in computing diluted EPS. This approach is reasonable. The profession's intent was to inform the investor of the possible dilution that might occur in reported EPS and not to be concerned with securities that, if converted or exercised, would result in an increase in EPS. Appendix 15B provides an extended example of how companies consider antidilution in a complex situation with multiple securities.

EPS Presentation and Disclosure

Illustration 15.10 shows how a company with a complex capital structure would present its EPS information.

ILLUSTRATION 15.10 EPS Presentation—Complex Capital Structure

Earnings per common share	
Basic earnings per share	$3.30
Diluted earnings per share	$2.70

When the earnings of a period include discontinued operations, a company should show per share amounts (where applicable) for the following: income from continuing operations, discontinued operations, and net income. Companies that report a discontinued operation should present per share amounts **for this line item** either on the face of the income statement or in the notes to the financial statements. Illustration 15.11 shows a presentation reporting discontinued operations.

Basic earnings per share	
Income from continuing operations	$3.80
Discontinued operations (loss)	(0.80)
Net income	$3.00
Diluted earnings per share	
Income from continuing operations	$3.35
Discontinued operations (loss)	(0.65)
Net income	$2.70

ILLUSTRATION 15.11 EPS Presentation, with Discontinued Operations

A company must show EPS amounts for all periods presented. Also, the company should restate all prior period EPS amounts presented for stock dividends and stock splits. If it reports diluted EPS data for at least one period, the company should report such data for all periods presented, even if it is the same as basic EPS. When a company restates results of operations of a prior period as a result of an error or a change in accounting principle, it should also restate the EPS data shown for the prior periods.

Complex capital structures and dual presentation of EPS require the following additional disclosures in note form.

1. Description of pertinent rights and privileges of the various securities outstanding.
2. A reconciliation of the numerators and denominators of the basic and diluted per share computations, including individual income and share amount effects of all securities that affect EPS.
3. The effect given preferred dividends in determining income available to common stockholders in computing basic EPS.
4. Securities that could potentially dilute basic EPS in the future that were excluded in the computation because they would be antidilutive.
5. Effect of conversions subsequent to year-end but before issuing statements.

Illustration 15.12 presents the reconciliation and the related disclosure to meet the requirements of this standard. [4]

	For the Year Ended 2025		
	Income (Numerator)	**Shares (Denominator)**	**Per Share Amount**
Income from continuing operations	$7,500,000		
Less: Preferred stock dividends	45,000		
Basic EPS	7,455,000	3,991,666	$1.87
Warrants	-0-	30,768	
Convertible preferred stock	45,000	308,333	
4% convertible bonds (net of tax)	60,000	50,000	
Diluted EPS	$7,560,000	4,380,767	$1.73

Stock options to purchase 1,000,000 shares of common stock at $85 per share were outstanding during the second half of 2025 but were not included in the computation of diluted EPS because the options' exercise price was greater than the average market price of the common shares. The options were still outstanding at the end of year 2025 and expire on June 30, 2030.

ILLUSTRATION 15.12 Reconciliation for Basic and Diluted EPS

To summarize the importance of EPS information to various company stakeholders, consider the following.

1. **EPS is used by investors and creditors to understand the profitability and the related valuation of a company.** For example, EPS and stock price are often correlated with each other. In examining **Costco Wholesale Corporation**'s financial statements, its EPS increased each year. It reported basic EPS of $7.15 in 2018, $8.32 in 2019, and $9.05 in 2020, or an increase of 29%. Its share price increased 52% over the same period of time.
2. **EPS is used in the price earnings ratio.** The price-earnings ratio is the market price of a share of the stock divided by EPS. For example, if the company's market price per share is $100 and its EPS is $20 per share, the price-earnings ratio is 5 ($100 ÷ $20). This ratio indicates how many years it will take a company's earnings to equal its share price. In other words, given the company's present earnings, it would take 5 years of accumulated earnings to equal the current price of the company's stock. A high price-earnings ratio suggests that a company may have less profitability and financial flexibility than a company which has a lower price-earnings ratio.
3. **EPS is often compared to dividends per share to understand how well the earnings can sustain the dividend distributions by the company**. Often referred to as the dividend coverage, it is computed by dividing a company's EPS by its dividend per share.

Finally, a word of caution—be careful in assessing profitability using only a single ratio like EPS. Earnings, for example, can sometimes be manipulated through accounting changes, substantial cost reductions, or unusual gains that are not sustainable. In addition, as noted in Chapter 14, outstanding shares can be reduced by purchase of treasury stock, which will increase EPS in the short run. That is why using many different measures to evaluate profitability should be used.

Summary of EPS Computation

As you can see, computation of EPS is a complex issue. It is a controversial area because many securities, although technically not common stock, have many of its basic characteristics. Indeed, some companies have issued these other securities rather than common stock to avoid an adverse dilutive effect on EPS. **Illustrations 15.13** and **15.14** display the elementary points of calculating EPS in a simple capital structure and in a complex capital structure.

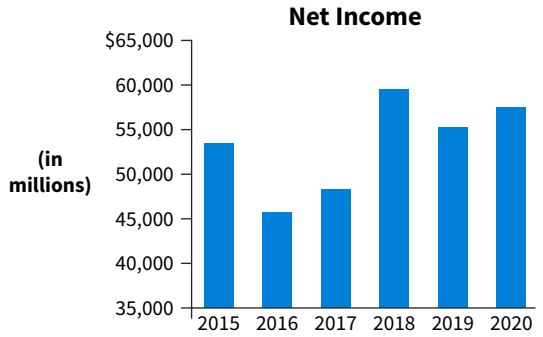
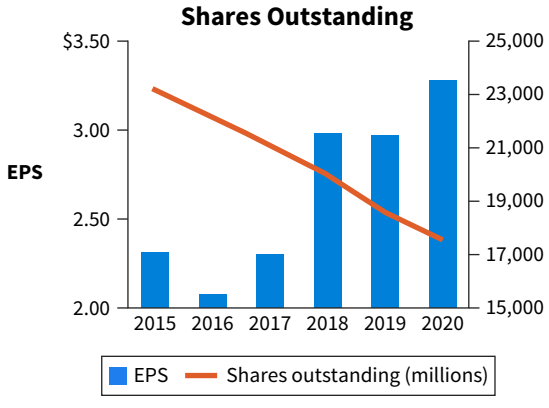
Analytics in Action: Earnings per Share versus Net Income

Does an increase in EPS always mean that net income is increasing? No! Earnings per share is a function of changes in the numerator (income) and the denominator (shares outstanding). Many companies reduce the number of shares outstanding by repurchasing their own shares as part of a stock buyback program. **Apple** has been a champion of stock buybacks in recent years, repurchasing its own stock worth billions of dollars.

While Apple's net income (the chart below on the left) shows a gradually increasing trend, its EPS (the chart below on the right) shows a steep increase. Why the disconnect? Apple's stock repurchases have resulted in lower shares outstanding (the orange line in the chart below) in the EPS denominator, giving Apple a soaring EPS.

With changes to tax rates and lower borrowing costs due to the Covid-19 global pandemic, Apple shows no sign of slowing down its stock repurchase plans. Investors beware! Stock buybacks can give the perception that earnings are increasing, making it important to fully analyze the components of this key metric–both the numerator **and** the denominator.





Go to the Analytics in Action Activities section at the end of the chapter, which includes Excel-based problems with data sets, to see the relevance and application of data analytics to intermediate accounting topics.

Put It into Practice LO 15.5
Compute Diluted EPS

FACTS Scutaro Company reported net income in 2025 of $30,000 and $27,000 in 2024. On January 1, 2024, Scutaro issued 10-year, $200,000 face value, 6% bonds at par (payable annually on January 1). Each $1,000 bond is convertible into 30 shares of Scutaro $2 par value common stock. The company has had 10,000 shares of common stock (and no preferred stock) outstanding throughout its life. None of the bonds have been converted as of the end of 2025.

Scutaro also has adopted a stock-option plan that granted options to key executives to purchase 4,000 shares of the company's common stock. The options were granted on January 2, 2024, and were exercisable 2 years after the date of grant if the grantee was still an employee of the company (the service period is 2 years). The options expire 6 years from the date of grant. The option price was set at $4.

INSTRUCTIONS

a. Prepare the journal entry Scutaro would have made on January 1, 2024, to record the issuance of the bonds.

b. Prepare the journal entry to record interest expense in 2025.

c. Compute basic and diluted earnings per share for Scutaro for 2025 and 2024. Scutaro's average stock price was $4.40 in 2024 and $5 in 2025. (Ignore income taxes.)

d. Assume that 75% of the holders of Scutaro's convertible bonds convert their bonds to stock on June 30, 2026, when Scutaro's stock is trading at $8 per share. Scutaro pays $2 per bond to induce bondholders to convert. Prepare the journal entry to record the conversion.

SOLUTION

a. Under GAAP, proceeds from the issuance of convertible debt are recorded entirely as debt:

Cash	200,000	
Bonds Payable		200,000

b. To record interest expense for 2025 ($200,000 × .06):

December 31, 2025

Interest Expense	12,000	
Interest Payable		12,000

c. To compute basic and diluted EPS:

	2025	2024
Basic EPS		
Net income (a)	$ 30,000	$27,000
Outstanding shares (b)	10,000	10,000
Basic EPS (a ÷ b)	$ 3.00	$ 2.70
Diluted EPS		
Net income	$ 30,000	$27,000
Add: Interest savings ($200,000 × .06)	12,000	12,000
Adjusted net income (a)	$ 42,000	$39,000
Outstanding shares	10,000	10,000
Shares upon conversion (200 × 30)	6,000	6,000
Options (treasury-stock method)	800*	364*
Total shares for diluted EPS (b)	16,800	16,364
Diluted EPS (a ÷ b)	$ 2.50	$ 2.38

*Treasury-stock method:

	2025		2024	
Cash proceeds	$16,000	($4 × 4,000)	$16,000	($4 × 4,000)
Shares repurchased	3,200	($16,000 ÷ $5)	3,636	($16,000 ÷ $4.40)
Net shares issued	800	(4,000 − 3,200)	364	(4,000 − 3,636)

d. **June 30, 2026**

Bond Conversion Expense (150 × $2)	300	
Bonds Payable (150 × $1,000)	150,000	
Common Stock (4,500 × $2)		9,000
Paid-in Capital in Excess of Par—Common Stock*		141,000
Cash		300

*$150,000 − $9,000 = $141,000 increase in paid-in capital account

APPENDIX **15A**

Accounting for Stock-Appreciation Rights

LEARNING OBJECTIVE *6

Explain the accounting for stock-appreciation rights plans.

A major disadvantage of many stock-option plans is that an executive must pay income tax on the difference between the market price of the stock and the option price at the **date of exercise**. This feature of stock-option plans (those referred to as **nonqualified**) can be a financial hardship for an executive who wishes to keep the stock (rather than sell it immediately) because he or she would have to pay not only income tax but the option price as well. In another type of plan (an **incentive plan**), the executive pays no taxes at exercise but may need to borrow to finance the exercise price, which leads to related interest cost.

One solution to this problem was the creation of **stock-appreciation rights (SARs)**.

- In this type of plan, the company gives an executive the right to receive compensation equal to the share appreciation.
- **Share appreciation** is the excess of the market price of the stock at the date of exercise over a pre-established price.

The company may pay the share appreciation in cash, shares, or a combination of both.

The major advantage of SARs is that the executive often does not have to make a cash outlay at the date of exercise, but receives a payment for the share appreciation. Unlike shares acquired under a stock-option plan, the company does not issue the shares that constitute the basis for computing the appreciation in a SARs plan. Rather, the company simply awards the executive cash or stock having a fair value equivalent to the appreciation. The accounting for stock-appreciation rights depends on whether the company classifies the rights as equity or as a liability.

SARs—Share-Based Equity Awards

Companies classify SARs as **equity awards** if at the date of exercise, the holder receives shares of stock from the company upon exercise. In essence, SARs are essentially equivalent to a stock option. The major difference relates to the form of payment. With the stock option, the holder pays the exercise price and then receives the stock. In an equity SAR, the holder receives shares in an amount equal to the **share-price appreciation** (the difference between the market price and the pre-established price). The accounting for SARs when they are equity awards follows the accounting used for stock options. At the date of grant, the company determines a fair value for the SAR and then allocates this amount to compensation expense over the service period of the employees.

SARs—Share-Based Liability Awards

Companies classify SARs as liability awards if at the date of exercise, the holder receives a cash payment. In this case, the holder is not receiving additional shares of stock but a cash payment equal to the amount of share-price appreciation. The company's compensation expense therefore changes as the value of the liability changes.

A company uses the following approach to record share-based liability awards.

1. Measure the fair value of the award at the grant date and accrue compensation over the service period.
2. Remeasure the fair value each reporting period, until the award is settled. Adjust the compensation cost each period for changes in fair value prorated for the portion of the service period completed.
3. Once the service period is completed, determine compensation expense each subsequent period by reporting the full change in market price as an adjustment to compensation expense.

For liability awards, the company estimates the fair value of the SARs using an option-pricing model. The company then allocates this total estimated compensation cost over the service period, recording expense (or a decrease in expense if fair value declines) in each period. At the end of each period, total compensation expense reported to date should equal the percentage of the total service period that has elapsed, multiplied by the total estimated compensation cost.

For example, assume that the service period is 20% complete and total estimated compensation is $100,000. The company reports cumulative compensation expense to date of $20,000 ($100,000 × 0.20).

The method of allocating compensation expense is called the **percentage approach**.

- In this method, in the first year of, say, a four-year plan, the company charges one-fourth of the estimated cost to date.
- In the second year, it charges off two-fourths, or 50%, of the estimated cost to date, less the amount already recognized in the first year.
- In the third year, it charges off three-fourths of the estimated cost to date, less the amount recognized previously.
- In the fourth year, it charges off the remaining compensation expense.

A special problem arises when the exercise date is later than the service period. In the previous example, if the stock-appreciation rights were not exercised at the end of four years, in the fifth year the company would have to account for the difference in the market price and the pre-established price. In this case, the company adjusts compensation expense whenever a change in the market price of the stock **occurs in subsequent reporting periods**, **until the rights expire or are exercised**, **whichever comes first**.

Increases or decreases in the fair value of the SAR between the date of grant and the exercise date therefore result in a change in the measure of compensation. Some periods will have credits to compensation expense if the fair value decreases from one period to the next. The credit to compensation expense, however, cannot exceed previously recognized compensation expense. In other words, **cumulative compensation expense cannot be negative**.

Stock-Appreciation Rights Example

Augusta Hotels, Inc. establishes a stock-appreciation rights plan on January 1, 2025. The plan entitles executives to receive cash at the date of exercise for the difference between the market price of the stock and the pre-established price of $10 on 10,000 SARs. The fair value of the SARs on December 31, 2025, is $3, and the service period runs for two years (2025–2026). **Illustration 15A.1** indicates the amount of compensation expense to be recorded each period, assuming that the executives hold the SARs for three years, at which time they exercise the rights.

ILLUSTRATION 15A.1
Compensation Expense, Stock-Appreciation Rights

Stock-Appreciation Rights
Schedule of Compensation Expense

(1) Date	(2) Fair Value	(3) Cumulative Compensation Recognizable[a]	(4) Percentage Accrued[b]	(5) Cumulative Compensation Accrued to Date	Expense 2025	Expense 2026	Expense 2027
12/31/25	$3	$30,000	50%	$15,000	$15,000		
				55,000		$55,000	
12/31/26	7	70,000	100%	70,000			
				(20,000)			$(20,000)
12/31/27	5	50,000	100%	$50,000			

[a]Cumulative compensation for unexercised SARs to be allocated to periods of service.

[b]The percentage accrued is based upon a 2-year service period (2025–2026).

In 2025, Augusta Hotels records compensation expense of $15,000 because 50% of the $30,000 total compensation cost estimated at December 31, 2025, is allocable to 2025. In 2026, the fair value increased to $7 per right ($70,000 total). The company recorded additional compensation expense of $55,000 ($70,000 − $15,000).

The executives held the SARs through 2027, during which time the fair value declined to $5 (and the obligation to the executives equals $50,000). Augusta Hotels recognizes the decrease by recording a $20,000 credit to Compensation Expense and a debit to Liability Under Stock-Appreciation Plan. Note that after the service period ends, since the rights are still outstanding, the company adjusts the rights to market at December 31, 2027. Any such credit to compensation expense cannot exceed previous charges to expense attributable to that plan.

As the company records the compensation expense each period, the corresponding credit is to a liability account, because the company will pay the stock appreciation in cash. Augusta Hotels records compensation expense in the first year as follows.

Compensation Expense	15,000	
Liability Under Stock-Appreciation Plan		15,000

The company makes a similar entry in 2026 to credit the liability account for $55,000. In 2027, when it records negative compensation expense, Augusta would debit the account for $20,000. The entry to record the negative compensation expense is as follows.

Liability Under Stock-Appreciation Plan	20,000	
Compensation Expense		20,000

At December 31, 2027, the executives receive $50,000 (which equals the market price of the shares less the pre-established price). Augusta would remove the liability with the following entry.

Liability Under Stock-Appreciation Plan	50,000	
Cash		50,000

Compensation expense can increase or decrease substantially from one period to the next. The reason is that compensation expense is remeasured each year, which can lead to large swings in compensation expense.

Liability Under Stock-Appreciation Plan

		2025	15,000
		2026	55,000
		Bal.	70,000
2027	20,000		
		Bal.	50,000
12/31/27	50,000		
			0

APPENDIX 15B

Comprehensive Earnings per Share Example

LEARNING OBJECTIVE *7

Compute earnings per share in a complex situation.

This appendix illustrates the method of computing dilution when many securities are involved. Illustration 15B.1 presents the section of the balance sheet of Webster Corporation for analysis. Assumptions related to the capital structure follow the balance sheet.

ILLUSTRATION 15B.1 Balance Sheet for Comprehensive Illustration

Webster Corporation
Balance Sheet (partial)
At December 31, 2025

Long-term debt	
Notes payable, 14%	$ 1,000,000
8% convertible bonds payable	2,500,000
10% convertible bonds payable	2,500,000
Total long-term debt	$ 6,000,000
Stockholders' equity	
7% cumulative, convertible preferred stock, par value $100, 100,000 shares authorized, 25,000 shares issued and outstanding	$ 2,500,000
Common stock, par value 15,000,000 shares authorized, 500,000 shares issued and outstanding	500,000
Additional paid-in capital	2,000,000
Retained earnings	9,000,000
Total stockholders' equity	$14,000,000

Notes and Assumptions
December 31, 2025

1. Options were granted in July 2023 to purchase 50,000 shares of common stock at $20 per share. The average market price of Webster's common stock during 2025 was $30 per share. All options are still outstanding at the end of 2025.
2. Both the 8% and 10% convertible bonds were issued in 2024 at face value. Each convertible bond is convertible into 40 shares of common stock. (Each bond has a face value of $1,000.)
3. The 7% cumulative, convertible preferred stock was issued at the beginning of 2025 at par. Each share of preferred is convertible into two shares of common stock.
4. The average income tax rate is 20%.
5. The 500,000 shares of common stock were outstanding during the entire year.
6. Preferred dividends were not declared in 2025.
7. Net income was $1,750,000 in 2025.
8. No bonds or preferred stock were converted during 2025.

The computation of basic earnings per share for 2025 starts with the amount based upon the weighted-average number of shares outstanding, as shown in Illustration 15B.2.

ILLUSTRATION 15B.2 Computation of Earnings per Share—Simple Capital Structure

Net income	$1,750,000
Less: 7% cumulative, convertible preferred stock dividend requirements (.07 × $2,500,000)	175,000
Income applicable to common stockholders	$1,575,000
Weighted-average number of shares outstanding	500,000
Earnings per common share ($1,575,000 ÷ 500,000)	$ 3.15

Note the following points concerning this calculation.

1. When preferred stock is cumulative, the company subtracts the preferred dividend to arrive at income applicable to common stock, whether the dividend is declared or not.
2. The company must compute earnings per share of $3.15 as a starting point, because it is the per share amount that is subject to reduction due to the existence of convertible securities and options.

Diluted Earnings per Share

The steps for computing diluted earnings per share are as follows.

①	②	③
Determine, for each dilutive security, the per share effect assuming exercise/conversion.	Rank the results from Step 1 from smallest to largest earnings effect per share. That is, rank the results from most dilutive to least dilutive.	Beginning with the earnings per share based upon the weighted-average number of shares outstanding ($3.15), recalculate earnings per share by adding the smallest per share effects from Step 2.

If the results from Step 3 are less than $3.15, proceed to the next smallest per share effect and recalculate earnings per share. Continue this process so long as each recalculated earnings per share is smaller than the previous amount. The process will end either because there are no more securities to test or a particular security maintains or increases earnings per share (is antidilutive).

We'll now apply the three steps to Webster Corporation. (Note that net income and income available to common stockholders are not the same if preferred dividends are declared or cumulative.) Webster Corporation has four securities that could reduce EPS: options, 8% convertible bonds, 10% convertible bonds, and the convertible preferred stock.

The first step in the computation of diluted earnings per share is to determine a per share effect for each potentially dilutive security. **Illustrations 15B.3** through **15B.6** show these computations.

Number of shares under option	50,000
Option price per share	× $20
Proceeds upon assumed exercise of options	$1,000,000
Average 2025 market price of common	$ 30
Treasury shares that could be acquired with proceeds ($1,000,000 ÷ $30)	33,333
Excess of shares under option over treasury shares that could be repurchased (50,000 − 33,333)	16,667
Per share effect:	
$\frac{\text{Incremental Numerator Effect}}{\text{Incremental Denominator Effect}} = \frac{\text{None}}{\text{16,667 shares}} =$	$ 0

ILLUSTRATION 15B.3 Per Share Effect of Options (Treasury-Stock Method), Diluted Earnings per Share

Interest expense for year (.08 × $2,500,000)	$200,000
Income tax reduction due to interest (.20 × $200,000)	40,000
Interest expense avoided (net of tax)	$160,000
Number of common shares Issued assuming conversion of bonds (2,500 bonds × 40 shares)	100,000
Per share effect:	
$\frac{\text{Incremental Numerator Effect}}{\text{Incremental Denominator Effect}} = \frac{\$160{,}000}{\text{100,000 shares}} =$	$ 1.60

ILLUSTRATION 15B.4 Per Share Effect of 8% Bonds (If-Converted Method), Diluted Earnings per Share

ILLUSTRATION 15B.5 Per Share Effect of 10% Bonds (If-Converted Method), Diluted Earnings per Share

Interest expense for year (.10 × $2,500,000)	$250,000
Income tax reduction due to interest (.20 × $250,000)	50,000
Interest expense avoided (net of tax)	$200,000
Number of common shares Issued assuming conversion of bonds (2,500 bonds × 40 shares)	100,000
Per share effect:	
$\frac{\text{Incremental Numerator Effect}}{\text{Incremental Denominator Effect}} = \frac{\$200{,}000}{100{,}000 \text{ shares}} =$	$ 2.00

ILLUSTRATION 15B.6 Per Share Effect of 7% Convertible Preferred (If-Converted Method), Diluted Earnings per Share

Dividend requirement on cumulative preferred (25,000 shares × $7)	$175,000
Income tax effect (dividends not a tax deduction)	none
Dividend requirement avoided ($2,500,000 × .07)	$175,000
Number of common shares Issued assuming conversion of preferred (2 × 25,000 shares)	50,000
Per share effect:	
$\frac{\text{Incremental Numerator Effect}}{\text{Incremental Denominator Effect}} = \frac{\$175{,}000}{50{,}000 \text{ shares}} =$	$ 3.50

Illustration 15B.7 shows the ranking of all four potentially dilutive securities.

ILLUSTRATION 15B.7 Ranking of per Share Effects (Smallest to Largest), Diluted Earnings per Share

	Effect per Share
1. Options	$ 0
2. 8% convertible bonds	1.60
3. 10% convertible bonds	2.00
4. 7% convertible bonds	3.50

The next step is to determine earnings per share giving effect to the ranking in Illustration 15B.7. Starting with the earnings per share of $3.15 computed previously, add the incremental effects of the options to the original calculation, as shown in **Illustration 15B.8**.

ILLUSTRATION 15B.8 Recomputation of EPS Using Incremental Effect of Options

Options	
Income applicable to common stockholders	$1,575,000
Add: Incremental numerator effect of options	none
Total	$1,575,000
Weighted-average number of shares outstanding	500,000
Add: Incremental denominator effect of options (Illustration 15B.3)	16,667
Total	516,667
Recomputed earnings per share ($1,575,000 ÷ 516,667 shares)	$ 3.05

Since the recomputed earnings per share is reduced (from $3.15 to $3.05), the effect of the options is dilutive. Again, we could have anticipated this effect because the average market price ($30) exceeded the option price ($20).

Assuming that Webster converts the 8% bonds, recomputed earnings per share is as shown in **Illustration 15B.9**.

ILLUSTRATION 15B.9 Recomputation of EPS Using Incremental Effect of 8% Convertible Bonds

8% Convertible Bonds	
Numerator from previous calculation	$1,575,000
Add: Interest expense avoided (net of tax)	160,000
Total	$1,735,000
Denominator from previous calculation (shares)	516,667
Add: Number of common shares assumed issued upon conversion of bonds	100,000
Total	616,667
Recomputed earnings per share ($1,735,000 ÷ 616,667 shares)	$ 2.81

Since the recomputed earnings per share is reduced (from $3.05 to $2.81), the effect of the 8% bonds is dilutive.

Next, assuming Webster converts the 10% bonds, the company recomputes earnings per share as shown in **Illustration 15B.10**.

ILLUSTRATION 15B.10 Recomputation of EPS Using Incremental Effect of 10% Convertible Bonds

10% Convertible Bonds	
Numerator from previous calculation	$1,735,000
Add: Interest expense avoided (net of tax)	200,000
Total	$1,935,000
Denominator from previous calculation (shares)	616,667
Add: Number of common shares assumed issued upon conversion of bonds	100,000
Total	716,667
Recomputed earnings per share ($1,935,000 ÷ 716,667 shares)	$ 2.70

Since the recomputed earnings per share is reduced (from $2.81 to $2.70), the effect of the 10% convertible bonds is dilutive.

The final step is the recomputation that includes the 7% preferred stock. This is shown in **Illustration 15B.11**.

ILLUSTRATION 15B.11 Recomputation of EPS Using Incremental Effect of 7% Convertible Preferred

7% Convertible Preferred	
Numerator from previous calculation	$1,935,000
Add: Dividend requirement avoided	175,000
Total	$2,110,000
Denominator from previous calculation (shares)	716,667
Add: Number of common shares assumed issued upon conversion of preferred	50,000
Total	766,667
Recomputed earnings per share ($2,110,000 ÷ 766,667 shares)	$ 2.75

Since the recomputed earnings per share is not reduced, the effect of the 7% convertible preferred is not dilutive. Diluted earnings per share is $2.70. The per share effects of the preferred are not used in the computation.

Finally, **Illustration 15B.12** shows Webster Corporation's disclosure of earnings per share on its income statement.

ILLUSTRATION 15B.12 Basic and Diluted EPS

Net income	$1,750,000
Basic earnings per common share (Note X)	$ 3.15
Diluted earnings per common share	$ 2.70

A company uses income from continuing operations (adjusted for preferred dividends) to determine whether potential common stock is dilutive or antidilutive. Some refer to this measure as the **control number**. To illustrate, assume that Barton Company provides the information shown in **Illustration 15B.13**.

ILLUSTRATION 15B.13 Barton Company Data

Income from continuing operations	$2,400,000
Loss from discontinued operations	3,600,000
Net loss	$1,200,000
Weighted-average number of shares outstanding	1,000,000
Potential common stock	200,000

Barton reports basic and dilutive earnings per share as shown in **Illustration 15B.14**.

ILLUSTRATION 15B.14 Income Statement Presentation, EPS

Basic earnings per share	
Income from continuing operations ($2,400,000 ÷ 1,000,000)	$2.40
Loss from discontinued operations ($3,600,000 ÷ 1,000,000)	3.60
Net loss	$1.20
Diluted earnings per share	
Income from continuing operations ($2,400,000 ÷ 1,200,000)	$2.00
Loss from discontinued operations ($3,600,000 ÷ 1,200,000)	3.00
Net loss	$1.00

As Illustration 15B.14 shows, basic earnings per share from continuing operations is higher than the diluted earnings per share from continuing operations. The reason: The diluted earnings per share from continuing operations includes an additional 200,000 shares of potential common stock in its denominator.

Companies use income from continuing operations as the control number because many of them show income from continuing operations (or a similar line item above net income if it appears on the income statement) but report a final net loss due to a loss on discontinued operations. If a company uses final net loss as the control number, basic and diluted earnings per share would be the same because the potential common shares are antidilutive.[11]

Review and Practice

Key Terms Review

antidilutive securities 15-28
basic EPS 15-28
complex capital structure 15-23
*control number 15-46
convertible debt 15-3
convertible preferred stock 15-5
dilutive securities 15-2, 15-28
earnings per share (EPS) 15-23
fair value method 15-13
grant date 15-13
if-converted method 15-29
income available to common stockholders 15-24
incremental method 15-9
induced conversion 15-5
*percentage approach 15-40
proportional method 15-8
restricted-stock awards 15-16
restricted-stock plans 15-16
restricted-stock units 15-16
service period 15-12
*share appreciation 15-39
simple capital structure 15-23
*stock-appreciation rights (SARs) 15-39
stock-based compensation plans 15-12
stock right 15-10
treasury-stock method 15-31
vesting period 15-12
warrants 15-7
weighted-average number of shares outstanding 15-25

[11] If a company reports a loss from continuing operations, basic and diluted earnings per share will be the same because potential common stock will be antidilutive, even if the company reports final net income. The FASB believes that comparability of EPS information will be improved by using income from continuing operations as the control number.

Learning Objectives Review

1 Describe the accounting for the issuance, conversion, and retirement of convertible securities.

The method for **recording convertible bonds at the date of issuance follows that used to record straight debt issues**. Companies amortize any discount or premium that results from the issuance of convertible bonds, assuming the bonds will be held to maturity. If companies **convert bonds into other securities**, the principal accounting problem is to determine the amount at which to record the securities exchanged for the bonds. The book value method is considered GAAP. The **retirement of convertible debt** is considered a debt retirement, and the difference between the carrying amount of the retired convertible debt and the cash paid should result in a gain or loss.

When convertible preferred stock is converted, a company uses the book value method. It debits Preferred Stock, along with any related Paid-in Capital in Excess of Par—Preferred Stock, and credits Common Stock and Paid-in Capital in Excess of Par—Common Stock (if an excess exists).

2 Contrast the accounting for stock warrants with stock rights.

Stock warrants: Companies should allocate the proceeds from the sale of debt with detachable warrants between the two securities. Warrants that are detachable can be traded separately from the debt, and therefore companies can determine their fair value. Two methods of allocation are available: the proportional method and the incremental method. Nondetachable warrants do not require an allocation of the proceeds between the bonds and the warrants; companies record the entire proceeds as debt. **Stock rights**: No entry is required when a company issues rights to existing stockholders. The company needs only to make a memorandum entry to indicate the number of rights issued to existing stockholders and to ensure that the company has additional unissued stock registered for issuance in case the stockholders exercise the rights.

3 Describe the accounting and reporting for stock compensation plans.

Companies must use the **fair value approach** to account for stock-based compensation. Under this approach, a company computes total compensation expense based on the fair value of the options that it expects to vest on the grant date. Companies recognize compensation expense in the periods in which the employee performs the services. Restricted-stock plans follow the same general accounting principles as those for stock options. Companies estimate total compensation cost at the grant date based on the fair value of the restricted stock (or stock units); they expense that cost over the service period. If vesting does not occur, companies reverse the compensation expense.

When first proposed, there was considerable opposition to the recognition provisions contained in the fair value approach. The reason: that approach could result in substantial, previously unrecognized compensation expense. Corporate America, particularly the high-technology sector, vocally opposed the proposed standard. They believed that the standard would place them at a competitive disadvantage with larger companies that can withstand higher compensation charges. Offsetting such opposition is the need for greater transparency in financial reporting, on which our capital markets depend.

4 Compute basic earnings per share.

When a company has both common and preferred stock outstanding, it subtracts the current-year preferred stock dividend from net income to arrive at income available to common stockholders. The formula for computing earnings per share is **net income less preferred stock dividends, divided by the weighted-average common shares outstanding**.

5 Compute diluted earnings per share.

A complex capital structure requires a dual presentation of earnings per share, each with equal prominence on the face of the income statement. These two presentations are referred to as basic earnings per share and diluted earnings per share. Basic earnings per share relies on the number of weighted-average common shares outstanding (i.e., equivalent to EPS for a simple capital structure). Diluted earnings per share indicates the dilution of earnings per share that will occur if all potential issuances of common stock that would reduce earnings per share takes place. Companies with complex capital structures should exclude antidilutive securities when computing earnings per share.

*6 Explain the accounting for stock-appreciation rights plans.

The accounting for stock-appreciation rights depends on whether the rights are classified as equity-or liability-based. If equity-based, the accounting is similar to that used for stock options. If liability-based, companies remeasure compensation expense each period and allocate it over the service period using the percentage approach.

*7 Compute earnings per share in a complex situation.

For diluted EPS, make the following computations. (1) For each potentially dilutive security, determine the per share effect assuming exercise/conversion. (2) Rank the results from most dilutive to least dilutive. (3) Recalculate EPS starting with the most dilutive, and continue adding securities until EPS does not change or becomes larger.

Enhanced Review and Practice

Go to Wiley Course Resources for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Exercises, Problems, Problem Solution Walkthrough Videos, Data Analytics Activities, and many more assessment tools and resources are available for practice in Wiley Course Resources.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

Questions

1. What is meant by a dilutive security?

2. Briefly explain why corporations issue convertible securities.

3. Discuss the similarities and the differences between convertible debt and debt issued with stock warrants.

4. Bridgewater Corp. offered holders of its 1,000 convertible bonds a premium of $160 per bond to induce conversion into shares of its common stock. Upon conversion of all the bonds, Bridgewater Corp. recorded the $160,000 premium as a reduction of paid-in capital. Comment on Bridgewater's treatment of the $160,000 "sweetener."

5. Explain how the conversion feature of convertible debt has a value (a) to the issuer and (b) to the purchaser.

6. What are the arguments for giving separate accounting recognition to the conversion feature of debentures?

7. Four years after issue, debentures with a face value of $1,000,000 and book value of $960,000 are tendered for conversion into 80,000 shares of common stock immediately after an interest payment date. At that time, the market price of the debentures is 104, and the common stock is selling at $14 per share (par value $10). The company records the conversion as follows.

Bonds Payable	1,000,000	
Discount on Bonds Payable		40,000
Common Stock		800,000
Paid-in Capital in Excess of Par—Common Stock		160,000

Discuss the propriety of this accounting treatment.

8. On July 1, 2025, Roberts Corporation issued $3,000,000 of 9% bonds payable in 20 years. The bonds include detachable warrants giving the bondholder the right to purchase for $30 one share of $1 par value common stock at any time during the next 10 years. The bonds were sold for $3,000,000. The value of the warrants at the time of issuance was $100,000. Prepare the journal entry to record this transaction.

9. What are stock rights? How does the issuing company account for them?

10. Briefly explain the accounting requirements for stock compensation plans under GAAP.

11. Cordero Corporation has an employee stock-purchase plan which permits all full-time employees to purchase 10 shares of common stock on the third anniversary of their employment and an additional 15 shares on each subsequent anniversary date. The purchase price is set at the market price on the date purchased and no commission is charged. Discuss whether this plan would be considered compensatory.

12. What date or event does the profession believe should be used in determining the value of a stock option? What arguments support this position?

13. Over what period of time should compensation cost be allocated?

14. How is compensation expense computed using the fair value approach?

15. What are the advantages of using restricted stock to compensate employees?

16. At December 31, 2025, Reid Company had 600,000 shares of common stock issued and outstanding, 400,000 of which had been issued and outstanding throughout the year and 200,000 of which were issued on October 1, 2025. Net income for 2025 was $2,000,000, and dividends declared on preferred stock were $400,000. Compute Reid's earnings per common share. (Round to the nearest penny.)

17. What effect do stock dividends or stock splits have on the computation of the weighted-average number of shares outstanding?

18. Define the following terms.

a. Basic earnings per share.

b. Potentially dilutive security.

c. Diluted earnings per share.

d. Complex capital structure.

e. Potential common stock.

19. What are the computational guidelines for determining whether a convertible security is to be reported as part of diluted earnings per share?

20. Discuss why options and warrants may be considered potentially dilutive common shares for the computation of diluted earnings per share.

21. Explain how convertible securities are determined to be potentially dilutive common shares and how those convertible securities that are not considered to be potentially dilutive common shares enter into the determination of earnings per share data.

22. Explain the treasury-stock method as it applies to options and warrants in computing dilutive earnings per share data.

23. Earnings per share can affect market prices of common stock. Can market prices affect earnings per share? Explain.

24. What is meant by the term antidilution? Give an example.

25. What type of earnings per share presentation is required in a complex capital structure?

***26.** How is antidilution determined when multiple securities are involved?

Brief Exercises

BE15.1 (LO 1) Archer Inc. issued $4,000,000 par value, 7% convertible bonds at 99 for cash. If the bonds had not included the conversion feature, they would have sold for 95. Prepare the journal entry to record the issuance of the bonds.

BE15.2 (LO 1) Petrenko Corporation has outstanding 2,000 of $1,000 bonds, each convertible into 50 shares of $10 par value common stock. The bonds are converted on December 31, 2025, when the unamortized discount is $30,000 and the market price of the stock is $21 per share. Record the conversion using the book value approach.

BE15.3 (LO 1) Pechstein Corporation issued 2,000 shares of $10 par value common stock upon conversion of 1,000 shares of $50 par value preferred stock. The preferred stock was originally issued at $60 per share. The common stock is trading at $26 per share at the time of conversion. Record the conversion of the preferred stock.

BE15.4 (LO 2) Eisler Corporation issued 2,000 $1,000 bonds at 101. Each bond was issued with one detachable stock warrant. After issuance, the bonds were selling in the market at 98, and the warrants had a market price of $40. Use the proportional method to record the issuance of the bonds and warrants.

BE15.5 (LO 2) McIntyre Corporation issued 2,000 $1,000 bonds at 101. Each bond was issued with one detachable stock warrant. After issuance, the bonds were selling separately at 98. The market price of the warrants without the bonds cannot be determined. Use the incremental method to record the issuance of the bonds and warrants.

BE15.6 (LO 3) On January 1, 2025, Barwood Corporation granted 5,000 options to executives. Each option entitles the holder to purchase one share of Barwood's $5 par value common stock at $50 per share at any time during the next 5 years. The market price of the stock is $65 per share on the date of grant. The fair value of the options at the grant date is $150,000. The period of benefit is 2 years. Prepare Barwood's journal entries for January 1, 2025, and December 31, 2025 and 2026.

BE15.7 (LO 3) Refer to the data for Barwood Corporation in BE15.6. Repeat the requirements assuming that instead of options, Barwood issued 2,000 shares of restricted stock.

BE15.8 (LO 3) Refer to the data for Barwood Corporation in BE15.6. Repeat the requirements assuming that instead of options, Barwood issued 2,000 shares of restricted stock units.

BE15.9 (LO 3) On January 1, 2025 (the date of grant), Lutz Corporation issues 2,000 shares of restricted stock to its executives. The fair value of these shares is $75,000, and their par value is $10,000. The stock is forfeited if the executives do not complete 3 years of employment with the company. Prepare the journal entry (if any) on January 1, 2025, and on December 31, 2025, assuming the service period is 3 years.

BE15.10 (LO 4) Kalin Corporation had 2025 net income of $1,000,000. During 2025, Kalin paid a dividend of $2 per share on 100,000 shares of preferred stock. During 2025, Kalin had outstanding 250,000 shares of common stock. Compute Kalin's 2025 earnings per share.

BE15.11 (LO 4) Douglas Corporation had 120,000 shares of stock outstanding on January 1, 2025. On May 1, 2025, Douglas issued 60,000 shares. On July 1, Douglas purchased 10,000 treasury shares, which were reissued on October 1. Compute Douglas's weighted-average number of shares outstanding for 2025.

BE15.12 (LO 4) Tomba Corporation had 300,000 shares of common stock outstanding on January 1, 2025. On May 1, Tomba issued 30,000 shares. (a) Compute the weighted-average number of shares outstanding if the 30,000 shares were issued for cash. (b) Compute the weighted-average number of shares outstanding if the 30,000 shares were issued in a stock dividend.

BE15.13 (LO 4) The 2025 income statement of Wasmeier Corporation showed net income of $480,000 and a loss from discontinued operations of $120,000. Wasmeier had 100,000 shares of common stock outstanding all year. Prepare Wasmeier's income statement presentation of earnings per share.

BE15.14 (LO 5) Rockland Corporation earned net income of $300,000 in 2025 and had 100,000 shares of common stock outstanding throughout the year. Also outstanding all year was $800,000 of 5% bonds, which are convertible into 16,000 shares of common. Rockland's tax rate is 20%. Compute Rockland's 2025 diluted earnings per share.

BE15.15 (LO 5) DiCenta Corporation reported net income of $270,000 in 2025 and had 50,000 shares of common stock outstanding throughout the year. Also outstanding all year were 5,000 shares of cumulative preferred stock, each convertible into 2 shares of common. The preferred stock pays an annual dividend of $5 per share. DiCenta's tax rate is 20%. Compute DiCenta's 2025 diluted earnings per share.

BE15.16 (LO 5) Bedard Corporation reported net income of $300,000 in 2025 and had 200,000 shares of common stock outstanding throughout the year. Also outstanding all year were 45,000 options to purchase common stock at $10 per share. The average market price of the stock during the year was $15. Compute diluted earnings per share.

*BE15.17 (LO 6) Ferraro, Inc. established a stock-appreciation rights (SARs) program on January 1, 2025, which entitles executives to receive cash at the date of exercise for the difference between the market price of the stock and the pre-established price of $20 on 5,000 SARs. The required service period is 2 years. The fair value of the SARs are determined to be $4 on December 31, 2025, and $9 on December 31, 2026. Compute Ferraro's compensation expense for 2025 and 2026.

Exercises

E15.1 (LO 1, 2) Excel **(Issuance and Conversion of Bonds)** For each of the unrelated transactions described below, present the entry (entries) required to record each transaction.

1. Grand Corp. issued $20,000,000 par value 10% convertible bonds at 99. If the bonds had not been convertible, the company's investment banker estimates they would have been sold at 95.
2. Hoosier Company issued $20,000,000 par value 10% bonds at 98. One detachable stock purchase warrant was issued with each $100 par value bond. At the time of issuance, the warrants were selling for $4.
3. Suppose **Sepracor, Inc.** called its convertible debt in 2025. Assume the following related to the transaction. The 11%, $10,000,000 par value bonds were converted into 1,000,000 shares of $1 par value common stock on July 1, 2025. On July 1, there was $55,000 of unamortized discount applicable to the bonds, and the company paid an additional $75,000 to the bondholders to induce conversion of all the bonds. The company records the conversion using the book value method.

E15.2 (LO 1) **(Conversion of Bonds)** Aubrey Inc. issued $4,000,000 of 10%, 10-year convertible bonds on June 1, 2025, at 98 plus accrued interest. The bonds were dated April 1, 2025, with interest payable April 1 and October 1. Bond discount is amortized semiannually on a straight-line basis.

On April 1, 2026, $1,500,000 of these bonds were converted into 30,000 shares of $20 par value common stock. Accrued interest was paid in cash at the time of conversion.

Instructions

a. Prepare the entry to record the interest expense at October 1, 2025. Assume that accrued interest payable was credited when the bonds were issued. (Round to nearest dollar.)

b. Prepare the entry(ies) to record the conversion on April 1, 2026. (Book value method is used.) Assume that the entry to record amortization of the bond discount and interest payment has been made.

E15.3 (LO 1) **(Conversion of Bonds)** Vargo Company has bonds payable outstanding in the amount of $500,000, and the Premium on Bonds Payable account has a balance of $7,500. Each $1,000 bond is convertible into 20 shares of preferred stock of par value of $50 per share. All bonds are converted into preferred stock.

Instructions

Assuming that the book value method was used, what entry would be made?

E15.4 (LO 1) **(Conversion of Bonds)** On January 1, 2024, when its $30 par value common stock was selling for $80 per share, Plato Corp. issued $10,000,000 of 8% convertible debentures due in 20 years. The conversion option allowed the holder of each $1,000 bond to convert the bond into five shares of the corporation's common stock. The debentures were issued for $10,800,000. The present value of the bond payments at the time of issuance was $8,500,000, and the corporation believes the difference between the present value and the amount paid is attributable to the conversion feature. On January 1, 2025, the corporation's $30 par value common stock was split 2 for 1, and the conversion rate for the bonds was adjusted accordingly. On January 1, 2026, when the corporation's $15 par value common stock was selling for $135 per share, holders of 30% of the convertible debentures exercised their conversion options. The corporation uses the straight-line method for amortizing any bond discounts or premiums.

Instructions

a. Prepare the journal entry to record the original issuance of the convertible debentures.

b. Prepare the journal entry to record the exercise of the conversion option, using the book value method. Show supporting computations in good form.

E15.5 (LO 1) (Conversion of Bonds) The December 31, 2025, balance sheet of Kepler Corp. is as follows.

10% callable, convertible bonds payable (semiannual interest dates April 30 and October 31; convertible into 6 shares of $25 par value common stock per $1,000 of bond principal; maturity date April 30, 2031)	$500,000	
Discount on bonds payable	10,240	$489,760

On March 5, 2026, Kepler Corp. called all of the bonds as of April 30 for the principal plus interest through April 30. By April 30, all bondholders had exercised their conversion to common stock as of the interest payment date. Consequently, on April 30, Kepler Corp. paid the semiannual interest and issued shares of common stock for the bonds. The discount is amortized on a straight-line basis. Kepler uses the book value method.

Instructions

Prepare the entry(ies) to record the interest expense and conversion on April 30, 2026. Reversing entries were made on January 1, 2026. (Round to the nearest dollar.)

E15.6 (LO 1) (Conversion of Bonds) On January 1, 2025, Gottlieb Corporation issued $4,000,000 of 10-year, 8% convertible debentures at 102. Interest is to be paid semiannually on June 30 and December 31. Each $1,000 debenture can be converted into eight shares of Gottlieb Corporation $100 par value common stock after December 31, 2026.

On January 1, 2027, $400,000 of debentures are converted into common stock, which is then selling at $110. An additional $400,000 of debentures are converted on March 31, 2027. The market price of the common stock is then $115. Accrued interest at March 31 will be paid on the next interest date.

Bond premium is amortized on a straight-line basis.

Instructions

Make the necessary journal entries for:

a. December 31, 2026.

b. January 1, 2027.

c. March 31, 2027.

d. June 30, 2027.

Record the conversions using the book value method.

E15.7 (LO 2) (Issuance of Bonds with Warrants) Illiad Inc. has decided to raise additional capital by issuing $170,000 face value of bonds with a coupon rate of 10%. In discussions with investment bankers, it was determined that to help the sale of the bonds, detachable stock warrants should be issued at the rate of one warrant for each $100 bond sold. The value of the bonds without the warrants is considered to be $136,000, and the value of the warrants in the market is $24,000. The bonds sold in the market at issuance for $152,000.

Instructions

a. What entry should be made at the time of the issuance of the bonds and warrants?

b. If the warrants were nondetachable, would the entries be different? Discuss.

E15.8 (LO 2) (Issuance of Bonds with Detachable Warrants) On September 1, 2025, Sands Company sold at 104 (plus accrued interest) 4,000 of its 9%, 10-year, $1,000 face value, nonconvertible bonds with detachable stock warrants. Each bond carried two detachable warrants. Each warrant was for one share of common stock at a specified option price of $15 per share. Shortly after issuance, the warrants were quoted on the market for $3 each. No fair value can be determined for the Sands Company bonds. Interest is payable on December 1 and June 1.

Instructions

Prepare in general journal format the entry to record the issuance of the bonds.

(AICPA adapted)

E15.9 (LO 2) (Issuance of Bonds with Stock Warrants) On May 1, 2025, Friendly Company issued 2,000 $1,000 bonds at 102. Each bond was issued with one detachable stock warrant. Shortly after issuance, the bonds were selling at 98, but the fair value of the warrants cannot be determined.

Instructions

a. Prepare the entry to record the issuance of the bonds and warrants.

b. Assume the same facts as part (a), except that the warrants had a fair value of $30. Prepare the entry to record the issuance of the bonds and warrants.

E15.10 (LO 3) (Issuance and Exercise of Stock Options) On November 1, 2025, Columbo Company adopted a stock-option plan that granted options to key executives to purchase 30,000 shares of the company's $10 par value common stock. The options were granted on January 2, 2026, and were exercisable 2 years after the date of grant if the grantee was still an employee of the company. The options expired 6 years from date of grant. The option price was set at $40, and the fair value option-pricing model determines the total compensation expense to be $450,000.

All of the options were exercised during the year 2028: 20,000 on January 3 when the market price was $67, and 10,000 on May 1 when the market price was $77 a share.

Instructions

Prepare journal entries relating to the stock option plan for the years 2026, 2027, and 2028. Assume that the employee performs services equally in 2026 and 2027.

E15.11 (LO 3) (Issuance, Exercise, and Termination of Stock Options) On January 1, 2026, Titania Inc. granted stock options to officers and key employees for the purchase of 20,000 shares of the company's $10 par common stock at $25 per share. The options were exercisable within a 5-year period beginning January 1, 2028, by grantees still in the employ of the company, and expiring December 31, 2032. The service period for this award is 2 years. Assume that the fair value option-pricing model determines total compensation expense to be $350,000.

On April 1, 2027, 2,000 options were terminated when the employees resigned from the company. The market price of the common stock was $35 per share on this date.

On March 31, 2028, 12,000 options were exercised when the market price of the common stock was $40 per share.

Instructions

Prepare journal entries to record issuance of the stock options, termination of the stock options, exercise of the stock options, and charges to compensation expense, for the years ended December 31, 2026, 2027, and 2028.

E15.12 (LO 3) (Issuance, Exercise, and Termination of Stock Options) On January 1, 2024, Nichols Corporation granted 10,000 options to key executives. Each option allows the executive to purchase one share of Nichols' $5 par value common stock at a price of $20 per share. The options were exercisable within a 2-year period beginning January 1, 2026, if the grantee is still employed by the company at the time of the exercise. On the grant date, Nichols' stock was trading at $25 per share, and a fair value option-pricing model determines total compensation to be $400,000.

On May 1, 2026, 8,000 options were exercised when the market price of Nichols' stock was $30 per share. The remaining options lapsed in 2028 because executives decided not to exercise their options.

Instructions

Prepare the necessary journal entries related to the stock option plan for the years 2024 through 2028.

E15.13 (LO 3) (Accounting for Restricted Stock) Derrick Company issues 4,000 shares of restricted stock to its CFO, Dane Yaping, on January 1, 2025. The stock has a fair value of $120,000 on this date. The service period related to this restricted stock is 4 years. Vesting occurs if Yaping stays with the company for 4 years. The par value of the stock is $5. At December 31, 2026, the fair value of the stock is $145,000.

Instructions

a. Prepare the journal entries to record the restricted stock on January 1, 2025 (the date of grant), and December 31, 2026.

b. On March 4, 2027, Yaping leaves the company. Prepare the journal entry (if any) to account for this forfeiture.

c. Prepare the journal entries on January 1, 2025, and December 31, 2026, assuming that Derrick issued 4,000 shares of restricted stock units instead of 4,000 shares of restricted stock.

d. On March 4, 2027, Yaping leaves the company. Prepare the journal entry (if any) to account for this forfeiture of restricted stock units.

E15.14 (LO 3) (Accounting for Restricted Stock) Tweedie Company issues 10,000 shares of restricted stock to its CFO, Mary Tokar, on January 1, 2025. The stock has a fair value of $500,000 on this date. The service period related to this restricted stock is 5 years. Vesting occurs if Tokar stays with the company until December 31, 2029. The par value of the stock is $10. At December 31, 2025, the fair value of the stock is $450,000.

Instructions

a. Prepare the journal entries to record the restricted stock on January 1, 2025 (the date of grant), and December 31, 2026.

b. On July 25, 2029, Tokar leaves the company. Prepare the journal entry (if any) to account for this forfeiture.

c. Prepare the journal entries on January 1, 2025, and December 31, 2026, assuming that Tweedie issued 10,000 shares of restricted stock units instead of 4,000 shares of restricted stock.

d. On July 5, 2029, Tokar leaves the company. Prepare the journal entry (if any) to account for this forfeiture of restricted stock units.

E15.15 (LO 4) Excel (Weighted-Average Number of Shares) Newton Inc. uses a calendar year for financial reporting. The company is authorized to issue 9,000,000 shares of $10 par common stock. At no time has Newton issued any potentially dilutive securities. Listed below is a summary of Newton's common stock activities.

1.	Number of common shares issued and outstanding at December 31, 2023	2,000,000
2.	Shares issued as a result of a 10% stock dividend on September 30, 2024	200,000
3.	Shares issued for cash on March 31, 2025	2,000,000
	Number of common shares issued and outstanding at December 31, 2025	4,200,000
4.	A 2-for-1 stock split of Newton's common stock took place on March 31, 2026	

Instructions

a. Compute the weighted-average number of common shares used in computing earnings per common share for 2024 on the 2025 comparative income statement.

b. Compute the weighted-average number of common shares used in computing earnings per common share for 2025 on the 2025 comparative income statement.

c. Compute the weighted-average number of common shares to be used in computing earnings per common share for 2025 on the 2026 comparative income statement.

d. Compute the weighted-average number of common shares to be used in computing earnings per common share for 2026 on the 2026 comparative income statement.

(CMA adapted)

E15.16 (LO 4) (EPS: Simple Capital Structure) On January 1, 2026, Wilke Corp. had 480,000 shares of common stock outstanding. During 2026, it had the following transactions that affected the common stock account.

February 1	Issued 120,000 shares
March 1	Issued a 10% stock dividend
May 1	Acquired 100,000 shares of treasury stock
June 1	Issued a 3-for-1 stock split
October 1	Reissued 60,000 shares of treasury stock

Instructions

a. Determine the weighted-average number of shares outstanding as of December 31, 2026.

b. Assume that Wilke Corp. earned net income of $3,456,000 during 2026. In addition, it had 100,000 shares of 9%, $100 par nonconvertible, noncumulative preferred stock outstanding for the entire year. Because of liquidity considerations, however, the company did not declare and pay a preferred dividend in 2026. Compute earnings per share for 2026, using the weighted-average number of shares determined in part (a).

c. Assume the same facts as in part (b), except that the preferred stock was cumulative. Compute earnings per share for 2026.

d. Assume the same facts as in part (b), except that net income included a loss from discontinued operations of $432,000 (net of tax). Compute earnings per share for 2026.

E15.17 (LO 4) (EPS: Simple Capital Structure) Ace Company had 200,000 shares of common stock outstanding on December 31, 2026. During the year 2027, the company issued 8,000 shares on May 1 and retired 14,000 shares on October 31. For the year 2027, Ace Company reported net income of $249,690 after a loss from discontinued operations of $40,600 (net of tax).

Instructions

What earnings per share data should be reported at the bottom of its income statement?

E15.18 (LO 4) (EPS: Simple Capital Structure) Flagstad Inc. presented the following data.

Net income	$2,500,000
Preferred stock: 50,000 shares outstanding, $100 par, 8% cumulative, not convertible	5,000,000
Common stock: Shares outstanding 1/1	750,000
Issued for cash, 5/1	300,000
Acquired treasury stock for cash, 8/1	150,000
2-for-1 stock split, 10/1	

Instructions

Compute earnings per share.

E15.19 (LO 4) (EPS: Simple Capital Structure) A portion of the combined statement of income and retained earnings of Seminole Inc. for the current year follows.

Income from continuing operations		$15,000,000
Loss from discontinued operations, net of applicable income tax (Note 1)		1,340,000
Net income		13,660,000
Retained earnings at the beginning of the year		83,250,000
		96,910,000
Dividends declared:		
On preferred stock—$6.00 per share	$ 300,000	
On common stock—$1.75 per share	14,875,000	15,175,000
Retained earnings at the end of the year		$81,735,000

Note 1. During the year, Seminole Inc. suffered a major loss from discontinued operations of $1,340,000 after applicable income tax reduction of $1,200,000.

At the end of the current year, Seminole Inc. has outstanding 8,500,000 shares of $10 par common stock and 50,000 shares of 6% preferred. On April 1 of the current year, Seminole Inc. issued 1,000,000 shares of common stock for $32 per share to help finance the loss from discontinued operations.

Instructions

Compute the earnings per share on common stock for the current year as it should be reported to stockholders.

E15.20 (LO 4) (EPS: Simple Capital Structure) On January 1, 2025, Lennon Industries had stock outstanding as follows.

6% Cumulative preferred stock, $100 par value, issued and outstanding 10,000 shares	$1,000,000
Common stock, $10 par value, issued and outstanding 200,000 shares	2,000,000

To acquire the net assets of three smaller companies, Lennon authorized the issuance of an additional 160,000 common shares. The acquisitions took place as shown below.

Date of Acquisition	Shares Issued
Company A April 1, 2025	50,000
Company B July 1, 2025	80,000
Company C October 1, 2025	30,000

On May 14, 2025, Lennon realized a $90,000 (before taxes) gain on discontinued operations. On December 31, 2025, Lennon recorded income of $300,000 from continuing operations.

Instructions

Assuming a 20% tax rate, compute the earnings per share data that should appear on the financial statements of Lennon Industries as of December 31, 2025.

E15.21 (LO 4) (EPS: Simple Capital Structure) At January 1, 2025, Langley Company's outstanding shares included the following.

280,000 shares of $50 par value, 7% cumulative preferred stock
900,000 shares of $1 par value common stock

Net income for 2025 was $2,530,000. No cash dividends were declared or paid during 2025. On February 15, 2026, however, all preferred dividends in arrears were paid, together with a 5% stock dividend on common shares. There were no dividends in arrears prior to 2025.

On April 1, 2025, 450,000 shares of common stock were sold for $10 per share, and on October 1, 2025, 110,000 shares of common stock were purchased for $20 per share and held as treasury stock.

Instructions

Compute earnings per share for 2025. Assume that financial statements for 2025 were issued in March 2026.

E15.22 (LO 5) (EPS with Convertible Bonds, Various Situations) In 2024, Chirac Enterprises issued, at par, 60 $1,000, 8% bonds, each convertible into 100 shares of common stock. Chirac had revenues of $17,500 and expenses other than interest and taxes of $8,400 for 2025. (Assume that the tax rate is 20%.) Throughout 2025, 2,000 shares of common stock were outstanding; none of the bonds was converted or redeemed.

Instructions

a. Compute diluted earnings per share for 2025.

b. Assume the same facts as those assumed for part (a), except that the 60 bonds were issued on September 1, 2025 (rather than in 2024), and none have been converted or redeemed. Compute diluted earnings per share for 2025.

c. Assume the same facts as assumed for part (a), except that 20 of the 60 bonds were actually converted on July 1, 2025. Compute diluted earnings per share for 2025.

E15.23 (LO 5) (EPS with Convertible Bonds) On June 1, 2023, Andre Company and Agassi Company merged to form Lancaster Inc. A total of 800,000 shares were issued to complete the merger. The new corporation reports on a calendar-year basis.

On April 1, 2025, the company issued an additional 400,000 shares of stock for cash. All 1,200,000 shares were outstanding on December 31, 2025.

Lancaster Inc. also issued $600,000 of 20-year, 8% convertible bonds at par on July 1, 2025. Each $1,000 bond converts to 40 shares of common at any interest date. None of the bonds have been converted to date.

Lancaster Inc. is preparing its annual report for the fiscal year ending December 31, 2025. The annual report will show earnings per share figures based upon a reported after-tax net income of $1,540,000. (The tax rate is 20%.)

Instructions

Determine the following for 2025.

a. The number of shares to be used for calculating:

1. Basic earnings per share.

2. Diluted earnings per share.

b. The earnings figures to be used for calculating:

1. Basic earnings per share.

2. Diluted earnings per share.

(CMA adapted)

E15.24 (LO 5) (EPS with Convertible Bonds and Preferred Stock) The Simon Corporation issued 10-year, $5,000,000 par, 7% callable convertible subordinated debentures on January 2, 2025. The bonds have a par value of $1,000, with interest payable annually. The current conversion ratio is 14:1, and in 2 years it will increase to 18:1. At the date of issue, the bonds were sold at 98. Bond discount is amortized on a straight-line basis. Simon's effective tax was 20%. Net income in 2025 was $9,500,000, and the company had 2,000,000 shares outstanding during the entire year.

Instructions

a. Prepare a schedule to compute both basic and diluted earnings per share.

b. Discuss how the schedule would differ if the security was convertible preferred stock.

E15.25 (LO 5) (EPS with Convertible Bonds and Preferred Stock) On January 1, 2025, Crocker Company issued 10-year, $2,000,000 face value, 6% bonds, at par. Each $1,000 bond is convertible into 15 shares of Crocker common stock. Crocker's net income in 2025 was $400,000, and its tax rate was 20%. The company had 100,000 shares of common stock outstanding throughout 2025. None of the bonds were converted in 2025.

Instructions

a. Compute diluted earnings per share for 2025.

b. Compute diluted earnings per share for 2025, assuming the same facts as in part (a) except that $1,000,000 of 6% convertible preferred stock was issued instead of the bonds. Each $100 preferred share is convertible into 5 shares of Crocker common stock.

E15.26 (LO 5) (EPS with Options, Various Situations) Venzuela Company's net income for 2025 is $50,000. The only potentially dilutive securities outstanding were 1,000 options issued during 2024, each exercisable for one share at $6. None has been exercised, and 10,000 shares of common were outstanding during 2025. The average market price of Venzuela's stock during 2025 was $20.

Instructions

a. Compute diluted earnings per share. (Round to nearest cent.)

b. Assume the same facts as those assumed for part (a), except that the 1,000 options were issued on October 1, 2025 (rather than in 2024). The average market price during the last 3 months of 2025 was $20.

E15.27 (LO 5) (EPS with Contingent Issuance Agreement) Winsor Inc. recently purchased Holiday Corp., a large midwestern home painting corporation. One of the terms of the merger was that if Holiday's income for 2025 was $110,000 or more, 10,000 additional shares would be issued to Holiday's stockholders in 2026. Holiday's income for 2024 was $120,000.

Instructions

a. Would the contingent shares have to be considered in Winsor's 2024 earnings per share computations?

b. Assume the same facts, except that the 10,000 shares are contingent on Holiday's achieving a net income of $130,000 in 2025. Would the contingent shares have to be considered in Winsor's earnings per share computations for 2024?

E15.28 (LO 5) (EPS with Warrants) Howat Corporation earned $360,000 during a period when it had an average of 100,000 shares of common stock outstanding. The common stock sold at an average market price of $15 per share during the period. Also outstanding were 15,000 warrants that could be exercised to purchase one share of common stock for $10 for each warrant exercised.

Instructions

a. Are the warrants dilutive?

b. Compute basic earnings per share.

c. Compute diluted earnings per share.

***E15.29 (LO 6) (Stock-Appreciation Rights)** On December 31, 2021, Beckford Company issues 150,000 stock-appreciation rights to its officers entitling them to receive cash for the difference between the market price of its stock and a pre-established price of $10. The fair value of the SARs is estimated to be $4 per SAR on December 31, 2022; $1 on December 31, 2023; $10 on December 31, 2024; and $9 on December 31, 2025. The service period is 4 years, and the exercise period is 7 years.

Instructions

a. Prepare a schedule that shows the amount of compensation expense allocable to each year affected by the stock-appreciation rights plan.

b. Prepare the entry at December 31, 2025, to record compensation expense, if any, in 2025.

c. Prepare the entry on December 31, 2025, assuming that all 150,000 SARs are exercised.

***E15.30 (LO 6) (Stock-Appreciation Rights)** Capulet Company establishes a stock-appreciation rights program that entitles its new president Ben Davis to receive cash for the difference between the market price of the stock and a pre-established price of $30 (also market price) on December 31, 2021, on 30,000 SARs. The date of grant is December 31, 2021, and the required employment (service) period is 4 years. President Davis exercises all of the SARs in 2027. The fair value of the SARs is estimated to be $6 per SAR on December 31, 2022; $9 on December 31, 2023; $15 on December 31, 2024; $6 on December 31, 2025; and $18 on December 31, 2026.

Instructions

a. Prepare a 5-year (2022–2026) schedule of compensation expense pertaining to the 30,000 SARs granted president Davis.

b. Prepare the journal entry for compensation expense in 2022, 2025, and 2026 relative to the 30,000 SARs.

Problems

P15.1 (LO 1, 2, 3) Groupwork (Entries for Various Dilutive Securities) The stockholders' equity section of Martino Inc. at the beginning of the current year appears below.

Common stock, $10 par value, authorized 1,000,000 shares, 300,000 shares issued and outstanding	$3,000,000
Paid-in capital in excess of par—common stock	600,000
Retained earnings	570,000

During the current year, the following transactions occurred.

1. The company issued to the stockholders 100,000 rights. Ten rights are needed to buy one share of stock at $32. The rights were void after 30 days. The market price of the stock at this time was $34 per share.
2. The company sold to the public a $200,000, 10% bond issue at 104. The company also issued with each $100 bond one detachable stock purchase warrant, which provided for the purchase of common stock at $30 per share. Shortly after issuance, similar bonds without warrants were selling at 96 and the warrants at $8.
3. All but 5,000 of the rights issued in (1) were exercised in 30 days.
4. At the end of the year, 80% of the warrants in (2) had been exercised, and the remaining were outstanding and in good standing.
5. During the current year, the company granted stock options for 10,000 shares of common stock to company executives. The company, using a fair value option-pricing model, determines that each option is worth $10. The option price is $30. The options were to expire at year-end and were considered compensation for the current year.
6. All but 1,000 shares related to the stock-option plan were exercised by year-end. The expiration resulted because one of the executives failed to fulfill an obligation related to the employment contract.

Instructions

a. Prepare general journal entries for the current year to record the transactions listed above.

b. Prepare the stockholders' equity section of the balance sheet at the end of the current year. Assume that retained earnings at the end of the current year is $750,000.

P15.2 (LO 1) Excel (Entries for Conversion, Amortization, and Interest of Bonds) Volker Inc. issued $2,500,000 of convertible 10-year bonds on July 1, 2025. The bonds provide for 12% interest payable semiannually on January 1 and July 1. The discount in connection with the issue was $54,000, which is being amortized monthly on a straight-line basis.

The bonds are convertible after one year into 8 shares of Volker Inc.'s $100 par value common stock for each $1,000 of bonds.

On August 1, 2026, $250,000 of bonds were turned in for conversion into common stock. Interest has been accrued monthly and paid as due. At the time of conversion, any accrued interest on bonds being converted is paid in cash.

Instructions

Prepare the journal entries to record the conversion, amortization, and interest in connection with the bonds as of the following dates. (Round to the nearest dollar.)

a. August 1, 2026. (Assume the book value method is used.)

b. August 31, 2026.

c. December 31, 2026, including closing entries for end-of-year.

(AICPA adapted)

P15.3 (LO 3) Excel (Stock-Option Plan) Berg Company adopted a stock-option plan on November 30, 2024, that provided that 70,000 shares of $5 par value stock be designated as available for the granting of options to officers of the corporation at a price of $9 a share. The market price was $12 a share on November 30, 2025.

On January 2, 2025, options to purchase 28,000 shares were granted to president Tom Winter—15,000 for services to be rendered in 2025 and 13,000 for services to be rendered in 2026. Also on that date, options to purchase 14,000 shares were granted to vice president Michelle Bennett—7,000 for services

to be rendered in 2025 and 7,000 for services to be rendered in 2026. The market price of the stock was $14 a share on January 2, 2025. The options were exercisable for a period of one year following the year in which the services were rendered. The fair value of the options on the grant date was $4 per option.

In 2026, neither the president nor the vice president exercised their options because the market price of the stock was below the exercise price. The market price of the stock was $8 a share on December 31, 2026, when the options for 2025 services lapsed.

On December 31, 2027, both president Winter and vice president Bennett exercised their options for 13,000 and 7,000 shares, respectively, when the market price was $16 a share.

Instructions

Prepare the necessary journal entries in 2024 when the stock-option plan was adopted, in 2025 when options were granted, in 2026 when options lapsed, and in 2027 when options were exercised.

P15.4 (LO 3) (Stock-Based Compensation) Assume that **Amazon.com** has a stock-option plan for top management. Each stock option represents the right to purchase a share of Amazon $1 par value common stock in the future at a price equal to the fair value of the stock at the date of the grant. Amazon has 5,000 stock options outstanding, which were granted at the beginning of 2025. The following data relate to the option grant.

Exercise price for options	$40
Market price at grant date (January 1, 2025)	$40
Fair value of options at grant date (January 1, 2025)	$ 6
Service period	5 years

Instructions

a. Prepare the journal entry (entries) for the first year of the stock-option plan.

b. Prepare the journal entry (entries) for the first year of the plan assuming that, rather than options, 700 shares of restricted stock were granted at the beginning of 2025.

c. Prepare the journal entry (entries) for the first year of the plan, assuming that 700 shares of restricted stock units were granted at the beginning of 2025 rather than options.

d. Now assume that the market price of Amazon stock on the grant date was $45 per share. Repeat the requirements for (a), (b), and (c).

e. Amazon would like to implement an employee stock-purchase plan for rank-and-file employees, but it would like to avoid recording expense related to this plan. Which of the following provisions must be in place for the plan to avoid recording compensation expense?

1. Substantially all employees may participate.

2. The discount from market is small (less than 5%).

3. The plan offers no substantive option feature.

4. There is no preferred stock outstanding.

***P15.5 (LO 5, 7) Groupwork (EPS with Complex Capital Structure)** Amy Dyken, controller at Fitzgerald Pharmaceutical Industries, a public company, is currently preparing the calculation for basic and diluted earnings per share and the related disclosure for Fitzgerald's financial statements. Below is selected financial information for the fiscal year ended June 30, 2025.

Fitzgerald Pharmaceutical Industries
Selected Balance Sheet Information
June 30, 2025

Long-term debt	
Notes payable, 10%	$ 1,000,000
8% convertible bonds payable	5,000,000
10% bonds payable	6,000,000
Total long-term debt	$12,000,000
Shareholders' equity	
Preferred stock, 6% cumulative, $50 par value, 100,000 shares authorized, 25,000 shares issued and outstanding	$ 1,250,000
Common stock, $1 par, 10,000,000 shares authorized, 1,000,000 shares issued and outstanding	1,000,000
Additional paid-in capital	4,000,000
Retained earnings	6,000,000
Total shareholders' equity	$12,250,000

The following transactions have also occurred at Fitzgerald.

1. Options were granted on July 1, 2024, to purchase 200,000 shares at $15 per share. Although no options were exercised during fiscal year 2025, the average price per common share during fiscal year 2025 was $20 per share.
2. Each bond was issued at face value. The 8% convertible bonds will convert into common stock at 50 shares per $1,000 bond. The bonds are exercisable after 5 years and were issued in fiscal year 2024.
3. The preferred stock was issued in 2024.
4. There are no preferred dividends in arrears; however, preferred dividends were not declared in fiscal year 2025.
5. The 1,000,000 shares of common stock were outstanding for the entire 2025 fiscal year.
6. Net income for fiscal year 2025 was $1,500,000, and the average income tax rate is 20%.

Instructions

For the fiscal year ended June 30, 2025, calculate the following for Fitzgerald Pharmaceutical Industries.

a. Basic earnings per share.

b. Diluted earnings per share.

P15.6 (LO 4) (Basic EPS: Two-Year Presentation) Melton Corporation is preparing the comparative financial statements for the annual report to its shareholders for fiscal years ended May 31, 2025, and May 31, 2026. The income from operations for the fiscal year ended May 31, 2025, was $1,800,000 and income from continuing operations for the fiscal year ended May 31, 2026, was $2,500,000. In both years, the company incurred a 10% interest expense on $2,400,000 of debt, an obligation that requires interest-only payments for 5 years. The company experienced a loss from discontinued operations of $600,000 in February 2026. The company uses a 20% effective tax rate for income taxes.

The capital structure of Melton Corporation on June 1, 2024, consisted of 1 million shares of common stock outstanding and 20,000 shares of $50 par value, 6%, cumulative preferred stock. There were no preferred dividends in arrears, and the company had not issued any convertible securities, options, or warrants.

On October 1, 2024, Melton sold an additional 500,000 shares of the common stock at $20 per share. Melton distributed a 20% stock dividend on the common shares outstanding on January 1, 2025. On December 1, 2025, Melton was able to sell an additional 800,000 shares of the common stock at $22 per share. These were the only common stock transactions that occurred during the 2 fiscal years.

Instructions

a. Identify whether the capital structure at Melton Corporation is a simple or complex capital structure, and explain why.

b. Determine the weighted-average number of shares that Melton Corporation would use in calculating earnings per share for the fiscal year ended:

1. May 31, 2025.
2. May 31, 2026.

c. Prepare, in good form, a comparative income statement, beginning with income from operations, for Melton Corporation for the fiscal years ended May 31, 2025, and May 31, 2026. This statement will be included in Melton's annual report and should display the appropriate earnings per share presentations.

(CMA adapted)

P15.7 (LO 4, 5) Groupwork (Computation of Basic and Diluted EPS) Charles Austin of the controller's office of Thompson Corporation was given the assignment of determining the basic and diluted earnings per share values for the year ending December 31, 2026. Austin has compiled the information listed below.

1. The company is authorized to issue 8,000,000 shares of $10 par value common stock. As of December 31, 2025, 2,000,000 shares had been issued and were outstanding.
2. The per share market prices of the common stock on selected dates were as follows.

	Price per Share
July 1, 2025	$20.00
January 1, 2026	21.00
April 1, 2026	25.00
July 1, 2026	11.00
August 1, 2026	10.50
November 1, 2026	9.00
December 31, 2026	10.00

3. A total of 700,000 shares of an authorized 1,200,000 shares of convertible preferred stock had been issued on July 1, 2025. The stock was issued at its par value of $25, and it has a cumulative dividend of $3 per share. The stock is convertible into common stock at the rate of one share of convertible preferred for one share of common. The rate of conversion is to be automatically adjusted for stock splits and stock dividends. Dividends are paid quarterly on September 30, December 31, March 31, and June 30.
4. Thompson Corporation is subject to a 20% income tax rate.
5. The after-tax net income for the year ended December 31, 2026, was $11,550,000.

The following specific activities took place during 2026.

1. January 1: A 5% common stock dividend was issued. The dividend had been declared on December 1, 2025, to all stockholders of record on December 29, 2025.
2. April 1: A total of 400,000 shares of the $3 convertible preferred stock was converted into common stock. The company issued new common stock and retired the preferred stock. This was the only conversion of the preferred stock during 2026.
3. July 1: A 2-for-1 split of the common stock became effective on this date. The board of directors had authorized the split on June 1.
4. August 1: A total of 300,000 shares of common stock were issued to acquire a factory building.
5. November 1: A total of 24,000 shares of common stock were purchased on the open market at $9 per share. These shares were to be held as treasury stock and were still in the treasury as of December 31, 2026.
6. Common stock cash dividends: Cash dividends to common stockholders were declared and paid as follows.

April 15—$0.30 per share
October 15—$0.20 per share

7. Preferred stock cash dividends: Cash dividends to preferred stockholders were declared and paid as scheduled.

Instructions

a. Determine the number of shares used to compute basic earnings per share for the year ended December 31, 2026.

b. Determine the number of shares used to compute diluted earnings per share for the year ended December 31, 2026.

c. Compute the adjusted net income to be used as the numerator in the basic earnings per share calculation for the year ended December 31, 2026.

***P15.8 (LO 5, 7) (Computation of Basic and Diluted EPS)** The information below pertains to Barkley Company for 2026.

Net income for the year	$1,200,000
7% convertible bonds issued at par ($1,000 per bond); each bond is convertible into 30 shares of common stock	2,000,000
6% convertible, cumulative preferred stock, $100 par value; each share is convertible into 3 shares of common stock	4,000,000
Common stock, $10 par value	6,000,000
Tax rate for 2026	20%
Average market price of common stock	$25 per share

There were no changes during 2026 in the number of common shares, preferred shares, or convertible bonds outstanding. There is no treasury stock. The company also has common stock options (granted in a prior year) to purchase 75,000 shares of common stock at $20 per share.

Instructions

a. Compute basic earnings per share for 2026.

b. Compute diluted earnings per share for 2026.

P15.9 (LO 4) (EPS with Stock Dividend and Discontinued Operations) Christina Corporation is preparing the comparative financial statements to be included in the annual report to stockholders. Christina employs a fiscal year ending May 31.

Income from operations before income taxes for Christina was $1,400,000 and $660,000, respectively, for fiscal years ended May 31, 2026 and 2025. Christina experienced a loss from discontinued operations of $400,000 on March 3, 2026. A 20% combined income tax rate pertains to any and all of Christina Corporation's profits, gains, and losses.

Christina's capital structure consists of preferred stock and common stock. The company has not issued any convertible securities or warrants and there are no outstanding stock options.

Christina issued 40,000 shares of $100 par value, 6% cumulative preferred stock in 2022. All of this stock is outstanding, and no preferred dividends are in arrears.

There were 1,000,000 shares of $1 par common stock outstanding on June 1, 2024. On September 1, 2024, Christina sold an additional 400,000 shares of the common stock at $17 per share. Christina distributed a 20% stock dividend on the common shares outstanding on December 1, 2025. These were the only common stock transactions during the past 2 fiscal years.

Instructions

a. Determine the weighted-average number of common shares that would be used in computing earnings per share on the current comparative income statement for:

1. The year ended May 31, 2025.

2. The year ended May 31, 2026.

b. Starting with income from operations before income taxes, prepare a comparative income statement for the years ended May 31, 2026 and 2025. The statement will be part of Christina Corporation's annual report to stockholders and should include appropriate earnings per share presentation.

c. The capital structure of a corporation is the result of its past financing decisions. Furthermore, the earnings per share data presented on a corporation's financial statements is dependent upon the capital structure.

1. Explain why Christina Corporation is considered to have a simple capital structure.

2. Describe how earnings per share data would be presented for a corporation that has a complex capital structure.

(CMA adapted)

Using Your Judgment

Financial Reporting Problem: The Procter & Gamble Company (P&G)

UYJ15.1 The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G's financial statements and accompanying notes to answer the following questions.

a. Under P&G's stock-based compensation plan, stock options are granted annually to key managers and directors.

1. How many options were granted during 2020 under the plan?

2. How many options were exercisable at June 30, 2020?

3. How many options were exercised in 2020, and what was the average price of those exercised?

4. What is the total stock-based compensation expense for stock options and the total compensation expense for restricted stock, restricted stock units (RSUs), and performance stock units (PSUs) for 2020, 2019, and 2018?

5. To what accounts are the proceeds from these option exercises credited?

6. What was the number of outstanding options at June 30, 2020, and at what average exercise price?

b. What number of diluted weighted-average common shares outstanding was used by P&G in computing earnings per share for 2020, 2019, and 2018? What was P&G's diluted earnings per share in 2020, 2019, and 2018?

c. What other stock-based compensation plans does P&G have?

Comparative Analysis Case: The Coca-Cola Company and PepsiCo, Inc.

UYJ15.2 The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

a. What employee stock-option compensation plans are offered by Coca-Cola and PepsiCo?

b. How many options are outstanding at year-end 2020 for both Coca-Cola and PepsiCo?

c. How many options were granted by Coca-Cola and PepsiCo to officers and employees during 2020?

d. How many options were exercised during 2020?

e. What was the average exercise price for Coca-Cola and PepsiCo employees at December 31, 2020?

f. What was the diluted net income per share for Coca-Cola and PepsiCo for 2020, 2019, and 2018?

Financial Statement Analysis Case: Ragatz, Inc.

UYJ15.3 Ragatz, Inc., a drug company, reported the following information. The company prepares its financial statements in accordance with GAAP.

(in thousands)	2025
Current liabilities	$ 554,114
Convertible subordinated debt	648,020
Total liabilities	1,228,313
Stockholders' equity	176,413
Net income	58,333

Analysts attempting to compare Ragatz to drug companies that issue debt with detachable warrants may face a challenge due to differences in accounting for convertible debt.

Instructions

a. Compute the following ratios for Ragatz, Inc. (Assume that year-end balances approximate annual averages.)

1. Return on assets.

2. Return on common stock equity.

3. Debt to assets ratio.

b. Briefly discuss the operating performance and financial position of Ragatz. Industry averages for these ratios in 2025 were ROA 3.5%, return on equity 16%, and debt to assets 75%. Based on this analysis, would you make an investment in the company's 5% convertible bonds? Explain.

c. Assume you want to compare Ragatz to an IFRS company like **Merck** (IFRS requires companies to split the debt proceeds between debt and equity components). Assuming that the fair value of the equity component of Ragatz's convertible bonds is $150,000, how would you adjust the analysis above to make valid comparisons between Ragatz and Merck?

Accounting, Analysis, and Principles

UYJ15.4 On January 1, 2024, Garner issued 10-year, $200,000 face value, 6% bonds at par. Each $1,000 bond is convertible into 30 shares of Garner $2 par value common stock. The company has had 10,000 shares of common stock (and no preferred stock) outstanding throughout its life. None of the bonds have been converted as of the end of 2025. (Ignore all tax effects.)

Accounting

a. Prepare the journal entry Garner would have made on January 1, 2024, to record the issuance of the bonds.

b. Garner's net income in 2025 was $30,000 and was $27,000 in 2024. Compute basic and diluted earnings per share for Garner for 2025 and 2024.

c. Assume that 75% of the holders of Garner's convertible bonds convert their bonds to stock on June 30, 2026, when Garner's stock is trading at $32 per share. Garner pays $50 per bond to induce bondholders to convert. Prepare the journal entry to record the conversion.

Analysis

Show how Garner will report income and EPS for 2025 and 2024. Briefly discuss the importance of GAAP for EPS to analysts evaluating companies based on price-earnings ratios. Consider comparisons for a company over time, as well as comparisons between companies at a point in time.

Principles

In order to converge GAAP and IFRS, the FASB is considering whether the equity element of a convertible bond should be reported as equity. Describe how the journal entry you made in part (a) above would differ under IFRS. In terms of the accounting principles discussed in Chapter 1, what does IFRS for convertible debt accomplish that GAAP potentially sacrifices? What does GAAP for convertible debt accomplish that IFRS potentially sacrifices?

Developing Your Professional Skills

Critical-Thinking Cases

CT15.1 (LO 2) (Warrants Issued with Bonds and Convertible Bonds) Incurring long-term debt with an arrangement whereby lenders receive an option to buy common stock during all or a portion of the time the debt is outstanding is a frequent corporate financing practice. In some situations, the result is achieved through the issuance of convertible bonds; in others, the debt instruments and the warrants to buy stock are separate.

Instructions

a. **1.** Describe the differences that exist in current accounting for original proceeds of the issuance of convertible bonds and of debt instruments with separate warrants to purchase common stock.

2. Discuss the underlying rationale for the differences described in (a)(1) above.

3. Summarize the arguments that have been presented in favor of accounting for convertible bonds in the same manner as accounting for debt with separate warrants.

b. At the start of the year, Huish Company issued $18,000,000 of 12% bonds along with detachable warrants to buy 1,200,000 shares of its $10 par value common stock at $18 per share. The bonds mature over the next 10 years, starting one year from date of issuance, with annual maturities of $1,800,000. At the time, Huish had 9,600,000 shares of common stock outstanding. The company received $20,040,000 for the bonds and the warrants. For Huish Company, 12% was a relatively low borrowing rate. If offered alone, at this time, the bonds would have sold in the market at a 22% discount. Prepare the journal entry (or entries) for the issuance of the bonds and warrants for the cash consideration received.

(AICPA adapted)

CT15.2 (LO 3) Ethics (Ethical Issues—Compensation Plan) The executive officers of Rouse Corporation have a performance-based compensation plan. The performance criteria of this plan is linked to growth in earnings per share. When annual EPS growth is 12%, the Rouse executives earn 100% of the shares; if growth is 16%, they earn 125%. If EPS growth is lower than 8%, the executives receive no additional compensation.

In 2020, Joan Devers, the controller of Rouse, reviews year-end estimates of bad debt expense and warranty expense. She calculates the EPS growth at 15%. Kurt Adkins, a member of the executive group, remarks over lunch one day that the estimate of bad debt expense might be decreased, increasing EPS growth to 16.1%. Devers is not sure she should do this because she believes that the current estimate of bad debts is sound. On the other hand, she recognizes that a great deal of subjectivity is involved in the computation.

Instructions

Answer the following questions.

a. What, if any, is the ethical dilemma for Devers?

b. Should Devers's knowledge of the compensation plan be a factor that influences her estimate?

c. How should Devers respond to Adkins's request?

CT15.3 (LO 2, 3) Writing (Stock Warrants—Various Types) For various reasons a corporation may issue warrants to purchase shares of its common stock at specified prices that, depending on the circumstances, may be less than, equal to, or greater than the current market price. For example, warrants may be issued:

1. To existing stockholders on a pro rata basis.

2. To certain key employees under an incentive stock-option plan.

3. To purchasers of the corporation's bonds.

Instructions

For each of the three examples of how stock warrants are used:

a. Explain why they are used.

b. Discuss the significance of the price (or prices) at which the warrants are issued (or granted) in relation to (1) the current market price of the company's stock, and (2) the length of time over which they can be exercised.

c. Describe the information that should be disclosed in financial statements, or notes thereto, that are prepared when stock warrants are outstanding in the hands of the three groups listed above.

(AICPA adapted)

CT15.4 (LO 3) Writing (Stock Compensation Plans) The following two items appeared on the Internet concerning the GAAP requirement to expense stock options.

WASHINGTON, D.C.—February 17, 2005 Congressman David Dreier (R–CA), Chairman of the House Rules Committee, and Congresswoman Anna Eshoo (D–CA) reintroduced legislation today that will preserve broad-based employee stock option plans and give investors critical information they need to understand how employee stock options impact the value of their shares.

"Last year, the U.S. House of Representatives overwhelmingly voted for legislation that would have ensured the continued ability of innovative companies to offer stock options to rank-and-file employees," Dreier stated. "Both the Financial Accounting Standards Board (FASB) and the Securities and Exchange Commission (SEC) continue to ignore our calls to address legitimate concerns about the impact of FASB's new standard on workers' ability to have an ownership stake in the New Economy, and its failure to address the real need of shareholders: accurate and meaningful information about a company's use of stock options."

"In December 2004, FASB issued a stock option expensing standard that will render a huge blow to the 21st century economy," Dreier said. "Their action and the SEC's apparent lack of concern for protecting shareholders, requires us to once again take a firm stand on the side of investors and economic growth. Giving investors the ability to understand how stock options impact the value of their shares is critical. And equally important is preserving the ability of companies to use this innovative tool to attract talented employees."

"Here We Go Again!" by Jack Ciesielski (2/21/2005, *http://www.accountingobserver.com/blog/2005/02/here-we-go-again*) On February 17, Congressman David Dreier (R–CA), and Congresswoman Anna Eshoo (D–CA), officially entered Silicon Valley's bid to gum up the launch of honest reporting of stock option compensation: They co-sponsored a bill to "preserve broad-based employee stock option plans and give investors critical information they need to understand how employee stock options impact the value of their shares." You know what "critical information" they mean: stuff like the stock compensation for the top five officers in a company, with a rigged value set as close to zero as possible. Investors *crave* this kind of information. Other ways the good Congresspersons want to "help" investors: The bill "also requires the SEC to study the effectiveness of those disclosures over three years, during which time, no new accounting standard related to the treatment of stock options could be recognized. Finally, the bill requires the Secretary of Commerce to conduct a study and report to Congress on the impact of broad-based employee stock option plans on expanding employee corporate ownership, skilled worker recruitment and retention, research and innovation, economic growth, and international competitiveness."

It's the old "four corners" basketball strategy: stall, stall, stall. In the meantime, hope for regime change at your opponent, the FASB.

Instructions

a. What are the major recommendations of the stock-based compensation pronouncement?

b. How do the provisions of GAAP in this area differ from the bill introduced by members of Congress (Dreier and Eshoo), which would require expensing for options issued to only the top five officers in a company? Which approach do you think would result in more useful information? (Focus on comparability.)

c. The bill in Congress urges the FASB to develop a rule that preserves "the ability of companies to use this innovative tool to attract talented employees." Write a response to these Congress-people explaining the importance of neutrality in financial accounting and reporting.

CT15.5 (LO 4, 5) (EPS: Preferred Dividends, Options, and Convertible Debt) "Earnings per share" (EPS) is the most featured, single financial statistic about modern corporations. Daily published quotations of stock prices have recently been expanded to include for many securities a "times earnings" figure that is based on EPS. Stock analysts often focus their discussions on the EPS of the corporations they study.

Instructions

a. Explain how dividends or dividend requirements on any class of preferred stock that may be outstanding affect the computation of EPS.

b. One of the technical procedures applicable in EPS computations is the "treasury-stock method." Briefly describe the circumstances under which it might be appropriate to apply the treasury-stock method.

c. Convertible debentures are considered potentially dilutive common shares. Explain how convertible debentures are handled for purposes of EPS computations.

(AICPA adapted)

CT15.6 (LO 4, 5) Writing (EPS, Antidilution) Brad Dolan, a stockholder of Rhode Corporation, has asked you, the firm's accountant, to explain why his stock warrants were not included in diluted EPS. In order to explain this situation, you must briefly explain what dilutive securities are, why they are included in the EPS calculation, and why some securities are antidilutive and thus not included in this calculation.

Rhode Corporation earned $228,000 during the period, when it had an average of 100,000 shares of common stock outstanding. The common stock sold at an average market price of $25 per share during the period. Also outstanding were 30,000 warrants that could be exercised to purchase one share of common stock at $30 per warrant.

Instructions

Write Mr. Dolan a 1–1.5-page letter explaining why the warrants are not included in the calculation.

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE15.1 Access the glossary ("Master Glossary") to answer the following.

a. What is the definition of "basic earnings per share"?

b. What is "dilution"?

c. What is a "warrant"?

d. What is a "grant date"?

CE15.2 For how many periods must a company present EPS data?

CE15.3 For each period that an income statement is presented, what must a company disclose about its EPS?

CE15.4 If a company's outstanding shares are increased through a stock dividend or a stock split, how would that alter the presentation of its EPS data?

Codification Research Case

Richardson Company is contemplating the establishment of a share-based compensation plan to provide long-run incentives for its top management. However, members of the compensation committee of the board of directors have voiced some concerns about adopting these plans, based on news accounts related to a recent accounting standard in this area. They would like you to conduct some research on this recent standard so they can be better informed about the accounting for these plans.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

a. Identify the authoritative literature that addresses the accounting for share-based payment compensation plans.

b. Briefly discuss the objectives for the accounting for stock compensation. What is the role of fair value measurement?

c. The Richardson Company board is also considering an employee share-purchase plan, but the Board does not want to record expense related to the plan. What criteria must be met to avoid recording expense on an employee stock-purchase plan?

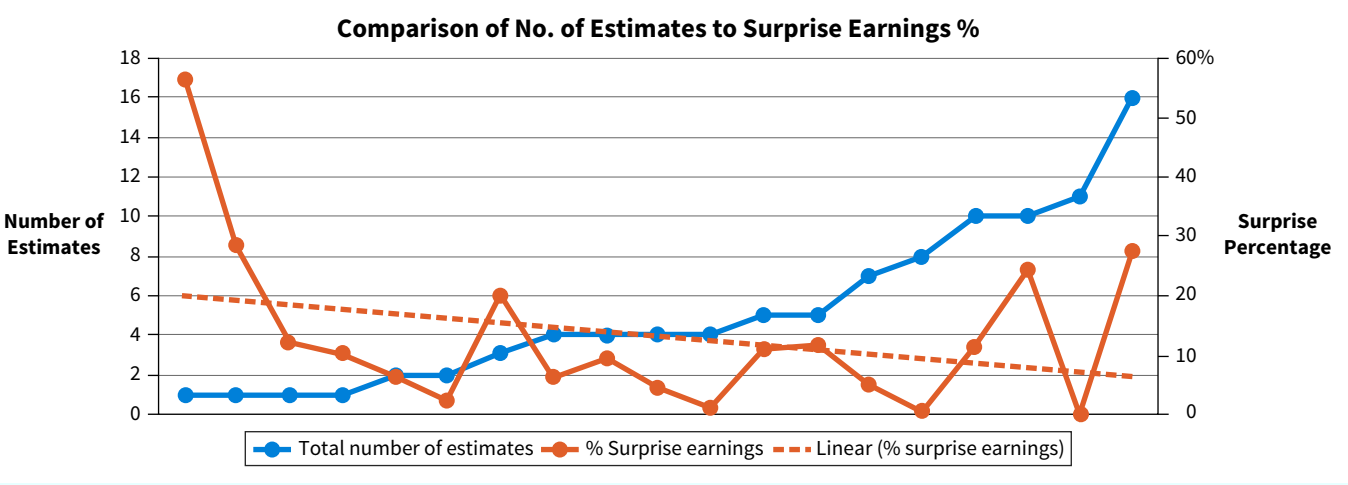
Analytics in Action Activities

Using Data Analytics to Evaluate Earnings Forecasts

Excel

DA15.1 Earnings per share (EPS) is one of the most highly visible standards of measurement for assessing management stewardship and predicating a company's future value. Given the relevant nature of this metric, any reliable predictions, or forecasts, of future EPS for a particular company would be valuable for investors.

The **Nasdaq** maintains an earnings calendar on its website and includes forecasted EPS. The forecast is derived from a consensus by all analysts who made earnings predictions; it could be one analyst or several. How reliable are these predictions? Does a forecast that incorporates estimates from several analysts lead to a more reliable prediction of EPS? We can use visualizations such as the following to understand any correlations between the number of analyst estimates and the quality of the forecast.



Required

Taking on the role of a data analyst for a financial advisor, you are provided with raw EPS data, including forecasted and actual results, for a variety of companies. Using Excel, you will organize the data into a pivot table and create different charts to help understand and analyze the results.

Go to Wiley Course Resources for complete details and instructions.

IFRS Insights

LEARNING OBJECTIVE 8

Compare the accounting for dilutive securities and earnings per share under GAAP and IFRS.

The primary IFRS related to financial instruments, including dilutive securities, is *IAS 39,* "Financial Instruments: Recognition and Measurement." The accounting for various forms of stock-based compensation under IFRS is found in *IFRS 2*, "Share-Based Payment." This standard was amended, resulting in significant convergence between IFRS and GAAP in this area. The IFRS addressing accounting and reporting for earnings per share computations is *IAS 33,* "Earnings per Share." Following are the key similarities and differences between GAAP and IFRS related to dilutive securities and earnings per share.

Similarities

- IFRS and GAAP follow the same model for recognizing stock-based compensation: The fair value of shares and options awarded to employees is recognized over the period to which the employees' services relate.
- Although the calculation of basic and diluted earnings per share is similar between IFRS and GAAP, the Boards have worked to resolve the few minor differences in EPS reporting. One proposal in the FASB project concerns contracts that can be settled in either cash or shares. IFRS requires that share settlement must be used, while GAAP gives companies a choice. If the FASB adopts the IFRS approach, GAAP and IFRS would be converged in this regard.

Differences

- A significant difference between IFRS and GAAP is the accounting for securities with characteristics of debt and equity, such as convertible debt. Under GAAP, all of the proceeds of convertible debt are recorded as long-term debt. Under IFRS, convertible bonds are "bifurcated"—separated into the equity component (the value of the conversion option) of the bond issue and the debt component.
- Related to employee share-purchase plans, under IFRS, all employee share-purchase plans are deemed to be compensatory; that is, compensation expense is recorded for the amount of the discount. Under GAAP, these plans are often considered noncompensatory and therefore no compensation is recorded. Certain conditions must exist before a plan can be considered noncompensatory—the most important being that the discount generally cannot exceed 5%.
- Modification of a share option results in the recognition of any incremental fair value under both IFRS and GAAP. However, if the modification leads to a reduction, IFRS does not permit the reduction but GAAP does.
- Other EPS differences relate to (1) the treasury-stock method and how the proceeds from extinguishment of a liability should be accounted for, and (2) how to compute the weighted average of contingently issuable shares.

Additional IFRS Resources

Additional IFRS Insights with assessment are available online at Wiley Course Resources. For those who want more IFRS coverage, *Intermediate Accounting, IFRS Fourth Edition* exists as another resource.

CHAPTER 16

© Sarath maroli / Shutterstock

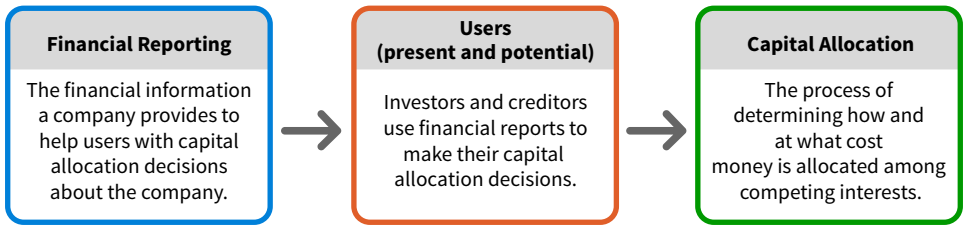
Investments

WHAT are the major types of securities purchased by companies?

The major types of securities held as investments are bonds, stock, and derivatives. Short-term debt investments include such items as commercial paper, money market funds, certificates of deposit (CDs), and Treasury bills. Long-term debt investments are typically asset-backed securities and commercial or municipal bond investments. Equity securities include common and preferred stock. Derivatives include forwards, futures, options, and swaps.

WHY is information about investments in securities important?

An effective process of capital allocation is critical to a healthy economy. It promotes productivity, encourages innovation, and provides an efficient and liquid market for buying and selling securities and obtaining and granting credit. Unreliable and irrelevant financial information leads to poor capital allocation, which adversely affects the securities markets. As summarized in the following chart (repeated from Chapter 1), relevant and reliable information on investment securities makes markets more efficient to help those with resources to provide funds to those who need investment capital.



Financial Reporting
The financial information a company provides to help users with capital allocation decisions about the company.
Users (present and potential)
Investors and creditors use financial reports to make their capital allocation decisions.
Capital Allocation
The process of determining how and at what cost money is allocated among competing interests.

Microsoft
Balance Sheet
June 30, 2021
(in millions)

Assets		
Current assets:		
Cash and cash equivalents	$ 14,224	
Short-term investments	**116,110**	
Total cash, cash equivalents, and short-term investments	130,334	
Accounts receivable, net	38,043	
Inventories	2,636	
Other current assets	13,393	
Total current assets		$184,406
Property and equipment, net		59,715
Operating lease right-of-use assets		11,088
Equity investments		**5,984**
Goodwill		49,711
Intangible assets, net		7,800
Other long-term assets		15,075
Total assets		$333,779

Debt and equity investments are used to grow businesses and provide funds for investments in property, plant, and equipment and research and development. A classic example is **Microsoft**. As shown in a recent balance sheet, short-term investments and equity investments comprise 36.6% of its total assets.

HOW do we account for investments in securities?

Investments in securities are reported differently depending on the security involved. Debt investments are classified into three categories: held-to-maturity, available-for-sale, and trading. Each of these debt securities have different reporting approaches, such as amortized cost and fair value. The accounting for equity investments depends on the level of ownership a company has in another company. The three classifications for equity securities are fair value, equity method, and consolidation.

16.1 Investments in Debt Securities

LEARNING OBJECTIVE 1

Describe the accounting for investments in debt securities.

Overview of Debt Investments

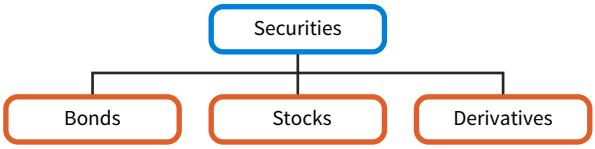
Background

Congratulations! You just won the lottery, and you are going to receive $10 million. So what are you going to do? After you have solved some of the more basic financial issues related to food, lodging, perhaps a nice vacation, and some charitable giving, you will need to consider carefully how you will proceed with such a substantial amount of funds. Let's examine two choices.

1. **Keep yourself liquid**. Buy short-term debt securities like certificates of deposit (CDs) at the bank or short-term Treasury bills that are risk-free. These investments may be a good idea for some of your funds because they are safe and easily accessed, but the returns on those investments are not very high.
2. **Diversify**. Are you risk-averse, risk-neutral, or a risk-taker? If you are risk-neutral, you likely will take a middle track in evaluating investment opportunities. Here is where it gets difficult because there are a variety of investment choices available. Investment experts generally recommend that you develop a diversification strategy. In other words, do not put all your eggs (funds) in one basket (one type of investment).

To implement a diversification strategy, you might invest in assets such as securities, real estate, or a new business. With a focus on investment securities, good candidates for diversification and depending on your risk profile are shown in **Illustration 16.1**. The first two categories—bonds and stocks—should be familiar to you, as we have discussed these types of securities in earlier chapters. We discuss derivatives in an appendix to this chapter.

ILLUSTRATION 16.1 Types of Investment Securities



You will have many bond and stock investment choices to consider:

1. U.S. fixed income (bond) markets represent 38.3% ($47.2 trillion) of the $123.5 trillion in global market capitalization, or 1.9 times the next largest market (European Union).
2. U.S. equity (stock) markets are 38.5% ($47 trillion) of the $105.8 trillion-dollar global securities market capitalization, which is 3.7 times the next largest market (the European Union).[1]

Now this chapter is not about you and your personal finances, but about companies and how they account for the many types of securities offered in the marketplace. Similar to your decision process, companies purchase securities using an investment strategy, which considers such items as liquidity, diversification, and adequate returns.

Financial Assets

A financial asset is an asset whose value comes from a contractual claim to cash flows. In Chapter 6, we discussed two types of financial assets—cash and receivables (primarily short-term). In this chapter, we discuss two other financial assets—debt and equity securities, which also have a contractual right to receive cash from another party. You should recognize that physical assets such as land and buildings are **not** financial assets because their value comes from the use in the business and not from a contractual claim.

The accounting for debt and equity investments depends on whether the security is debt or equity and the company's intent with respect to the investment. **Illustration 16.2** provides an overview of the type of security, the company intent, and valuation.

[1]Sifma, *Capital Markets Fact Book 2021*.

Type of Security	Management Intent	Valuation Approach
Debt	No plans to sell Plan to sell	Amortized cost Fair value
Equity	Plan to sell Exercise some control	Fair value Equity method

ILLUSTRATION 16.2 Summary of Investment Accounting Approaches

Debt Investment Classifications

Debt securities represent a creditor relationship with another entity. Debt securities include U.S. government securities, municipal securities, corporate bonds, convertible debt, and commercial paper.[2] Companies group investments in debt securities into three separate categories for accounting and reporting purposes (see **Global View**):

- **Held-to-maturity**. Debt securities that the company has the positive intent and ability to hold to maturity.
- **Trading**. Debt securities bought and held primarily for sale in the near term to generate income on short-term price differences.
- **Available-for-sale**. Debt securities not classified as held-to-maturity or trading securities.

Illustration 16.3 identifies these categories, along with the accounting and reporting treatments required for each.

Global View

Under IFRS, debt investments are classified as either held-for-collection or trading. *See the IFRS Insights at the end of the chapter for a discussion of the similarities and differences between IFRS and GAAP.*

ILLUSTRATION 16.3 Accounting for Debt Securities by Category

Category	Valuation	Unrealized Holding Gains or Losses	Other Income Effects
Held-to-maturity	Amortized cost	Not recognized	Interest when earned; gains and losses from sale.
Available-for-sale	Fair value	Recognized as other comprehensive income and as separate component of stockholders' equity	Interest when earned; gains and losses from sale.
Trading securities	Fair value	Recognized in net income	Interest when earned; gains and losses from sale.

Amortized cost is the acquisition cost adjusted for the amortization of discount or premium, if appropriate. **Fair value** is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. **[2]**

Held-to-Maturity Securities (Amortized Cost)

Only debt securities can be classified as held-to-maturity. By definition, equity securities have no maturity date. Financial institutions, such as large banks or insurance companies like **JPMorgan Chase**, **Citigroup**, or **Prudential Insurance**, often use held-to-maturity

[2]Trade accounts receivable and loans receivable are not debt securities because they do not meet the definition of a security. A **security** is a share, participation, or other interest in property or in an enterprise of the issuer or an obligation of the issuer that has the following three characteristics. (1) It either is represented by an instrument issued in bearer or registered form or, if not represented by an instrument, is registered in books maintained to record transfers by or on behalf of the issuer. (2) It is commonly traded on securities exchanges or markets or, when represented by an instrument, is commonly recognized in any area in which it is issued or dealt in as a medium for investment. (3) It either is one of a class or series or by its terms is divisible into a class or series of shares, participations, interests, or obligations. **[1]** (See the FASB Codification Reference near the end of the chapter.)

securities as part of their investment strategy. For companies like Citigroup to classify a debt security as held to maturity, they must have both:

1. A positive intent to hold these securities to maturity.
2. The ability to hold these securities to maturity.

Therefore, Citigroup will not classify debt securities as held-to-maturity if it intends to sell the securities before the stated maturity date. Likewise, if Citigroup anticipates that a sale may be necessary due to changes in interest rates, foreign currency risk, liquidity needs, or other asset-liability management reasons, it should not classify the security as held-to-maturity.

Companies use held-to-maturity securities for the following reasons.

- To earn a spread (net income) on the difference between the collection of interest revenue on the debt security and the payment of interest expense on borrowed funds, and therefore have a secured return over a given period of time.
- To diversify their portfolio of investments by making low-risk investments, which are unlikely to default.
- To eliminate the volatility in either reported earnings or reported capital, which might occur if other types of debt securities are used which often must be reported at fair value.

Citigroup accounts for held-to-maturity securities at amortized cost, not fair value. If its management intends to hold debt investment securities to maturity and has no plans to sell them, fair values (selling prices) are not relevant for measuring and evaluating the cash flows associated with these securities. Amortized cost accounting recognizes interest revenue as the primary earnings of the company. Using this approach, companies recognize changes in fair value of an instrument in net income only in the rare instance that they sell the security before maturity and actually realize the gain or loss.

Example 16.1
Purchase Held-to-Maturity Security

FACTS Uptown Financial purchased $100,000 of 8% bonds of Gamedrop Inc. on January 1, 2025, at a discount, paying, $92,278. The bonds mature January 1, 2030, and yield 10%. Interest is payable each July 1 and January 1.

QUESTION What entry should Uptown Financial use to record the purchase of the bonds from Gamedrop, assuming Uptown intends to hold the bonds to maturity?

SOLUTION

Uptown Financial records the investment as follows.

January 1, 2025

Debt Investments	92,278	
Cash		92,278

Uptown's held-to-maturity security was purchased at a discount because it was only paying 8% when the market rate was 10%.

Uptown uses a Debt Investments account to record the cost of the debt security (often referred to as the net method).

Companies generally do not record investments at maturity values with adjustment for separate discount or premium accounts similar to bonds payable. The rationale: The use of the effective-interest method is more easily applied with the net method than using a separate discount or premium account as a valuation account.[3]

[3]Companies generally record investments acquired at par, at a discount, or at a premium in the accounts at cost, including brokerage and other fees but excluding the accrued interest. They generally do not record investments at maturity value. The use of a separate discount or premium account as a valuation account is acceptable procedure for investments, but in practice companies do not widely use it.

As indicated in Chapter 13, companies must amortize a premium or discount using the **effective-interest method** unless some other method—such as the straight-line method—yields a similar result (see **Underlying Concepts**). They apply the effective-interest method to bond investments in a way similar to that for bonds payable. To compute interest revenue:

1. Companies compute the effective-interest rate or yield at the time of investment and apply that rate to the beginning carrying amount (book value) for each interest period.
2. The investment carrying amount is increased by the amortized discount or decreased by the amortized premium in each period.

Underlying Concepts

The use of some simpler method that yields results similar to the effective-interest method is an application of the materiality concept.

Example 16.2 Amortization of Held-to-Maturity Security

FACTS The following is a schedule of interest revenue and bond discount amortization for the Uptown Financial investment in Example 16.1, using the effective-interest method.

8% Bonds Purchased to Yield 10%				
Date	Cash Received	Interest Revenue	Bond Discount Amortization	Carrying Amount of Bonds
1/1/25				$ 92,278
7/1/25	$ 4,000[a]	$ 4,614[b]	$ 614[c]	92,892[d]
1/1/26	4,000	4,645	645	93,537
7/1/26	4,000	4,677	677	94,214
1/1/27	4,000	4,711	711	94,925
7/1/27	4,000	4,746	746	95,671
1/1/28	4,000	4,783	783	96,454
7/1/28	4,000	4,823	823	97,277
1/1/29	4,000	4,864	864	98,141
7/1/29	4,000	4,907	907	99,048
1/1/30	4,000	4,952	952	100,000
	$40,000	$47,722	$7,722	

[a] $4,000 = $100,000 × .08 × 6/12 [b] $4,614 = $92,278 × .10 × 6/12 [c] $614 = $4,614 − $4,000
[d] $92,892 = $92,278 + $614

This schedule shows the effect of the discount amortization on the interest revenue that Uptown records for its investment in Gamedrop bonds.

QUESTIONS (a) How should Uptown Financial record the first semiannual interest payment on July 1, 2025? (b) How should Uptown Financial record the accrual of interest and amortization of the bond discount on December 31, 2025? (c) How should Uptown Financial report this information on its balance sheet at December 31, 2025, and its income statement for 2025?

SOLUTION

a. Uptown Financial records the receipt of the first semiannual interest payment on July 1, 2025, as follows.

July 1, 2025

Cash	4,000	
Debt Investments	614	
Interest Revenue		4,614

b. Uptown Financial accrues interest and amortizes the bond discount on December 31, 2025, as follows.

December 31, 2025

Interest Receivable	4,000	
Debt Investments	645	
Interest Revenue		4,645

c. Uptown Financial reports its investments in Gamedrop's bonds in its December 31, 2025, financial statements as follows.

Balance Sheet

Current assets	
Interest receivable	$4,000
Long-term investments	
Debt investments (held-to-maturity)	$93,537

Income Statement

Other revenues and gains	
Interest revenue ($4,614 + $4,645)	$9,259

Sometimes, a company sells a held-to-maturity debt security so close to its maturity date that a change in the market interest rate would not significantly affect the security's fair value. Such a sale may be considered a sale at maturity and would not call into question the company's original intent to hold the investment to maturity.[4]

Example 16.3
Sale Before Maturity

FACTS Uptown Financial sells its investment in Gamedrop on November 1, 2029, at 99 ¾ plus accrued interest.

QUESTION What entries should Uptown Financial make to record the sale of these bonds on November 1, 2029?

SOLUTION

Uptown must first record the discount from July 1, 2029, to November 1, 2029, which is 4 months, as follows.

November 1, 2029

Debt Investments	635	
Interest Revenue (4/6 × $952 from amortization table)		635

Uptown then computes the gain on the sale of Gamedrop securities as follows.

Selling price of bonds (exclusive of accrued interest, $100,000 × .9975)		$99,750
Less: Book value of bonds on November 1, 2029		
Amortized cost, July 1, 2029	$99,048	
Add: Discount amortized for the period July 1, 2029, to November 1, 2029	635	99,683
Gain on sale of bonds		$ 67

Uptown records the sale of the bonds as follows.

November 1, 2029

Cash	102,417	
Interest Revenue (4/6 × $4,000)		2,667
Debt Investments		99,683
Gain on Sale of Investments		67

The credit to Interest Revenue represents accrued interest for 4 months, for which the purchaser pays cash. The debit to Cash represents the selling price of the bonds plus accrued interest ($99,750 + $2,667). The credit to Debt Investments represents the book value of the bonds on the date of sale. The credit to Gain on Sale of Investments represents the excess of the selling price over the book value of the bonds.

[4]The FASB defines situations where, even though a company sells a security before maturity, it has constructively held the security to maturity and thus does not violate the held-to-maturity requirement. These include selling a security close enough to maturity (such as three months), so that interest rate risk is no longer an important pricing factor.

As indicated earlier, financial companies like banks and insurance companies are the primary users of held-to-maturity securities. For example, a life insurance company like **Prudential** will hold longer maturing bonds to match expected liabilities versus a car insurer, which will use shorter-term bonds. **Citigroup** reports and discusses its held-to-maturity portfolio as follows.

> "Held-to-maturity securities net of allowances (in millions) $104,943. Debt securities classified as held to maturity are securities that the company has both the ability and the intent to hold until maturity and are carried at amortized cost. Interest income on such securities is included in interest revenue."

Companies must be extremely careful with debt securities held-to-maturity. If a company prematurely sells a debt security in this category, the sale may "taint" the entire held-to-maturity portfolio. That is, a management's statement regarding "intent" is no longer credible. Therefore, the company may have to reclassify the securities. This could lead to unfortunate consequences. An interesting by-product of this situation is that companies that wish to retire their debt securities early (the issuers of the debt securities) are finding it difficult to do so. The holder will not sell because the securities are classified as held-to-maturity.

Available-for-Sale Securities (Fair Value Through Other Comprehensive Income)

For accounting purposes, available-for-sale securities are debt securities that are neither held-to-maturity nor trading securities. These securities are used more extensively by companies compared to held-to-maturity securities. In fact, one recent study indicated that available-for-sale securities comprise more than 75% of debt securities portfolios. An important objective for investing in available-for-sale debt securities is to find undervalued securities that may have substantial capital gain potential in the future, in contrast to securities held-to-maturity. Additionally, companies hold available-for-sale securities to:

- Provide income and capital gains over a longer period of time (relative to trading securities, discussed later).
- Diversify their portfolio of investments, thereby reducing risks.
- Provide liquidity in situations where cash is needed for operations, repayment to investors, or use for other investment opportunities.

Companies account for available-for-sale securities as follows.

1. Reported on the balance sheet at fair value, not amortized cost.
2. Differences between fair value and amortized cost are recognized as an unrealized holding gain or loss.
3. Unrealized holding gains or losses are reported in other comprehensive income, not net income (see **Underlying Concepts**).
4. Other comprehensive income is reported in the statement of comprehensive income and is added to (or subtracted from) accumulated comprehensive income, which is reported as a separate component of stockholders' equity.

This approach reduces the volatility of net income as changes in fair value are reported in other comprehensive income, not net income.

Underlying Concepts

Recognizing unrealized gains and losses is an application of the concept of comprehensive income.

Example 16.4 Purchase Available-for-Sale Security

FACTS Graff Corporation purchases $100,000, 10% five-year bonds on January 1, 2024, with interest payable on July 1 and January 1. The bonds sell for $108,111 which results in a premium of $8,111 and an effective interest rate of 8%. Graff classifies the bond investment as available-for-sale.

QUESTION What entry should Graff make to record the bonds?

SOLUTION

Graff records the investment in the bonds as follows.

January 1, 2024

Debt Investments	108,111	
Cash		108,111

Illustration 16.4 presents a schedule of interest revenue and amortization of bond premium for the five-year period using the effective-interest method.

ILLUSTRATION 16.4 Schedule of Interest Revenue and Bond Premium Amortization—Effective-Interest Method

10% Bonds Purchased to Yield 8%

Date	Cash Received	Interest Revenue	Bond Premium Amortization	Carrying Amount of Bonds
1/1/24				$108,111
7/1/24	$ 5,000[a]	$ 4,324[b]	$ 676[c]	107,435[d]
1/1/25	5,000	4,297	703	106,732
7/1/25	5,000	4,269	731	106,001
1/1/26	5,000	4,240	760	105,241
7/1/26	5,000	4,210	790	104,451
1/1/27	5,000	4,178	822	103,629
7/1/27	5,000	4,145	855	102,774
1/1/28	5,000	4,111	889	101,885
7/1/28	5,000	4,075	925	100,960
1/1/29	5,000	4,040	960	100,000
	$50,000	$41,889	$8,111	

[a] $5,000 = $100,000 × .10 × 6/12 [b] $4,324 = $108,111 × .08 × 6/12 [c] $676 = $5,000 − $4,324
[d] $107,435 = $108,111 − $676

Example 16.5 Amortization of Available-for-Sale Security

FACTS Refer to the amortization schedule in Illustration 16.4.

QUESTION What entries would Graff make on July 1, 2024, and December 31, 2024, to record interest revenue?

SOLUTION

Using the effective-interest method, the entry to record interest revenue on July 1, 2025, is as follows.

July 1, 2024

Cash	5,000	
Debt Investments		676
Interest Revenue		4,324

At December 31, 2024, Graff makes the following entry to recognize interest revenue.

December 31, 2024

Interest Receivable	5,000	
Debt Investments		703
Interest Revenue		4,297

As a result, Graff reports interest revenue for 2024 of $8,621 ($4,324 + $4,297).

Continuing with Example 16.5, Graff then turns its attention to determining the fair value of its debt investments to record any unrealized gain or loss for 2024.

Example 16.6 Fair Value Adjustment

FACTS Refer to data for Graff's available-for-sale investment in Illustration 16.4. Graft determines that the fair value of the bonds is $105,000 and that the carrying amount of the investments is $106,732 (from the amortization table) at December 31, 2024.

QUESTIONS (a) What entry should Graff make to record the unrealized gain or loss on December 31, 2024, and (b) how would Graff report the available-for-sale investment and related accounts on its December 31, 2024, balance sheet?

SOLUTION

a. Graff recognizes an unrealized holding loss of $1,732 ($106,732 − $105,000). Graff makes the following entry.

December 31, 2024		
Unrealized Holding Gain or Loss—Equity	1,732	
Fair Value Adjustment		1,732

Graff uses an **Unrealized Gain or Loss—Equity account** to signify that the unrealized gain or loss is reported in other comprehensive income, **not** in net income. The unrealized loss is a debit, like other types of losses you have studied in previous chapters.

Graff also uses a valuation account instead of crediting the Debt Investments account. The use of the **Fair Value Adjustment**[5] account enables the company to maintain a record of its amortized cost. Because the adjustment account has a credit balance in this case, Graff subtracts it from the balance of the Debt Investments account to determine fair value.

b. Reporting in Graff's balance sheet is as follows.

Investments:	
Debt investment, net ($106,732 − $1,732)	$105,000*
Stockholders' equity:	
Accumulated other comprehensive loss	$1,732

As indicated, the Unrealized Holding Gain or Loss—Equity account is reported in stockholders' equity as accumulated other comprehensive loss. The available-for-sale security is reported on the December 31, 2024, balance sheet net of the balance in the Fair Value Adjustment account.

Portfolio of Securities

Companies often have multiple available-for-sale investments. Rather than make fair value adjustments to each individual investment, it is more efficient to make one fair value adjustment for the entire portfolio of available-for-sale investments, To illustrate the accounting for a portfolio of securities, assume that Webb Corporation has two debt securities classified as available-for-sale. **Illustration 16.5** identifies the amortized cost, fair value, and the amount of the unrealized gain or loss.

Available-for-Sale Debt Security Portfolio
December 31, 2025

Investments	Amortized Cost	Fair Value	Unrealized Gain (Loss)
Watson Corporation 8% bonds	$ 93,537	$103,600	$10,063
Anacomp Corporation 10% bonds	200,000	180,400	(19,600)
Total of portfolio	$293,537	$284,000	(9,537)
Previous fair value adjustment balance			–0–
Fair value adjustment—Cr.			$ (9,537)

ILLUSTRATION 16.5
Computation of Fair Value Adjustment—Available-for-Sale Securities (2025)

[5]Various account titles might be used instead of Fair Value Adjustment, such as Fair Value Allowance or Valuation Allowance for Debt Investments. *For homework problems, use the account title Fair Value Adjustment.*

The fair value of Webb's available-for-sale portfolio totals $284,000. The gross unrealized gains are $10,063, and the gross unrealized losses are $19,600, resulting in a net unrealized loss of $9,537. That is, the total fair value of available-for-sale securities is $9,537 lower than its total amortized cost. Webb makes an adjusting entry to a valuation allowance to record the decrease in value and to record the loss as follows.

December 31, 2025		
Unrealized Holding Gain or Loss—Equity	9,537	
Fair Value Adjustment		9,537

Webb reports the unrealized holding loss of $9,537 as other comprehensive income, which results in a reduction of stockholders' equity. Recall that companies exclude from net income any unrealized holding gains and losses related to available-for-sale securities.

Sale of Available-for-Sale Securities

If a company sells bonds carried as investments in available-for-sale securities before the maturity date, it must make entries to remove from the Debt Investments account the amortized cost of bonds sold. To illustrate, assume that Webb Corporation sold the Watson bonds (from Illustration 16.5) on July 1, 2026, for $90,000, at which time it had an amortized cost of $94,214. **Illustration 16.6** shows the computation of the **realized** loss.

ILLUSTRATION 16.6
Computation of Loss on Sale of Bonds

Amortized cost (Watson bonds)	$94,214
Less: Selling price or bonds	90,000
Loss on sale of bonds	$ 4,214

Webb records the sale of the Watson bonds as follows.

July 1, 2026		
Cash	90,000	
Loss on Sale of Investments	4,214	
Debt Investments		94,214

Webb reports this realized loss in the "Other expenses and losses" section of the income statement.

Notice the entry to record the sale does **not** include any adjustments for previously recognized fair value adjustments of the Watson bonds. An adjustment will be made at year-end when the entire portfolio is evaluated for fair value adjustment. Assuming no other purchases and sales of bonds in 2026, Webb on December 31, 2026, prepares the information shown in **Illustration 16.7**.

ILLUSTRATION 16.7
Computation of Fair Value Adjustment—Available-for-Sale Securities (2026)

Available-for-Sale Debt Security Portfolio
December 31, 2026

Investments	Amortized Cost	Fair Value	Unrealized Gain (Loss)
Anacomp Corporation 10% bonds (total portfolio)	$200,000	$195,000	$(5,000)
Previous fair value adjustment balance—Cr.			(9,537)
Fair value adjustment—Dr.			$ 4,537

Webb has an unrealized holding loss of $5,000. However, the Fair Value Adjustment account already has a credit balance of $9,537. To reduce the adjustment account balance to $5,000, Webb debits it for $4,537, as follows.

Fair Value Adjustment

	12/31/25	9,537
Adjustment	4,537	
	12/31/26	5,000

December 31, 2026		
Fair Value Adjustment	4,537	
Unrealized Holding Gain or Loss—Equity		4,537

You should recognize that the Fair Value Adjustment account has been adjusted to the current balance needed to report the fair value of $195,000 related to the Anacomp bonds at December 31, 2026. The unrealized holding gain related to the Watson bonds that were sold is gone. Therefore, the fair value adjustment made on December 31, 2026, has the effect of removing Watson's unrealized gains recognized in prior periods on the sold investment. As a result, there is no double-counting of Watson's **unrealized** holding gain and **realized** holding gain.

Financial Statement Presentation

Webb's December 31, 2026, balance sheet and the 2026 income statement include the items and amounts shown in **Illustration 16.8**. The Anacomp bonds are long-term investments but are not intended to be held to maturity. In most cases, available-for-sale investments are reported as current assets.

ILLUSTRATION 16.8 Reporting of Available-for-Sale Securities

Balance Sheet	
Current assets	
Interest receivable	$ xxx
Investments	
Debt investments (available-for-sale)	195,000
Stockholders' equity	
Accumulated other comprehensive loss	$5,000
Income Statement	
Other revenues and gains	
Interest revenue	$ xxx
Other expenses and losses	
Loss on sale of investments	4,214

Some favor including the unrealized holding gain or loss in net income rather than showing it as other comprehensive income.[6] However, some companies, particularly financial institutions, note that recognizing gains and losses on assets, but not liabilities, introduces substantial volatility in net income. They argue that hedges often exist between assets and liabilities so that gains in assets are offset by losses in liabilities, and vice versa. In short, to recognize gains and losses only on the asset side is unfair and not representative of the economic activities of the company.

This argument convinced the FASB. As a result, companies **do not include in net income** these unrealized gains and losses. **[3]** However, even this approach solves only some of the problems because **volatility of capital** still results. This is of concern to financial institutions because regulators restrict financial institutions' operations based on their level of capital. However, companies can still manage their net income by engaging in **gains trading** (i.e., selling the winners and holding the losers).

Trading Securities (Fair Value Through Net Income)

We now turn our attention to the third debt security classification, identified as trading securities. "Trading" in this context means frequent buying and selling. Companies hold **trading securities** with the intention of selling them in a short period of time, generally holding these investments for less than three months (some for merely days or hours). Companies use trading securities to:

- Generate profits from short-term differences in price. Holding cash in a savings account provides little return. Investing in short-term securities like Treasury bills, commercial paper, CDs, and municipal bonds provides a better return with little additional risk.
- Provide liquidity as these types of securities can easily be bought and sold in markets with little downside risk.

[6] In Chapter 3, we discussed the concept of, and reporting for, other comprehensive income.

Companies report trading securities at fair value, with unrealized holding gains and losses reported as part of net income. Similar to held-to-maturity or available-for-sale investments, companies are required to amortize any discount or premium.

A **holding gain or loss** is the net change in the fair value of a security from one period to another, exclusive of dividend or interest revenue recognized but not received. In short, the FASB says to adjust the trading securities to fair value, at each reporting date. In addition, companies **report the change in value as part of net income, not other comprehensive income**.

Example 16.7
Trading Securities

FACTS Assume that on December 31, 2025, **Venture Publishers** determined its trading securities portfolio to be as follows (assume that 2025 is the first year that Venture Publishers held trading securities).

Trading Debt Security Portfolio
December 31, 2025

Investments	Amortized Cost	Fair Value	Unrealized Gain (Loss)
Municipal bonds	$ 43,860	$ 51,500	$ 7,640
Treasury bonds	184,230	175,200	(9,030)
Certificates of deposit	86,360	91,500	5,140
Total of portfolio	$314,450	$318,200	3,750
Previous fair value adjustment balance			–0–
Fair value adjustment—Dr.			$ 3,750

At the date of acquisition, Venture Publishers recorded these trading securities at cost, including brokerage commissions and taxes, in the account entitled Debt Investments. This is the first valuation of this recently purchased portfolio.

QUESTION What entry should Venture make to record these securities at December 31, 2025?

SOLUTION

The total cost of Venture Publishers' trading portfolio is $314,450. The gross unrealized gains are $12,780 ($7,640 + $5,140), and the gross unrealized losses are $9,030, resulting in a net unrealized gain of $3,750. The fair value of trading securities is therefore $3,750 greater than its amortized cost.

At December 31, Venture Publishers makes an adjusting entry to the Fair Value Adjustment account, to record both the increase in value and the unrealized holding gain.

December 31, 2025

Fair Value Adjustment	3,750	
Unrealized Holding Gain or Loss—Income		3,750

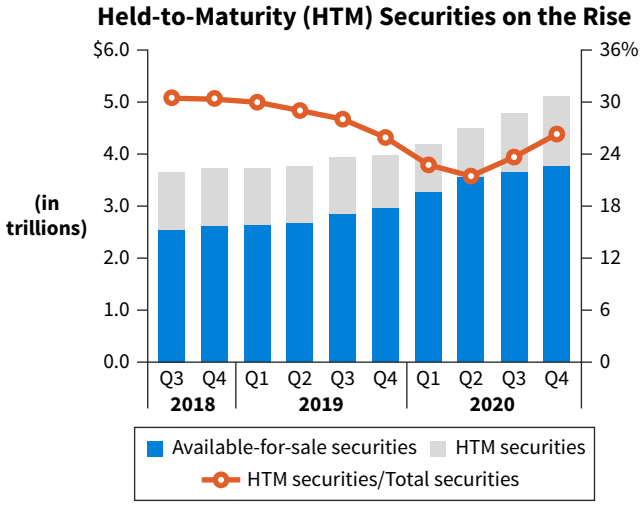
Because the Fair Value Adjustment account balance is a debit, Venture Publishers adds it to the cost of the Debt Investments account to arrive at a fair value for the trading securities. Venture Publishers reports this fair value amount on the balance sheet. The term "Income" in the account title Unrealized Gain or Loss—Income indicates that the gain is reported in net income.

As with other debt investments, when a trading investment is sold, the Debt Investments account is reduced by the amount of the amortized cost of the bonds. Any **realized** gain or loss is recorded in the "Other revenues and gains" or the "Other expenses and losses" section of the income statement. The Fair Value Adjustment account is then adjusted at year-end for the unrealized gains or losses on the remaining securities in the trading investment portfolio, similar to the process for available-for-sale investments.

When securities are actively traded, the FASB believes that the investments should be reported at fair value on the balance sheet. Trading securities are reported as short-term investments on the balance sheet as part of current assets. In addition, changes in fair value (unrealized gains and losses) should be reported in income. Such reporting on trading securities provides more relevant information to existing and prospective stockholders.

Accounting Matters — To Have and to Hold

To have and to hold, to maturity? The differences in accounting treatment between bond investments classified as available-for-sale and held-to-maturity can have a real impact on a company's investment strategy, especially for banks. While the majority of bonds owned by banks are still classified as available-for-sale, the following chart shows that the held-to-maturity category is on the rise, outside of a temporary decline in 2020 due to the impact of Covid-19.



Source: S&P Global Market Intelligence.

As interest rates rise and bond values decline, banks may look to move more securities into the held-to-maturity category to avoid reporting unrealized holding losses in their other comprehensive income. For large banks, those with over $700 billion in assets, changes in accumulated other comprehensive income impact regulatory capital. The relative safety of held-to-maturity investments, carried at amortized cost, helps minimize income volatility.

What happened during 2020, however, when the Covid-19 pandemic impacted the global economy and demands on bank liquidity increased unexpectedly? Bank retail and commercial customers sought to defer loan payments and loan demand increased from small businesses as a result of the Paycheck Protection Program. Could banks liquidate investments from their held-to-maturity portfolios without tainting the remaining investments in the portfolio? As it turns out, GAAP has guidance in place allowing companies to sell or transfer held-to-maturity securities in the event of isolated, nonrecurring, and unusual events that the company could not have reasonably anticipated. Covid-19 seems to meet that requirement!

Sources: Nathan Stovall and Ronamil Portes, "Big Banks Holding More than 60% of Bonds to Maturity to Protect Capital," *S&P Global Market Intelligence* (September 17, 2021); and Accounting Standards Codification, Section 320-10-25.

Put It into Practice LO 16.1
Account for Debt Investments

FACTS Rogers Corporation holds the following bond investments, which were purchased in 2025.

Date Purchased	Description	Amount Paid
April 1	U.S. government bonds, 5%, due April 1, 2030, interest payable April 1 and October 1, 100 bonds at $1,000 each	$100,000
July 1	Driver Company 6% bonds, par $50,000, dated July 1, 2016, purchased at par, interest payable annually on July 1, due July 1, 2040	50,000

INSTRUCTIONS

a. Prepare entries when the bonds were purchased, assuming the bonds are classified as available-for-sale.

b. Prepare the entry to record the accrued interest on December 31, 2025.

c. The fair values of the securities on December 31, 2025, were U.S. government bonds $124,700 and Driver Company bonds $58,600. What entry or entries, if any, would you recommend be made?

d. The U.S. government bonds were sold on July 1, 2026, for $119,200 plus accrued interest. Give the proper entry.

e. Briefly describe how the accounting in part (c) for these investments would change if the securities are classified as (1) held-to-maturity and (2) trading.

SOLUTION

a. Rogers makes the following entries for purchase of the bonds.

April 1, 2025		
Debt Investments (available-for-sale)	100,000	
Cash		100,000

July 1, 2025

Debt Investments (available-for-sale)	50,000	
Cash		50,000

b. Accrued interest for 2025 would be recorded as follows.

December 31, 2025

Interest Receivable	2,750	
Interest Revenue		2,750*

*U.S. government bonds: $100,000 × .05 × 3/12 (October–December interest paid April 1, 2026) $1,250

Driver company bonds: $50,000 × .06 × 6/12 (July–December interest paid July 1, 2026) 1,500

$2,750

c. The following entry should be made to record the fair value adjustment.

December 31, 2025

Fair Value Adjustment	33,300**	
Unrealized Holding Gain or Loss—Equity		33,300

**

Available-for-Sale Portfolio
December 31, 2025

Securities	Cost	Fair Value	Unrealized Gain (Loss)
U.S. government bonds	$100,000	$124,700	$24,700
Driver Company bonds	50,000	58,600	8,600
Total	$150,000	$183,300	33,300
Previous fair value adjustment balance			0
Fair value adjustment—Dr.			$33,300

d.

July 1, 2026

Cash ($119,200 + $1,250)	120,450	
Debt Investments (available-for-sale)		100,000
Interest Revenue ($100,000 × .05 × 3/12)		1,250
Gain on Sale of Investments		19,200

e. 1. If classified as held-to-maturity, the bonds are accounted for at amortized cost with no fair adjustment. Therefore, there is no journal entry required for part (c).

2. If classified as trading, the bonds are accounted for at fair value with any unrealized gains and losses recorded in income. So the account credited in the entry for part (c) is Unrealized Holding Gain or Loss—Income.

16.2 Investments in Equity Securities

LEARNING OBJECTIVE 2

Describe the accounting for investments in equity securities.

Equity securities represent ownership interests such as common, preferred, or other capital stock. They also include rights to acquire or dispose of ownership interests at an agreed-on or determinable price, such as in warrants, rights, and call or put options. Companies do **not** treat convertible debt securities as equity securities. The cost of equity securities includes the purchase price of the security plus broker's commissions and other fees incidental to the purchase.

The degree to which one corporation (**investor**) acquires an interest in the common stock of another corporation (**investee**) generally determines the accounting treatment for the investment subsequent to acquisition. The classification of such investments depends on the percentage of the investee voting stock that is held by the investor:

1. Holdings of less than 20% (**fair value method**)—investor has passive interest.
2. Holdings between 20% and 50% (**equity method**)—investor has **significant influence**.
3. Holdings of more than 50% (**consolidated statements**)—investor has controlling interest.

Illustration 16.9 lists these levels of interest or influence and the corresponding valuation and reporting method that companies must apply to the investment.

Percentage of Ownership	0% ⟷ 20%	⟷ 50%	⟷ 100%
Level of influence	Little or none	Significant	Control
Valuation method	Fair value method	Equity method	Consolidation

ILLUSTRATION 16.9 Levels of Influence Determine Accounting Methods

The accounting and reporting for equity securities therefore depend on the level of influence as shown in Illustration 16.10.

Category	Valuation	Unrealized Holding Gains or Losses	Other Income Effects
Holdings less than 20%	Fair value*	Recognized in net income	Dividends declared; gains and losses from sale
Holdings between 20% and 50%	Equity	Not recognized	Proportionate share of investee's net income
Holdings more than 50%	Consolidation	Not recognized	Not applicable

*Companies report equity holdings of less than 20% at fair value and record unrealized gains and losses through net income. The only exception would be for practicability reasons for determining fair value.

ILLUSTRATION 16.10 Accounting and Reporting for Equity Securities by Category

Holdings of Less Than 20%

Why do companies invest in the stock of other companies? You might ask Warren Buffett of **Berkshire Hathaway**. Buffett has run Berkshire Hathaway for many years, and the company has a stock portfolio of over 30 different companies. For example, Illustration 16.11 shows a recent listing of four of the companies held by Berkshire Hathaway, the shareholdings, the value of these holdings, and the percent interest owned.

	A	B	D	E
1	**Company**	**Shareholdings**	**Value of Holdings ($ millions)***	**Percent Interest in Company**
2	**Bank of America**	1,032,852,000	$42,987	5.50%
3	**General Motors**	67,000,000	3,615	4.60
4	**Restoration Hardware**	1,756,488	1,262	8.40
5	**Verizon Communications**	158,824,575	8,875	3.80
6	* The total valuation of Berkshire Hathaway stock portfolio at December 31, 2020, was $281,170; **Apple Inc.** accounted for over 40% of this amount.			

ILLUSTRATION 16.11 Partial Stock Portfolio of **Berkshire Hathaway**

Here is what Buffett might say as to why Berkshire Hathaway has such a significant investment in equity securities.

- **Rates of return.** We invest in equity securities because the rates of return are generally higher than debt securities. As a result, Berkshire Hathaway has made the decision that returns related to dividend revenue and capital gains will be much higher than through debt investments.
- **Liquidity.** Equity securities are very liquid because shares of stock can be sold very quickly in case of expected or unexpected business needs. Given the liquidity in the stock market, the company can easily sell off some of its existing stock to generate funds necessary for business needs.
- **Diversification.** Although Berkshire Hathaway has a substantial position in **Apple**, it has many other stocks in its portfolio that provide substantial diversification of its portfolio. By having this diversification, it minimizes the risks associated with its own business ventures and can offset good and bad performances of stock in the portfolio.

Are there any disadvantages to having such a large portfolio of equity investments? One possible disadvantage is that for financial reporting purposes, stock investment holdings of less than 20% are reported at fair value with gains or losses reported in net income, which is the **fair value method**.

Buffet seems to think there should be another approach because he believes these gains and losses should not be part of earnings until realized. As noted earlier, the FASB believes that when an investor has an interest of less than 20%, it is presumed that the investor has little or no influence over the investee in such cases. If market prices are available subsequent to acquisition, the company values and reports the investment using the fair value method.

In some cases, companies can use a practicability exception when measuring equity securities that do not have a readily determinable fair value, often referred to as nonmarketable equity securities. If the practicability exception is elected, companies record investments at cost, less impairment. Companies recognize dividends when received and generally recognize gains and losses when selling the securities.[7]

Fair Value Method

Upon acquisition, companies record equity securities at cost.[8] To illustrate, assume that on November 3, 2025, **Amazon** purchased the following common stock of three companies, each investment representing less than a 20% interest.

	Cost (in thousands)
Nike	$259,700
Tesla	317,500
Nautilus	141,350
Total cost	$718,550

Amazon records these investments as follows.

	November 3, 2025	
Equity Investments	718,550	
Cash		718,550

[7]A company is encouraged to adjust for observable price changes subsequent to recording the investment at cost if it can determine prices in orderly transactions for identical investments or from similar investments of the same issuer.

[8]Companies should record equity securities acquired in **exchange for noncash consideration** (property or services) at (1) the fair value of the consideration given, or (2) the fair value of the security received, whichever is more clearly determinable. Accounting for numerous purchases of securities requires the preservation of information regarding the cost of individual purchases, as well as the dates of purchases and sales. If specific identification is not possible, companies may use average-cost for multiple purchases of the same class of security. The **first-in, first-out method (FIFO)** of assigning costs to investments at the time of sale is also acceptable and normally employed.

On December 6, 2025, Amazon receives a cash dividend of $4,200 on its investment in the common stock of Nike. It records the cash dividend as follows.

December 6, 2025

Cash	4,200	
Dividend Revenue		4,200

All three of the investee companies reported net income for the year, but only Nike declared and paid a dividend to Amazon. Amazon does not recognize any revenue related to the net income of the three investees. Why?

1. It is presumed that Amazon has little influence over the investees if it owns less than 20% of common stock of another corporation. **As a result, net income is not a proper basis for recognizing income from the investment.**
2. The increased net assets resulting from profitable operations of the investees may be permanently retained for use in the investees' businesses.

Therefore, the investor recognizes revenue only when the investee declares cash dividends. In this case, Amazon does recognize revenue when the investee (in this case, Nike) declares a cash dividend.

Example 16.8 Fair Value Adjustment—2025

FACTS At December 31, 2025, assume that **Amazon**'s equity security portfolio has the following cost and fair value.

Investments	Cost	Fair Value	Unrealized Gain (Loss)
Nike	$259,700	$275,000	$ 15,300
Tesla	317,500	304,000	(13,500)
Nautilus	141,350	104,000	(37,350)
Total of portfolio	$718,550	$683,000	(35,550)
Previous fair value adjustment balance			–0–
Fair value adjustment—Cr.			$(35,550)

QUESTION What entry should Amazon make on December 31, 2025, related to its investment portfolio?

SOLUTION

For Amazon's equity securities portfolio, the gross unrealized gains are $15,300, and the gross unrealized losses are $50,850 ($13,500 + $37,350), resulting in a net unrealized loss of $35,550. That is, the fair value of the equity securities portfolio is below cost by $35,550.

Amazon records the net unrealized gains and losses related to changes in the fair value of these securities in an Unrealized Holding Gain or Loss—Income account. In this case, Amazon prepares an adjusting entry debiting the Unrealized Holding Gain or Loss—Income account and crediting the Fair Value Adjustment account to record the decrease in fair value and to record the loss as follows.

December 31, 2025

Unrealized Holding Gain or Loss—Income	35,550	
Fair Value Adjustment		35,550

Continuing with our Amazon example, now assume that on January 23, 2026, Amazon sold all of its Nike common stock, receiving net proceeds of $287,220. **Illustration 16.12** shows the computation of the realized gain on the sale.

Net proceeds from sale	$287,220
Cost of **Nike** shares	259,700
Gain on sale of investment	$ 27,520

ILLUSTRATION 16.12
Computation of Gain on Sale of Investment

Amazon records the sale as follows.

	January 23, 2026	
Cash	287,220	
Equity Investments		259,700
Gain on Sale of Investments		27,520

Example 16.9 Fair Value Adjustment—2026

FACTS Assume that on February 10, 2026, **Amazon** purchased 20,000 shares of **Netgear** at a market price of $12.75 per share, plus brokerage commissions of $1,850 (total cost, $256,850). Amazon's portfolio of equity securities as of December 31, 2026, is as follows.

Investments	Cost	Fair Value	Unrealized Gain (Loss)
Netgear	$256,850	$278,350	$21,500
Tesla	317,500	362,550	45,050
Nautilus	141,350	139,050	(2,300)
Total of portfolio	$715,700	$779,950	64,250
Previous fair value adjustment balance—Cr.			(35,550)
Fair value adjustment—Dr.			$99,800

QUESTION What entry should Amazon make on December 31, 2026, related to its investment portfolio?

SOLUTION

At December 31, 2026, the fair value of Amazon's equity securities portfolio exceeds cost by $64,250 (unrealized gain). The Fair Value Adjustment account had a credit balance of $35,550 at December 31, 2025. To adjust its December 31, 2026, equity portfolio to fair value, the company debits the Fair Value Adjustment account for $99,800 ($35,550 + $64,250). Amazon records this adjustment as follows.

	December 31, 2026	
Fair Value Adjustment	99,800	
Unrealized Holding Gain or Loss—Income		99,800

Fair Value Adjustment

		12/31/25	35,550
Adjustment	99,800		
12/31/26	64,250		

In Example 16.9, you should recognize that the Fair Value Adjustment account has been adjusted to the current balance needed to report the fair value of $779,950 ($715,700 + $64,250) related to the three equity securities at December 31, 2026. The unrealized holding gain related to the **Nike** investment that was sold is gone. The fair value adjustment made on December 31, 2026, has the effect of removing Nike's unrealized gain that had been recognized in prior periods on the sold investment. As a result, there is no double counting of Nike's unrealized holding gain and realized holding gain.

Financial Statement Presentation

Equity investments accounted for under the fair value method are reported in the balance sheet as either current or noncurrent assets, depending on management's intent to hold them for short-term profits or longer-term gains. At the end of a reporting period, unrealized holding gains or losses from equity investments are reported in the income statement as "Other revenues and gains" or "Other expenses or losses."

Holdings Between 20% and 50% (Equity Method)

LEARNING OBJECTIVE 3

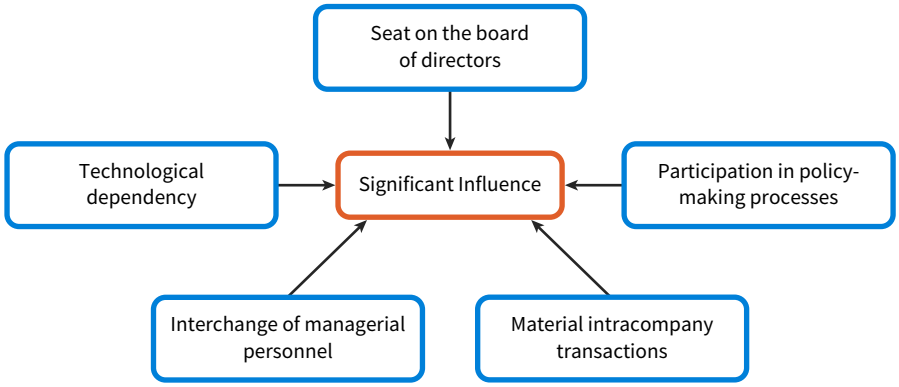
Explain the equity and consolidation methods of accounting.

An investor corporation may hold an interest of less than 50% of an investee corporation and therefore not possess legal control. However, an investment in voting stock of less than 50%

can still give the investor the ability to exercise **significant influence** over the operating and financial policies of an investee. [4]

For example, at one time **Siemens AG** owned 34% of **Areva** (which constructs power plants). Areva is very important to Siemens because the power industry is a key customer for its generators and other power-related products. Siemens has significant but not controlling ownership stake in a power plant construction company, which helps Siemens push its products into the market. Other examples of significant influence are the **Berkshire Hathaway** ownership of 26.6% of **Kraft Heinz Co.** or its 34.4% interest in healthcare provider **DaVita**. Significant influence may be indicated in several ways. **Illustration 16.13** shows items to consider when evaluating whether significant influence occurs.

ILLUSTRATION 16.13
Significant Influence Factors

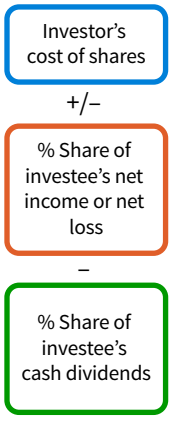


Another important consideration in evaluating significant influence is the extent of ownership by an investor in relationship to the concentration of other shareholdings. For example, an investment of 18% could convey influence if no other investor holds more than 5% of the shares.[9] To achieve a reasonable degree of uniformity and application of the significant influence criterion, the profession concluded that an investment (direct or indirect) of 20% or more of the voting stock of an investee should lead to a presumption, that in the absence of evidence to the contrary, an investor has the ability to exercise significant influence over an investee. In instances of "significant influence," the investor accounts for the investment using the equity method.

Accounting for the Equity Method

Under the **equity method**, the investor and the investee acknowledge a substantive economic relationship. The accounting for the investment account under the equity method is as follows.

- The investment at the time of purchase is recorded at the cost of the shares acquired.
- The investor's proportionate share of the income (losses) of the investee periodically increases or decreases the investment's carrying amount.
- Cash dividends received by the investor from the investee decreases the investment's carrying amount.



FACTS Mylar Corporation acquires 30% of the common stock of **Borden Company** for $120,000 on January 1, 2025. For the year ending 2025, Borden reports net income of $100,000 and pays a $40,000 cash dividend on December 31, 2025.

QUESTION How should Mylar record these transactions in 2025?

Example 16.10
Equity Method Accounting

[9] GAAP provides examples in which an investment of 20% or more might not enable an investor to exercise significant influence. [5]

SOLUTION

The entry to purchase the Borden Company stock is as follows.

January 1, 2025

Equity Investments (Borden)	120,000	
Cash		120,000

On December 31, 2025, Mylar must record its share of Borden's income and a reduction in the investment account for the dividends received. The entries are as follows.

December 31, 2025

Equity Investments (Borden)	30,000	
Investment Income (.30 × $100,000)		30,000
Cash (.30 × $40,000)	12,000	
Equity Investments (Borden)		12,000

In summary, the investment account increased by $18,000, which is explained as follows: (1) Mylar records a $30,000 increase, based on its share of Borden's income, and (2) Mylar records a $12,000 decrease in its investment due to dividends received. The changes in Mylar's investment account changed relative to the change in Borden Company's total equity.[10]

Equity Investments (Borden)

1/1/25	120,000	
12/31/25	30,000	12/31/25 12,000
Balance	138,000	

Comparison of Equity Method to Fair Value

To illustrate the equity method and compare it with the fair value method, assume that Maxi Company purchases a 20% interest in Mini Company. First consider that Maxi **does not have** the ability to exercise significant influence and applies the fair value method. Then consider that Maxi does exercise significant influence and applies the equity method. Illustration 16.14 shows the entries.

ILLUSTRATION 16.14 Comparison of Fair Value Method and Equity Method

Entries by Maxi Company

Fair Value Method			Equity Method		
On January 2, 2025, Maxi Company acquired 48,000 shares (20% of Mini Company common stock) at a cost of $10 a share:					
Equity investments	480,000		Equity Investments	480,000	
Cash		480,000	Cash		480,000
For the year 2025, Mini Company reported net income of $200,000; Maxi Company's share is 20%, or $40,000:					
No entry			Equity Investments	40,000	
			Investment Income		40,000
At December 31, 2025, the 48,000 shares of Mini Company have a fair value (market price) of $12 a share, or $576,000:					
Fair Value Adjustment	96,000		No entry		
Unrealized Holding Gain or Loss—Income ($576,000 − $480,000)		96,000			
On January 28, 2026, Mini Company announced and paid a cash dividend of $100,000; Maxi Company received 20%, or $20,000:					
Cash	20,000		Cash	20,000	
Dividend Revenue		20,000	Equity Investments		20,000
For the year 2026, Mini Company reported a net loss of $50,000; Maxi Company's share is 20%, or $10,000:					
No entry			Investment Loss	10,000	
			Equity Investments		10,000
At December 31, 2026, the Mini Company 48,000 shares have a fair value (market price) of $11 a share, or $528,000:					
Unrealized Holding Gain or Loss— Income	48,000		No entry		
Fair Value Adjustment		48,000			

[10]Similar adjustments would be made for the investor's share of comprehensive income recorded, if any) by the investee company during the year.

With reference to Illustration 16.14, let's review the rationale for different methods of accounting for equity securities. The key driver of these different methods is the amount of influence the investor has over the investee. Suppose Maxi owns 20% in Mini, which results in Maxi occupying a seat on Mini's board of directors. This situation generally qualifies as having significant influence and requires the use of the equity method. Consider these implications of significant influence:

- **Net income/loss**. The board of directors participates in Mini's strategic planning and high-level operating decisions. Therefore, Maxi is involved, at a high level, in the management of Mini. If Mini is successful, it follows that Maxi should report its share of that success. Maxi recognizes this by **increasing** its equity investment account by 20% of Mini's net income ($40,000) and recording investment income. What if Mini is unsuccessful and reports a net loss? Maxi also reports its share by **decreasing** its equity investment account by 20% of Mini's net loss ($10,000) and recording an investment loss.
- **Dividends**. It is the board of directors that authorizes the amount and payment of dividends. Therefore, Maxi has the ability to influence whether Mini pays a dividend. Should Maxi be allowed to report dividend revenue if it has the ability to influence the payment of that dividend? The FASB has decided no. Under the equity method, Maxi records the receipt of cash dividends as a **decrease** in the equity investment account, not as revenue. If Maxi is already recording its share of Mini's net income as revenue, then it would be double-counting to also report a dividend, which is a distribution of earnings, as revenue.

If Maxi does not have a seat on the board and otherwise has no significant influence, then the fair value method is used. Maxi would **not** report its share of Mini's net income or loss because Maxi had no influence over Mini's operating performance. Maxi would only recognize as revenue its share of Mini's dividends, if Mini pays dividends.

For some companies, equity accounting can be a real pain to the bottom line. For example, **Amazon** struggled to turn a profit at one time. Furthermore, some of Amazon's equity investments (in such companies as **Altera International**, **Basis Technology**, **Drugstore.com**, and **Eziba.com**) had resulted in Amazon's earnings performance going from bad to worse. These equity investees reported losses that made Amazon's already bad bottom line even worse, accounting for up to 22% of its reported loss in one year alone.

Investee Losses Exceed Carrying Amount

If an investor's share of the investee's losses exceeds the carrying amount of the investment, should the investor recognize additional losses? Ordinarily, the investor should discontinue applying the equity method and not recognize additional losses.

If the investor's potential loss is not limited to the amount of its original investment (by guarantee of the investee's obligations or other commitment to provide further financial support) or if imminent return to profitable operations by the investee appears to be assured, the investor should recognize additional losses. **[6]** For example, **Berkshire Hathaway** describes its policy in this area as follows.

> "In the event that net losses of the investee reduced the carrying amount to zero, additional net losses may be recorded if other investments in the investee are at risk, even if we have not committed to provide financial support to the investee. Such additional equity method losses, if any, are based upon the change in our claim on the investee's book value."

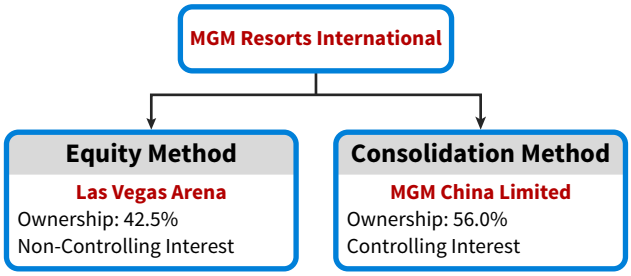
Holdings of More Than 50% (Consolidation)

When one corporation acquires a voting interest of more than 50% in another corporation, it is said to have a **controlling interest**. In such a relationship, the investor corporation is referred to as the **parent** and the investee corporation as the **subsidiary**. Companies present the investment in the common stock of the subsidiary as a long-term investment on the separate financial statements of the parent.

For example, **MGM Resorts International** (casino and resorts company) has a subsidiary, **MGM China Limited**, in which it has a 56% interest. In addition, it has a 42.5% interest

in **Las Vegas Arena Company**, which has one of the highest revenue-producing arenas in the country. **Illustration 16.15** highlights the difference in accounting related to these different ownership structures.

ILLUSTRATION 16.15 Ownership Structures/Accounting



Consolidated financial statements treat the parent and subsidiary corporations as a single economic entity. Whether or not consolidated financial statements are prepared, the parent company generally accounts for the investment in the subsidiary **using the equity method** as explained in the previous section. The accounting for consolidated financial statement can be quite complex and is discussed extensively in advanced accounting.

Accounting Matters — Who's in Control Here?

Walgreens Boots Alliance (WBA) is anchored by well-known brands Walgreens in the United States and Boots in the United Kingdom. It has a global portfolio of healthcare-focused investments, several of which are accounted for using the equity method of accounting. As you have learned, companies use the equity method of accounting for investments in which they exercise significant influence, but not control, which can be subjective. WBA discloses that it considers key factors when making this assessment, such as ownership interest, legal form of the investee, representation on the board of directors, participation in policy-making decisions, and material intra-entity transactions.

Reporting investments using the equity method of accounting allows WBA to report a single income item from the profits of its investees, along with the net investment on WBA's balance sheet. However, equity method investments are not without risk, far from it in fact. Without the ability to exercise control, WBA must rely on the internal controls and financial reporting controls of its investees. Investee failure to maintain effective standards could materially affect the financial results of WBA.

For example, one of WBA's equity method investees recently disclosed that it was involved in material litigation related to the opioid crisis. This, in turn, created additional risk for WBA and its overall financial results, which WBA disclosed in its 10-K report to investors. While companies are not required to report as much detailed information for equity method investments, they must consider the risk they carry to their organization and disclose that risk to the users of their financial reports.

Source: WBA 10-K annual report.

Put It into Practice LO 16.2/16.3 Account for Equity Investments

FACTS Potsaid Company acquired 30% of the outstanding common stock of Buyuk Inc. on December 31, 2025. The purchase price was $2,400,000 for 100,000 shares. Buyuk declared and paid a $4 per share cash dividend on June 30 and December 31, 2026. Buyuk reported net income of $1,460,000 for 2026. The fair value of Buyuk's stock was $27 per share at December 31, 2026.

INSTRUCTIONS

a. Prepare the journal entries for Potsaid for 2025 and 2026, assuming that Potsaid cannot exercise significant influence over Buyuk.

b. Prepare the journal entries for Potsaid for 2025 and 2026, assuming that Potsaid can exercise significant influence over Buyuk.

c. At what amount are the investment in securities reported on the balance sheet under each of these methods at December 31, 2026? What is the total income reported in 2026 under each of these methods?

SOLUTION

a.

December 31, 2025		
Equity Investments	2,400,000	
Cash		2,400,000
June 30, 2026		
Cash [100,000 × ($4 × .30)]	120,000	
Dividend Revenue		120,000
December 31, 2026		
Cash [100,000 × ($4 × .30)]	120,000	
Dividend Revenue		120,000
Fair Value Adjustment	300,000*	
Unrealized Holding Gain or Loss—Income		300,000

*$27 × 100,000 = $2,700,000; $2,700,000 − $2,400,000

b.

December 31, 2025		
Equity Investments (Buyuk Inc.)	2,400,000	
Cash		2,400,000
June 30, 2026		
Cash [100,000 × ($4 × .30)]	120,000	
Equity Investments (Buyuk Inc.)		120,000
December 31, 2026		
Cash [100,000 × ($4 × .30)]	120,000	
Equity Investments (Buyuk Inc.)		120,000
Equity Investments (Buyuk Inc.)	438,000	
Investment Income (.30% × $1,460,000)		438,000

c.

	Fair Value Method	Equity Method
Investment amount (balance sheet)	$2,700,000*	$2,598,000**
Dividend revenue (income statement)	$240,000	$ 0
Unrealized holding gain (income statement)	300,000	0
Investment income (income statement)		438,000
Total income	$540,000	$ 438,000

*$2,400,000 + $300,000

**$2,400,000 + $438,000 − $120,000 − $120,000

16.4 Other Financial Reporting Issues

LEARNING OBJECTIVE 4

Evaluate other major issues related to investments in debt and equity securities.

Fair Value Option

Companies have the choice to report most financial assets and financial liabilities at fair value. This choice is referred to as the **fair value option**. The following guidelines are used to report this information.

- All gains and losses related to changes in fair value are reported in net income.[11]
- This option is applied on an instrument-by-instrument basis.
- This option is generally available only at the time a company first purchases the financial asset or incurs a financial liability.
- If the company chooses to use the fair value option, it measures the financial asset or liability at fair value until the company no longer has ownership.

For example, assume that **Abbott Laboratories** purchased debt securities in 2025 that it classified as held-to-maturity. Abbott does not choose to report this security using the fair value option. In 2026, Abbott buys another held-to-maturity debt security. Abbott decides to report this security using the fair value option. Once it chooses the fair value option for the security bought in 2026, the decision is irrevocable (may not be changed). In addition, Abbott does not have the option to value the held-to-maturity security purchased in 2025 at fair value in 2026 or in subsequent periods.

Example 16.11 Fair Value Option—Available-for-Sale Security

FACTS Hardy Company purchases bonds in Fielder Company during 2025, which cost $100,000, and classified them as available-for-sale. On December 31, 2025, the fair value of these securities is $125,000.

QUESTION How should Hardy record this transaction if it chooses to use the fair value option?

SOLUTION

If Hardy chooses the fair value option to account for the Fielder company bonds, it makes the following entry at December 31, 2025.

Debt Investments	25,000	
Unrealized Holding Gain or Loss—Income		25,000

In this situation, Hardy uses the Debt Investments account to record the change in fair value at December 31. It does not use a Fair Value Adjustment account because the accounting for a fair value option is on an investment-by-investment basis rather than on a portfolio basis.

Available-for-sale debt securities are normally reported at fair value, with any unrealized gains and losses recorded as part of other comprehensive income. **Because Hardy selected the fair value option in Example 16.11, the unrealized gain or loss is recorded as part of net income and not in other comprehensive income.** Hardy also must continue to use the fair value option to record this investment until it no longer has ownership of the security.

Therefore, in subsequent periods, Hardy will report any change in fair value as an unrealized holding gain or loss. For example, if on December 31, 2026, the fair value of the debt investment is $110,000, Hardy recognizes an unrealized holding loss of $15,000 ($125,000 − $110,000) and reduces the Debt Investments account.

Companies may also use the fair value option for investments that otherwise follow the equity method of accounting.

Example 16.12 Fair Value Option—Equity Method Investments

FACTS Durham Company holds a 28% stake in Suppan Inc. Durham purchased the investment in 2025 for $930,000. At December 31, 2025, the fair value of the investment is $900,000. Durham elects to report the investment in Suppan using the fair value option.

QUESTION What entry should Durham make to record the investment under the fair value option?

SOLUTION

The entry to record this investment is as follows.

Unrealized Holding Gain or Loss—Income	30,000	
Equity Investments		30,000

In contrast to equity method accounting, if the fair value option is chosen, Durham does not report its pro rata share of the income or loss from Suppan. In addition, any dividend payments are credited to Dividend Revenue and therefore do not reduce the Equity Investments account.

[11] As indicated in our discussion of the fair value option in Chapter 13 related to liabilities, it is possible to record other comprehensive income if the change is due to deterioration of credit risk.

One major advantage of using the fair value option for this type of investment is that it addresses confusion about the equity method of accounting. In other words, what exactly does the one-line consolidation related to the equity method of accounting on the balance sheet tell investors? Many believe it does not provide information about liquidity or solvency, nor does it provide an indication of the worth of the company.

Note receivables are another financial asset for which a company can apply the fair value option.

Example 16.13 Fair Value Option—Note Receivable

FACTS Escobar Company receives a note receivable from one of its customers for $620,000 on December 31, 2025. On December 31, 2025, the fair value and carrying value of the note receivable is $620,000. Escobar decides to use the fair value option for this receivable. On December 31, 2026, the note receivable has a carrying value of $620,000, but the fair value increased to $810,000 due to a decrease in interest rates.

QUESTION How should Escobar record this transaction?

SOLUTION

Because Escobar has elected the fair value option, it reports the receivable at fair value with any unrealized holding gains and losses reported as part of net income. The unrealized holding gain is the difference between the fair value and the carrying value amount on December 31, 2026, which for Escobar is $190,000 ($810,000 - $620,000). Escobar makes the following entry to record the increase in value of the notes receivable and record the unrealized holding gain.

December 31, 2026		
Note Receivable	190,000	
Unrealized Holding Gain—Income		190,000

Escobar adds the difference between fair value and cost of the note receivable to arrive at the fair value reported on the balance sheet.

Many support the use of the fair value option as a step closer to total fair value reporting for financial instruments. They believe this treatment leads to an improvement in financial reporting. Others argue that the fair value option is confusing. A company can choose from period to period whether to use the fair value option for any new investment in a financial instrument. By permitting an instrument-by-instrument approach, companies can report some financial instruments at fair value but not others.

Accounting Matters — Fair Value Controversy

The reporting of investment securities is controversial. Some believe that all securities should be reported at fair value with the unrealized gain or loss reported in net income. Others believe the unrealized gain or loss should be reported in other comprehensive income. A third group believes all debt securities should be stated at amortized cost, and still others favor the present approach. Here are some of the major unresolved issues:

- **Measurement based on intent**. Companies classify debt securities as held-to-maturity, available-for-sale, or trading. As a result, companies can report three identical debt securities in three different ways in the financial statements. Some argue such treatment is confusing. Furthermore, the held-to-maturity category relies on intent, a subjective evaluation. What is not subjective is the fair value of the debt instrument. In other words, the three classifications are subjective, resulting in arbitrary classifications.
- **Gains trading**. Companies can classify certain debt securities as held-to-maturity and therefore report them at amortized cost. Companies can classify other debt securities as available-for-sale and report them at fair value, with the unrealized gain or loss reported as other comprehensive income. In either case, a company can become involved in "gains trading" (also referred to as "cherry picking," "snacking," or "sell the best and keep the rest"). In **gains trading**, companies sell their "winners," reporting the gains in income, and hold on to the losers.
- **Liabilities not fairly valued**. Many argue that if companies report investment securities at fair value, they also should report liabilities at fair value. Why? By recognizing changes in value on only one side of the balance sheet (the asset side), a high degree of volatility can occur in the income and stockholders' equity amounts. Further, financial institutions are involved in asset and liability management (not just asset management). Viewing only one side may lead managers to make uneconomic decisions as a result of the accounting. The fair value option may address this concern to some extent. However, there is debate on the usefulness of fair value estimates for liabilities.

Impairment of Value

Receivables

As indicated in Chapter 6 for receivables, companies use the **current expected credit loss (CECL) model** to measure impairment of receivables. To recognize the impairment, an entry is made to increase Bad Debt Expense and credit Allowance for Doubtful Accounts for the amount of the impairment. When it is probable that a company will be unable to collect all amounts due under the terms of the transaction, the receivable is permanently written off by a debit to Allowance for Doubtful Accounts and a credit to Accounts Receivable.

Debt Investments: Held-to-Maturity

The rules for debt investments (debt securities and loans) reported at amortized cost follow the same approach as discussed in Chapter 6. That is, companies should use the CECL model to record the impairment of debt investments similar to receivables. As indicated earlier, the CECL model considers both historical and current information as well as reasonable forecasts of future events.

Example 16.14
Impairment—Held-to-Maturity Security

FACTS Assume that **Chewy, Inc.** holds held-to-maturity bond securities with a par value and an amortized cost of $1,000,000. In evaluating the securities and using the CECL model, Chewy estimates that it will not collect $200,000 related to the debt investment.

QUESTION How should Chewy account for this impairment?

SOLUTION

Chewy records a debit to Bad Debt Expense and a credit to Allowance for Doubtful Accounts for $200,000 as follows.

Bad Debt Expense	200,000	
Allowance for Doubtful Accounts		200,000

The allowance will then be adjusted each period as appropriate.

Debt Investments: Available-for-Sale

Companies holding available-for-sale (AFS) debt investments follow a different approach in accounting for impairments than the CECL model. The reason is that the CECL model is designed to estimate credit losses over the contractual term of the debt investment, such as with held-to-maturity debt investments. However, if companies hold available-for-sale debt investments, they may choose to sell the securities before the contractual term ends. Therefore, companies have two choices with available-for-sale securities.

1. They may realize the value of these securities through collection of the cash flows.
2. They may realize the value of these securities by sale of the securities.

The amount of the credit losses that can be realized on available-for-sale securities is limited to the "fair value floor."[12] The fair value floor is determined as follows.

Amortized Cost of AFS Debt Security − Fair Value of AFS Debt Security = Fair Value Floor

If the expected credit loss is greater than the fair value floor, the company can sell the security and avoid the higher credit loss.

[12]In our earlier discussion related to available-for-sale investments, we assumed that these securities did not have any credit losses associated with them. As a result, unrealized gains and losses were reported in other comprehensive income. If available-for-sale investments have credit losses, they must be analyzed on an individual basis. These securities therefore cannot be combined with other available-for-sale securities to determine whether credit losses have occurred.

Example 16.15 Impairment—The Fair Value Floor

FACTS Assume that **Peleton Interactive** has an available-for-sale security with an amortized cost of $100,000, a fair value of $90,000, and an expected credit loss on this security of $15,000.

QUESTION How should Peleton account for this loss?

SOLUTION

The fair value floor is determined as $100,000 − $90,000 = $10,000 fair value floor. Peleton should record a loss of only $10,000 even though the expected credit loss is $15,000. It could sell the security for $90,000 and have a loss of only $10,000.

Illustration 16.16 provides data for an impairment analysis for available-for-sale impairment guidelines for Alexander Company.

ILLUSTRATION 16.16
Impairment Analysis, Available-for-Sale Investments

Facts	Situation A	Situation B	Situation C
Amortized cost	$1,000,000	$1,000,000	$1,000,000
Fair value	1,100,000	960,000	860,000
Expected credit loss	110,000	110,000	110,000
Expected credit loss recognized in net income	–0–	40,000	110,000
Unrealized Holding Gain or (Loss)—Equity	100,000	–0–	30,000

- **Situation A.** Alexander does not recognize an impairment loss because the fair value of $1,100,000 is higher than the amortized cost of $1,000,000. The entry Alexander makes is to record an unrealized holding gain of $100,000 ($1,100,000 − $1,000,000) in other comprehensive income.

Fair Value Adjustment	100,000	
Unrealized Holding Gain or Loss—Equity		100,000

  In this situation, Alexander does not recognize any impairment even though it has an expected credit loss of $110,000 because the fair value of its security is above its amortized cost.

- **Situation B.** Alexander recognizes an impairment loss of $40,000 ($1,000,000 − $960,000) even though the expected credit loss is $110,000. In other words, Alexander's impairment loss is limited to the fair value floor. Alexander makes the following entry to record this loss.

Bad Debt Expense	40,000	
Allowance for Doubtful Accounts		40,000

  The Allowance for Doubtful Accounts is reported on the balance sheet as an adjustment to the carrying value of the available-for-sale debt investments. An allowance account is used because after recording an impairment, events or economic conditions may change and the impairment loss may decrease (e.g., due to an improvement in the debtor's credit rating).

  In this situation, for available-for-sale investments, some or all of the previously recognized impairment loss is reversed with a debit to the allowance account (which increases the carrying value of the investment) and a credit to Bad Debt Expense. The reversal of impairment losses must not result in a carrying amount of the investment that exceeds the amortized cost that would have been reported had the impairment not been recognized.

- **Situation C.** Alexander recognizes an impairment loss of $110,000 and an unrealized holding loss through other comprehensive income of $30,000. In other words, Alexander separates the total loss of $140,000 ($1,000,000 − $860,000) into the following two components.

1. The credit loss or the amount representing the decrease in cash flows expected to be collected of $110,000.
2. The noncredit-related factors, such as changes in interest rates, market volatility, and liquidity concerns, of $30,000.

Alexander makes the following entry to record this transaction.

Bad Debt Expense	110,000	
Unrealized Holding Gain or Loss—Equity	30,000	
Allowance for Doubtful Accounts		110,000
Fair Value Adjustment		30,000

In summary, companies recognize credit losses on an available-for-sale security when the security's fair value is less than amortized cost.

Equity Investments

The accounting for impairments related to equity securities with holdings of less than 20%, **which are recorded at fair value with unrealized gains and losses through net income**, is straightforward. That is, if fair value is less than cost, the decline in value is reported through net income. As a consequence, it is not necessary to write off the individual stock investment unless a permanent impairment occurs. This same treatment applies to trading debt investments.

Illustration 16.17 provides a summary of the guidelines related to impairments.

ILLUSTRATION 16.17
Impairment Model Summary

Asset Measurement Basis	Impairment Model
Loans, receivables, and debt securities measured at amortized cost.	Expected losses recognized in net income.
Debt securities measured at fair value with gains and losses recorded in other comprehensive income (available-for-sale).	No expected credit losses recognized if fair value is greater than or equal to amortized cost. If fair value is less than amortized cost, the expected credit loss is recognized in net income. Credit losses are limited to the difference between fair value and amortized cost.
Debt (trading) and equity securities measured at fair value with gains and losses recorded in net income.	Impairment measured as the difference between the lower of amortized cost or fair value (debt securities) or lower of cost or fair value (equity securities).

Presentation of Comprehensive Income

Companies may display the components of other comprehensive income in one of two ways:

1. A combined statement of income and comprehensive income.
2. A separate statement of comprehensive income that begins with net income.

Single-Period Example

To provide a single-period example of the reporting of investment securities and related gain or loss on available-for-sale debt securities, assume that on January 1, 2025, Hinges Co. had cash and common stock of $50,000.[13] At that date, the company had no other asset, liability, or equity balance. On January 2, Hinges purchased for cash $50,000 of debt securities classified as available-for-sale. On June 30, Hinges sold part of the available-for-sale security debt portfolio, realizing a gain as shown in Illustration 16.18.

[13]We adapted this example from Dennis R. Beresford, L. Todd Johnson, and Cheri L. Reither, "Is a Second Income Statement Needed?" *Journal of Accountancy* (April 1996), p. 71.

Fair value of securities sold	$22,000
Less: Cost of securities sold	20,000
Realized gain	$ 2,000

ILLUSTRATION 16.18 Computation of Realized Gain

Hinges did not purchase or sell any other securities during 2025. It received $3,000 in interest during the year. At December 31, 2025, the remaining portfolio is as shown in **Illustration 16.19**.

Fair value of portfolio	$34,000
Less: Cost of portfolio	30,000
Unrealized gain	$ 4,000

ILLUSTRATION 16.19 Computation of Unrealized Gain

Illustration 16.20 shows the company's income statement for 2025.

Hinges Co.
Income Statement
For the Year Ended December 31, 2025

Interest revenue	$3,000
Realized gains on investment in securities	2,000
Net income	$5,000

ILLUSTRATION 16.20 Income Statement

The company reports its change in the unrealized holding gain in a statement of comprehensive income as shown in **Illustration 16.21**.

Hinges Co.
Statement of Comprehensive Income
For the Year Ended December 31, 2025

Net income (includes realized gain of $2,000)	$5,000
Other comprehensive income	
Unrealized holding gain	4,000
Comprehensive income	$9,000

ILLUSTRATION 16.21 Statement of Comprehensive Income

Illustration 16.22 shows its statement of stockholders' equity.

Hinges Co.
Statement of Stockholders' Equity
For the Year Ended December 31, 2025

	Common Stock	Retained Earnings	Accumulated Other Comprehensive Income	Total
Beginning balance	$50,000	$–0–	$ –0–	$50,000
Add: Net income		5,000		5,000
Other comprehensive income			4,000	4,000
Ending balance	$50,000	$5,000	$4,000	$59,000

ILLUSTRATION 16.22 Statement of Stockholders' Equity

The comparative balance sheet is shown in Illustration 16.23.

ILLUSTRATION 16.23 Comparative Balance Sheet

Hinges Co.
Comparative Balance Sheet

	1/1/25	12/31/25
Assets		
Cash	$50,000	$25,000
Debt investments		34,000
Total assets	$50,000	$59,000
Stockholders' equity		
Common stock	$50,000	$50,000
Retained earnings		5,000
Accumulated other comprehensive income		4,000
Total stockholders'equity	$50,000	$59,000

This example indicates how an unrealized gain or loss on available-for-sale debt securities affects all the financial statements. Note that a company must disclose the components that comprise accumulated other comprehensive income.

Reclassification Adjustment

When a company sells securities during the year, double-counting of the realized gains or losses in comprehensive income can occur. This double-counting results when a company reports unrealized gains or losses in other comprehensive income in a **prior period** and reports these gains or losses as part of net income in the **current period**.

To ensure that gains and losses are not counted twice when a sale occurs, a **reclassification adjustment** is necessary. To illustrate, assume that Open Company has the two available-for-sale debt securities in its portfolio at the end of 2025 (its first year of operations) shown in Illustration 16.24.

ILLUSTRATION 16.24 Available-for-Sale Security Portfolio (2025)

Investments	Amortized Cost	Fair Value	Unrealized Holding Gain (Loss)
Lehman Inc. bonds 6%	$ 80,000	$105,000	$25,000
Woods Co. bonds 7%	120,000	135,000	15,000
Total of portfolio	$200,000	$240,000	40,000
Previous fair value adjustment balance			–0–
Fair value adjustment—Dr.			$40,000

The entry to record the unrealized holding gain in 2025 is as follows.

December 31, 2025

Fair Value Adjustment	40,000	
Unrealized Holding Gain or Loss—Equity		40,000

If Open Company reports net income in 2025 of $350,000, it presents a statement of comprehensive income as shown in Illustration 16.25.

ILLUSTRATION 16.25 Statement of Comprehensive Income (2025)

Open Company
Statement of Comprehensive Income
For the Year Ended December 31, 2025

Net income	$350,000
Other comprehensive income	
Unrealized holding gain	40,000
Comprehensive income	$390,000

At December 31, 2025, Open Company reports on its balance sheet debt investments of $240,000 (cost $200,000 plus fair value adjustment of $40,000) and accumulated other comprehensive income in stockholders' equity of $40,000. The closing entry to transfer the unrealized holding gain—equity to accumulated other comprehensive income is as follows.

December 31, 2025 (Closing Entry)

Unrealized Holding Gain or Loss—Equity	40,000	
Accumulated Other Comprehensive Income		40,000

On August, 10, 2026, Open Company sells its Lehman Inc. bonds for $105,000 and realizes a gain on the sale of $25,000 ($105,000 − $80,000). The journal entry to record this transaction is as follows.

August 10, 2026

Cash	105,000	
Debt Investments		80,000
Gain on Sale of Investments		25,000

At the end of 2026, the fair value of the Woods Co. bonds increased an additional $20,000 ($155,000 − $135,000), to $155,000. **Illustration 16.26** shows the computation of the change in the Fair Value Adjustment account based on only the Woods Co. investment as the Lehman bonds have been sold.

ILLUSTRATION 16.26 Available-for-Sale Security Portfolio (2026)

Investments	Cost	Fair Value	Unrealized Holding Gain (Loss)
Woods Co. bonds 7%	$120,000	$155,000	$35,000
Previous fair value adjustment balance—Dr.			(40,000)
Fair value adjustment—Cr.			$ (5,000)

The entry to record the unrealized holding gain or loss in 2026 is as follows.

December 31, 2026

Unrealized Holding Gain or Loss—Equity	5,000	
Fair Value Adjustment		5,000

Fair Value Adjustment

12/31/25	40,000		
		Adjustment	5,000
12/31/26	35,000		

If we assume that Open Company reports net income of $720,000 in 2026, including the realized sale on the Lehman bonds, its statement of comprehensive income is presented as shown in **Illustration 16.27**.

ILLUSTRATION 16.27 Statement of Comprehensive Income (2026)

Open Company
Statement of Comprehensive Income
For the Year Ended December 31, 2026

Net income (includes $25,000 realized gain on Lehman bonds)	$720,000
Other comprehensive income	
Unrealized holding loss	(5,000)
Comprehensive income	$715,000

At December 31, 2026, Open Company reports on its balance sheet debt investments of $155,000 (cost $120,000 plus a fair value adjustment of $35,000) and accumulated other comprehensive income in stockholders' equity of $35,000 ($40,000 − $5,000). The closing entry to transfer the unrealized holding loss—equity to accumulated other comprehensive income is as follows.

December 31, 2026 (Closing Entry)

Accumulated Other Comprehensive Income	5,000	
Unrealized Holding Gain or Loss—Equity		5,000

In 2025, Open included the unrealized gain on the Lehman Co. bonds in comprehensive income. In 2026, Open sold the bonds. It reported the realized gain ($25,000) in net income,

which increased comprehensive income again. To avoid double-counting this gain, Open makes a **reclassification adjustment** to eliminate the realized gain from the computation of comprehensive income in 2026.

This reclassification adjustment may be made in the income statement, in accumulated other comprehensive income, or in a note to the financial statements. The FASB prefers to show the reclassification amount in accumulated other comprehensive income in the notes to the financial statements. For Open Company, this presentation is as shown in Illustration 16.28.

ILLUSTRATION 16.28 Note Disclosure of Reclassification Adjustments

Open Company
Notes to Financial Statements
Changes in Accumulated Other Comprehensive Income

Beginning balance January 1, 2026		$40,000
Current-period other comprehensive income ($155,000 – $135,000)	$20,000*	
Amount reclassified from accumulated other comprehensive income	(25,000)	
Unrealized holding loss		(5,000)
Ending balance, December 31, 2026		$35,000

*This $20,000 measures the change in fair value (unrealized gain) on Wood's bonds from December 31, 2025, to December 31, 2026 (see Illustrations 16.26 and 16.27).

Transfers Related to Debt Securities

Companies account for transfers between any of the categories at fair value.

- If a company transfers available-for-sale debt securities to held-to-maturity investments, it records the new investments (held-to-maturity) at the date of transfer at **fair value** in the new category.
- Similarly, if it transfers held-to-maturity investments to available-for-sale debt investments, it records the new investments (available-for-sale) at **fair value**.

This **fair value** rule assures that a company cannot omit recognition of fair value simply by transferring securities to the held-to-maturity category. Illustration 16.29 summarizes the accounting treatment for transfers.

ILLUSTRATION 16.29 Accounting for Transfers of Debt Securities

Type of Transfer	Measurement Basis	Impact of Transfer on Stockholders' Equity*	Impact of Transfer on Net income*
Transfer from trading to available-for-sale	Security transferred at fair value at the date of transfer, which is the new cost basis of the security.	The unrealized gain or loss at the date of transfer increases or decreases stockholders' equity.	The unrealized gain or loss at the date of transfer is recognized in income.
Transfer from available-for-sale to trading	Security transferred at fair value at the date of transfer, which is the new cost basis of the security.	The unrealized gain or loss at the date of transfer increases or decreases stockholders' equity.	The unrealized gain or loss at the date of transfer is recognized in income.
Transfer from held-to-maturity to available-for-sale**	Security transferred at fair value at the date of transfer.	The separate component of stockholders' equity is increased or decreased by the unrealized gain or loss at the date of transfer.	None.
Transfer from available-for-sale to held-to-maturity	Security transferred at fair value at the date of transfer.	The unrealized gain or loss at the date of transfer carried as a separate component of stock holders' equity is amortized over the remaining life of the security.	None.

*Assumes that adjusting entries to report changes in fair value for the current period are not yet recorded.
**According to GAAP, these types of transfers should be rare.

Summary of Reporting Treatment of Securities

Illustration 16.30 summarizes the major debt and equity securities and their reporting treatment.[14]

ILLUSTRATION 16.30 Summary of Treatment of Major Debt and Equity Securities

Classification*	Valuation Approach and Balance Sheet Reporting	Income Effects
Debt Classifications		
Trading	Fair value. Current assets.	Interest is recognized as revenue. Unrealized holding gains and losses are recognized in income.
Available-for-sale	Fair value. Current or noncurrent assets.	Interest is recognized as revenue. Unrealized holding gains and losses are not recognized in income but in other comprehensive income.
Held-to-maturity	Amortized cost. Current or noncurrent assets.	Interest is recognized as revenue.
Equity Classifications		
Holdings less 20%	Fair value. Current or noncurrent assets.	Dividends are recognized as revenue. Unrealized gains and losses are included in income.
Holdings between 20% and 50%	Equity method. Investments originally recorded at cost with periodic adjustment for the investor's share of the investee's income or loss, and decreased by all dividends received from the investee, subsequent to the date of the investment.	Revenue is recognized to the extent of the investee's income or loss.
Holdings more than 50%	Consolidation of financial statements.	Parent and subsidiary company income or loss combined.
Nonmarketable	Cost.	Dividends are recognized as revenue.

*Companies have the option to report financial instruments at fair value with all gains and losses related to changes in fair value reported in the income statement. If a company chooses to use the fair option for some of its financial instruments, these assets or liabilities should be reported separately from other financial instruments that use a different valuation basis.

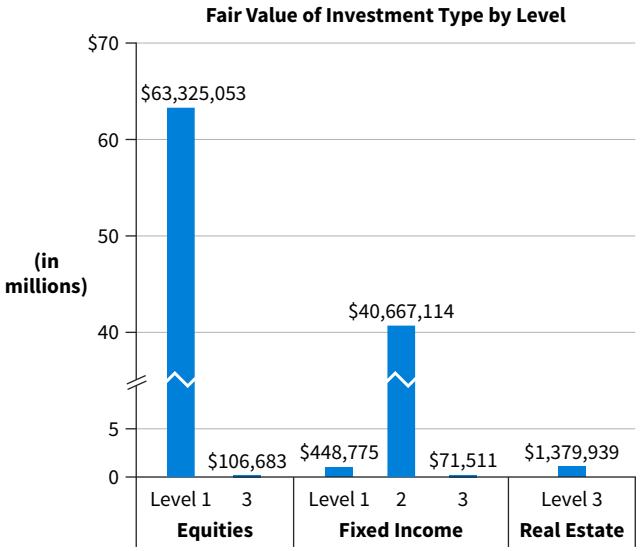
Analytics in Action: Risky Retirement

Any company with investments on its balance sheet is required to report various information about those investments, including a comparison of cost versus fair value, and the level of reliability regarding the fair value measurement. Recall that the FASB established a fair value hierarchy with Level 1 measurements being the most reliable and Level 3 being the least reliable. Now consider that you are reviewing the investment holdings of the organization that manages the assets that will fund your retirement—you may want to understand the breakdown of investments by fair value levels!

The **State of Wisconsin Investment Board (SWIB)**, responsible for managing the assets of the Wisconsin Retirement System, manages over $140 billion in assets. SWIB must disclose in its annual report its investment holdings both by type and level of fair value measurement. Analytical tools help users to best understand what types of assets SWIB is investing in and, most importantly, the reliability of the fair value measures used to report those investments.

For example, the following chart allows us to see that SWIB holds a significant amount of Level 1 equity securities while most fixed income investments are classified as Level 2. The bulks of SWIB's Level 3 assets consist of real estate investments. Note that levels not shown in the chart are not part of SWIB's holdings.

[14]Not surprisingly, the disclosure requirements for investments and other financial assets and liabilities are extensive. We provide an expanded discussion with examples of these disclosure requirements in Appendix 16B.



Go to the Analytics in Action Activities section at the end of the chapter, which includes Excel-based problems with data sets, to see the relevance and application of data analytics to intermediate accounting topics.

APPENDIX **16A**

Accounting for Derivative Instruments

LEARNING OBJECTIVE *5

Describe the uses of and accounting for derivatives.

Until the early 1970s, most financial managers worked in a cozy, if unthrilling, world. Since then, constant change caused by volatile markets, new technology, and deregulation has increased the risks to businesses. In response, the financial community developed products to manage these risks.

These products—called **derivative financial instruments** or simply **derivatives**—are useful for managing risk. Companies use the fair values or cash flows of these instruments to offset the changes in fair values or cash flows of the at-risk assets. The development of powerful computing and communication technology has aided the growth in derivative use. This technology provides new ways to analyze information about markets as well as the power to process high volumes of payments.

Defining Derivatives

In order to understand derivatives, consider the following examples.

- **Example 1—Forward Contract.** Assume that a company like **Dell** believes that the price of **Google**'s stock will increase substantially in the next three months. Unfortunately, it does not have the cash resources to purchase the stock today. Dell therefore enters into a contract with a broker for delivery of 10,000 shares of Google stock in three months at the price of $110 per share.

  Dell has entered into a **forward contract**, a type of derivative. As a result of the contract, Dell **has received the right** to receive 10,000 shares of Google stock in three months. Further, it **has an obligation** to pay $110 per share at that time. What is the benefit of this derivative contract? Dell can buy Google stock today and take delivery (and make payment) in three months. If the price goes up, as it expects, Dell profits. If the price goes down, Dell loses.
- **Example 2—Option Contract.** Now suppose that Dell needs two weeks to decide whether to purchase Google stock. It therefore enters into a different type of contract,

one that gives it the right to purchase Google stock at its current price any time within the next two weeks. As part of the contract, the broker charges $3,000 for holding the contract open for two weeks at a set price.

Dell has now entered into an **option contract**, another type of derivative. As a result of this contract, **it has received the right but not the obligation** to purchase this stock. If the price of the Google stock increases in the next two weeks, Dell exercises its option. In this case, the cost of the stock is the price of the stock stated in the contract, plus the cost of the option contract. If the price does not increase, Dell does not exercise the contract but still incurs the cost for the option.

The forward contract and the option contract both involve a future delivery of stock. The value of the contract relies on the underlying asset—the Google stock. Thus, these financial instruments are known as derivatives because they **derive their value from** values of other assets (e.g., stocks, bonds, or commodities). Or, put another way, their value relates to a market-determined indicator (e.g., stock price, interest rates, or the Standard and Poor's 500 stock composite index).

In this appendix, we discuss the accounting for three different types of derivatives:

1. Financial forwards or financial futures.
2. Options.
3. Swaps.

Who Uses Derivatives, and Why?

Whether to protect for changes in interest rates, the weather, stock prices, oil prices, or foreign currencies, derivative contracts help to smooth the fluctuations caused by various types of risks. A company that wants to ensure against certain types of business risks often uses derivative contracts to achieve this objective.[15]

Producers and Consumers

To illustrate, assume that Heartland Ag is a large producer of potatoes for the consumer market. The present price for potatoes is excellent. Unfortunately, Heartland needs two months to harvest its potatoes and deliver them to the market. Because Heartland expects the price of potatoes to drop in the coming months, it signs a forward contract. It agrees to sell its potatoes today at the current market price for delivery in two months.

Who would buy this contract? Suppose on the other side of the contract is **McDonald's**. McDonald's wants to have potatoes (for French fries) in two months and believes that prices will increase. McDonald's is therefore agreeable to accepting delivery in two months at current prices. It knows that it will need potatoes in two months and that it can make an acceptable profit at this price level.

In this situation, if the price of potatoes increases before delivery, Heartland loses and McDonald's wins. Conversely, if the price decreases, Heartland wins and McDonald's loses. However, the objective is not to gamble on the outcome. Regardless of which way the price moves, both Heartland and McDonald's have received a price at which they obtain an acceptable profit. In this case, although Heartland is a **producer** and McDonald's is a **consumer**, both companies are **hedgers**. They both **hedge their positions** to ensure an acceptable financial result.

Commodity prices are volatile. They depend on weather, crop production, and general economic conditions. For the producer and the consumer to plan effectively, it makes good sense to lock in specific future revenues or costs in order to run their businesses successfully.

Speculators and Arbitrageurs

In some cases, instead of McDonald's taking a position in the forward contract, a speculator may purchase the contract from Heartland. The **speculator** bets that the price of potatoes will rise, thereby increasing the value of the forward contract. The speculator, who may be in the

[15]Derivatives are traded on many exchanges throughout the world. In addition, many derivative contracts (primarily interest rate swaps) are privately negotiated.

market for only a few hours, will then sell the forward contract to another speculator or to a company like McDonald's.

Arbitrageurs also use derivatives. These market players attempt to exploit inefficiencies in markets. They seek to lock in profits by simultaneously entering into transactions in two or more markets. For example, an arbitrageur might trade in a futures contract. At the same time, the arbitrageur will also trade in the commodity underlying the futures contract, hoping to achieve small price gains on the difference between the two. Markets rely on speculators and arbitrageurs to keep the market liquid on a daily basis.

In these illustrations, we explained why Heartland (the producer) and McDonald's (the consumer) would become involved in a derivative contract. Consider other types of situations that companies face.

1. Airlines, like **Delta**, **Southwest**, and **United**, are affected by changes in the price of jet fuel.
2. Financial institutions, such as **Citigroup**, **Bankers Trust**, and **BMO Harris**, are involved in borrowing and lending funds that are affected by changes in interest rates.
3. Multinational corporations, like **Cisco Systems**, **Coca-Cola**, and **General Electric**, are subject to changes in foreign exchange rates.

In fact, most corporations are involved in some form of derivatives transactions. Companies give these reasons (in their annual reports) as to why they use derivatives:

1. **ExxonMobil** uses derivatives to hedge its exposure to fluctuations in interest rates, foreign currency exchange rates, and hydrocarbon prices.
2. **Caterpillar** uses derivatives to manage foreign currency exchange rates, interest rates, and commodity price exposure.
3. **Johnson & Johnson** uses derivatives to manage the impact of interest rate and foreign exchange rate changes on earnings and cash flows.

Many corporations use derivatives extensively and successfully. However, derivatives can be dangerous. All parties involved must understand the risks and rewards associated with these contracts.[16]

Basic Principles in Accounting for Derivatives

The FASB concluded that derivatives such as forwards and options are assets and liabilities. It also concluded that companies should report them in the balance sheet **at fair value**.[17] The Board believes that fair value will provide statement users the best information about derivatives. Relying on some other basis of valuation for derivatives, such as historical cost, does not make sense. Why? Because many derivatives have a historical cost of zero. Furthermore, the markets for derivatives, and the assets upon which derivatives' values rely, are well developed. As a result, the Board believes that companies can determine reliable fair value amounts for derivatives.[18]

[16]There are some well-publicized examples of companies that have suffered considerable losses using derivatives. For example, companies such as **Fannie Mae** (U.S.), **Enron** (U.S.), **Showa Shell Sekiyu** (Japan), **Metallgesellschaft** (Germany), **Procter & Gamble** (U.S.), and **Air Products & Chemicals** (U.S.) incurred significant losses from investments in derivative instruments.

[17]GAAP covers accounting and reporting for all derivative instruments, whether financial or not. In this appendix, we place greater focus on derivative financial instruments because of their widespread use in practice. **[7]**

[18]As discussed in earlier chapters, fair value is defined as "the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date." Fair value is therefore a market-based measure. As discussed in Chapter 1, the FASB has also developed a fair value hierarchy, which indicates the priority of valuation techniques to use to determine fair value. **Level 1** fair value measures are based on observable inputs that reflect quoted prices for identical assets or liabilities in active markets. **Level 2** measures are based on inputs other than quoted prices included in Level 1 but that can be corroborated with observable data. **Level 3** fair values are based on unobservable inputs (for example, a company's own data or assumptions). Thus, Level 1 is the most reliable because it is based on quoted prices, like a closing stock price in the *Wall Street Journal.* Level 2 is the next most reliable and would rely on evaluating similar assets or liabilities in active markets. For Level 3 (the least reliable), much judgment is needed, based on the best information available, to arrive at a relevant and reliable fair value measurement. **[8]**

On the income statement, a company should recognize any unrealized gain or loss in income, if it uses the derivative for speculation purposes. If using the derivative for hedging purposes, the accounting for any gain or loss depends on the type of hedge used. We discuss the accounting for hedged transactions later in the appendix.

In summary, companies follow these guidelines in accounting for derivatives.

1. Recognize derivatives in the financial statements as assets and liabilities.
2. Report derivatives at fair value.
3. Recognize gains and losses resulting from speculation in derivatives immediately in income.
4. Report gains and losses resulting from hedge transactions differently, depending on the type of hedge.

Example of Derivative Financial Instrument—Speculation

To illustrate the measurement and reporting of a derivative for speculative purposes, we examine a derivative whose value depends on the market price of Laredo Inc. common stock. A company can realize a gain from the increase in the value of the Laredo shares with the use of a derivative, such as a call option.[19] A **call option** gives the holder the right, but not the obligation, to buy shares at a preset price. This price is often referred to as the **strike price** or the **exercise price**.

For example, assume a company enters into a call option contract with Baird Investment Co., which gives it the option to purchase Laredo stock at $100 per share.[20] If the price of Laredo stock increases above $100, the company can exercise this option and purchase the shares for $100 per share. If Laredo's stock never increases above $100 per share, the call option is worthless.

Accounting Entries To illustrate the accounting for a call option, assume that the company purchases a call option contract on January 2, 2025, when Laredo shares are trading at $100 per share. The contract gives it the option to purchase 1,000 shares (referred to as the **notional amount**) of Laredo stock at an option price of $100 per share. The option expires on April 30, 2025. The company purchases the call option for $400 and makes the following entry.

	January 2, 2025		
Call Option		400	
Cash			400

This payment is referred to as the **option premium**. It is generally much less than the cost of purchasing the shares directly. The option premium consists of two amounts: (1) intrinsic value and (2) time value. The following formula is used to compute the option premium.

Option Premium = Intrinsic Value + Time Value

- **Intrinsic value** is the difference between the market price and the preset strike price at any point in time. It represents the amount realized by the option holder, if exercising the option immediately. On January 2, 2025, the intrinsic value is zero because the market price equals the preset strike price.

[19] Investors can use a different type of option contract—a **put option**—to realize a gain if anticipating a decline in the Laredo stock value. A put option gives the holder the option to sell shares at a preset price. Thus, a put option **increases** in value when the underlying asset **decreases** in value.

[20] Baird Investment Co. is referred to as the **counterparty**. Counterparties frequently are investment bankers or other companies that hold inventories of financial instruments.

- **Time value** refers to the option's value over and above its intrinsic value. Time value reflects the possibility that the option has a fair value greater than zero. How? Because there is some expectation that the price of Laredo shares will increase above the strike price during the option term. As indicated, the time value for the option is $400.[21]

The following additional data are available with respect to the call option.

Date	Market Price of Laredo Shares	Time Value of Call Option
March 31, 2025	$120 per share	$100
April 16, 2025	115 per share	60

As indicated, on March 31, 2025, the price of Laredo shares increases to $120 per share. The intrinsic value of the call option contract is now $20,000. That is, the company can exercise the call option and purchase 1,000 shares from Baird Investment for $100 per share. It can then sell the shares in the market for $120 per share. This gives the company a gain of $20,000 ($120,000 − $100,000) on the option contract.[22] It records the increase in the intrinsic value of the option as follows.

March 31, 2025

Call Option	20,000	
Unrealized Holding Gain or Loss—Income		20,000

A market appraisal indicates that the time value of the option at March 31, 2025, is $100.[23] The company records this change in value of the option as follows.

March 31, 2025

Unrealized Holding Gain or Loss—Income	300	
Call Option ($400 − $100)		300

At March 31, 2025, the company reports the call option in its balance sheet at fair value of $20,100.[24] The unrealized holding gain increases net income for the period. The loss on the time value of the option decreases net income.

On April 16, 2025, the company settles the option before it expires. To properly record the settlement, it updates the value of the option for the decrease in the intrinsic value of $5,000 [($120 − $115) × 1,000] as follows.

April 16, 2025

Unrealized Holding Gain or Loss—Income	5,000	
Call Option		5,000

The decrease in the time value of the option of $40 ($100 − $60) is recorded as follows.

Call Option

1/2/25	400	3/31/25	300
3/31/25	20,000	4/16/25	5,000
		4/16/25	40
Balance	15,060		

April 16, 2025

Unrealized Holding Gain or Loss—Income	40	
Call Option		40

Thus, at the time of the settlement, the call option's carrying value is $15,060.

[21]This value is estimated using option-pricing models, such as the Black-Scholes equation. The volatility of the underlying stock, the expected life of the option, the risk-free rate of interest, and expected dividends on the underlying stock during the option term affect the Black-Scholes fair value estimate.

[22]In practice, investors generally do not have to actually buy and sell the Laredo shares to settle the option and realize the gain. This is referred to as the **net settlement feature of option contracts**.

[23]The decline in value reflects both the decreased likelihood that the Laredo shares will continue to increase in value over the option period and the shorter time to maturity of the option contract.

[24]As indicated earlier, the total value of the option at any point in time equals the intrinsic value plus the time value.

The company records the settlement of the option contract with Baird as follows.

April 16, 2025		
Cash	15,000	
Loss on Settlement of Call Option	60	
Call Option		15,060

Illustration 16A.1 summarizes the effects of the call option contract on net income.

ILLUSTRATION 16A.1 Effect on Income—Derivative Financial Instrument

Date	Transaction	Income (Loss) Effect
March 31, 2025	Net increase in value of call option ($20,000 − $300)	$19,700
April 16, 2025	Decrease in value of call option ($5,000 + $40)	(5,040)
April 16, 2025	Settle call option	(60)
	Total net income	$14,600

The accounting summarized in Illustration 16A.1 is in accord with GAAP. That is, because the call option meets the definition of an asset, the company records it in the balance sheet on March 31, 2025. Furthermore, it reports the call option at fair value, with any gains or losses reported in income.

Differences Between Traditional and Derivative Financial Instruments

How does a traditional financial instrument differ from a derivative one? A derivative financial instrument has the following three basic characteristics. [9]

1. **The instrument has (1) one or more underlyings and (2) an identified payment provision.** An **underlying** is a specified interest rate, security price, commodity price, index of prices or rates, or other market-related variable. The interaction of the underlying, with the face amount or the number of units specified in the derivative contract (the notional amounts), determines payment. For example, the value of the call option increased in value when the value of the Laredo stock increased. In this case, the underlying is the stock price. To arrive at the payment provision, multiply the change in the stock price by the number of shares (notional amount).
2. **The instrument requires little or no investment at the inception of the contract.** To illustrate, the company paid a small premium to purchase the call option—an amount much less than if purchasing the Laredo shares as a direct investment.
3. **The instrument requires or permits net settlement.** As indicated in the call option example, the company could realize a profit on the call option without taking possession of the shares. This **net settlement** feature reduces the transaction costs associated with derivatives.

Illustration 16A.2 summarizes the differences between traditional and derivative financial instruments. Here, we use a trading security for the traditional financial instrument and a call option as an example of a derivative one.

ILLUSTRATION 16A.2 Features of Traditional and Derivative Financial Instruments

Feature	Traditional Financial Instrument (Trading Security)	Derivative Financial Instrument (Call Option)
Payment provision	Stock price times the number of shares.	Change in stock price (underlying) times number of shares (notional amount).
Initial investment	Investor pays full cost.	Initial investment is much less than full cost.
Settlement	Deliver stock to receive cash.	Receive cash equivalent, based on changes in stock price times the number of shares.

Derivatives Used for Hedging

LEARNING OBJECTIVE *6

Explain the accounting for hedges.

Flexibility in use and the low-cost features of derivatives relative to traditional financial instruments explain the popularity of derivatives. An additional use for derivatives is in risk management. For example, companies such as **Coca-Cola**, **ExxonMobil**, and **General Electric** borrow and lend substantial amounts in credit markets. In doing so, they are exposed to significant **interest rate risk**. That is, they face substantial risk that the fair values or cash flows of interest-sensitive assets or liabilities will change if interest rates increase or decrease. These same companies also have significant international operations. As such, they are also exposed to **exchange rate risk**—the risk that changes in foreign currency exchange rates will negatively impact the profitability of their international businesses.

- Companies can use derivatives to offset the negative impacts of changes in interest rates or foreign currency exchange rates.
- This use of derivatives is referred to as **hedging**.

GAAP established accounting and reporting standards for derivative financial instruments used in hedging activities. The FASB allows special accounting for two types of hedges—fair value and cash flow hedges.[25]

Fair Value Hedge

In a **fair value hedge**, a company uses a derivative to hedge (offset) the exposure to changes in the fair value of a recognized asset or liability or of an unrecognized commitment. In a perfectly hedged position, the gain or loss on the fair value of the derivative equals and offsets that of the hedged asset or liability.

To illustrate a fair value hedge, assume that on December 1, 2025, Hayward Tire Fabricators, Inc. holds an inventory of 1,000 tractor tires, with a cost of $200 per tire. Hayward has been building an inventory of tractor tires in anticipation of demand for these tires in the upcoming spring planting season. Hayward records the inventory on its balance sheet at $200,000 (1,000 × $200), using lower-of-FIFO-cost-or-net realizable value.

Illustration 16A.3 indicates how Hayward reports the tire inventory in its balance sheet at December 31, 2025, assuming none of the tires have been sold.

ILLUSTRATION 16A.3 Balance Sheet Presentation of Inventory

Hayward Tire Fabricators, Inc.
Balance Sheet (partial)
December 31, 2025

Current assets	
Inventory	$200,000

Hayward could benefit from an increase in the price of tires (based on realized gross profit on tire sales). But until it sells the tires, the company is exposed to the risk that the value of the tire inventory will decline. Hayward wishes to hedge its exposure to fair value declines for its tire inventory (the inventory is pledged as collateral for one of its bank loans).

[25] GAAP also addresses the accounting for certain foreign currency hedging transactions. In general, these transactions are special cases of the two hedges we discuss here. [10] Understanding of foreign currency hedging transactions requires knowledge related to consolidation of multinational entities, which is beyond the scope of this text.

To hedge this risk, Hayward locks in the value of its tire inventory on January 2, 2026, by purchasing a put option to sell rubber at a fixed price. Hayward designates the option as a fair value hedge of the tire inventory. This put option (which expires in two years) gives Hayward the option to sell 4,000 pounds of rubber at a price of $50 per pound, which is the current spot price for rubber in the market. Since the exercise price equals the current market price, no entry is necessary at inception of the put option.[26]

January 2, 2026

No entry required. A memorandum indicates the signing of the put option contract and its designation as a fair value hedge for the tire inventory.

At March 31, 2026, the fair value of the inventory has declined by 10%. Hayward records the following entry for the tire inventory.

March 31, 2026

Unrealized Holding Gain or Loss—Income ($200,000 × .10)	20,000	
Allowance to Reduce Inventory to Fair Value		20,000

Note that upon designation of the hedge, the accounting for the inventory fair value change deviates from regular GAAP.[27] That is, Hayward records an unrealized holding loss in income, even though it has not yet sold the inventory. **If Hayward had not followed this accounting, a mismatch of gains and losses in the income statement would result.** Thus, special accounting for the hedged item (in this case, the tire inventory) is necessary in a fair value hedge.

The following journal entry records the increase in value of the put option to sell rubber, assuming that the spot price for rubber declined by 10%.

March 31, 2026

Put Option	20,000	
Unrealized Holding Gain or Loss—Income		20,000

The decline in the spot price of rubber results in an increase in the fair value of the put option. That is, Hayward could realize a gain on the put option, by purchasing 4,000 pounds of rubber in the open market for $45 (.90 × $50), and then exercise the put option, selling the rubber for $50 per pound. This results in a gain to Hayward of $20,000 (4,000 pounds × $5).[28]

Illustration 16A.4 indicates how Hayward reports the amounts related to the Inventory and the put option.

Hayward Tire Fabricators. Inc.
Balance Sheet (partial)
March 31, 2026

Current assets	
Inventory (net of the allowance of $20,000)	$180,000
Put option	20,000

ILLUSTRATION 16A.4 Balance Sheet Presentation of Fair Value Hedge

As indicated, the increase in fair value on the option offsets or hedges the decline in value of Hayward's tire inventory.

[26]To simplify the example, we assume no premium is paid for the option. A put option on rubber is a good candidate for this hedge because the rubber raw material is the primary driver of fair value changes on tires.

[27]The accounting for inventory is discussed in Chapters 7 and 8. In this example, the inventory is not subject to a lower-of-cost-or-net realizable value assessment.

[28]In practice, Hayward generally does not have to actually buy and sell the rubber in the commodity market to realize this gain. Rather, unless the counterparty wants to hold the rubber, Hayward can "close out" the contract by having the counterparty pay it $20,000 in cash. This is an example of the net settlement feature of derivatives.

- By using fair value accounting for both the inventory and the put option, the financial statements reflect the underlying substance of Hayward's net exposure to the risks of holding the inventory.
- That is, the balance sheet reports the amount that Hayward would receive for the inventory and the put option contract if Hayward sold and settled them, respectively.

Illustration 16A.5 indicates the reporting of the effects of the hedging transaction on income for the quarter ended March 31, 2026.

ILLUSTRATION 16A.5 Income Statement Presentation of Fair Value Hedge

Hayward Tire Fabricators, Inc. Income Statement (partial) For the Quarter Ended March 31, 2026	
Other income	
Unrealized holding gain—put option	$20,000
Unrealized holding loss—inventory	(20,000)

The income statement indicates that the gain on the put option offsets the loss on the inventory.[29] The reporting for these financial instruments, even when they reflect a hedging relationship, illustrates why the FASB argues that fair value accounting provides the most relevant information about financial instruments, including derivatives.

Cash Flow Hedge

Companies use **cash flow hedges** to hedge exposures to **cash flow risk**, which results from the variability in cash flows. The FASB allows special accounting for cash flow hedges. Generally, companies measure and report derivatives at fair value on the balance sheet. They report gains and losses directly in net income.

- Companies account for derivatives used in cash flow hedges at fair value on the balance sheet.
- They **record gains or losses in equity**, **as part of other comprehensive income**.

To illustrate, assume that in September 2025, Allied Can Co. anticipates purchasing 1,000 metric tons of aluminum in January 2026. Concerned that prices for aluminum will increase in the next few months, Allied wants to hedge the risk that it might pay higher prices for inventory in January 2026. As a result, Allied enters into an aluminum futures contract.

A **futures contract** gives the holder the right and the obligation to purchase an asset at a preset price for a specified period of time.[30] In this case, the aluminum futures contract gives Allied the right and the obligation to purchase 1,000 metric tons of aluminum for $1,550 per ton. This contract price is good until the contract expires in January 2026. The underlying for this derivative is the price of aluminum. If the price of aluminum rises above $1,550, the value of the futures contract to Allied increases. Why? Because Allied will be able to purchase the aluminum at the lower price of $1,550 per ton.[31]

Allied enters into the futures contract on September 1, 2025. Assume that the price to be paid today for inventory to be delivered in January—the **spot price**—equals the contract price. With the two prices equal, the futures contract has no value. Therefore, no entry is necessary.

September 2025

No entry required. A memorandum indicates the signing of the futures contract.

[29]Note that the fair value changes in the option contract will not offset **increases** in the value of the Hayward inventory. Should the price of rubber increase above $50 per pound, Hayward would have no incentive to exercise the put option.

[30]A **futures contract** is a firm contractual agreement between a buyer and seller for a specified asset on a fixed date in the future which also trades on an exchange. The contract also has a standard specification so both parties know exactly what is being traded. A **forward** is similar but is not traded on an exchange and does not have standardized conditions.

[31]As with the earlier call option example, the actual aluminum does not have to be exchanged. Rather, the parties to the futures contract settle by paying the cash difference between the futures price and the price of aluminum on each settlement date.

At December 31, 2025, the price for January delivery of aluminum increases to $1,575 per metric ton. Allied makes the following entry to record the increase in the value of the futures contract.

December 31, 2025

Futures Contract	25,000	
Unrealized Holding Gain or Loss—Equity [($1,575 − $1,550) × 1,000 tons]		25,000

Allied reports the futures contract in the balance sheet as a current asset. It reports the gain on the futures contract as part of other comprehensive income.

- Since Allied has not yet purchased and sold the inventory, this gain arises from an **anticipated transaction**.
- In this type of transaction, **a company accumulates in equity gains or losses on the futures contract as part of other comprehensive income until the period in which it sells the inventory, thereby affecting earnings**.

In January 2026, Allied purchases 1,000 metric tons of aluminum for $1,575 and makes the following entry.[32]

January 2026

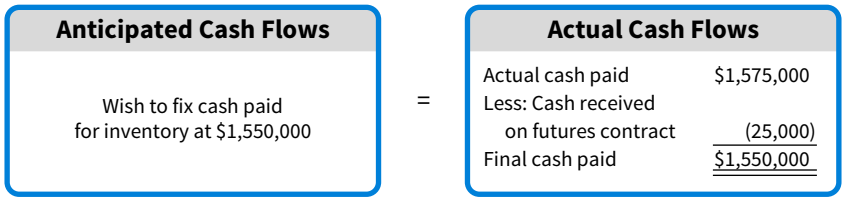
Aluminum Inventory	1,575,000	
Cash ($1,575 × 1,000 tons)		1,575,000

At the same time, Allied makes final settlement on the futures contract. It records the following entry.

January 2026

Cash	25,000	
Futures Contract ($1,575,000 − $1,550,000)		25,000

Through use of the futures contract derivative, Allied fixes the cost of its inventory. The $25,000 futures contract settlement offsets the amount paid to purchase the inventory at the prevailing market price of $1,575,000. The result: net cash outflow of $1,550 per metric ton, as desired. As **Illustration 16A.6** shows, Allied has therefore effectively hedged the cash flow for the purchase of inventory.



Anticipated Cash Flows
Wish to fix cash paid for inventory at $1,550,000
=
Actual Cash Flows
Actual cash paid $1,575,000
Less: Cash received on futures contract (25,000)
Final cash paid $1,550,000

ILLUSTRATION 16A.6 Effect of Hedge on Cash Flows

There are no income effects at this point. Allied accumulates in equity the gain on the futures contract as part of other comprehensive income until the period when it sells the inventory, affecting earnings through cost of goods sold.

For example, assume that Allied processes the aluminum into finished goods (cans). The total cost of the cans (including the aluminum purchases in January 2026) is $1,700,000. Allied sells the cans in July 2026 for $2,000,000, and records this sale as follows.

July 2026

Cash	2,000,000	
Sales Revenue		2,000,000
Cost of Goods Sold	1,700,000	
Inventory (cans)		1,700,000

[32]In practice, futures contracts are settled on a daily basis. For our purposes, we show only one settlement for the entire amount.

Since the effect of the anticipated transaction has now affected earnings, Allied makes the following entry related to the hedging transaction.

July 2026		
Unrealized Holding Gain or Loss—Equity	25,000	
Cost of Goods Sold		25,000

The gain on the futures contract, which Allied reported as part of other comprehensive income, now reduces cost of goods sold. As a result, the cost of aluminum included in the overall cost of goods sold is $1,550,000. The futures contract has worked as planned. Allied has managed the cash paid for aluminum inventory and the amount of cost of goods sold.

Other Reporting Issues

LEARNING OBJECTIVE *7

Identify special reporting issues related to derivative financial instruments that cause unique accounting problems.

The preceding examples illustrate the basic reporting issues related to the accounting for derivatives. Next, we discuss the following additional issues.

1. The accounting for embedded derivatives.
2. Qualifying hedge criteria.

Embedded Derivatives

As we indicated at the beginning of this appendix, rapid innovation in the development of complex financial instruments drove efforts toward unifying and improving the accounting standards for derivatives. In recent years, this innovation has led to the development of **hybrid securities**. These securities have characteristics of both debt and equity. They often combine traditional and derivative financial instruments.

For example, a convertible bond is a hybrid instrument. It consists of two parts:

1. A debt security, referred to as the **host security**.
2. An option to convert the bond to shares of common stock, the **embedded derivative**.

To provide consistency in accounting for similar derivatives, a company must account for embedded derivatives similarly to other derivatives.

Therefore, to account for an embedded derivative, a company **should separate it from the host security** and then account for it using the accounting for derivatives. This separation process is referred to as **bifurcation**.[33] Thus, a company investing in a convertible bond must separate the stock option component of the instrument. It then accounts for the derivative (the stock option) at fair value and the host instrument (the debt) according to GAAP, as if there were no embedded derivative.[34]

Qualifying Hedge Criteria

The FASB identified certain criteria that hedging transactions must meet before requiring the special accounting for hedges. The FASB designed these criteria to ensure the use of hedge

[33]A company can also designate such a derivative as a hedging instrument. The company would apply the hedge accounting provisions outlined earlier in the chapter.

[34]The issuer of the convertible bonds would not bifurcate the option component of the convertible bonds payable. GAAP explicitly precludes embedded derivative accounting for an embedded derivative that is indexed to a company's own common stock. If the conversion feature was tied to **another company's** stock, then the derivative would be bifurcated.

accounting in a consistent manner across different hedge transactions. The general criteria relate to the following areas.

1. **Documentation, risk management, and designation**. At inception of the hedge, there must be formal **documentation** of the hedging relationship, the company's **risk management** objective, and the strategy for undertaking the hedge. **Designation** refers to identifying the hedging instrument, the hedged item or transaction, the nature of the risk being hedged, and how the hedging instrument will offset changes in the fair value or cash flows attributable to the hedged risk.

   The FASB decided that documentation and designation are critical to the implementation of the special accounting for hedges. Without these requirements, companies might try to apply the hedge accounting provisions retroactively, only in response to negative changes in market conditions, to offset the negative impact of a transaction on the financial statements. Allowing special hedge accounting in such a setting could mask the speculative nature of the original transaction.

2. **Effectiveness of the hedging relationship.** At inception and on an ongoing basis, the hedging relationship should be **highly effective** in achieving offsetting changes in fair value or cash flows. Companies must assess effectiveness whenever preparing financial statements.

   The general guideline for effectiveness is that the fair values or cash flows of the hedging instrument (the derivative) and the hedged item exhibit a high degree of correlation. In practice, high effectiveness is assumed when the correlation is close to one (e.g., within plus or minus 10%). In our earlier hedging examples (put option and the futures contract on aluminum inventory), the fair values and cash flows are perfectly correlated. That is, when the cash payment for the inventory purchase increased, it offset, dollar for dollar, the cash received on the futures contract.

   If the effectiveness criterion is not met, either at inception or because of changes following inception of the hedging relationship, the FASB no longer allows special hedge accounting. The company should then account for the derivative as a free-standing derivative.[35]

3. **Effect on reported earnings of changes in fair values or cash flows**. A change in the fair value of a hedged item or variation in the cash flow of a hedged forecasted transaction must have the potential to change the amount recognized in reported earnings.[36] There is no need for special hedge accounting if a company accounts for both the hedging instrument and the hedged item at fair value under existing GAAP. In this case, earnings will properly reflect the offsetting gains and losses.

   For example, special accounting is not needed for a fair value hedge of a trading security, because a company accounts for both the investment and the derivative at fair value on the balance sheet with gains or losses reported in earnings. Thus, "special" hedge accounting is necessary only when there is a mismatch of the accounting effects for the hedging instrument and the hedged item under GAAP.[37]

Summary of Derivatives Accounting

Illustration 16A.7 summarizes the accounting provisions for derivatives and hedging transactions.

[35]That is, the accounting for the part of a derivative that is not effective in a hedge is at fair value, with gains and losses recorded in income.

[36]GAAP gives companies the option to measure most types of financial instruments—from equity investments to debt issued by the company—at fair value. Changes in fair value are recognized in net income each reporting period. Thus, GAAP provides companies with the opportunity to hedge their financial instruments without the complexity inherent in applying hedge accounting provisions. For example, if the fair value option is used, bifurcation of an embedded derivative is not required. **[11]**

[37]An important criterion specific to cash flow hedges is that the forecasted transaction in a cash flow hedge "is likely to occur." A company should support this probability (defined as significantly greater than the term "more likely than not") by observable facts such as frequency of similar past transactions and its financial and operational ability to carry out the transaction.

ILLUSTRATION 16A.7 Summary of Derivative Accounting Under GAAP

Derivative Use	Accounting for Derivative	Accounting for Hedged item	Common Example
Speculation	At fair value with unrealized holding gains and losses recorded in income.	Not applicable.	Call or put optionon an equity security.
Hedging—Fair value	At fair value with holding gains and losses recorded in income.	At fair value with gains and losses recorded in income.	Put option to hedge inventory.
Hedging—Cash flow	At fair value with unrealized holding gains and losses from the hedge recorded in other comprehensive income, and reclas sified in income when the hedged transac tion's cash flows affect earnings.	Use other GAAP for the hedged item.	Use of a futures contract to hedge a forecasted purchase of inventory.

As indicated, the general accounting for derivatives relies on fair values. GAAP also establishes special accounting guidance when companies use derivatives **for hedging purposes**. For example, when a company uses a put option to hedge price changes in inventory in a fair value hedge (see the Hayward example earlier), it records unrealized gains on the investment in earnings, which is not GAAP for inventory without such a hedge. This special accounting is justified in order to accurately report the nature of the hedging relationship in the balance sheet (recording both the put option and the inventory at fair value) and in the income statement (reporting offsetting gains and losses in the same period).

Special accounting also is used for cash flow hedges. Companies account for derivatives used in qualifying cash flow hedges at fair value on the balance sheet, but record unrealized holding gains or losses in other comprehensive income until selling or settling the hedged item. In a cash flow hedge, a company continues to record the hedged item at its historical cost.

Disclosure requirements for derivatives are complex. Recent pronouncements on fair value information and financial instruments provide a helpful disclosure framework for reporting derivative instruments. Appendix 16B illustrates many of these disclosures, except for discussion of hedging issues. In general, companies that have derivatives are required to disclose the objectives for holding or issuing those instruments (speculation or hedging), the hedging context (fair value or cash flow), and the strategies for achieving risk-management objectives.

Comprehensive Hedge Accounting Example

To provide a comprehensive example of hedge accounting, we examine the use of an interest rate swap. First, let's consider how swaps work and why companies use them.

Options and futures trade on organized securities exchanges. Because of this, options and futures have standardized terms. Although that standardization makes the trading easier, it limits the flexibility needed to tailor contracts to specific circumstances. In addition, most types of derivatives have relatively short time horizons, thereby excluding their use for reducing long-term risk exposure.

As a result, many corporations instead turn to the swap, a very popular type of derivative.

- A **swap** is a transaction between two parties in which the first party promises to make a payment to the second party. Similarly, the second party promises to make a simultaneous payment to the first party.
- The most common type of swap is the **interest rate swap**. In this type, one party makes payments based on a fixed or floating rate, and the second party does just the opposite. In most cases, large money-center banks bring together the two parties. These banks handle the flow of payments between the parties, as shown in **Illustration 16A.8**.

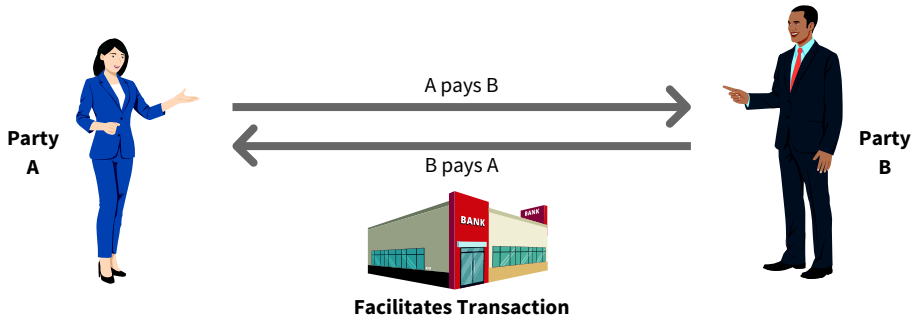


ILLUSTRATION 16A.8 Swap Transaction

Fair Value Hedge

To illustrate the use of a swap in a fair value hedge, assume that Jones Company issues $1,000,000 of five-year, 8% bonds on January 2, 2025. Jones records this transaction as follows.

January 2, 2025

Cash	1,000,000	
Bonds Payable		1,000,000

Jones offered a fixed interest rate to appeal to investors. But Jones is concerned that if market interest rates decline, the fair value of the liability will increase. The company will then suffer an economic loss.[38] To protect against the risk of loss, Jones hedges the risk of a decline in interest rates by entering into a five-year interest rate swap contract. Jones agrees to the following terms.

1. Jones will receive fixed payments at 8% (based on the $1,000,000 amount).
2. Jones will pay variable rates, based on the market rate in effect for the life of the swap contract. The variable rate at the inception of the contract is 6.8%.

As **Illustration 16A.9** shows, this swap allows Jones to change the interest on the bonds payable from a fixed rate to a variable rate.

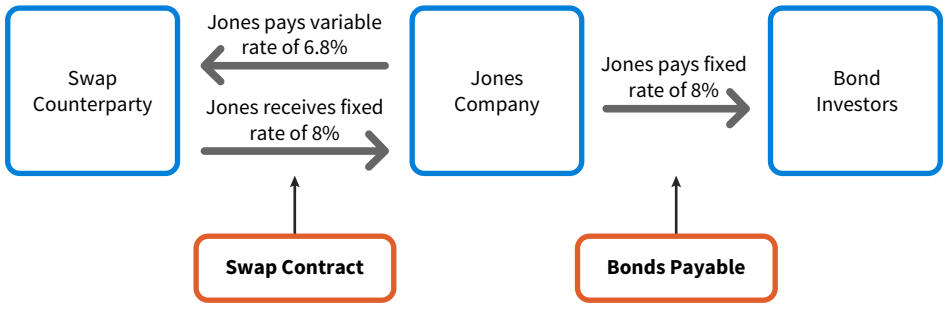

ILLUSTRATION 16A.9 Interest Rate Swap

The settlement dates for the swap correspond to the interest payment dates on the debt (December 31). On each interest payment (settlement) date, Jones and the counterparty compute the difference between current market interest rates and the fixed rate of 8%, and determine the value of the swap.[39] If interest rates decline, the value of the swap contract to Jones increases (Jones has a gain), while at the same time Jones's fixed-rate debt obligation increases (Jones has an economic loss).

[38]This economic loss arises because Jones is locked into the 8% interest payments even if rates decline.

[39]The underlying for an interest rate swap is some index of market interest rates. The most commonly used index is the London Interbank Offer Rate, or LIBOR. In this example, we assume the LIBOR is 6.8%.

The swap is an effective risk-management tool in this setting. Its value relates to the same underlying (interest rates) that will affect the value of the fixed-rate bond payable. Thus, if the value of the swap goes up, it offsets the loss related to the debt obligation.

Assuming that Jones enters into the swap on January 2, 2025 (the same date as the issuance of the debt), the swap at this time has no value. Therefore, no entry is necessary.

January 2, 2025

No entry required. A memorandum indicates the signing of the swap contract.

At the end of 2025, Jones makes the interest payment on the bonds. It records this transaction as follows.

December 31, 2025

Interest Expense	80,000	
Cash (.08 × $1,000,000)		80,000

At the end of 2025, market interest rates have declined substantially. Therefore, the value of the swap contract increases. Recall (see Illustration 16A.8) that in the swap, Jones receives a fixed rate of 8%, or $80,000 ($1,000,000 × .08), and pays a variable rate (6.8%), or $68,000. Jones therefore receives $12,000 ($80,000 − $68,000) as a settlement payment on the swap contract on the first interest payment date. Jones records this transaction as follows.

December 31, 2025

Cash	12,000	
Interest Expense		12,000

In addition, a market appraisal indicates that the value of the interest rate swap has increased $40,000. Jones records this increase in value as follows.[40]

December 31, 2025

Swap Contract	40,000	
Unrealized Holding Gain or Loss—Income		40,000

Jones reports this swap contract in the balance sheet. It reports the gain on the hedging transaction in the income statement. Because interest rates have declined, the company records a loss and a related increase in its liability as follows.

December 31, 2025

Unrealized Holding Gain or Loss—Income	40,000	
Bonds Payable		40,000

Jones reports the loss on the hedging activity in net income. It adjusts bonds payable in the balance sheet to fair value (which deviates from normal accounting at amortized cost).

Financial Statement Presentation of an Interest Rate Swap

Illustration 16A.10 indicates how Jones reports the asset and liability related to this hedging transaction on the balance sheet.

ILLUSTRATION 16A.10 Balance Sheet Presentation of Fair Value Hedge

Jones Company
Balance Sheet (partial)
December 31, 2025

Current assets	
Swap contract	$40,000
Long-term liabilities	
Bonds payable	$1,040,000

[40] Theoretically, this fair value change reflects the present value of expected future differences in variable and fixed interest rates.

The effect on Jones's balance sheet is the addition of the swap asset and an increase in the carrying value of the bonds payable. **Illustration 16A.11** indicates how Jones reports the effects of this swap transaction in the income statement.

ILLUSTRATION 16A.11 Income Statement Presentation of Fair Value Hedge

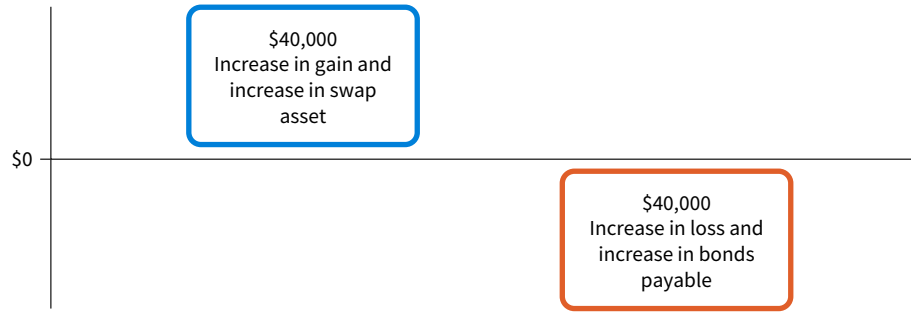
Jones Company
Income Statement (partial)
For the Year Ended December 31, 2025

Interest expense ($80,000 − $12,000)		$68,000
Other income		
Unrealized holding gain—swap contract	$ 40,000	
Unrealized holding loss—bonds payable	(40,000)	
Net gain (loss)		–0–

On the income statement, Jones reports interest expense of $68,000. Jones has effectively changed the debt's interest rate from fixed to variable. That is, by receiving a fixed rate and paying a variable rate on the swap, the company converts the fixed rate on the bond payable to variable. This results in an effective-interest rate of 6.8% in 2025.[41] Also, the gain on the swap offsets the loss related to the debt obligation. Therefore, the net gain or loss on the hedging activity is zero.

Illustration 16A.12 shows the overall impact of the swap transaction on the financial statements.

ILLUSTRATION 16A.12 Impact on Financial Statements of Fair Value Hedge



In summary, to account for fair value hedges (as illustrated in the Jones example) **record the derivative at its fair value in the balance sheet, and record any gains and losses in income**. Thus, the gain on the swap offsets or hedges the loss on the bond payable, due to the decline in interest rates.

By adjusting the hedged item (the bond payable in the Jones case) to fair value, with the gain or loss recorded in earnings, the accounting for the Jones bond payable deviates from amortized cost. This special accounting is justified in order to report accurately the nature of the hedging relationship between the swap and the bond payable in the balance sheet (both the swap and the debt obligation are recorded at fair value) and in the income statement (offsetting gains and losses are reported in the same period).[42]

[41] Jones will apply similar accounting and measurement at future interest payment dates. Thus, if interest rates increase, Jones will continue to receive 8% on the swap (records a loss) but will also be locked into the fixed payments to the bondholders at an 8% rate (records a gain).

[42] An interest rate swap can also be used in a cash flow hedge. A common setting is the cash flow risk inherent in having variable rate debt as part of a company's debt structure. In this situation, the variable debt issuer can hedge the cash flow risk by entering into a swap contract to receive variable rate cash flows but pay fixed rate. The cash received on the swap contract will offset the variable cash flows to be paid on the debt obligation.

Controversy and Concluding Remarks

Companies need rules to properly measure and report derivatives in financial statements. However, some argue that reporting derivatives at fair value results in unrealized gains and losses that are difficult to interpret. Others raise concerns about the complexity and cost of implementing GAAP in this area.

However, we believe that the long-term benefits of reporting derivatives at fair value far outweigh any implementation costs. As the volume and complexity of derivatives and hedging transactions continue to grow, so does the risk that investors and creditors will be exposed to unexpected losses arising from derivative transactions. Statement readers must have comprehensive information concerning many derivative financial instruments and the effects of hedging transactions using derivatives.

APPENDIX **16B**

Fair Value Disclosures

LEARNING OBJECTIVE *8

Describe required fair value disclosures.

As indicated in the chapter, the FASB believes that fair value information is relevant for making effective business decisions. However, others express concern about fair value measurements for two reasons:

1. The lack of reliability related to the fair value measurement in certain cases.
2. The ability to manipulate fair value measurements to achieve financial results inconsistent with the underlying economics of the situation.

The Board recognizes these concerns and has attempted to develop a sound conceptual basis for measuring and reporting fair value information.

In addition, the Board has placed emphasis on developing guidelines for reporting fair value information for financial instruments because many of these instruments have relatively active markets for which valuations can be reliably determined. The purpose of this appendix is to explain the disclosure requirements for financial instruments related to fair value information.

Disclosure of Fair Value Information: Financial Instruments

One requirement related to fair value disclosure is that both the cost and the fair value of all financial instruments be reported in the notes to the financial statements. [12] This enables readers of the financial statements to understand the fair value of the company's financial instruments and the potential gains and losses that might occur in the future as a result of these instruments.

The Board also decided that companies should disclose information that enables users to determine the extent of usage of fair value and the inputs used to implement fair value

measurement. Two reasons for additional disclosure beyond the simple itemization of fair values are:

1. **Differing levels of reliability exist in the measurement of fair value information**. It therefore is important to understand the varying risks involved in measurement. It is difficult to incorporate these levels of uncertainty into the financial statements. Disclosure provides a framework for addressing the qualitative aspects related to risk and measurement.
2. **Changes in the fair value of financial instruments are reported differently in the financial statements, depending on the type of financial instrument involved and whether the fair value option is employed.** Note disclosure provides an opportunity to explain more precisely the impact that changes in the value of financial instruments have on financial results. In assessing the inputs, the Board recognizes that the reliability of the fair value measurement is of extreme importance. Many financial instruments are traded in active markets, and their valuation is not difficult. Other instruments are complex/illiquid, and their valuation is difficult.

To highlight these levels of reliability in valuation, the FASB established a fair value hierarchy. As discussed in Chapter 1, this hierarchy identifies three broad levels—1, 2, and 3—related to the measurement of fair values.

- Level 1 is the most reliable measurement because fair value is based on quoted prices in active markets **for identical assets or liabilities**.
- Level 2 is less reliable; it is not based on quoted market prices for identical assets and liabilities but instead may be based on **similar assets or liabilities**.
- Level 3 is least reliable; it uses unobservable inputs that reflect the company's assumption as to the value of the financial instrument.

Illustration 16B.1 is an example of a fair value note disclosure for Sabathia Company. It includes both the fair value amounts and the reliability level. (A similar disclosure would be presented for liabilities.)

ILLUSTRATION 16B.1 Example of Fair Value Hierarchy

Sabathia Company
Notes to the Financial Statements

($ in 000s)	Fair Value Measurements at Reporting Data Using			
Description	Fair Value 12/31/25	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable inputs (Level 2)	Significant Unobservable inputs (Level 3)
Trading securities	$115	$105	$10	
Available-for-sale securities	75	75		
Derivatives	60	25	15	$20
Venture capital investments	10			10
Total	$260	$205	$25	$30

For assets and liabilities measured at fair value and classified as Level 3, a reconciliation of Level 3 changes for the period is required. In addition, companies should report an analysis of how Level 3 changes in fair value affect total gains and losses and their impact on net income. **Illustration 16B.2** is an example of this disclosure.

ILLUSTRATION 16B.2
Reconciliation of Level 3 Inputs

Sabathia Company
Notes to the Financial Statements

($ in 000s)	Fair Value Measurements Using Significant Unobservable Input (Level 3)		
	Derivatives	Venture Capital Investments	Total
Beginning balance	$14	$11	$25
Total gains or losses (realized/unrealized)			
Included in earnings (or changes in net assets)	11	(3)	8
Included in other comprehensive income	4		4
Purchases, issuances, and settlements	(7)	2	(5)
Transfers in and/or out of Level 3	(2)		(2)
Ending balance	$20	$10	$30
The amount or total gains or losses for the period included in earnings (or changes in net assets) attributable to the change in unrealized gains or losses relating to assets still held at the reporting date	$7	$2	$9

Gains and losses (realized and unrealized) included in earnings (or changes in net assets) for the period (above) are reported in trading revenues and in other revenues as follows.

	Trading Revenues	Other Revenues
Total gains or losses included in earnings (or changes in net assets) for the period (as shown in the table above)	$11	$(3)
Change in unrealized gains or losses relating to assets still held at reporting date	$7	$2

Sabathia Company's disclosure provides to the user of the financial statements an understanding of the following.

1. The carrying amount and the fair value of the company's financial instruments segregated by level of reliability. Thus, the reader of the financial statements has a basis for judging what credence should be given to the fair value amounts.
2. For Level 3 financial instruments, a reconciliation of the balance from the beginning to the end of the period. This reconciliation enables the reader to understand the composition of the change. It is important because these calculations are most affected by subjective estimates and could be subject to manipulation.
3. The impact of changes in fair value on the net assets of the company from one period to the next.

For companies that choose to use the **fair value option** for some or all of their financial instruments [13], they are permitted to incorporate the entire guidelines related to fair value measurement into one master schedule, or they can provide in a separate schedule information related solely to the fair value option.

Finally, companies must provide the following (with special emphasis on Level 3 measurements):

1. Quantitative information about significant unobservable inputs used for all Level 3 measurements.
2. A qualitative discussion about the sensitivity of recurring Level 3 measurements to changes in the unobservable inputs disclosed, including interrelationships between inputs.
3. Any transfers between Levels 1 and 2 of the fair value hierarchy.
4. Information about nonfinancial assets measured at fair value at amounts that differ from the assets' highest and best use.
5. The proper hierarchy classification for items that are not recognized on the balance sheet but are disclosed in the notes to the financial statements.

A typical disclosure related to Level 3 fair value measurements is presented in Illustration 16B.3.

ILLUSTRATION 16B.3 Quantitative Information about Level 3 Fair Value Measurements

($ in millions)	Fair Value at 12/31/2025	Valuation Technique(s)	Unobservable Input	Range (Weighted-Average)
Residential mortgage-backed securities	125	Discounted cash flow	Constant prepayment rate Probability of default Loss severity	3.5%–5.5% (4.5%) 5%–50% (10%) 40%–100% (60%)
Collateralized debt obligations	35	Consensus pricing	Offered quotes Comparability adjustments (%)	20–45 −10%–+15% (+5%)
Direct venture capital investments: Healthcare	53	Discounted cash flow	Weighted-average cost of capital Long term revenue growth rate Long term pretax operating margin Discount for lack of marketability[a] Control premium[a]	7%–16% (12.1%) 2%–5% (4.2%) 3%–20% (10.3%) 5%–20% (17%) 10%–30% (20%)
		Market-comparable companies	EBITDA multiple[b] Revenue multiple[b] Discount for lack of marketability[a] Control premium[a]	6.5–12 (9.5) 1.0–3.0 (2.0) 5%–20% (10%) 10%–20% (12%)
Credit contracts	38	Option model	Annualized volatility of credit[c] Counterparty credit risk[d] Own credit risk[d]	10%–20% 0.5%–3.5% 0.3%–2.0%

[a]Represents amounts used when the reporting entity has determined that market participants would take into account these premiums and discounts when pricing the investments.
[b]Represents amounts used when the reporting entity has determined that market participants would use such multiples when pricing the investments.
[c]Represents the range of the volatility curves used in the valuation analysis that the reporting entity has determined market participants would use when pricing the contracts.
[d]Represents the range of the credit default swap spread curves used in the valuation analysis that the reporting entity has determined market participants would use when pricing the contracts.
(**Note:** For liabilities, a similar table should be presented.)

Disclosure of Fair Values: Impaired Assets or Liabilities

In addition to financial instruments, companies often have assets or liabilities that are remeasured on a nonrecurring basis due to impairment. In this case, the fair value hierarchy can highlight the reliability of the measurement, coupled with the related gain or loss for the period. Illustration 16B.4 highlights this disclosure for McClung Company.

McClung Company
Notes to the Financial Statements

($ in millions)	Fair Value Measurements Using			
Description	Year Ended 12/31/25	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Long lived assets held and used	$75	–	$75	–
Goodwill	30	–	–	$30
Long-lived assets held for sale	26	–	26	–

Long-lived assets held and used with a carrying amount of $100 million were written down to their fair value of $75 million, resulting in an impairment charge of $25 million, which was included in earnings for the period.

Goodwill with a carrying amount of $65 million was written down, resulting in an impairment charge of $35 million, which was included in earnings for the period.

In accordance with the provisions of the impairment or Disposal of Long-Lived Assets Subsections of FASB Codification Subtopic 360-10, long lived assets held for sale with a carrying amount of $35 million were written down to their fair value of $26 million, less cost to sell of $6 million (or $20 million), resulting in a loss of $15 million, which was included in earnings for the period.

ILLUSTRATION 16B.4 Disclosure of Fair Value, with Impairment

Conclusion

With recent joint FASB and IASB standard-setting efforts, we now have convergence with respect to fair value measurement, both in terms of the definition and measurement guidelines when fair value is the measurement approach in GAAP and IFRS. In addition, GAAP and IFRS have similar fair value disclosure requirements, as illustrated in this appendix. As the former chair of the IASB noted, this "marks the completion of a major convergence project and is a fundamentally important element of our joint response to the global crisis. The result is clearer and more consistent guidance on measuring fair value, where its use is already required."[43]

Learning Objectives Review

1 Describe the accounting for investments in debt securities.

(1) Carry and report **held-to-maturity debt securities** at amortized cost. (2) Value **trading debt securities** for reporting purposes at fair value, with unrealized holding gains or losses included in net income. (3) Value **available-for-sale debt securities** for reporting purposes at fair value, with unrealized holding gains or losses reported as other comprehensive income and as a separate component of stockholders' equity.

2 Describe the accounting for investments in equity securities.

The degree to which one corporation (investor) acquires an interest in the common stock of another corporation (investee) generally determines the accounting treatment for the investment. Long-term investments by one corporation in the common stock of another can be classified according to the percentage of the voting stock of the investee held by the investor.

[43]The FASB continues to evaluate standards to improve existing disclosure requirements related to fair value measurement. For example, in Accounting Standards Update (ASU 2016-01), the FASB requires separate presentation of financial assets and financial liabilities by measurement category and form of financial asset (e.g., securities or loans and receivables) on the balance sheet or in the accompanying notes to the financial statements.

3 Explain the equity and consolidation methods of accounting.

Under the **equity method**, the investor and the investee acknowledge a substantive economic relationship. The company originally records the investment at cost but subsequently adjusts the amount each period for changes in the net assets of the investee. That is, the investor's proportionate share of the earnings (losses) of the investee periodically increases (decreases) the investment's carrying amount. All dividends received by the investor from the investee decrease the investment's carrying amount.

Under the **fair value method**, a company reports the equity investment at fair value each reporting period irrespective of the investee's earnings or dividends paid to it. A company applies the equity method to investment holdings between 20% and 50% of ownership. It applies the fair value method to holdings below 20%. Equity investments with holdings greater than 50% are accounted for using consolidation procedures.

4 Evaluate other major issues related to investments in debt and equity securities.

Fair value option. Companies have the option to report most financial instruments at fair value, with all gains and losses related to changes in fair value reported in the income statement. This option is applied on an instrument-by-instrument basis. The fair value option is generally available only at the time a company first purchases the financial asset or incurs a financial liability. If a company chooses to use the fair value option, it must measure this instrument at fair value until the company no longer has ownership.

Impairments. Refer to Illustration 16.17 for a summary of the guidelines related to impairments.

Reclassifications. A company needs a reclassification adjustment when it reports realized gains or losses as part of net income but also shows the amounts as part of other comprehensive income in the current or in previous periods. Companies should report unrealized holding gains or losses related to available-for-sale securities in other comprehensive income and the aggregate balance as accumulated comprehensive income on the balance sheet.

Transfers. Transfers of securities between categories of investments should be accounted for at fair value, with unrealized holding gains or losses treated in accordance with the nature of the transfer.

*5 Describe the uses of and accounting for derivatives.

Any company or individual that wants to protect against different types of business risks may use derivative contracts to achieve this objective. In general, these transactions involve some type of hedge. Speculators also use derivatives, attempting to find an enhanced return. Speculators are very important to the derivatives market because they keep it liquid on a daily basis. Arbitrageurs attempt to exploit inefficiencies in various derivative contracts. A company primarily uses derivatives for purposes of hedging its exposure to fluctuations in interest rates, foreign currency exchange rates, and commodity prices.

Companies should recognize derivatives in the financial statements as assets and liabilities, and report them at fair value. Companies should recognize gains and losses resulting from speculation immediately in income. They report gains and losses resulting from hedge transactions in different ways, depending on the type of hedge.

Companies report derivative financial instruments in the balance sheet and record them at fair value. Except for derivatives used in cash flow hedges, companies record realized and unrealized gains and losses on derivative financial instruments in income.

*6 Explain the accounting for hedges.

Fair value hedges. A company records the derivative used in a qualifying fair value hedge at its fair value in the balance sheet, recording any gains and losses in income. In addition, the company also accounts for the item being hedged with the derivative at fair value. By adjusting the hedged item to fair value, with the gain or loss recorded in earnings, the accounting for the hedged item may deviate from GAAP in the absence of a hedge relationship. This special accounting is justified in order to report accurately the nature of the hedging relationship between the derivative hedging instruments and the hedged item. A company reports both in the balance sheet, reporting offsetting gains and losses in income in the same period.

Cash flow hedge. Companies account for derivatives used in qualifying cash flow hedges at fair value on the balance sheet, but record gains or losses in equity as part of other comprehensive income. Companies accumulate these gains or losses, and reclassify them in income when the hedged transaction's cash flows affect earnings. Accounting is according to GAAP for the hedged item.

*7 Identify special reporting issues related to derivative financial instruments that cause unique accounting problems.

A company should separate a derivative that is embedded in a hybrid security from the host security and account for it using the accounting for derivatives. This separation process is referred to as **bifurcation**. Special hedge accounting is allowed only for hedging relationships that meet certain criteria. The main criteria are as follows. (1) There is formal documentation of the hedging relationship, the company's risk-management objective, and the strategy for undertaking the hedge, and the company designates the derivative as either a cash flow or fair value hedge. (2) The company expects the hedging relationship to be highly effective in achieving offsetting changes in fair value or cash flows. (3) "Special" hedge accounting is necessary only when there is a mismatch of the accounting effects for the hedging instrument and the hedged item under GAAP.

*8 Describe required fair value disclosures.

The FASB has developed required fair value disclosures in response to concerns about the reliability of fair value measures. Disclosure elements include fair value amounts and reliability levels as well as impaired assets or liabilities.

Enhanced Review and Practice

Go to Wiley Course Resources for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Exercises, Problems, Problem Solution Walkthrough Videos, Data Analytics Activities, and many more assessment tools and resources are available for practice in Wiley Course Resources.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

Questions

1. Distinguish between a debt security and an equity security.

2. What purpose does the variety in bond features (types and characteristics) serve?

3. What is the cost of a long-term investment in bonds?

4. Identify and explain the three types of classifications for investments in debt securities.

5. When should a debt security be classified as held-to-maturity?

6. Explain how trading debt securities are accounted for and reported.

7. At what amount should trading, available-for-sale, and held-to-maturity debt securities be reported on the balance sheet?

8. On July 1, 2025, Wheeler Company purchased $4,000,000 of Duggen Company's 8% bonds, due on July 1, 2032. The bonds, which pay interest semiannually on January 1 and July 1, were purchased for $3,500,000 to yield 10%. Determine the amount of interest revenue Wheeler should report on its income statement for the year ended December 31, 2025.

9. If the bonds in Question 8 are classified as available-for-sale and they have a fair value at December 31, 2025, of $3,604,000, prepare the journal entry (if any) at December 31, 2025, to record this transaction.

10. Indicate how unrealized holding gains and losses should be reported for debt investments classified as trading, available-for-sale, and held-to-maturity.

11. (a) Assuming no Fair Value Adjustment account balance at the beginning of the year, prepare the adjusting entry at the end of the year if Laura Company's available-for-sale debt securities have a fair value $60,000 below cost. (b) Assume the same information as part (a), except that Laura Company has a debit balance in its Fair Value Adjustment account of $10,000 at the beginning of the year. Prepare the adjusting entry at year-end.

12. Identify and explain the different types of classifications for investments in equity securities.

13. Why are held-to-maturity investments applicable only to debt securities?

14. Hayes Company sold 10,000 shares of Kenyon Co. common stock for $27.50 per share, incurring $1,770 in brokerage commissions. These securities originally cost $260,000. Prepare the entry to record the sale of these securities.

15. Distinguish between the accounting treatment for marketable versus nonmarketable equity securities.

16. What constitutes "significant influence" when an investor's financial interest is below the 50% level?

17. Explain how the investment account is affected by investee activities under the equity method.

18. Your classmate Kate believes that the equity method is applied with a strict application of the "20%" rule. Do you agree? Explain.

19. Hiram Co. uses the equity method to account for investments in common stock. What accounting should be made for dividends received from these investments subsequent to the date of investment?

20. Raleigh Corp. has an investment with a carrying value (equity method) on its books of $170,000 representing a 30% interest in Borg Company, which suffered a $620,000 loss this year. How should Raleigh Corp. handle its proportionate share of Borg's loss?

21. Where on the asset side of the balance sheet are debt investments classified as trading securities, available-for-sale securities, and held-to-maturity securities reported? Explain.

22. Explain why reclassification adjustments are necessary.

23. Briefly discuss how a transfer of securities from the available-for-sale category to the trading category affects stockholders' equity and income.

24. Explain how to account for the impairment of a held-to-maturity debt security.

25. Explain how to account for the impairment of an available-for-sale debt investment.

26. What is the GAAP definition of fair value?

27. What is the fair value option?

28. Franklin Corp. has a debt investment that it has held for several years. When it purchased the debt investment, Franklin classified and accounted for it as available-for-sale. Can Franklin use the fair value option for this investment? Explain.

***29.** What is meant by the term "underlying" as it relates to derivative financial instruments?

***30.** What are the main distinctions between a traditional financial instrument and a derivative financial instrument?

***31.** What is the purpose of a fair value hedge?

***32.** In what situation will the unrealized holding gain or loss on inventory be reported in income?

***33.** Why might a company become involved in an interest rate swap contract to receive fixed interest payments and pay variable?

***34.** What is the purpose of a cash flow hedge?

***35.** Where are gains and losses related to cash flow hedges involving anticipated transactions reported?

***36.** What are hybrid securities? Give an example of a hybrid security.

Brief Exercises

BE16.1 (LO 1) Garfield Company purchased, on January 1, 2025, as a held-to-maturity investment, $80,000 of the 9%, 5-year bonds of Chester Corporation for $74,086, which provides an 11% return. Prepare Garfield's journal entries for (a) the purchase of the investment, and (b) the receipt of annual interest and discount amortization. Assume effective-interest amortization is used.

BE16.2 (LO 1) Use the information from BE16.1 but assume the bonds are purchased as an available-for-sale security. Prepare Garfield's journal entries for (a) the purchase of the investment, (b) the receipt of annual interest and discount amortization, and (c) the year-end fair value adjustment. (Assume a zero balance in the Fair Value Adjustment account.) The bonds have a year-end fair value of $75,500.

BE16.3 (LO 1) Carow Corporation purchased on January 1, 2025, as a held-to-maturity investment, $60,000 of the 8%, 5-year bonds of Harrison, Inc. for $65,118, which provides a 6% return. The bonds pay interest semiannually. Prepare Carow's journal entries for (a) the purchase of the investment, and (b) the receipt of semiannual interest and premium amortization. Assume effective-interest amortization is used.

BE16.4 (LO 1) Hendricks Corporation purchased trading investment bonds for $50,000 at par. At December 31, Hendricks received annual interest of $2,000, and the fair value of the bonds was $47,400. Prepare Hendricks' journal entries for (a) the purchase of the investment, (b) the interest received, and (c) the fair value adjustment. (Assume a zero balance in the Fair Value Adjustment account.)

BE16.5 (LO 2) Fairbanks Corporation purchased 400 shares of Sherman Inc. common stock for $13,200 (Fairbanks does not have significant influence). During the year, Sherman paid a cash dividend of $3.25 per share. At year-end, Sherman stock was selling for $34.50 per share. Prepare Fairbanks' journal entries to record (a) the purchase of the investment, (b) the dividends received, and (c) the fair value adjustment. (Assume a zero balance in the Fair Value Adjustment account.)

BE16.6 (LO 2) Use the information from BE16.5 but assume the stock is nonmarketable. Prepare Fairbanks' journal entries to record (a) the purchase of the investment, (b) the dividends received, and (c) the fair value adjustment, if any.

BE16.7 (LO 3) Zoop Corporation purchased for $300,000 a 30% interest in Murphy, Inc. This investment enables Zoop to exert significant influence over Murphy. During the year, Murphy earned net income of $180,000 and paid dividends of $60,000. Prepare Zoop's journal entries related to this investment.

BE16.8 (LO 2) Cleveland Company has a stock portfolio valued at $4,000. Its cost was $3,300. If the Fair Value Adjustment account has a debit balance of $200, prepare the journal entry at year-end.

BE16.9 (LO 2, 4) The following information relates to Moran Co. for the year ended December 31, 2025: net income $1,245.7 million; unrealized holding loss of $10.9 million related to available-for-sale debt securities during the year; accumulated other comprehensive income of $57.2 million on December 31, 2024. Assuming no other changes in accumulated other comprehensive income, determine (a) other comprehensive income for 2025, (b) comprehensive income for 2025, and (c) accumulated other comprehensive income at December 31, 2025.

BE16.10 (LO 4) Hillsborough Co. has a held-to-maturity investment in the bonds of Schuyler Corp. with a carrying value of $70,000. Hillsborough determined that due to poor economic prospects for Schuyler, the bonds have decreased in value to $60,000. It is determined that this loss in value is uncollectible. Prepare the journal entry, if any, to record the reduction in value.

BE16.11 (LO 4) Presented below are two independent cases related to available-for-sale debt investments.

	Case 1	Case 2
Amortized cost	$40,000	$100,000
Fair value	30,000	110,000
Expected credit losses	25,000	92,000

For each case, determine the amount of impairment loss, if any.

BE16.12 (LO 4) Stave Company invests $10,000,000 in 5% fixed rate corporate bonds on January 1, 2025. All the bonds are classified as available-for-sale and are purchased at par. At year-end, market interest rates have declined, and the fair value of the bonds is now $10,600,000. Interest is paid on January 1. Prepare journal entries for Stave Company to (a) record the transactions related to these bonds in 2025, assuming Stave does not elect the fair option; and (b) record the transactions related to these bonds in 2025, assuming that Stave Company elects the fair value option to account for these bonds.

BE16.13 (LO 4) Michek Company loans Sarasota Company $2,000,000 at 6% for 3 years on January 1, 2025. Michek intends to hold this loan to maturity and has the financial ability to do so. The fair value of the loan at the end of each reporting period is as follows.

December 31, 2025	$2,050,000
December 31, 2026	2,020,000
December 31, 2027	2,000,000

Prepare the journal entry (entries) at December 31, 2025, and December 31, 2027, for Michek related to these bonds, assuming (a) it does not use the fair value option, and (b) it uses the fair value option. Interest is paid on January 1.

Exercises

E16.1 (LO 1, 2) (Investment Classifications) For the following investments, identify whether they are:

1. Trading debt securities.
2. Available-for-sale debt securities.
3. Held-to-maturity debt securities.
4. None of the above.

Each case is independent of the other.

a. A bond that will mature in 4 years was bought 1 month ago when the price dropped. As soon as the value increases, which is expected next month, it will be sold.

b. 10% of the outstanding stock of Farm-Co was purchased. The company is planning on eventually getting a total of 30% of its outstanding stock.

c. Bonds were purchased in December of this year. The bonds are expected to be sold in January of next year.

d. Bonds that will mature in 5 years are purchased. The company would like to hold them until they mature, but money has been tight recently and they may need to be sold.

e. Preferred stock was purchased for its constant dividend. The company is planning to hold the preferred stock for a long time.

f. A bond that matures in 10 years was purchased. The company has committed the money for an expansion project planned 10 years from now.

E16.2 (LO 1) Excel (Entries for Held-to-Maturity Securities) On January 1, 2025, Dagwood Company purchased at par 6% bonds having a maturity value of $300,000. They are dated January 1, 2025, and mature January 1, 2030, with interest received on January 1 of each year. The bonds are classified in the held-to-maturity category.

Instructions

a. Prepare the journal entry at the date of the bond purchase.

b. Prepare the journal entry to record the interest revenue on December 31, 2025.

c. Prepare the journal entry to record the interest received on January 1, 2026.

E16.3 (LO 1) (Entries for Held-to-Maturity Securities) On January 1, 2025, Hi and Lois Company purchased 12% bonds having a maturity value of $300,000 for $322,744.44. The bonds provide the bondholders with a 10% yield. They are dated January 1, 2025, and mature January 1, 2030, with interest received on January 1 of each year. Hi and Lois Company uses the effective-interest method to allocate unamortized discount or premium. The bonds are classified in the held-to-maturity category.

Instructions

a. Prepare the journal entry at the date of the bond purchase.

b. Prepare a bond amortization schedule.

c. Prepare the journal entry to record the interest revenue and the amortization at December 31, 2025.

d. Prepare the journal entry to record the interest revenue and the amortization at December 31, 2026.

E16.4 (LO 1) (Entries for Available-for-Sale Securities) Assume the same information as in E16.3 except that the securities are classified as available-for-sale. The fair value of the bonds at December 31 of each year-end is as follows.

2025	$320,500	2028	$310,000
2026	$309,000	2029	$300,000
2027	$308,000		

Instructions

a. Prepare the journal entry at the date of the bond purchase.

b. Prepare the journal entries to record the interest revenue and recognition of fair value for 2025.

c. Prepare the journal entry to record the recognition of fair value for 2026.

E16.5 (LO 1) Excel **(Effective-Interest versus Straight-Line Bond Amortization)** On January 1, 2025, Phantom Company acquires $200,000 of Spiderman Products, Inc., 9% bonds at a price of $185,589. Interest is received on January 1 of each year, and the bonds mature on January 1, 2028. The investment will provide Phantom Company a 12% yield. The bonds are classified as held-to-maturity.

Instructions

a. Prepare a 3-year schedule of interest revenue and bond discount amortization, applying the straight-line method.

b. Prepare a 3-year schedule of interest revenue and bond discount amortization, applying the effective-interest method.

c. Prepare the journal entry for the interest revenue and discount amortization under the straight-line method at December 31, 2026.

d. Prepare the journal entry for the interest revenue and discount amortization under the effective-interest method at December 31, 2026.

E16.6 (LO 2) **(Entries for Equity Securities)** The following information is available for Barkley Company at December 31, 2025, regarding its investments.

Securities	Cost	Fair Value
3,000 shares of Myers Corporation common stock	$40,000	$48,000
1,000 shares of Cole Incorporated preferred stock	25,000	22,000
	$65,000	$70,000

Instructions

a. Prepare the adjusting entry (if any) for 2025, assuming no balance in the Fair Value Adjustment account at January 1, 2025. Neither of Barkley's investments result in significant influence.

b. Discuss how the amounts reported in the financial statements are affected by the entries in (a).

E16.7 (LO 2) **(Equity Securities Entries)** On December 21, 2025, Bucky Katt Company provided you with the following information regarding its equity investments.

Investments	Cost	Fair Value	Unrealized Gain (Loss)
Clemson Corp. stock	$20,000	$19,000	$(1,000)
Colorado Co. stock	10,000	9,000	(1,000)
Buffaloes Co. stock	20,000	20,600	600
Total of portfolio	$50,000	$48,600	(1,400)
Previous fair value adjustment balance			–0–
Fair value adjustment—Cr.			$(1,400)

During 2026, Colorado Co. stock was sold for $9,400. The fair value of the stock on December 31, 2026, was Clemson Corp. stock—$19,100; Buffaloes Co. stock—$20,500. None of the equity investments result in significant influence.

Instructions

a. Prepare the adjusting journal entry needed on December 31, 2025.

b. Prepare the journal entry to record the sale of the Colorado Co. stock during 2026.

c. Prepare the adjusting journal entry needed on December 31, 2026.

E16.8 (LO 2) **(Equity Securities Entries and Reporting)** Satchel Corporation purchases equity securities costing $73,000. At December 31, the fair value of the portfolio is $65,000.

Instructions

Prepare the adjusting entry to report the securities properly, assuming that the investments purchased represent less than a 5% interest in the other companies. Indicate the statement presentation of the accounts in your entry.

E16.9 (LO 1) (Available-for-Sale Debt Securities Entries and Financial Statement Presentation) At December 31, 2025, the available-for-sale debt portfolio for Steffi Graf, Inc. is as follows.

Security	Cost	Fair Value	Unrealized Gain (Loss)
A	$17,500	$15,000	($2,500)
B	12,500	14,000	1,500
C	23,000	25,500	2,500
Total	$53,000	$54,500	1,500
Previous fair value adjustment balance—Dr.			400
Fair value adjustment—Dr.			$1,100

On January 20, 2026, Steffi Graf, Inc. sold security A for $15,100. The sale proceeds are net of brokerage fees.

Instructions

a. Prepare the adjusting entry at December 31, 2025, to report the portfolio at fair value.

b. Show the balance sheet presentation of the investment-related accounts at December 31, 2025 (Ignore notes presentation.)

c. Prepare the journal entry for the 2026 sale of security A.

E16.10 (LO 4) (Comprehensive Income Disclosure) Assume the same information as E16.9 and that Steffi Graf, Inc. reports net income in 2025 of $120,000 and in 2026 of $140,000. Unrealized holding gains or losses equal $40,000 in 2026.

Instructions

a. Prepare a statement of comprehensive income for 2025, starting with net income.

b. Prepare a statement of comprehensive income for 2026, starting with net income.

E16.11 (LO 2) (Equity Securities Entries) Aranda Corporation made the following cash purchases of securities during 2025, which is the first year in which Aranda invested in securities.

1. On January 15, purchased 10,000 shares of Sanchez Company's common stock at $33.50 per share plus commission $1,980.
2. On April 1, purchased 5,000 shares of Vicario Co.'s common stock at $52.00 per share plus commission $3,370.
3. On September 10, purchased 7,000 shares of WTA Co.'s preferred stock at $26.50 per share plus commission $4,910.

On May 20, 2025, Aranda sold 4,000 shares of Sanchez Company's common stock at a market price of $35 per share less brokerage commissions, taxes, and fees of $3,850. The year-end fair values per share were Sanchez $30, Vicario $55, and WTA $28. In addition, the chief accountant of Aranda told you that the corporation plans to hold these securities for the long-term but may sell them in order to earn profits from appreciation in prices. The equity method of accounting is not appropriate for these stock purchases.

Instructions

a. Prepare the journal entries to record the above three security purchases.

b. Prepare the journal entry for the security sale on May 20.

c. Compute the unrealized gains or losses and prepare the adjusting entries for Aranda on December 31, 2025.

E16.12 (LO 2, 3) (Journal Entries for Fair Value and Equity Methods) The following are independent situations.

Situation 1: Conchita Cosmetics acquired 10% of the 200,000 shares of common stock of Martinez Fashion at a total cost of $13 per share on March 18, 2025. On June 30, Martinez declared and paid $75,000 cash dividends to all stockholders. On December 31, Martinez reported net income of $122,000 for the year. At December 31, the market price of Martinez Fashion was $15 per share.

Situation 2: Monica, Inc. obtained significant influence over Seles Corporation by buying 30% of Seles's 30,000 outstanding shares of common stock at a total cost of $9 per share on January 1, 2025. On June 15, Seles declared and paid cash dividends of $36,000 to all stockholders. On December 31, Seles reported a net income of $85,000 for the year.

Instructions

Prepare all necessary journal entries in 2025 for both situations.

E16.13 (LO 3) (Equity Method) Parent Co. invested $1,000,000 in Sub Co. for 25% of its outstanding stock. Sub Co. pays out 40% of net income in dividends each year.

Instructions

Use the information in the following T-account for the investment in Sub to answer the following questions.

Investment in Sub Co.	
1,000,000	
110,000	44,000

a. How much was Parent Co.'s share of Sub Co.'s net income for the year?

b. What was Sub Co.'s total net income for the year?

c. What was Sub Co.'s total dividends for the year?

d. How much was Parent Co.'s share of Sub Co.'s dividends for the year?

E16.14 (LO 2) (Equity Investment) Oregon Co. had purchased 200 shares of Washington Co. for $40 each this year (Oregon Co. does not have significant influence). Oregon Co. sold 100 shares of Washington Co. stock for $45 each. At year-end, the price per share of the Washington Co. stock had dropped to $35.

Instructions

Prepare the journal entries for these transactions and any year-end adjustments.

E16.15 (LO 2) (Equity Investments) Kenseth Company has the following securities in its portfolio on December 31, 2025. None of these investments are accounted for under the equity method.

Investments	Cost	Fair Value
1,500 shares of Gordon, Inc., common	$ 73,500	$ 69,000
5,000 shares of Wallace Corp., common	180,000	175,000
400 shares of Martin, Inc., preferred	60,000	61,600
	$313,500	$305,600

All of the securities were purchased in 2025.

In 2026, Kenseth completed the following securities transactions.

March 1 Sold the 1,500 shares of Gordon, Inc., common, @ $45 less fees of $1,200.

April 1 Bought 700 shares of Earnhart Corp., common, @ $75 plus fees of $1,300.

Kenseth's portfolio of equity securities appeared as follows on December 31, 2026.

Investments	Cost	Fair Value
5,000 shares of Wallace Corp., common	$180,000	$175,000
700 shares of Earnhart Corp., common	53,800	50,400
400 shares of Martin, Inc., preferred	60,000	58,000
	$293,800	$283,400

Instructions

Prepare the general journal entries for Kenseth Company for:

a. The 2025 adjusting entry.

b. The sale of the Gordon stock.

c. The purchase of the Earnhart stock.

d. The 2026 adjusting entry for the portfolio.

E16.16 (LO 2, 3) (Fair Value and Equity Method Compared) Jaycie Phelps Inc. acquired 20% of the outstanding common stock of Theresa Kulikowski Inc. on December 31, 2025. The purchase price was $1,200,000 for 50,000 shares. Kulikowski Inc. declared and paid an $0.85 per share cash dividend on June 30 and on December 31, 2026. Kulikowski reported net income of $730,000 for 2026. The fair value of Kulikowski's stock was $27 per share at December 31, 2026.

Instructions

a. Prepare the journal entries for Jaycie Phelps Inc. for 2025 and 2026, assuming that Phelps cannot exercise significant influence over Kulikowski.

b. Prepare the journal entries for Jaycie Phelps Inc. for 2025 and 2026, assuming that Phelps can exercise significant influence over Kulikowski.

c. At what amount is the investment in securities reported on the balance sheet under each of these methods at December 31, 2026? What is the total net income reported in 2026 under each of these methods?

E16.17 (LO 3) (Equity Method) On January 1, 2025, Pennington Corporation purchased 30% of the common shares of Edwards Company for $180,000. During the year, Edwards earned net income of $80,000 and paid dividends of $20,000.

Instructions

Prepare the entries for Pennington to record the purchase and any additional entries related to this investment in Edwards Company in 2025.

E16.18 (LO 4) (Impairment of Debt Securities) Hagar Corporation has municipal bonds classified as a held-to-maturity at December 31, 2025. These bonds have a par value of $800,000, an amortized cost of $800,000, and a fair value of $720,000. The company believes that impairment accounting is now appropriate for these bonds.

Instructions

a. Prepare the journal entry to recognize the impairment.

b. What is the new carrying value of the municipal bonds? Given that the maturity value of the bonds is $800,000, should Hagar Corporation amortize the difference between the carrying amount and the maturity value over the life of the bonds?

c. At December 31, 2026, the fair value of the municipal bonds is $760,000. Prepare the entry (if any) to record this information.

E16.19 (LO 2, 4) (Fair Value Measurement) Presented below is information related to the purchases of common stock by Lilly Company during 2025.

	Cost (at purchase date)	Fair Value (at December 31)
Investment in Arroyo Company stock	$100,000	$ 80,000
Investment in Lee Corporation stock	250,000	300,000
Investment in Woods Inc. stock	180,000	190,000
Total	$530,000	$570,000

Instructions

(Assume a zero balance for any Fair Value Adjustment account at the beginning of 2025.)

a. What entry would Lilly make at December 31, 2025, to record the investment in Arroyo Company stock if it chooses to report this security using the fair value option?

b. What entry (entries) would Lilly make at December 31, 2025, to record the investments in the Lee and Woods corporations, assuming that Lilly did not select the fair value option for these investments?

E16.20 (LO 2, 4) (Fair Value Measurement Issues) Assume the same information as in E16.19 for Lilly Company. In addition, assume that the investment in the Woods Inc. stock was sold during 2026 for $195,000. At December 31, 2026, the following information relates to its two remaining investments of common stock.

	Cost (at purchase date)	Fair Value (at December 31)
Investment in Arroyo Company stock	$100,000	$140,000
Investment in Lee Corporation stock	250,000	310,000
Total	$350,000	$450,000

Net income before any security gains and losses for 2026 was $905,000.

Instructions

a. Compute the amount of net income or net loss that Lilly should report for 2026, taking into consideration Lilly's security transactions for 2026.

b. Prepare the journal entry to record unrealized gain or loss related to the investment in Arroyo Company stock at December 31, 2026.

E16.21 (LO 1, 2, 4) (Fair Value Option) Presented below is selected information related to the financial instruments of Dawson Company at December 31, 2025. This is Dawson Company's first year of operations.

	Carrying Amount	Fair Value (at December 31)
Investment in debt securities (intent is to hold to maturity)	$ 40,000	$ 41,000
Investment in Chen Company stock	800,000	910,000
Bonds payable	220,000	195,000

Instructions

a. Dawson elects to use the fair value option for these investments. Assuming that Dawson's net income is $100,000 in 2025 before reporting any securities gains or losses, determine Dawson's net income for 2025. Assume that the difference between the carrying value and fair value is due to credit deterioration.

b. Record the journal entry, if any, necessary at December 31, 2025, to record the fair value option for the bonds payable.

E16.22 (LO 4) (Impairment) Elaina Company has the following investments as of December 31, 2025.

Investments in common stock of Laser Company	$1,500,000
Investment in debt securities of FourSquare Company	3,300,000

In both investments, the carrying value and the fair value of these two investments are the same at December 31, 2025. Elaina's stock investments do not result in significant influence on the operations of Laser Company. Elaina's debt investment is considered held-to-maturity. At December 31, 2026, the shares in Laser Company are valued at $1,100,000; the debt securities of FourSquare are valued at $2,500,000 and are considered impaired.

Instructions

a. Prepare the journal entry to record the impairment of the debt securities at December 31, 2026.

b. Assuming the fair value of the Laser shares is $1,400,000 and the value of its debt investment is $2,950,000, what entries, if any, should be recorded in 2027?

c. Assume that the debt investment in FourSquare Company was available-for-sale and the expected credit loss was $900,000. Prepare the journal entry to record this impairment on December 31, 2026.

E16.23 (LO 4) (Impairment) Morley Company in its first year of operations provides the following information related to one of its available-for-sale debt securities at December 31, 2025.

Amortized cost	$50,000
Fair value	40,000
Expected credit loss	12,000

Instructions

a. What is the amount of the credit loss that Morley should report on this available-for-sale security at December 31, 2025?

b. Prepare the journal entry to record the credit loss, if any (and any other adjustment needed), at December 31, 2025.

c. Assume that the fair value of the available-for-sale security is $53,000 at December 31, 2025, instead of $40,000. What is the amount of the credit loss that Morley should report at December 31, 2025?

d. Assume the same information as for part (c). Prepare the journal entry to record the credit loss, if necessary (and any other adjustment needed), at December 31, 2025.

***E16.24 (LO 5) (Derivative Transaction)** On January 2, 2025, Jones Company purchases a call option for $300 on Merchant common stock. The call option gives Jones the option to buy 1,000 shares of Merchant at a strike price of $50 per share. The market price of a Merchant share is $50 on January 2, 2025 (the intrinsic value is therefore $0). On March 31, 2025, the market price for Merchant stock is $53 per share, and the time value of the option is $200.

Instructions

a. Prepare the journal entry to record the purchase of the call option on January 2, 2025.

b. Prepare the journal entry (entries) to recognize the change in the fair value of the call option as of March 31, 2025.

c. What was the effect on net income of entering into the derivative transaction for the period January 2 to March 31, 2025?

***E16.25 (LO 6) (Fair Value Hedge)** On January 2, 2025, MacCloud Co. issued a 4-year, $100,000 note at 6% fixed interest, interest payable semiannually. MacCloud now wants to change the note to a variable-rate note.

As a result, on January 2, 2025, MacCloud Co. enters into an interest rate swap where it agrees to receive 6% fixed and pay LIBOR of 5.7% for the first 6 months on $100,000. At each 6-month period, the variable rate will be reset. The variable rate is reset to 6.7% on June 30, 2025.

Instructions

a. Compute the net interest expense to be reported for this note and related swap transaction as of June 30, 2025.

b. Compute the net interest expense to be reported for this note and related swap transaction as of December 31, 2025.

***E16.26 (LO 6) (Cash Flow Hedge)** On January 2, 2025, Parton Company issues a 5-year, $10,000,000 note at LIBOR, with interest paid annually. The variable rate is reset at the end of each year. The LIBOR rate for the first year is 5.8%.

Parton Company decides it prefers fixed-rate financing and wants to lock in a rate of 6%. As a result, Parton enters into an interest rate swap to pay 6% fixed and receive LIBOR based on $10 million. The variable rate is reset to 6.6% on January 2, 2026.

Instructions

a. Compute the net interest expense to be reported for this note and related swap transactions as of December 31, 2025.

b. Compute the net interest expense to be reported for this note and related swap transactions as of December 31, 2026.

***E16.27 (LO 6) (Fair Value Hedge)** Sarazan Company issues a 4-year, 7.5% fixed-rate interest only, nonprepayable $1,000,000 note payable on December 31, 2024. It decides to change the interest rate from a fixed rate to variable rate and enters into a swap agreement with M&S Corp. The swap agreement specifies that Sarazan will receive a fixed rate at 7.5% and pay variable with settlement dates that match the interest payments on the debt. Assume that interest rates have declined during 2025 and that Sarazan received $13,000 as an adjustment to interest expense for the settlement at December 31, 2025. The loss related to the debt (due to interest rate changes) was $48,000. The value of the swap contract increased $48,000.

Instructions

a. Prepare the journal entry to record the payment of interest expense on December 31, 2025.

b. Prepare the journal entry to record the receipt of the swap settlement on December 31, 2025.

c. Prepare the journal entry to record the change in the fair value of the swap contract on December 31, 2025.

d. Prepare the journal entry to record the change in the fair value of the debt on December 31, 2025.

***E16.28 (LO 5) (Call Option)** On August 15, 2024, Outkast Co. invested idle cash by purchasing a call option on Counting Crows Inc. common shares for $360. The notional value of the call option is 400 shares, and the option price is $40. The option expires on January 31, 2025. The following data are available with respect to the call option.

Date	Market Price of Counting Crows Shares	Time Value of Call Option
September 30, 2024	$48 per share	$180
December 31, 2024	46 per share	65
January 15, 2025	47 per share	30

Instructions

Prepare the journal entries for Outkast for the following dates.

a. Investment in call option on Counting Crows shares on August 15, 2024.

b. September 30, 2024—Outkast prepares financial statements.

c. December 31, 2024—Outkast prepares financial statements.

d. January 15, 2025—Outkast settles the call option on the Counting Crows shares.

***E16.29 (LO 6) (Cash Flow Hedge)** Hart Golf Co. uses titanium in the production of its specialty drivers. Hart anticipates that it will need to purchase 200 ounces of titanium in November 2025, for clubs that will be sold in advance of the spring and summer of 2026. However, if the price of titanium increases, this will increase the cost to produce the clubs, which will result in lower profit margins.

To hedge the risk of increased titanium prices, on May 1, 2025, Hart enters into a titanium futures contract and designates this futures contract as a cash flow hedge of the anticipated titanium purchase. The notional amount of the contract is 200 ounces, and the terms of the contract give Hart the right and obligation to purchase titanium at a price of $500 per ounce. The price will be good until the contract expires on November 30, 2025.

Assume the following data with respect to the price of the futures contract and the titanium inventory purchase.

Date	Spot Price for November Delivery
May 1, 2025	$500 per ounce
June 30, 2025	520 per ounce
September 30, 2025	525 per ounce

Instructions

Present the journal entries for the following dates/transactions.

a. May 1, 2025—Inception of futures contract, no premium paid.

b. June 30, 2025—Hart prepares financial statements.

c. September 30, 2025—Hart prepares financial statements.

d. October 5, 2025—Hart purchases 200 ounces of titanium at $525 per ounce and settles the futures contract.

e. December 15, 2025—Hart sells clubs containing titanium purchased in October 2025 for $250,000. The cost of the finished goods inventory is $140,000.

f. Indicate the amount(s) reported in the income statement related to the futures contract and the inventory transactions on December 31, 2025.

Problems

P16.1 (LO 1) (Debt Securities) Presented below is an amortization schedule related to Spangler Company's 5-year, $100,000 bond with a 7% interest rate and a 5% yield, purchased on December 31, 2023, for $108,660.

Date	Cash Received	Interest Revenue	Bond Premium Amortization	Carrying Amount of Bonds
12/31/23				$108,660
12/31/24	$7,000	$5,433	$1,567	107,093
12/31/25	7,000	5,354	1,646	105,447
12/31/26	7,000	5,272	1,728	103,719
12/31/27	7,000	5,186	1,814	101,905
12/31/28	7,000	5,095	1,905	100,000

The following schedule presents a comparison of the amortized cost and fair value of the bonds at year-end.

	12/31/24	12/31/25	12/31/26	12/31/27	12/31/28
Amortized cost	$107,093	$105,447	$103,719	$101,905	$100,000
Fair value	106,500	107,500	105,650	103,000	100,000

Instructions

a. Prepare the journal entry to record the purchase of these bonds on December 31, 2023, assuming the bonds are classified as held-to-maturity securities.

b. Prepare the journal entry (entries) related to the held-to-maturity bonds for 2024.

c. Prepare the journal entry (entries) related to the held-to-maturity bonds for 2026.

d. Prepare the journal entry (entries) to record the purchase of these bonds, assuming they are classified as available-for-sale.

e. Prepare the journal entry (entries) related to the available-for-sale bonds for 2024.

f. Prepare the journal entry (entries) related to the available-for-sale bonds for 2026.

P16.2 (LO 1) (Available-for-Sale Debt Securities) On January 1, 2025, Novotna Company purchased $400,000, 8% bonds of Aguirre Co. for $369,114. The bonds were purchased to yield 10% interest. Interest is payable semiannually on July 1 and January 1. The bonds mature on January 1, 2030. Novotna Company uses the effective-interest method to amortize discount or premium. On January 1, 2027, Novotna Company sold the bonds for $370,726 after receiving interest to meet its liquidity needs.

Instructions

a. Prepare the journal entry to record the purchase of bonds on January 1. Assume that the bonds are classified as available-for-sale.

b. Prepare the amortization schedule for the bonds.

c. Prepare the journal entries to record the semiannual interest on July 1, 2025, and December 31, 2025.

d. If the fair value of Aguirre bonds is $372,726 on December 31, 2026, prepare the necessary adjusting entry. (Assume the fair value adjustment balance on December 31, 2025, is a debit of $3,375.)

e. Prepare the journal entry to record the sale of the bonds on January 1, 2027.

P16.3 (LO 1, 2) (Debt and Equity Investments) Cardinal Paz Corp. carries an account in its general ledger called Investments, which contained debits for investment purchases, and no credits, with the following descriptions.

Feb. 1, 2025	Sharapova Company common stock, $100 par, 200 shares	$ 37,400
April 1	U.S. government bonds, 11%, due April 1, 2035, interest payable April 1 and October 1, 110 bonds of $1,000 par each	110,000
July 1	McGrath Company 12% bonds, par $50,000, dated March 1, 2025, purchased at 104 plus accrued interest, interest payable annually on March 1, due March 1, 2045	54,000

Instructions

(Round all computations to the nearest dollar.)

a. Prepare entries necessary to classify the amounts into proper accounts, assuming that the debt securities are classified as available-for-sale. Sharapova has 200,000 shares outstanding.

b. Prepare the entry to record the accrued interest and the amortization of premium on December 31, 2025, using the straight-line method.

c. The fair values of the investments on December 31, 2025, were:

Sharapova Company common stock	$ 31,800
U.S. government bonds	124,700
McGrath Company bonds	58,600

What entry or entries, if any, would you recommend be made?

d. The U.S. government bonds were sold on July 1, 2026, for $119,200 plus accrued interest. Give the proper entry.

P16.4 (LO 1) (Debt Investments) Presented below is information taken from a bond investment amortization schedule with related fair values provided. These bonds are classified as available-for-sale.

	12/31/25	12/31/26	12/31/27
Amortized cost	$491,150	$519,442	$550,000
Fair value	497,000	509,000	550,000

Instructions

a. Indicate whether the bonds were purchased at a discount or at a premium.

b. Prepare the adjusting entry to record the bonds at fair value at December 31, 2025. The Fair Value Adjustment account has a debit balance of $1,000 prior to adjustment.

c. Prepare the adjusting entry to record the bonds at fair value at December 31, 2026.

P16.5 (LO 2) Excel (Equity Securities Entries and Disclosures) Parnevik Company has the following securities in its investment portfolio on December 31, 2025 (all securities were purchased in 2025): (1) 3,000 shares of Anderson Co. common stock which cost $58,500, (2) 10,000 shares of Munter Ltd. common stock which cost $580,000, and (3) 6,000 shares of King Company preferred stock which cost $255,000. The Fair Value Adjustment account shows a credit of $10,100 at the end of 2025.

In 2026, Parnevik completed the following securities transactions.

1. On January 15, sold 3,000 shares of Anderson's common stock at $22 per share less fees of $2,150.
2. On April 17, purchased 1,000 shares of Castle's common stock at $33.50 per share plus fees of $1,980.

On December 31, 2026, the market prices per share of these securities were Munter $61, King $40, and Castle $29. In addition, the accounting supervisor of Parnevik told you that, even though all these securities have readily determinable fair values, Parnevik will not actively trade these securities because the top management intends to hold them for more than one year.

Instructions

a. Prepare the entry for the security sale on January 15, 2026.

b. Prepare the journal entry to record the security purchase on April 17, 2026.

c. Compute the unrealized gains or losses and prepare the adjusting entry for Parnevik on December 31, 2026.

d. How should the unrealized gains or losses be reported on Parnevik's income statement and balance sheet?

P16.6 (LO 2) (Equity Securities Entries) McElroy Company has the following portfolio of investment securities at September 30, 2025, its most recent reporting date.

Investment Securities	Cost	Fair Value
Horton, Inc. common (5,000 shares)	$215,000	$200,000
Monty, Inc. preferred (3,500 shares)	133,000	140,000
Oakwood Corp. common (1,000 shares)	180,000	179,000

On October 10, 2025, the Horton shares were sold at a price of $54 per share. In addition, 3,000 shares of Patriot common stock were acquired at $54.50 per share on November 2, 2025. The December 31, 2025, fair values were Monty $106,000, Patriot $132,000, and Oakwood $193,000.

Instructions

Prepare the journal entries to record the sale, purchase, and adjusting entries related to the equity securities in the last quarter of 2025. None of these investments represents significant influence. The Fair Value Adjustment account has a zero balance prior to September 30, 2025.

P16.7 (LO 1) (Available-for-Sale and Held-to-Maturity Debt Securities Entries) The following information relates to the debt securities investments of Wildcat Company.

1. On February 1, the company purchased 10% bonds of Gibbons Co. having a par value of $300,000 at 100 plus accrued interest. Interest is payable April 1 and October 1.
2. On April 1, semiannual interest is received.
3. On July 1, 9% bonds of Sampson, Inc. were purchased. These bonds with a par value of $200,000 were purchased at 100 plus accrued interest. Interest dates are June 1 and December 1.
4. On September 1, bonds with a par value of $60,000, purchased on February 1, are sold at 99 plus accrued interest.
5. On October 1, semiannual interest is received.
6. On December 1, semiannual interest is received.
7. On December 31, the fair value of the bonds purchased February 1 and July 1 are 95 and 93, respectively.

Instructions

a. Prepare any journal entries you consider necessary, including year-end entries (December 31), assuming these are available-for-sale securities.

b. If Wildcat classified these as held-to-maturity investments, explain how the journal entries would differ from those in part (a).

P16.8 (LO 2, 3) (Fair Value and Equity Methods) Brooks Corp. is a medium-sized corporation specializing in quarrying stone for building construction. The company has long dominated the market, at one time achieving a 70% market penetration. During prosperous years, the company's profits, coupled with a conservative dividend policy, resulted in funds available for outside investment. Over the years, Brooks has had a policy of investing idle cash in equity securities. In particular, Brooks has made periodic investments in the company's principal vendor of mining equipment, Norton Industries. Although the firm currently owns 12% of the outstanding common stock of Norton Industries, Brooks does not have significant influence over the operations of Norton Industries.

Cheryl Thomas has recently joined Brooks as assistant controller, and her first assignment is to prepare the 2025 year-end adjusting entries for the accounts that are valued by the "fair value" rule for financial reporting purposes. Thomas has gathered the following information about Brooks' pertinent accounts.

1. Brooks has equity securities related to Delaney Motors and Patrick Electric. During 2025, Brooks purchased 100,000 shares of Delaney Motors for $1,400,000; these shares currently have a fair value of $1,600,000. Brooks' investment in Patrick Electric has not been profitable; the company acquired 50,000 shares of Patrick in April 2025 at $20 per share, a purchase that currently has a value of $720,000.
2. Prior to 2025, Brooks invested $22,500,000 in Norton Industries and has not changed its holdings this year. This investment in Norton Industries was valued at $21,500,000 on December 31, 2024. Brooks' 12% ownership of Norton Industries has a current fair value of $22,225,000 on December 2025.

Instructions

a. Prepare the appropriate adjusting entries for Brooks as of December 31, 2025, to reflect the application of the "fair value" rule for the securities described above.

b. For the securities presented above, describe how the results of the valuation adjustments made in (a) would be reflected in the body of Brooks' 2025 financial statements.

c. Prepare the entries for the Norton investment, assuming that Brooks owns 25% of Norton's shares. Norton reported income of $500,000 in 2025 and paid cash dividends of $100,000.

P16.9 (LO 2, 4) (Gain on Sale of Investments and Comprehensive Income) On January 1, 2025, Acker Inc. had the following balance sheet.

Acker Inc.
Balance Sheet
As of January 1, 2025

Assets		Equity	
Cash	$ 50,000	Common stock	$260,000
Debt investments (available-for-sale)	240,000	Accumulated other comprehensive income	30,000
Total	$290,000	Total	$290,000

The accumulated other comprehensive income related to unrealized holding gains on available-for-sale debt securities. The fair value of Acker Inc.'s available-for-sale debt securities at December 31, 2025, was $190,000; its cost was $140,000. No securities were purchased during the year. Acker Inc.'s income statement for 2025 was as follows. (Ignore income taxes.)

Acker Inc.
Income Statement
For the Year Ended December 31, 2025

Dividend revenue	$ 5,000
Gain on sale of investments	30,000
Net income	$35,000

Instructions

(Assume all transactions during the year were for cash.)

a. Prepare the journal entry to record the sale of the available-for-sale debt securities in 2025.

b. Prepare the journal entry to record the Unrealized Holding Gain or Loss for 2025.

c. Prepare a statement of comprehensive income for 2025.

d. Prepare a balance sheet as of December 31, 2025.

P16.10 (LO 2) Excel (Equity Investments) Castleman Holdings, Inc. had the following equity investment portfolio at January 1, 2025.

Evers Company	1,000 shares @ $15 each	$15,000
Rogers Company	900 shares @ $20 each	18,000
Chance Company	500 shares @ $9 each	4,500
Equity investments @ cost		37,500
Fair value adjustment		(7,500)
Equity investments @ fair value		$30,000

During 2025, the following transactions took place.

1. On March 1, Rogers Company paid a $2 per share dividend.
2. On April 30, Castleman Holdings, Inc. sold 300 shares of Chance Company for $11 per share.
3. On May 15, Castleman Holdings, Inc. purchased 100 more shares of Evers Company stock at $16 per share.
4. At December 31, 2025, the stocks had the following price per share values: Evers $17, Rogers $19, and Chance $8.

During 2026, the following transactions took place.

5. On February 1, Castleman Holdings, Inc. sold the remaining Chance shares for $8 per share.
6. On March 1, Rogers Company paid a $2 per share dividend.
7. On December 21, Evers Company declared a cash dividend of $3 per share to be paid in the next month.
8. At December 31, 2026, the stocks had the following price per share values: Evers $19 and Rogers $21.

Instructions

a. Prepare journal entries for each of the above transactions.

b. Prepare a partial balance sheet showing the investment-related amounts to be reported at December 31, 2025 and 2026.

P16.11 (LO 2, 4) (Equity Securities—Statement Presentation) Fernandez Corp. invested its excess cash in securities during 2025. As of December 31, 2025, the securities portfolio consisted of the following common stocks. Fernandez does not have significant influence in any of these companies.

Security	Quantity		Cost	Fair Value
Lindsay Jones, Inc.	1,000 shares		$ 15,000	$ 21,000
Poley Corp.	2,000 shares		40,000	42,000
Arnold Aircraft	2,000 shares		72,000	60,000
		Totals	$127,000	$123,000

Instructions

a. What should be reported on Fernandez's December 31, 2025, balance sheet relative to these securities? What should be reported on Fernandez's 2025 income statement?

On December 31, 2026, Fernandez's securities portfolio consisted of the following common stocks.

Security	Quantity		Cost	Fair Value
Lindsay Jones, Inc.	1,000 shares		$ 15,000	$20,000
Lindsay Jones, Inc.	2,000 shares		33,000	40,000
Duff Company	1,000 shares		16,000	12,000
Arnold Aircraft	2,000 shares		72,000	22,000
		Totals	$136,000	$94,000

During the year 2026, Fernandez Corp. sold 2,000 shares of Poley Corp. for $38,200 and purchased 2,000 more shares of Lindsay Jones, Inc. and 1,000 shares of Duff Company.

b. What should be reported on Fernandez's December 31, 2026, balance sheet? What should be reported on Fernandez's 2026 income statement?

On December 31, 2027, Fernandez's securities portfolio consisted of the following common stocks.

Security	Quantity		Cost	Fair Value
Arnold Aircraft	2,000 shares		$72,000	$82,000
Duff Company	500 shares		8,000	6,000
		Totals	$80,000	$88,000

During the year 2027, Fernandez Corp. sold 3,000 shares of Lindsay Jones, Inc. for $39,900 and 500 shares of Duff Company at a loss of $2,700.

c. What should be reported on the face of Fernandez's December 31, 2027, balance sheet? What should be reported on Fernandez's 2027 income statement?

***P16.12 (LO 5)** Excel **(Derivative Financial Instrument)** The treasurer of Miller Co. has read on the Internet that the stock price of Wade Inc. is about to take off. In order to profit from this potential development, Miller Co. purchased a call option on Wade common shares on July 7, 2025, for $240. The call option is for 200 shares (notional value), and the strike price is $70. (The market price of a share of Wade stock on that date is $70.) The option expires on January 31, 2026. The following data are available with respect to the call option.

Date	Market Price of Wade Shares	Time Value of Call Option
September 30, 2025	$77 per share	$180
December 31, 2025	75 per share	65
January 4, 2026	76 per share	30

Instructions

Prepare the journal entries for Miller Co. for the following dates.

a. July 7, 2025—Investment in call option on Wade shares.

b. September 30, 2025—Miller prepares financial statements.

c. December 31, 2025—Miller prepares financial statements.

d. January 4, 2026—Miller settles the call option on the Wade shares.

***P16.13 (LO 5) (Derivative Financial Instrument)** Johnstone Co. purchased a put option on Ewing common shares on July 7, 2025, for $240. The put option is for 200 shares, and the strike price is $70. (The market price of a share of Ewing stock on that date is $70.) The option expires on January 31, 2026. The following data are available with respect to the put option.

Date	Market Price of Ewing Shares	Time Value of Put Option
September 30, 2025	$77 per share	$125
December 31, 2025	75 per share	50
January 31, 2026	78 per share	0

Instructions

Prepare the journal entries for Johnstone Co. for the following dates.

a. July 7, 2025—Investment in put option on Ewing shares.

b. September 30, 2025—Johnstone prepares financial statements.

c. December 31, 2025—Johnstone prepares financial statements.

d. January 31, 2026—Put option expires.

***P16.14 (LO 5) (Free-Standing Derivative)** Warren Co. purchased a put option on Echo common shares on January 7, 2025, for $360. The put option is for 400 shares, and the strike price is $85 (which equals the price of an Echo share on the purchase date). The option expires on July 31, 2025. The following data are available with respect to the put option.

Date	Market Price of Echo Shares	Time Value of Put Option
March 31, 2025	$80 per share	$200
June 30, 2025	82 per share	90
July 6, 2025	77 per share	25

Instructions

Prepare the journal entries for Warren Co. for the following dates.

a. January 7, 2025—Investment in put option on Echo shares.

b. March 31, 2025—Warren prepares financial statements.

c. June 30, 2025—Warren prepares financial statements.

d. July 6, 2025—Warren settles the put option on the Echo shares.

***P16.15 (LO 6) Excel (Fair Value Hedge Interest Rate Swap)** On December 31, 2025, Mercantile Corp. had a $10,000,000, 8% fixed-rate note outstanding, payable in 2 years. It decides to enter into a 2-year swap with Chicago First Bank to convert the fixed-rate debt to variable-rate debt. The terms of the swap indicate that Mercantile will receive interest at a fixed rate of 8% and will pay a variable rate equal to the 6-month LIBOR rate, based on the $10,000,000 amount. The LIBOR rate on December 31, 2025, is 7%. The LIBOR rate will be reset every 6 months and will be used to determine the variable rate to be paid for the following 6-month period.

Mercantile Corp. designates the swap as a fair value hedge. Assume that the hedging relationship meets all the conditions necessary for hedge accounting. The 6-month LIBOR rate and the swap and debt fair values are as follows.

Date	6-Month LIBOR Rate	Swap Fair Value	Debt Fair Value
December 31, 2025	7.0%	—	$10,000,000
June 30, 2026	7.5%	(200,000)	9,800,000
December 31, 2026	6.0%	60,000	10,060,000

Instructions

a. Present the journal entries to record the following transactions.

1. The entry, if any, to record the swap on December 31, 2025.

2. The entry to record the semiannual debt interest payment on June 30, 2026.

3. The entry to record the settlement of the semiannual swap amount receivables at 8%, less amount payable at LIBOR, 7%.

4. The entry to record the change in the fair value of the debt on June 30, 2026.

5. The entry to record the change in the fair value of the swap at June 30, 2026.

b. Indicate the amount(s) reported on the balance sheet and income statement related to the debt and swap on December 31, 2025.

c. Indicate the amount(s) reported on the balance sheet and income statement related to the debt and swap on June 30, 2026.

d. Indicate the amount(s) reported on the balance sheet and income statement related to the debt and swap on December 31, 2026.

***P16.16 (LO 6) (Cash Flow Hedge)** LEW Jewelry Co. uses gold in the manufacture of its products. LEW anticipates that it will need to purchase 500 ounces of gold in October 2025, for jewelry that will be

shipped for the holiday shopping season. However, if the price of gold increases, LEW's cost to produce its jewelry will increase, which would reduce its profit margins.

To hedge the risk of increased gold prices, on April 1, 2025, LEW enters into a gold futures contract and designates this futures contract as a cash flow hedge of the anticipated gold purchase. The notional amount of the contract is 500 ounces, and the terms of the contract give LEW the right and the obligation to purchase gold at a price of $300 per ounce. The price will be good until the contract expires on October 31, 2025.

Assume the following data with respect to the price of the futures contract and the gold inventory purchase:

Date	Spot Price for October Delivery
April 1, 2025	$300 per ounce
June 30, 2025	310 per ounce
September 30, 2025	315 per ounce

Instructions

Prepare the journal entries for the following transactions.

a. April 1, 2025—Inception of the futures contract, no premium paid.

b. June 30, 2025—LEW Co. prepares financial statements.

c. September 30, 2025—LEW Co. prepares financial statements.

d. October 10, 2025—LEW Co. purchases 500 ounces of gold at $315 per ounce and settles the futures contract.

e. December 20, 2025—LEW sells jewelry containing gold purchased in October 2025 for $350,000. The cost of the finished goods inventory is $200,000.

f. Indicate the amount(s) reported on the balance sheet and income statement related to the futures contract on June 30, 2025.

g. Indicate the amount(s) reported in the income statement related to the futures contract and the inventory transactions on December 31, 2025.

***P16.17 (LO 6) (Fair Value Hedge)** On October 15, 2025, Oil Products Co. purchased 4,000 barrels of fuel oil with a cost of $240,000 ($60 per barrel). Oil Products is holding this inventory in anticipation of the winter 2026 heating season. Oil Products accounts for its inventory at the lower-of-FIFO-cost-or-net realizable value. To hedge against potential declines in the value of the inventory, Oil Products also purchased a put option on the fuel oil. Oil Products paid an option premium of $300 for the put option, which gives Oil Products the option to sell 4,000 barrels of fuel oil at a strike price of $60 per gallon. The option expires on March 1, 2026. The following data are available with respect to the values of the fuel of inventory and the put option.

Date	Market Price of Fuel Oil	Time Value of Put Option
October 31, 2025	$58 per gallon	$175
November 30, 2025	57 per gallon	105
December 31, 2025	54 per gallon	40

Instructions

a. Prepare the journal entries of Oil Products for the following dates.

1. October 15, 2025—Oil Products purchases fuel oil and the put option on fuel oil.

2. October 31, 2025—Oil Products prepares financial statements.

3. November 30, 2025—Oil Products prepares financial statements.

4. December 31, 2025—Oil Products prepares financial statements.

b. Indicate the amount(s) reported on the balance sheet and income statement related to the fuel oil inventory and the put option on November 30, 2025.

c. Indicate the amount(s) reported on the balance sheet and income statement related to the fuel oil and the put option on December 31, 2025.

Using Your Judgment

Financial Reporting Problem: The Procter & Gamble Company (P&G)

UYJ16.1 The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

a. What investments does P&G report in 2020, and how are these investments accounted for in its financial statements?

b. How are P&G's investments valued? How does P&G determine fair value?

c. How does P&G use derivative financial instruments?

Comparative Analysis Case: The Coca-Cola Company and PepsiCo, Inc.

UYJ16.2 The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

a. Based on the information contained in these financial statements, determine each of the following for each company.

1. Cash used in (for) investing activities during 2020 (from the statement of cash flows).

2. What was the total other comprehensive income for the year 2020?

3. What was the unrealized gains or losses reported as part of other comprehensive income?

b. Identify from Coca-Cola's December 31, 2020, balance sheet the investments it reported as being accounted for under the equity method.

c. In Note 4, what is Coca-Cola's policy regarding its cost method investments?

Financial Statement Analysis Case: Union Planters

UYJ16.3 **Union Planters** is a Tennessee bank holding company (that is, a corporation that owns banks). (Union Planters is now part of **Regions Bank**.) Union Planters manages $32 billion in assets, the largest of which is its loan portfolio of $19 billion. In addition to its loan portfolio, however, like other banks it has significant debt investments. The nature of these investments varies from short-term to long-term. As a consequence, consistent with the requirements of accounting rules, Union Planters reports its investments in two different categories—trading and available-for-sale. The following facts were found in a recent Union Planters' annual report.

(all dollars in millions)	Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses	Fair Value
Trading account assets	$ 275	—	—	$ 275
Securities available-for-sale	8,209	$108	$15	8,302
Net income				224
Net securities gains (losses)				(9)

Instructions

a. Why do you suppose Union Planters purchases investments, rather than simply making loans? Why does it purchase investments that vary in nature both in terms of their maturities and in type (debt versus stock)?

b. How must Union Planters account for its investments in each of the two categories?

c. In what ways does classifying investments into two different categories assist investors in evaluating the profitability of a company like Union Planters?

d. Suppose that the management of Union Planters was not happy with its net income for the year. What step could it have taken with its investment portfolio that would have definitely increased reported profit? How much could it have increased reported profit? Why do you suppose it chose not to do this?

Accounting, Analysis, and Principles

UYJ16.4 Instar Company has several investments in the securities of other companies. The following information regarding these investments is available at December 31, 2025.

1. Instar holds bonds issued by Dorsel Corp. The bonds have an amortized cost of $320,000 and their fair value at December 31, 2025, is $400,000. Instar intends to hold the bonds until they mature on December 31, 2033.

2. Instar has invested idle cash in the equity securities of several publicly traded companies. Instar intends to sell these securities during the first quarter of 2026, when it will need the cash to acquire seasonal inventory. These equity securities have a cost basis of $800,000 and a fair value of $920,000 at December 31, 2025.
3. Instar has an ownership stake in one of the companies that supplies Instar with various components Instar uses in its products. Instar owns 6% of the common stock of the supplier, does not have any representation on the supplier's board of directors, does not exchange any personnel with the supplier, and does not consult with the supplier on any of the supplier's operating, financial, or strategic decisions. The cost basis of the investment in the supplier is $1,200,000 and the fair value of the investment at December 31, 2025, is $1,550,000. Instar does not intend to sell the investment in the foreseeable future. The supplier reported net income of $80,000 for 2025 and paid no dividends.
4. Instar purchased 25% of the stock of Slobbaer Co. for $900,000. Instar has significant influence over the operating activities of Slobbaer Co. During 2025, Slobbaer Co. reported net income of $300,000 and paid a dividend of $100,000.

Accounting

a. Determine how each of the investments described above should be classified and accounted for.

b. Prepare any December 31, 2025, journal entries needed for Instar relating to Instar's various investments in other companies. Assume 2025 is Instar's first year of operations.

Analysis

What is the effect on Instar's 2025 net income (as reported on Instar's income statement) of Instar's investments in other companies?

Principles

Briefly explain the different rationales for the different accounting and reporting rules for different types of investments in the securities of other companies.

Developing Your Professional Skills

Critical-Thinking Cases

CT16.1 (LO 1) (Issues Raised About Investment Securities) You have just started work for Warren Co. as part of the controller's group involved in current financial reporting problems. Jane Henshaw, controller for Warren, is interested in your accounting background because the company has experienced a series of financial reporting surprises over the last few years. Recently, the controller has learned from the company's auditors that there is authoritative literature that may apply to its investment in securities. She assumes that you are familiar with this pronouncement and asks how the following situations should be reported in the financial statements.

Situation 1: Trading debt securities in the current assets section have a fair value that is $4,200 lower than cost.

Situation 2: A trading debt security whose fair value is currently less than cost is transferred to the available-for-sale category.

Situation 3: An available-for-sale debt security whose fair value is currently less than cost is classified as noncurrent but is to be reclassified as current.

Situation 4: The company's portfolio of held-to-maturity debt securities consists of the bonds of one company. At the end of the prior year, the fair value of the security was 50% of original cost, and this reduction in fair value was reported as an impairment. However, at the end of the current year, the fair value of the security had appreciated to twice the original cost.

Situation 5: The company has purchased some equity securities that it plans to hold for less than a year. The fair value of the securities is $7,700 below its cost.

Instructions

What is the effect upon carrying value and earnings for each of the situations above? Assume that these situations are unrelated.

CT16.2 (LO 2) (Equity Securities) Lexington Co. has the following securities outstanding on December 31, 2025 (its first year of operations).

	Cost	Fair Value
Greenspan Corp. stock	$20,000	$19,000
Summerset Company stock	9,500	8,800
Tinkers Company stock	20,000	20,600
	$49,500	$48,400

During 2026, Summerset Company stock was sold for $9,200, the difference between the $9,200 and the "fair value" of $8,800 being recorded as a "Gain on Sale of Investments." The market price of the stock on December 31, 2026, was Greenspan Corp. stock $19,900; Tinkers Company stock $20,500.

Instructions

a. What justification is there for valuing equity securities at fair value and reporting the unrealized gain or loss as part of net income?

b. How should Lexington Co. report this information in its financial statements at December 31, 2025? Explain.

c. Did Lexington Co. properly account for the sale of the Summerset Company stock? Explain.

d. Are there any additional entries necessary for Lexington Co. at December 31, 2026, to reflect the facts on the financial statements in accordance with generally accepted accounting principles? Explain.

(AICPA adapted)

CT16.3 (LO 1) (Financial Statement Effect of Securities) Presented below are three unrelated situations involving equity securities.

Situation 1: A debt security, whose fair value is currently less than cost, is classified as available-for-sale but is to be reclassified as trading.

Situation 2: A noncurrent held-to-maturity portfolio with an aggregate fair value in excess of cost includes one particular debt security whose fair value has declined to less than one-half of the original cost. The decline in value is considered to be permanent.

Situation 3: The portfolio of trading debt securities has a cost in excess of fair value of $13,500. The available-for-sale debt portfolio has a fair value in excess of cost of $28,600.

Instructions

What is the effect upon carrying value and earnings for each of the situations above?

CT16.4 (LO 3) (Investment Accounted for Under the Equity Method) On July 1, 2026, Fontaine Company purchased for cash 40% of the outstanding common stock of Knoblett Company. Both Fontaine Company and Knoblett Company have a December 31 year-end. Knoblett Company, whose common stock is actively traded in the over-the-counter market, reported its total net income for the year to Fontaine Company and also paid cash dividends on November 15, 2026, to Fontaine Company and its other stockholders.

Instructions

How should Fontaine Company report the above facts in its December 31, 2026, balance sheet and its income statement for the year then ended? Discuss the rationale for your answer.

(AICPA adapted)

CT16.5 (LO 3) Writing (Equity Investment) On July 1, 2025, Selig Company purchased for cash 30% of the outstanding common stock of Spoor Corporation. Both Selig and Spoor have a December 31 year-end. Spoor Corporation, whose common stock is actively traded on the NASDAQ exchange, paid a cash dividend on November 15, 2025, to Selig Company and its other stockholders. It also reported its total net income for the year of $920,000 to Selig Company.

Instructions

Prepare a one-page memorandum of instructions on how Selig Company should report the above facts in its December 31, 2025, balance sheet and its 2025 income statement. In your memo, identify and describe the method of valuation you recommend. Provide rationale where you can. Address your memo to the chief accountant at Selig Company.

CT16.6 (LO 4) Ethics (Fair Value) Addison Manufacturing holds a large portfolio of debt securities as an investment. The fair value of the portfolio is greater than its original cost, even though some debt securities have decreased in value. Sam Beresford, the financial vice president, and Angie Nielson, the controller, are near year-end in the process of classifying for the first time this securities portfolio in

accordance with GAAP. Beresford wants to classify those securities that have increased in value during the period as trading securities in order to increase net income this year. He wants to classify all the securities that have decreased in value as held-to-maturity.

Nielson disagrees. She wants to classify those debt securities that have decreased in value as trading securities and those that have increased in value as held-to-maturity. She contends that the company is having a good earnings year and that recognizing the losses will help to smooth the income this year. As a result, the company will have built-in gains for future periods when the company may not be as profitable.

Instructions

Answer the following questions.

a. Will classifying the portfolio as each proposes actually have the effect on earnings that each says it will?

b. Is there anything unethical in what each of them proposes? Who are the stakeholders affected by their proposals?

c. Assume that Beresford and Nielson properly classify the entire portfolio into trading, available-for-sale, and held-to-maturity categories. But then each proposes to sell just before year-end the securities with gains or with losses, as the case may be, to accomplish their effect on earnings. Is this unethical?

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE16.1 Access the glossary ("Master Glossary") to answer the following.

a. What are trading securities?

b. What is the definition of "holding gain or loss"?

c. What is a cash flow hedge?

d. What is a fair value hedge?

CE16.2 What guidance does the SEC give for disclosures regarding accounting policies used for derivatives?

CE16.3 When would an investor discontinue applying the equity method in an investment? Are there any exceptions to this rule?

CE16.4 For balance sheet purposes, can the fair value of a derivative in a loss position be netted against the fair value of a derivative in a gain position?

Codification Research Case

Your client, Cascade Company, is planning to invest some of its excess cash in 5-year revenue bonds issued by the county and in the stock of one of its suppliers, Teton Co. Teton's shares trade on the over-the-counter market. The company would like you to conduct some research on the accounting for these investments.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

a. Since the Teton shares do not trade on one of the large stock markets, Cascade argues that the fair value of this investment is not readily available. According to the authoritative literature, when is the fair value of a security "readily determinable"?

b. To avoid volatility in their financial statements due to fair value adjustments, Cascade debated whether the bond investment could be classified as held-to-maturity; Cascade is pretty sure it will hold the bonds for 5 years. How close to maturity could Cascade sell an investment and still classify it as held-to-maturity?

c. What disclosures must be made for any sale or transfer from securities classified as held-to-maturity?

Additional Professional Resources

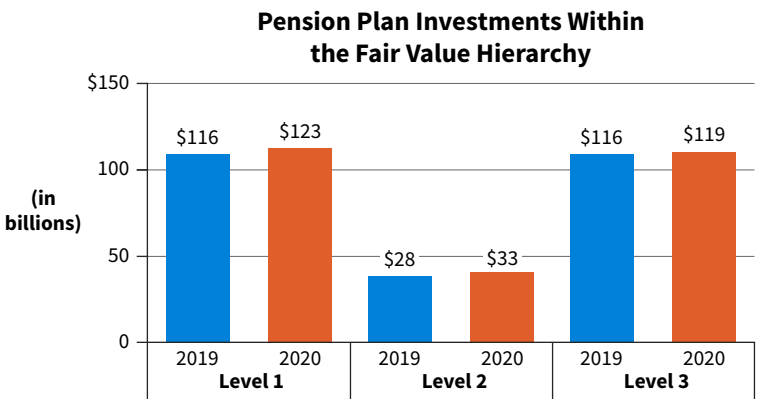
Go to Wiley Course Resources for other career-readiness resources, such as career coaching, internship opportunities, and CPAexcel prep.

Analytics in Action Activities

Using Data Visualizations to Analyze Investments

DA16.1 You just started an internship as a data analyst with the administrator of a very large pension fund. You know that the balance sheet of a pension fund is primarily made up of investments, but beyond that, you have a lot to learn. Perhaps using some data visualizations will help you hit the ground running on your internship!

Using visualizations like the following chart can provide some quick, yet relevant, information about a company's investment balance. Understanding the distribution of investment values across the three levels of the fair value hierarchy can provide good insights into the different types of investments held by a pension plan.



Required

Using different visualizations of assets held by a pension fund, you will answer a series of multiple-choice questions about the make-up of the investment category itself and the relationship of investments to total assets on the pension fund's balance sheet.

Go to Wiley Course Resources for complete details and instructions.

DA16.2 Data visualizations can be a powerful tool for a data analyst, but the data is just one piece. We must apply our knowledge about fair value measurement to understand the story that the data is telling us.

Required

Using the same visualizations from DA16.1, you will explain why a company must classify assets measured at fair value using the fair value hierarchy. You should consider why this classification is relevant for financial statement users.

Go to Wiley Course Resources for complete details and instructions.

Using Data Analytics to Gain Insights on Investment Holdings

DA16.3 The data visualizations from DA16.1 give you a baseline understanding of the types of assets and investments held by the pension fund you are working for. Now, you are ready to move into some advanced analysis using raw data about the individual investment holdings.

Required

You are provided raw data on the pension fund's total assets, the cost versus fair value of investments, and fair value of investments by level in the fair value hierarchy. Using Excel pivot tables and pivot charts, you will analyze the raw data and document your insights on the investments held by the pension fund, including looking for potential impairments.

Go to Wiley Course Resources for complete details and instructions.

IFRS Insights

LEARNING OBJECTIVE 9

Compare the accounting for investments under GAAP and IFRS.

The accounting for investments is discussed in *IAS 27* ("Consolidated and Separate Financial Statements"), *IAS 28* ("Accounting for Investments in Associates"), *IAS 39* ("Financial Instruments: Recognition and Measurement"), and *IFRS 9* ("Financial Instruments"). Until recently, when the IASB issued *IFRS 9*, the accounting and reporting for investments under IFRS and GAAP were for the most part very similar. However, *IFRS 9* introduces new investment classifications and increases the situations when investments are accounted for at fair value, with gains and losses recorded in income. Following are the key similarities and differences between GAAP and IFRS related to investments.

Similarities

- GAAP and IFRS use similar classifications for financial assets: cash, loans and receivables, investments, and derivatives.
- Both IFRS and GAAP require that financial assets be sorted into specific categories for measurement and classification purposes.
- Held-to-maturity (GAAP) and held-for-collection (IFRS) investments are accounted for at amortized cost. Gains and losses on some investments are reported in other comprehensive income.

- Amortized cost or fair value is used depending upon the classification of the financial instrument.
- The definitions of amortized cost and fair value are the same.
- Both GAAP and IFRS use the same test to determine whether the equity method of accounting should be used, that is, significant influence with a general guideline of over 20% ownership.
- GAAP and IFRS are similar in the accounting for the fair value option. That is, the option to use the fair value method must be made at initial recognition, the selection is irrevocable, and gains and losses are reported as part of income.

Differences

- While GAAP classifies debt investments as trading, available-for-sale, and held-to-maturity, IFRS classifies debt investments as held-for-collection (debt investments) and trading.
- GAAP requires that all changes in fair value for **all equity securities** be reported as part of income. IFRS requires that changes in fair value for **non-trading equity securities** be reported as part of other comprehensive income.
- While the measurement of impairments is similar under GAAP and IFRS, GAAP does not permit the reversal of an impairment charge related to held-to-maturity debt investments and equity investments. IFRS allows reversals of impairments of held-for-collection investments.
- While GAAP and IFRS are similar in the accounting for the fair value option, one difference is that GAAP permits the fair value option for equity method investments; IFRS does not.

Revenue Recognition

WHAT guidelines has the FASB issued for the accounting and reporting related to revenue recognition?

The FASB uses a five-step process to determine when revenue should be recognized. The five-step process focuses on identifying contracts, identifying separate performance obligations, determining transaction price, allocating transaction price to separate performance obligations, and recognizing revenue when the performance obligation is satisfied. Here are some excerpts from companies' annual reports related to revenue recognition.

- **Amazon:** We offer consumer products through our online and physical stores. Revenue is recognized when control of the goods is transferred to the customer, which generally occurs upon our delivery to a third-party carrier or, in the case of an Amazon delivery, to the customer.
- **Chevron:** The company accounts for each delivery order of crude oil, natural gas, petroleum, and chemical products as a separate performance obligation. Revenue is recognized when the performance obligation is satisfied, which typically occurs at the point in time when control of the product transfers to the customer. Payment is generally due within 30 days of delivery. The company accounts for delivery transportation as a fulfillment cost, not a separate performance obligation.
- **General Mills:** Our revenues primarily result from contracts with customers, which are generally short-term and have a single performance obligation—the delivery of product. We recognize revenue for the sale of packaged foods at the point in time when our performance obligation has been satisfied and control of the product has transferred to our customer, which generally occurs when the shipment is accepted by our customer. Sales include shipping and handling charges billed to the customer and are reported net of variable consideration and consideration payable to our customers.

WHY is the proper accounting for revenue so important?

Without revenue that is stable or increasing, it is unlikely that companies will be profitable in the long run. Revenue (often referred to as the top line) is considered by many to be as important as the bottom line (net income), which may not be sustainable. However, in one survey, financial executives noted that the revenue recognition process is increasingly more complex to manage, more prone to error, and more material to financial statements compared to other areas in financial reporting. The report also identified revenue recognition as a top fraud risk and, that regardless of the accounting rules followed, the risk of errors and inaccuracies in revenue reporting is significant.

HOW do companies account for revenues?

The key objective in the accounting for revenue is to depict the transfer of goods or services to customers in the amount that reflects the consideration that the company receives or expects to receive in exchange for these goods or services (the transaction price). Following from this key objective, the revenue recognition principle is to recognize revenue in the accounting period when the performance obligation is satisfied. A company satisfies its performance obligation when the customer obtains control of the good or service.

The concept of change in control is the deciding factor in determining when a performance obligation is satisfied. The customer controls the product or service when it can direct the use of and obtain substantially all the remaining benefits from the asset or service. Control also includes the customers' ability to prevent other companies from directing the use of, or receiving the benefits, from the asset or service. Through application of the comprehensive five-step model by all companies, the comparability and consistency in reporting revenue should be enhanced.

Chapter Roadmap

LEARNING OBJECTIVES	TOPICS	REVIEW AND PRACTICE
LO 17.1 Discuss the fundamental concepts related to revenue recognition and measurement.	**17.1 Fundamentals of Revenue Recognition** • Background • Revenue recognition standard • Example of five-step process	**Example** See the BEAN example in the text discussion.

17.1 Fundamentals of Revenue Recognition

LEARNING OBJECTIVE 1

Discuss the fundamental concepts related to revenue recognition and measurement.

Background

Revenue is one of, if not the most, important measures of financial performance that a company reports. Revenue provides insights into a company's past and future performance and is a significant driver of other performance measures, such as EBITDA (earnings before interest, taxes, depreciation, and amortization), net income, and earnings per share. Therefore, establishing robust guidelines for recognizing revenue is a standard-setting priority.

Most revenue transactions pose few problems for revenue recognition. That is, most companies initiate and complete transactions at the same time. However, not all transactions are that simple. For example, consider a cell phone contract between a company such as **Verizon** and a customer. Verizon often provides a customer with a package that may include a smartphone and unlimited talk, text, and data using high-speed data transmission. In addition, Verizon may include some perks like access to different streaming services like **Disney+**. At the same time, the customer may pay for these services in a variety of ways, possibly receiving a discount on the smartphone and then paying higher prices for connection fees and so forth. In some cases, depending on the package purchased, the company may provide free upgrades in subsequent periods. How, then, should Verizon report the various pieces of this sale? The answer is not obvious.

The FASB issued a standard on revenue recognition entitled *Revenue from Contracts with Customers*. [1] (See the FASB Codification References near the end of the chapter.) To address the inconsistencies and weaknesses of the previous approaches, this comprehensive revenue recognition standard applies to a wide range of transactions and industries. This new standard improves GAAP by:

1. Providing a more robust framework for addressing revenue recognition issues.
2. Improving comparability of revenue recognition practices across entities, industries, jurisdictions, and capital markets.
3. Simplifying the preparation of financial statements by reducing the number of requirements to which companies must refer.
4. Requiring enhanced disclosures to help financial statement users better understand the amount, timing, and uncertainty of revenue that is recognized. [2]

Revenue Recognition Standard

The revenue standard adopts an **asset-liability approach** as the basis for revenue recognition. The asset-liability approach recognizes and measures revenue based on changes in assets and liabilities. The FASB decided that focusing on the following brings more discipline to the measurement of revenue.

- The recognition and measurement of assets and liabilities.
- Changes in those assets or liabilities over the life of the contract.

Underlying Concepts

The asset-liability approach is consistent with the conceptual framework approach to recognition.

Under the asset-liability approach, companies account for revenue based on the asset or liability arising from contracts with customers. Companies analyze contracts with customers because contracts initiate revenue transactions. Contracts indicate the terms of the transaction, provide the measurement of the consideration, and specify the promises that must be met by each party (see **Underlying Concepts**).

Illustration 17.1 shows the key concepts related to this new standard on revenue recognition. The new standard first identifies the key objective of revenue recognition, followed by a five-step process that companies should use to ensure that revenue is measured and reported correctly.

ILLUSTRATION 17.1 Key Concepts of Revenue Recognition

Key Objective

Recognize revenue to depict the transfer of goods or services to customers in an amount that reflects the consideration that the company receives, or expects to receive, in exchange for these goods or services.

Five-Step Process for Revenue Recognition

1. Identity the contract with customers.
2. Identify the separate performance obligations in the contract.
3. Determine the transaction price.
4. Allocate the transaction price to the separate performance obligations.
5. Recognize revenue when each performance obligation is satisfied.

Revenue Recognition Principle

Recognize revenue in the accounting period when the performance obligation is satisfied.

The culmination of the process is the **revenue recognition principle**, which states that revenue is recognized when the performance obligation is satisfied. We examine all steps in the five-step process in the following section.

Example of the Five-Step Process: BEAN

To provide an application of the basic principles of the five-step revenue recognition model, we use a coffee, wine, and bakery business called BEAN. BEAN is located in the Midwest and serves gourmet coffee, espresso, lattes, teas, and smoothies. It also sells pastries, coffee beans, other food products, wine, and beer.

Identifying the Contract with Customers—Step 1

Assume that Tyler Angler orders a large cup of black coffee costing $3 from BEAN. Tyler gives $3 to a BEAN barista, who pours the coffee into a large cup and gives it to Tyler.

QUESTION **How much revenue should BEAN recognize on this transaction?**

Step 1 We first must determine whether a valid contract exists between BEAN and Tyler. Here are the components of a valid contract and how it affects BEAN and Tyler.

1. **The contract has commercial substance:** Tyler gives cash for the coffee.
2. **The parties have approved the contract:** Tyler agrees to purchase the coffee, and BEAN agrees to sell it.
3. **Identification of the rights of the parties is established:** Tyler has the right to the coffee, and BEAN has the right to receive $3.
4. **Payment terms are identified:** Tyler agrees to pay $3 for the coffee.
5. **It is probable that the consideration will be collected:** BEAN received $3 before it delivered the coffee. [3][1]

From this information, it appears that BEAN and Tyler have a valid contract with one another.

[1]BEAN disregards revenue guidance for a contract that is wholly unperformed and for which each party can unilaterally terminate the contract without compensation.

Step 2 The next step is to identify BEAN's performance obligation(s), if any. The answer is straightforward—BEAN has a performance obligation to provide a large cup of coffee to Tyler. BEAN has no other performance obligation for any other good or service.

Step 3 BEAN must determine the transaction price related to the sale of the coffee. The price of the coffee is $3, and no discounts or other adjustments are available. Therefore, the transaction price is $3.

Step 4 BEAN must allocate the transaction price to all performance obligations. Given that BEAN has only one performance obligation, no allocation is necessary.

Step 5 Revenue is recognized when the performance obligation is satisfied. BEAN satisfies its performance obligation when Tyler obtains control of the coffee. The following conditions are indicators that control of the coffee has passed to Tyler.

a. BEAN has the right to payment for the coffee.

b. BEAN has transferred legal title to the coffee.

c. BEAN has transferred physical possession of the coffee.

d. Tyler has significant risks (e.g., he might spill the coffee) and rewards of ownership (he gets to drink the coffee).

e. Tyler has accepted the asset.

SOLUTION **BEAN should recognize $3 in revenue from this transaction when Tyler receives the coffee.**

Identifying Separate Performance Obligations—Step 2

The following day, Tyler orders another large cup of coffee for $3 and also purchases two bagels at a price of $5. The barista provides these products and Tyler pays $8.

QUESTION **How much revenue should BEAN recognize on the purchase of these two items?**

Step 1 A valid contract exists as it meets the five conditions necessary for a contract to be enforceable as discussed in the previous example.

Step 2 BEAN must determine whether the sale of the coffee and the sale of the two bagels involve one or two performance obligations. In the previous transaction between BEAN and Tyler, this determination was straightforward because BEAN provided a single distinct product (a large cup of coffee) and therefore only one performance obligation existed. However, an arrangement to purchase coffee and bagels may have more than one performance obligation. Multiple performance obligations exist when the following two conditions are satisfied.

1. BEAN must provide a distinct product or service. In other words, BEAN must be able to sell the coffee and the bagels separately from one another.
2. BEAN's products are distinct within the contract. In other words, if the performance obligation is not highly dependent on, or interrelated with, other promises in the contract, then each performance obligation should be accounted for separately. Conversely, if each of these products is interdependent and interrelated, these products are combined and reported as one performance obligation. [4]

The large cup of coffee and the two bagels appear to be distinct from one another and are not highly dependent or interrelated. That is, BEAN can sell the coffee and the two bagels separately, and Tyler benefits separately from the coffee and the bagels.

BEAN should therefore record two performance obligations—one for the sale of the coffee and one for the sale of the bagels.

Step 3 The transaction price is $8 ($3 + $5).

Step 4 BEAN has two performance obligations: to provide (1) a large cup of coffee and (2) the two bagels. Each of these obligations is distinct and not interrelated (and priced separately); no allocation of the transaction price is necessary. That is, the coffee sale is recorded at $3, and the sale of the bagels is priced at $5.

Step 5 BEAN has satisfied both performance obligations when the coffee and bagels are given to Tyler (control of the product has passed to the customer).

SOLUTION BEAN should recognize $8 ($3 + $5) of revenue when Tyler receives the coffee and bagels.

Determining the Transaction Price—Step 3

BEAN decides to provide an additional incentive to its customers to shop at its store. BEAN roasts its own coffee beans and sells the beans wholesale to grocery stores, restaurants, and other commercial companies. In addition, it sells the coffee beans at its retail location. BEAN is interested in stimulating sales of its Smoke Jumper coffee beans on Tuesdays, a slow business day for the store. Normally, these beans sell for $10 for a 12-ounce bag, but BEAN decides to cut the price by $1 when customers buy them on Tuesdays (the discounted price is now $9 per bag). Tyler has come to the store on a Tuesday, decides to purchase a bag of Smoke Jumper beans, and pays BEAN $9.

QUESTION How much revenue should BEAN recognize on this transaction?

Step 1 As in our previous examples, with the sale of a large cup of coffee or the sale of a large cup of coffee and two bagels, a valid contract exists. The same is true for the sale of Smoke Jumper beans as well.

Step 2 The identification of the performance obligation is straightforward. BEAN has a performance obligation to provide a bag of Smoke Jumper coffee beans to Tyler. BEAN has no other performance obligation to provide a product or service.

Step 3 The transaction price for a bag of Smoke Jumper beans sold to Tyler is $9, not $10. The transaction price is the amount that a company expects to receive from a customer in exchange for transferring goods and services. [5] The transaction price in a contract is often easily determined because the customer agrees to pay a fixed amount to the company over a short period of time. In other contracts, companies must consider adjustments such as when they make payments or provide some other consideration to their customers (e.g., a coupon) as part of a revenue arrangement.[2]

Step 4 BEAN allocates the transaction price to the performance obligations. Given that there is only one performance obligation, no allocation is necessary.

Step 5 BEAN has satisfied the performance obligation, as control of the product has passed to Tyler.

SOLUTION BEAN should recognize $9 of revenue when Tyler receives the Smoke Jumper coffee beans.

Allocating the Transaction Price to Separate Performance Obligations—Step 4

For revenue arrangements with multiple performance obligations, BEAN might be required to allocate the transaction price to more than one performance obligation in the contract. If an allocation is needed, the transaction price is allocated to the various performance obligations based on their relative standalone selling prices. If this information is not available, companies should use their best estimate of what the good or service might sell for as a standalone unit. [6]

BEAN wants to provide even more incentive for customers to buy its coffee beans, as well as purchase a cup of coffee. BEAN therefore offers customers a $2 discount on the purchase of a large cup of coffee when they buy a bag of its premium Motor Moka beans (which normally sell for $12) at the same time. Tyler decides this offer is too good to pass up and buys a bag of Motor Moka beans for $12 and a large cup of coffee for $1. As indicated earlier, a large cup of coffee normally retails for $3 at BEAN.

[2]We provide expanded discussion and examples of variation in transaction price, including variable consideration, later in the chapter.

QUESTION **How much revenue should BEAN recognize on the sale of these two items?**

Step 1 In our previous situations, valid contracts have existed. The same is also true for the sale of a bag of Motor Moka beans and the large cup of coffee.

Step 2 The bag of Motor Moka beans and the large cup of coffee are distinct from one another and are not highly dependent on or highly interrelated with the other. BEAN can sell a bag of the Motor Moka beans and a large cup of coffee separately. Furthermore, Tyler benefits separately from both the large cup of coffee and the Motor Moka coffee beans.

Step 3 BEAN's transaction price is $13 ($12 for the bag of Motor Moka beans and $1 for the large cup of coffee).

Step 4 BEAN allocates the transaction price to the two performance obligations based on their relative standalone selling prices. The standalone selling price of a bag of Motor Moka beans is $12 and the large cup of coffee is $3. The allocation of the transaction price of $13 is as follows.

Product	Standalone Selling Price	Percentage	Allocated Amount
Motor Moka beans (one bag)	$12	80% ($12 ÷ $15)	$10.40 ($13 × .80)
Large cup of coffee	3	20 ($3 ÷ $15)	2.60 ($13 × .20)
Total	$15	100%	$13.00

As indicated, the total transaction price ($13) is allocated as $10.40 to the bag of Motor Moka beans and $2.60 to the large cup of coffee.

Step 5 BEAN has satisfied both performance obligations as control of the bag of Motor Moka beans and the large cup of coffee has passed to Tyler.

SOLUTION **BEAN should recognize revenue of $13, comprised of revenue from the sale of the Motor Moka beans at $10.40 and the sale of the large cup of coffee at $2.60.**

Recognizing Revenue When (or as) Each Performance Obligation Is Satisfied—Step 5

As indicated in the examples presented, BEAN satisfied its performance obligation(s) when Tyler obtained control of the product(s). Change in control is the deciding factor in determining when a performance obligation is satisfied. A customer controls the product or service when the customer has the ability to direct the use of and obtain substantially all the remaining benefits from the product. Control also includes Tyler's ability to prevent other companies from directing the use of, or receiving benefits from, the coffee or coffee beans. As discussed earlier, the indicators that Tyler has obtained control are as follows.

a. BEAN has the right to payment for the coffee.
b. BEAN has transferred legal title to the coffee.
c. BEAN has transferred physical possession of the coffee.
d. Tyler has significant risks and rewards of ownership.
e. Tyler has accepted the asset.[3]

17.2 The Five-Step Process Revisited

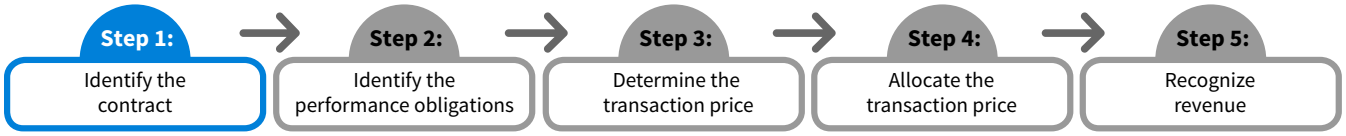
LEARNING OBJECTIVE 2

Explain and apply the five-step revenue recognition process.

The BEAN examples provide a basic understanding of the five-step process used to recognize revenue. We now discuss more technical issues related to the implementation of these five steps.

[3]While in the BEAN example recognition occurred at a point in time, in certain cases, companies satisfy performance obligations over a period of time. We address the criteria for determining point-in-time versus over-time recognition later in the chapter.

Identifying the Contract with Customers—Step 1

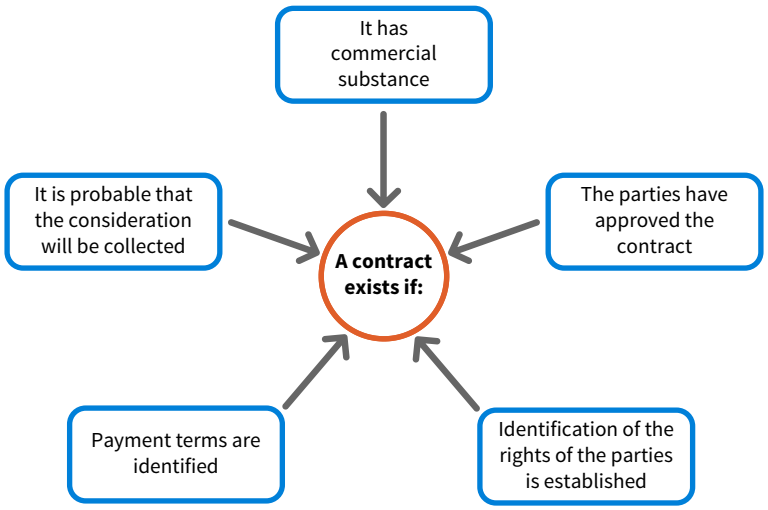


A **contract** is an agreement between two or more parties that creates enforceable rights or obligations.

- Contracts can be written, oral, or implied from customary business practice (such as the BEAN contract with Tyler).
- Revenue is recognized only when a valid contract exists.

On entering into a contract with a customer, a company obtains rights to receive consideration from the customer and assumes obligations to transfer goods or services to the customer (performance obligations). The combination of those rights and performance obligations gives rise to a (net) asset or (net) liability.

In some cases, there are multiple contracts related to an arrangement. Accounting for each contract may or may not occur, depending upon the circumstances. These situations often develop when not only a product is provided but some type of service is performed as well. As in the BEAN example, the conditions for a valid a contract are shown in **Illustration 17.2**.



It has commercial substance
It is probable that the consideration will be collected
The parties have approved the contract
A contract exists if:
Payment terms are identified
Identification of the rights of the parties is established

ILLUSTRATION 17.2 Contract Criteria

If the contract is wholly unperformed and each party can unilaterally terminate the contract without compensation, then revenue should not be recognized until one or both of the parties have performed.

Example 17.1 Contracts and Recognition

FACTS On March 1, 2025, Margo Company enters into a contract to transfer a product to Soon Yoon on July 31, 2025. The contract is structured such that Soon Yoon is required to pay the full contract price of $5,000 on August 31, 2025. The cost of the goods transferred is $3,000. Either party can unilaterally terminate the contract without compensation. Margo delivers the product to Soon Yoon on July 31, 2025.

QUESTION What journal entries should Margo Company make in regard to this contract in 2025?

SOLUTION

No entry is required on March 1, 2025, because neither party has performed on the contract. On July 31, 2025, Margo delivers the product and therefore should recognize revenue on that date as it satisfies its performance obligation by delivering the product to Soon Yoon. The journal entry to record the sale and related cost of goods sold by Margo is as follows.

July 31, 2025

Accounts Receivable	5,000	
Sales Revenue		5,000
Cost of Goods Sold	3,000	
Inventory		3,000

After receiving the cash payment on August 31, 2025, Margo makes the following entry.

August 31, 2025

Cash	5,000	
Accounts Receivable		5,000

A key feature of the revenue arrangement is that the contract between the two parties is not recorded (does not result in a journal entry) until one or both of the parties **perform under the contract**. **Until performance occurs, no net asset or net liability exists.**

Regarding **collectibility**, if it is probable that the transaction price will not be collected, this is an indication that the parties are not committed to their obligations. As a result, one of the criteria for the existence of a contract (in Illustration 17.2) is not met, and revenue is therefore not recognized.[4]

Example 17.2
Collectibility

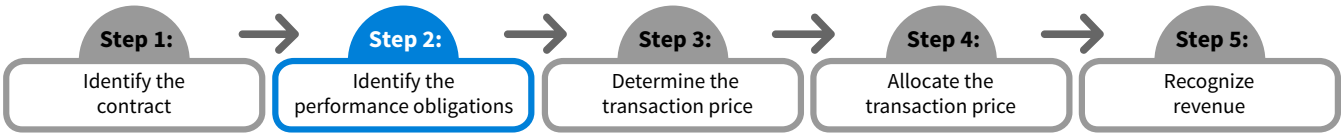
FACTS In November 2025, Specialty Chef sells an assortment of knives to numerous customers for $800,000. Specialty Chef believes that control of the knives has transferred to its customers. In addition, Specialty Chef concludes that collection from its customers is probable. Based on historical trends, approximately 2% of the receivables will not be collectible.

QUESTION How much revenue should Specialty Chef recognize in November?

SOLUTION

Specialty Chef should recognize $800,000 in revenue. It should report the revenue gross (without consideration of the credit risk). It then presents an allowance for any impairment due to bad debts (recognized initially and subsequently in accordance with respective bad debt guidance, as discussed in Chapter 6). An impairment related to bad debts is reported as an operating expense in the income statement.

Identifying Separate Performance Obligations—Step 2



A **performance obligation** is a promise to provide a product or service to a customer. This promise may be explicit, implicit, or possibly based on customary business practice. To

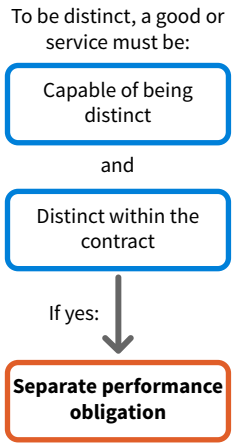
[4]Collectibility is not a consideration for determining when to recognize revenue (Step 5). In determining whether it is probable that a company will collect the amount of consideration to which it is entitled, the company assesses both the customer's ability and intent to pay as amounts become due. [7]

determine whether a performance obligation exists, the company must provide a distinct product or service to the customer.

- A product or service is distinct when a customer benefits from a good or service on its own or together with other readily available resources.
- This situation typically occurs when the company can sell a good or service on a standalone basis (can be sold separately).

For example, BEAN provided a good (a large cup of coffee) on a standalone basis to Tyler. Tyler benefited from this cup of coffee by consuming it.

To determine whether a company has to account for multiple performance obligations, the company's promise to sell the good or service to the customer must be separately identifiable from other promises within the contract.



- That is, the good or service must be distinct within the contract.
- In other words, the **objective is to determine whether the nature of a company's promise is to transfer individual goods and services to the customer or to transfer a combined item (or items) for which individual goods or services are inputs**.

For example, when BEAN sold Tyler a large cup of coffee and two bagels, two performance obligations occurred. In that case, the large cup of coffee had a standalone selling price and the two bagels had a standalone selling price—even though the two promises may be part of one contract.

Conversely, assume that BEAN sold a large latte (comprised of coffee and milk) to Tyler. In this case, BEAN sold two distinct products (coffee and milk), but these two goods are not distinct within the contract. That is, the coffee and milk in the latte are highly interdependent or interrelated within the contract. As a result, the products are combined and reported as one performance obligation.

Example 17.3 Separate Performance Obligations

FACTS Assume that **General Motors** sells a car to Olympic Auto Dealers at a price that includes 6 months of telematics services such as navigation and remote diagnostics. These telematics services are regularly sold on a standalone basis by General Motors for a monthly fee. After the 6-month period, the consumer can renew these services on a fee basis with General Motors.

QUESTION Has General Motors sold one or two products?

SOLUTION

If we look at General Motors' objective, it appears that it is to sell two goods, the car and the telematic services. **Both are distinct (they can be sold separately), and they are not interdependent.** General Motors has two performance obligations in this situation.

Here is another example.

Example 17.4 Not Separate Performance Obligations

FACTS SoftTech Inc. licenses customer-relationship software to Lopez Company. In addition to providing the software itself, SoftTech promises to perform consulting services by extensively customizing the software to Lopez's information technology environment, for total consideration of $600,000.

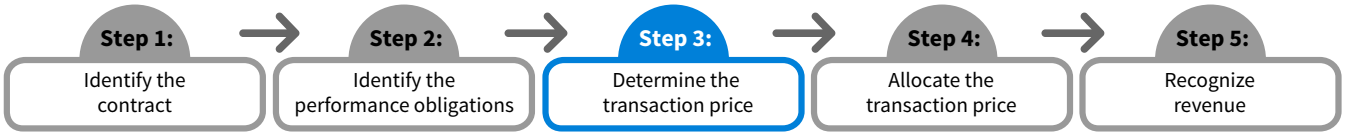
QUESTION Has SoftTech sold one or two products?

SOLUTION

In this case, the objective of SoftTech appears to be to transfer a combined product and service for which individual goods and services are inputs. In other words, SoftTech is providing a significant service by integrating the goods and services (the license and the consulting service) into one combined item for which Lopez has contracted. In addition, the software is significantly customized by SoftTech in accordance with specifications negotiated by Lopez. As a result, **the license and the consulting services are distinct but interdependent,** and therefore should be accounted for as one performance obligation.

In practice, determining whether multiple performance obligations exist can be complex. *For homework purposes, you need to determine the objective of the transaction.* If the objective is to transfer individual goods or services, then account for these performance obligations separately. Indicators that help to understand whether performance obligations should be accounted for separately are (1) the performance obligations have a standalone selling price and (2) the goods or services are not highly interdependent or interrelated.

Determining the Transaction Price—Step 3



The **transaction price** is the amount of consideration that a company expects to receive from a customer in exchange for transferring goods and services. The transaction price in a contract is often easily determined because the customer agrees to pay a fixed amount to the company over a short period of time. In other contracts, companies must consider the following factors. [8]

- Variable consideration.
- Time value of money.
- Noncash consideration.
- Consideration paid or payable to the customer.

Variable Consideration

Underlying Concepts
The expected value approach is also illustrated in Chapter 5 to determine the liability for warranties.

In some cases, the price of a good or service is dependent on future events. These future events might include price increases, volume discounts, rebates, credits, performance bonuses, or royalties. In these cases, the company estimates the amount of variable consideration it will receive from the contract to determine the amount of revenue to recognize.

- Companies use either the **expected value,** which is a probability-weighted amount, or the **most likely amount** in a range of possible amounts to estimate variable consideration (see **Underlying Concepts**).
- Companies select between these two methods based on which approach better predicts the amount of consideration to which a company is entitled. [9]

Illustration 17.3 highlights the issues to be considered in selecting the appropriate method.

ILLUSTRATION 17.3 Estimating Variable Consideration

Expected value: Probability-weighted amount in a range of possible consideration amounts.	**Most likely amount:** The single most likely amount in a range of possible consideration outcomes.
• May be appropriate if a company has a large number of contracts with similar characteristics. • Can be based on a limited number of discrete outcomes and probabilities.	• May be appropriate if the contract has only two possible outcomes.

Example 17.5
Variable Consideration

FACTS Peabody Construction Company enters into a contract with a customer to build a warehouse for $100,000, with a performance bonus of $50,000 that will be paid based on the timing of completion. The amount of the performance bonus decreases by 10% per week for every week beyond the agreed-upon completion date. The contract requirements are similar to contracts that Peabody has performed previously, and management believes that such experience is predictive for this contract. Management estimates that there is a 60% probability that the contract will be completed by the agreed-upon completion date, a 30% probability that it will be completed 1 week late, and only a 10% probability that it will be completed 2 weeks late.

QUESTION How should Peabody account for this revenue arrangement?

SOLUTION

The transaction price should include management's estimate of the amount of consideration to which Peabody will be entitled. Management has concluded that the **probability-weighted method** is the most predictive approach for estimating the variable consideration in this situation:

On time: 60% chance of $150,000 [$100,000 + ($50,000 × 1.0)]	$ 90,000
1 week late: 30% chance of $145,000 [$100,000 + ($50,000 × .90)]	43,500
2 weeks late: 10% chance of $140,000 [$100,000 + ($50,000 × .80)]	14,000
	$147,500

The total transaction price is $147,500 based on the probability-weighted estimate. Management should update its estimate at each reporting date.

Using a most likely outcome approach may be more predictive if a performance bonus is binary (Peabody either will or will not earn the performance bonus), such that Peabody earns either the $50,000 bonus for completion on the agreed-upon date or nothing for completion after the agreed-upon date. In this scenario, if management believes that Peabody will meet the deadline and estimates the consideration using the **most likely outcome**, the total transaction price would be $150,000 (the outcome with 60% probability).

A word of caution—a company only **allocates variable consideration if it is reasonably assured that it will be entitled to that amount**. Companies therefore may only recognize variable consideration if (1) they have experience with similar contracts and are able to estimate the cumulative amount of revenue, and (2) based on experience, it is highly probable that there will not be a significant reversal of revenue previously recognized.[5] If these criteria are not met, revenue recognition is constrained. **[11]**

Example 17.6
Revenue Constraint

FACTS On January 1, Shera Company enters into a contract with Heman Inc. to perform asset-management services for 1 year. Shera receives a quarterly management fee based on a percentage of Heman's assets under management at the end of each quarter. In addition, Shera receives a performance-based incentive fee of 20% of the fund's return in excess of the return of an observable index at the end of the year.

Shera accounts for the contract as a single performance obligation to perform investment-management services for 1 year because the services are interdependent and interrelated. To recognize revenue for satisfying the performance obligation over time, Shera selects an output method of measuring progress toward complete satisfaction of the performance obligation. Shera has had a number of these types of contracts with customers in the past.

QUESTION At what point should Shera recognize the management fee and the performance-based incentive fee related to Heman?

SOLUTION

Shera should record the management fee each quarter as it performs the management of the fund. However, Shera should not record the incentive fee until the end of the year. Although Shera has experience with similar contracts, that experience is not predictive of the outcome of the current contract because the amount of consideration is highly susceptible to volatility in the market. In addition, the incentive fee has a large number and high variability of possible consideration amounts. Therefore, revenue related to the incentive fee is constrained (not recognized) until the incentive fee is known at the end of the year.

[5] Conditions such as one of the following would indicate that the revenue is constrained (or not recognized).

1. The amount of consideration is highly susceptible to factors outside the company's influence. Factors include volatility in a market, the judgment of third parties, weather conditions, and a high risk of obsolescence of the promised good or service.
2. The uncertainty about the amount of consideration is not expected to be resolved for a long period of time.
3. The company's experience (or other evidence) with similar types of performance obligations is limited.
4. The contract has a large number and broad range of possible consideration amounts. **[10]**

Time Value of Money

Timing of payment to the company sometimes does not match the transfer of the goods or services to the customer. In most situations, companies receive consideration after the product is provided or the service performed. In essence, the company provides financing for the customer.

Companies account for the time value of money if the contract **involves a significant financing component**. When a sales transaction involves a significant financing component (i.e., interest is accrued on consideration to be paid over time), the fair value should be determined by discounting the payment using an imputed interest rate. The imputed interest rate is the more clearly determinable of one of the following conditions.

1. The prevailing rate for a similar instrument of an issuer with a similar credit rating.
2. A rate of interest that discounts the nominal amount of the instrument to the current sales price of the goods or services.

The company will report the effects of the financing as interest revenue.

Example 17.7 Extended Payment Terms

FACTS On July 1, 2025, SEK Company sold goods to Grant Company worth $900,000 in exchange for a 4-year, zero-interest-bearing note with a face amount of $1,416,163. The goods have an inventory cost on SEK's books of $590,000. SEK uses the perpetual inventory method.

QUESTIONS (a) How much revenue should SEK Company record on July 1, 2025? (b) How much revenue should it report related to this transaction on December 31, 2025?

SOLUTION

a. SEK should record revenue of $900,000 on July 1, 2025, which is the fair value of the inventory in this case.

b. SEK is also financing this purchase and records interest revenue on the note over the 4-year period. In this case, the interest rate is imputed and is determined to be 12%*. SEK records interest revenue of $54,000 ($.12 \times {}^{6}/_{12} \times \$900{,}000$) at December 31, 2025.

*PV = FV($PVF_{4,i}$)
$900,000 = $1,416,163 ($PVF_{4,i}$)
$PVF_{4,i} = $900,000/$1,416,163
$PVF_{4,i} = .6355$
Using the table for Present Value of 1 for 4 periods, the implicit interest rate is 12%.

To record SEK's sale to Grant Company:

July 1, 2025		
Notes Receivable	1,416,163	
Discount on Notes Receivable		516,163
Sales Revenue		900,000
Cost of Goods Sold	590,000	
Inventory		590,000

To record (accrue) interest revenue at the end of the year:

December 31, 2025		
Discount on Notes Receivable	54,000	
Interest Revenue (.12 × 6/12 × $900,000)		54,000

Excel Solution

n	4
PV	–$900,000
FV	$1,416,163
i	12.0%

RATE(nper, pmt, pv, [fv], [type], [guess])

As a practical expedient, companies are not required to consider the time value of money to determine the transaction price if the time period for payment is less than a year. [12]

Noncash Consideration

Companies sometimes receive consideration in the form of goods, services, or other noncash consideration. When these situations occur, **companies generally recognize revenue on the basis of the fair value of what is received.** For example, assume that Raylin Company

receives common stock of Monroe Company in payment for consulting services. In that case, Raylin Company recognizes revenue in the amount of the fair value of the common stock received. If Raylin cannot determine this amount, then it should estimate the selling price of the services performed and recognize this amount as revenue.

In addition, companies sometimes receive contributions (e.g., donations and gifts). A contribution is often some type of asset (e.g., securities, land, buildings, or use of facilities) but it could be the forgiveness of debt. In these cases, companies recognize revenue for the fair value of the consideration received. Similarly, customers sometimes contribute goods or services, such as equipment or labor, as consideration for goods provided or services performed. This consideration should be recognized as revenue based on the fair value of the consideration received (see Chapter 9).

Consideration Paid or Payable to Customers

Companies often make payments to their customers as part of a revenue arrangement. Consideration paid or payable may include discounts, volume rebates, coupons, free products, or services. In general, these elements reduce the consideration received and the revenue to be recognized.

Example 17.8 Volume Discount

FACTS Sansung Company offers its customers a 3% volume discount if they purchase at least $2 million of its product during the calendar year. On March 31, 2025, Sansung has made sales of $700,000 to Artic Co. In the previous 2 years, Sansung sold over $3,000,000 to Artic in the period April 1 to December 31. Assume that Sansung prepares financial statements quarterly.

QUESTION How much revenue should Sansung recognize for the first 3 months of 2025?

SOLUTION

In this case, Sansung should reduce its revenue by $21,000 ($700,000 × .03) because it is probable that it will provide this rebate. Revenue is therefore $679,000 ($700,000 − $21,000). To not recognize this volume discount overstates Sansung's revenue for the first 3 months of 2025. In other words, the appropriate revenue to be recognized is $679,000, not $700,000.

Given these facts, Sansung makes the following entry on March 31, 2025, to recognize revenue.

Accounts Receivable	679,000	
Sales Revenue		679,000

Assuming that Sansung's customer **meets the discount threshold**, Sansung makes the following entry to record collection of accounts receivable.

Cash	679,000	
Accounts Receivable		679,000

If Sansung's customer **fails to meet the discount threshold**, Sansung makes the following entry to record collection of accounts receivable.

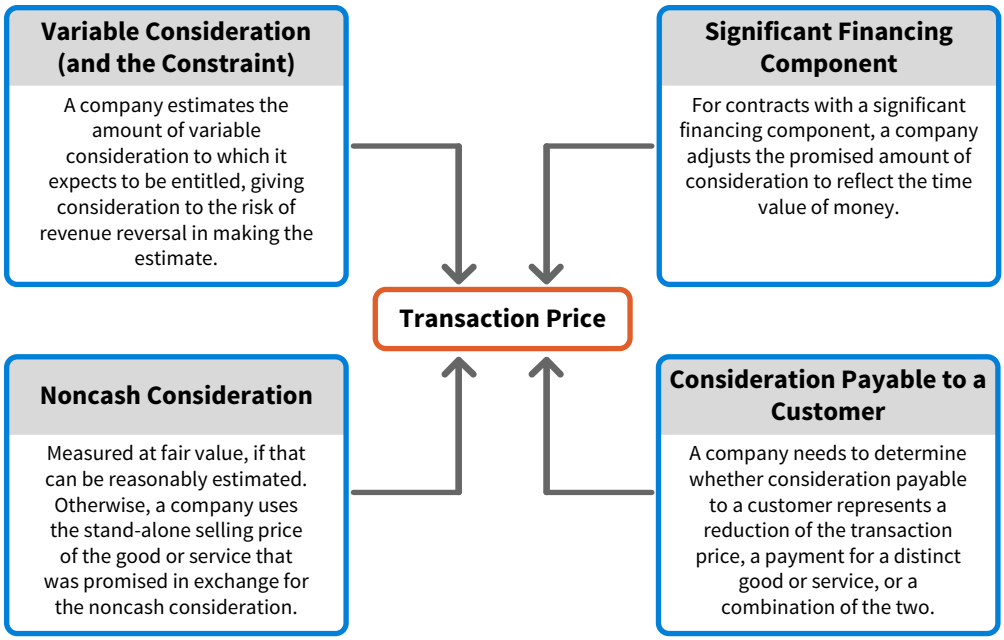
Cash	700,000	
Accounts Receivable		679,000
Sales (Volume) Discounts Forfeited		21,000

As indicated in Chapter 6, Sales Discounts Forfeited is reported in the "Other revenues and gains" section of the income statement.

In many cases, companies provide cash discounts to customers for a short period of time (often referred to as prompt settlement discounts). For example, assume that terms are payment due in 60 days. If payment is made within five days, a 2% discount is given, referred to as 2/5, net 60. These prompt settlement discounts should reduce revenues, if material. In most cases, companies record the revenue at full price (gross) and record a sales discount if payment is made within the discount period.

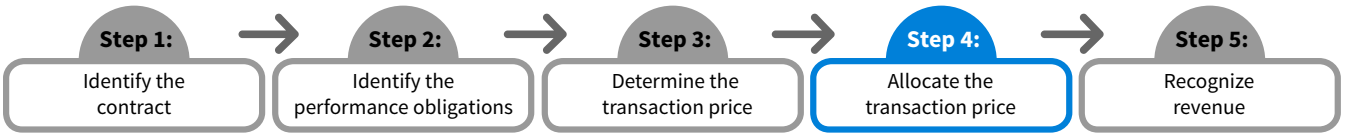
A concise summary of transaction price considerations is provided in **Illustration 17.4**.

ILLUSTRATION 17.4 Transaction Price Summary



Variable Consideration (and the Constraint)
A company estimates the amount of variable consideration to which it expects to be entitled, giving consideration to the risk of revenue reversal in making the estimate.
Significant Financing Component
For contracts with a significant financing component, a company adjusts the promised amount of consideration to reflect the time value of money.
Transaction Price
Noncash Consideration
Measured at fair value, if that can be reasonably estimated. Otherwise, a company uses the stand-alone selling price of the good or service that was promised in exchange for the noncash consideration.
Consideration Payable to a Customer
A company needs to determine whether consideration payable to a customer represents a reduction of the transaction price, a payment for a distinct good or service, or a combination of the two.

Allocating the Transaction Price to Separate Performance Obligations—Step 4



Companies often have to allocate the transaction price to more than one performance obligation in a contract. If an allocation is needed, the transaction price allocated to the various performance obligations is based on their relative fair values. The best measure of fair value is what the company could sell the good or service for on a standalone basis, referred to as the **standalone selling price**. If this information is not available, companies should use their best estimate of what the good or service might sell for as a standalone unit. Illustration 17.5 summarizes the approaches that companies follow (in preferred order of use).

ILLUSTRATION 17.5 Transaction Price—Allocation

Allocation Approach	Implementation
Adjusted market assessment approach	Evaluate the market in which the company sells goods or services and estimate the price that customers in that market are willing to pay for those goods or services. This approach also might include referring to prices from the company's competitors for similar goods or services and adjusting those prices as necessary to reflect the company's costs and margins.
Expected cost plus a margin approach	Forecast expected costs of satisfying a performance obligation and then add an appropriate margin for that good or service.
Residual approach	If the standalone selling price of a good or service is highly variable or uncertain, then a company may estimate the standalone selling price by reference to the total transaction price less the sum or the observable standalone selling prices or other goods or services promised in the contract.[6]

[6]A selling price is highly variable when a company sells the same good or service to different customers (at or near the same time) for a broad range of amounts. A selling price is uncertain when a company has not yet established a price for a good or service and the good or service has not previously been sold. [13]

Example 17.9 Transaction Price Allocation

FACTS Travis Company enters into a contract with a customer to sell Products A, B, and C in exchange for $100,000. Travis Company regularly sells Product A separately, and therefore the standalone selling price is directly observable at $50,000. The standalone selling price of Product B is estimated using the adjusted market assessment approach and is determined to be $30,000. Travis Company decides to use the residual approach to value Product C as it has confidence that Products A and B are valued correctly.

QUESTION How would Travis allocate the selling price to Products A, B, and C?

SOLUTION

The selling price for the products is allocated as follows.

Product	Price	Rationale
A	$ 50,000	Directly observable using standalone selling price.
B	30,000	Directly observable using adjusted market assessment approach.
C	20,000*	Using the residual approach given reliability of the two above measurements.
Total transaction price	$100,000	

*$100,000 − ($50,000 + $30,000)

Examples 17.10 and 17.11 also address measurement issues involved in allocating the transaction price.

Example 17.10 Multiple Performance Obligations I

FACTS Lonnie Company enters into a contract to **build, run, and maintain** a highly complex piece of electronic equipment for a period of 5 years, commencing upon delivery of the equipment. There is a fixed fee for each of the build, run, and maintenance deliverables, and any progress payments made are nonrefundable. It is determined that the transaction price must be allocated to the three performance obligations: building, running, and maintaining the equipment. There is verifiable evidence of the selling price for the building and maintenance but not for running the equipment.

QUESTION What procedure should Lonnie Company use to allocate the transaction price to the three performance obligations?

SOLUTION

The performance obligations relate to building the equipment, running the equipment, and maintaining the equipment. Lonnie can determine verifiable standalone selling prices for the equipment and the maintenance agreements. The company then can make a best estimate of the selling price for running the equipment, using the **adjusted market assessment approach or expected cost plus a margin approach**. Lonnie next applies the proportional standalone selling price method at the inception of the transaction to determine the proper allocation to each performance obligation. Once the allocation is performed, Lonnie recognizes revenue independently for each performance obligation using regular revenue recognition criteria.

If, on the other hand, Lonnie is unable to estimate the standalone selling price for running the equipment because such an estimate is highly variable or uncertain, Lonnie may use a **residual approach**. In this case, Lonnie uses the standalone selling prices of the equipment and maintenance agreements and subtracts these prices from the total transaction price to arrive at a residual value for running the equipment.

Example 17.11 Multiple Performance Obligations II

FACTS Handler Company is an established manufacturer of equipment used in the construction industry. Handler's products range from small to large individual pieces of automated machinery to complex systems containing numerous components. Unit selling prices range from $600,000 to $4,000,000 and are quoted inclusive of installation and training. The installation process does not involve changes to the features of the equipment and does not require proprietary information about the equipment for the installed equipment to perform to specifications. Handler has the following arrangement with Chai Company.

- Chai purchases equipment from Handler for a price of $2,000,000 and chooses Handler to do the installation. Handler charges the same price for the equipment irrespective of whether it does the installation or not. (Some companies do the installation themselves because they either prefer their own employees to do the work or because of relationships with other customers.) The installation service included in the arrangement is estimated to have a standalone selling price of $20,000.
- The standalone selling price of the training sessions is estimated at $50,000. Other companies can also perform these training services.
- Chai is obligated to pay Handler the $2,000,000 upon the delivery and installation of the equipment.
- Handler delivers the equipment on September 1, 2025, and completes the installation of the equipment on November 1, 2025 (transfer of control is complete after installation). Training related to the equipment starts once the installation is completed and lasts for 1 year. The equipment has a useful life of 10 years.

QUESTIONS (a) What are the performance obligations for purposes of accounting for the sale of the equipment? (b) If there is more than one performance obligation, how should the payment of $2,000,000 be allocated to various components?

SOLUTION

a. Handler's primary objective is to sell equipment. The other services (installation and training) can be performed by other parties if necessary. **As a result, the equipment, installation, and training are three separate products or services**. Each of these items has a standalone selling price and is not interdependent.

b. The total revenue of $2,000,000 should be allocated to the three components based on their relative standalone selling prices. In this case, the standalone selling price of the equipment is $2,000,000, the installation fee is $20,000, and the training is $50,000. The total standalone selling price therefore is $2,070,000 ($2,000,000 + $20,000 + $50,000). The allocation is as follows.

Equipment	$1,932,367 [($2,000,000 ÷ $2,070,000) × $2,000,000]
Installation	19,324 [($20,000 ÷ $2,070,000) × $2,000,000]
Training	48,309 [($50,000 ÷ $2,070,000) × $2,000,000]
	$2,000,000

Continuing with Example 17.11, Handler makes the following entry on November 1, 2025, to record both sales revenue and service revenue on the installation, as well as unearned service revenue for the training component.

November 1, 2025

Cash	2,000,000	
Service Revenue (installation)		19,324
Unearned Service Revenue (training)		48,309
Sales Revenue (equipment)		1,932,367

Assuming the cost of the equipment is $1,500,000, the entry to record cost of goods sold is as follows.

November 1, 2025

Cost of Goods Sold	1,500,000	
Inventory		1,500,000

As indicated by these entries, Handler recognizes revenue from the sale of the equipment once the installation is completed on November 1, 2025. In addition, it recognizes revenue for the installation fee because these services have been performed.

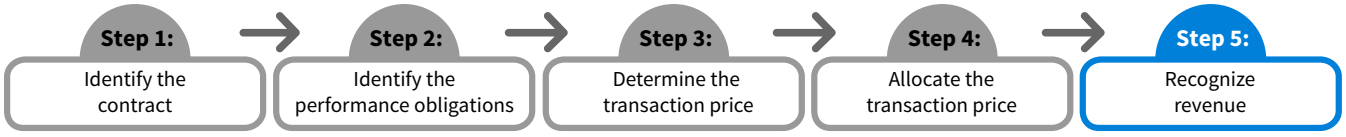
Handler recognizes the training revenues on a straight-line basis starting on November 1, 2025, or $4,026 ($48,309 ÷ 12) per month for one year (unless a more appropriate method such as the percentage-of-completion method—discussed in the next section—is warranted). The journal entry to recognize the training revenue for two months in 2025 is as follows.

December 31, 2025		
Unearned Service Revenue	8,052	
Service Revenue (training) ($4,026 × 2)		8,052

Therefore, Handler recognizes revenue at December 31, 2025, in the amount of $1,959,743 ($1,932,367 + $19,324 + $8,052). Handler makes the following journal entry to recognize the remaining training revenue in 2026, assuming adjusting entries are made at year-end.

December 31, 2026		
Unearned Service Revenue	40,257	
Service Revenue (training) ($48,309 − $8,052)		40,257

Recognizing Revenue When (or as) Each Performance Obligation Is Satisfied—Step 5



A company satisfies its performance obligation when the customer obtains control of the good or service. As indicated in the Handler example (in Example 17.11) and the BEAN example, the concept of change in control is the deciding factor in determining when a performance obligation is satisfied. The customer controls the product or service when it has the ability to direct the use of and obtain substantially all the remaining benefits from the asset or service. Control also includes the customer's ability to prevent other companies from directing the use of, or receiving the benefits, from the asset or service. **Illustration 17.6** summarizes the indicators that the customer has obtained control. **[14]**

ILLUSTRATION 17.6 Change in Control Indicators

1. The company has a right to payment for the asset.
2. The company has transferred legal title to the asset.
3. The company has transferred physical possession of the asset.
4. The customer has significant risks and rewards of ownership.
5. The customer has accepted the asset.

This is a list of indicators, not requirements or criteria. Not all of the indicators need to be met for management to conclude that control has transferred and revenue can be recognized. Management must use judgment to determine whether the factors collectively indicate that the customer has obtained control. This assessment should be focused primarily on the customer's perspective.

Companies satisfy performance obligations either at a point in time or over a period of time. Companies recognize revenue over a period of time if one of the three criteria shown in **Illustration 17.7** is met.

ILLUSTRATION 17.7 Recognition over Time Criteria

Criterion	Example
1. The customer receives and consumes the benefits as the seller performs.	Routine or recurring services, such as cleaning.
2. The customer controls the asset as it is created or enhanced.	Building an asset on a customer's site.

(*continues*)

ILLUSTRATION 17.7 (continued)

Criterion	Example
3. The company does not have an alternative use for the asset created or enhanced and either: **a.** The customer receives benefits as the company performs and therefore the task would not need to be re-performed. **or** **b.** The company has a right to payment and this right is enforceable.	An aircraft manufacturer builds specialty jets to a customer's specifications, such that only the customer can use.

Example 17.12 Timing of Revenue Recognition

FACTS Gomez Software Company enters into a contract with Hurly Company to develop and install customer relationship management (CRM) software. Progress payments are made upon completion of each stage of the contract. If the contract is terminated, then the partly completed CRM software passes to Hurly Company. Gomez Software is prohibited from redirecting the software to another customer.

QUESTION At what point should Gomez Software Company recognize revenue related to its contract with Hurly Company?

SOLUTION

Gomez Software does not create an asset with an alternative use because it is prohibited from redirecting the software to another customer. In addition, Gomez Software is entitled to payments for performance to date and expects to complete the project. Therefore, Gomez Software concludes that the contract meets the criteria for recognizing revenue over time.

A company recognizes revenue from a performance obligation over time by measuring the progress toward completion. The method selected for measuring progress should depict the transfer of control from the company to the customer. **For many service arrangements, revenue is recognized on a straight-line basis because the performance obligation is being satisfied ratably over the contract period.** In other settings (e.g., long-term construction contracts), companies use various methods to determine the extent of progress toward completion. The most common are the cost-to-cost and units-of-delivery methods. The objective of all these methods is to measure the extent of progress in terms of costs, units, or value added.

Companies identify the various measures (costs incurred, labor hours worked, tons produced, floors completed, etc.) and classify them as input or output measures.

- Input measures are efforts devoted to a contract, such as costs incurred and labor hours worked.
- Output measures track results. Results are measured in units of delivery, such as tons produced, floors of a building completed, and miles of a highway completed.

Neither is universally applicable to all long-term projects. Their use requires the exercise of judgment and careful tailoring to the circumstances.

The most popular input measure used to determine the progress toward completion is the cost-to-cost basis. Under this basis, a company measures the percentage of completion by comparing costs incurred to date with the most recent estimate of the total costs required to complete the contract. The percentage-of-completion method is discussed more fully in Appendix 17A, which examines the accounting for long-term contracts.

Summary

Illustration 17.8 provides a summary of the five-step revenue recognition process.

ILLUSTRATION 17.8 Summary of the Five-Step Revenue Recognition Process

Step in Process	Description	Implementation
1. Identify the contract with customers.	A contract is an agreement that creates enforceable rights or obligations.	A company applies the revenue guidance to contracts with customers.
2. Identify the separate performance obligations in the contract.	A performance obligation is a promise in a contract to provide a product or service to a customer. A performance obligation exists if the customer can benefit from the good or service on its own or together with other readily available resources.	A contract may be comprised of multiple performance obligations. The accounting for multiple performance obligations is based on evaluation of whether the product or service is distinct within the contract. If each of the goods or services is distinct but is interdependent and interrelated, these goods and services are combined and reported as one performance obligation.
3. Determine the transaction price.	The transaction price is the amount of consideration that a company expects to receive from a customer in exchange for transferring goods and services.	In determining the transaction price, companies must consider the following factors: (1) variable consideration, (2) time value of money, (3) noncash consideration, and (4) consideration paid or payable to customer.
4. Allocate the transaction price to the separate performance obligations.	If more than one performance obligation exists, allocate the transaction price based on relative fair values.	The best measure of fair value is what the good or service could be sold for on a standalone basis (standalone selling price). Estimates of standalone selling price can be based on (1) adjusted market assessment, (2) expected cost plus a margin approach, or (3) a residual approach.
5. Recognize revenue when each performance obligation is satisfied.	A company satisfies its performance obligation when the customer obtains control of the good or service.	Companies satisfy performance obligations either at a point name or over a period of time. Companies recognize revenue over a period of time if one of the following criteria is met: (1) the customer receives and consumes the benefits as the seller performs, (2) the customer controls the asset as it is created, or (3) the company does not have an alternative use for the asset.

FACTS Ace Appliance Company manufactures compact appliances (stoves, microwaves, refrigerators), which are in demand for use in dormitories, hotel rooms, and efficiency apartments. One of its most popular products is a combination stove/microwave, which can be installed in a space-saving manner under counters or in cabinets. Each unit has a retail price of $800 (the cost to Ace is $350).

Ace sells its products under a written contract, which indicates the customer's and Ace's rights and responsibilities on the sale of each unit (collection on the contract is probable). Ace sells its appliances on a standalone basis directly to customers, as well as provides installation services. Installation services are not specialized, and customers could hire other vendors for these services.

Ace sells 400 stove/microwaves (with installation) to a hotel for use in three of its new properties for a total price of $320,000. Ace provides installation services at a standalone selling price of $100 per

Put It into Practice LO 17.2

Apply the Five-Step Model

unit; the cost to Ace to install is $50 per unit. The stove/microwaves are delivered on April 1, 2025, installation is completed on May 20, 2025, and full payment is made to Ace at delivery of the appliances.

INSTRUCTIONS

a. Evaluate each of the five steps in the revenue recognition process for this revenue arrangement. The sale of the appliance and the installation are accounted for as separate performance obligations.

b. Prepare journal entries for Ace on April 1, 2025, and May 20, 2025.

c. What amount of income related to this arrangement will be included in Ace's 2025 income?

d. Assume now that the customer signs and Ace accepts a note as consideration in the contract (to be paid in 6 months). Briefly discuss how collectibility of the note affects revenue recognition and income measurement for Ace.

SOLUTION

a. With respect to the five-step model:

1. **Identify the contract.** Ace and the customer enter into a written contract, which entails (1) approval and commitment of parties and (2) identification of rights and payment terms. Collection is probable.
2. **Identify performance obligations.** There are two performance obligations: (1) delivery of the combination stove/microwaves and (2) installation. These promises are distinct and, given installation could be done by another vendor and installation has a stand-alone selling price, Ace concludes that installation is separately identifiable from sale of the appliance and should be accounted for as a separate performance obligation.
3. **Determine the transaction price.** The total transaction price is $320,000, as specified in the contract. It is the amount that Ace expects to receive in exchange for the goods and services.
4. **Allocate the transaction price**. The total price should be allocated between the appliance and installation, based on relative standalone selling prices:

Equipment [($320,000 ÷ $360,000*) × $320,000]	$284,444
Installation [($40,000 ÷ $360,000) × $320,000]	35,556
	$320,000

*400 stove/microwaves × $800	$320,000
400 installations × $100	40,000
Total standalone price	$360,000

5. **Recognize revenue.** Control of the stove/microwaves transfers upon delivery on April 1, 2025; Sales Revenue (and Cost of Goods Sold) is recognized on this date. The installation revenue is recognized on May 20, 2025, when installation is completed (Ace satisfies its installation performance obligation).

b. To record payment and delivery of stove/microwaves:

April 1, 2025

Cash	320,000	
Cost of Goods Sold (400 × $350)	140,000	
Inventory		140,000
Sales Revenue		284,444
Unearned Service Revenue (Installation)		35,556

To record installation:

May 20, 2025

Unearned Service Revenue	35,556	
Service Revenue (Installation)		35,556
Installation Expense	20,000	
Cash, Wages, Materials		20,000

c. Income to be included on this arrangement is as follows.

Sales revenue	$284,444	
Cost of goods sold (400 × $350)	140,000	
Gross profit		$144,444
Installation revenue	35,556	
Installation expense (400 × $50)	20,000	
Net profit on installation		15,556
Net income on this arrangement		$160,000

Assuming both delivery and installation occur in the same accounting period, the income effect on the entire arrangement would appear in a single period's income.

d. If not probable that a company will get paid for satisfying a performance obligation, this raises concern about the existence of a valid contract. If collection is not probable, Ace cannot recognize revenue until payment is probable. Only then (or when all amounts are paid), can Ace recognize revenue on this contract.

17.3 Accounting for Revenue Recognition Issues

LEARNING OBJECTIVE 3

Apply the five-step process to major revenue recognition issues.

This section addresses revenue recognition issues found in practice. Most of these issues relate to determining the transaction price (Step 3) and evaluating when control of the product or service passes to the customer (Step 5). The revenue recognition principle and the concept of control are illustrated for the following situations.

- Sales returns and allowances.
- Repurchase agreements.
- Bill and hold.
- Principal-agent relationships.
- Consignments.
- Warranties.
- Nonrefundable upfront fees.

Sales Returns and Allowances

Sales returns and allowances are very common for many companies that sell goods to customers. For example, assume that Fafco Solar sells solar panels to customers on account. Fafco grants customers the right of return for these panels for various reasons (e.g., dissatisfaction with the product). To account for these sales returns and allowances, Fafco should recognize the following.

- Revenue for the transferred solar panels in the amount of consideration to which Fafco is reasonably assured to be entitled (considering the products to be returned or allowance granted).
- An asset, and corresponding adjustment to cost of goods sold, for the goods returned from customers.

Example 17.13
Sales with Returns and Allowances

FACTS On March 5, 2025, Epic Co. sells 100 video games on account to GoGamer for $50 each. The cost of each game is $20. Epic allows GoGamer to return any unused video games within 60 days of purchase. Epic estimates that:

1. Six video games will be returned.
2. The cost of recovering the products will be immaterial.
3. Returned video games are expected to be resold at a profit.

On March 24, 2025, GoGamer returns four of the video games because they were for the wrong gaming system. On March 31, Epic prepares financial statements and determines that it is likely that two more games will be returned.

QUESTIONS (a) What entries should be made on March 5, 24, and 31 by Epic to record the information related to the sale of these video games? (b) How would this information be reported on Epic's income statement and balance sheet related to March 2025?

SOLUTION

a. Epic makes the following entries on March 5 and March 24 as follows.

To record the sale of games and related cost of goods sold:

March 5, 2025

Accounts Receivable	5,000	
Sales Revenue (100 × $50)		5,000
Cost of Goods Sold	2,000	
Inventory (100 × $20)		2,000

To record the return of four video games:

March 24, 2025

Sales Returns and Allowances	200	
Accounts Receivable (4 × $50)		200
Returned Inventory	80	
Cost of Goods Sold (4 × $20)		80

The Sales Returns and Allowances account is a contra account to Sales Revenue. The Returned Inventory account is used to separate returned inventory from regular inventory.

On March 31, 2025, Epic prepares financial statements. As indicated earlier, Epic originally estimated that the most likely outcome was that six video games would be returned. Epic believes the original estimate is correct. Epic should make the following adjusting entries to account for the expected returns.

March 31, 2025

Sales Returns and Allowances	100	
Refund Liability (2 × $50)		100

To record the expected return of the two video games and related reduction in cost of goods sold:

Estimated Inventory Returns	40	
Cost of Goods Sold (2 × $20)		40

The Refund Liability account is the amount Epic is expected to return to GoGamer. The Refund Liability account is updated each reporting period for changes in circumstances and is reported as a liability on Epic's balance sheet. The Estimated Inventory Returns account will generally be added to the Returned Inventory account at the end of the reporting period.

b. For the month of March, Epic's income statement reports the following information.

Sales revenue (100 × $50)	$5,000
Less: Sales returns and allowances ($200 + $100)	300
Net sales	4,700
Cost of goods sold ($2,000 − $80 − $40)	1,880
Gross profit	$2,820

As a result, at the end of the reporting period, the net sales reflects the amount that Epic expects to be entitled to collect.

Epic reports the following information in the balance sheet as of March 31, 2025.

Accounts receivable (net)	$4,800
Returned inventory (including estimated) (6 × $20)	120
Refund liability (2 × $50)	100

As indicated in Example 17.13, at the date of sale, both sales revenue and accounts receivable are recorded at their gross amounts without consideration of sales returns and allowances. Then, at the end of the reporting period, adjusting entries are made, resulting in both sales revenue and accounts receivable being reported for actual and estimated returns and allowances.

As discussed in Chapter 6, most companies follow this adjusting entry approach because estimating net sales at the date of sale is often difficult and time-consuming. By waiting to make the necessary adjusting entries at the end of the reporting period, information related to actual sales returns and allowances is available, and a company still achieves the FASB's objective of reporting accounts receivable and sales revenue at the amount the company is entitled to receive, and inventories and cost of goods sold at cost.

Analytics in Action: Are You Going to Keep That?

Consider the number of times you have ordered a product online with the comfort of knowing you can return it, no questions asked, if you change your mind. Do you want a red shirt or blue? Medium or large? How about you buy them all, try them on at home, and only keep what you like best? Sound familiar? In one recent year, U.S. consumers returned $428 billion of goods, a return rate of 10.6%!

Estimated future sales returns is a material amount on the financial statements, with a direct impact to the bottom line. So, how do companies estimate these amounts? Using vast amounts of historical data, coupled with machine learning, companies can continually improve these important estimates.

With the transactional data housed in a company's accounting system, coupled with advances in technology, a company like **Amazon** can incorporate things like product type, sales price, product color or size, time of year, or geographic location of sale to laser in on the estimated amount of returns. And with machine learning, the system gets smarter as more data is accumulated!

The adjacent graph compares net product sales and the refund liability for a select group of retailers. This is just one example of metrics that companies may use to track and estimate their sales returns.

Go to the Analytics in Action Activities section at the end of the chapter, which includes Excel-based problems with data sets, to see the relevance and application of data analytics to intermediate accounting topics.

Repurchase Agreements

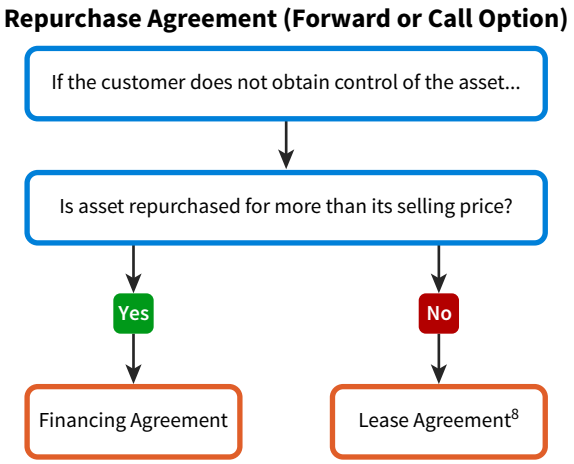
In some cases, companies enter into **repurchase agreements**, which allow them to transfer an asset to a customer but have an unconditional (forward) obligation or unconditional right (call option) to repurchase the asset at a later date. In these situations, the question is whether

the company sold the asset.[7] Generally, companies report these transactions as a financing (borrowing). That is, if the company has a forward obligation or call option to repurchase the asset for an amount **greater than or equal to its selling price,** then the transaction is a financing transaction by the company. As a financing transaction:

1. The company continues to recognize the asset and also recognizes a financial liability for any cash received.
2. Interest is recognized for the difference between the amount received by the company from the original transfer of the asset and the amount to be paid when the asset is repurchased.

Illustration 17.9 summarizes the accounting framework.

ILLUSTRATION 17.9 Repurchase Agreement



Repurchase Agreement (Forward or Call Option)
If the customer does not obtain control of the asset...
Is asset repurchased for more than its selling price?
Yes
No
Financing Agreement
Lease Agreement[8]

Example 17.14 Repurchase Agreement

FACTS Morgan Inc., an equipment dealer, sells equipment on January 1, 2025, to Lane Company for $100,000. It agrees to repurchase this equipment (an unconditional obligation) from Lane Company on December 31, 2026, for a price of $121,000.

QUESTION Should Morgan Inc. record a sale for this transaction?

SOLUTION

For a sale and repurchase agreement, the terms of the agreement need to be analyzed to determine whether Morgan Inc. has transferred control to the customer, Lane Company. As indicated earlier, control of an asset refers to the ability to direct the use of and obtain substantially all the benefits from the asset. Control also includes the ability to prevent other companies from directing the use of and receiving the benefit from a good or service. In this case, Morgan Inc. continues to have control of the asset because it has agreed to repurchase the asset at an amount greater than the selling price. Therefore, this agreement is a financing transaction and not a sale. Thus, the asset is not removed from the books of Morgan Inc.

Assuming that an interest rate of 10% is imputed from the agreement, Morgan Inc. makes the following entries to record this agreement. Morgan Inc. records the financing on January 1, 2025, as follows.

[7] Beyond financing motivations, a company may transfer inventory to another party on a short-term basis to avoid inventory taxes. If the counterparty is able to use the inventory during the transfer period, the transaction may more appropriately be accounted for as a rental agreement.

[8] If the repurchase price is less than the selling price, then the transaction is accounted for as a lease. [15] The accounting for leases is discussed in Chapter 20.

January 1, 2025

Cash	100,000	
Liability to Lane Company		100,000

Morgan Inc. records interest on December 31, 2025, as follows.

December 31, 2025

Interest Expense	10,000	
Liability to Lane Company ($100,000 × .10)		10,000

Morgan Inc. records interest and retirement of its liability to Lane Company as follows.

December 31, 2026

Interest Expense	11,000	
Liability to Lane Company ($110,000 × .10)		11,000
Liability to Lane Company	121,000	
Cash ($100,000 + $10,000 + $11,000)		121,000

Continuing with Example 17.14, now assume that Lane Company **has the option** to require Morgan Inc. to repurchase the asset at December 31, 2026. This option is a put option; that is, Lane Company has the option to put the asset back to Morgan Inc. In this situation:

- Lane Company has control of the asset as it can keep the equipment or sell it to Morgan Inc. or to some other third party.
- The value of a put option increases when the value of the underlying asset (in this case, the equipment) decreases.

In determining how to account for this transaction, Morgan Inc. has to determine whether Lane Company will have an economic incentive to exercise this put option at the end of 2026.

Specifically, Lane Company has a significant economic incentive to exercise its put option if the value of the equipment declines. In this case, the transaction is generally reported as a financing transaction, as shown in Example 17.14. That is, Lane Company will return (put) the equipment back to Morgan Inc. if the repurchase price exceeds the fair value of the equipment. For example, if the repurchase price of the equipment is $150,000 but its fair value is $125,000, Lane Company is better off returning the equipment to Morgan Inc.

Conversely, if Lane Company does not have a significant economic incentive to exercise its put option, then the transaction should be reported as a sale of a product with a right of return.

Bill-and-Hold Arrangements

A **bill-and-hold arrangement** is a contract under which a company bills a customer for a product, but the company retains physical possession of the product until it is transferred to the customer at a point in time in the future. Bill-and-hold sales result when the buyer is not yet ready to take delivery but does take title and accepts billing. For example, a customer may request a company to enter into such an arrangement because of:

1. Lack of available space for the product.
2. Delays in its production schedule.
3. More than sufficient inventory in its distribution channel. **[16]**

Example 17.15
Bill and Hold

FACTS Butler Company sells $450,000 (cost $280,000) of fireplaces on March 1, 2025, to a local coffee shop, Baristo, which is planning to expand its locations around the city. Under the agreement, Baristo asks Butler to hold these fireplaces in its warehouses until the new coffee shops that will house the fireplaces are ready. Title passes to Baristo at the time the agreement is signed.

QUESTION When should Butler recognize the revenue from this bill-and-hold arrangement?

SOLUTION

When to recognize revenue in a bill-and-hold arrangement depends on the circumstances. Butler determines when it has satisfied its performance obligation to transfer a product by evaluating when Baristo obtains control of that product. For Baristo to have obtained control of a product in a bill-and-hold arrangement, it must meet all of the conditions for change in control plus all of the following criteria.

a. The reason for the bill-and-hold arrangement must be substantive.

b. The product must be identified separately as belonging to Baristo.

c. The product currently must be ready for physical transfer to Baristo.

d. Butler cannot have the ability to use the product or to direct it to another customer.

In this case, assuming that the above criteria were met in the contract, revenue recognition should be permitted at the time the contract is signed. Butler has transferred control to Baristo; that is, Butler has a right to payment for the fireplaces and legal title has transferred.

Butler makes the following entry to record the bill-and-hold sale and related cost of goods sold.

March 1, 2025

Accounts Receivable	450,000	
Sales Revenue		450,000
Cost of Goods Sold	280,000	
Inventory		280,000

Principal-Agent Relationships

In a **principal-agent relationship**, the principal's performance obligation is to provide goods or perform services for a customer. The agent's performance obligation is to arrange for the principal to provide these goods or services to a customer. Examples of principal-agent relationships are as follows.

- Preferred Travel Company (agent) facilitates the booking of cruise excursions by finding customers for Regency Cruise Company (principal).
- **Priceline** (agent) facilitates the sale of various services such as car rentals for **Hertz** (principal).

In these types of situations, amounts collected on behalf of the principal are not revenue of the agent. Instead, revenue for the agent is the amount of the commission it receives (usually a percentage of total revenue).

Example 17.16
Principal-Agent Relationship

FACTS Assume that Fly-Away Travel sells airplane tickets for **British Airways (BA)** to various customers.

QUESTION What are the performance obligations in this situation, and how should revenue be recognized for both the principal and agent?

SOLUTION

The principal in this case is BA, and the agent is Fly-Away Travel. Because BA has the performance obligation to provide air transportation to the customer, it is the principal. Fly-Away Travel facilitates the sale of the airline ticket to the customer in exchange for a fee or commission. Its performance obligation is to arrange for BA to provide air transportation to the customer.

Although Fly-Away collects the full airfare from the customer, it then remits this amount to BA less the commission. Fly-Away therefore should not record the full amount of the fare as revenue on its books—to do so overstates revenue. Its revenue is the commission, not the full price. Control of performing the air transportation is with BA, not Fly-Away Travel.

For Example 17.16, some might argue that there is no harm in letting Fly-Away record revenue for the full price of the ticket and then charging the cost of the ticket against the revenue (often referred to as the **gross method** of recognizing revenue). Others note that this approach overstates the agent's revenue and is misleading. The revenue received is the commission for providing the travel services, not the full fare price (often referred to as the **net approach**). The profession believes the net approach is the correct method for recognizing revenue in a principal-agent relationship.

As a result, the FASB developed a set of indicators to determine when a principal-agent relationship exists:

a. One party (the principal) is primarily responsible for fulfilling the contract.

b. The other party (the agent) does not have inventory risk before or after the customer order, during shipping, or on return.

c. The agent does not have latitude in establishing prices for the other party's goods or services. As a result, the amount that the agent can receive from those goods or services is constrained.[9]

An important feature in deciding whether Fly-Away is acting as an agent is whether the amount it earns is predetermined, being either a fixed fee per transaction or a stated percentage of the amount billed to the customer.

Consignments

A common principal-agent relationship involves consignments. In these cases, manufacturers (or wholesalers) deliver goods but retain title to the goods until they are sold. This specialized method of marketing certain types of products makes use of an agreement known as a **consignment**. Under this arrangement:

- The **consignor** (manufacturer or wholesaler) ships merchandise to the **consignee** (dealer), who is to act as an agent for the consignor in selling the merchandise.
- Both consignor and consignee are interested in selling—the former to make a profit or develop a market, the latter to make a commission on the sale.

The consignee accepts the merchandise and agrees to exercise due diligence in caring for and selling it. The consignee remits to the consignor cash received from customers, after deducting a sales commission and any chargeable expenses. In consignment sales, the consignor uses a

[9]These indicators are not requirements. As a result, management must exercise judgment in this determination. [17]

modified version of the point-of-sale basis of revenue recognition. That is, the consignor recognizes revenue only after receiving notification of the sale.

The consignor carries the merchandise as inventory throughout the consignment, separately classified as Inventory (consignments). **The consignee does not record the merchandise as an asset on its books**. Upon sale of the merchandise, the consignee has **a liability for the net amount due the consignor**. The consignor periodically receives from the consignee a report called **account sales** that shows the merchandise received, merchandise sold, expenses chargeable to the consignment, and the cash remitted. Revenue is then recognized by the consignor.

Example 17.17 Sales on Consignment

FACTS Nelba Manufacturing Co. ships merchandise costing $36,000 on consignment to Best Value Stores. Nelba pays $3,750 of freight costs, and Best Value pays $2,250 for local advertising costs that are reimbursable from Nelba. By the end of the period, Best Value has sold two-thirds of the consigned merchandise for $40,000 cash. Best Value notifies Nelba of the sales, retains a 10% commission, and remits the cash due Nelba.

QUESTION What are the journal entries that the consignor (Nelba) and the consignee (Best Value) make to record this transaction?

SOLUTION

Nelba Mfg. Co. (Consignor)			**Best Value Stores** (Consignee)		
Shipment of consigned merchandise:					
Inventory (consignments)	36,000		No entry (record memo or merchandise received).		
Finished Goods Inventory		36,000			
Payment of freight costs by consignor:					
Inventory (consignments)	3,750		No entry.		
Cash		3,750			
Payment of advertising by consignee:					
No entry until notified.			Receivable from Consignor	2,250	
			Cash		2,250
Sales of consigned merchandise:					
No entry until notified.			Cash	40,000	
			Payable to Consignor		40,000
Notification of sales and expenses and remittance or amount due:					
Cash	33,750		Payable to Consignor	40,000	
Advertising Expense	2,250		Receivable from Consignor		2,250
Commission Expense	4,000		Commission Revenue		4,000
Revenue from Consignment Sales		40,000	Cash		33,750
Adjustment of inventory on consignment for cost of sales:					
Cost of Goods Sold	26,500		No entry.		
Inventory (consignments)		26,500			
[2/3 ($36,000 + $3,750) = $26,500]					

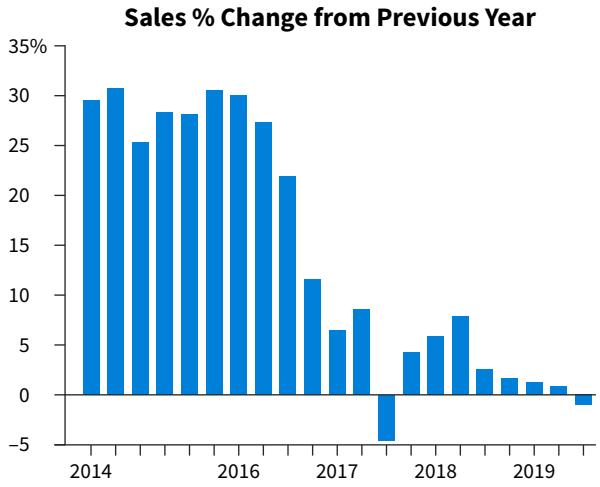
Under the consignment arrangement, the consignor accepts the risk that the merchandise might not sell and relieves the consignee of the need to commit part of its working capital to inventory. Consignors use a variety of systems and account titles to record consignments, but they all share the common goal of postponing the recognition of revenue until it is known that a sale to a third party has occurred. **Consignees only recognize commission revenue.**

Accounting Matters — Did You Meet Your Target?

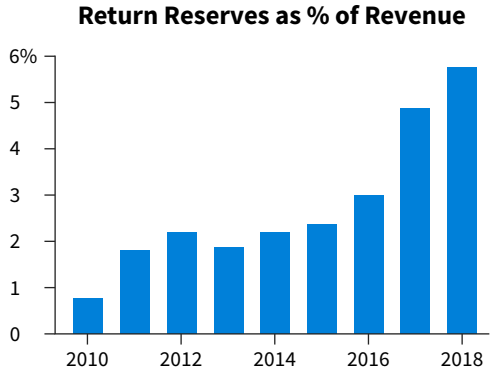
The emphasis on a company's bottom line, or hitting previously disclosed earnings targets, often has a direct impact on the value of the company's stock. While we often hear about net income or earnings per share, the revenue line item has arguably the largest impact on a company's reported net earnings.

In fact, improper timing of revenue recognition is the most common type of accounting that the Securities and Exchange Commission (SEC) has taken action against under its whistleblower program. About 60% of the SEC's actions involve companies who have accelerated revenue recognition (or delayed recognition if they already met earnings targets).

For example, **Under Armour** agreed to pay $9 million to settle an SEC probe into its accounting practices. The probe indicated that the company pulled forward a total of $408 million in existing product orders in 2015 and 2016 that customers requested be shipped in future quarters. This practice ultimately catches up with a company, as it did for Under Armour in 2017 (see the following graph).



Strict guidance on revenue recognition and transparent reporting are a key component of curbing fraud. Careful review of financial metrics can also shed light on potential reporting issues. For Under Armour, striving to maintain sales growth resulted in offering discounts it would not otherwise offer and modifying contracts to extend payment terms. This second graph shows Under Armour's allowance for product returns as a percentage of revenue.



As indicated, while Under Armour was showing a steady increase in sales revenue, its returns were skyrocketing.

Thus, analytic review of financial reports can help shed light on potential negative trends in key revenue metrics, which impact profit margin and receivable turnover.

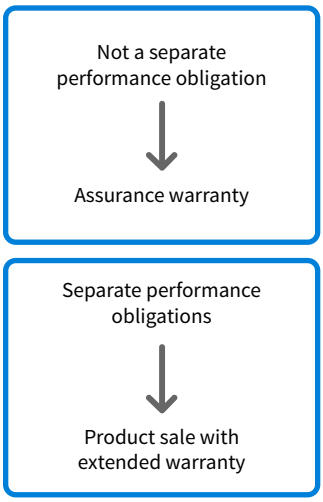
Sources: K. Safdar and A. Viswanatha, "Inside Under Armour's Sales Scramble: 'Pulling Forward Every Quarter'," *Wall Street Journal* (November 14, 2019); and L. Mirabella, "Under Armour Agrees to Pay $9 Million to Settle SEC Probe into Accounting Practices," *The Baltimore Sun* (May 3, 2021).

Warranties

As discussed in Chapter 12, companies often provide one of two types of **warranties** to customers:

1. Warranties that the product **meets agreed-upon specifications in the contract at the time the product is sold**. This type of warranty is included in the sales price of a company's product and is often referred to as an **assurance-type warranty**.
2. Warranties that provide an **additional service beyond the assurance-type warranty**. This warranty is not included in the sales price of the product and is referred to as a **service-type warranty**. As a consequence, it is recorded as a separate performance obligation.

Companies do not record a separate performance obligation for assurance-type warranties. This type of warranty is nothing more than a quality guarantee that the good or service is free from defects at the point of sale. In this case, the sale of the product and the related assurance warranty are one performance obligation as they are interdependent of and interrelated with



each other. The objective for companies that issue an assurance warranty is to provide a combined item (product and a warranty).

These types of obligations should be expensed in the period the goods are provided or services performed. In addition, the company should record a warranty liability. The estimated amount of the liability includes all the costs that the company is expected to incur after sale due to the correction of defects or deficiencies required under the warranty provisions.

Companies sometimes provide customers with an option to purchase a service-type warranty separately. In most cases, these extended warranties provide the customer a service beyond fixing defects that existed at the time of sale. For example, when you purchase a TV, you are entitled to the company's warranty. You will also undoubtedly be offered an extended warranty on the product at an additional cost. These service-type extended warranties represent a **separate service and are an additional performance obligation**.

The service-type warranty is sold separately and therefore has a standalone selling price. In this case, the objective of the company is to sell an additional service to customers. As a result, companies should account for the service warranty as a separate performance obligation. The company recognizes revenue in the period that the service-type warranty is in effect.

Example 17.18
Warranties

FACTS Maverick Company sold 1,000 Rollomatics on October 1, 2025, at total price of $6,000,000, with a warranty guarantee that the product was free of defects. The cost of the Rollomatics is $4,000,000. The term of this assurance warranty is 2 years, which Maverick estimates will cost $80,000. In addition, Maverick sold extended warranties related to 400 Rollomatics for 3 years beyond the 2-year period for $18,000. On November 22, 2025, Maverick incurred labor costs of $3,000 and part costs of $25,000 related to the assurance warranties. Maverick prepares financial statements on December 31, 2025. It estimates that its future assurance warranty costs will total $44,000 at December 31, 2025.

QUESTION What are the journal entries that Maverick Company should make in 2025 related to the sale of the Rollomatics and the assurance and extended warranties?

SOLUTION

Maverick makes the following entries in 2025 related to Rollomatics sold with warranties.

To record the sale of the Rollomatics and the related extended warranties:

October 1, 2025

Cash ($6,000,000 + $18,000)	6,018,000	
Sales Revenue		6,000,000
Unearned Warranty Revenue		18,000

To record the cost of goods sold and reduce the inventory of Rollomatics:

October 1, 2025

Cost of Goods Sold	4,000,000	
Inventory		4,000,000

To record the warranty costs incurred:

November 22, 2025

Warranty Expense	28,000	
Salaries and Wages Payable		3,000
Inventory (parts)		25,000

To record the adjusting entry related to its assurance warranty at the end of the year:

December 31, 2025

Warranty Expense	44,000	
Warranty Liability		44,000

In Example 17.18, Maverick Company makes an adjusting entry on December 31, 2025, to record a liability for the expected warranty costs related to the sale of the Rollomatics. When actual warranty costs are incurred in 2026, the Warranty Liability account is reduced.

In most cases, Unearned Warranty Revenue (related to the service-type warranty) is recognized on a straight-line basis as Warranty Revenue over the three-year period to which it applies. Revenue related to the extended warranty is not recognized until the warranty becomes effective on October 1, 2027. If financial statements are prepared on December 31, 2027, Maverick makes the following entry to recognize revenue.

Unearned Warranty Revenue	1,500	
Warranty Revenue [($18,000 ÷ 36 months) × 3 months]		1,500

Similar to that illustrated in Chapter 12, Maverick Company reduces the Warranty Liability account over the warranty period as the actual warranty costs are incurred.[10]

Nonrefundable Upfront Fees

Companies sometimes receive payments (**upfront fees**) from customers before they deliver a product or perform a service.

- Upfront payments generally relate to the initiation, activation, or setup of a good or service to be provided or performed in the future.
- In most cases, these upfront payments are nonrefundable.

Examples include fees paid for membership in a health club or buying club, and activation fees for phone, Internet, or cable.

Companies must determine whether these nonrefundable advance payments are for products or services in the current period. In most situations, these payments are for future delivery of products and services and should therefore not be recorded as revenue at the time of payment. In some cases, the upfront fee is viewed similar to a renewal option for future products and services at a reduced price. An example would be a health club where once the initiation fee is paid, no additional fee is necessary upon renewal.

Example 17.19
Upfront Fee Considerations

FACTS Erica Felise signs a 1-year contract with Bigelow Health Club. The terms of the contract are that Erica is required to pay a nonrefundable initiation fee of $200 and a membership fee of $50 per month. Bigelow determines that its customers, on average, renew their annual membership two times before terminating their membership.

QUESTION What is the amount of revenue Bigelow Health Club should recognize in the first year?

[10] As with the accounting for sales returns and allowances, the entries shown here reflect a gross (as opposed to net) treatment of the warranty obligation. That is, at the date of sale, Maverick recorded sales with an assurance warranty at the gross amount, without adjustment for expected warranty costs (sometimes referred to as the expense warranty approach). Then at the end of the accounting period when financial statements are prepared, Maverick prepares adjusting entries to record a liability for any remaining estimated warranty expenses (after accounting for actual warranty expenditures). Companies generally do not use the net method because it requires additional analysis and bookkeeping to adjust the warranty liability for unused warranty claims.

SOLUTION

In this case, the membership fee arrangement may be viewed as a single performance obligation (similar services are provided in all periods). That is, Bigelow is providing a discounted price in the second and third years for the same services, and this should be included in the revenue recognized in those periods. Bigelow determines the total transaction price to be $2,000—the upfront fee of $200 and the 3 years of monthly fees of $1,800 ($50 × 36)—and allocates it over the 3 years. In this case, Bigelow would report revenue of $55.56 ($2,000 ÷ 36) each month for 3 years. *Unless otherwise instructed, use this approach for homework problems.*[11]

Summary

Illustration 17.10 provides a summary of issues related to transfer of control and revenue recognition.

ILLUSTRATION 17.10 Summary—Other Revenue Recognition Issues

Issue	Description	Implementation
Sales returns and allowances	Return of product by customer (e.g., due to dissatisfaction with the product) in exchange for refunds, a credit against amounts owed or that will be owed, and/or another product in exchange.	Seller may recognize (a) an adjustment to revenue for products expected to be returned, and (b) an asset (and corresponding adjustment to cost of goods sold) for the goods returned from customers.
Repurchase agreements	Seller has an obligation or right to repurchase the asset at a later date.	Generally, if the company has an obligation or right to repurchase the asset for an amount greater than its selling price, then the transaction is a financing transaction.
Bill-and-hold	Result when the buyer is not yet ready to take delivery but does take title and accept billing.	Revenue is recognized depending on when the customer obtains control of that product.
Principal-agent	Arrangement in which the principal's performance obligation is to provide goods or perform services for a customer. The agent's performance obligation is to arrange for the principal to provide these goods or services to a customer.	Amounts collected on behalf of the principal are not revenue of the agent. Instead, revenue for the agent is the amount of the commission it receives. The principal recognizes revenue when the goods or services are sold to a third-party customer.
Consignments	A principal-agent relationship in which the consignor (manufacturer or wholesaler) ships merchandise to the consignee (dealer), who is to act as an agent for the consignor in selling the merchandise.	The consignor recognizes revenue only after receiving notification of the sale and the cash remittance from the consignee (consignor carries the merchandise as inventory throughout the consignment). The consignee records commission revenue (usually some percentage or the selling price).
Warranties	Warranties can be assurance-type (product meets agreed-upon specifications) or service type (provides additional service beyond the assurance type warranty).	A separate performance obligation is not recorded for assurance-type warranties (considered part or the product; Service-type warranties are recorded as a separate performance obligation. Companies should allocate a portion of the transaction price to service-type warranties, when present.
Nonrefundable upfront fees	Upfront payments generally relate to initiation, activation, or setup activities for a good or service to be delivered in the future.	The upfront payment should be allocated over the periods benefited.

[11]The initiation fee might be viewed as a separate performance obligation (it provides a renewal option at a lower price than normally charged, perhaps with different services). In this situation, in the first period, Bigelow would report revenue of $600 ($50 × 12). The initiation fee (as a separate performance obligation) would then be allocated to years two and three ($100 in each year) unless forfeited earlier.

Put It into Practice LO 17.3

Account for Revenue Issues

FACTS Outback Industries manufactures emergency power equipment. Its most popular generator is a model called the E-Booster, which has a retail price of $1,500 and costs Outback $740 to manufacture. It sells the E-Booster on a standalone basis directly to businesses, as well as provides installation services. Outback also distributes the E-Booster through a consignment agreement with **Home Depot**. Income data for Outback's first quarter of 2025 from operations other than the E-Booster generator are as follows.

Revenues	$6,500,000
Expenses	4,350,000

Outback has the following information related to four E-Booster revenue arrangements during the first quarter of 2025.

1. Outback entered into an arrangement with the Grocers Co-op in eastern Minnesota to deliver E-Boosters for the meat lockers in the grocers' stores. Outback provides a 5% volume discount for E-Boosters purchased by Grocers Co-op if at least $450,000 of E-Boosters are purchased during 2025. By March 31, 2025, Outback has made sales of $360,000 ($1,500 × 240 generators) to Grocers Co-op. Based on prior experience with this promotion in two neighboring states, the discount threshold is met for the year if more than one-half of the target had been met by mid-year.
2. On January 1, 2025, Outback sells 20 E-Boosters to Nick's Liquors. Nick's signs a note due in 6 months at an annual interest rate of 12%. Outback allows Nick's to return any E-Boosters that it cannot use within 120 days and receive a full refund. Based on prior experience, Outback estimates that three units will be returned (using the most likely outcome approach). Outback's costs to recover the products will be immaterial, and the returned generators are expected to be resold at a profit. No E-Boosters have been returned as of March 31, 2025, and Outback still estimates that three units will be returned in the future.
3. Outback sells 30 E-Boosters to a community bank in the Florida Keys to provide uninterrupted power for bank branches with ATMs for a total contract price of $50,000. In addition to the E-Boosters, Outback also provides installation at a standalone selling price of $200 per E-Booster; the cost to Outback to install is $150 per E-Booster. The E-Boosters are delivered and installed on March 1, 2025, and full payment is made to Outback.
4. Outback ships 300 E-Boosters to Home Depot on consignment. By March 31, 2025, Home Depot has sold three-fourths of the consigned merchandise at the listed price of $1,500 per unit. Home Depot notifies Outback of the sales, retains an 8% commission, and remits the cash due to Outback.

INSTRUCTIONS

Determine net income for Outback Industries for the first quarter of 2025. (Ignore taxes.)

SOLUTION

The amount of revenue and expense recognized on each of the arrangements is as follows.

1. Sales revenue [.95 × ($1,500 × 240)]		$342,000	
Cost of goods sold ($740 × 240)		177,600	
Gross profit (income effect of this arrangement)			$164,400
2. Sales revenue (20 × $1,500)		30,000	
Less: Estimated returns (3 × $1,500)		4,500	
Net sales		25,500	
Cost of goods sold (17 × $740)		12,580	
Gross profit		12,920	
Interest revenue ($30,000 × .12 × 3/12)		900	
Net income on this arrangement			13,820
3. The total transaction price of $50,000 is allocated between the equipment and installation. The transaction price for the equipment and installation is allocated based on relative standalone selling prices:			
Equipment: $44,118 = ($45,000 ÷ $51,000*) × $50,000			
Installation: $5,882 = ($6,000 ÷ $51,000) × $50,000			
*$45,000 (30 × $1,500) + $6,000 (30 × $200)			
Sales revenue	$44,118		
Cost of goods sold (30 × $740)	22,200		
Gross profit		$21,918	
Installation revenue	5,882		
Installation expense (30 × $150)	4,500		
Net profit		1,382	
Net income on this arrangement			23,300

4. Sales revenue (225* × $1,500)	$337,500	
Cost of goods sold (225* × $740)	166,500	
Gross profit	171,000	
Commission expense ($337,500 × .08)	27,000	
Net income on this arrangement		144,000
Net income on E-Booster		**$345,520**

*300 × 3/4

Outback Industries' net income for the quarter: $6,500,000 − $4,350,000 + $345,520 = $2,495,520.

17.4 Presentation and Disclosure

LEARNING OBJECTIVE 4

Describe presentation and disclosure regarding revenue.

Presentation

As discussed earlier, companies use an asset-liability approach to recognize revenue. For example, when **General Mills** delivers cereal to **Whole Foods Market** (satisfying its performance obligation), it has a right to consideration from Whole Foods and therefore has a contract asset. If, on the other hand, Whole Foods Market performs first, by prepaying for this cereal, General Mills has a contract liability. Companies must present these contract assets and contract liabilities on their balance sheets.

Contract Assets and Liabilities

Contract assets are of two types:

1. Unconditional rights to receive consideration because the company has satisfied its performance obligation with a customer.
2. Conditional rights to receive consideration because the company has satisfied one performance obligation but must satisfy another performance obligation in the contract before it can bill the customer.

Companies should report unconditional rights to receive consideration as a receivable on the balance sheet. Conditional rights on the balance sheet should be reported separately as contract assets.

Example 17.20
Contract Asset

FACTS On January 1, 2025, Finn Company enters into a contract to transfer Product A and Product B to Obermine Co. for $100,000. The contract specifies that payment of Product A will not occur until Product B is also delivered. In other words, payment will not occur until both Product A and Product B are transferred to Obermine. Finn determines that standalone selling prices are $30,000 for Product A and $70,000 for Product B. Finn delivers Product A to Obermine on February 1, 2025. On March 1, 2025, Finn delivers Product B to Obermine.

QUESTION What journal entries should Finn Company make related to this contract in 2025?

SOLUTION

No entry is required on January 1, 2025, because neither party has performed on the contract. On February 1, 2025, Finn records the following entry.

February 1, 2025

Contract Asset	30,000	
Sales Revenue		30,000

On February 1, Finn has satisfied its performance obligation and therefore reports revenue of $30,000. However, it does not record an accounts receivable at this point because it does not have an unconditional right to receive the $100,000 unless it also transfers Product B to Obermine. In other words, a contract asset occurs generally when a company must satisfy another performance obligation before it is entitled to bill the customer. When Finn transfers Product B on March 1, 2025, it makes the following entry.

March 1, 2025

Accounts Receivable	100,000	
Contract Asset		30,000
Sales Revenue		70,000

A **contract liability** is a company's obligation to transfer goods or services to a customer for which the company has received consideration from the customer.

Example 17.21
Contract Liability

FACTS On March 1, 2025, Henly Company enters into a contract to transfer a product to Propel Inc. on July 31, 2025. It is agreed that Propel will pay the full price of $10,000 in advance on April 15, 2025. Henly delivers the product on July 31, 2025. The cost of the product is $7,500.

QUESTION What journal entries are required in 2025?

SOLUTION

No entry is required on March 1, 2025, because neither party has performed on the contract. On receiving the cash on April 15, 2025, Henly records the following entry.

April 15, 2025

Cash	10,000	
Unearned Sales Revenue		10,000

On satisfying the performance obligation on July 31, 2025, Henly records the following entry to record the sale.

July 31, 2025

Unearned Sales Revenue	10,000	
Sales Revenue		10,000

In addition, Henly records cost of goods sold as follows.

Cost of Goods Sold	7,500	
Inventory		7,500

Companies are not required to use the terms "contract assets" and "contract liabilities" on the balance sheet. For example, contract liabilities are performance obligations and therefore more descriptive titles such as unearned service revenue, unearned sales revenue, repurchase liability, and return liability may be used where appropriate. For contract assets, it is important that financial statement users can differentiate between unconditional and conditional rights through appropriate account presentation.

Contract Modifications

Companies sometimes change the contract terms while it is ongoing; this is referred to as a **contract modification**. When a contract modification occurs, companies determine whether a new contract (and performance obligations) results or whether it is a modification of the existing contract.

Separate Performance Obligation A company accounts for a contract modification as a new contract if **both** of the following conditions are satisfied.

- The promised **goods or services are distinct** (i.e., the company sells them separately and they are not interdependent with other goods and services), and
- The company has the right to receive an amount of **consideration that reflects the standalone selling price** of the promised goods or services. [18]

Example 17.22 Contract Modification

FACTS Crandall Co. has a contract to sell 100 products to a customer for $10,000 ($100 per product) at various points in time over a six-month period. After 60 products have been delivered, Crandall modifies the contract by promising to deliver 20 more products for an additional $1,900, or $95 per product (which is the standalone selling price of the products at the time of the contract modification). Crandall regularly sells the products separately.

QUESTION How should Crandall account for this modification?

SOLUTION

In this situation, the contract modification for the additional 20 products is, in effect, a **new and separate contract** because it meets both of the conditions above. That is, it does not affect the accounting for the original contract.

Given a new contract, Crandall recognizes an additional $4,000 [(100 units − 60 units) × $100] related to the original contract terms and $1,900 (20 units × $95) related to the new products. Total revenue after the modification is therefore $5,900 ($4,000 + $1,900).

Prospective Modification What if Crandall Co. (in Example 17.22) determines that the additional products are not a separate performance obligation? This might arise if the new products are not priced at the proper standalone selling price or if they are not distinct. In this situation, companies generally account for the modification using a prospective approach.

Under the prospective approach, Crandall should account for the effect of the change in the period of change as well as future periods if the change affects both. Crandall should not change previously reported results. Therefore, for Crandall, the amount recognized as revenue for each of the remaining products would be a blended price of $98.33, computed as shown in **Illustration 17.11**.

ILLUSTRATION 17.11 Revenue Under Prospective Modification

Consideration for products not yet delivered under original contract ($100 × 40)	$4,000
Consideration (or products to be delivered under the contract modification ($95 × 20)	1,900
Total remaining revenue	$5,900
Revenue per remaining unit ($5,900 ÷ 60) = $98.33	

Under the prospective approach, this computation differs from that in the separate performance obligation approach in that revenue on the remaining units is recognized at the blended price. Total revenue after the modification is therefore $5,900 (60 units × $98.33). **Illustration 17.12** shows the revenue reported under the two contract modification approaches for Crandall Co.

	Revenue Recognized Prior to Modification	Revenue Recognized After Modification	Total Revenue Recognized
Separate performance obligation	$6,000	$5,900	$11,900
No separate performance obligation—prospectively	$6,000	$5,900	$11,900

ILLUSTRATION 17.12
Comparison of Contract Modification Approaches

As indicated, whether a modification is treated as a separate performance obligation or prospectively, the same amount of revenue is recognized before and after the modification. However, under the prospective approach, a blended price ($98.33) is used for sales in the periods after the modification.[12]

Costs to Fulfill a Contract

Companies may also report assets associated with fulfillment costs related to a revenue arrangement. Companies divide fulfillment costs (contract acquisition costs) into two categories:

1. Those that give rise to an asset.
2. Those that are expensed as incurred.

Companies recognize an asset for the incremental costs if these costs are incurred to obtain a contract with a customer. In other words, **incremental costs are those that a company would not incur if the contract had not been obtained** (e.g., selling commissions). Additional examples that give rise to an asset are as follows.

- **Direct labor, direct materials, and allocation of costs that relate directly to the contract.** Such costs include costs of contract management and supervision, insurance, and depreciation of tools and equipment.
- **Costs that generate or enhance resources of the company that will be used in satisfying performance obligations in the future**. Such costs include intangible design or engineering costs that will continue to give rise to benefits in the future.

Other costs that are expensed as incurred include general and administrative costs (unless those costs are explicitly chargeable to the customer under the contract) as well as costs of wasted materials, labor, or other resources to fulfill the contract that were not reflected in the price of the contract. That is, **companies only capitalize costs that are direct, incremental, and recoverable** (assuming that the contract period is more than one year).

Example 17.23
Contract Costs

FACTS Rock Integrators enters into a contract to operate Dello Company's information technology data center for 5 years. Rock Integrators incurs selling commission costs of $10,000 to obtain the contract. Before performing the services, Rock Integrators designs and builds a technology platform that interfaces with Dello's systems. That platform is not transferred to Dello. Dello promises to pay a fixed fee of $20,000 per month. Rock Integrators incurs the following additional costs: design services for the platform $40,000, hardware for the platform $120,000, and testing of data center $100,000.

QUESTION What are Rock Integrators' costs for fulfilling the contract to Dello Company?

[12]Another approach to account for a contract modification is to report the information in a cumulative catch-up manner. In other words, assuming that these new products are part of the original contract, companies adjust the revenue account to reflect the cumulative effect for periods prior to when the modification occurred. An example of a catch-up situation is a long-term construction contract, which is discussed in more detail in Appendix 17A. Use of the prospective approach avoids the complexity of opening up the accounting for previously satisfied performance obligations. However, it ignores any adjustments to revenue that have already been recognized. **[19]** *For homework purposes, unless instructed otherwise, use the prospective approach for modifications that do not result in a separate performance obligation.* Expanded discussion of the prospective and cumulative catch-up (retrospective) approaches to accounting changes is provided in Chapter 21.

SOLUTION

The $10,000 selling commission cost related to obtaining the contract is recognized as an asset. The design services cost of $40,000 and the hardware for the platform of $120,000 are also capitalized. As the technology platform is independent of the contract, the pattern of amortization of this platform may not be related to the terms of the contract. The testing costs are expensed as incurred; in general, these costs are not recoverable.

As a practical expedient, a company recognizes the incremental costs of obtaining a contract as an expense when incurred if the amortization period of the asset that the company otherwise would have recognized is one year or less.

Disclosure

The disclosure requirements for revenue recognition are designed to help financial statement users understand the nature, amount, timing, and uncertainty of revenue and cash flows arising from contracts with customers. To achieve that objective, companies disclose qualitative and quantitative information about all of the following.

- **Contracts with customers.** These disclosures include the disaggregation of revenue, presentation of opening and closing balances in contract assets and contract liabilities, and significant information related to their performance obligations.
- **Significant judgments.** These disclosures include judgments and changes in these judgments that affect the determination of the transaction price, the allocation of the transaction price, and the determination of the timing of revenue.
- **Assets recognized from costs incurred to fulfill a contract.** These disclosures include the closing balances of assets recognized to obtain or fulfill a contract, the amount of amortization recognized, and the method used for amortization.

To implement these requirements and meet the disclosure objectives, companies provide a range of disclosures, as summarized in Illustration 17.13. [20][13]

ILLUSTRATION 17.13 Revenue Disclosures

Disclosure Type	Requirements
Disaggregation of revenue	Disclose disaggregated revenue information in categories that depict how the nature, amount, timing, and uncertainty of revenue and cash flows are affected by economic factors. Reconcile disaggregated revenue to revenue for reportable segments.
Reconciliation or contract balances	Disclose opening and closing balances or contract assets (e.g., unbilled receivables) and liabilities (e.g., deferred revenue) and provide a qualitative description or significant changes in these amounts. Disclose the amount of revenue recognized in the current period relating to performance obligations satisfied in a prior period (e.g., from contracts with variable consideration). Disclose the opening and closing balances of trade receivables if not presented elsewhere.
Remaining performance obligations	Disclose the amount of the transaction price allocated to remaining performance obligations not subject to significant revenue reversal. Provide a narrative discussion of potential additional revenue in constrained arrangements.
Costs to obtain or fulfill contracts	Disclose the closing balances or capitalized costs to obtain and fulfill a contract and the amount of amortization in the period. Disclose the method used to determine amortization for each reporting period.
Other qualitative disclosures	Disclose significant judgments and changes in judgments that affect the amount and timing of revenue from contracts with customers. Disclose how management determines the minimum amount of revenue not subject to the variable consideration constraint.

[13] See *PricewaterhouseCoopers Dataline 2013–2014.*

APPENDIX **17A**

Long-Term Construction Contracts

LEARNING OBJECTIVE *5

Apply the percentage-of-completion method for long-term contracts.

Revenue Recognition over Time

For the most part, companies recognize revenue at the point of sale because that is when the performance obligation is satisfied. However, as indicated in the chapter, under certain circumstances companies recognize revenue over time. The most notable context in which revenue is recognized over time is long-term construction contract accounting.

Long-term contracts frequently provide that the seller (builder) may bill the purchaser at intervals, as it reaches various points in the project. Examples of long-term contracts are construction-type contracts, development of military and commercial aircraft, weapons-delivery systems, and space exploration hardware. When the project consists of separable units, such as a group of buildings or miles of roadway, contract provisions may provide for delivery in installments. In that case, the seller would bill the buyer and transfer title at stated stages of completion, such as the completion of each building unit or every 10 miles of road. The accounting records should record sales when installments are "delivered."

A company satisfies a performance obligation and recognizes revenue over time if at least one of the following three criteria is met. **[21]**

1. The customer simultaneously receives and consumes the benefits of the seller's performance as the seller performs.
2. The company's performance creates or enhances an asset (for example, work in process) that the customer controls as the asset is created or enhanced; or
3. The company's performance does not create an asset with an alternative use. For example, the asset cannot be used by another customer. In addition to this alternative use element, at least *one* of the following criteria must be met:
   a. Another company would not need to substantially re-perform the work the company has completed to date if that other company were to fulfill the remaining obligation to the customer.
   b. The company has a right to payment for its performance completed to date, and it expects to fulfill the contract as promised.[14]

Therefore, if criterion 1, 2, or 3 is met, then a company recognizes revenue over time **if it can reasonably estimate its progress toward satisfaction of the performance obligations**. That is, it recognizes revenues and gross profits each period based upon the progress of the construction—referred to as the **percentage-of-completion method**. The company accumulates construction costs plus gross profit recognized to date in an inventory account (Construction in Process), and it accumulates progress billings in a contra inventory account (Billings on Construction in Process).

[14]The right to payment for performance completed to date does not need to be for a fixed amount. However, the company must be entitled to an amount that would compensate the company for performance completed to date (even if the customer can terminate the contract for reasons other than the company's failure to perform as promised). Compensation for performance completed to date includes payment that approximates the selling price of the goods or services transferred to date (for example, recovery of the company's costs plus a reasonable profit margin).

The rationale for using percentage-of-completion accounting is that under most of these contracts the buyer and seller have enforceable rights.

- The buyer has the legal right to require specific performance on the contract.
- The seller has the right to require progress payments that provide evidence of the buyer's ownership interest.

As a result, a continuous sale occurs as the work progresses. Companies should recognize revenue according to that progression.

Alternatively, if the criteria for recognition over time are not met (e.g., the company does not have a right to payment for work completed to date), the company recognizes revenues and gross profit at a point in time, that is, when the contract is completed or implementing an approach referred to as the **cost-recovery (zero-profit) method**. This method recognizes revenue only to the extent of costs incurred that are expected to be recoverable. Only after all costs are incurred is gross profit recognized.[15]

Percentage-of-Completion Method

The **percentage-of-completion method** recognizes revenues, costs, and gross profit as a company makes progress toward completion on a long-term contract. To defer recognition of these items until completion of the entire contract is to misrepresent the efforts (costs) and accomplishments (revenues) of the accounting periods during the contract. In order to apply the percentage-of-completion method, a company must have some basis or standard for measuring the progress toward completion at particular interim dates.

Measuring the Progress Toward Completion

As one practicing accountant wrote, "The big problem in applying the percentage-of-completion method . . . has to do with the ability to make reasonably accurate estimates of completion and the final gross profit." Companies use various methods to determine the **extent of progress toward completion**. The most common are the **cost-to-cost** and **units-of-delivery** methods.

As indicated in the chapter, the objective of all these methods is to measure the extent of progress in terms of costs, units, or value added. Companies identify the various measures (costs incurred, labor hours worked, tons produced, floors completed, etc.) and classify them as input or output measures, as summarized in **Illustration 17A.1**. Neither measure is universally applicable to all long-term projects. Their use requires the exercise of judgment and careful tailoring to the circumstances.

ILLUSTRATION 17A.1
Completion Measures

Measure	Description	Examples
Input	Based on a company's efforts or inputs toward satisfying a performance obligation, relative to the total expected inputs to the satisfaction of that performance obligation.	• Resources consumed • Costs incurred • Time elapsed • Labor hours expended • Machine hours used
Output	Based on direct measurements of the value to the customer of goods or services transferred to date, relative to the remaining goods or services promised under the contract.	• Surveys of performance to date • Appraisals of results achieved • Milestones reached • Time elapsed

[15] In some circumstances (e.g., in the early stages of a contract), a company may not be able to reasonably measure the outcome of a performance obligation, but it expects to recover the costs incurred in satisfying the performance obligation. In these situations, companies recognize revenue only to the extent of the costs incurred until such time that they can reasonably measure the outcome of the performance obligation. This is referred to as the **cost-recovery method**, which is discussed later in this section. [22]

Both input and output measures have disadvantages. The input measure is based on an established relationship between a unit of input and productivity. If inefficiencies cause the productivity relationship to change, inaccurate measurements result. Another potential problem is front-end loading, in which significant upfront costs result in higher estimates of completion. To avoid this problem, companies should disregard some early-stage construction costs—for example, costs of uninstalled materials or costs of subcontracts not yet performed—if they do not relate to contract performance.

Similarly, output measures can produce inaccurate results if the units used are not comparable in time, effort, or cost to complete. For example, using floors (stories) completed can be deceiving. Completing the first floor of an eight-story building may require more than one-eighth the total cost because of the substructure and foundation construction.

The most popular input measure used to determine the progress toward completion is the **cost-to-cost basis**. Under this basis, a company like **Halliburton** measures the percentage of completion by comparing costs incurred to date with the most recent estimate of the total costs required to complete the contract. The formula for the cost-to-cost basis is as follows.

$$\frac{\text{Costs Incurred to Date}}{\text{Most Recent Estimate of Total Costs}} = \text{Percent Complete}$$

Once Halliburton knows the percentage that costs incurred bear to total estimated costs, it applies that percentage to the total revenue or the estimated total gross profit on the contract. The resulting amount is the revenue or the gross profit to be recognized to date, as shown in the following formula.

$$\text{Percent Complete} \times \text{Estimated Total Revenue (or Gross Profit)} = \text{Revenue (or Gross Profit) to Be Recognized to Date}$$

To find the amounts of revenue and gross profit recognized each period, Halliburton subtracts total revenue or gross profit recognized in prior periods, as the following formula shows.

$$\text{Revenue (or Gross Profit) to Be Recognized to Date} - \text{Revenue (or Gross Profit) Recognized in Prior Periods} = \text{Current-Period Revenue (or Gross Profit)}$$

Because **the cost-to-cost method is widely used** (without excluding other bases for measuring progress toward completion), we have adopted it for use in our examples.

Example of Percentage-of-Completion Method—Cost-to-Cost Basis

To illustrate the percentage-of-completion method, assume that Hardhat Construction Company has a contract to construct a $4,500,000 bridge at an estimated cost of $4,000,000. The contract is to start in July 2025, and the bridge is to be completed in October 2027.

The following data pertain to the construction period. (Note that by the end of 2026, Hardhat has revised the estimated total cost from $4,000,000 to $4,050,000.)

	2025	2026	2027
Costs to date	$1,000,000	$2,916,000	$4,050,000
Estimated costs to complete	3,000,000	1,134,000	—
Progress billings during the year	900,000	2,400,000	1,200,000
Cash collected during the year	750,000	1,750,000	2,000,000

Hardhat would compute the percent complete as shown in **Illustration 17A.2**.

ILLUSTRATION 17A.2 Application of Percentage-of-Completion Method, Cost-to-Cost Basis

	2025	2026	2027
Contract price	$4,500,000	$4,500,000	$4,500,000
Less estimated cost:			
Costs to date	1,000,000	2,916,000	4,050,000
Estimated costs to complete	3,000,000	1,134,000	–
Estimated total costs	4,000,000	4,050,000	4,050,000
Estimated total gross profit	$ 500,000	$ 450,000	$ 450,000
Percent complete	25% ($1,000,000 / $4,000,000)	72% ($2,916,000 / $4,050,000)	100% ($4,050,000 / $4,050,000)

On the basis of the data above, Hardhat would make the entries shown in **Illustration 17A.3** to record (1) the costs of construction, (2) progress billings, and (3) collections. These entries appear as summaries of the many transactions that would be entered individually as they occur during the year.

ILLUSTRATION 17A.3 Journal Entries—Percentage-of-Completion Method, Cost-to-Cost Basis

	2025		2026		2027	
To record costs of construction:						
Construction in Process	1,000,000		1,916,000		1,134,000	
Materials, Cash, Payables, etc.		1,000,000		1,916,000		1,134,000
To record progress billings:						
Accounts Receivable	900,000		2,400,000		1,200,000	
Billings on Construction In Process		900,000		2,400,000		1,200,000
To record collections:						
Cash	750,000		1,750,000		2,000,000	
Accounts Receivable		750,000		1,750,000		2,000,000

In this example, the costs incurred to date are a measure of the extent of progress toward completion. To determine this, Hardhat evaluates the costs incurred to date as a proportion of the estimated total costs to be incurred on the project. The estimated revenue and gross profit that Hardhat will recognize for each year are calculated as shown in **Illustration 17A.4**.

	To Date	Recognized in Prior Years	Recognized in Current Year
2025			
Revenues ($4,500,000 × .25)	$1,125,000		$1,125,000
Costs	1,000,000		1,000,000
Gross profit	$ 125,000		$ 125,000
2026			
Revenues ($4,500,000 × .72)	$3,240,000	$1,125,000	$2,115,000
Costs	2,916,000	1,000,000	1,916,000
Gross profit	$ 324,000	$ 125,000	$ 199,000
2027			
Revenues ($4,500,000 × 1.00)	$4,500,000	$3,240,000	$1,260,000
Costs	4,050,000	2,916,000	1,134,000
Gross profit	$ 450,000	$ 324,000	$ 126,000

ILLUSTRATION 17A.4 Percentage-of-Completion Revenue, Costs, and Gross Profit by Year

Illustration 17A.5 shows Hardhat's entries to recognize revenue and gross profit each year and to record completion and final approval of the contract.

	2025		2026		2027	
To recognize revenue and gross profit:						
Construction in Process (gross profit)	125,000		199,000		126,000	
Construction Expenses	1,000,000		1,916,000		1,134,000	
Revenue from Long-Term Contracts		1,125,000		2,115,000		1,260,000
To record completion of the contract:						
Billings on Construction in Process					4,500,000	
Construction in Process						4,500,000

ILLUSTRATION 17A.5 Journal Entries to Recognize Revenue and Gross Profit and to Record Contract Completion—Percentage-of-Completion Method, Cost-to-Cost Basis

Note that **Hardhat debits gross profit (as computed in Illustration 17A.4) to Construction in Process**. Similarly, it credits Revenue from Long-Term Contracts for the amounts computed. Hardhat then debits the difference between the amounts recognized each year for revenue and gross profit to a nominal account, Construction Expenses (similar to Cost of Goods Sold in a manufacturing company). It reports that amount in the income statement as the actual cost of construction incurred in that period. For example, in 2025 Hardhat uses the actual costs of $1,000,000 to compute both the gross profit of $125,000 and the percent complete (25%).

Hardhat continues to accumulate costs in the Construction in Process account, in order to maintain a record of total costs incurred (plus recognized gross profit) to date. Although theoretically a series of "sales" takes place using the percentage-of-completion method, the selling company cannot remove the inventory cost until the construction is completed and transferred to the new owner. Hardhat's Construction in Process account for the bridge would include the summarized entries shown in **Illustration 17A.6** over the term of the construction project.

ILLUSTRATION 17A.6 Content of Construction in Process Account—Percentage-of-Completion Method

Construction in Process

2025 construction costs	$1,000,000	12/31/27	To close completed project	$4,500,000
2025 recognized gross profit	125,000			
2026 construction costs	1,916,000			
2026 recognized gross profit	199,000			
2027 construction costs	1,134,000			
2027 recognized gross profit	126,000			
Total	$4,500,000	Total		$4,500,000

Recall that the Hardhat Construction Company example contained a **change in estimated costs**: In the second year, 2026, it increased the estimated total costs from $4,000,000 to $4,050,000. The change in estimate is accounted for in a **cumulative catch-up manner**, as indicated in the chapter. This is done by first adjusting the percent completed to the new estimate of total costs. Next, Hardhat deducts the amount of revenues and gross profit recognized in prior periods from revenues and gross profit computed for progress to date. That is, it accounts for the change in estimate in the period of change. That way, the balance sheet at the end of the period of change and the accounting in subsequent periods are as they would have been if the revised estimate had been the original estimate.

Financial Statement Presentation—Percentage-of-Completion

Generally, when a company records a receivable from a sale, it reduces the Inventory account. Under the percentage-of-completion method, however, the company continues to carry both the receivable and the inventory. Subtracting the balance in the **Billings account** from Construction in Process avoids double-counting the inventory. During the life of the contract, Hardhat reports in the balance sheet the difference between the Construction in Process and the Billings on Construction in Process accounts. If that amount is a debit, Hardhat reports it **as a current asset**; if it is a credit, it reports it **as a current liability**.

At times, the costs incurred plus the gross profit recognized to date (the balance in Construction in Process) exceed the billings. In that case, Hardhat reports this excess as a current asset entitled "Costs and recognized profit in excess of billings." Hardhat can at any time calculate the unbilled portion of revenue recognized to date by subtracting the billings to date from the revenue recognized to date, as illustrated for 2025 for Hardhat Construction in **Illustration 17A.7**.

ILLUSTRATION 17A.7 Computation of Unbilled Contract Price at 12/31/25

Contract revenue recognized to date: $4,500,000 × $\frac{\$1,000,000}{\$4,000,000}$	$1,125,000
Billings to date	(900,000)
Unbilled revenue	$ 225,000

At other times, the billings exceed costs incurred and gross profit to date. In that case, Hardhat reports this excess as a current liability entitled "Billings in excess of costs and recognized profit."

What happens, as is usually the case, when companies have more than one project going at a time? When a company has a number of projects, costs exceed billings on some contracts and billings exceed costs on others. In such a case, the company segregates the contracts. The asset side includes only those contracts on which costs and recognized profit exceed billings. The liability side includes only those on which billings exceed costs and recognized profit. Separate disclosures of the dollar volume of billings and costs are preferable to a summary presentation of the net difference.

Using data from the bridge example, Hardhat Construction Company would report the status and results of its long-term construction activities in 2025 under the percentage-of-completion method as shown in **Illustration 17A.8**.

Hardhat Construction Company

Income Statement (from illustration 17A.4)		**2025**
Revenue from long-term contracts		$1,125,000
Costs of construction		1,000,000
Gross profit		$ 125,000
Balance Sheet (12/31)		
Current assets		
Accounts receivable ($900,000 − $750,000)		$ 150,000
Inventory		
Construction in process	$1,125,000	
Less: Billings	900,000	
Costs and recognized profit in excess or billings		225,000

ILLUSTRATION 17A.8 Financial Statement Presentation—Percentage-of-Completion Method (2025)

Illustration 17A.9 shows its financial statement presentation in 2026.

Hardhat Construction Company

Income Statement (from Illustration 17A.4)		**2026**
Revenue from long term contracts		$2,115,000
Costs of construction		1,916,000
Gross profit		$ 199,000
Balance Sheet (12/31)		
Current assets		
Accounts receivable ($150,000 + $2,400,000 − $1,750,000)		$ 800,000
Current liabilities		
Billings	$3,300,000	
Less: Construction in process	3,240,000	
Billings in excess of costs and recognized profit		60,000

ILLUSTRATION 17A.9 Financial Statement Presentation—Percentage-of-Completion Method (2026)

In 2027, as shown in **Illustration 17A.10**, Hardhat's financial statements only include an income statement because the bridge project was completed and settled.

Hardhat Construction Company

Income Statement (from Illustration 17A.4)	**2027**
Revenue from long-term contracts	$1,260,000
Costs of construction	1,134,000
Gross profit	$ 126,000

ILLUSTRATION 17A.10 Financial Statement Presentation—Percentage-of-Completion Method (2027)

In addition, Illustration 17A.11 shows the information that Hardhat should disclose in each year.

ILLUSTRATION 17A.11
Percentage-of-Completion Method Note Disclosure

> **Note 1. Summary of significant accounting policies.**
> **Long-Term Construction Contracts.** The company recognizes revenues and reports profits from long-term construction contracts, its principal business under the percentage-of-completion method of accounting. These contracts generally extend for periods in excess or one year. The amounts of revenues and profits recognized each year are based on the ratio of costs incurred to the total estimated costs. Costs included in construction in process include direct materials, direct labor, and project related overhead. Corporate general and administrative expenses are charged to the periods as incurred and are not allocated to construction contracts.

Cost-Recovery (Zero-Profit) Method

LEARNING OBJECTIVE * 6
Apply the cost-recovery method for long-term contracts.

During the early stages of a contract, a company like **Alcatel-Lucent Enterprise** may not be able to estimate reliably the outcome of a long-term construction contract. Nevertheless, Alcatel-Lucent Enterprise is confident that it will recover the contract costs incurred. In this case, Alcatel-Lucent Enterprise uses the **cost-recovery (zero-profit) method**. This method recognizes revenue only to the extent of costs incurred that are expected to be recoverable. Only after all costs are incurred is gross profit recognized.[16]

To illustrate the cost-recovery method for the bridge project illustrated on the preceding pages, Hardhat Construction would report the following revenues and costs for 2025–2027, as shown in Illustration 17A.12.

ILLUSTRATION 17A.12
Cost-Recovery Method Revenue, Costs, and Gross Profit by Year

	To Date	Recognized in Prior Years	Recognized in Current Year
2025			
Revenues (costs incurred)	$1,000,000		$1,000,000
Costs	1,000,000		1,000,000
Gross profit	$ 0		$ 0
2026			
Revenues (costs incurred)	$2,916,000	$1,000,000	$1,916,000
Costs	2,916,000	1,000,000	1,916,000
Gross profit	$ 0	$ 0	$ 0
2027			
Revenues ($4,500,000 × 1.00)	$4,500,000	$2,916,000	$1,584,000
Costs	4,050,000	2,916,000	1,134,000
Gross profit	$ 450,000	$ 0	$ 450,000

Illustration 17A.13 shows Hardhat's entries to recognize revenue and gross profit each year and to record completion and final approval of the contract.

[16]Results from the cost-recovery method are substantially the same as the completed-contract method, which was eliminated under ASC 606. See KPMG, *Revenue Issues in Depth* (May 2016), p. 147.

ILLUSTRATION 17A.13 Journal Entries—Cost-Recovery Method

	2025		2026		2027	
To recognize costs and related expenses:						
Construction Expenses	1,000,000		1,916,000			
Revenue from Long-Term Contracts		1,000,000		1,916,000		
Construction in Process (gross profit)					450,000	
Construction in Expenses					1,134,000	
Revenue from Long-Term Contracts						1,584,000
To record completion of the contract:						
Billings on Construction in Process					4,500,000	
Construction in Process						4,500,000

As indicated, no gross profit is recognized in 2025 and 2026. In 2027, Hardhat then recognizes gross profit and closes the Billings and Construction in Process accounts.

Illustration 17A.14 compares the amount of gross profit that Hardhat Construction would recognize for the bridge project under the two revenue recognition methods.

ILLUSTRATION 17A.14 Comparison of Gross Profit Recognized Under Different Methods

	Percentage-of-Completion	Cost-Recovery
2025	$125,000	$ 0
2026	199,000	0
2027	126,000	450,000

Under the cost-recovery method, Hardhat Construction would report its long-term construction activities as shown in Illustration 17A.15.

ILLUSTRATION 17A.15 Financial Statement Presentation—Cost-Recovery Method

Hardhat Construction

Income Statement		2025	2026	2027
Revenue from long-term contracts		$1,000,000	$1,916,000	$1,584,000
Costs of construction		1,000,000	1,916,000	1,134,000
Gross profit		$ 0	$ 0	$ 450,000
Balance Sheet (12/31)				
Current assets				
Inventories				
Construction in process	$1,000,000			
Less: Billings	900,000			
Costs in excess of billings		$ 100,000		$–0–
Accounts receivable		150,000	$ 800,000	–0–
Current liabilities				
Billings	$3,300,000			
Less: Construction in process	2,916,000			
Billings in excess of costs and recognized profits			$ 384,000	$–0–

Note 1. Summary of significant accounting policies.

Long-Term Construction Contracts. The company recognizes revenues and reports profits from long term construction contracts, its principal business, under the cost-recovery method. These contracts generally extend for periods in excess of one year. Contract costs and billings arc accumulated during the periods of construction, and revenues are recognized only to the extent of costs incurred that are expected to be recoverable. Only after all costs are incurred is net income recognized. Costs included in construction in process include direct material, direct labor, and project related overhead. Corporate general and administrative expenses are charged to the periods as incurred.

Long-Term Contract Losses

LEARNING OBJECTIVE *7

Identify the proper accounting for losses on long-term contracts.

Two types of losses can become evident under long-term contracts:

1. **Loss in the current period on a profitable contract.** This condition arises when, during construction, there is a significant increase in the estimated total contract costs but the increase does not eliminate all profit on the contract. Under the percentage-of-completion method only, the estimated cost increase requires a current-period adjustment of excess gross profit recognized on the project in prior periods. The company records this adjustment as a loss in the current period because it is a change in accounting estimate (discussed in Chapter 21).
2. **Loss on an unprofitable contract.** Cost estimates at the end of the current period may indicate that a loss will result on completion of the **entire** contract. Under both the percentage-of-completion and the cost-recovery methods, the company must recognize in the current period the entire expected contract loss.

The treatment described for unprofitable contracts is consistent with the accounting custom of anticipating foreseeable losses to avoid overstatement of current and future income (conservatism). [23]

Loss in Current Period

To illustrate a loss in the current period on a contract expected to be profitable upon completion, we'll continue with the Hardhat Construction Company bridge project. Assume that on December 31, 2026, Hardhat estimates the costs to complete the bridge contract at $1,468,962 instead of $1,134,000. Assuming all other data are the same as before, Hardhat would compute the percent complete and recognize the loss as shown in Illustration 17A.16. Compare these computations with those for 2026 in Illustration 17A.2. The "percent complete" has dropped, from 72% to 66⅔%, due to the increase in estimated future costs to complete the contract.

ILLUSTRATION 17A.16
Computation of Recognizable Loss, 2026—Loss in Current Period

Cost to date (12/31/26)	$2,916,000
Estimated costs to complete (revised)	1,468,962
Estimated total costs	$4,384,962
Percent complete ($2,916,000 ÷ $4,384,962)	66⅔%
Revenue recognized in 2026	
($4,500,000 × .665) − $1,125,000	$1,867,500
Costs incurred in 2026	1,916,000
Loss recognized in 2026	$ (48,500)

The 2026 loss of $48,500 is a cumulative adjustment of the "excessive" gross profit recognized on the contract in 2025. Instead of restating the prior period, the company absorbs the prior period misstatement entirely in the current period. In this illustration, the adjustment was large enough to result in recognition of a loss.

Hardhat Construction would record the loss in 2026 as follows.

Construction Expenses	1,916,000	
Construction in Process (loss)		48,500
Revenue from Long-Term Contracts		1,867,500

Hardhat will report the loss of $48,500 on the 2026 income statement as the difference between the reported revenue of $1,867,500 and the costs of $1,916,000.[17] **Under the cost-recovery method, the company does not recognize a loss in 2026.** Why not? Because the company still expects the contract **to result in a profit**, to be recognized in the year of completion.

Loss on an Unprofitable Contract

To illustrate the accounting for an **overall loss on a long-term contract**, assume that at December 31, 2026, Hardhat Construction Company estimates the costs to complete the bridge contract at $1,640,250 instead of $1,134,000. Revised estimates for the bridge contract are as follows.

	2025 Original Estimates	2026 Revised Estimates
Contract price	$4,500,000	$4,500,000
Estimated total cost	4,000,000	4,556,250[a]
Estimated gross profit	$ 500,000	
Estimated loss		$ (56,250)

[a]($2,916,000 + $1,640,250)

Under the percentage-of-completion method, Hardhat recognized $125,000 of gross profit in 2025 (see Illustration 17A.4). This amount must be offset in 2026 because it is no longer expected to be realized. In addition, since losses must be recognized as soon as estimable, the company must recognize the total estimated loss of $56,250 in 2026. Therefore, Hardhat must recognize a total loss of $181,250 ($125,000 + $56,250) in 2026.

Illustration 17A.17 shows Hardhat's computation of the revenue to be recognized in 2026.

ILLUSTRATION 17A.17
Computation of Revenue Recognizable, 2026—Unprofitable Contract

Revenue recognized in 2026:		
Contract price		$4,500,000
Percent complete		× .64[a]
Revenue recognizable to date		2,880,000
Less: Revenue recognized prior to 2026		1,125,000
Revenue recognized in 2026		$1,755,000
[a]Cost in date (12/31/26)	$2,916,000	
Estimated cost to complete	1,640,250	
Estimated total costs	$4,556,250	
Percent complete: $2,916,000 ÷ $4,556,250 = 64%		

To compute the construction costs to be expensed in 2026, Hardhat adds the total loss to be recognized in 2026 ($125,000 + $56,250) to the revenue to be recognized in 2026. Illustration 17A.18 shows this computation.

[17]In 2027, Hardhat Construction will recognize the remaining 33½% of the revenue ($1,507,500), with costs of $1,468,962 as expected, and will report a gross profit of $38,538. The total gross profit over the three years of the contract would be $115,038 [$125,000 (2025) − $48,500 (2026) + $38,538 (2027)]. This amount is the difference between the total contract revenue of $4,500,000 and the total contract costs of $4,384,962.

ILLUSTRATION 17A.18 Computation of Construction Expense, 2026—Unprofitable Contract

Revenue recognized in 2026 (computed above)		$1,755,000
Total loss recognized in 2026:		
Reversal of 2025 gross profit	$125,000	
Total estimated loss on the contract	56,250	181,250
Construction cost expensed in 2026		$1,936,250

Hardhat Construction would record the long-term contract revenues, expenses, and loss in 2026 as follows.

Construction Expenses	1,936,250	
Construction in Process (loss)		181,250
Revenue from Long-Term Contracts		1,755,000

At the end of 2026, Construction in Process has a balance of $2,859,750 as shown in **Illustration 17A.19**.[18]

ILLUSTRATION 17A.19 Content of Construction in Process Account at End Of 2026—Unprofitable Contract

Construction in Process			
2025 Construction costs	1,000,000		
2025 Recognized gross profit	125,000		
2026 Construction costs	1,916,000	2026 Recognized loss	181,250
Balance	**2,859,750**		

Under the cost-recovery method, Hardhat also would recognize the contract loss of $56,250 through the following entry in 2026 (the year in which the loss first became evident).

Loss from Long-Term Contracts	56,250	
Construction in Process (loss)		56,250

Just as the Billings account balance cannot exceed the contract price, neither can the balance in Construction in Process exceed the contract price.

- In circumstances where the Construction in Process balance exceeds the billings, the company can deduct the recognized loss from such accumulated costs on the balance sheet.
- That is, under both the percentage-of-completion and the cost-recovery methods, the provision for the loss (the credit) may be combined with Construction in Process, thereby reducing the inventory balance.
- In those circumstances, however (as in the 2026 example above), where the billings exceed the accumulated costs, Hardhat must report separately on the balance sheet, as a current liability, the amount of the estimated loss.

As a result, under both the percentage-of-completion and the cost-recovery methods, Hardhat would take the $56,250 loss, as estimated in 2026, from the Construction in Process account and report it separately as a current liability titled "Estimated liability from long-term contracts."

[18]If the costs in 2027 are $1,640,250 as projected, at the end of 2027 the Construction in Process account will have a balance of $1,640,250 + $2,859,750, or $4,500,000, equal to the contract price. When the company matches the revenue remaining to be recognized in 2027 of $1,620,000 [$4,500,000 (total contract price) − $1,125,000 (2025) − $1,755,000 (2026)] with the construction expense to be recognized in 2027 of $1,620,000 [total costs of $4,556,250 less the total costs recognized in prior years of $2,936,250 (2025, $1,000,000; 2026, $1,936,250)], a zero profit results. Thus, the total loss has been recognized in 2026, the year in which it first became evident.

APPENDIX **17B**

Revenue Recognition for Franchises

LEARNING OBJECTIVE *8

Explain revenue recognition for franchises.

In this appendix, we discuss a common yet unique type of business transaction—franchises. As indicated throughout this chapter, companies recognize revenue when performance obligations in a revenue arrangement are satisfied. **Franchises** represent a challenging area because a variety of performance obligations may exist in a given franchise agreement. As a result, companies must carefully analyze franchise agreements to identify the separate performance obligations, determine when performance obligations are satisfied, and, therefore, when revenue should be recognized.[19]

Four types of franchising arrangements have evolved: (1) manufacturer-retailer, (2) manufacturer-wholesaler, (3) service sponsor-retailer, and (4) wholesaler-retailer. The fastest-growing category of franchising, and the one that has given rise to accounting challenges, is the third category, **service sponsor-retailer**. Included in this category are such industries and businesses as:

- Soft ice cream/frozen yogurt stores (**Tastee Freez**, **TCBY**, **Dairy Queen**).
- Food drive-ins (**McDonald's**, **KFC**, **Burger King**).
- Restaurants (**TGI Friday's**, **Pizza Hut**, **Denny's**).
- Motels (**Holiday Inn**, **Marriott**, **Best Western**).
- Auto rentals (**Avis**, **Hertz**, **National**).
- Others (**H & R Block**, **Meineke Mufflers**, **7-Eleven Stores**, **Kelly Services**).

Franchise companies derive their revenue from one or both of two sources: (1) from the sale of initial franchises and related assets or services, and (2) from continuing fees based on the operations of franchises. The **franchisor** (the party who grants business rights under the franchise) normally provides the **franchisee** (the party who operates the franchised business) with the following services.

1. Assistance in site selection: (a) analyzing location and (b) negotiating lease.
2. Evaluation of potential income.
3. Supervision of construction activity: (a) obtaining financing, (b) designing building, and (c) supervising contractor while building.
4. Assistance in the acquisition of signs, fixtures, and equipment.
5. Bookkeeping and advisory services: (a) setting up franchisee's records; (b) advising on income, real estate, and other taxes; and (c) advising on local regulations of the franchisee's business.
6. Employee and management training.
7. Quality control.
8. Advertising and promotion.

In the past, it was standard practice for franchisors to recognize the entire franchise fee at the date of sale, whether the fee was received then or was collectible over a long period of

[19]Franchises are an example of a license or similar rights to use intellectual property. In such arrangements, a company grants a customer the right to use, but not own, intellectual property of the company. Other examples of intellectual property include (1) software and technology; (2) motion pictures, music, and other forms of media and entertainment; and (3) patents, trademarks, and copyrights. Generally, revenue is recognized in these situations when the customer obtains control of the rights. In some cases, a license is a promise to provide a right, which transfers to the customer at a point in time. In other cases, a license is a promise to provide access to an entity's intellectual property, which transfers benefits to the customer over time. **[24]**

time. Frequently, franchisors recorded the entire amount as revenue in the year of sale, even though many of the services were yet to be performed and uncertainty existed regarding the collection of the entire fee. (In effect, the franchisors were counting their fried chickens before they were hatched.) However, a **franchise agreement** may provide for refunds to the franchisee if certain conditions are not met, and franchise fee profit can be reduced sharply by future costs of obligations and services to be rendered by the franchisor.

Franchise Accounting

As indicated, the performance obligations in a franchise arrangement relate to the right to open a business, use of the trade name or other intellectual property of the franchisor, and continuing services, such as marketing help, training, and in some cases supplying inventory and inventory management. Franchisors commonly charge an initial franchise fee as well as continuing franchise fees.

- The **initial franchise fee** is payment for establishing the franchise relationship and providing some initial services.
- **Continuing franchise fees** are received in return for the continuing rights granted by the franchise agreement and for providing such services as management training, advertising and promotion, legal assistance, and other support.

Example 17B.1
Franchise

FACTS Tum's Pizza Inc. enters into a franchise agreement on December 31, 2025, giving Food Fight Corp. the right to operate as a franchisee of Tum's Pizza for 5 years. Tum's charges Food Fight an initial franchise fee of $50,000 for the right to operate as a franchisee. Of this amount, $20,000 is payable when Food Fight signs the agreement, and the note balance is payable in five annual payments of $6,000 each on December 31. As part of the arrangement, Tum's helps locate the site, negotiate the lease or purchase of the site, supervise the construction activity, and provide employee training and the equipment necessary to be a distributor of its products. Similar training services and equipment are sold separately.

Food Fight also promises to pay ongoing royalty payments of 1% of its annual sales (payable each January 31 of the following year) and is obliged to purchase products from Tum's at its current standalone selling prices at the time of purchase. The credit rating of Food Fight indicates that money can be borrowed at 8%. The present value of an ordinary annuity of five annual receipts of $6,000 each discounted at 8% is $23,957. The discount of $6,043 represents the interest revenue to be accrued by Tum's over the payment period.

QUESTION What are the performance obligations in this arrangement and the point in time at which the performance obligations for Tum's are satisfied and revenue is recognized?

SOLUTION

To identify the performance obligations, Tum's must determine whether the promised rights, site selection and construction services, training services, and equipment are distinct.

- Rights to the trade name, market area, and proprietary know-how for 5 years are not individually distinct because each one is not sold separately and cannot be used with other goods or services that are readily available to the franchisee. Therefore, those combined rights give rise to a single performance obligation. Tum's satisfies the performance obligation to grant those rights at the point in time when Food Fight obtains control of the rights. That is, once Food Fight begins operating the store, Tum's has no further obligation with respect to these rights.
- Training services and equipment are distinct because similar services and equipment are sold separately. Tum's satisfies these performance obligations when it transfers the services and equipment to Food Fight.
- Tum's cannot recognize revenue for the royalty payments because it is not reasonably assured to be entitled to these sales-based royalty amounts. That is, these payments represent variable consideration. Therefore, Tum's recognizes revenue for the royalties when (or as) the uncertainty is resolved.

Tum's promise to stand ready to provide products to the franchisee in the future at standalone selling prices is not accounted for as a separate performance obligation in the contract because it does not provide Food Fight with a material right. Thus, revenue from those sales is recorded in the future when the sales are made.

To illustrate the accounting for the franchise in Example 17B.1, consider the following values for allocation of the transaction price at December 31, 2025.

Rights to the trade name, market area, and proprietary know-how	$20,000
Training services	9,957
Equipment (cost of $10,000)	14,000
Total transaction price	$43,957

Training is completed in January 2026, the equipment is installed in January 2026, and Food Fight holds a grand opening on February 2, 2026. The entries for the Tum's franchise arrangement are summarized in **Illustration 17B.1**.

ILLUSTRATION 17B.1 Franchise Entries—Inception and Commencement of Operations

Tum's signs the agreement and receives upfront payment and note on December 31, 2025:

Cash	20,000	
Notes Receivable ($50,000 − $20,000)	30,000	
Discount on Notes Receivable		6,043
Unearned Franchise Revenue		20,000
Unearned Service Revenue (training)		9,957
Unearned Sales Revenue (equipment)		14,000

Franchise opens; Tum's satisfies the performance obligations related to the franchise rights, training, and equipment (that is, Tum's has no further obligations related to these elements of the franchise) on February 2, 2026:

Unearned Franchise Revenue	20,000	
Franchise Revenue		20,000
Unearned Service Revenue (training)	9,957	
Service Revenue (training)		9,957
Unearned Sales Revenue (equipment)	14,000	
Sales Revenue		14,000
Cost or Goods Sold	10,000	
Inventory		10,000

As indicated, when Food Fight begins operations, Tum's satisfies the performance obligations related to the franchise rights, training, and equipment under the franchise agreement. That is, Tum's has no further obligations related to these elements of the franchise.

During 2026, Food Fight does well, recording $525,000 of sales in its first year of operations. The entries for Tum's related to the first year of operations of the franchise are summarized in **Illustration 17B.2**.

ILLUSTRATION 17B.2 Franchise Entries—First Year of Franchise Operations

To record continuing franchise feecs on December 31, 2026:

Accounts Receivable ($525,000 × .01)	5,250	
Franchise Revenue		5,250

To record payment received and interest revenue on note on December 31, 2026:

Cash	6,000	
Notes Receivable		6,000
Discount on Notes Receivable ($23,957 × .08)	1,917	
Interest Revenue		1,917

Tum's will make similar entries in subsequent years of the franchise agreement.

Recognition of Franchise Rights Revenue over Time

In Example 17B.1, Tum's transferred control of the franchise rights at a point in time—that is, when the franchisee began operations and could benefit from control of the rights—with no further involvement by Tum's. In other situations, depending on the economic substance

of the rights, the franchisor may be providing **access to the right** rather than transferring control of the franchise rights. In this case, **the franchise revenue is recognized over time**, rather than at a point in time.

Example 17B.2 Franchise Revenue over Time

FACTS Tech Solvers Corp. is a franchisor in the emerging technology consulting service business. Tech Solvers' stores provide a range of computing services (hardware/software installation, repairs, data backup, device syncing, and network solutions) on popular Apple and PC devices. Each franchise agreement gives a franchisee the right to open a Tech Solvers store and sell Tech Solvers' products and services in the area for 5 years.

Under the contract, Tech Solvers also provides the franchisee with a number of services to support and enhance the franchise brand, including (a) advising and consulting on the operations of the store; (b) communicating new hardware and software developments, and service techniques; (c) providing business and training manuals; and (d) advertising programs and training. As an almost entirely service operation (all parts and other supplies are purchased as needed by customers), Tech Solvers provides few upfront services to franchisees. Instead, the franchisee recruits service technicians, who are given Tech Solvers' training materials (online manuals and tutorials), which are updated for technology changes, on a monthly basis at a minimum.

Tech Solvers enters into a franchise agreement on December 15, 2025, giving a franchisee the rights to operate a Tech Solvers franchise in eastern Indiana for 5 years. Tech Solvers charges an initial franchise fee of $5,000 for the right to operate as a franchisee, payable upon signing the contract. Tech Solvers also receives ongoing royalty payments of 7% of the franchisee's annual sales (payable each January 15 of the following year). The franchise began operations in January 2026 and recognized $85,000 of revenue in 2026.

QUESTION What are the performance obligations in this arrangement and the point in time at which the performance obligations will be satisfied and revenue will be recognized?

SOLUTION

To identify the performance obligations, Tech Solvers must determine whether the promised rights and the ongoing franchisee technology support and training services are distinct.

- Rights to the trade name, market area, and proprietary know-how for 5 years are not individually distinct because each one is not sold separately and cannot be used with other goods or services that are readily available to the franchisee. In addition, these licensed rights have a close connection with the underlying Tech Solvers' intellectual property (its ability to keep its service and training materials up-to-date). Therefore, those combined rights and the ongoing training materials are a single performance obligation. Tech Solvers satisfies the performance obligation over time. That is, once the franchisee begins operating a Tech Solvers franchise, Tech Solvers is providing access to the rights and must continue to perform updates and services.
- Tech Solvers cannot recognize revenue for the royalty payments because it is not reasonably assured to be entitled to those revenue-based royalty amounts. That is, these payments represent variable consideration. Therefore, Tech Solvers recognizes revenue for the royalties when (or as) the uncertainty is resolved.

The entries for Tech Solvers related to the franchise are summarized in Illustration 17B.3.

ILLUSTRATION 17B.3 Franchise Entries—Revenue Recognized over Time

Franchise agreement signed and receipt of upfront payment and note on December 15, 2025:

Cash	5,000	
Unearned Franchise Revenue		5,000

Franchise begins operations in January 2026 and records $85,000 of revenue for the year ended December 31, 2026, on December 31, 2026:

Unearned Franchise Revenue	1,000	
Franchise Revenue ($5,000 ÷ 5)		1,000
Accounts Receivable	5,950	
Franchise Revenue ($85,000 × .07)		5,950

To record payment received from franchisee on January 15, 2027:

Cash	5,950	
Accounts Receivable		5,950

As indicated, Tech Solvers satisfies the performance obligation related to the franchise rights and training materials over time (in this case, on a straight-line basis). Continuing franchise fees are recognized when uncertainty related to the variable consideration is resolved.

In summary, analysis of the characteristics of the Tech Solvers franchise indicates that it does not represent a right that is transferred at a point in time. That is, Tech Solvers has a continuing obligation to provide updated materials and ongoing support, suggesting the control of the right has not been transferred to the franchisee. Thus, revenue from the franchise rights is recognized over time.

Learning Objectives Review

1 Discuss the fundamental concepts related to revenue recognition and measurement.

Most revenue transactions pose few problems for revenue recognition. This is because, in many cases, the transaction is initiated and completed at the same time. Increasing complexity of business and revenue arrangements have resulted in revenue recognition practices being identified as the most prevalent reasons for accounting restatements. A number of the revenue recognition issues relate to possible fraudulent behavior by company executives and employees, but are also due to sometimes incomplete and inconsistent accounting guidelines for revenue recognition. The FASB has issued guidance for determining when revenue should be reported and how it should be measured. The standard is comprehensive and applies to all companies. As a result, comparability and consistency in reporting revenue should be enhanced.

The five steps in the revenue recognition process are (1) identify the contract with customers, (2) identify the separate performance obligations in the contract, (3) determine the transaction price, (4) allocate the transaction price to the separate performance obligations, and (5) recognize revenue when each performance obligation is satisfied.

2 Explain and apply the five-step revenue recognition process.

1. **Identify the contract with customers.** A contract is an agreement that creates enforceable rights or obligations. A company applies the revenue guidance to contracts with customers.
2. **Identify the separate performance obligations in the contract.** A performance obligation is a promise in a contract to provide a product or service to a customer. A contract may be comprised of multiple performance obligations. The accounting for multiple performance obligations is based on evaluation of whether the product or service is distinct within the contract. If each of the goods or services is distinct, but is interdependent and interrelated, these goods and services are combined and reported as one performance obligation.
3. **Determine the transaction price.** The transaction price is the amount of consideration that a company expects to receive from a customer in exchange for transferring goods and services. In determining the transaction price, companies must consider the following factors: (1) variable consideration, (2) time value of money, (3) noncash consideration, and (4) consideration paid or payable to a customer.

4. **Allocate the transaction price to the separate performance obligations.** If more than one performance obligation exists in a contract, allocate the transaction price based on relative standalone selling prices. Estimates of standalone selling price can be based on (1) adjusted market assessment, (2) expected cost plus a margin approach, or (3) a residual approach.
5. **Recognize revenue when the company satisfies its performance obligation.** A company satisfies its performance obligation when the customer obtains control of the good or service. Companies satisfy performance obligations either at a point in time or over a period of time. Companies recognize revenue over a period of time if one of the following criteria is met: (1) the customer receives and consumes the benefits as the seller performs, (2) the customer controls the asset as it is created, or (3) the company does not have an alternative use for the asset.

3 Apply the five-step process to major revenue recognition issues.

Refer to Illustration 17.10 for a summary of the accounting for (a) sales returns and allowances, (b) repurchase agreements, (c) bill-and-hold sales, (d) principal-agent relationships, (e) consignments, (f) warranties, and (g) nonrefundable upfront fees.

4 Describe presentation and disclosure regarding revenue.

Under the asset-liability approach to recognize revenue, companies present contract assets and contract liabilities on their balance sheets. Contract assets are rights to receive consideration. A contract liability is a company's obligation to transfer goods or services to a customer for which the company has received consideration from the customer. Companies must determine if new performance obligations are created by a contract modification and may also report assets associated with fulfillment costs and contract acquisition costs related to a revenue arrangement.

Companies disclose qualitative and quantitative information about (a) contracts with customers with disaggregation of revenue, presentation of opening and closing balances in contract assets and contract liabilities, and significant information related to their performance obligations; (b) significant judgments that affect the determination of the transaction price, the allocation of the transaction price, and the determination of the timing of revenue; and (c) assets recognized from costs incurred to fulfill a contract.

*5 Apply the percentage-of-completion method for long-term contracts.

To apply the percentage-of-completion method to long-term contracts, a company must have some basis for measuring the progress toward completion at particular interim dates. One of the most popular input measures used to determine the progress toward completion is the cost-to-cost basis. Using this basis, a company measures the percentage of completion by comparing costs incurred to date with the most recent estimate of the total costs to complete the contract. The company applies that percentage to the total revenue or the estimated total gross profit on the contract to arrive at the amount of revenue or gross profit to be recognized to date.

*6 Apply the cost-recovery method for long-term contracts.

Under the cost-recovery method, companies recognize gross profit only at the point of sale, that is, when the company completes the contract. The company accumulates costs of long-term contracts in process and current billings. This method (sometimes referred to as the zero-profit method) recognizes revenue only to the extent of costs incurred that are expected to be recoverable. Profit is recognized only after all costs are incurred.

*7 Identify the proper accounting for losses on long-term contracts.

Two types of losses can become evident under long-term contracts. (1) **Loss in current period on a profitable contract:** Under the percentage-of-completion method only, the estimated cost increase requires a current-period adjustment of excess gross profit recognized on the project in prior periods. The company records this adjustment as a loss in the current period because it is a change in accounting estimate. (2) **Loss on an unprofitable contract:** Under both the percentage-of-completion and the cost-recovery methods, the company must recognize the entire expected contract loss in the current period.

*8 Explain revenue recognition for franchises.

In a franchise arrangement, the franchisor satisfies its performance obligation for a franchise license when control of the franchise rights is transferred, generally when the franchisee begins operations of the franchise. In situations where the franchisor provides **access to the rights** rather than transferring control of the franchise rights, the franchise rights' revenue is recognized over time rather than at a point in time. Franchisors recognize continuing franchise fees over time (as uncertainty related to the variable consideration is resolved).

Enhanced Review and Practice

Go to Wiley Course Resources for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Exercises, Problems, Data Analytics Activities, Problem Solution Walkthrough Videos, and many more assessment tools and resources are available for practice in Wiley Course Resources.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

Questions

1. Explain the current environment regarding revenue recognition.

2. What was viewed as a major criticism of GAAP as it relates to revenue recognition?

3. Describe the revenue recognition principle.

4. Identify the five steps in the revenue recognition process.

5. Describe the critical factor in evaluating whether a performance obligation is satisfied.

6. When is revenue recognized in the following situations? (a) Revenue from selling products, (b) revenue from services performed, (c) revenue from permitting others to use company assets, and (d) revenue from disposing of assets other than products.

7. Explain the importance of a contract in the revenue recognition process.

8. On October 10, 2025, Executor Co. entered into a contract with Belisle Inc. to transfer Executor's specialty products (sales value of $10,000, cost of $6,500) on December 15, 2025. Belisle agrees to make a payment of $5,000 upon delivery and signs a promissory note to pay the remaining balance on January 15, 2026. What entries does Executor make in 2025 on this contract? Ignore time value of money considerations.

9. What is a performance obligation? Under what conditions does a performance obligation exist?

10. When must multiple performance obligations in a revenue arrangement be accounted for separately?

11. Engelhart Implements Inc. sells tractors to area farmers. The price for each tractor includes GPS positioning service for 9 months (which facilitates field settings for planting and harvesting equipment). The GPS service is regularly sold on a standalone basis by Engelhart for a monthly fee. After the 9-month period, the consumer can renew the service on a fee basis. Does Engelhart have one or multiple performance obligations? Explain.

12. What is the transaction price? What additional factors related to the transaction price must be considered in determining the transaction price?

13. What are some examples of variable consideration? What are the two approaches for estimating variable consideration?

14. Allee Corp. is evaluating a revenue arrangement to determine proper revenue recognition. The contract is for construction of 10 speedboats for a contract price of $400,000. The customer needs the boats in its showrooms by February 1, 2026, for the boat purchase season; the customer provides a bonus payment of $21,000 if all boats are delivered by the February 1 deadline. The bonus is reduced by $7,000 each week that the boats are delivered after the deadline until no bonus is paid if the boats are delivered after February 15, 2026. Allee frequently includes such bonus terms in its contracts and thus has good historical data for estimating the probabilities of completion at different dates. It estimates an equal probability (25%) for each full delivery outcome. What approach should Allee use to determine the transaction price for this contract? Explain.

15. Refer to the information in Question 14. Assume that Allee has limited experience with a construction project on the same scale as the 10 speedboats. How does this affect the accounting for the variable consideration?

16. In measuring the transaction price, explain the accounting for (a) time value of money, and (b) noncash consideration.

17. What is the proper accounting for volume discounts on sales of products?

18. On what basis should the transaction price be allocated to various performance obligations? Identify the approaches for allocating the transaction price.

19. Fuhremann Co. is a full-service manufacturer of surveillance equipment. Customers can purchase any combination of equipment, installation services, and training as part of Fuhremann's security services. Thus, each of these performance obligations are separate with individual standalone selling prices. Laplante Inc. purchased cameras, installation, and training at a total price of $80,000. Estimated standalone selling prices of the equipment, installation, and training are $90,000, $7,000, and $3,000, respectively. How should the transaction price be allocated to the equipment, installation, and training?

20. When does a company satisfy a performance obligation? Identify the indicators of satisfaction of a performance obligation.

21. Under what conditions does a company recognize revenue over a period of time?

22. How do companies recognize revenue from a performance obligation over time?

23. Explain the accounting for sales with right of return.

24. What are the reporting issues in a sale with a repurchase agreement?

25. Explain a bill-and-hold sale. When is revenue recognized in these situations?

26. Explain a principal-agent relationship and its significance to revenue recognition.

27. What is the nature of a sale on consignment?

28. What are the two types of warranties? Explain the accounting for each type.

29. Campus Cellular provides cell phones and 1 year of cell service to students for an upfront, nonrefundable fee of $300 and a usage fee of $5 per month. Students may renew the service without paying another upfront fee for each year they are on campus (on average, students renew their service one time). What amount of revenue should Campus Cellular recognize in the first year of the contract?

30. Describe the conditions when contract assets and liabilities are recognized and presented in financial statements.

31. Explain the accounting for contract modifications.

32. Explain the reporting for costs to fulfill a contract.

33. What qualitative and quantitative disclosures are required related to revenue recognition?

*34. What are the two basic methods of accounting for long-term construction contracts? Indicate the circumstances that determine when one or the other of these methods should be used.

*35. For what reasons should the percentage-of-completion method be used over the cost-recovery method whenever possible?

*36. What methods are used in practice to determine the extent of progress toward completion? Identify some "input measures" and some "output measures" that might be used to determine the extent of progress.

*37. What are the two types of losses that can become evident in accounting for long-term contracts? What is the nature of each type of loss? How is each type accounted for?

*38. Why in franchise arrangements may it be improper to recognize the entire franchise fee as revenue at the date of sale?

*39. How should a franchisor account for continuing franchise fees and routine sales of equipment and supplies to franchisees?

Brief Exercises

BE17.1 (LO 1) Leno Computers manufactures tablet computers for sale to retailers such as Fallon Electronics. Recently, Leno sold and delivered 200 tablet computers to Fallon for $20,000 on January 5, 2025. Fallon has agreed to pay for the 200 tablet computers within 30 days. Fallon has a good credit rating and should have no difficulty in making payment to Leno. (a) Explain whether a valid contract exists between Leno Computers and Fallon Electronics. (b) Assuming that Leno Computers has not yet delivered the tablet computers to Fallon Electronics, what might cause a valid contract not to exist between Leno and Fallon?

BE17.2 (LO 1) On May 10, 2025, Cosmo Co. enters into a contract to deliver a product to Greig Inc. on June 15, 2025. Greig agrees to pay the full contract price of $2,000 on July 15, 2025. The cost of the goods is $1,300. Cosmo delivers the product to Greig on June 15, 2025, and receives payment on July 15, 2025. Prepare the journal entries for Cosmo related to this contract. Either party may terminate the contract without compensation until one of the parties performs.

BE17.3 (LO 2) Hillside Company enters into a contract with Sanchez Inc. to provide a software license and 3 years of customer support. The customer-support services require specialized knowledge that only Hillside Company's employees can perform. How many performance obligations are in the contract?

BE17.4 (LO 2) Destin Company signs a contract to manufacture a new 3D printer for $80,000. The contract includes installation which costs $4,000 and a maintenance agreement over the life of the printer at a cost of $10,000. The printer cannot be operated without the installation. Destin Company as well as other companies could provide the installation and maintenance agreement. What are Destin Company's performance obligations in this contract?

BE17.5 (LO 2) Ismail Construction enters into a contract to design and build a hospital. Ismail is responsible for the overall management of the project and identifies various goods and services to be provided, including engineering, site clearance, foundation, procurement, construction of the structure, piping and wiring, installation of equipment, and finishing. Does Ismail have a single performance obligation to the customer in this revenue arrangement? Explain.

BE17.6 (LO 2) Nair Corp. enters into a contract with a customer to build an apartment building for $1,000,000. The customer hopes to rent apartments at the beginning of the school year and provides a performance bonus of $150,000 to be paid if the building is ready for rental beginning August 1, 2026. The bonus is reduced by $50,000 each week that completion is delayed. Nair commonly includes these completion bonuses in its contracts and, based on prior experience, estimates the following completion outcomes:

Completed by	Probability
August 1, 2026	70%
August 8, 2026	20
August 15, 2026	5
After August 15, 2026	5

Determine the transaction price for this contract.

BE17.7 (LO 2) Referring to the revenue arrangement in BE17.6, determine the transaction price for the contract, assuming (a) Nair is only able to estimate whether the building can be completed by August 1, 2026, or not (Nair estimates that there is a 70% chance that the building will be completed by August 1, 2026), and (b) Nair has limited information with which to develop a reliable estimate of completion by the August 1, 2026, deadline.

BE17.8 (LO 2) Presented below are three revenue recognition situations.

a. Groupo sells goods to MTN for $1,000,000, payment due at delivery.

b. Groupo sells goods on account to Grifols for $800,000, payment due in 30 days.

c. Groupo sells goods to Magnus for $500,000, payment due in two installments, the first installment payable in 18 months and the second payment due 6 months later. The present value of the future payments is $464,000.

Indicate the transaction price for each of these situations and when revenue will be recognized.

BE17.9 (LO 2) On January 2, 2025, Adani Inc. sells goods to Geo Company in exchange for a zero-interest-bearing note with face value of $11,000, with payment due in 12 months. The fair value of the goods at the date of sale is $10,000 (cost $6,000). Prepare the journal entry to record this transaction on January 2, 2025. How much total revenue should be recognized in 2025?

BE17.10 (LO 2) On March 1, 2025, Parnevik Company sold goods to Goosen Inc. for $660,000 in exchange for a 5-year, zero-interest-bearing note in the face amount of $1,062,937 (an inputed rate of 10%). The goods have an inventory cost on Parnevik's books of $400,000. Prepare the journal entries for Parnevik on (a) March 1, 2025, and (b) December 31, 2025.

BE17.11 (LO 2, 3) Larkspur Inc. sells prepaid telephone cards to customers in its convenience stores. When Larkspur sells cards, it then pays the telecommunications company, TeleExpress, for the value of the cards less a 20% commission. Assume that Larkspur receives $4,000 of prepaid cards in January 2025. Larkspur sold 50% of the cards in February, 30% in March, and 20% in April. The total payment by Larkspur to TeleExpress over the 3 months is $3,200. Indicate how much income Larkspur should recognize in January, February, March, and April.

BE17.12 (LO 2, 3) Manual Company sells goods to Nolan Company during 2025. It offers Nolan the following rebates based on total sales to Nolan. If total sales to Nolan are 10,000 units, it will grant a rebate of 2%. If it sells up to 20,000 units, it will grant a rebate of 4%. If it sells up to 30,000 units, it will grant a rebate of 6%. In the first quarter of the year, Manual sells 11,000 units to Nolan at a sales price of $110,000. Manual, based on past experience, has sold over 40,000 units to Nolan, and these sales normally take place in the third quarter of the year. What amount of revenue should Manual report for the sale of the 11,000 units in the first quarter of the year?

BE17.13 (LO 3) On July 10, 2025, Amodt Music sold CDs to retailers on account and recorded sales revenue of $700,000 (cost $560,000). Amodt grants the right to return CDs that do not sell in 3 months following delivery. Past experience indicates that the normal return rate is 15%. By October 11, 2025, retailers returned CDs to Amodt and were granted credit of $78,000. Prepare Amodt's journal entries to record (a) the sale on July 10, 2025, and (b) $78,000 of returns on October 11, 2025, and on October 31, 2025. Assume that Amodt prepares financial statements on October 31, 2025.

BE17.14 (LO 3) Kristin Company sells 300 units of its products for $20 each to Logan Inc. for cash. Kristin allows Logan to return any unused product within 30 days and receive a full refund. The cost of each product is $12. To determine the transaction price, Kristin decides that the approach that is most predictive of the amount of consideration to which it will be entitled is the probability-weighted amount. Using the probability-weighted amount, Kristin estimates that (1) 10 products will be returned and (2) the returned products are expected to be resold at a profit. Indicate the amount of (a) net sales, (b) estimated liability for refunds, and (c) cost of goods sold that Kristen should report in its financial statements (assume that none of the products have been returned at the financial statement date).

BE17.15 (LO 3) On June 1, 2025, Mills Company sells $200,000 of shelving units to a local retailer, ShopBarb, which is planning to expand its stores in the area. Under the agreement, ShopBarb asks Mills to retain the shelving units at its factory until the new stores are ready for installation. Title passes to ShopBarb at the time the agreement is signed. The shelving units are delivered to the stores on September 1, 2025, and ShopBarb pays in full. Prepare the journal entries for this bill-and-hold arrangement (assuming that conditions for recognizing the sale as a bill-and-hold sale have been met) for Mills on June 1 and September 1, 2025. The cost of the shelving units to Mills is $110,000.

BE17.16 (LO 3) Travel Inc. sells tickets for a Caribbean cruise on ShipAway Cruise Lines to Carmel Company employees. The total cruise package price to Carmel Company employees is $70,000. Travel Inc. receives a commission of 6% of the total price. Travel Inc. therefore remits $65,800 to ShipAway. Prepare the journal entry to record (1) the receipt of payment of $70,000 from employees for the cruise packages and (2) the remittance and revenue recognized by Travel Inc. on this transaction.

BE17.17 (LO 3) Jansen Corporation shipped $20,000 of merchandise on consignment to Gooch Company. Jansen paid freight costs of $2,000. Gooch Company paid $500 for local advertising, which is reimbursable from Jansen. By year-end, 60% of the merchandise had been sold for $21,500. Gooch notified Jansen, retained a 10% commission, and remitted the cash due to Jansen. Prepare Jansen's journal entry when the cash is received.

BE17.18 (LO 3) Talarczyk Company sold 10,000 Super-Spreaders on December 31, 2025, at a total price of $1,000,000, with a warranty guarantee that the product was free of any defects. The cost of the spreaders sold is $550,000. The assurance warranties extend for a 2-year period and are estimated to cost $40,000. Talarczyk also sold extended warranties (service-type warranties) related to 2,000 spreaders for 2 years beyond the 2-year period for $12,000. Given this information, determine the amounts to report

for the following at December 31, 2025: sales revenue, warranty expense, unearned warranty revenue, warranty liability, and cash.

BE17.19 (LO 3) On May 1, 2025, Mount Company enters into a contract to transfer a product to Eric Company on September 30, 2025. It is agreed that Eric will pay the full price of $25,000 in advance on June 15, 2025. Eric pays on June 15, 2025, and Mount delivers the product on September 30, 2025. Prepare the journal entries required for Mount in 2025.

BE17.20 (LO 3) Nate Beggs signs a 1-year contract with BlueBox Video. The terms of the contract are that Nate is required to pay a nonrefundable initiation fee of $100. No annual membership fee is charged in the first year. After the first year, membership can be renewed by paying an annual membership fee of $5 per month. BlueBox determines that its customers, on average, renew their annual membership three times after the first year before terminating their membership. What amount of revenue should BlueBox recognize in its first year?

BE17.21 (LO 4) Stengel Co. enters into a 3-year contract to perform maintenance service for Laplante Inc. Laplante promises to pay $100,000 at the beginning of each year (the standalone selling price of the service at contract inception is $100,000 per year). At the end of the second year, the contract is modified and the fee for the third year of service, which reflects a reduced menu of maintenance services to be performed at Laplante locations, is reduced to $80,000 (the standalone selling price of the services at the beginning of the third year is $80,000 per year). Briefly describe the accounting for this contract modification.

*__BE17.22 (LO 5)__ Turner, Inc. began work on a $7,000,000 contract in 2025 to construct an office building. During 2025, Turner, Inc. incurred costs of $1,700,000, billed its customers for $1,200,000, and collected $960,000. At December 31, 2025, the estimated additional costs to complete the project total $3,300,000. Prepare Turner's 2025 journal entries using the percentage-of-completion method.

*__BE17.23 (LO 6)__ Guillen, Inc. began work on a $7,000,000 contract in 2025 to construct an office building. Guillen uses the cost-recovery method. At December 31, 2025, the balances in certain accounts were Construction in Process $1,715,000, Accounts Receivable $240,000, and Billings on Construction in Process $1,000,000. Indicate how these accounts would be reported in Guillen's December 31, 2025, balance sheet.

*__BE17.24 (LO 7)__ Archer Construction Company began work on a $420,000 construction contract in 2025. During 2025, Archer incurred costs of $278,000, billed its customer for $215,000, and collected $175,000. At December 31, 2025, the estimated additional costs to complete the project total $162,000. Prepare Archer's journal entry to record profit or loss, if any, using (a) the percentage-of-completion method and (b) the cost-recovery method.

*__BE17.25 (LO 8)__ Frozen Delight, Inc. charges an initial franchise fee of $75,000 for the right to operate as a franchisee of Frozen Delight. Of this amount, $25,000 is collected immediately. The remainder is collected in four equal annual installments of $12,500 each. These installments have a present value of $41,402. As part of the total franchise fee, Frozen Delight also provides training (with a fair value of $2,000) to help franchisees get the store ready to open. The franchise agreement is signed on April 1, 2025, training is completed, and the store opens on July 1, 2025. Prepare the journal entries required by Frozen Delight on April 1 and July 1, 2025.

Exercises

E17.1 (LO 1) (Fundamentals of Revenue Recognition) Presented below are five different situations. Provide an answer to each of these questions.

1. The Kawaski Jeep dealership sells both new and used Jeeps. Some of the Jeeps are used for demonstration purposes; after 6 months, these Jeeps are then sold as used vehicles. Should Kawaski Jeep record these sales of used Jeeps as revenue or as a gain?
2. One of the main indicators of whether control has passed to the customer is whether revenue has been earned. Is this statement correct?
3. One of the five steps in determining whether revenue should be recognized is whether the sale has been realized. Do you agree?
4. One of the criteria that contracts must meet to apply the revenue standard is that collectibility of the sales price must be reasonably possible. Is this correct?
5. Many believe the distinction between revenue and gains is important in the financial statements. Given that both revenues and gains increase net income, why is the distinction important?

E17.2 (LO 1) (Fundamentals of Revenue Recognition) Respond to the questions related to the following statements.

1. A wholly unperformed contract is one in which the company has neither transferred the promised goods or services to the customer nor received, or become entitled to receive, any consideration. Why are these contracts not recorded in the accounts?
2. Performance obligations are the unit of account for purposes of applying the revenue recognition standard and therefore determine when and how revenue is recognized. Is this statement correct?
3. Elaina Company contracts with a customer and provides the customer with an option to purchase additional goods for free or at a discount. Should Elaina Company account for this option?
4. The transaction price is generally not adjusted to reflect the customer's credit risk, meaning the risk that the customer will not pay the amount to which the entity is entitled to under the contract. Comment on this statement.

E17.3 (LO 1, 2) (Existence of a Contract) On May 1, 2025, Richardson Inc. entered into a contract to deliver one of its specialty mowers to Kickapoo Landscaping Co. The contract requires Kickapoo to pay the contract price of $900 in advance on May 15, 2025. Kickapoo pays Richardson on May 15, 2025, and Richardson delivers the mower (with cost of $575) on May 31, 2025.

Instructions

a. Prepare the journal entry on May 1, 2025, for Richardson.

b. Prepare the journal entry on May 15, 2025, for Richardson.

c. Prepare the journal entry on May 31, 2025, for Richardson.

E17.4 (LO 2) (Determine Transaction Price) Jupiter Company sells goods to Danone Inc. by accepting a note receivable on January 2, 2025. The goods have a sales price of $610,000 (cost of $500,000). The terms are net 30. If Danone pays within 5 days, however, it receives a cash discount of $10,000. Past history indicates that the cash discount will be taken. On January 28, 2025, Danone makes payment to Jupiter for the full sales price.

Instructions

a. Prepare the journal entry(ies) to record the sale and related cost of goods sold for Jupiter Company on January 2, 2025, and the payment on January 28, 2025. Assume that Jupiter Company records the January 2, 2025, transaction using the net method.

b. Prepare the journal entry(ies) to record the sale and related cost of goods sold for Jupiter Company on January 2, 2025, and the payment on January 28, 2025. Assume that Jupiter Company records the January 2, 2025, transaction using the gross method.

E17.5 (LO 2) (Determine Transaction Price) Jeff Heun, president of Concrete Always, agrees to construct a concrete cart path at Dakota Golf Club. Concrete Always enters into a contract with Dakota to construct the path for $200,000. In addition, as part of the contract, a performance bonus of $40,000 will be paid based on the timing of completion. The performance bonus will be paid fully if completed by the agreed-upon date. The performance bonus decreases by $10,000 per week for every week beyond the agreed-upon completion date. Jeff has been involved in a number of contracts that had performance bonuses as part of the agreement in the past. As a result, he is fairly confident that he will receive a good portion of the performance bonus. Jeff estimates, given the constraints of his schedule related to other jobs, that there is 55% probability that he will complete the project on time, a 30% probability that he will be 1 week late, and a 15% probability that he will be 2 weeks late.

Instructions

a. Determine the transaction price that Concrete Always should compute for this agreement.

b. Assume that Jeff Heun has reviewed his work schedule and decided that it makes sense to complete this project on time. Assuming that he now believes that the probability for completing the project on time is 90% and otherwise it will be finished 1 week late, determine the transaction price.

E17.6 (LO 2) (Determine Transaction Price) Bill Amends, owner of Real Estate Inc., buys and sells commercial properties. Recently, he sold land for $3,000,000 to the Blackhawk Group, a developer that plans to build a new shopping mall. In addition to the $3,000,000 sales price, Blackhawk Group agrees to pay Real Estate Inc. 1% of the retail sales of the mall for 10 years. Blackhawk estimates that retail sales in a typical mall project is $1,000,000 a year. Given the substantial increase in online sales that are occurring in the retail market, Bill had originally indicated that he would prefer a higher price for the land instead of the 1% future-sales-based arrangement and suggested a price of $3,250,000. However, Blackhawk would not agree to those terms.

Instructions

What is the transaction price for the land and related royalty payment that Real Estate Inc. should record?

E17.7 (LO 2) (Determine Transaction Price) Blair Biotech enters into a licensing agreement with Pang Pharmaceutical for a drug under development. Blair will receive a payment of $10,000,000 if the drug receives regulatory approval. Based on prior experience in the drug-approval process, Blair determines it is 90% likely that the drug will gain approval and a 10% chance of denial.

Instructions

a. Determine the transaction price of the arrangement for Blair Biotech.

b. Assuming that regulatory approval was granted on December 20, 2025, and that Blair received the payment from Pang on January 15, 2026, prepare the journal entries for Blair. The license meets the criteria for point-in-time revenue recognition.

E17.8 (LO 2, 3) (Determine Transaction Price) Aaron's Agency sells an insurance policy offered by Capital Insurance Company for a commission of $100 on January 2, 2025. In addition, Aaron will receive an additional commission of $10 each year for as long as the policyholder does not cancel the policy. Based on Aaron's significant experience with these types of policies, it estimates that policyholders on average renew the policy for 4.5 years, which results in an expected policy life of 5.5 years. It has no evidence to suggest that previous policyholder behavior will change.

Instructions

a. Determine the transaction price of the arrangement for Aaron, assuming 100 policies are sold.

b. Determine the revenue that Aaron will recognize in 2025.

E17.9 (LO 2, 3) (Determine Transaction Price) Taylor Marina has 300 available slips that rent for $800 per season. Payments must be made in full by the start of the boating season, April 1, 2026. The boating season ends October 31, and the marina has a December 31 year-end. Slips for future seasons may be reserved if paid for by December 31, 2026. Under a new policy, if payment for 2027 season slips is made by December 31, 2026, a 5% discount is allowed. If payment for 2028 season slips is made by December 31, 2026, renters get a 20% discount (this promotion hopefully will provide cash flow for major dock repairs).

On December 31, 2025, all 300 slips for the 2026 season were rented at full price. On December 31, 2026, 200 slips were reserved and paid for the 2027 boating season, and 60 slips were reserved and paid for the 2028 boating season.

Instructions

a. Prepare the appropriate journal entries for December 31, 2025, and December 31, 2026.

b. Assume the marina operator is unsophisticated in business. Explain the managerial significance of the above accounting to this person.

E17.10 (LO 2) (Allocate Transaction Price) Geraths Windows manufactures and sells custom storm windows for three-season porches. Geraths also provides installation service for the windows. The installation process does not involve changes in the windows, so this service can be performed by other vendors. Geraths enters into the following contract on July 1, 2025, with a local homeowner. The customer purchases windows for a price of $2,400 and chooses Geraths to do the installation. Geraths charges the same price for the windows irrespective of whether it does the installation or not. The installation service is estimated to have a standalone selling price of $600. The customer pays Geraths $2,000 (which equals the standalone selling price of the windows, which have a cost of $1,100) upon delivery and the remaining balance upon installation of the windows. The windows are delivered on September 1, 2025, Geraths completes installation on October 15, 2025, and the customer pays the balance due. Prepare the journal entries for Geraths in 2025. (Round amounts to nearest dollar.)

E17.11 (LO 2) (Allocate Transaction Price) Refer to the revenue arrangement in E17.10. Repeat the requirements, assuming (a) Geraths estimates the standalone selling price of the installation based on an estimated cost of $400 plus a margin of 20% on cost, and (b) given uncertainty of finding skilled labor, Geraths is unable to develop a reliable estimate for the standalone selling price of the installation. (Round amounts to nearest dollar.)

E17.12 (LO 2) (Allocate Transaction Price) Shaw Company sells goods on credit that cost $300,000 to Ricard Company for $410,000 on January 2, 2025. The sales price includes an installation fee, which has a standalone selling price of $40,000. The standalone selling price of the goods is $370,000. The installation is considered a separate performance obligation and is expected to take 6 months to complete.

Instructions

a. Prepare the journal entries (if any) to record the sale on January 2, 2025.

b. Shaw prepares an income statement for the first quarter of 2025, ending on March 31, 2025 (installation was completed on June 18, 2025). How much revenue should Shaw recognize related to its sale to Ricard?

E17.13 (LO 2) (Allocate Transaction Price) Crankshaft Company manufactures products ranging from simple automated machinery to complex systems containing numerous components. Unit selling prices range from $200,000 to $1,500,000 and are quoted inclusive of installation. The installation process does not involve changes to the features of the equipment and does not require proprietary information about the equipment in order for the installed equipment to perform to specifications. Crankshaft has the following arrangement with Winkerbean Inc.

- Winkerbean purchases equipment from Crankshaft for a price of $1,000,000 and contracts with Crankshaft to install the equipment. Crankshaft charges the same price for the equipment irrespective of whether it does the installation or not. Using market data, Crankshaft determines installation service is estimated to have a standalone selling price of $50,000. The cost of the equipment is $600,000.
- Winkerbean is obligated to pay Crankshaft the $1,000,000 upon the delivery of the equipment.

Crankshaft delivers the equipment on June 1, 2025, and completes the installation of the equipment on September 30, 2025. The equipment has a useful life of 10 years. Assume that the equipment and the installation are two distinct performance obligations which should be accounted for separately.

Instructions

a. How should the transaction price of $1,000,000 be allocated among the service obligations?

b. Prepare the journal entries for Crankshaft for this revenue arrangement on June 1, 2025 and September 30, 2025, assuming Crankshaft receives payment when installation is completed.

E17.14 (LO 2) (Allocate Transaction Price) Refer to the revenue arrangement in E17.13.

Instructions

Repeat requirements (a) and (b) assuming Crankshaft does not have market data with which to determine the standalone selling price of the installation services. As a result, an expected cost plus margin approach is used. The cost of installation is $36,000; Crankshaft prices these services with a 25% margin relative to cost.

E17.15 (LO 2) (Allocate Transaction Price) Appliance Center is an experienced home appliance dealer. Appliance Center also offers a number of services for the home appliances that it sells. Assume that Appliance Center sells ovens on a standalone basis. Appliance Center also sells installation services and maintenance services for ovens. However, Appliance Center does not offer installation or maintenance services to customers who buy ovens from other vendors. Pricing for ovens is as follows.

Oven only	$ 800
Oven with installation service	850
Oven with maintenance services	975
Oven with installation and maintenance services	1,000

In each instance in which maintenance services are provided, the maintenance service is separately priced within the arrangement at $175. Additionally, the incremental amount charged by Appliance Center for installation approximates the amount charged by independent third parties. Ovens are sold subject to a general right of return. If a customer purchases an oven with installation and/or maintenance services, in the event Appliance Center does not complete the service satisfactorily, the customer is only entitled to a refund of the portion of the fee that exceeds $800.

Instructions

a. Assume that a customer purchases an oven with both installation and maintenance services for $1,000. Based on its experience, Appliance Center believes that it is probable that the installation of the equipment will be performed satisfactorily to the customer. Assume that the maintenance services are priced separately (i.e., the three components are distinct). Identify the separate performance obligations related to the Appliance Center revenue arrangement.

b. Indicate the amount of revenue that should be allocated to the oven, the installation, and to the maintenance contract.

E17.16 (LO 3) Excel (Sales with Returns) On March 10, 2025, Steele Company sold to Barr Hardware 200 tool sets at a price of $50 each (cost $30 per set) with terms of n/60, f.o.b. shipping point. Steele allows Barr to return any unused tool sets within 60 days of purchase. Steele estimates that (1) 10 sets will

be returned, (2) the cost of recovering the products will be immaterial, and (3) the returned tools sets can be resold at a profit. On March 25, 2025, Barr returned six tool sets and received a credit to its account.

Instructions

a. Prepare journal entries for Steele to record (1) the sale on March 10, 2025, (2) the return on March 25, 2025, and (c) any adjusting entries required on March 31, 2025 (when Steele prepares financial statements). Steele believes the original estimate of returns is correct.

b. Indicate the income statement and balance sheet reporting by Steele at March 31, 2025, of the information related to the Barr sales transaction.

E17.17 (LO 3) Excel **(Sales with Returns)** Refer to the revenue arrangement in E17.16. Assume that instead of selling the tool sets on credit, that Steele sold them for cash.

Instructions

a. Prepare journal entries for Steele to record (1) the sale on March 10, 2025, (2) the return on March 25, 2025, and (c) any adjusting entries required on March 31, 2025 (when Steele prepares financial statements). Steele believes the original estimate of returns is correct.

b. Indicate the income statement and balance sheet reporting by Steele at March 31, 2025, of the information related to the Barr sale.

E17.18 (LO 3) Excel **(Sales with Allowances)** On October 2, 2025, Laplante Company sold $6,000 of its elite camping gear (with a cost of $3,600) to Lynch Outfitters. As part of the sales agreement, Laplante includes a provision that if Lynch is dissatisfied with the product, Laplante will grant an allowance on the sales price or agree to take the product back (although returns are rare, given the long-term relationship between Laplante and Lynch). Lynch expects total allowances to Lynch to be $800. On October 16, 2025, Laplante grants an allowance of $400 to Lynch because the color for some of the items delivered was a bit different than what appeared in the catalog.

Instructions

a. Prepare journal entries for Laplante to record (1) the sale on October 2, 2025, (2) the granting of the allowance on October 16, 2025, and, (c) any adjusting required on October 31, 2025 (when Laplante prepares financial statements). Laplante now estimates additional allowances of $250 will be granted to Lynch in the future.

b. Indicate the income statement and balance sheet reporting by Laplante at October 31, 2025, of the information related to the Lynch transaction.

E17.19 (LO 3) Excel **(Sales with Returns)** On June 3, 2025, Hunt Company sold to Ann Mount merchandise having a sales price of $8,000 (cost $6,000) with terms of n/60, f.o.b. shipping point. Hunt estimates that merchandise with a sales value of $800 will be returned. An invoice totaling $120 was received by Mount on June 8 from Olympic Transport Service for the freight cost. Upon receipt of the goods, on June 8, Mount returned to Hunt $300 of merchandise containing flaws. Hunt estimates the returned items are expected to be resold at a profit. The freight on the returned merchandise was $24, paid by Hunt on June 8. On July 16, the company received a check for the balance due from Mount.

Instructions

Prepare journal entries for Hunt Company to record all the events in June and July.

E17.20 (LO 3) **(Sales with Returns)** Organic Growth Company is presently testing a number of new agricultural seed planters that it has recently developed. To stimulate interest, it has decided to grant to five of its largest customers the unconditional right of return of these products if not fully satisfied. The right of return extends for 4 months. Organic Growth estimates returns of 20%. Organic Growth sells these planters on account for $1,500,000 (cost $750,000) on January 2, 2025. Customers are required to pay the full amount due by March 15, 2025.

Instructions

a. Prepare the journal entry for Organic Growth at January 2, 2025.

b. Assume that one customer returns planters on March 1, 2025, due to unsatisfactory performance. Prepare the journal entry to record this transaction, assuming this customer purchased $100,000 of planters from Organic Growth.

c. Assume Organic Growth prepares financial statements quarterly. Prepare the necessary entries (if any) to adjust Organic Growth's financial results for the above transactions on March 31, 2025, assuming remaining expected returns of $200,000.

E17.21 (LO 3) (Sales with Returns) Uddin Publishing Co. publishes college textbooks that are sold to bookstores on the following terms. Each title has a fixed wholesale price, terms f.o.b. shipping point, and payment is due 60 days after shipment. The retailer may return a maximum of 30% of an order at the retailer's expense. Sales are made only to retailers who have good credit ratings. Past experience indicates that the normal return rate is 12%. The costs of recovery are expected to be immaterial, and the textbooks are expected to be resold at a profit.

Instructions

a. Identify the revenue recognition criteria that Uddin could employ concerning textbook sales.

b. Briefly discuss the reasoning for your answers in (a) above.

c. On July 1, 2025, Uddin shipped books invoiced at $15,000,000 (cost $12,000,000). Prepare the journal entry to record this transaction.

d. On October 3, 2025, $1.5 million of the invoiced July sales were returned according to the return policy, and the remaining $13.5 million was paid. Prepare the journal entries for the return and payment.

e. Assume Uddin prepares financial statements on October 31, 2025, the close of the fiscal year. No other returns are anticipated. Indicate the amounts reported on the income statement and balance related to the above transactions.

E17.22 (LO 3) (Sales with Repurchase) Cramer Corp. sells idle machinery to Enyart Company on July 1, 2025, for $40,000. Cramer agrees to repurchase this equipment from Enyart on June 30, 2026, for a price of $42,400 (an imputed interest rate of 6%).

Instructions

a. Prepare the journal entry for Cramer for the transfer of the asset to Enyart on July 1, 2025.

b. Prepare any other necessary journal entries for Cramer in 2025.

c. Prepare the journal entry for Cramer when the machinery is repurchased on June 30, 2026.

E17.23 (LO 3) (Repurchase Agreement) Zagat Inc. enters into an agreement on March 1, 2025, to sell Werner Metal Company aluminum ingots. As part of the agreement, Zagat also agrees to repurchase the ingots on May 1, 2025, at the original sales price of $200,000 plus 2%.

Instructions

a. Prepare Zagat's journal entry necessary on March 1, 2025.

b. Prepare Zagat's journal entry for the repurchase of the ingots on May 1, 2025.

E17.24 (LO 3) (Bill and Hold) Wood-Mode Company is involved in the design, manufacture, and installation of various types of wood products for large construction projects. Wood-Mode recently completed a large contract for Stadium Inc., which consisted of building 35 different types of concession counters for a new soccer arena under construction. The terms of the contract are that upon completion of the counters, Stadium would pay $2,000,000. Unfortunately, due to the depressed economy, the completion of the new soccer arena is now delayed. Stadium has therefore asked Wood-Mode to hold the counters for 2 months at its manufacturing plant until the arena is completed. Stadium acknowledges in writing that it ordered the counters and that they now have ownership. The time that Wood-Mode Company must hold the counters is totally dependent on when the arena is completed. Because Wood-Mode has not received additional progress payments for the counters due to the delay, Stadium has provided a deposit of $300,000.

Instructions

a. Explain this type of revenue recognition transaction.

b. What factors should be considered in determining when to recognize revenue in this transaction?

c. Prepare the journal entry(ies) that Wood-Mode should make, assuming it signed a valid sales contract to sell the counters and received at the time the $300,000 deposit.

E17.25 (LO 3) (Consignment Sales) On May 3, 2025, Eisler Company consigned 80 freezers, costing $500 each, to Remmers Company. The cost of shipping the freezers amounted to $840 and was paid by Eisler Company. On December 30, 2025, a report was received from the consignee, indicating that 40 freezers had been sold for $750 each. Remittance was made by the consignee for the amount due after deducting a commission of 6%, advertising of $200, and total installation costs of $320 on the freezers sold.

Instructions

a. Compute the inventory value of the units unsold in the hands of the consignee.

b. Compute the profit for the consignor for the units sold.

c. Compute the amount of cash that will be remitted by the consignee.

E17.26 (LO 3) (Warranty Arrangement) On January 2, 2025, Grando Company sells production equipment to Fargo Inc. for $50,000. Grando includes a 2-year assurance warranty service with the sale of all its equipment. The customer receives and pays for the equipment on January 2, 2025. During 2025, Grando incurs costs related to warranties of $900. At December 31, 2025, Grando estimates that $650 of warranty costs will be incurred in the second year of the warranty.

Instructions

a. Prepare the journal entry to record this transaction on January 2, 2025, and on December 31, 2025 (assuming financial statements are prepared on December 31, 2025).

b. Repeat the requirements for (a), assuming that in addition to the assurance warranty, Grando sold Fargo an extended warranty (service-type warranty) for an additional 2 years (2027–2028) for $800.

E17.27 (LO 3) (Warranties) Celic Inc. manufactures and sells computers that include an assurance-type warranty for the first 90 days. Celic offers an optional extended coverage plan under which it will repair or replace any defective part for 3 years from the expiration of the assurance-type warranty. Because the optional extended coverage plan is sold separately, Celic determines that the 3 years of extended coverage represents a separate performance obligation. The total transaction price for the sale of a computer and the extended warranty is $3,600 on October 1, 2025, and Celic determines the standalone selling price of each is $3,200 and $400, respectively. Further, Celic estimates, based on historical experience, it will incur $200 in costs to repair defects that arise within the 90-day coverage period for the assurance-type warranty. The cost of the equipment is $1,440. Assume that the $200 in costs to repair defects in the computers occurred on October 25, 2025.

Instructions

a. Prepare the journal entry(ies) to record the October transactions related to sale of the computers.

b. Briefly describe the accounting for the service-type warranty after the 90-day assurance-type warranty period.

E17.28 (LO 4) (Existence of a Contract) On January 1, 2025, Gordon Co. enters into a contract to sell a customer a wiring base and shelving unit that sits on the base in exchange for $3,000. The contract requires delivery of the base first but states that payment for the base will not be made until the shelving unit is delivered. Gordon identifies two performance obligations and allocates $1,200 of the transaction price to the wiring base and the remainder to the shelving unit. The cost of the wiring base is $700; the shelves have a cost of $320.

Instructions

a. Prepare the journal entry on January 1, 2025, for Gordon.

b. Prepare the journal entry on February 5, 2025, for Gordon when the wiring base is delivered to the customer.

c. Prepare the journal entry on February 25, 2025, for Gordon when the shelving unit is delivered to the customer and Gordon receives full payment.

E17.29 (LO 4) (Contract Modification) In September 2025, Gaertner Corp. commits to selling 150 of its iPhone-compatible docking stations to Better Buy Co. for $15,000 ($100 per product). The stations are delivered to Better Buy over the next 6 months. After 90 stations are delivered, the contract is modified and Gaertner promises to deliver an additional 45 products for an additional $4,275 ($95 per station). All sales are cash on delivery.

Instructions

a. Prepare the journal entry for Gaertner for the sale of the first 90 stations. The cost of each station is $54.

b. Prepare the journal entry for the sale of 10 more stations after the contract modification, assuming that the price for the additional stations reflects the standalone selling price at the time of the contract modification. In addition, the additional stations are distinct from the original products as Gaertner regularly sells the products separately.

c. Prepare the journal entry for the sale of 10 more stations (as in (b)), assuming that the pricing for the additional products **does not** reflect the standalone selling price of the additional products and the prospective method is used.

E17.30 (LO 4) (Contract Modification) Tyler Financial Services performs bookkeeping and tax-reporting services to startup companies in the Oconomowoc area. On January 1, 2025, Tyler entered into a 3-year service contract with Walleye Tech. Walleye promises to pay $10,000 at the beginning of

each year, which at contract inception is the standalone selling price for these services. At the end of the second year, the contract is modified and the fee for the third year of services is reduced to $8,000. In addition, Walleye agrees to pay an additional $20,000 at the beginning of the third year to cover the contract for 3 additional years (i.e., 4 years remain after the modification). The extended contract services are similar to those provided in the first 2 years of the contract.

Instructions

a. Prepare the journal entries for Tyler in 2025 and 2026 related to this service contract.

b. Prepare the journal entries for Tyler in 2027 related to the modified service contract, assuming a prospective approach.

c. Repeat the requirements for part (b), assuming Tyler and Walleye agree on a revised set of services (fewer bookkeeping services but more tax services) in the extended contract period and the modification results in a separate performance obligation.

E17.31 (LO 4) (Contract Costs) Rex's Reclaimers entered into a contract with Dan's Demolition to manage the processing of recycled materials on Dan's various demolition projects. Services for the 3-year contract include collecting, sorting, and transporting reclaimed materials to recycling centers or contractors who will reuse them. Rex's incurs selling commission costs of $2,000 to obtain the contract. Before performing the services, Rex's also designs and builds receptacles and loading equipment that interfaces with Dan's demolition equipment at a cost of $27,000. These receptacles and equipment are retained by Rex's and can be used for other projects. Dan's promises to pay a fixed fee of $12,000 per year, payable every 6 months for the services under the contract. Rex's incurs the following costs: design services for the receptacles to interface with Dan's equipment $3,000, loading equipment controllers $6,000, and special testing and OSHA inspection fees $2,000 (some of Dan's projects are on government property).

Instructions

a. Determine the costs that should be capitalized as part of Rex's Reclaimers revenue arrangement with Dan's Demolition.

b. Dan's also expects to incur general and administrative costs related to this contract, as well as costs of wasted materials and labor that likely cannot be factored into the contract price. Can these costs be capitalized? Explain.

E17.32 (LO 4) (Contract Costs, Collectibility) Refer to the information in E17.31.

Instructions

a. Does the accounting for capitalized costs change if the contract is for 1 year rather than 3 years? Explain.

b. Dan's Demolition is a startup company; as a result, there is more than insignificant uncertainty about Dan's ability to make the 6-month payments on time. Does this uncertainty affect the amount of revenue to be recognized under the contract? Explain.

***E17.33 (LO 5, 6) (Recognition of Profit on Long-Term Contracts)** During 2025, Nilsen Company started a construction job with a contract price of $1,600,000. The job was completed in 2027. The following information is available.

	2025	2026	2027
Costs incurred to date	$400,000	$825,000	$1,070,000
Estimated costs to complete	600,000	275,000	–0–
Billings to date	300,000	900,000	1,600,000
Collections to date	270,000	810,000	1,425,000

Instructions

a. Compute the amount of gross profit to be recognized each year, assuming the percentage-of-completion method is used.

b. Prepare all necessary journal entries for 2026.

c. Compute the amount of gross profit to be recognized each year, assuming the cost-recovery method is used.

***E17.34 (LO 5) (Analysis of Percentage-of-Completion Financial Statements)** In 2025, Steinrotter Construction Corp. began construction work under a 3-year contract. The contract price was $1,000,000. Steinrotter uses the percentage-of-completion method for financial accounting purposes. The

income to be recognized each year is based on the proportion of cost incurred to total estimated costs for completing the contract. The financial statement presentations relating to this contract at December 31, 2025, are shown below.

Balance Sheet		
Accounts receivable		$18,000
Construction in process	$65,000	
Less: Billings	61,500	
Costs and recognized profit in excess of billings		3,500
Income Statement		
Income (before tax) on the contract recognized in 2025		$19,500

Instructions

a. How much cash was collected in 2025 on this contract?

b. What was the initial estimated total income before tax on this contract?

(AICPA adapted)

*E17.35 (LO 5) Excel **(Gross Profit on Uncompleted Contract)** On April 1, 2025, Dougherty Inc. entered into a cost plus fixed fee contract to construct an electric generator for Altom Corporation. At the contract date, Dougherty estimated that it would take 2 years to complete the project at a cost of $2,000,000. The fixed fee stipulated in the contract is $450,000. Dougherty appropriately accounts for this contract under the percentage-of-completion method. During 2025, Dougherty incurred costs of $800,000 related to the project. The estimated cost at December 31, 2025, to complete the contract is $1,200,000. Altom was billed $600,000 under the contract.

Instructions

Prepare a schedule to compute the amount of gross profit to be recognized by Dougherty under the contract for the year ended December 31, 2025. Show supporting computations in good form.

(AICPA adapted)

*E17.36 (LO 5, 6) **(Recognition of Revenue on Long-Term Contract and Entries)** Hamilton Construction Company uses the percentage-of-completion method of accounting. In 2025, Hamilton began work under contract #E2-D2, which provided for a contract price of $2,200,000. Other details follow:

	2025	2026
Costs incurred during the year	$640,000	$1,425,000
Estimated costs to complete, as of December 31	960,000	–0–
Billings during the year	420,000	1,680,000
Collections during the year	350,000	1,500,000

Instructions

a. What portion of the total contract price would be recognized as revenue in 2025? In 2026?

b. Assuming the same facts as those above except that Hamilton uses the cost-recovery method of accounting, what portion of the total contract price would be recognized as revenue in 2026?

c. Prepare a complete set of journal entries for 2025 (using the percentage-of-completion method).

*E17.37 (LO 5, 6) **(Recognition of Profit and Balance Sheet Amounts for Long-Term Contracts)** Yanmei Construction Company began operations on January 1, 2025. During the year, Yanmei Construction entered into a contract with Lundquist Corp. to construct a manufacturing facility. At that time, Yanmei estimated that it would take 5 years to complete the facility at a total cost of $4,500,000. The total contract price for construction of the facility is $6,000,000. During the year, Yanmei incurred $1,185,800 in construction costs related to the construction project. The estimated cost to complete the contract is $4,204,200. Lundquist Corp. was billed and paid 25% of the contract price.

Instructions

Prepare schedules to compute the amount of gross profit to be recognized for the year ended December 31, 2025, and the amount to be shown as "costs and recognized profit in excess of billings" or "billings in excess of costs and recognized profit" at December 31, 2025, under each of the following methods. Show supporting computations in good form.

a. Cost-recovery method.

b. Percentage-of-completion method.

(AICPA adapted)

*E17.38 (LO 8) **(Franchise Entries)** Pacific Crossburgers Inc. charges an initial franchise fee of $70,000. Upon the signing of the agreement (which covers 3 years after commencement of operations), a payment of $28,000 is due. Thereafter, three annual payments of $14,000 are required. The credit rating of the franchisee is such that it would have to pay interest at 10% to borrow money. The franchise agreement is signed on May 1, 2025, and the franchise commences operation on July 1, 2025.

Instructions

Prepare the journal entries in 2025 for the franchisor under the following assumptions. (Round to the nearest dollar.)

a. No future services are required by the franchisor once the franchise starts operations.

b. The franchisor has substantial services to perform, once the franchise begins operations, to maintain the value of the franchise.

c. The total franchise fee includes training services (with a value of $2,400) for the period leading up to the franchise opening and for 2 months following opening.

*E17.39 (LO 8) **(Franchise Fee, Initial Down Payment)** On January 1, 2025, Lesley Benjamin signed an agreement, covering 5 years, to operate as a franchisee of Campbell Inc. for an initial franchise fee of $50,000. The amount of $10,000 was paid when the agreement was signed, and the balance is payable in five annual payments of $8,000 each, beginning January 1, 2026. The agreement provides that the down payment is nonrefundable and that no future services are required of the franchisor once the franchise commences operations on April 1, 2025. Lesley Benjamin's credit rating indicates that she can borrow money at 11% for a loan of this type.

Instructions

a. Prepare journal entries for Campbell for 2025-related revenue for this franchise arrangement.

b. Prepare journal entries for Campbell for 2025-related revenue for this franchise arrangement, assuming that in addition to the franchise rights, Campbell also provides 1 year of operational consulting and training services, beginning on the signing date. These services have a value of $3,600.

c. Repeat the requirements for part (a), assuming that Campbell must provide services to Benjamin throughout the franchise period to maintain the franchise value.

Problems

P17.1 (LO 2, 3) **(Allocate Transaction Price, Upfront Fees)** Tablet Tailors sells tablet PCs combined with Internet service, which permits the tablet to connect to the Internet anywhere and set up a Wi-Fi hot spot. It offers two bundles with the following terms.

1. Tablet Bundle A sells a tablet with 3 years of Internet service. The price for the tablet and a 3-year Internet connection service contract is $500. The standalone selling price of the tablet is $250 (the cost to Tablet Tailors is $175). Tablet Tailors sells the Internet access service independently for an upfront payment of $300. On January 2, 2025, Tablet Tailors signed 100 contracts, receiving a total of $50,000 in cash.
2. Tablet Bundle B includes the tablet and Internet service plus a service plan for the tablet PC (for any repairs or upgrades to the tablet or the Internet connections) during the 3-year contract period. That product bundle sells for $600. Tablet Tailors provides the 3-year tablet service plan as a separate product with a standalone selling price of $150. Tablet Tailors signed 200 contracts for Tablet Bundle B on July 1, 2025, receiving a total of $120,000 in cash.

Instructions

a. Prepare any journal entries to record the revenue arrangement for Tablet Bundle A on January 2, 2025, and December 31, 2025.

b. Prepare any journal entries to record the revenue arrangement for Tablet Bundle B on July 1, 2025, and December 31, 2025.

c. Repeat the requirements for part (a), assuming that Tablet Tailors has no reliable data with which to estimate the standalone selling price for the Internet service.

P17.2 (LO 2, 3, 4) **(Allocate Transaction Price, Modification of Contract)** Refer to the Tablet Bundle A revenue arrangement in P17.1. In response to competitive pressure for Internet access for

Tablet Bundle A, after 2 years of the 3-year contract, Tablet Tailors offers a modified contract and extension incentive. The extended contract services are similar to those provided in the first 2 years of the contract. Signing the extension and paying $90 (which equals the standalone selling of the revised Internet service package) extends access for 2 more years of Internet connection. Forty Tablet Bundle A customers sign up for this offer.

Instructions

a. Prepare the journal entries when the contract is signed on January 2, 2027, for the 40 extended contracts. Assume the modification does not result in a separate performance obligation.

b. Prepare the journal entries on December 31, 2027, for the 40 extended contracts (the first year of the revised 3-year contract).

P17.3 (LO 2, 3) (Allocate Transaction Price, Discounts, Time Value) Grill Master Company sells total outdoor grilling solutions, providing gas and charcoal grills, accessories, and installation services for custom patio grilling stations.

Instructions

Respond to the requirements related to the following independent revenue arrangements for Grill Master products and services.

a. Grill Master offers contract GM205, which is comprised of a free-standing gas grill for small patio use plus installation to a customer's gas line for a total price $800. On a standalone basis, the grill sells for $700 (cost $425), and Grill Master estimates that the standalone selling price of the installation service (based on cost-plus estimation) is $150. (The selling of the grill and the installation services should be considered two performance obligations.) Grill Master signed 10 GM205 contracts on April 20, 2025, and customers paid the contract price in cash. The grills were delivered and installed on May 15, 2025. Prepare journal entries for Grill Master for GM205 in April and May 2025.

b. The State of Kentucky is planning major renovations in its parks during 2025 and enters into a contract with Grill Master to purchase 400 durable, easy maintenance, standard charcoal grills during 2025. The grills are priced at $200 each (with a cost of $160 each), and Grill Master provides a 6% volume discount if Kentucky purchases at least 300 grills during 2025. On April 17, 2025, Grill Master delivered and received payment for 280 grills. Based on prior experience with the State of Kentucky renovation projects, the delivery of this many grills makes it certain that Kentucky will meet the discount threshold. Prepare the journal entries for Grill Master for grills sold on April 17, 2025. Assume the company records sales transaction net.

c. Grill Master sells its specialty combination gas/wood-fired grills to local restaurants. Each grill is sold for $1,000 (cost $550) on credit with terms 3/30, net/90. Prepare the journal entries for the sale of 20 grills on September 1, 2025, and upon payment, assuming the customer paid on (1) September 25, 2025, and (2) October 15, 2025. Assume the company records sales net.

d. On October 1, 2025, Grill Master sold one of its super deluxe combination gas/charcoal grills to a local builder. The builder plans to install it in one of its "Parade of Homes" houses. Grill Master accepted a 3-year, zero-interest-bearing note with face amount of $5,324. The grill has an inventory cost of $2,700. An interest rate of 10% is an appropriate market rate of interest for this customer. Prepare the journal entries on October 1, 2025, and December 31, 2025.

P17.4 (LO 2, 3) (Allocate Transaction Price, Discounts, Time Value) Economy Appliance Co. manufactures low-price, no-frills appliances that are in great demand for rental units. Pricing and cost information on Economy's main products are as follows.

Item	Standalone Selling Price (Cost)
Refrigerator	$500 ($260)
Range	560 (275)
Stackable washer/dryer unit	700 (400)

Customers can contract to purchase either individually at the stated prices or a three-item bundle with a price of $1,800. The bundle price includes delivery and installation. Economy also provides installation (not a separate performance obligation).

Instructions

Respond to the requirements related to the following independent revenue arrangements for Economy Appliance Co.

a. On June 1, 2025, Economy sold 100 washer/dryer units without installation to Laplante Rentals for $70,000. Laplante is a newer customer and is unsure how this product will work in its older rental units. Economy offers a 60-day return privilege and estimates, based on prior experience with sales

on this product, 4% of the units will be returned. Prepare the journal entries for the sale and related cost of goods sold on June 1, 2025.

b. YellowCard Property Managers operates upscale student apartment buildings. On May 1, 2025, Economy signs a contract with YellowCard for 300 appliance bundles to be delivered and installed in one of its new buildings. YellowCard pays 20% cash at contract signing and will pay the balance upon installation no later than August 1, 2025. Prepare journal entries for Economy on (1) May 1, 2025, and (2) August 1, 2025, when all appliances are installed.

c. Refer to the arrangement in part (b). It would help YellowCard secure lease agreements with students if the installation of the appliance bundles can be completed by July 1, 2025. YellowCard offers a 10% bonus payment if Economy can complete installation by July 1, 2025. Economy estimates its chances of meeting the bonus deadline to be 90%, based on a number of prior contracts of similar scale. Repeat the requirement for part (b), given this bonus provision. Assume installation is completed by July 1, 2025.

d. Epic Rentals would like to take advantage of the bundle price for its 400-unit project; on February 1, 2025, Economy signs a contract with Epic for 400 bundles. Under the agreement, Economy will hold the appliance bundles in its warehouses until the new rental units are ready for installation. Epic pays 10% cash at contract signing. On April 1, 2025, Economy completes manufacture of the appliances in the Epic bundle order and places them in the warehouse. Economy and Epic have documented the warehouse arrangement and identified the units designated for Epic. The units are ready to ship, and Economy may not sell these units to other customers. Prepare journal entries for Economy on (1) February 1, 2025, and (2) April 1, 2025.

P17.5 (LO 2, 3) (Allocate Transaction Price, Returns, and Consignments) Ritt Ranch & Farm is a distributor of ranch and farm equipment. Its products range from small tools, power equipment for trench-digging and fencing, grain dryers, and barn winches. Most products are sold direct via its company catalog and Internet site. However, given some of its specialty products, select farm implement stores carry Ritt's products. Pricing and cost information on three of Ritt's most popular products are as follows.

Item	Standalone Selling Price (Cost)
Mini-trencher	$ 3,600 ($2,000)
Power fence hole auger	1,200 (800)
Grain/hay dryer	14,000 (11,000)

Instructions

Respond to the requirements related to the following independent revenue arrangements for Ritt Ranch & Farm.

a. On January 1, 2025, Ritt sells 40 augers to Mills Farm & Fleet for $48,000. Mills signs a 6-month note at an annual interest rate of 12%. Ritt allows Mills to return any auger that it cannot use within 60 days and receive a full refund. Based on prior experience, Ritt estimates that 5% of units sold to customers like Mills will be returned (using the most likely outcome approach). Ritt's costs to recover the products will be immaterial, and the returned augers are expected to be resold at a profit. Prepare the journal entry for Ritt on January 1, 2025.

b. On August 10, 2025, Ritt sells 16 mini-trenchers to a farm co-op in western Minnesota on account. Ritt provides a 4% volume discount on the mini-trenchers if the co-op has a 15% increase in purchases from Ritt compared to the prior year. Given the slowdown in the farm economy, sales to the co-op have been flat, and it is highly uncertain that the benchmark will be met. Prepare the journal entry for Ritt on August 10, 2025.

c. Ritt sells three grain/hay dryers to a local farmer at a total contract price of $45,200. In addition to the dryers, Ritt provides installation, which has a standalone selling price of $1,000 per unit installed. The contract payment also includes a $1,200 maintenance plan for the dryers for 3 years after installation. Ritt signs the contract on June 20, 2025, and receives a 20% down payment from the farmer. The dryers are delivered and installed on October 1, 2025, and full payment is made to Ritt. Prepare the journal entries for Ritt in 2025 related to this arrangement.

d. On April 25, 2025, Ritt ships 100 augers to Farm Depot, a farm supply dealer in Nebraska, on consignment. By June 30, 2025, Farm Depot has sold 60 of the consigned augers at the listed price of $1,200 per unit. Farm Depot notifies Ritt of the sales, retains a 10% commission, and remits the cash due Ritt. Prepare the journal entries for Ritt and Farm Depot for the consignment arrangement.

P17.6 (LO 2, 3) (Warranty, Customer Loyalty Program) Hale Hardware takes pride as the "shop around the corner" that can compete with the big-box home improvement stores by providing good service from knowledgeable sales associates (many of whom are retired local handymen). Hale has developed the following two revenue arrangements to enhance its relationships with customers and increase its bottom line.

1. Hale sells a specialty portable winch that is popular with many of the local customers for use at their lake homes (putting docks in and out, launching boats, etc.). The Hale winch is a standard manufacture winch that Hale modifies so the winch can be used for a variety of tasks. Hale sold 70 of these winches during 2025 at a total price of $21,000, with a warranty guarantee that the product was free of any defects. The cost of winches sold is $16,000. The assurance warranties extend for a 3-year period with an estimated cost of $2,100. In addition, Hale sold extended warranties related to 20 Hale winches for 2 years beyond the 3-year period for $400 each.
2. To bolster its already strong customer base, Hale implemented a customer loyalty program that rewards a customer with 1 loyalty point for every $10 of purchases on a select group of Hale products. Each point is redeemable for a $1 discount on any purchases of Hale merchandise in the following 2 years. During 2025, customers purchased select group products for $100,000 (all products are sold to provide a 45% gross profit) and earned 10,000 points redeemable for future purchases. The stand-alone selling price of the purchased products is $100,000. Based on prior experience with incentives programs like this, Hale expects 9,500 points to be redeemed related to these sales (Hale appropriately uses this experience to estimate the value of future consideration related to bonus points).

Instructions

a. Identify the separate performance obligations in the Hale warranty and bonus point programs, and briefly explain the point in time when the performance obligations are satisfied.

b. Prepare the journal entries for Hale related to the sales of Hale winches with warranties.

c. Prepare the journal entries for the bonus point sales for Hale in 2025.

d. How much additional sales revenue is recognized by Hale in 2026, assuming 4,500 bonus points are redeemed?

P17.7 (LO 2) (Customer Loyalty Program) Martz Inc. has a customer loyalty program that rewards a customer with 1 customer loyalty point for every $10 of purchases. Each point is redeemable for a $3 discount on any future purchases. On July 2, 2025, customers purchase products for $300,000 (with a cost of $171,000) and earn 30,000 points redeemable for future purchases. Martz expects 25,000 points to be redeemed. Martz estimates a standalone selling price of $2.50 per point (or $75,000 total) on the basis of the likelihood of redemption. The points provide a material right to customers that they would not receive without entering into a contract. As a result, Martz concludes that the points are a separate performance obligation.

Instructions

a. Determine the transaction price for the product and the customer loyalty points.

b. Prepare the journal entries to record the sale of the product and related points on July 2, 2025.

c. At the end of the first reporting period (July 31, 2025), 10,000 loyalty points are redeemed. Martz continues to expect 25,000 loyalty points to be redeemed in total. Determine the amount of loyalty point revenue to be recognized at July 31, 2025.

P17.8 (LO 2) (Time Value, Gift Cards, Discounts) Presented below are two independent revenue arrangements for Colbert Company.

Instructions

Respond to the requirements related to each revenue arrangement.

a. Colbert sells 3D printer systems. Recently, Colbert provided a special promotion of zero-interest financing for 2 years on any new 3D printer system. Assume that Colbert sells Lyle Cartright a 3D system, receiving a $5,000 zero-interest-bearing note on January 1, 2025. The cost of the 3D printer system is $4,000. Colbert imputes a 6% interest rate on this zero-interest note transaction. Prepare the journal entry to record the sale on January 1, 2025, and compute the total amount of revenue to be recognized in 2025.

b. Colbert sells 20 nonrefundable $100 gift cards for 3D printer paper on March 1, 2025. The paper has a standalone selling price of $100 (cost $80). The gift cards expiration date is June 30, 2025. Colbert estimates that customers will not redeem 10% of these gift cards (breakage). The pattern of redemption is as follows.

	Redemption Total
March 31	50%
April 30	80
June 30	85

Prepare the 2025 journal entries related to the gift cards at March 1, March 31, April 30, and June 30. Colbert recognizes breakage when cards expire (June 30).

*P17.9 (LO 5, 6) Excel **(Recognition of Profit on Long-Term Contract)** Shanahan Construction Company has entered into a contract beginning January 1, 2025, to build a parking complex. It has been estimated that the complex will cost $600,000 and will take 3 years to construct. The complex will be billed to the purchasing company at $900,000. The following data pertain to the construction period.

	2025	2026	2027
Costs to date	$270,000	$450,000	$610,000
Estimated costs to complete	330,000	150,000	–0–
Progress billings to date	270,000	550,000	900,000
Cash collected to date	240,000	500,000	900,000

Instructions

a. Using the percentage-of-completion method, compute the estimated gross profit that would be recognized during each year of the construction period.

b. Using the cost-recovery method, compute the estimated gross profit that would be recognized during each year of the construction period.

*P17.10 (LO 5, 6, 7) **(Long-Term Contract with Interim Loss)** On March 1, 2025, Pechstein Construction Company contracted to construct a factory building for Fabrik Manufacturing Inc. for a total contract price of $8,400,000. The building was completed by October 31, 2027. The annual contract costs incurred, estimated costs to complete the contract, and accumulated billings to Fabrik for 2025, 2026, and 2027 are given below.

	2025	2026	2027
Contract costs incurred during the year	$2,880,000	$2,230,000	$2,190,000
Estimated costs to complete the contract at 12/31	3,520,000	2,190,000	–0–
Billings to Fabrik during the year	3,200,000	3,500,000	1,700,000

Instructions

a. Using the percentage-of-completion method, prepare schedules to compute the profit or loss to be recognized as a result of this contract for the years ended December 31, 2025, 2026, and 2027. (Ignore income taxes.)

b. Using the cost-recovery method, prepare schedules to compute the profit or loss to be recognized as a result of this contract for the years ended December 31, 2025, 2026, and 2027. (Ignore incomes taxes.)

*P17.11 (LO 5, 6, 7) Excel **(Long-Term Contract with an Overall Loss)** On July 1, 2025, Torvill Construction Company Inc. contracted to build an office building for Gumbel Corp. for a total contract price of $1,900,000. On July 1, Torvill estimated that it would take between 2 and 3 years to complete the building. On December 31, 2027, the building was deemed substantially completed. Following are accumulated contract costs incurred, estimated costs to complete the contract, and accumulated billings to Gumbel for 2025, 2026, and 2027.

	At 12/31/25	At 12/31/26	At 12/31/27
Contract costs incurred to date	$ 300,000	$1,200,000	$2,100,000
Estimated costs to complete the contract	1,200,000	800,000	–0–
Billings to Gumbel	300,000	1,100,000	1,850,000

Instructions

a. Using the percentage-of-completion method, prepare schedules to compute the profit or loss to be recognized as a result of this contract for the years ended December 31, 2025, 2026, and 2027. (Ignore income taxes.)

b. Using the cost-recovery method, prepare schedules to compute the profit or loss to be recognized as a result of this contract for the years ended December 31, 2025, 2026, and 2027. (Ignore income taxes.)

*P17.12 (LO 8) **(Franchise Revenue)** Amigos Burrito Inc. sells franchises to independent operators throughout the northwestern part of the United States. The contract with the franchisee includes the following provisions.

1. The franchisee is charged an initial fee of $120,000. Of this amount, $20,000 is payable when the agreement is signed, and a $100,000 zero-interest-bearing note is payable with a $20,000 payment at the end of each of the 5 subsequent years. The present value of an ordinary annuity of five annual receipts of $20,000, each discounted at 10%, is $75,816.

2. All of the initial franchise fee collected by Amigos is to be refunded and the remaining obligation canceled if, for any reason, the franchisee fails to open his or her franchise.
3. In return for the initial franchise fee, Amigos agrees to (a) assist the franchisee in selecting the location for the business, (b) negotiate the lease for the land, (c) obtain financing and assist with building design, (d) supervise construction, (e) establish accounting and tax records, and (f) provide expert advice over a 5-year period relating to such matters as employee and management training, quality control, and promotion. This continuing involvement by Amigos helps maintain the brand value of the franchise.
4. In addition to the initial franchise fee, the franchisee is required to pay to Amigos a monthly fee of 2% of sales for menu planning, recipe innovations, and the privilege of purchasing ingredients from Amigos at or below prevailing market prices.

Management of Amigos Burrito estimates that the value of the services rendered to the franchisee at the time the contract is signed amounts to at least $20,000. All franchisees to date have opened their locations at the scheduled time, and none have defaulted on any of the notes receivable. The credit ratings of all franchisees would entitle them to borrow at the current interest rate of 10%.

Instructions

a. Discuss the alternatives that Amigos Burrito Inc. might use to account for the franchise fees.

b. Prepare the journal entries for the initial and continuing franchise fees, assuming:

1. Franchise agreement is signed on January 5, 2025.
2. Amigos completes franchise startup tasks and the franchise opens on July 1, 2025.
3. The franchisee records $260,000 in sales in the first 6 months of operations and remits the monthly franchise fee on December 31, 2025.

c. Briefly describe the accounting for unearned franchise fees, assuming that Amigos has little or no involvement with the franchisee related to expert advice on employee and management training, quality control, and promotion, once the franchise opens.

Using Your Judgment

Financial Reporting Problem: The Procter & Gamble Company (P&G)

UYJ17.1 The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

a. What were P&G's net sales for 2020?

b. What was the percentage of increase or decrease in P&G's net sales from 2019 to 2020? From 2018 to 2019?

c. In its notes to the financial statements, what criteria does P&G use to recognize revenue?

d. How does P&G account for trade promotions? Does the accounting conform to accrual accounting concepts? Explain.

Comparative Analysis Case: The Coca-Cola Company and PepsiCo, Inc.

UYJ17.2 The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

a. What were Coca-Cola's and PepsiCo's net revenues (sales) for the year 2020? Which company increased its revenue more (dollars and percentage) from 2019 to 2020?

b. Are the revenue recognition policies of Coca-Cola and PepsiCo similar? Explain.

c. In which foreign countries (geographic areas) did Coca-Cola and PepsiCo experience significant revenues in 2020? Compare the amounts of foreign revenues to U.S. revenues for both Coca-Cola and PepsiCo.

Financial Statement Analysis Case: Westinghouse Electric Corporation

UYJ17.3 The following note appears in the "Summary of Significant Accounting Policies" section of the Annual Report of **Westinghouse Electric Corporation**.

> **Note 1 (in part): Revenue Recognition.** Sales are primarily recorded as products are shipped and services are rendered. The percentage-of-completion method of accounting is used for nuclear steam supply system orders with delivery schedules generally in excess of five years and for certain construction projects where this method of accounting is consistent with industry practice.
>
> WFSI revenues are generally recognized on the accrual method. When accounts become delinquent for more than two payment periods, usually 60 days, income is recognized only as payments are received. Such delinquent accounts for which no payments are received in the current month, and other accounts on which income is not being recognized because the receipt of either principal or interest is questionable, are classified as nonearning receivables.

Instructions

a. Identify the revenue recognition methods used by Westinghouse Electric as discussed in its note on significant accounting policies.

b. Under what conditions are the revenue recognition methods identified in the first paragraph of Westinghouse's note above acceptable?

c. From the information provided in the second paragraph of Westinghouse's note, identify the type of operation being described and defend the acceptability of the revenue recognition method.

Accounting, Analysis, and Principles

UYJ17.4 Diversified Industries manufactures sump-pumps. Its most popular product is called the Super Soaker, which has a retail price of $1,200 and costs $540 to manufacture. It sells the Super Soaker on a standalone basis directly to businesses. Diversified also provides installation services for these commercial customers, who want an emergency pumping capability (with regular and back-up generator power) at their businesses. Diversified also distributes the Super Soaker through a consignment agreement with **Menards**. Income data for the first quarter of 2025 from operations other than the Super Soaker are as follows.

Revenues	$9,500,000
Expenses	7,750,000

Diversified has the following information related to two Super Soaker revenue arrangements during the first quarter of 2025.

1. Diversified sells 30 Super Soakers to businesses in flood-prone areas for a total contract price of $54,600. In addition to the pumps, Diversified also provides installation (at a cost of $150 per pump). On a standalone basis, the fair value of this service is $200 per unit installed. The contract payment also includes a $10 per month service plan for the pumps for 3 years after installation (Diversified's cost to provide this service is $7 per month). The Super Soakers are delivered and installed on March 1, 2025, and full payment is made to Diversified. Any discount is applied to the pump/installation bundle.
2. Diversified ships 300 Super Soakers to Menards on consignment. By March 31, 2025, Menards has sold two-thirds of the consigned merchandise at the listed price of $1,200 per unit. Menards notifies Diversified of the sales, retains a 5% commission, and remits the cash due Diversified.

Accounting

Determine Diversified Industries' 2025 first-quarter net income. (Ignore taxes.)

Analysis

Determine free cash flow (see Chapter 4) for Diversified Industries for the first quarter of 2025. In the first quarter, Diversified had depreciation expense of $175,000 and a net increase in working capital (change in accounts receivable and accounts payable) of $250,000. In the first quarter, capital expenditures were $500,000; Diversified paid dividends of $120,000.

Principles

Explain how the five-step revenue recognition process, when applied to Diversified's two revenue arrangements, reflects the concept of control in the definition of an asset and trade-offs between relevance and faithful representation.

Developing Your Professional Skills

Critical-Thinking Cases

CT17.1 (LO 2, 3) (Five-Step Revenue Process) Revenue is recognized based on a five-step process that is applied to a company's revenue arrangements.

Instructions

a. Briefly describe the five-step process.

b. Explain the importance of contracts when analyzing revenue arrangements.

c. How are fair value measurement concepts applied in implementation of the five-step process?

d. How does the five-step process reflect application of the definitions of assets and liabilities?

CT17.2 (LO 1, 2, 3) (Satisfying Performance Obligations) Judy Schaeffer is getting up to speed on the new guidance on revenue recognition. She is trying to understand the revenue recognition principle as it relates to the five-step revenue recognition process.

Instructions

a. Describe the revenue recognition principle.

b. Briefly discuss how the revenue recognition principle relates to the definitions of assets and liabilities. What is the importance of control?

c. Judy recalls that previous revenue recognition guidance required that revenue not be recognized unless the revenue was realized or realizable (also referred to as collectibility). Is collectibility a consideration in the recognition of revenue? Explain.

CT17.3 (LO 1, 2, 3) (Recognition of Revenue—Theory) Revenue is usually recognized at the point of sale (a point in time). Under special circumstances, however, bases other than the point of sale are used for the timing of revenue recognition.

Instructions

a. Why is the point of sale usually used as the basis for the timing of revenue recognition?

b. Disregarding the special circumstances when bases other than the point of sale are used, discuss the merits of each of the following objections to the point-of-sale basis of revenue recognition:

1. It is too conservative because revenue is earned throughout the entire process of production.

2. It is not conservative enough because accounts receivable do not represent disposable funds, sales returns and allowances may be made, and collection and bad debt expenses may be incurred in a later period.

c. Revenue may also be recognized over time. Give an example of the circumstances in which revenue is recognized over time and the accounting merits of its use instead of the point-of-sale basis.

(AICPA adapted)

CT17.4 (LO 1, 2, 3) (Recognition of Revenue—Theory) Revenue is recognized for accounting purposes when a performance obligation is satisfied. In some situations, revenue is recognized over time as the fair values of assets and liabilities change. In other situations, however, accountants have developed guidelines for recognizing revenue at the point of sale.

Instructions

(Ignore income taxes.)

a. Explain and justify why revenue is often recognized at time of sale.

b. Explain in what situations it would be appropriate to recognize revenue over time.

CT17.5 (LO 2, 3) (Discounts) Fahey Company sells Stairmasters to a retailer, Physical Fitness, Inc., for $2,000,000. Fahey has a history of providing price concessions on this product if the retailer has difficulty selling the Stairmasters to customers. Fahey has experience with sales like these in the past and estimates that the maximum amount of price concessions is $300,000.

Instructions

a. Determine the amount of revenue that Fahey should recognize for the sale of Stairmasters to Physical Fitness, Inc.

b. According to GAAP, in some situations, the amount of revenue recognized may be constrained. Explain how the accounting for the Stairmasters sales might be affected by the revenue constraint due to variable consideration or returns.

c. Some believe that revenue recognition should be constrained by collectibility. Is such a view consistent with GAAP? Explain.

CT17.6 (LO 1, 2, 3) (Recognition of Revenue from Subscriptions) *Cutting Edge* is a monthly magazine that has been on the market for 18 months. It currently has a circulation of 1.4 million copies. Negotiations are underway to obtain a bank loan in order to update the magazine's facilities. *Cutting Edge* is producing close to capacity and expects to grow at an average of 20% per year over the next 3 years.

After reviewing the financial statements of *Cutting Edge*, Andy Rich, the bank loan officer, had indicated that a loan could be offered to *Cutting Edge* only if it could increase its current ratio and decrease its debt to equity ratio to a specified level. Jonathan Embry, the marketing manager of *Cutting Edge*, has devised a plan to meet these requirements. Embry indicates that an advertising campaign can be initiated to immediately increase circulation. The potential customers would be contacted after the purchase of another magazine's mailing list. The campaign would include:

1. An offer to subscribe to *Cutting Edge* at three-fourths the normal price.
2. A special offer to all new subscribers to receive the most current world atlas whenever requested at a guaranteed price of $2.
3. An unconditional guarantee that any subscriber will receive a full refund if dissatisfied with the magazine.

Although the offer of a full refund is risky, Embry claims that few people will ask for a refund after receiving half of their subscription issues. Embry notes that other magazine companies have tried this sales promotion technique and experienced great success. Their average cancellation rate was 25%. On average, each company increased its initial circulation threefold and in the long run increased circulation to twice that which existed before the promotion. In addition, 60% of the new subscribers are expected to take advantage of the atlas premium. Embry feels confident that the increased subscriptions from the advertising campaign will increase the current ratio and decrease the debt to equity ratio.

You are the controller of *Cutting Edge* and must give your opinion of the proposed plan.

Instructions

a. When should revenue from the new subscriptions be recognized?

b. How would you classify the estimated sales returns stemming from the unconditional guarantee?

c. How should the atlas premium be recorded? Is the estimated premium claims a liability? Explain.

d. Does the proposed plan achieve the goals of increasing the current ratio and decreasing the debt to equity ratio?

CT17.7 (LO 2, 3) (Recognition of Revenue—Bonus Points) Griseta & Dubel Inc. was formed early this year to sell merchandise credits to merchants, who distribute the credits free to their customers. For example, customers can earn additional credits based on the dollars they spend with a merchant (e.g., airlines and hotels). Accounts for accumulating the credits and catalogs illustrating the merchandise for which the credits may be exchanged are maintained online. Centers with inventories of merchandise premiums have been established for redemption of the credits. Merchants may not return unused credits to Griseta & Dubel.

The following schedule expresses Griseta & Dubel's expectations as to the percentages of a normal month's activity that will be attained. For this purpose, a "normal month's activity" is defined as the level of operations expected when expansion of activities ceases or tapers off to a stable rate. The company expects that this level will be attained in the third year and that sales of credits will average $6,000,000 per month throughout the third year.

Month	Actual Credit Sales Percent	Merchandise Premium Purchases Percent	Credit Redemptions Percent
6th	30%	40%	10%
12th	60	60	45
18th	80	80	70
24th	90	90	80
30th	100	100	95

Griseta & Dubel plans to adopt an annual closing date at the end of each 12 months of operation.

Instructions

a. Discuss the factors to be considered in determining when revenue should be recognized.

b. Apply the revenue recognition concepts to the Griseta & Dubel Inc. revenue arrangement.

c. Provide balance sheet accounts that should be used and indicate how each should be classified.

(AICPA adapted)

CT17.8 (LO 2, 3) Ethics (Revenue Recognition—Membership Fees) Midwest Health Club (MHC) offers 1-year memberships. Membership fees are due in full at the beginning of the individual membership period. As an incentive to new customers, MHC advertised that any customers not satisfied for any reason could receive a refund of the remaining portion of unused membership fees. As a result of this policy, Richard Nies, corporate controller, recognized revenue ratably over the life of the membership. MHC is in the process of preparing its year-end financial statements. Rachel Avery, MHC's treasurer, is concerned about the company's lackluster performance this year. She reviews the financial statements Nies prepared and tells Nies to recognize membership revenue when the fees are received.

Instructions

Answer the following questions.

a. What are the ethical issues involved?

b. What should Nies do?

*__CT17.9 (LO 5) Writing (Long-Term Contract—Percentage-of-Completion)__ Widjaja Company is accounting for a long-term construction contract using the percentage-of-completion method. It is a 4-year contract that is currently in its second year. The latest estimates of total contract costs indicate that the contract will be completed at a profit to Widjaja Company.

Instructions

a. What theoretical justification is there for Widjaja Company's use of the percentage-of-completion method?

b. How would progress billings be accounted for? Include in your discussion the classification of progress billings in Widjaja Company financial statements.

c. How would the income recognized in the second year of the 4-year contract be determined using the cost-to-cost method of determining percentage of completion?

d. What would be the effect on earnings per share in the second year of the 4-year contract of using the percentage-of-completion method instead of the cost-recovery method? Discuss.

(AICPA adapted)

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE17.1 Access the glossary ("Master Glossary") to answer the following.

a. What is the definition of a customer?

b. What is a performance obligation?

c. How is standalone selling price defined?

d. What is a transaction price?

CE17.2 Briefly explain the conditions when a contract modification shall be accounted for as a separate performance obligation.

CE17.3 Describe the accounting for refund liabilities.

CE17.4 What procedures are followed in the allocation of a discount?

Codification Research Case

Employees at your company disagree about the accounting for sales returns. The sales manager believes that granting more generous return provisions can give the company a competitive edge and increase sales revenue. The controller cautions that, depending on the terms granted, loose return provisions might lead to non-GAAP revenue recognition. The company CFO would like you to research the issue to provide an authoritative answer.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses. (Provide paragraph citations.)

a. What is the authoritative literature addressing revenue recognition when right of return exists?

b. What is meant by "right of return"? "Bill and hold"?

c. Describe the accounting when there is a right of return.

d. When goods are sold on a bill-and-hold basis, what conditions must be met to recognize revenue upon receipt of the order?

Additional Professional Resources

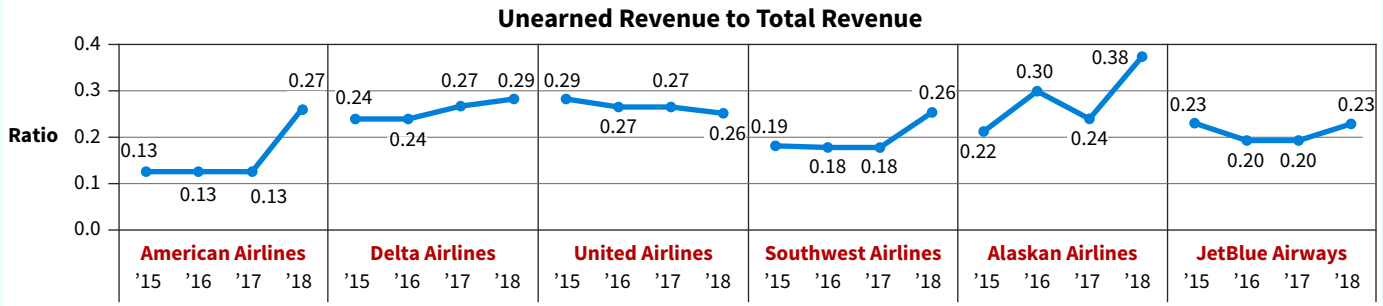
Go to Wiley Course Resources for other career-readiness resources, such as career coaching, internship opportunities, and CPAexcel prep.

Analytics in Action Activities

Using Data Visualizations to Benchmark Revenue Results

DA17.1 Using financial statement data to benchmark results against other companies in the same industry is important for any company but especially relevant for new companies. Benchmarking industry-specific data allows new companies to evaluate their performance against more established organizations and can help provide timely feedback on initial policies and business practices.

Data visualizations bring together data from different financial statements, enhancing the insights we can gain from the information. For example, the following chart shows the ratio of unearned revenue to total earned revenue for several companies in the airline industry. Unearned revenue represents a significant liability for most airline companies, and this visualization can help management understand the relationship of that liability to future revenues.



Required

For this exercise, you will use data visualizations to answer several questions about the relationship between unearned and earned revenue for companies in the airline industry.

Go to Wiley Course Resources for complete details and instructions.

DA17.2 Is there a correlation between unearned and earned revenue? What conclusions can we reasonably draw based on the trends of unearned revenue in the airline industry? Data visualizations can offer initial insight into relationships and identify trends over time.

Required

Using the same visualizations from DA17.1, you will document any correlations among the revenue data and discuss trends in unearned revenue for the airline industry.

Go to Wiley Course Resources for complete details and instructions.

Using Data Analytics to Estimate Sales Returns

DA17.3 Accounting systems hold a wealth of data that can unlock better estimates, management decisions, and business policies. Using analytical tools as accessible as Excel allows us to evaluate detailed transactional business data more than ever before.

Required

Using monthly sales and return data over a 5-year period, you will use Excel to create pivot tables and charts to evaluate trends in sales and returns data for a retail company. After creating visualizations in Excel, you will document your insights from the data.

Go to Wiley Course Resources for complete details and instructions.

CHAPTER 18

© Sarath maroli / Shutterstock

Accounting for Income Taxes

WHAT is the purpose of accounting for income taxes?

In Chapter 12, you learned about the accounting for sales and payroll taxes, such as Social Security, Medicare, and state and federal unemployment taxes. Companies also pay income taxes on their earnings, just like individuals do, by filing a tax return each year. But, the tax expense reported on a company's GAAP financial statements differs from the taxes paid when filing a tax return. The reason? A company's financial statements and its tax return have different purposes and users. The financial statements are intended for investors, creditors, and other stakeholders. In contrast, the tax return is intended for a government body with the purpose of raising taxes to address public policy issues.

WHY is understanding the accounting for income taxes important?

Payment of income taxes represents one of a company's most significant cash payments in any given year. For example, recent financial statements for **Proctor & Gamble (P&G)** indicated that it paid $3.5 billion in taxes to various government agencies, but the income statement reported GAAP tax expense of $2.7 billion. The differences in the taxes paid (based on tax rules) and tax expense are caused by either permanent or temporary differences. The temporary differences give rise to deferred tax assets and deferred tax liabilities, as shown in the excerpt from P&G's balance sheet.

Proctor & Gamble
Balance Sheet (partial, in millions)

Deferred Tax Assets	
Pension and postretirement benefits	**$1,602**
Loss and other carryforwards	**875**
Stock-based compensation	**398**
Accrued marketing and promotion	**353**
Other (7 items)	**862**
Total	**$4,090**
Deferred Tax Liabilities	
Goodwill and intangible assets	**$5,775**
Fixed assets	**1,485**
Other (4 items)	**838**
Total	**$8,098**

These significant deferred assets and liabilities (P&G's total assets are nearly $121 billion) arise from timing differences between when tax and GAAP rules include the items in income. For example, as you learned in Chapter 15, the expense for stock-based compensation is recorded as a reduction in GAAP income over the service period. However, under the tax code, these costs are deducted from taxable income when employees exercise the options after the service period. That future deductible amount is recorded as an asset, because P&G will pay less taxes in the period of the exercise. Investors and creditors are keenly aware of these deferred tax assets and liabilities because they provide information about the amounts, timing, and uncertainty of future cash flows arising from these timing differences between tax and GAAP accounting rules.

HOW do companies account for income taxes?

The accounting for income taxes starts with determination of taxable income, computed by using the rules and regulations of the Internal Revenue Code. Taxable income is then multiplied by the enacted tax rate to determine income taxes payable. The items causing differences between taxable income and GAAP-based income—deferred tax assets and liabilities—are analyzed and accounted for depending on how those items impact future taxes owed. The net effect of the differences between changes in the deferred tax assets and the deferred tax liabilities is then added or subtracted from the income taxes payable to determine income tax expense. Income tax expense each period therefore equals income taxes payable adjusted for changes in deferred tax assets and deferred tax liabilities.

Chapter Roadmap

LEARNING OBJECTIVES	TOPICS	REVIEW AND PRACTICE
LO 18.1 Describe the fundamentals of accounting for income taxes.	**18.1 Fundamentals of Accounting for Income Taxes** • Future taxable amounts and deferred taxes • Future deductible amounts and deferred taxes • Valuation allowance	Example **18.1** Deferred Tax Liability **18.2** Income Tax Expense **18.3** Income Tax Expense—2026 **18.4** Income Tax Expense—2027 **18.5** Deferred Tax Asset **18.6** Income Tax Expense **18.7** Income Tax Expense—2026 **18.8** Deferred Tax Asset—Warranty **18.9** Valuation Allowance Put It into Practice LO 18.1 Apply Tax Fundamentals
LO 18.2 Identify additional issues in accounting for income taxes.	**18.2 Additional Considerations** • Specific differences • Tax rate considerations	Example **18.10** Originating / Reversing Differences **18.11** Temporary and Permanent Differences **18.12** Change in Tax Rates Put It into Practice LO 18.2 Account for Additional Issues
LO 18.3 Explain the accounting for loss carryforwards.	**18.3 Accounting for Net Operating Losses (NOLs)** • Loss carryforward • Loss carryforward examples	Example **18.13** Net Operating Loss (NOL) **18.14** NOL—2026 **18.15** NOL, Valuation Allowance **18.16** NOL, Valuation Allowance—2026 Put It into Practice LO 18.3 Record Loss Carryforward
LO 18.4 Describe the presentation of deferred income taxes in financial statements.	**18.4 Financial Statement Presentation** • Balance sheet • Note disclosure • Income statement • Asset-liability method	Example **18.17** Classification

Go to the **Review and Practice** section at the end of the chapter for a targeted summary review. Multiple-choice questions with annotated solutions, as well as additional exercises and practice problem with solutions, are also available in Wiley Course Resources.

18.1 Fundamentals of Accounting for Income Taxes

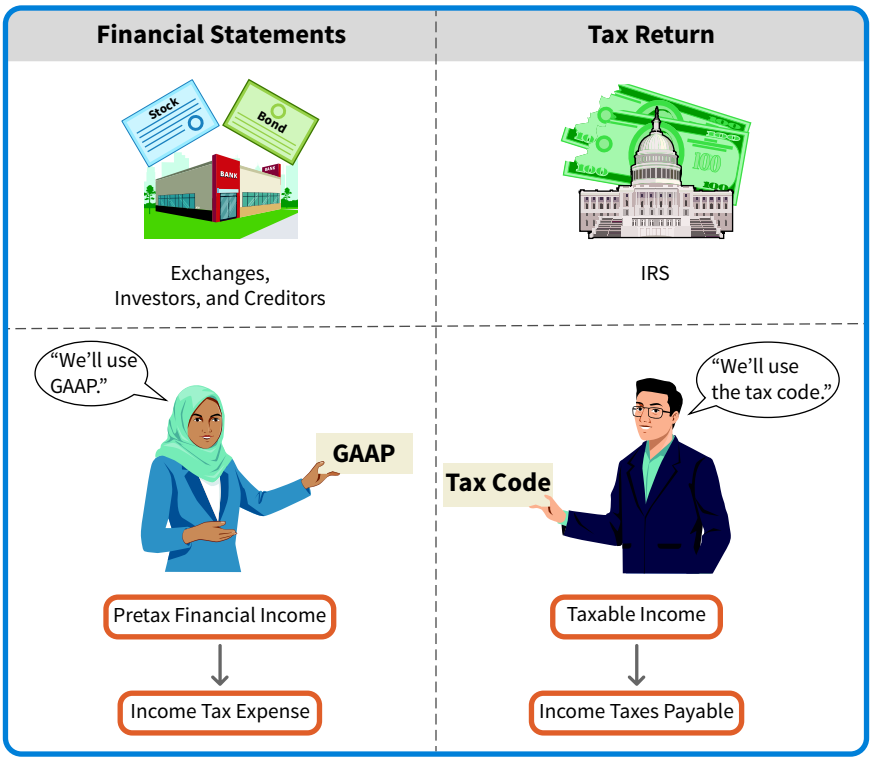
LEARNING OBJECTIVE 1

Describe the fundamentals of accounting for income taxes.

Benjamin Franklin once stated, "In this world nothing can be certain, except death and taxes." Which of these is worse? That might be debatable if you had to read the over 75,000 pages of the Internal Revenue Code. Fortunately, we are only covering the basic principles of income tax reporting in this chapter.

Up to this point, you have learned the basic guidelines that corporations use to report information to investors and creditors. Corporations also must file income tax returns following the guidelines developed by the **Internal Revenue Service (IRS)**. Because GAAP and tax regulations differ in a number of ways, pretax financial income on the income statement will differ from taxable income on the tax return. Consequently, the amount that a company reports as income tax expense on the income statement will differ from the amount of taxes payable to the IRS. **Illustration 18.1** highlights these differences.

ILLUSTRATION 18.1
Fundamental Differences Between Financial and Tax Reporting



Differences between pretax financial income and taxable income are as follows.

- **Pretax financial income** is a **financial reporting** term. It also is referred to as income before taxes, income for financial reporting purposes, or income for book purposes. Companies determine pretax financial income according to GAAP, which means they must follow **accrual-based accounting**. They measure pretax financial income with the objective of providing useful information to investors and creditors.

- **Taxable income**, or income for tax purposes, is a **tax accounting** term. It indicates the amount used to compute income taxes payable to the Internal Revenue Service (IRS). Companies determine taxable income according to the Internal Revenue Code (the tax code or IRC), which is more of a **cash-based accounting approach**. The objective of tax accounting is calculating taxes owed to support government operations.[1]

To illustrate how differences in GAAP and IRS rules affect financial reporting and taxable income, assume that Chelsea Inc. reported revenues of $130,000 and expenses of $60,000 in each of its first three years of operations. **Illustration 18.2** shows the (partial) income statement over these three years.

ILLUSTRATION 18.2 Financial Reporting Income

Chelsea Inc.
GAAP Reporting

	2025	2026	2027	Total
Revenues	$130,000	$130,000	$130,000	
Expenses	60,000	60,000	60,000	
Pretax financial income	$ 70,000	$ 70,000	$ 70,000	$210,000
Income tax expense (20%)	$ 14,000	$ 14,000	$ 14,000	$ 42,000

For tax purposes (following the tax code), Chelsea reported the same expenses to the IRS in each of the years. But, as **Illustration 18.3** shows, Chelsea reported taxable revenues of $100,000 in 2025, $150,000 in 2026, and $140,000 in 2027.

ILLUSTRATION 18.3 Tax Reporting Income

Chelsea Inc.
Tax Reporting

	2025	2026	2027	Total
Revenues	$ 100,000	$150,000	$140,000	
Expenses	60,000	60,000	60,000	
Taxable income	$ 40,000	$ 90,000	$ 80,000	$210,000
Income taxes payable (20%)	$ 8,000	$ 18,000	$ 16,000	$ 42,000

Income tax expense (GAAP reporting) and income taxes payable (tax reporting) differ over the three years but were equal **in total**, as **Illustration 18.4** shows.

ILLUSTRATION 18.4 Comparison of Income Tax Expense to Income Taxes Payable

Chelsea Inc.
Income Tax Expense and Income Taxes Payable

	2025	2026	2027	Total
Income tax expense	$14,000	$14,000	$14,000	$42,000
Income taxes payable	8,000	18,000	16,000	42,000
Difference	$ 6,000	$ (4,000)	$ (2,000)	$ –0–

[1]Determining the amount of tax to pay the IRS is a costly exercise. Individuals and businesses must pay not only the taxes owed but also the costs of their own time spent filing and complying with the tax code. One recent study found that compliance with the federal income tax cost the economy over $360 billion annually. Another study noted that the tax compliance industry employs more people than all the workers at **Walmart**, **UPS**, **McDonald's**, **IBM**, and **Citigroup** combined. One silver lining is that, since enactment of the Tax Cuts and Jobs Act of 2017 (TCJA), taxpayers are spending less time on tax compliance. Let's hope that future tax reforms continue this trend. See A. El-Sibaie, "Tax Compliance Burden Could Cost America as Much as 1.2 Percent of Its GDP," *taxfoundation.org* (February 21, 2018); and D. Brady, "Tax Complexity 2020: Compliance Burdens Ease for Second Year Since Tax Reform," *National Taxpayers Union Foundation* (April 15, 2020).

The differences between income tax expense and income taxes payable in this example arise because:

- For financial reporting, companies use the full accrual method to report revenues. As a result, Chelsea reports **pretax financial income of $70,000 and income tax expense of $14,000 for each of the three years.**
- For tax purposes, a cash basis is generally used to determine taxable income (sometimes referred to as the modified cash-basis approach). This tax basis accounting results in taxable income fluctuating from year to year. For example, in 2025, **taxable income is only $40,000, so Chelsea owes just $8,000 to the IRS that year.** Chelsea classifies the income taxes payable as a current liability on the balance sheet.

What about the difference in income tax expense and income taxes payable? As Illustration 18.4 indicates, for Chelsea the $6,000 ($14,000 − $8,000) difference between income tax expense and income taxes payable in 2025 reflects taxes that it will pay in future periods. This $6,000 difference is often referred to as a **temporary difference**, which results in a deferred tax amount. In this case, it is a deferred tax liability. In cases where taxes will be lower in the future, Chelsea records a deferred tax asset. We explain the measurement and accounting for deferred tax liabilities and assets in the following two sections.

Future Taxable Amounts and Deferred Taxes

The Chelsea example summarized in Illustration 18.4 shows how income taxes payable can differ from income tax expense. This can happen when there are temporary differences between the amounts reported for tax purposes and those reported for book purposes. A **temporary difference** is the difference between the tax basis of an asset or liability and its reported carrying or book value in the GAAP-based financial statements. These differences will result in taxable amounts or deductible amounts in future years.

- A **taxable amount** increases taxable income in future years.
- A **deductible amount** decreases taxable income in future years.

In Chelsea's situation, the only difference between the book basis and tax basis of the assets and liabilities relates to accounts receivable that arose from revenue recognized for book purposes. **Illustration 18.5** indicates that Chelsea reports accounts receivable at $30,000 in the December 31, 2025, GAAP-basis balance sheet. However, the receivables have a zero tax basis.

ILLUSTRATION 18.5 Temporary Difference, Sales Revenue

Per Books	12/31/25	Per Tax Return	12/31/25
Accounts receivable	$30,000	Accounts receivable	$–0–

What will happen to the $30,000 temporary difference that originated in 2025 for Chelsea? Assuming that Chelsea expects to collect $20,000 of the receivables in 2026 and $10,000 in 2027, this collection results in future taxable amounts of $20,000 in 2026 and $10,000 in 2027. These future taxable amounts will cause taxable income to exceed pretax financial income in both 2026 and 2027.

An assumption inherent in a company's GAAP balance sheet is that companies recover and settle the assets and liabilities at their reported amounts (carrying amounts). This assumption creates a requirement under accrual accounting to recognize **currently** the deferred tax consequences of temporary differences. That is, companies recognize the amount of income taxes that are payable (or refundable) when they recover and settle the reported amounts of the assets and liabilities, respectively.

Illustration 18.6 shows the reversal of the temporary difference described in Illustration 18.5 and the resulting taxable amounts in future periods.

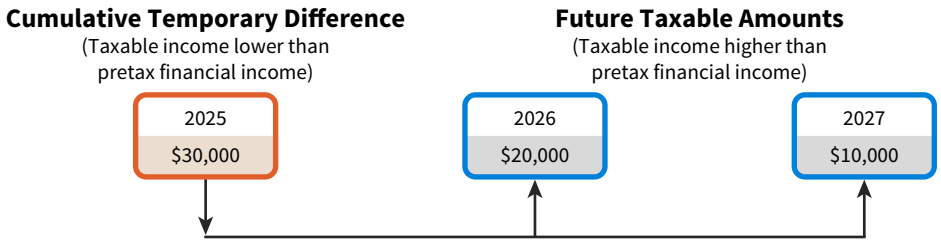


ILLUSTRATION 18.6 Reversal of Temporary Difference, Chelsea Inc.

Chelsea assumes that it will collect the accounts receivable and report the $30,000 collection as taxable revenues in future tax returns. A payment of income tax in both 2026 and 2027 will occur. Chelsea should therefore record in its books in 2025 the deferred tax consequences of the revenue and related receivables reflected in the 2025 financial statements. Chelsea does this by recording a deferred tax liability.

Deferred Tax Liability

A **deferred tax liability** is the deferred tax consequences attributable to taxable temporary differences. In other words, **a deferred tax liability represents the increase in taxes payable in future years as a result of taxable temporary differences existing at the end of the current year**.

Example 18.1 Deferred Tax Liability

FACTS Refer to the Chelsea example in Illustration 18.4. Recall that income taxes payable is $8,000 ($40,000 × .20) in 2025. A temporary difference exists at year-end because Chelsea reports the revenue and related accounts receivable differently for book and tax purposes. The book basis of accounts receivable is $30,000, and the tax basis is zero.

QUESTION What is Chelsea's deferred tax liability at the end of 2025?

SOLUTION

The total deferred tax liability at the end of 2025 is $6,000, computed as follows.

Book basis of accounts receivable	$30,000
Tax basis of accounts receivable	–0–
Cumulative temporary difference at the end of 2025	30,000
Tax rate	20%
Deferred tax liability at the end of 2025	$ 6,000

Companies may also compute the deferred tax liability by preparing a schedule that indicates the future taxable amounts due to existing temporary differences. Such a schedule, as shown in **Illustration 18.7**, is particularly useful when the computations become more complex.

	Future Years		
	2026	**2027**	**Total**
Future taxable amounts	$20,000	$10,000	$30,000
Tax rate	20%	20%	
Deferred tax liability at the end of 2025	$ 4,000	$ 2,000	$ 6,000

ILLUSTRATION 18.7 Schedule of Future Taxable Amounts

Example 18.2
Income Tax Expense with Deferred Tax Liability

FACTS Refer to the information for Chelsea in Example 18.1 (based on Illustration 18.4). Because it is the first year of operations for Chelsea, there is no deferred tax liability at the beginning of the year. Income taxes payable is $8,000 ($40,000 × .20).

QUESTION What is Chelsea's income tax expense for 2025?

SOLUTION

Chelsea computes income tax expense for 2025 as follows.

Current tax expense for 2025 (income taxes payable)		$ 8,000
Deferred tax liability at end of 2025	$6,000	
Deferred tax liability at beginning of 2025	0	
Deferred tax expense (benefit) for 2025		6,000
Income tax expense (total) for 2025		$14,000

Take note of this computation. As indicated, the determination of income tax expense starts with income taxes payable ($8,000) and then adds the increase in the deferred tax liability ($6,000) during the year.

As a result, income tax expense has two components—**current tax expense** (the amount of income taxes payable for the period) and **deferred tax expense**. Deferred tax expense is the change in the deferred tax liability balance from the beginning to the end of the accounting period.

Continuing with Example 18.2, Chelsea records income tax expense in 2025 as follows.

Income Tax Expense	14,000	
Income Taxes Payable		8,000
Deferred Tax Liability		6,000

As indicated, Chelsea credits taxes due and payable to income taxes payable, and credits the increase in deferred taxes to Deferred Tax Liability. Chelsea then debits the sum of those two items to Income Tax Expense.

Let's next look at what happens to Chelsea's deferred tax liability in 2026 and 2027.

Example 18.3
Income Tax Expense—2026

FACTS Continuing the Chelsea example, at the end of 2026 (the second year), the difference between the book basis and the tax basis of the accounts receivable is $10,000 ($30,000 − $20,000). Chelsea multiplies this difference by the applicable tax rate to arrive at the deferred tax liability of $2,000 ($10,000 × .20), which it reports at the end of 2026. Income taxes payable for 2026 is $18,000 ($90,000 × .20).

QUESTIONS (a) What is Chelsea's income tax expense in 2026? (b) What is the journal entry to record income tax expense, income taxes payable, and the change in the deferred tax liability in 2026?

SOLUTION

a. Chelsea's income tax expense for 2026 is calculated as follows.

Current tax expense for 2026 (income taxes payable)		$18,000
Deferred tax liability at end of 2026	$2,000	
Deferred tax liability at beginning of 2026	6,000	
Deferred tax expense (benefit) for 2026		(4,000)
Income tax expense (total) for 2026		$14,000

As indicated, the determination of income tax expense starts with income taxes payable ($18,000) and subtracts the decrease in the deferred tax liability ($4,000) during the year.

b. To record income tax expense, the change in the deferred tax liability, and income taxes payable for 2026:

Income Tax Expense	14,000	
Deferred Tax Liability	4,000	
Income Taxes Payable		18,000

Example 18.4 Income Tax Expense—2027

FACTS Continuing the Chelsea example to the third year, at the end of 2027, the difference between the book basis and the tax basis of the accounts receivable is zero ($30,000 − $20,000 − $10,000). Income taxes payable for 2027 is $16,000 ($80,000 × .20).

QUESTIONS (a) What is Chelsea's income tax expense in 2027? (b) What is the journal entry to record income tax expense, income taxes payable, and the change in the deferred tax liability in 2027?

SOLUTION

a. Chelsea's income tax expense for 2027 is calculated as follows.

Current tax expense for 2027 (income taxes payable)		$16,000
Deferred tax liability at end of 2027	$ 0	
Deferred tax liability at beginning of 2027	2,000	
Deferred tax expense (benefit) for 2027		(2,000)
Income tax expense (total) for 2027		$14,000

As indicated, the determination of income tax expense starts with income taxes payable ($16,000) and then subtracts the decrease in the deferred tax liability ($2,000) during the year.

b. To record the income tax expense, the change in deferred tax liability, and income taxes payable for 2027:

Income Tax Expense	14,000	
Deferred Tax Liability	2,000	
Income Taxes Payable		16,000

Illustration 18.8 shows the Deferred Tax Liability account at the end of 2027.

Deferred Tax Liability

2026	4,000	2025	6,000
2027	2,000		

ILLUSTRATION 18.8 Deferred Tax Liability Account After Reversals

As indicated, the Deferred Tax Liability account has a zero balance at the end of 2027.

Financial Statement Effects

Chelsea reports the information on its balance sheets for 2025–2027 as shown in Illustration 18.9.

Year-End	Income Taxes Payable	Deferred Tax Liability
2025	$ 8,000	$6,000
2026	18,000	2,000
2027	16,000	–0–

ILLUSTRATION 18.9 Balance Sheet Presentation, Deferred Tax Liabilities

Income taxes payable is reported as a current liability, and the deferred tax liability is reported as a noncurrent liability.[2]

On its income statement, Chelsea reports the information as shown in **Illustration 18.10**, from information taken from Illustration 18.2.

ILLUSTRATION 18.10 Income Statement Presentation, Income Tax Expense

	For the Year Ended		
	2025	**2026**	**2027**
Income before income taxes	$70,000	$70,000	$70,000
Income tax expense	14,000	14,000	14,000
Net income	$56,000	$56,000	$56,000

In the income statement or in the notes to the financial statements, a company should disclose the significant components of income tax expense attributable to continuing operations. For example, the presentation for Chelsea in 2025 is as shown in **Illustration 18.11**.

ILLUSTRATION 18.11 Components of Income Tax Expense

Income Statement (partial)

Income before income taxes		$70,000
Income tax expense		
Current	$8,000	
Deferred	6,000	14,000
Net income		$56,000

As illustrated, Chelsea reports both the current portion (amount of income taxes payable for the period) and the deferred portion of income tax expense. Another option is to simply report the total income tax expense on the income statement and then indicate in the notes to the financial statements the current and deferred portions. Income tax expense is often referred to as "Provision for income taxes." Using this terminology, the current provision is $8,000, and the provision for deferred taxes is $6,000.

Accounting Matters

Deferring Tax Payments, Bonus!

As you have learned so far in this chapter, a deferred tax liability is a result of a company **deferring** tax payments to a future period. A large driver of deferred tax liabilities for many companies relates to the timing of depreciation expense. When companies take advantage of accelerated depreciation methods for tax purposes, they are increasing their tax deduction for depreciation expense relative to the straight-line depreciation often used for book purposes. Larger deductions for tax purposes allows companies to defer tax payments to future periods.

Some assets are even eligible for "bonus" depreciation, which allows companies to take a large amount of depreciation the same year the asset is purchased. Why allow this bonus depreciation, which is sometimes as large as 100%? To stimulate growth in the economy! Companies may be incentivized to invest in new fixed assets as part of their tax-planning strategy. As shown in the following table, companies in the utilities and communications business have some of the largest deferred tax liabilities related to depreciation differences, with **AT&T** reporting almost $47 billion of deferred tax payments.

Deferred Tax Liabilities Related to Depreciation and Amortization ($ in millions)

AT&T	$46,952
Comcast	29,829
ExxonMobil	28,778
Verizon Communications	18,009

Note, however, that companies are simply deferring taxes, not avoiding them altogether.

[2]All deferred tax assets and liabilities are classified as noncurrent. [1] (See the FASB Codification References near the end of the chapter.) Expanded discussion of this provision is provided later in the chapter.

Future Deductible Amounts and Deferred Taxes

To illustrate a temporary difference, resulting in a deferred tax asset, assume that during 2025, Cunningham Inc. estimated its warranty costs related to the sale of microwave ovens to be $500,000, paid evenly over the next two years. For book purposes, in 2025 Cunningham reported warranty expense and a related estimated liability for warranties of $500,000 in its financial statements. For tax purposes, **the warranty tax deduction is not allowed until paid**. Therefore, Cunningham recognizes no warranty liability on a tax-basis balance sheet. Illustration 18.12 shows the balance sheet difference at the end of 2025.

Per Books	12/31/25	Per Tax Return	12/31/25
Estimated liability for warranties	$500,000	Estimated liability for warranties	$–0–

ILLUSTRATION 18.12 Temporary Difference, Warranty Liability

When Cunningham pays the warranty liability, it reports an expense (deductible amount) for tax purposes. Because of this temporary difference, Cunningham should recognize in 2025 the tax benefits (positive tax consequences) for the tax deductions that will result from the future settlement of the liability (payments on warranties). Cunningham reports this future tax benefit in the December 31, 2025, balance sheet as a **deferred tax asset**. We can think about this situation another way.

- These **future deductible amounts** cause taxable income to be less than pretax financial income in the future as a result of an existing temporary difference.
- Cunningham's temporary difference originates (arises) in one period (2025) and reverses over two periods (2026 and 2027).

Illustration 18.13 diagrams this situation.

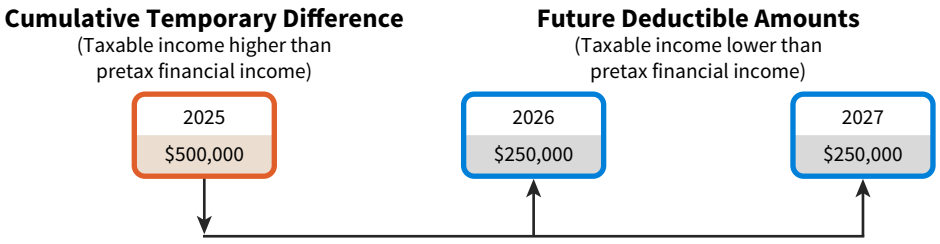

ILLUSTRATION 18.13 Reversal of Temporary Difference, Cunningham Inc.

Deferred Tax Asset

A **deferred tax asset** is the deferred tax consequence attributable to deductible temporary differences. In other words, a **deferred tax asset represents the increase in taxes refundable (or saved) in future years as a result of deductible temporary differences existing at the end of the current year**.

To illustrate the accounting, assume Hunt Company has revenues of $900,000 for both 2025 and 2026. It also has operating expenses of $400,000 for each of these years. In addition, Hunt accrues a loss and related liability of $50,000 for financial reporting purposes because of pending litigation. Hunt cannot deduct this amount for tax purposes until it pays the liability, expected in 2026. As a result, a deductible amount will occur in 2026 when Hunt settles the liability, causing taxable income to be lower than pretax financial income. Illustration 18.14 shows the GAAP and tax reporting over the two years.

ILLUSTRATION 18.14 GAAP and Tax Reporting, Hunt Company

GAAP Reporting

	2025	2026
Revenues	$900,000	$900,000
Expenses (operating)	400,000	400,000
Litigation loss	50,000	–0–
Pretax financial income	$450,000	$500,000
Tax rate	20%	20%
Income tax expense	$ 90,000	$100,000

Tax Reporting

	2025	2026
Revenues	$900,000	$900,000
Expenses (operating)	400,000	400,000
Litigation loss	–0–	50,000
Taxable income	$500,000	$450,000
Tax rate	20%	20%
Income taxes payable	$100,000	$ 90,000

Example 18.5 Deferred Tax Asset

FACTS Refer to the Hunt Company information in Illustration 18.14. A temporary difference exists at year-end because Hunt accounts for a litigation loss differently for book and tax purposes. The book basis of the liability is $50,000, and the tax basis is zero.

QUESTION What is Hunt's deferred tax asset at the end of 2025?

SOLUTION

The total deferred tax asset at the end of 2025 is $10,000, computed as follows.

Book basis of litigation liability	$50,000
Tax basis of litigation liability	–0–
Cumulative temporary difference at the end of 2025	50,000
Tax rate	20%
Deferred tax asset at the end of 2025	$10,000

In this case, Hunt records a deferred tax asset of $10,000 at the end of 2025 because it represents taxes that will be saved in future periods as a result of a deductible temporary difference existing at the end of 2025.

Hunt can also compute the deferred tax asset by preparing a schedule that indicates the future deductible amounts due to deductible temporary differences. **Illustration 18.15** shows this schedule.

ILLUSTRATION 18.15 Schedule of Future Deductible Amounts

	Future Years
Future deductible amounts	$50,000
Tax rate	20%
Deferred tax asset at the end of 2025	$10,000

Example 18.6 Income Tax Expense with Deferred Tax Asset

FACTS Refer to the Hunt Company information in Example 18.5. Because it is the first year of operations for Hunt, there is no deferred tax asset at the beginning of the year. Income taxes payable is $100,000 ($500,000 × .20).

QUESTION What is Hunt's income tax expense for 2025?

SOLUTION

Hunt computes income tax expense for 2025 as follows.

Current tax expense for 2025 (income taxes payable)		$100,000
Deferred tax asset at end of 2025	$10,000	
Deferred tax asset at beginning of 2025	0	
Deferred tax expense (benefit) for 2025		(10,000)
Income tax expense (total) for 2025		$ 90,000

As with the Chelsea examples, the determination of income tax expense starts with income taxes payable ($100,000) and then subtracts the increase in the deferred tax asset ($10,000) during the year.

The **deferred tax benefit** in Example 18.6 results from the increase in the deferred tax asset from the beginning to the end of the accounting period (similar to the Chelsea example earlier).

- The deferred tax benefit is a negative component of income tax expense.
- The total income tax expense of $90,000 on the income statement for 2025 thus consists of two elements—current tax expense of $100,000 and a deferred tax benefit of $10,000.

To record income tax expense, deferred income taxes, and income taxes payable at the end of 2025, Hunt makes the following entry.

Income Tax Expense	90,000	
Deferred Tax Asset	10,000	
Income Taxes Payable		100,000

Let's next look at what happens to Hunt's deferred tax asset in 2026.

Example 18.7 Income Tax Expense—2026

FACTS Continuing the Hunt example, at the end of 2026 (the second year), the difference between the book basis and the tax basis of the litigation liability is zero. Income taxes payable for 2026 is $90,000 ($450,000 × .20).

QUESTIONS (a) What is Hunt's income tax expense in 2026? (b) What is the journal entry to record income tax expense, income taxes payable, and the change in the deferred tax asset in 2026?

SOLUTION

a. Hunt's income tax expense for 2026 is calculated as follows.

Current tax expense for 2026 (income taxes payable)		$ 90,000
Deferred tax asset at end of 2026	$ 0	
Deferred tax asset at beginning of 2026	10,000	
Deferred tax expense (benefit) for 2026		10,000
Income tax expense (total) for 2026		$100,000

As indicated, the determination of income tax expense starts with income taxes payable ($90,000) and then adds the decrease in the deferred tax asset ($10,000) during the year.

b. To record income taxes for 2026:

Income Tax Expense	100,000	
Deferred Tax Asset		10,000
Income Taxes Payable		90,000

Financial Statement Effects

Hunt Company reports the following information on its balance sheets for 2025 and 2026 as shown in Illustration 18.16.

ILLUSTRATION 18.16
Balance Sheet Presentation, Deferred Tax Asset

Year-End	Income Taxes Payable	Deferred Tax Asset
2025	$100,000	$10,000
2026	90,000	–0–

Income taxes payable is reported as a current liability, and the deferred tax asset is reported as a noncurrent asset. On its income statement, Hunt Company reports the information as shown in Illustration 18.17.

ILLUSTRATION 18.17
Income Statement Presentation, Deferred Tax Asset

Hunt Company
Income Statement
For the Year Ending December 31, 2025

Revenues		$900,000
Expenses (operating)		400,000
Litigation loss		50,000
Income before income taxes		450,000
Income tax expense		
Current	$100,000	
Deferred	10,000	90,000
Net income		$360,000

As illustrated, Hunt reports both the current portion (the amount of income taxes payable for the period) and the deferred portion of the income tax expense. In this case, the deferred amount is subtracted from the current portion to arrive at the proper income tax expense.

Illustration 18.18 shows the Deferred Tax Asset account at the end of 2026.

ILLUSTRATION 18.18
Deferred Tax Asset Account After Reversals

Deferred Tax Asset

2025	10,000	2026	10,000

Deferred Tax Asset—Valuation Allowance

Companies recognize a deferred tax asset for all deductible temporary differences. However, as with other assets for which future benefits may not be realized, an allowance might be recorded. For example, an allowance account is established for accounts receivable to anticipate that some accounts receivable will not be collected. Similarly, a company should reduce a deferred tax asset by a **valuation allowance** if, based on available evidence, **it is more likely than not** that it **will not realize** some portion or all of the deferred tax asset. "**More likely than not**" means a level of likelihood of at least slightly more than 50%.

Example 18.8
Deferred Tax Asset—Warranty

FACTS Saris has a deductible temporary difference of $1,000,000 at the end of 2025, related to the lifetime warranty of its products. This is its first year of operations. Its tax rate is 20%. Saris has $900,000 of income taxes payable.

QUESTION What is the journal entry to record income tax expense, income taxes payable, and the deferred tax asset?

SOLUTION

To record income tax expense, the deferred tax asset, and income taxes payable:

Income Tax Expense*	700,000	
Deferred Tax Asset ($1,000,000 × .20)	200,000	
Income Taxes Payable		900,000

*Income Tax Expense = Income Taxes Payable – Increase in Deferred Tax Asset
= $900,000 – $200,000
= $700,000

Saris next evaluates whether a valuation allowance should be recorded, summarized as follows.

- Companies pay tax on income, not on losses. If there is no income, there is no tax.
- If there is no tax, the deferred tax asset cannot be used to offset future taxes owed.
- The deferred tax asset loses its future benefit.

What would cause Saris not to realize the deferred tax asset to offset future taxes owed to the IRS? Suppose Saris predicts it will not have taxable income next year. In other words, Saris is predicting it will show a net taxable loss.

Example 18.9
Valuation Allowance

FACTS Refer to the information in Example 18.8. After careful review of all available evidence, Saris determines that it is more likely than not that it will not realize $80,000 of this deferred tax asset.

QUESTION What is the journal entry (if any) to record a valuation allowance for Saris' deferred tax asset?

SOLUTION

To record the reduction in deferred tax asset value:

Income Tax Expense	80,000	
Allowance to Reduce Deferred Tax Asset to Expected Realizable Value		80,000

Allowance to Reduce Deferred Tax Asset to Expected Realizable Value

	2025	80,000

The valuation account used in Example 18.9 is a **contra account**. Saris reports it on the financial statements as shown in **Illustration 18.19**. The presentation is similar to how Allowance for Doubtful Accounts is deducted from Accounts Receivable.

ILLUSTRATION 18.19
Balance Sheet Presentation of Valuation Allowance Account

Deferred tax asset	$200,000
Less: Allowance to reduce deferred tax asset to expected realizable value	80,000
Deferred tax asset (net)	$120,000

Saris then evaluates this allowance account at the end of each accounting period and may determine that the account needs to be increased or decreased. At the end of 2026, assuming the original deferred tax asset is still outstanding Saris determines that it is more likely than not that it will not realize $50,000 of the deferred tax asset. Therefore, Saris makes the following entry to adjust the valuation allowance at 2026.

Allowance to Reduce Deferred Tax Asset to Expected Realizable Value ($80,000 – $50,000)	30,000	
Income Tax Expense		30,000

Allowance to Reduce Deferred Tax Asset to Expected Realizable Value

		2025 Bal.	80,000
2026 Adj.	30,000		
		2026 Bal.	50,000

Note that this adjustment **decreased** income tax expense because Saris changed its estimate. By lowering the allowance, Saris indicates that it expects to realize more of the deferred tax asset

than originally estimated. Saris should consider all available evidence, both positive and negative, to determine whether, based on the weight of available evidence, it needs a valuation allowance. For example, if Saris has been experiencing a series of loss years, it reasonably assumes that these losses will continue. Therefore, Saris will lose the benefit of the future deductible amounts. We discuss the use of a valuation account under other conditions later in the chapter.

Accounting Matters — Deferred Tax Assets

Companies that carry deferred tax assets on their balance sheet must, like any other asset, consider whether they will realize that asset in the future. This is no easy task, especially when changes in tax laws create a moving target. The CARES Act, executed to provide economic relief during the Covid-19 global pandemic, instituted a variety of changes to tax laws that required companies to reevaluate their valuation allowances.

Already a subjective estimate, the valuation allowance for deferred tax assets became even more difficult to estimate. That is, companies estimate whether they will have enough taxable income to realize these assets. For a company like **Citigroup**, which recently reported $36 billion of gross deferred tax assets, its valuation allowance of $5.1 billion was considered a critical audit matter (CAM) by its auditors. Any change in the valuation allowance will have a direct impact on a company's reported net income and EPS.

Put It into Practice LO 18.1
Apply Tax Fundamentals

FACTS Wisco Company has the following information related to taxes in 2025.

1. Deferred tax liability, January 1, 2025, $40,000.
2. Deferred tax asset, January 1, 2025, $0.
3. Taxable income for 2025, $190,000.
4. Pretax financial income for 2025, $400,000.
5. Cumulative temporary difference at December 31, 2025, giving rise to future taxable amounts, $480,000.
6. Cumulative temporary difference at December 31, 2025, giving rise to future deductible amounts, $70,000.
7. Tax rate for all years, 20%.
8. The company is expected to operate profitably in the future.

INSTRUCTIONS

a. Compute income taxes payable for 2025.

b. Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2025.

c. Prepare the income tax expense section of the income statement for 2025, beginning with the line "Income before income taxes."

d. Wisco examines available evidence and concludes that it is more likely than not that 30% of the deferred tax asset will not be realized. Prepare the journal entry to record an allowance if needed.

SOLUTION

a.

Taxable income	$190,000
Enacted tax rate	20%
Income taxes payable	$38,000

b. First, determine the deferred tax asset and liability and the change in the deferred tax asset and liability in 2025.

Temporary Difference	Future Taxable (Deductible) Amounts	Tax Rate	Deferred Tax (Asset)	Deferred Tax Liability
Item (5) above	$480,000	20%		$96,000
Item (6) above	(70,000)	20%	$(14,000)	
Totals	$410,000		$(14,000)	$96,000

Change in deferred taxes:

Deferred tax liability at the end of 2025	$96,000
Deferred tax liability at the beginning of 2025	40,000
Deferred tax expense for 2025 (increase required in deferred tax liability)	$56,000
Deferred tax asset at the end of 2025	$14,000
Deferred tax asset at the beginning of 2025	0
Deferred tax benefit for 2025 (increase required in deferred tax asset)	$(14,000)

Income tax expense:

Current tax expense for 2025 (income taxes payable)		$38,000
Deferred tax expense for 2025 (increase in deferred tax liability)	$56,000	
Deferred tax benefit for 2025 (increase in deferred tax asset)	(14,000)	
Net deferred tax expense for 2025		42,000
Income tax expense for 2025		$80,000

To record income tax expense, deferred income taxes, and income taxes payable for 2025:

Income Tax Expense	80,000	
Deferred Tax Asset	14,000	
Income Taxes Payable		38,000
Deferred Tax Liability		56,000

c.

Income before income taxes		$400,000	
Income tax expense			
Current	$38,000		
Deferred ($56,000 − $14,000)	42,000	80,000	
Net income		$320,000	

Note: The details on the current/deferred tax expense can be disclosed in the notes to the financial statements.

d. To record the allowance:

Income Tax Expense	4,200	
Allowance to Reduce Deferred Tax Asset to Expected Realizable Value ($14,000 × .30)		4,200

The allowance account is reported as a contra asset to Deferred Tax Asset.

18.2 Additional Considerations

LEARNING OBJECTIVE 2

Identify additional issues in accounting for income taxes.

Specific Differences

Numerous items create differences between pretax financial income and taxable income. For purposes of accounting recognition, these differences are (1) temporary and (2) permanent.

Temporary Differences

Taxable temporary differences are temporary differences that will result in taxable amounts in future years when the related assets are recovered. **Deductible temporary differences**

are temporary differences that will result in deductible amounts in future years, when the related book liabilities are settled. As discussed earlier, taxable temporary differences give rise to recording deferred tax liabilities. Deductible temporary differences give rise to recording deferred tax assets. **Illustration 18.20** provides examples of temporary differences.

ILLUSTRATION 18.20 Examples of Temporary Differences

Temporary Differences Resulting in Deferred Tax Liabilities (taxable income is **less than** financial income)
Revenues or gains are taxable after they are recognized in financial income that will result in taxable amounts in future years. For example, an asset (e.g., accounts receivable or investment) may be recognized for revenues or gains that will result in taxable amounts in future years when the asset is recovered. Other examples: 1. Sales accounted for on the accrual basis for financial reporting purposes and on the installment (cash) basis for tax purposes. 2. Contracts accounted for under the percentage-of-completion method for financial reporting purposes and a portion of related gross profit deferred for tax purposes. 3. Investments accounted for under the equity method for financial reporting purposes and under the cost method for tax purposes. 4. Gain on involuntary conversion of a nonmonetary asset which is recognized for financial reporting purposes but deferred for tax purposes. 5. Unrealized holding gains for financial reporting purposes (including use of the fair value option), but deferred for tax purposes.
Expenses or losses are deductible before they are recognized in financial income that will result in taxable amounts in future years. The cost of an asset may have been deducted for tax purposes faster than it was expensed for financial reporting purposes. Amounts received upon future recovery of the amount of the asset for financial reporting (through use or sale) will exceed the remaining tax basis of the asset. Other examples: 1. Depreciable property, depletable resources, and intangibles. 2. Deductible pension funding exceeding expense. 3. Prepaid expenses that are deducted on the tax return in the period paid.
Temporary Differences Resulting in Deferred Tax Assets (taxable income is **greater than** financial income)
Revenues or gains are taxable before they are recognized in financial income that will result in deductible amounts in future years. For example, a liability may be recognized for an advance payment for goods or services to be provided in future years. For tax purposes, the advance payment is included in taxable income upon the receipt of cash. Future sacrifices to provide goods or services (or future refunds to those who cancel their orders). Other examples: 1. Subscriptions received in advance. 2. Advance rental receipts. 3. Prepaid contracts and royalties received in advance.
Expenses or losses are deductible after they are recognized in financial income that will result in deductible amounts in future years. For example, a liability (or contra asset) may be recognized as taxable expenses or losses when the liability is settled. Other examples: 1. Product warranty liabilities. 2. Estimated liabilities related to discontinued operations or restructurings. 3. Litigation accruals. 4. Bad debt expense recognized using the allowance method for financial reporting purposes; direct write-off method used for tax purposes. 5. Stock-based compensation expense. 6. Unrealized holding losses for financial reporting purposes (including use of the fair value option) but deferred for tax purposes.

Determining a company's temporary differences may prove difficult. A company should prepare a balance sheet for tax purposes that it can compare with its GAAP balance sheet. Many of the differences between the two balance sheets are temporary differences.

Temporary differences have originating and reversing elements.

- An **originating temporary difference** is the initial difference between the book basis and the tax basis of an asset or liability, regardless of whether the tax basis of the asset or liability exceeds or is exceeded by the book basis of the asset or liability.
- A **reversing difference**, on the other hand, occurs when eliminating a temporary difference that originated in prior periods and then removing the related tax effect from the deferred tax account.

Example 18.10 Originating / Reversing Differences

FACTS Sharp Co. purchases a new piece of equipment in 2023. For book (GAAP) purposes, Sharp uses the straight-line method to depreciate the asset. For tax purposes, Sharp uses an accelerated method that is allowed by the IRS. The following table summarizes the amount of depreciation expense recognized each year for the tax return and on the income statement.

Depreciation Expense	2023	2024	2025	2026	2027	Total
Tax depreciation (tax return)	$11,000	$9,000	$5,000	$3,000	$2,000	$30,000
Book depreciation (income statement)	6,000	6,000	6,000	6,000	6,000	30,000
Temporary difference	5,000	3,000	(1,000)	(3,000)	(4,000)	0
Tax rate	15%	15%	15%	15%	15%	
Tax effect	$ 750	$ 450	$ (150)	$ (450)	$ (600)	$ 0

As indicated, over the 5-year period, total depreciation expense is the same. However, in 2023 and 2024, the expense is greater for tax purposes. In 2025, 2026, and 2027, the expense is less for tax purposes.

QUESTIONS What are the journal entries to record income tax expense in (a) 2023 (an originating difference) and (b) 2027 (a reversing difference)? Assume taxable income before depreciation expense is $80,000 in each year.

SOLUTION

a. To record income tax expense in 2023:

Income Tax Expense ($10,350 + $750)	11,100	
Deferred Tax Liability ($5,000 × .15)		750
Income Taxes Payable [($80,000 − $11,000) × .15)]		10,350

A similar entry (with different amounts, based on the schedule above) is recorded in 2024.

b. To record income tax expense in 2027:

Income Tax Expense ($11,700 − $600)	11,100	
Deferred Tax Liability ($4,000 × .15)	600	
Income Taxes Payable [($80,000 − $2,000) × .15)]		11,700

A similar reversing entry (with different amounts, based on the schedule above) would be made in 2025 and 2026.

As indicated in Example 18.10, Sharp Co. had tax depreciation in excess of book depreciation in 2023 and 2024, but had excess of book depreciation over tax depreciation in 2025, 2026, and 2027 for the same asset. Assuming a tax rate of 15% for all years involved, the Deferred Tax Liability account is as shown in **Illustration 18.21**.

ILLUSTRATION 18.21 Tax Effects of Originating and Reversing Differences

Deferred Tax Liability

Tax effects of reversing differences	2025	150	2023	750	Tax effects of originating differences
	2026	450	2024	450	
	2027	600			
	Bal.	- 0 -			

The originating differences for Sharp in each of the first two years results in increases to the deferred tax liability. The reversing differences in 2025, 2026, and 2027 result in a zero balance in the Deferred Tax Liability account.

Permanent Differences

Some differences between taxable income and pretax financial income are permanent, meaning they affect one but not the other. **Permanent differences** result from items either that:

1. Enter into pretax financial income but **never** into taxable income.
2. Enter into taxable income but **never** into pretax financial income.

Congress has enacted a variety of tax law provisions to attain certain political, economic, and social objectives. Some of these provisions achieve the following.

- **Exclude certain revenues from taxation**. For example, interest earned on state and municipal bonds is not taxable, but it is included as revenue on a company's income statement.
- **Limit the deductibility of certain expenses**. For example, a fine paid for violating a law is not deductible on a tax return, but it is reported as an expense on the income statement.
- **Permit the deduction of certain other expenses in excess of costs incurred**. For example, a company can report a "percentage of depletion" of natural resources on its tax return that is in excess of the actual cost reported in the financial statements.

A corporation that has tax-free income, nondeductible expenses, or allowable deductions in excess of cost has an effective tax rate that differs from its statutory (regular) tax rate. Since permanent differences affect only the period in which they occur, they do not give rise to future taxable or deductible amounts. As a result, **companies recognize no deferred tax consequences**. **Illustration 18.22** shows examples of permanent differences.

ILLUSTRATION 18.22 Examples of Permanent Differences

Items recognized for financial reporting purposes but not for tax purposes:

1. Interest received on state and municipal obligations.
2. Expenses incurred in obtaining tax-exempt income.
3. Proceeds from life insurance carried by the company on key officers or employees.
4. Premiums paid for life insurance carried by the company on key officers or employees (company is beneficiary).
5. Fines and expenses resulting from a violation of law.

Items recognized for tax purposes but not for financial reporting purposes:

1. "Percentage of depletion" of natural resources in excess of their cost.
2. The deduction for dividends received from U S. corporations, generally 70% or 80%.

Examples of Temporary and Permanent Differences

To illustrate the computations used when both temporary and permanent differences exist, assume that Bio-Tech Company reports pretax financial income of $200,000 in each of the years 2023, 2024, and 2025. The company is subject to a 20% tax rate and has the following differences between pretax financial income and taxable income.

1. Bio-Tech reports gross profit of $18,000 from an installment sale in 2023. It recognizes the entire amount for book purposes in 2023. For tax purposes, it will recognize revenue over an 18-month period at a constant amount of $1,000 per month beginning January 1, 2024.
2. It pays life insurance premiums for its key officers of $5,000 in 2024 and 2025. Although not tax-deductible, Bio-Tech expenses the premiums for book purposes.

The installment sale is a temporary difference, whereas the life insurance premium is a permanent difference. **Illustration 18.23** shows the reconciliation of Bio-Tech's pretax financial income to taxable income and the computation of income taxes payable.

ILLUSTRATION 18.23
Reconciliation and Computation of Income Taxes Payable

	2023	2024	2025
Pretax financial income	$200,000	$200,000	$200,000
Permanent difference			
Nondeductible expense		5,000	5,000
Temporary difference			
Installment sale	(18,000)	12,000	6,000
Taxable income	182,000	217,000	211,000
Tax rate	20%	20%	20%
Income taxes payable	$ 36,400	$ 43,400	$ 42,200

Note that:

- In 2023, Bio-Tech **deducts** the installment-sales gross profit ($18,000) from pretax financial income to arrive at taxable income. The reason: Pretax financial income includes the installment-sales gross profit; taxable income does not.
- In 2024 and 2025, Bio-Tech **adds** the $5,000 insurance premium to pretax financial income to arrive at taxable income. The reason: Pretax financial income records an expense for this premium, but for tax purposes the premium is **not** deductible.

Example 18.11 Temporary and Permanent Differences

FACTS Refer to the information in Illustration 18.23 related to Bio-Tech.

QUESTIONS (a) How does the temporary difference impact the future? (b) What are the journal entries at December 31, 2023, 2024, and 2025 to record income tax expense, deferred taxes, and income taxes payable?

SOLUTION

a. In 2023, the originating temporary difference is caused by installment sales of $18,000. The $18,000 is included in financial income but excluded from taxable income. Therefore, taxable income is less than financial income, which creates a future taxable amount and a deferred tax liability. The temporary difference will reverse in 2024 and 2025. (*Note:* There is no deferred tax amount associated with the difference caused by the nondeductible insurance expense because it is a permanent difference.)

b. To record income taxes for 2023, 2024, and 2025:

December 31, 2023		
Income Tax Expense ($36,400 + $3,600)	40,000	
Deferred Tax Liability ($18,000 × .20)		3,600
Income Taxes Payable ($182,000 × .20)		36,400
December 31, 2024		
Income Tax Expense ($43,400 − $2,400)	41,000	
Deferred Tax Liability ($12,000 × .20)	2,400	
Income Taxes Payable ($217,000 × .20)		43,400
December 31, 2025		
Income Tax Expense ($42,200 − $1,200)	41,000	
Deferred Tax Liability ($6,000 × .20)	1,200	
Income Taxes Payable ($211,000 × .20)		42,200

Bio-Tech has one temporary difference, which originates in 2023 and reverses in 2024 and 2025. It recognizes a deferred tax liability at the end of 2023 because the temporary difference causes future taxable amounts. As the temporary difference reverses, Bio-Tech reduces the deferred tax liability to zero.

Deferred Tax Liability

		2023	3,600
2024	2,400		
2025	1,200		
			0

As indicated, Bio-Tech has an enacted tax rate of 20%, which applies for all three years. However, the effective rate differs from the enacted rate in 2024 and 2025. Bio-Tech computes the **effective tax rate** by dividing total income tax expense for the period by pretax financial income. The effective rate for Bio-Tech is as follows.

- **20%** for 2023 ($40,000 ÷ $200,000).
- **20.5%** for 2024 and 2025 ($41,000 ÷ $200,000).

As expected, the effective tax rate for 2024 and 2025 is **higher** than the enacted tax rate of 20% as the life insurance premiums are not deductible for tax purposes.

Tax Rate Considerations

In the Bio-Tech example, the enacted tax rate did not change from one year to the next. Therefore, to compute the deferred income tax amount to report on the balance sheet, a company like Bio-Tech simply multiplies the cumulative temporary difference by the enacted tax rate. But in the "real world," tax rates can change as lawmakers enact new tax legislation.

Future Tax Rates

What happens if tax rates are expected to change in the future? In this case, a company should use the **enacted tax rate** expected to apply when the temporary difference reverses and the tax impact is realized. Therefore, a company must consider presently enacted changes in the tax rate that become effective for a particular future year(s) when determining the tax rate to apply to existing temporary differences. For example, assume that SolarCity, at the end of 2026, has the following cumulative temporary difference of $300,000, computed as shown in **Illustration 18.24**.

ILLUSTRATION 18.24 Computation of Cumulative Temporary Difference

Book basis of depreciable assets	$1,000,000
Tax base of depreciable assets	700,000
Cumulative temporary difference	$ 300,000

Furthermore, assume that the $300,000 will reverse and result in taxable amounts in the future, with the enacted tax rates shown in **Illustration 18.25**. The amount that reverses in each future year should be multiplied by the enacted tax rate for that future year.

ILLUSTRATION 18.25 Deferred Tax Liability Based on Future Rates

	2027	2028	2029	2030	2031	Total
Future taxable amounts	$80,000	$70,000	$60,000	$50,000	$40,000	$300,000
Tax rate	20%	20%	18%	15%	15%	
Deferred tax liability	$ 16,000	$ 14,000	$10,800	$ 7,500	$ 6,000	$ 54,300

The total deferred tax liability to be reported at the end of 2026 is $54,300. SolarCity may only use tax rates other than the current rate when the future tax rates have been **enacted**, as is the case in this example. **If new rates are not yet enacted for future years, SolarCity should use the current rate.**[3]

[3]The TCJA enacted a flat corporate federal tax rate of 21%. The tax rate for an individual company may be higher or lower than 21%, depending on state and international taxes, as well as various provisions in the tax code, which usually reduce the rate. Prior to the TCJA, the IRS and other taxing jurisdictions taxed income on a graduated tax basis. For example, the IRS taxed the first $50,000 of taxable income at 15%, the next $25,000 at 25%, with higher incremental levels of income at rates as high as 39%. As a result, in computing deferred income taxes, companies for which graduated tax rates were a significant factor had to determine and then use the **average tax rate**.

Revision of Future Tax Rates

In most cases, a company will record a deferred tax asset or deferred tax liability at the current tax rate. When a change in the future tax rate is enacted, companies should record its effect on the existing deferred income tax accounts immediately. **A company reports the effect as an adjustment to income tax expense in the period of the change.**

Example 18.12 Change in Future Tax Rates

FACTS On December 10, 2025, a new income tax act is signed into law that lowers the corporate tax rate from 40% to 20%, effective January 1, 2027. If Hostel Co. has one temporary difference at the beginning of 2025 related to $3 million of excess tax depreciation, then it has a Deferred Tax Liability account with a balance of $1,200,000 ($3,000,000 × .40) at January 1, 2025.

QUESTIONS If taxable amounts related to this difference are scheduled to occur equally in 2026, 2027, and 2028, (a) what is Hostel's deferred tax liability at the end of 2025 and (b) what journal entry would you make (if any) for Hostel as a result of the tax rate change?

SOLUTION

a. The deferred tax liability at the end of 2025 is $800,000, computed as follows.

	2026	2027	2028	Total
Future taxable amounts	$1,000,000	$1,000,000	$1,000,000	$3,000,000
Tax rate	40%	20%	20%	
Deferred tax liability	$ 400,000	$ 200,000	$ 200,000	$ 800,000

b. To recognize the decrease of $400,000 ($1,200,000 – $800,000) at the end of 2025 in the deferred tax liability:

Deferred Tax Liability		400,000	
Income Tax Expense			400,000

Deferred Tax Liability

		1/1/25	1,200,000
2025	400,000		
		12/31/25	800,000

Corporate tax rates do not change often. However, state and foreign tax rates change more frequently, and they require adjustments in deferred income taxes accordingly.

Accounting Matters — Lower Tax Rate—Good or Bad?

It may seem counterintuitive that a lower corporate tax rate would have a negative impact on a company's reported earnings, but that is exactly what happens to companies with large deferred tax assets on their balance sheet. When corporate tax rates declined to 21%, down from 35% as a result of the TCJA (2017), **Citigroup** took a $19 billion charge to write-down its deferred tax assets, while **General Motors** took a $7 billion charge. With lower future tax rates, companies will realize lower tax deductions, thereby lowering the reported value of the asset on the balance sheet.

The news is not all bad, especially for companies with deferred tax liabilities. As deferred tax liabilities reverse and generate taxable income, companies will be taxed at a lower rate. **Wells Fargo** reported a gain of $3.9 billion related to the lower tax rate and the impact to its deferred tax liability position. The adjacent table shows the distribution of deferred tax assets and liabilities, by sector, for December year-end firms the year before the TCJS was enacted.

($ in billions)	No. of Firms	Deferred Tax Assets	Deferred Tax Liabilities	DTLs ÷ DTAs
Utilities	28	$ 53.6	$ 232.3	4.3
Telecom services	3	16.7	66.1	4.0
Consumer staples	16	20.1	72.8	3.6
Real estate	32	1.6	4.4	2.8
Healthcare	46	55.0	126.3	2.3
Energy	31	94.4	169.9	1.8
Industrials	55	82 4	147.7	1.8
Consumer discretionary	47	81.1	116.7	1.4
Materials	22	24.8	34.2	1.4
Financials	64	273.4	271.1	1.0
Information technology	28	43.9	32.8	0.7
	372	$747.0	$1,274.2	1.7

You can see that companies in the utilities sector stood to benefit most from a reduction in tax rate. This makes sense given that utility companies invest significantly in fixed assets, often taking advantage of accelerated depreciation for tax purposes, creating deferred tax liabilities. When those depreciation differences reverse and taxable income is higher, the companies will pay taxes at a lower rate! Companies in the financial and technology industry are not so lucky, with a much lower ratio of deferred tax liabilities to assets. As Congress considers future tax rate changes, tax planning is more critical than ever.

Put It into Practice LO 18.2
Account for Additional Tax Issues

FACTS Johnny Bravo Company began operations in 2025 and has provided the following information.

1. Pretax financial income for 2025 is $100,000.
2. The tax rate enacted for 2025 and future years is 20%.
3. Differences between the 2025 income statement and tax return are listed below.
   a. Warranty expense accrued for financial reporting purposes amounts to $5,000. Warranty deductions per the tax return amount to $2,000.
   b. Gross profit on construction contracts using the percentage-of-completion method for books amounts to $92,000. Gross profit on construction contracts for tax purposes amounts to $62,000.
   c. Depreciation of property, plant, and equipment for financial reporting purposes amounts to $60,000. Depreciation of these assets amounts to $80,000 for the tax return.
   d. A $3,500 fine paid for violation of pollution laws was deducted in computing pretax financial income.
   e. Interest revenue earned on an investment in tax-exempt municipal bonds amounts to $1,400.
4. Taxable income is expected for the next few years.

INSTRUCTIONS

a. Compute taxable income for 2025.

b. Compute the deferred taxes at December 31, 2025, that relate to the temporary differences described above.

c. Prepare the journal entry to record income tax expense, deferred taxes, and income taxes payable for 2025.

SOLUTION

a. Taxable income is computed as follows.

Pretax financial income	$100,000
Permanent differences	
Fine for pollution	3,500
Tax-exempt interest	(1,400)
Originating temporary differences	
Excess warranty expense per books ($5,000 – $2,000)	3,000
Excess construction profits per books ($92,000 – $62,000)	(30,000)
Excess depreciation per tax ($80,000 – $60,000)	(20,000)
Taxable income	$ 55,100

b. Deferred tax assets and deferred tax liabilities:

Temporary Difference	Future Taxable (Deductible) Amounts	Tax Rate	Deferred Tax (Asset)	Deferred Tax Liability
Warranty costs	$ (3,000)	20%	$(600)	
Construction contracts	30,000	20		$ 6,000
Depreciation	20,000	20		4,000
Totals	$ 47,000		$(600)	$10,000

c. To record income tax expense, deferred taxes, and income taxes payable:

Income Tax Expense	20,420	
Deferred Tax Asset	600	
Deferred Tax Liability		10,000
Income Taxes Payable ($55,100 × .20)		11,020

Taxable income for 2025 [from part (a)]	$55,100
Tax rate	20%
Income taxes payable for 2025	$11,020
Deferred tax expense / benefit	
Deferred tax liability at the end of 2025 [from part (b)]	$10,000
Deferred tax liability at the beginning of 2025	0
Deferred tax expense for 2025 (increase in deferred tax liability)	$10,000
Deferred tax asset at the end of 2025 [from part (b)]	$ 600
Deferred tax asset at the beginning of 2025	0
Deferred tax benefit for 2025 (decrease in deferred tax asset)	$(600)

Income Tax Expense	=	Income Taxes Payable	+	Increase in Deferred Tax Liability	−	Increase in Deferred Tax Asset
$20,420	=	$11,020	+	$10,000	−	$600

18.3 Accounting for Net Operating Losses

LEARNING OBJECTIVE 3

Explain the accounting for loss carryforwards.

Every management hopes its company will be profitable. But hopes and profits may not materialize. For a start-up company, it is common to accumulate operating losses while expanding its customer base but before realizing economies of scale. For an established company, a major event such as a labor strike, rapidly changing regulatory and competitive forces, a disaster such as a hurricane, or a general economic recession such as that experienced in the global Covid-19 pandemic can cause expenses to exceed revenues and result in a net operating loss.

- A **net operating loss (NOL)** occurs for tax purposes in a year when tax-deductible expenses exceed taxable revenues.
- A company pays no income taxes for a year in which it incurs a NOL.
- In addition, a company may be able to use the losses of one year to offset the profits of future years.

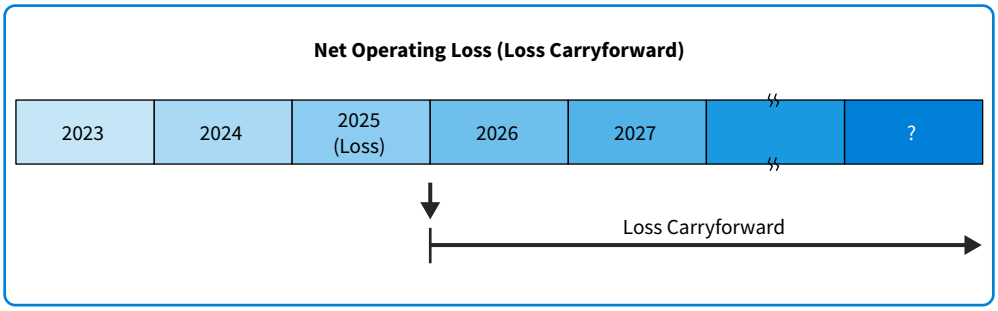
This tax relief is partly designed to help companies through difficult economic times. Indeed, an inequitable tax burden would result if companies were taxed during profitable periods without receiving any tax relief during periods of net operating losses. Under certain circumstances, therefore, the federal tax laws permit taxpayers to use the losses of one year to offset the profits of other years.

Companies accomplish this income-averaging provision through the **carryforward of net operating losses**. Under this provision, a company pays no income taxes for a year in which it incurs a net operating loss, and it can reduce future taxes payable as well.

Loss Carryforward

As indicated when a NOL occurs, a company pays no tax in the year of loss. In addition, through use of a **loss carryforward**, a company may carry the NOL forward indefinitely to offset future taxable income and reduce taxes payable in future years. **Illustration 18.26** shows this approach.

ILLUSTRATION 18.26 Loss Carryforward Procedure



Operating losses can be substantial. For example, **Yahoo!** at one time had net operating losses of approximately $5.4 billion. That amount translates into tax savings of $1.4 billion if Yahoo! is able to generate taxable income in the future.[4]

Loss Carryforward Examples

Because companies use carryforwards to offset future taxable income, the **tax effect of a loss carryforward** represents **future tax savings**. However, realization of a future tax benefit depends on future earnings, an uncertain prospect.

- The key accounting issue is whether there should be different requirements for recognition of a deferred tax asset for (a) deductible temporary differences and (b) operating loss carryforwards.
- The FASB's position is that in substance these items are the same—both are tax-deductible amounts in future years.

As a result, the Board concluded that there **should not be different requirements** for recognition of a deferred tax asset from deductible temporary differences and operating loss carryforwards.[5] As we discussed earlier in the chapter, if a company has a deferred tax asset, it must evaluate whether it needs a related valuation allowance account. If it is more likely than not that a company will **not** realize some or all of the deferred tax asset, then it must establish a valuation allowance account.

Loss Carryforward Without Valuation Allowance

Let's first examine a loss carryforward with no valuation allowance.

[4]The length of carryforward periods has varied, increasing from 7 years to 20 years over a period of time. An indefinite carryforward period was enacted as part of the TCJA. The TCJA also limited the amount that can be carried forward to 80% of taxable income in a future year. Most recently, in an attempt to help companies manage the economic effects of the pandemic, the CARES Act suspended the 80% limitation for 3 years. (*Unless stated otherwise, in homework, assume that the 80% limit does not limit the carryforward.*) Finally, the TCJA also eliminated carryback provisions, which permitted companies to carry back NOLs against prior taxable income and get a tax refund (CARES also reinstated carryback provisions for 3 years). We discuss the accounting for carrybacks in Appendix 18B.

[5]This requirement is controversial because many believe it is inappropriate to recognize deferred tax assets except when assured beyond a reasonable doubt. Others argue that companies should never recognize deferred tax assets for loss carryforwards until realizing the income in the future.

Example 18.13 NOL—No Valuation Allowance

FACTS Groh Inc. has no temporary or permanent differences between its financial and taxable income. Groh experiences a net operating loss of $200,000 in 2025 and takes advantage of the carryforward provision. The enacted future tax rate is 20%.

QUESTIONS (a) What is the future (deferred) tax effect of Groh's net operating loss? (b) What journal entry would you make to record the deferred tax effect in 2025?

SOLUTION

a. In 2025, the tax effect of the $200,000 loss carryforward is a deferred tax asset of $40,000 ($200,000 × .20).

b. To record the benefit of the carryforward in 2025:

Deferred Tax Asset	40,000	
Income Tax Expense (Loss Carryforward)		40,000

There is no Income Taxes Payable account in the journal entry because Groh does not owe any amounts to the IRS in the year of a NOL.

In Example 18.13, the account credited, Income Tax Expense (Loss Carryforward), is a contra income tax expense item, which Groh presents on its 2025 income statement shown in Illustration 18.27.

ILLUSTRATION 18.27
Recognition of the Benefit of the Loss Carryforward in the Loss Year

Groh Inc.
Income Statement (partial) for 2025

Operating loss before income taxes	$(200,000)
Income tax benefit	
Deferred	40,000*
Net loss	$(160,000)

*Carryforward ($200,000 × .20)

The $40,000 is the deferred tax benefit for 2025, which results from an increase in the deferred tax asset. The deferred tax benefit reduces Groh's overall loss from $200,000 to $160,000. Let's look at the accounting in the following year.

Example 18.14 NOL, No Valuation Allowance—2026

FACTS Refer to the Groh information in Example 18.13. Assume that in 2026 Groh returns to profitable operations and has taxable income of $250,000 (prior to adjustment for the NOL carryforward), subject to a 20% tax rate. Groh then realizes the benefits of the carryforward for tax purposes in 2026, which it recognized for accounting purposes in 2025.

QUESTIONS (a) What is Groh's income taxes payable in 2026? (b) What journal entry would you make to record Groh's 2026 income taxes?

SOLUTION

a. Groh computes the income taxes payable for 2026 as follows.

Taxable income prior to loss carryforward	$ 250,000
Loss carryforward deduction	(200,000)
Taxable income for 2026	50,000
Tax rate	20%
Income taxes payable for 2026	$ 10,000

b. To record income taxes in 2026:

Income Tax Expense	50,000	
Deferred Tax Asset		40,000
Income Taxes Payable		10,000

The benefits of the NOL carryforward, realized in 2026, reduce the Deferred Tax Asset account to zero.

The income statement shown in Illustration 18.28 does **not report** the tax effects of the loss carryforward because Groh had reported both previously. The current income tax expense of $10,000 represents what Groh must pay to the IRS for 2026.

ILLUSTRATION 18.28
Presentation of the Benefit of Loss Carryforward Realized in 2026, Recognized in 2025

Groh Inc.
Income Statement (partial) for 2026

Income before income taxes		$250,000
Income tax expense		
Current	$ 10,000	
Deferred	40,000	50,000
Net income		$200,000

Carryforward with Valuation Allowance

Now let's revisit the Groh example assuming that a valuation allowance is needed with the creation of the deferred tax asset.

Example 18.15
NOL with Valuation Allowance—2025

FACTS Refer to the Groh information in Example 18.13. Recall that in 2025, Groh has no temporary or permanent differences. Groh experiences a net operating loss of $200,000 in 2025 and takes advantage of the carryforward provision. The enacted future tax rate is 20%. Assume that it is more likely than not that Groh will **not** realize any of the NOL carryforward in future years.

QUESTION What journal entries would you make to record the deferred tax effects for Groh's 2025 NOL?

SOLUTION

As before, Groh records a deferred tax asset of $40,000 ($200,000 × .20) for the potential benefits related to the loss and an allowance to reduce the deferred tax asset by the same amount. Groh makes the following journal entries in 2025.

To recognize benefit of loss carryforward:

Deferred Tax Asset	40,000	
Income Tax Expense (Loss Carryforward)		40,000

To record allowance amount:

Income Tax Expense (Allowance)	40,000	
Allowance to Reduce Deferred Tax Asset to Expected Realizable Value		40,000

The second entry indicates that because it is more likely than not that Groh will not realize the benefit from the deferred tax asset, Groh needs a valuation allowance.

Illustration 18.29 shows Groh's 2025 income statement presentation. Notice that because it is more likely than not that Groh will not realize the benefit from the deferred tax asset, the deferred tax benefit is zero and Groh's net loss remains at $200,000.

ILLUSTRATION 18.29
Recognition of Benefit of Loss Carryforward Only

Groh Inc.
Income Statement (partial) for 2025

Operating loss before income taxes	$(200,000)
Income tax expense	
Deferred	–0–*
Net loss	$(200,000)

*Allowance ($40,000) − Carryforward ($40,000)

Let's see what happens for Groh in the next year if it is profitable.

Example 18.16 NOL, Valuation Allowance—2026

FACTS Refer to the Groh information in Example 18.15. In 2026, Groh has taxable income of $250,000 (before considering the carryforward) subject to a tax rate of 20%. As a result, Groh realizes the deferred tax asset and no longer needs the allowance.

QUESTION What journal entries would you make to record Groh's 2026 income taxes?

SOLUTION

To record current and deferred income taxes (same entry from Example 18.14):

Income Tax Expense	50,000	
Deferred Tax Asset		40,000
Income Taxes Payable		10,000

To eliminate allowance and recognize loss carryforward:

Allowance to Reduce Deferred Tax Asset to Expected Realizable Value	40,000	
Income Tax Expense (Allowance)		40,000

Continuing with Example 18.16, Groh reports the $40,000 benefit related to the loss carryforward on the 2026 income statement. The company did not recognize it in 2025 because it was more likely than not that it would not be realized. Assuming that Groh derives the income for 2026 from continuing operations, it prepares the income statement as shown in **Illustration 18.30**.

ILLUSTRATION 18.30
Recognition of Benefit of Loss Carryforward When Realized

Groh Inc.
Income Statement (partial) for 2026

Income before income taxes		$250,000
Income tax expense		
Current	$ 10,000	
Deferred	–0–*	10,000
Net Income		$240,000

*Loss carryforward ($40,000) — Allowance ($40,000)

Another method is to report only one line for total income tax expense of $10,000 on the face of the income statement and disclose the components of income tax expense in the notes to the financial statements.

Valuation Allowance Revisited

A company should consider all positive and negative information in determining whether it needs a valuation allowance. Whether the company will realize a deferred tax asset depends on whether sufficient taxable income exists or will exist within the carryforward period available under tax law. **Illustration 18.31** shows possible sources of taxable income that may be available under the tax law to realize a tax benefit for deductible temporary differences and carryforwards.

ILLUSTRATION 18.31 Possible Sources of Taxable Income

Taxable Income Sources

a. Future reversals of existing taxable temporary differences.
b. Future taxable income exclusive of reversing temporary differences and carryforwards.
c. Tax-planning strategies that would, if necessary, be implemented to:
(1) Accelerate taxable amounts to utilize expiring carryforwards.
(2) Change the character of taxable or deductible amounts from ordinary income or loss to capital gain or loss.
(3) Switch from tax-exempt to taxable investments. [2]

If any one of these sources is sufficient to support a conclusion that a valuation allowance is unnecessary, a company need not consider other sources.

Forming a conclusion that a valuation allowance is not needed is difficult when there is negative evidence such as cumulative losses in recent years. Companies may also cite positive evidence indicating that a valuation allowance is not needed. **Illustration 18.32** presents examples (not prerequisites) of evidence to consider when determining the need for a valuation allowance.

ILLUSTRATION 18.32 Evidence to Consider in Evaluating the Need for a Valuation Account

Negative Evidence

a. A history of operating loss or tax credit carryforwards expiring unused.
b. Losses expected in early future years (by a presently profitable entity).
c. Unsettled circumstances that, if unfavorably resolved, would adversely affect future operations and profit levels on a continuing basis in future years.
d. A carryforward period that is so brief that it would limit realization of tax benefits if (1) a significant deductible temporary difference is expected to reverse in a single year or (2) the enterprise operates in a traditionally cyclical business.

Positive Evidence

a. Existing contracts or firm sales backlog that will produce more than enough taxable income to realize the deferred tax asset based on existing sale prices and cost structures.
b. An excess appreciated asset value over the tax basis of the entity's in an amount sufficient to realize the deferred tax asset.
c. A strong earnings history exclusive of the loss that created the future deductible amount (tax loss carryforward or deductible temporary difference) coupled with evidence indicating that the loss is an aberration rather than a continuing condition (for example, the result of an unusual or infrequent item, or both). [3]

Global View

Under IFRS (*IAS 12*), a company may not recognize a deferred tax asset unless realization is "probable." However, "probable" is not defined in the standard, leading to diversity in the recognition of deferred tax assets. *See the IFRS Insights at the end of the chapter for a discussion of the similarities and differences between IFRS and GAAP.*

The use of a valuation allowance provides a company with an opportunity to manage its earnings. As one accounting expert notes, "The 'more likely than not' provision is perhaps the most judgmental clause in accounting." Some companies may set up a valuation account and then use it to increase income as needed. Others may take the income immediately to increase equity or to offset large negative charges to income (see **Global View**).

Accounting Matters — NOLs: Good News or Bad?

Here are some net operating loss numbers reported by several notable companies (dollars in millions).

Company	Income (Loss)	Operating Loss Carryforward	Tax Deferred (Tax Asset)
Delta Air Lines	$(12,385.0)	$5,700.0	$1,495.0
Goodyear	(1,250.0)	1,570.0	704.0
Kodak	(541.0)	2,068.0	480.0
General Mills	2,181.2	155.6	146.6

All of these companies are using the carryforward provisions of the tax code for their NOLs. For many of them, the NOL is an amount far exceeding their reported profits. (Carryforwards can be claimed indefinitely into the future.) In some cases, management expects the tax rates in the future to be higher. This difference in expected rates provides a bigger tax benefit if the losses are carried forward and matched against future income.

Is there a downside? To realize the benefits of carryforwards, a company must have future taxable income to claim the NOL deductions. As we learned, if it is more likely than not that a company will not have taxable income, it must record a valuation allowance (and increased tax expense). As the data in the adjacent table indicate, recording a valuation allowance to reflect the uncertainty of realizing the tax benefits has merit.

A classic example is **Sony Corp.**, which announced a $3.2 billion net loss, blaming a $4.4 billion write-off on a certain portion of deferred tax assets in Japan. The write-off was an admission that an earthquake and tsunami shattered its expectations for a robust current fiscal year. Sony faced uncertainties because its recovery prospects were partially dependent on parts and materials suppliers, many of which were also affected by the quake. As a result, Sony had to record an allowance of ¥360 billion on certain deferred tax assets due to uncertainty about future taxable income.

We observed a similar experience in the wake of the global Covid-19 pandemic, with major global companies reporting significant declines in operating profits as the crisis unfolded. These results create extreme uncertainty as to future profitability, leading to expected increases in allowances established against deferred tax assets.

Sources: Company annual reports (2020); J. Osawa, "Sony Expects Hefty Loss: Electronics Giant Reverses Prediction for Full-Year Profit, Blaming Earthquake," *Wall Street Journal* (May 24, 2011); and Deloitte, "How Covid-19 Infects Financial Reporting and Results Presentations," *Perspectives* (Quarter 1, 2020).

Put It into Practice LO 18.3
Record Loss Carryforward

FACTS Richardson Inc. reported the following pretax financial income (loss) for the years 2025–2027.

2025	$240,000
2026	(180,000)
2027	380,000

Pretax financial income (loss) and taxable income (loss) were the same for all years involved. The enacted tax rate was 20% for 2025 and 25% in 2026–2027.

INSTRUCTIONS

a. Prepare the journal entries for the years 2025–2027 to record income tax expense, income taxes payable, and the tax effects of the loss carryforward. Assume that based on the weight of available evidence, it is more likely than not that 40% of the benefits of the loss carryforward will **not** be realized.

b. Prepare the income tax section of the 2026 income statement beginning with the line "Income (loss) before income taxes."

SOLUTION

a.

2025

Income Tax Expense ($240,000 × .20)	48,000	
Income Taxes Payable		48,000

	2026		
	Deferred Tax Asset ($180,000 × .25)	45,000	
	Income Tax Expense (Carryforward)		45,000
	Income Tax Expense (Carryforward)	18,000	
	Allowance to Reduce Deferred Tax Assetto Expected Realizable Value (.40 × $45,000)		18,000
	2027		
	Income Tax Expense ($380,000 × .25)	95,000	
	Income Taxes Payable [($380,000 – $180,000) × .25]		50,000
	Deferred Tax Asset		45,000
	Allowance to Reduce Deferred Tax Asset to Expected Realizable Value	18,000	
	Income Tax Expense (Allowance)		18,000

b.	Loss before income taxes	$(180,000)
	Income tax benefit	
	Deferred	27,000*
	Net loss	$(153,000)

*Deferred tax asset = Carryforward ($45,000) − Allowance $18,000)

18.4 Financial Statement Presentation

LEARNING OBJECTIVE 4

Describe the presentation of deferred income taxes in financial statements.

Balance Sheet

On the balance sheet:

- Companies report income taxes payable and income tax refund receivable as a current liability and current asset, respectively.
- Companies often make estimated payments to taxing authorities quarterly; these payments are reported as prepaid income taxes in the current assets section.
- Companies are generally permitted to offset any balances in income taxes payable against related income tax refund receivable or prepaid income taxes balances.

Deferred tax accounts are also reported as assets and liabilities. Companies should classify deferred tax accounts as a net noncurrent amount on the balance sheet. That is, deferred tax assets and deferred tax liabilities are separately recognized and measured and then offset on the balance sheet, reported in the noncurrent section of the balance sheet.

Example 18.17 Classification

FACTS Yelich Company has four deferred tax items at December 31, 2025, as shown in the following table.

Temporary Difference	Deferred Tax Asset	Deferred Tax Liability
1. Rent collected in advance: recognized when a performance obligation is satisfied for accounting purposes and when received for tax purposes.	$(42,000)	
2. Use of straight-line depreciation for accounting purposes and accelerated depreciation for tax purposes.		$214,000
3. Recognition of income on installment sales at the time of sale for accounting purposes and during period of collection for tax purposes.		45,000
4. Warranty liabilities: recognized at time of sale for accounting purposes and at time paid for tax purposes.	(12,000)	
Totals	(54,000)	259,000
Net deferred tax liability		$205,000

QUESTION How should Yelich report deferred taxes in its balance sheet?

SOLUTION

Yelich Company has total deferred tax assets of $54,000 and total deferred tax liabilities of $259,000. Yelich therefore reports a deferred tax liability of $205,000 ($259,000 − $54,000) in the noncurrent liability section of the balance sheet.

Some disagree with the use of the noncurrent section for classification of deferred taxes on the balance sheet. That is, the classification should be based on when the temporary difference reverses. For example, a temporary difference that reverses in the next period should be classified as current rather than noncurrent. While the FASB recognizes that classifying all deferred tax items as noncurrent is conceptually deficient, it notes the following.

- Determining when a temporary difference reverses is often difficult (such as with a loss carryforward).
- Scheduling of the reversals to determine current versus noncurrent is complex and costly, and provides limited usefulness to the financial statement reader.

As a result, as part of an overall simplification initiative, the Board decided to classify all deferred taxes as noncurrent.

Note Disclosure

Companies are required to disclose the total of all deferred tax liabilities, the total of all deferred assets, and the total valuation allowance in the notes to the financial statements. In addition, companies should disclose:

1. Any change during the year in the total valuation allowance.
2. The types of temporary differences or carryforwards that give rise to significant portions of deferred tax liabilities and assets.

For example, **PepsiCo** reported the information shown in **Illustration 18.33** related to its deferred tax assets, deferred tax liabilities, and valuation allowance account.

ILLUSTRATION 18.33 PepsiCo Tax Note

PepsiCo
(in millions)

Deferred tax liabilities and assets are comprised of the following:

	2020	2019
Deferred tax liabilities		
Debt guarantee of wholly-owned subsidiary	$ 578	$ 578
Property, plant and equipment	1,851	1,583
Recapture of net operating losses	504	335
Right-of-use assets	371	345
Other	159	167
Gross deferred tax liabilities	3,463	3,008
Deferred tax assets		
Net carryforwards	5,008	4,168
Intangible assets other than nondeductible goodwill	1,146	793
Share-based compensation	90	94
Retiree medical benefits	153	154
Other employee-related benefits	373	350
Pension benefits	80	104
Deductible state tax and interest benefits	150	126
Lease liabilities	371	345
Other	866	741
Gross deferred tax assets	8,237	6,875
Valuation allowances	(4,686)	(3,599)
Deferred tax assets, net	3,551	3,276
Net deferred tax assets (assets greater than liabilities)	$ (88)	$ (268)

A summary of our valuation allowance activity is as follows:

	2020	2019
Balance, beginning of year	$ 3,599	$ 3,753
Provision	1,082	(124)
Other additions/(deductions)	5	(30)
Balance, end of year	$ 4,686	$ 3,599

The disclosure of gross deferred tax assets, deferred tax liabilities, and changes in the valuation allowance helps users make better predictions of future cash flows. Examination of the deferred portion of income tax expense provides information as to whether taxes payable are likely to be higher or lower in the future.

In PepsiCo's case, analysts expect future taxable amounts and higher tax payments, primarily from lower depreciation in the future. PepsiCo expects future deductible amounts and lower tax payments due to deductions for carryforwards, intangible assets, and employee benefits. These deferred tax items indicate that actual tax payments for PepsiCo will be higher than the tax expense reported on the income statement in the future.[7]

Income Statement

Companies are required to report income before income taxes and income tax expense on the income statement. **Illustration 18.34** shows the amounts that PepsiCo reported related to tax expense.

[7]See R. P. Weber and J. E. Wheeler, "Using Income Tax Disclosures to Explore Significant Economic Transactions," *Accounting Horizons* (September 1992), for a discussion of how analysts use deferred tax disclosures to assess the quality of earnings and to predict future cash flows.

PepsiCo
(in millions)

	2020	2019	2018
Income before income taxes	$9,069	$9,312	$9,189
Provision for income taxes	1,894	1,959	(3,370)
Net income	$7,175	$7,353	$12,559

ILLUSTRATION 18.34 Tax Expense Disclosures

Income tax expense (or benefit) generally equals the sum of income taxes payable (or refundable) and the change in the deferred tax expense or benefit. As discussed earlier, the following formula is used to compute income tax expense (benefit).

Income Taxes Payable or Refundable ± **Change in Deferred Income Taxes** = **Total Income Tax Expense or Benefit**

The total deferred tax expense (or benefit) equals the sum of the changes in the deferred tax assets, deferred tax liabilities, and the valuation allowance for the year. For example, a company adds an increase in a deferred tax liability to income taxes payable. On the other hand, it subtracts an increase in a deferred tax asset from income taxes payable.

PepsiCo provided the disclosure shown in **Illustration 18.35** in the notes to the financial statements providing additional explanation related to income before income taxes and deferred income taxes.

PepsiCo
(in millions)

The components of income before income taxes are as follows:

	2020	2019	2018
U.S.	$4,070	$4,123	$3,864
Foreign	4,999	5,189	5,325
	$9,069	$9,312	$9,189

The provision for (benefit from) income taxes consisted of the following:

		2020	2019	2018
Current:	U.S. Federal	$ 715	$ 652	$ 437
	Foreign	932	807	378
	State	110	196	63
		1,757	1,655	878
Deferred:	U.S. Federal	273	325	140
	Foreign	(167)	(31)	(4,379)
	State	31	10	(9)
		137	304	(4,248)
Provision (benefit) (see Illustration 18.34)		$1,894	$1,959	$(3,370)

ILLUSTRATION 18.35 Components of Income Tax Expense

Although companies generally report only the change in the deferred portion on the income statement, it is important to recognize that the change can involve many of the following items.

1. Current tax expense or benefit.
2. Deferred tax expense or benefit, exclusive of other components listed below.

3. Government grants (if recognized as a reduction of income tax expense).
4. The benefits of operating loss carryforwards (resulting in a reduction of income tax expense).
5. Adjustments of a deferred tax liability or asset for enacted changes in tax laws or rates or a change in the tax status of a company.
6. Adjustments of the beginning-of-the-year balance of a valuation allowance because of a change in circumstances that causes a change in judgment about the realizability of the related deferred tax asset in future years.

In the notes, companies must also reconcile (using percentages or dollar amounts) income tax expense attributable to continuing operations with the amount that results from applying domestic or federal statutory tax rates to pretax income from continuing operations. Companies should disclose the estimated amount and the nature of significant reconciling items. **Illustration 18.36** presents an example from the annual report of PepsiCo.

ILLUSTRATION 18.36 Tax Rate Reconciliation

PepsiCo

A reconciliation of the U.S. Federal statutory tax rate to our annual tax rate is as follows:

	2020	2019	2018
U.S. Federal statutory tax rate	21.0%	21.0%	21.0%
State income tax, net of U.S. Federal tax benefit	1.2	1.6	0.5
Lower taxes on foreign results	(0.8)	(0.9)	(2.2)
One-time mandatory transition tax—TCJ Act	—	(0.1)	0.1
Remeasurement of deferred taxes—TCJ Act	—	—	(0.4)
International reorganizations	—		(47.3)
Tax settlements	—	—	(7.8)
Other, net	(0.5)	(0.6)	(0.6)
Annual tax rate	20.9%	21.0%	(36.7)%

This disclosure helps users assess the quality of earnings. Many investors seeking to assess the quality of a company's earnings are interested in the reconciliation of pretax financial income to taxable income. Analysts carefully examine earnings that are enhanced by a favorable tax effect, particularly if the tax effect is non-recurring.

For example, the tax rate reconciliation schedule indicates that PepsiCo's effective tax rate is actually negative in 2018. The reason for this difference is primarily due to one-time adjustments for the recent enactment of the TCJA (remeasuring deferred taxes and taxes on foreign earnings). In prior years, PepsiCo's tax rate was lower than the statutory rate. In 2019 and 2020, there is little or no difference in PepsiCo's effective tax rate and the statutory rate.

Companies should also disclose the nature of their tax loss carryforward. PepsiCo, for example, provides the information shown in **Illustration 18.37**.

ILLUSTRATION 18.37 Disclosure of Carryforwards and Allowances

PepsiCo

Carryforwards and Allowances

Operating loss carryforwards totaling $28.3 billion as of December 26, 2020 are being carried forward in a number of foreign and state jurisdictions where we are permitted to use tax operating losses from prior periods to reduce future taxable income. These operating losses will expire as follows: $0.2 billion in 2021, $25.2 billion between 2022 and 2040 and $2.9 billion may be carried forward indefinitely. We establish valuation allowances for our deferred tax assets if, based on the available evidence, it is more likely than not that some portion or all of the deferred tax assets will not be realized.

This disclosure helps users predict future cash flows for operating loss carryforwards. From this disclosure, analysts determine the amount of income that the company may recognize in the future on which it will pay no income tax. For example, the PepsiCo disclosure in Illustration 18.37 indicates that PepsiCo has $28.3 billion in net operating loss carryforwards that it can use to reduce future taxes. However, the valuation allowance indicates that $4,686 million (see Illustration 18.33) of deferred tax assets may not be realized in the future.

Loss carryforwards can be valuable to a potential acquirer. For example, as mentioned earlier, **Yahoo!** has a substantial net operating loss carryforward. A potential acquirer would find Yahoo! more valuable as a result of these carryforwards. That is, the acquirer may be able to use these carryforwards to shield future income. However, the acquiring company has to be careful because the structure of the deal may lead to a situation where the deductions will be severely limited.

A similar issue arises in companies emerging from bankruptcy.

- In many cases, these companies have large NOLs but the value of the losses may be limited.
- This is because any gains related to the cancellation of liabilities in bankruptcy must be offset against the NOLs.

For example, when **Kmart** emerged from bankruptcy, it disclosed NOL carryforwards approximating $3.8 billion. At the same time, Kmart disclosed cancellation of debt gains that reduced the value of the NOL carryforward. These reductions soured the merger between Kmart and **Sears Roebuck** because the cancellation of the indebtedness gains reduced the value of the Kmart carryforwards to the merged company by $3.74 billion.[8]

Accounting Matters — Uncertain Tax Positions

Every company takes tax positions, from taking a tax deduction or credit, to filing a tax return in a certain jurisdiction. Some tax positions are clear-cut, while others may be the result of more aggressive or risky tax-planning strategies. **Uncertain tax positions** give rise to tax benefits either by reducing income tax expense or related payables, or by increasing an income tax refund receivable or deferred tax asset. When companies take these riskier tax positions, there is inherently some risk that the taxing authority will "disagree" with the company's position. If audited by the taxing authority, some companies may have to amend their initial position and lose some of the tax benefit they initially claimed.

To provide more consistency and insight into tax positions, companies must evaluate each tax position on its technical merit and determine the likelihood that the position will pass muster with the tax authority. Companies can only recognize a benefit on their GAAP-based financial statements if, in management's opinion, there is a greater than 50% chance of the benefit being realized upon audit by the taxing authority.

Now, companies have already taken the tax position for tax purposes, so what do they do with a difference between the benefit recognized for tax purposes and the amount allowed for financial statement purposes? If the recognition threshold is passed, companies must then recognize an adjustment to their tax assets/liabilities and usually an increase to income tax expense. (This estimation process is complex and is beyond the scope of this text.) **[4]**

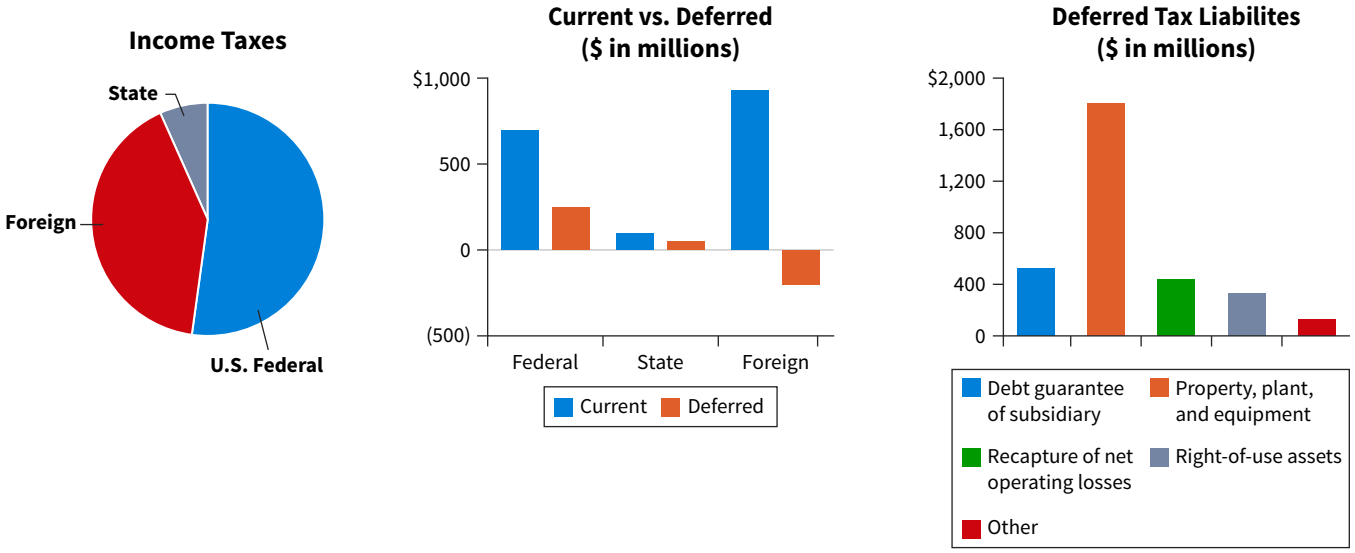
For example, say a company took advantage of a credit on its tax return that reduced its tax liability by $100. As a result of the assessment process, it concludes that only $75 of that benefit can be recognized for financial statement purposes. The difference of $25 is recorded as an unrecognized tax benefit on its balance sheet. In **Apple**'s case, the amount of its unrecognized tax benefit is $16.5 billion! This means that Apple took tax positions (and their related benefits) worth $16.5 billion for which it deems there is a less than 50% chance of being upheld by taxing authorities in the event of an audit.

Apple is not alone in the significance of its unrecognized benefits. This is definitely a footnote disclosure worthy of reviewing to gain insights into a company's tax strategies.

[8]The IRS frowns on acquisitions done solely to obtain operating loss carryforwards. If it determines that the merger is solely tax-motivated, the IRS disallows the deductions. But because it is very difficult to determine whether a merger is or is not tax-motivated, the "purchase of operating loss carryforwards" continues.

Analytics in Action: Visualizing Taxes?

As with many other business functions, using large data sets and technology like data visualization tools can help tax professionals make better decisions and improve overall business performance. Emerging technologies allow companies to, literally, see data in new dynamic ways, learn from past results, and better predict future outcomes. The charts below show some components of **PepsiCo**'s tax expense.



With these visualizations, management can drill into the transactional data behind these figures and gain better insights about the overall tax position of the company. Better than looking at lines on a financial statement or tax return? We think so!

Go to the Analytics in Action Activities section at the end of the chapter, which includes Excel-based problems with data sets, to see the relevance and application of data analytics to intermediate accounting topics.

A Summary of the Asset-Liability Method

The FASB believes that the **asset-liability method**, which this chapter has covered, is the most consistent method for accounting for income taxes.

- One objective of this approach is to recognize the amount of taxes payable or refundable for the current year.
- A second objective is to recognize **deferred tax liabilities and assets** for the **future tax consequences** of events that have been recognized in the financial statements or tax returns.

To implement the objectives, companies apply some basic principles in accounting for income taxes at the date of the financial statements, as listed in **Illustration 18.38**. **[5]**

ILLUSTRATION 18.38 Basic Principles of the Asset-Liability Method

Basic Principles

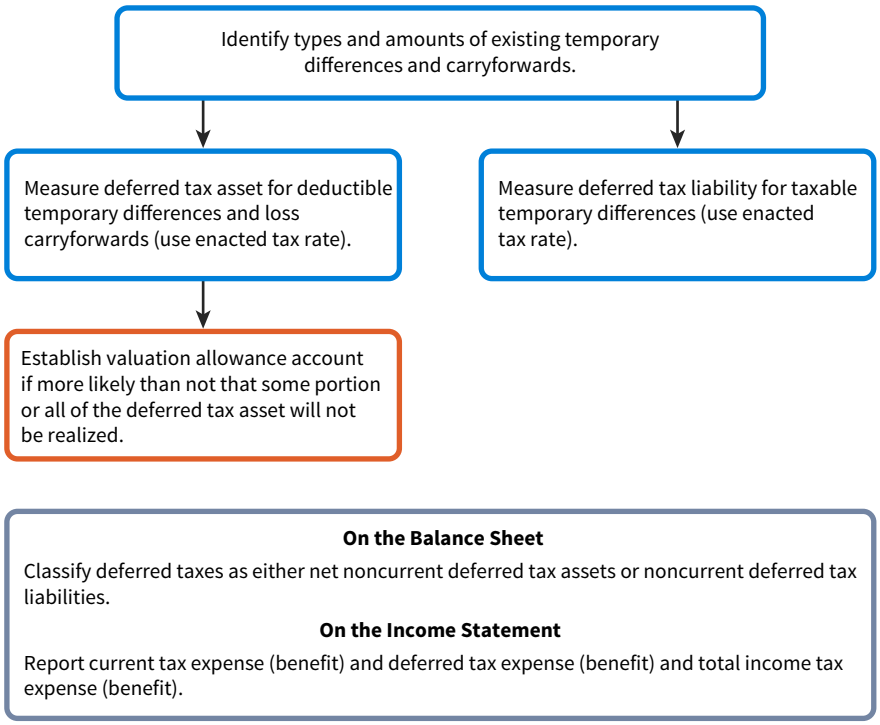
a. A current tax liability or asset is recognized for the estimated taxes payable or refundable on the tax return for the current year.

b. A deferred tax liability or asset is recognized for the estimated future tax effects attributable to temporary differences and carryforwards.

c. The measurement of current and deferred tax liabilities and assets is based on provisions of the enacted tax law; the effects of future changes in tax laws or rates are not anticipated.

d. The measurement of deferred tax assets is reduced, if necessary, by the amount of any tax benefits that, based on available evidence, are not expected to be realized.

Illustration 18.39 diagrams the procedures for implementing the asset-liability method.



Identify types and amounts of existing temporary differences and carryforwards.
Measure deferred tax asset for deductible temporary differences and loss carryforwards (use enacted tax rate).
Measure deferred tax liability for taxable temporary differences (use enacted tax rate).
Establish valuation allowance account if more likely than not that some portion or all of the deferred tax asset will not be realized.
On the Balance Sheet
Classify deferred taxes as either net noncurrent deferred tax assets or noncurrent deferred tax liabilities.
On the Income Statement
Report current tax expense (benefit) and deferred tax expense (benefit) and total income tax expense (benefit).

ILLUSTRATION 18.39 Procedures for Computing and Reporting Deferred Income Taxes

As an aid to understanding deferred income taxes, we provide the following glossary.

Key Deferred Income Tax Terms

Carryforwards. Deductions or credits that cannot be utilized on the tax return during a year and that may be carried forward to reduce taxable income or taxes payable in a future year. An **operating loss carryforward** is an excess of tax deductions over gross income in a year. A **tax credit carryforward** is the amount by which tax credits available for utilization exceed statutory limitations.

Current tax expense (benefit). The amount of income taxes paid or payable (or refundable) for a year as determined by applying the provisions of the enacted tax law to the taxable income or excess of deductions over revenues for that year.

Deductible temporary difference. Temporary differences that result in deductible amounts in future years when recovering or settling the related asset or liability, respectively.

Deferred tax asset. The deferred tax consequences attributable to deductible temporary differences and carryforwards.

Deferred tax consequences. The future effects on income taxes as measured by the enacted tax rate and provisions of the enacted tax law resulting from temporary differences and carryforwards at the end of the current year.

Deferred tax expense (benefit). The change during the year in a company's deferred tax liabilities and assets.

Deferred tax liability. The deferred tax consequences attributable to taxable temporary differences.

Financial income. Income before taxes reported on the GAAP income statement.

Income taxes. Domestic and foreign federal (national), state, and local (including franchise) taxes based on income.

Income taxes currently payable (refundable). Refer to current tax expense (benefit).

Income tax expense (benefit). The sum of current tax expense (benefit) and deferred tax expense (benefit).

Taxable income. The excess of taxable revenues over tax-deductible expenses and exemptions for the year as defined by the governmental taxing authority.

Taxable temporary difference. Temporary differences that result in taxable amounts in future years when recovering or settling the related asset or liability, respectively.

Tax-planning strategy. An action that meets certain criteria and that a company implements to realize a tax benefit for an operating loss or tax credit carryforward. Companies consider tax-planning strategies when assessing the need for and amount of a valuation allowance for deferred tax assets.

Temporary difference. A difference between the tax basis of an asset or liability and its reported amount in the financial statements that will result in taxable or deductible amounts in future years when recovering or settling the reported amount of the asset or liability, respectively.

Valuation allowance. The portion of a deferred tax asset for which it is more likely than not that a company will not realize a tax benefit.

APPENDIX 18A Comprehensive Example of Interperiod Tax Allocation

LEARNING OBJECTIVE *5

Apply the concepts and procedures of interperiod tax allocation.

This appendix presents a comprehensive illustration of a deferred income tax problem with several temporary and permanent differences. The example follows one company through two complete years (2024 and 2025). **Study it carefully.** It should help you understand the concepts and procedures presented in the chapter.

First Year—2024

Allman Company, which began operations at the beginning of 2024, produces various products on a contract basis. Each contract generates a gross profit of $80,000. Some of Allman's contracts provide for the customer to pay on an installment basis. Under these contracts, Allman collects one-fifth of the contract revenue evenly over the current year and in each of the following four years. For financial reporting purposes, the company recognizes gross profit in the year of completion (accrual basis); for tax purposes, Allman recognizes gross profit in the year cash is collected (installment basis).

Presented below is information related to Allman's operations for 2024.

1. In 2024, the company completed seven contracts that allow for the customer to pay on an installment basis. Allman recognized the related gross profit of $560,000 for financial reporting purposes. It reported only $112,000 of gross profit on installment sales on the 2024 tax return. The company expects future collections on the related installment receivables to result in taxable amounts of $112,000 in each of the next four years.
2. At the beginning of 2024, Allman Company purchased depreciable assets with a cost of $540,000. For financial reporting purposes, Allman depreciates these assets using the straight-line method over a six-year service life. For tax purposes, the assets fall in the five-year recovery class, and Allman uses the MACRS system. The depreciation schedules for both financial reporting and tax purposes are as follows.

Year	Depreciation for Financial Reporting Purposes	Depreciation for Tax Purposes	Difference
2024	$ 90,000	$108,000	$(18,000)
2025	90,000	172,800	(82,800)
2026	90,000	103,680	(13,680)
2027	90,000	62,208	27,792
2028	90,000	62,208	27,792
2029	90,000	31,104	58,896
	$540,000	$540,000	$ –0–

3. The company warrants its product for two years from the date of completion of a contract. During 2024, the product warranty liability accrued for financial reporting purposes was $200,000, and the amount paid for the satisfaction of warranty liability was $44,000. Allman expects to settle the remaining $156,000 by expenditures of $56,000 in 2025 and $100,000 in 2026.
4. In 2024, nontaxable municipal bond interest revenue was $28,000.
5. During 2024, nondeductible fines and penalties of $26,000 were paid.
6. Pretax financial income for 2024 amounts to $412,000.
7. Tax rates enacted before the end of 2024 were:

2024	30%
2025 and later years	20%

8. The accounting period is the calendar year.
9. The company is expected to have taxable income in all future years.

Taxable Income and Income Taxes Payable—2024

The first step is to determine Allman Company's income taxes payable for 2024 by calculating its taxable income. **Illustration 18A.1** shows this computation.

ILLUSTRATION 18A.1 Computation of Taxable Income, 2024

Pretax financial income for 2024	$412,000
Permanent differences:	
Nontaxable revenue-municipal bond interest	(28,000)
Nondeductible expenses—fines and penalties	26,000
Temporary differences:	
Excess gross profit per books ($560,000 – $112,000)	(448,000)
Excess depreciation per tax ($108,000 – $90,000)	(18,000)
Excess warranty expense per books ($200,000 – $44,000)	156,000
Taxable income for 2024	$100,000

Allman computes income taxes payable on taxable income for $100,000 as shown in **Illustration 18A.2**.

ILLUSTRATION 18A.2 Computation of Income Taxes Payable, End of 2024

Taxable income for 2024	$100,000
Tax rate	30%
Income taxes payable (current tax expense) for 2024	$ 30,000

Computing Deferred Income Taxes—End of 2024

The schedule in **Illustration 18A.3** summarizes the temporary differences and the resulting future taxable and deductible amounts.

ILLUSTRATION 18A.3 Schedule of Future Taxable and Deductible Amounts, End of 2024

	Future Years					
	2025	**2026**	**2027**	**2028**	**2029**	**Total**
Future taxable (deductible) amounts:						
Installment sales	$112,000	$112,000	$112,000	$112,000		$448,000
Depreciation	(82,800)	(13,680)	27,792	27,792	$58,896	18,000
Warranty costs	(56,000)	(100,000)				(156,000)

Allman computes the amounts of deferred income taxes to be reported at the end of 2024 as shown in **Illustration 18A.4**.

ILLUSTRATION 18A.4 Computation of Deferred Income Taxes, End of 2024

Temporary Difference	**Future Taxable (Deductible) Amounts**	**Tax Rate**	**Deferred Tax (Asset)**	**Deferred Tax Liability**
Installment sales	$448,000	20%		$89,600
Depreciation	18,000	20		3,600
Warranty costs	(156,000)	20	$(31,200)	
Totals	$310,000		$(31,200)	$93,200*

*Because only a single tax rate is involved in all relevant years, these totals can be reconciled: $310,000 × .20 = ($31,200) + $93,200.

A temporary difference is caused by the use of the accrual basis for financial reporting purposes and the installment method for tax purposes. This temporary difference will result in future taxable amounts and hence a deferred tax liability. Because of the installment contracts completed in 2024, a temporary difference of $448,000 originates that will reverse in equal amounts over the next four years. The company expects to have taxable income in all future years, and there is only one enacted tax rate applicable to all future years. Allman uses that rate (20%) to compute the entire deferred tax liability resulting from this temporary difference.

The temporary difference caused by different depreciation policies for books and for tax purposes originates over three years and then reverses over three years. This difference will cause deductible amounts in 2025 and 2026 and taxable amounts in 2027, 2028, and 2029. These amounts sum to a net future taxable amount of $18,000 (which is the cumulative temporary difference at the end of 2024). Because the company expects to have taxable income in all future years and because there is only one tax rate enacted for all of the relevant future years, Allman applies that rate to the net future taxable amount to determine the related net deferred tax liability.

The third temporary difference is caused by different methods of accounting for warranties. This difference will result in deductible amounts in each of the two future years it takes to reverse. Because the company expects to report a positive income on all future tax returns and because there is only one tax rate enacted for each of the relevant future years, Allman uses the 20% rate to calculate the resulting deferred tax asset.

Deferred Tax Expense (Benefit) and the Journal Entry to Record Income Taxes—2024

To determine the deferred tax expense (benefit), we need to compare the beginning and ending balances of the deferred income tax accounts. **Illustration 18A.5** shows that computation.

ILLUSTRATION 18A.5
Computation of Deferred Tax Expense (Benefit), 2024

Deferred tax asset at the end of 2024	$ 31,200
Deferred tax asset at the beginning of 2024	–0–
Deferred tax expense (benefit)	$(31,200)
Deferred tax liability at the end of 2024	$ 93,200
Deferred tax liability at the beginning of 2024	–0–
Deferred tax expense (benefit)	$ 93,200

The $31,200 increase in the deferred tax asset causes a deferred tax benefit to be reported in the income statement. The $93,200 increase in the deferred tax liability during 2024 results in a deferred tax expense. As **Illustration 18A.6** shows, these two amounts **net** to a deferred tax expense of $62,000 for 2024.

ILLUSTRATION 18A.6
Computation of Net Deferred Tax Expense, 2024

Deferred tax expense (benefit)	$(31,200)
Deferred tax expense (benefit)	93,200
Net deferred tax expense for 2024	$ 62,000

Allman then computes the total income tax expense as shown in **Illustration 18A.7**.

ILLUSTRATION 18A.7
Computation of Total Income Tax Expense, 2024

Current tax expense for 2024	$30,000
Deferred tax expense for 2024	62,000
Income tax expense (total) for 2024	$92,000

Allman records income taxes payable, deferred income taxes, and income tax expense as follows.

Income Tax Expense	92,000	
Deferred Tax Asset	31,200	
Income Taxes Payable		30,000
Deferred Tax Liability		93,200

Financial Statement Presentation—2024

Companies should classify deferred tax assets and liabilities as noncurrent on the balance sheet. Multiple categories of deferred taxes are classified into a net noncurrent amount. **Illustration 18A.8** shows the classification of Allman's deferred tax accounts at the end of 2024.

ILLUSTRATION 18A.8 Classification of Deferred Tax Accounts, End of 2024

	Resulting Deferred Tax	
Temporary Difference	**(Asset)**	**Liability**
Installment sales		$89,600
Depreciation		3,600
Warranty costs	$(31,200)	
Totals	$(31,200)	$93,200

Thus, Allman reports a net noncurrent deferred tax liability of $62,000 ($93,200 – $31,200). The balance sheet at the end of 2024 reports the amounts shown in **Illustration 18A.9**.

ILLUSTRATION 18A.9 Balance Sheet Presentation of Deferred Taxes, 2024

Current liabilities	
Income taxes payable	$30,000
Long-term liabilities	
Deferred tax liability ($93,200 – $31,200)	$62,000

Illustration 18A.10 shows Allman's income statement for 2024.

ILLUSTRATION 18A.10 Income Statement Presentation of Income Tax Expense, 2024

Income before income taxes		$412,000
Income tax expense		
Current	$30,000	
Deferred	62,000	92,000
Net income		$320,000

Second Year—2025

1. During 2025, Allman collected $112,000 from customers for the receivables arising from contracts completed in 2024. The company expects recovery of the remaining receivables to result in taxable amounts of $112,000 in each of the following three years.
2. In 2025, the company completed four new contracts that allow for the customer to pay on an installment basis. These installment sales created new installment receivables. Future collections of these receivables will result in reporting gross profit of $64,000 for tax purposes in each of the next four years.
3. During 2025, Allman continued to depreciate the assets acquired in 2024 according to the depreciation schedules presented earlier. Thus, depreciation amounted to $90,000 for financial reporting purposes and $172,800 for tax purposes.
4. An analysis at the end of 2025, of the product warranty liability account, showed the following details.

Balance of liability at beginning of 2025	$156,000
Expense for 2025 income statement purposes	180,000
Amount paid for contracts completed in 2024	(56,000)
Amount paid for contracts completed in 2025	(50,000)
Balance of liability at end of 2025	$230,000

The balance of the liability is expected to require expenditures in the future as follows.

$100,000	in 2026 due to 2024 contracts
50,000	in 2026 due to 2025 contracts
80,000	in 2027 due to 2025 contracts
$230,000	

5. During 2025, nontaxable municipal bond interest revenue was $24,000.
6. Allman accrued a loss of $172,000 for financial reporting purposes because of pending litigation. This amount is not tax-deductible until the period the loss is realized, which the company estimates to be 2033.
7. Pretax financial income for 2025 amounts to $504,800.
8. The enacted tax rates still in effect are:

2024	30%
2025 and later years	20%

Taxable Income and Income Taxes Payable—2025

Allman computes taxable income for 2025 as shown in Illustration 18A.11.

ILLUSTRATION 18A.11 Computation of Taxable Income, 2025

Pretax financial income for 2025	$504,800
Permanent difference:	
Nontaxable revenue—municipal bond interest	(24,000)
Reversing temporary differences:	
Collection on 2024 Installment sales	112,000
Payments on warranties from 2024 contracts	(56,000)
Originating temporary differences:	
Excess gross profit per books—2025 contracts	(256,000)
Excess depreciation per tax	(82,800)
Excess warranty expense per books—2025 contracts	130,000
Loss accrual per books	172,000
Taxable income for 2025	$500,000

Income taxes payable for 2025 are as shown in Illustration 18A.12.

ILLUSTRATION 18A.12 Computation of Income Taxes Payable, End of 2025

Taxable income for 2025	$500,000
Tax rate	20%
Income taxes payable (current tax expense) for 2025	$100,000

Computing Deferred Income Taxes—End of 2025

The schedule in Illustration 18A.13 summarizes the temporary differences existing at the end of 2025 and the resulting future taxable and deductible amounts.

ILLUSTRATION 18A.13 Schedule of Future Taxable and Deductible Amounts, End of 2025

	Future Years					
	2026	2027	2028	2029	2033	Total
Future taxable (deductible) amounts:						
Installment sales—2024	$112,000	$112,000	$112,000			$336,000
Installment sales—2025	64,000	64,000	64,000	$64,000		256,000
Depreciation	(13,680)	27,792	27,792	58,896		100,800
Warranty costs	(150,000)	(80,000)				(230,000)
Loss accrual					$(172,000)	(172,000)

Allman computes the amounts of deferred income taxes to be reported at the end of 2025 as shown in **Illustration 18A.14**.

ILLUSTRATION 18A.14
Computation of Deferred Income Taxes, End of 2025

Temporary Difference	Future Taxable (Deductible) Amounts	Tax Rate	Deferred Tax (Asset)	Deferred Tax Liability
Installment sales	$592,000*	20%		$118,400
Depreciation	100,800	20		20,160
Warranty costs	(230,000)	20	$(46,000)	
Loss accrual	(172,000)	20	(34,400)	
Totals	$290,800		$(80,400)**	$138,560**

*Cumulative temporary difference = $336,000 + $256,000
**Because of a flat tax rate, these totals can be reconciled: $290,800 × .20 = $(80,400) + $138,560

Deferred Tax Expense (Benefit) and the Journal Entry to Record Income Taxes—2025

To determine the deferred tax expense (benefit), Allman must compare the beginning and ending balances of the deferred income tax accounts, as shown in **Illustration 18A.15**.

ILLUSTRATION 18A.15
Computation of Deferred Tax Expense (Benefit) 2025

Deferred tax asset at the end of 2025	$ 80,400
Deferred tax asset at the beginning of 2025	31,200
Deferred tax expense (benefit)	$ (49,200)
Deferred tax liability at the end of 2025	$138,560
Deferred tax liability at the beginning of 2025	93,200
Deferred tax expense (benefit)	$ 45,360

The deferred tax expense (benefit) and the total income tax expense for 2025 are, therefore, as shown in **Illustration 18A.16**.

ILLUSTRATION 18A.16
Classification of Deferred Tax Accounts, End of 2025

Deferred tax expense (benefit)	$(49,200)
Deferred tax expense (benefit)	45,360
Deferred tax benefit for 2025	(3,840)
Current tax expense for 2025	100,000
Income tax expense (total) for 2025	$ 96,160

The deferred tax expense of $45,360 and the deferred tax benefit of $49,200 net to a deferred tax benefit of $3,840 for 2025.

Allman records income taxes for 2025 with the following journal entry.

Income Tax Expense	96,160	
Deferred Tax Asset	49,200	
Income Taxes Payable		100,000
Deferred Tax Liability		45,360

Financial Statement Presentation—2025

Illustration 18A.17 shows the classification of Allman's deferred tax accounts at the end of 2025.

ILLUSTRATION 18A.17 Computation of Total Income Tax Expense, 2025

Temporary Difference	Resulting Deferred Tax (Asset)	Liability
Installment sales		$118,400
Depreciation		20,160
Warranty costs	$(46,000)	
Loss accrual	(34,400)	
Totals	$(80,400)	$138,560

Allman's balance sheet at the end of 2025 reports the amounts shown in Illustration 18A.18.

ILLUSTRATION 18A.18 Balance Sheet Presentation of Deferred Taxes, End of 2025

Current liabilities	
Income taxes payable	$100,000
Noncurrent liabilities	
Deferred tax liability ($138,560 − $80,400)	$58,160

Illustration 18A.19 shows the income statement for 2025.

ILLUSTRATION 18A.19 Income Statement Presentation of Income Tax Expense, 2025

Income before income taxes		$504,800
Income tax expense		
Current	$100,000	
Deferred	3,840	96,160
Net income		$408,640

APPENDIX **18B**

Accounting for Net Operating Loss Carrybacks

LEARNING OBJECTIVE *6

Explain the accounting for loss carrybacks.

The TCJA permitted the carryforward of current net operating losses to offset future taxable income. Prior rules for net operating losses permitted net operating losses to be carried back for two years and carried forward for 20 years. Under the TCJA, companies have indefinite carryforward periods.

However, the TCJA eliminated carryback provisions for NOLs. The carryback provision had been sort of a reprieve for money-losing companies that generated an NOL. That is, by carrying the NOL back to two profitable years on amended tax returns, net-loss companies could free up some cash in the year of the loss. In this appendix, we present the accounting for loss carrybacks as future tax laws may reinstitute carryback provisions.[9]

[9]In fact, the CARES Act (2020) reinstated the carryback provision for 2018, 2019, and 2020 tax years to help companies stem the negative effects of the global pandemic. As with carryforwards, carryback periods have varied over time. Indeed, as part of the Economic Recovery Act of 2009, Congress enacted a temporary extension of the carryback period from two to five years for operating losses incurred in 2008 and 2009 (during the financial crisis). It is estimated that the companies in the S&P 500 reaped a refund of $5 billion due to this change. See D. Zion, A. Varshney, and C. Cornett, "Spinning Losses into Gold," *Equity Research—Accounting and Tax*, Credit Suisse (November 12, 2009).

Loss Carryback

Through use of a **loss carryback**, a company may carry the net operating loss back two years and receive refunds for income taxes paid in those years. The company must apply the loss to the earlier year first and then to the second year. It may **carry forward** any loss remaining after the two-year carryback to offset future taxable income. **Illustration 18B.1** diagrams the loss carryback procedure, assuming a loss in 2025.

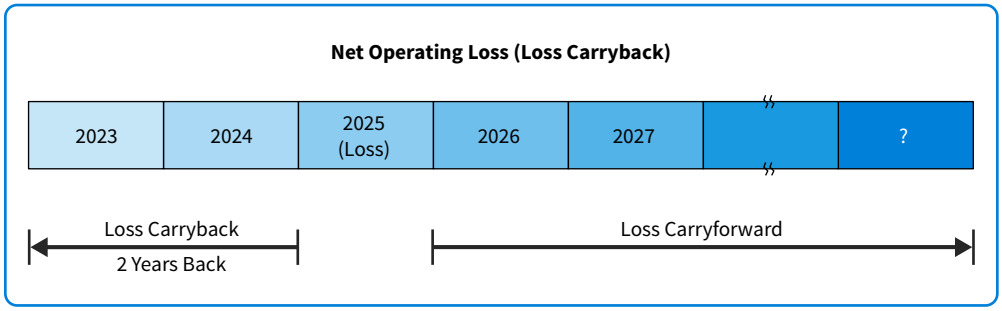


ILLUSTRATION 18B.1 Loss Carryback Procedure

Loss Carryback Example

To illustrate the accounting procedures for a net operating loss carryback, assume that Groh Inc. has no temporary or permanent differences. Groh experiences the following.

Year	Taxable Income or Loss	Tax Rate	Tax Paid
2022	$ 50,000	20%	$10,000
2023	100,000	15%	15,000
2024	200,000	25%	50,000
2025	(500,000)	–	–0–

In 2025, Groh incurs a net operating loss that it decides to carry back.

- Generally, Groh must apply the carryback first to the **second year preceding the loss year**. Therefore, it carries the loss back first to 2023.
- Then, Groh carries back any unused loss to 2024. Accordingly, Groh files amended tax returns for 2023 and 2024, receiving refunds for the $65,000 ($15,000 + $50,000) of taxes paid in those years.

For accounting as well as tax purposes, the $65,000 represents the **tax effect (tax benefit)** of the loss carryback. Groh should recognize this tax effect in 2025, the loss year. Since the tax loss gives rise to a refund that is both measurable and currently realizable, Groh should recognize the associated tax benefit in this loss period.

Groh makes the following journal entry for 2025.

Income Tax Refund Receivable	65,000	
Income Tax Expense (Loss Carryback)		65,000

Groh reports the account debited, **Income Tax Refund Receivable**, on the balance sheet as a current asset at December 31, 2025. It reports the account credited on the income statement for 2025 as shown in **Illustration 18B.2**.

Groh Inc.
Income Statement (partial) for 2025

Operating loss before income taxes	$(500,000)
Income tax benefit	
Income tax expense (loss carryback)	65,000
Net loss	$(435,000)

ILLUSTRATION 18B.2 Recognition of the Benefit of the Loss Carryback in the Loss Year

Since the $500,000 net operating loss for 2025 exceeds the $300,000 total taxable income from the two preceding years, Groh carries forward the remaining $200,000 loss.

Loss Carryback with Carryforward

If a carryback fails to fully absorb a net operating loss (as in the Groh example) or if the company decides not to carry the loss back, then it can carry forward the loss. To illustrate, return to the Groh example from the preceding section. In 2025, the company records the tax effect of the $200,000 loss carryforward as a deferred tax asset of $50,000 ($200,000 × .25), assuming that the enacted future tax rate is 25%. Groh records the benefits of the carryback and the carryforward in 2025 as follows.

To recognize benefit of loss carryback:

Income Tax Refund Receivable	65,000	
Income Tax Expense (Loss Carryback)		65,000

To recognize benefit of loss carryforward:

Deferred Tax Asset	50,000	
Income Tax Expense (Loss Carryforward)		50,000

Groh realizes the income tax refund receivable of $65,000 immediately as a refund of taxes paid in the past. It establishes a Deferred Tax Asset account for the benefits of future tax savings. The two accounts credited are contra income tax expense items, which Groh presents on the 2025 income statement shown in **Illustration 18B.3**.

ILLUSTRATION 18B.3 Recognition of the Benefit of the Loss Carryback and Carryforward in the Loss Year

Groh Inc.
Income Statement (partial) for 2025

Operating loss before income taxes		$(500,000)
Income tax benefit		
Income tax expense (loss carryback)	$65,000	
Income tax expense (loss carryforward)	50,000	115,000
Net loss		$(385,000)

The **current tax benefit** of $65,000 is the income tax refundable for the year. As shown earlier, Groh determines this amount by applying the carryback provisions of the tax law to the taxable loss for 2025. The $50,000 is the **deferred tax benefit** for the year, which results from an increase in the deferred tax asset, as discussed in the chapter.

Review and Practice

taxable temporary difference 18-15
*tax effect (tax benefit) 18-45
temporary difference 18-4
uncertain tax positions 18-35
valuation allowance 18-12

Learning Objectives Review

1 Describe the fundamentals of accounting for income taxes.

Companies compute pretax financial income (or income for book purposes) in accordance with generally accepted accounting principles. They compute taxable income (or income for tax purposes) in accordance with prescribed tax regulations. Because tax regulations and GAAP differ in many ways, so frequently do pretax financial income and taxable income. Differences may exist, for example, in the timing of revenue recognition and the timing of expense recognition.

Deferred tax liability. Revenue recognized for book purposes in the period earned but deferred and reported as revenue for tax purposes when collected results in future taxable amounts. The future taxable amounts will occur in the periods the company recovers the receivable and reports the collections as revenue for tax purposes. This results in a deferred tax liability.

Deferred tax asset. An accrued warranty expense that a company pays for and deducts for tax purposes, in a period later than the period in which it incurs and recognizes it for book purposes, results in future deductible amounts. The future deductible amounts will occur in the periods during which the company settles the related liability for book purposes. This results in a deferred tax asset.

Valuation allowance. A deferred tax asset should be reduced by a valuation allowance if, based on all available evidence, it is more likely than not (a level of likelihood that is at least slightly more than 50%) that it will not realize some portion or all of the deferred tax asset. The company should carefully consider all available evidence, both positive and negative, to determine whether, based on the weight of available evidence, it needs a valuation allowance.

2 Identify additional issues in accounting for income taxes.

Significant components of income tax expense should be disclosed in the income statement or in the notes to the financial statements. The most commonly encountered components are the current expense (or benefit) and the deferred expense (or benefit).

Examples of temporary differences are (1) revenues or gains that are taxable after recognition in financial income, (2) expenses or losses that are deductible after recognition in financial income, (3) revenues or gains that are taxable before recognition in financial income, and (4) expenses or losses that are deductible before recognition in financial income.

Examples of permanent differences are (1) items recognized for financial reporting purposes but not for tax purposes, and (2) items recognized for tax purposes but not for financial reporting purposes.

Companies may use tax rates other than the current rate only after enactment of the future tax rates. When a change in the tax rate is enacted, a company should immediately recognize its effect on the deferred income tax accounts. The company reports the effects as an adjustment to income tax expense in the period of the change.

3 Explain the accounting for loss carryforwards.

A company may carry a net operating loss forward indefinitely. A valuation allowance may be established for the deferred tax asset that arises from the carryforward, depending on uncertainty about future taxable income.

4 Describe the presentation of deferred income taxes in financial statements.

Companies report deferred tax accounts on the balance sheet as assets and liabilities. These deferred tax accounts are classified as a net noncurrent amount.

Companies apply the following basic principles in accounting for income taxes at the date of the financial statements. (1) Recognize a current tax liability or asset for the estimated taxes payable or refundable on the tax return for the current year. (2) Recognize a deferred tax liability or asset for the estimated future tax effects attributable to temporary differences and carryforwards using the enacted tax rate. (3) Base the measurement of current and deferred tax liabilities and assets on provisions of the enacted tax law. (4) Reduce the measurement of deferred tax assets, if necessary, by the amount of any tax benefits that, based on available evidence, companies do not expect to realize.

*5 Apply the concepts and procedures of interperiod tax allocation.

Accounting for deferred taxes involves the following steps. (1) Calculate taxable income and income taxes payable for the year. (2) Compute deferred income taxes at the end of the year. (3) Determine deferred tax expense (benefit) and make the journal entry to record income taxes. (4) Classify the net deferred tax asset or liability as noncurrent in the financial statements.

*6 Explain the accounting for loss carrybacks.

When permitted by law, a company may carry a net operating loss back two years and receive refunds for taxes paid in those years. Any loss remaining after the two-year carryback may be carried forward to offset future taxable income.

Enhanced Review and Practice

Go to Wiley Course Resources for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Exercises, Problems, Data Analytics Activities, Problem Solution Walkthrough Videos, and many more assessment tools and resources are available for practice in Wiley Course Resources.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

Questions

1. Explain the difference between pretax financial income and taxable income.

2. What are the two objectives of accounting for income taxes?

3. Explain the meaning of a temporary difference as it relates to deferred tax computations, and give three examples.

4. Differentiate between an originating temporary difference and a reversing difference.

5. The book basis of depreciable assets for Erwin Co. is $900,000, and the tax basis is $700,000 at the end of 2026. The enacted tax rate is 17% for all periods. Determine the amount of deferred taxes to be reported on the balance sheet at the end of 2026.

6. Roth Inc. has a deferred tax liability of $68,000 at the beginning of 2026. At the end of 2026, it reports accounts receivable on the books at $90,000 and the tax basis at zero (its only temporary difference). If the enacted tax rate is 17% for all periods, and income taxes payable for the period is $230,000, determine the amount of total income tax expense to report for 2026.

7. What is the difference between a future taxable amount and a future deductible amount? When is it appropriate to record a valuation account for a deferred tax asset?

8. Pretax financial income for Lake Inc. is $300,000, and its taxable income is $100,000 for 2026. Its only temporary difference at the end of the period relates to a $70,000 difference due to excess depreciation for tax purposes. If the tax rate is 20% for all periods, compute the amount of income tax expense to report in 2026. No deferred income taxes existed at the beginning of the year.

9. Feagler Company's current income taxes payable related to its taxable income for 2025 is $460,000. In addition, Feagler's deferred tax asset decreased $20,000 during 2025. What is Feagler's income tax expense for 2025?

10. Lee Company's current income taxes payable related to its taxable income for 2025 is $320,000. In addition, Lee's deferred tax liability increased $40,000 and its deferred tax asset increased $10,000 during 2025. What is Lee's income tax expense for 2025?

11. How are deferred tax assets and deferred tax liabilities reported on the balance sheet?

12. Interest on municipal bonds is referred to as a permanent difference when determining the proper amount to report for deferred taxes. Explain the meaning of permanent differences, and give two other examples.

13. At the end of the year, Falabella Co. has pretax financial income of $550,000. Included in the $550,000 is $70,000 interest income on municipal bonds, $25,000 fine for dumping hazardous waste, and depreciation of $60,000. Depreciation for tax purposes is $45,000. Compute income taxes payable, assuming the tax rate is 30% for all periods.

14. Addison Co. has one temporary difference at the beginning of 2025 of $500,000. The deferred tax liability established for this amount is $150,000, based on a tax rate of 30%. The temporary difference will provide the following taxable amounts: $100,000 in 2026, $200,000 in 2027, and $200,000 in 2028. If a new tax rate for 2028 of 20% is enacted into law at the end of 2025, what is the journal entry necessary in 2025 (if any) to adjust deferred taxes?

15. What are some of the reasons that the components of income tax expense should be disclosed and a reconciliation between the effective tax rate and the statutory tax rate be provided?

16. Describe a "loss carryforward." Discuss the uncertainty when it arises.

17. What is the possible treatment for tax purposes of a net operating loss? What is the proper treatment of a net operating loss for financial reporting purposes?

18. What controversy relates to the accounting for net operating loss carryforwards?

19. What is an uncertain tax position, and what are the general guidelines for accounting for uncertain tax positions?

Brief Exercises

BE18.1 (LO 1) In 2025, Amirante Corporation had pretax financial income of $168,000 and taxable income of $120,000. The difference is due to the use of different depreciation methods for tax and accounting purposes. The effective tax rate is 20%. Compute the amount to be reported as income taxes payable at December 31, 2025.

BE18.2 (LO 1) Oxford Corporation began operations in 2025 and reported pretax financial income of $225,000 for the year. Oxford's tax depreciation exceeded its book depreciation by $40,000. Oxford's tax rate for 2025 and years thereafter is 30%. In its December 31, 2025, balance sheet, what amount of deferred tax liability should be reported?

BE18.3 (LO 1, 2) Using the information from BE18.2, assume this is the only difference between Oxford's pretax financial income and taxable income. Prepare the journal entry to record the income tax expense, deferred income taxes, and income taxes payable, and show how the deferred tax liability will be classified on the December 31, 2025, balance sheet.

BE18.4 (LO 1, 2) At December 31, 2025, Appaloosa Corporation had a deferred tax liability of $25,000. At December 31, 2026, the deferred tax liability is $42,000. The corporation's 2026 current tax expense is $48,000. What amount should Appaloosa report as total 2026 income tax expense?

BE18.5 (LO 1, 2) At December 31, 2025, Suffolk Corporation had an estimated warranty liability of $105,000 for accounting purposes and $0 for tax purposes. (The warranty costs are not deductible until paid.) The effective tax rate is 20%. Compute the amount Suffolk should report as a deferred tax asset at December 31, 2025.

BE18.6 (LO 1, 2) At December 31, 2025, Percheron Inc. had a deferred tax asset of $30,000. At December 31, 2026, the deferred tax asset is $59,000. The corporation's 2026 current tax expense is $61,000. What amount should Percheron report as total 2026 income tax expense?

BE18.7 (LO 1, 2) At December 31, 2025, Hillyard Corporation has a deferred tax asset of $200,000. After a careful review of all available evidence, it is determined that it is more likely than not that $60,000 of this deferred tax asset will not be realized. Prepare the necessary journal entry.

BE18.8 (LO 1, 2) Mitchell Corporation had income before income taxes of $195,000 in 2025. Mitchell's current income tax expense is $24,000, and deferred income tax expense is $15,000. Prepare Mitchell's 2025 income statement, beginning with "Income before income taxes."

BE18.9 (LO 1, 2) Shetland Inc. had pretax financial income of $154,000 in 2025. Included in the computation of that amount is insurance expense of $4,000 which is not deductible for tax purposes. In addition, depreciation for tax purposes exceeds accounting depreciation by $10,000. Prepare Shetland's journal entry to record 2025 taxes, assuming a tax rate of 25%.

BE18.10 (LO 1, 2) Clydesdale Corporation has a cumulative temporary difference related to depreciation of $580,000 at December 31, 2025. This difference will reverse as follows: 2026, $42,000; 2027, $244,000; and 2028, $294,000. Enacted tax rates are 17% for 2026 and 2027, and 20% for 2028. Compute the amount Clydesdale should report as a deferred tax liability at December 31, 2025.

BE18.11 (LO 2) At December 31, 2025, Fell Corporation had a deferred tax liability of $340,000, resulting from future taxable amounts of $2,000,000 and an enacted tax rate of 17%. In May 2026, a new income tax act is signed into law that raises the tax rate to 20% for 2026 and future years. Prepare the journal entry for Fell to adjust the deferred tax liability.

BE18.12 (LO 3) Rode Inc. incurred a net operating loss of $500,000 in 2025. The tax rate for all years is 20%. Prepare the journal entries to record the benefits of the loss carryforward. Rode expects to return to profitability in 2026.

BE18.13 (LO 3) Use the information for Rode Inc. given in BE18.12. Assume that it is more likely than not that the entire net operating loss carryforward will not be realized in future years. Prepare all the journal entries necessary at the end of 2025.

BE18.14 (LO 4) Youngman Corporation has temporary differences at December 31, 2025, that result in the following deferred taxes.

Deferred tax liability related to depreciation difference	$38,000
Deferred tax asset related to warranty liability	62,000
Deferred tax liability related to revenue recognition	96,000
Deferred tax asset related to litigation accruals	27,000

Indicate how these balances would be presented in Youngman's December 31, 2025, balance sheet.

***BE18.15 (LO 6)** Nolan Corporation had the following tax information.

Year	Taxable Income	Tax Rate	Taxes Paid
2023	$300,000	35%	$105,000
2024	325,000	30	97,500
2025	400,000	30	120,000

In 2026, Nolan suffered a net operating loss of $480,000, which it elected to carryback. The 2026 enacted tax rate is 29%. Prepare Nolan's entry to record the effect of the loss carryback.

***BE18.16 (LO 6)** Sylvie Inc. incurred a net operating loss of $500,000 in 2025. Combined income for 2023 and 2024 was $350,000. The tax rate for all years is 20%. Sylvie elects the carryback option. Prepare the journal entries to record the benefits of the loss carryback and the loss carryforward. Sylvie expects to return to profitability in 2026.

Exercises

E18.1 (LO 1, 2) Excel (One Temporary Difference, Future Taxable Amounts, One Rate, No Beginning Deferred Taxes) South Carolina Corporation has one temporary difference at the end of 2025 that will reverse and cause taxable amounts of $55,000 in 2026, $60,000 in 2027, and $65,000 in 2028. South Carolina's pretax financial income for 2025 is $300,000, and the tax rate is 30% for all years. There are no deferred taxes at the beginning of 2025.

Instructions

a. Compute taxable income and income taxes payable for 2025.

b. Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2025.

c. Prepare the income tax expense section of the income statement for 2025, beginning with the line "Income before income taxes."

E18.2 (LO 1, 2) (Two Differences, No Beginning Deferred Taxes, Tracked through 2 Years) The following information is available for Wenger Corporation for 2024 (its first year of operations).

1. Excess of tax depreciation over book depreciation, $40,000. This $40,000 difference will reverse equally over the years 2025–2028.

2. Deferral, for book purposes, of $20,000 of rent received in advance. The rent will be recognized in 2025.

3. Pretax financial income, $300,000.

4. Tax rate for all years, 20%.

Instructions

a. Compute taxable income for 2024.

b. Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2024.

c. Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2025, assuming taxable income of $325,000.

E18.3 (LO 1, 2) Excel (One Temporary Difference, Future Taxable Amounts, One Rate, Beginning Deferred Taxes) Bandung Corporation began 2025 with a $46,000 balance in the Deferred Tax Liability account. At the end of 2025, the related cumulative temporary difference amounts to $350,000, and it will reverse evenly over the next 2 years. Pretax accounting income for 2025 is $525,000, the tax rate for all years is 20%, and taxable income for 2025 is $405,000.

Instructions

a. Compute income taxes payable for 2025.

b. Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2025.

c. Prepare the income tax expense section of the income statement for 2025 beginning with the line "Income before income taxes."

E18.4 (LO 1, 2) (Three Differences, Compute Taxable Income, Entry for Taxes) Zurich Company reports pretax financial income of $70,000 for 2025. The following items cause taxable income to be different than pretax financial income.

1. Depreciation on the tax return is greater than depreciation on the income statement by $16,000.

2. Rent collected on the tax return is greater than rent recognized on the income statement by $22,000.

3. Fines for pollution appear as an expense of $11,000 on the income statement.

Zurich's tax rate is 30% for all years, and the company expects to report taxable income in all future years. There are no deferred taxes at the beginning of 2025.

Instructions

a. Compute taxable income and income taxes payable for 2025.

b. Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2025.

c. Prepare the income tax expense section of the income statement for 2025, beginning with the line "Income before income taxes."

d. Compute the effective income tax rate for 2025.

E18.5 (LO 1, 2) (Two Temporary Differences, One Rate, Beginning Deferred Taxes) The following facts relate to Krung Thep Corporation.

1. Deferred tax liability, January 1, 2025, $20,000.
2. Deferred tax asset, January 1, 2025, $0.
3. Taxable income for 2025, $95,000.
4. Pretax financial income for 2025, $200,000.
5. Cumulative temporary difference at December 31, 2025, giving rise to future taxable amounts, $240,000.
6. Cumulative temporary difference at December 31, 2025, giving rise to future deductible amounts, $35,000.
7. Tax rate for all years, 20%.
8. The company is expected to operate profitably in the future.

Instructions

a. Compute income taxes payable for 2025.

b. Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2025.

c. Prepare the income tax expense section of the income statement for 2025, beginning with the line "Income before income taxes."

E18.6 (LO 1, 2) (Identify Temporary or Permanent Differences) Listed below are items that are commonly accounted for differently for financial reporting purposes than they are for tax purposes.

Instructions

For each item below, indicate whether it involves:

1. A temporary difference that will result in future deductible amounts and, therefore, will usually give rise to a deferred income tax asset.
2. A temporary difference that will result in future taxable amounts and, therefore, will usually give rise to a deferred income tax liability.
3. A permanent difference.

Use the appropriate number to indicate your answer for each.

a. _____The MACRS depreciation system is used for tax purposes, and the straight-line depreciation method is used for financial reporting purposes for some plant assets.

b. _____A landlord collects some rents in advance. Rents received are taxable in the period when they are received.

c. _____Expenses are incurred in obtaining tax-exempt income.

d. _____Costs of guarantees and warranties are estimated and accrued for financial reporting purposes.

e. _____Installment sales of investments are accounted for by the accrual method for financial reporting purposes and the installment method for tax purposes.

f. _____For some assets, straight-line depreciation is used for both financial reporting purposes and tax purposes, but the assets' lives are shorter for tax purposes.

g. _____Interest is received on an investment in tax-exempt municipal obligations.

h. _____Proceeds are received from a life insurance company because of the death of a key officer. (The company carries a policy on key officers.)

i. _____The tax return reports a deduction for 80% of the dividends received from U.S. corporations. The cost method is used in accounting for the related investments for financial reporting purposes.

j. _____Estimated losses on pending lawsuits and claims are accrued for books. These losses are tax-deductible in the period(s) when the related liabilities are settled.

k. _____Expenses on stock options are accrued for financial reporting purposes.

E18.7 (LO 1, 2) (Terminology, Relationships, Computations, Entries)

Instructions

Complete the following statements by filling in the blanks.

a. In a period in which a taxable temporary difference reverses, the reversal will cause taxable income to be _____ (less than, greater than) pretax financial income.

b. If a $38,000 balance in Deferred Tax Asset was computed by use of a 20% rate, the underlying cumulative temporary difference amounts to $_____.

c. Deferred taxes _____ (are, are not) recorded to account for permanent differences.

d. If a taxable temporary difference originates in 2025, it will cause taxable income for 2025 to be _____ (less than, greater than) pretax financial income for 2025.

e. If total tax expense is $50,000 and deferred tax expense is $65,000, then the current portion of the expense computation is referred to as current tax _____ (expense, benefit) of $_____.

f. If a corporation's tax return shows taxable income of $100,000 for Year 2 and a tax rate of 20%, how much will appear on the December 31, Year 2, balance sheet for "Income taxes payable" if the company has made estimated tax payments of $18,250 for Year 2? $_____.

g. An increase in the Deferred Tax Liability account on the balance sheet is recorded by a _____ (debit, credit) to the Income Tax Expense account.

h. An income statement that reports current tax expense of $82,000 and deferred tax benefit of $23,000 will report total income tax expense of $_____.

i. A valuation account is needed whenever it is judged to be _____ that a portion of a deferred tax asset _____ (will be, will not be) realized.

j. If the tax return shows total taxes due for the period of $75,000 but the income statement shows total income tax expense of $55,000, the difference of $20,000 is referred to as deferred tax _____ (expense, benefit).

E18.8 (LO 1, 2) (Two Temporary Differences, One Rate, 3 Years) Button Company has the following two temporary differences between its income tax expense and income taxes payable.

	2025	2026	2027
Pretax financial income	$840,000	$910,000	$945,000
Excess depreciation expense on tax return	(30,000)	(40,000)	(10,000)
Excess warranty expense in financial income	20,000	10,000	8,000
Taxable income	$830,000	$880,000	$943,000

The income tax rate for all years is 20%.

Instructions

a. Assuming there were no temporary differences prior to 2025, prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2025, 2026, and 2027.

b. Indicate how deferred taxes will be reported on the 2027 balance sheet. Button's product warranty is for 12 months.

c. Prepare the income tax expense section of the income statement for 2027, beginning with the line "Pretax financial income."

E18.9 (LO 4) (Three Differences, Classify Deferred Taxes) At December 31, 2024, Belmont Company had a net deferred tax liability of $375,000. An explanation of the items that compose this balance is as follows.

Temporary Differences	Resulting Balances in Deferred Taxes
1. Excess of tax depreciation over book depreciation.	$200,000
2. Accrual, for book purposes, of estimated loss contingency from pending lawsuit that is expected to be settled in 2025. The loss will be deducted on the tax return when paid.	(50,000)
3. Accrual method used for book purposes and installment method used for tax purposes for an isolated installment sale of an investment.	225,000
	$375,000

In analyzing the temporary differences, you find that $30,000 of the depreciation temporary difference will reverse in 2025, and $120,000 of the temporary difference due to the installment sale will reverse in 2025. The tax rate for all years is 20%.

Instructions

Indicate the manner in which deferred taxes should be presented on Belmont Company's December 31, 2024, balance sheet.

E18.10 (LO 1, 2) (Two Temporary Differences, One Rate, Beginning Deferred Taxes, Compute Pretax Financial Income) The following facts relate to Duncan Corporation.

1. Deferred tax liability, January 1, 2025, $30,000.
2. Deferred tax asset, January 1, 2025, $10,000.
3. Taxable income for 2025, $105,000.
4. Cumulative temporary difference at December 31, 2025, giving rise to future taxable amounts, $230,000.
5. Cumulative temporary difference at December 31, 2025, giving rise to future deductible amounts, $95,000.
6. Tax rate for all years, 20%. No permanent differences exist.
7. The company is expected to operate profitably in the future.

Instructions

a. Compute the amount of pretax financial income for 2025.

b. Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2025.

c. Prepare the income tax expense section of the income statement for 2025 beginning with the line "Income before income taxes."

d. Compute the effective tax rate for 2025.

E18.11 (LO 1, 2) (One Difference, Multiple Rates, Effect of Beginning Balance versus No Beginning Deferred Taxes) At the end of 2024, Lucretia McEvil Company has $180,000 of cumulative temporary differences that will result in reporting the following future taxable amounts.

2025	$ 60,000
2026	50,000
2027	40,000
2028	30,000
	$180,000

Tax rates enacted as of the beginning of 2023 are:

2023 and 2024	40%
2025 and 2026	30%
2027 and later	25%

McEvil's taxable income for 2024 is $320,000. Taxable income is expected in all future years.

Instructions

a. Prepare the journal entry for McEvil to record income taxes payable, deferred income taxes, and income tax expense for 2024, assuming that there were no deferred taxes at the end of 2023.

b. Prepare the journal entry for McEvil to record income taxes payable, deferred income taxes, and income tax expense for 2024, assuming that there was a balance of $22,000 in a Deferred Tax Liability account at the end of 2023.

E18.12 (LO 1, 2) (Deferred Tax Asset with and without Valuation Account) Jennifer Capriati Corp. has a deferred tax asset account with a balance of $75,000 at the end of 2024 due to a single cumulative temporary difference of $375,000. At the end of 2025, this same temporary difference has increased to a cumulative amount of $450,000. Taxable income for 2025 is $820,000. The tax rate is 20% for all years. No valuation account related to the deferred tax asset is in existence at the end of 2024.

Instructions

a. Record income tax expense, deferred income taxes, and income taxes payable for 2025, assuming that it is more likely than not that the deferred tax asset will be realized.

b. Assuming that it is more likely than not that $15,000 of the deferred tax asset will not be realized, prepare the journal entry at the end of 2025 to record the valuation account.

E18.13 (LO 1, 2) (Deferred Tax Asset with Previous Valuation Account) Assume the same information as E18.12, except that at the end of 2024, Jennifer Capriati Corp. had a valuation account related to its deferred tax asset of $22,500.

Instructions

a. Record income tax expense, deferred income taxes, and income taxes payable for 2025, assuming that it is more likely than not that the deferred tax asset will be realized in full.

b. Record income tax expense, deferred income taxes, and income taxes payable for 2025, assuming that it is more likely than not that none of the deferred tax asset will be realized.

E18.14 (LO 1, 2, 4) (Deferred Tax Liability, Change in Tax Rate, Prepare Section of Income Statement) Novotna Inc.'s only temporary difference at the beginning and end of 2024 is caused by a $3 million deferred gain for tax purposes for an installment sale of a plant asset, and the related receivable (only one-half of which is classified as a current asset) is due in equal installments in 2025 and 2026. The related deferred tax liability at the beginning of the year is $900,000. In the third quarter of 2024, a new tax rate of 20% is enacted into law and is scheduled to become effective for 2026. Taxable income for 2024 is $5,000,000, and taxable income is expected in all future years.

Instructions

a. Determine the amount reported as a deferred tax liability at the end of 2024. Indicate proper classification(s).

b. Prepare the journal entry (if any) necessary to adjust the deferred tax liability when the new tax rate is enacted into law.

c. Draft the income tax expense portion of the income statement for 2024. Begin with the line "Income before income taxes." Assume no permanent differences exist.

E18.15 (LO 1, 2) (Two Temporary Differences, Tracked through 3 Years, Multiple Rates) Taxable income and pretax financial income would be identical for Huber Co. except for its treatments of gross profit on installment sales and estimated costs of warranties. The following income computations have been prepared.

Taxable Income	**2024**	**2025**	**2026**
Excess of revenues over expenses (excluding two temporary differences)	$160,000	$210,000	$90,000
Installment gross profit collected	8,000	8,000	8,000
Expenditures for warranties	(5,000)	(5,000)	(5,000)
Taxable income	$163,000	$213,000	$93,000
Pretax Financial Income			
Excess of revenues over expenses (excluding two temporary differences)	$160,000	$210,000	$90,000
Installment gross profit recognized	24,000	–0–	–0–
Estimated cost of warranties	(15,000)	–0–	–0–
Income before taxes	$169,000	$210,000	$90,000

The tax rates in effect are 2024, 20%; 2025 and 2026, 25%. All tax rates were enacted into law on January 1, 2024. No deferred income taxes existed at the beginning of 2024. Taxable income is expected in all future years.

Instructions

Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2024, 2025, and 2026.

E18.16 (LO 1, 2) (Three Differences, Multiple Rates, Future Taxable Income) During 2025, Kate Holmes Co.'s first year of operations, the company reports pretax financial income at $250,000. Holmes's enacted tax rate is 45% for 2025 and 20% for all later years. Holmes expects to have taxable income in each of the next 5 years. The effects on future tax returns of temporary differences existing at December 31, 2025, are summarized as follows.

	Future Years					
	2026	**2027**	**2028**	**2029**	**2030**	**Total**
Future taxable (deductible) amounts:						
Installment sales	$32,000	$32,000	$32,000			$ 96,000
Depreciation	6,000	6,000	6,000	$6,000	$6,000	30,000
Unearned rent	(50,000)	(50,000)				(100,000)

Instructions

a. Complete the schedule below to compute deferred taxes at December 31, 2025.

Temporary Difference	Future Taxable (Deductible) Amounts	Tax Rate	December 31, 2025 Deferred Tax (Asset)	December 31, 2025 Deferred Tax Liability
Installment sales	$ 96,000			
Depreciation	30,000			
Unearned rent	(100,000)			
Totals	$			

b. Compute taxable income for 2025.

c. Prepare the journal entry to record income taxes payable, deferred taxes, and income tax expense for 2025.

E18.17 (LO 1, 2) (Two Differences, One Rate, Beginning Deferred Balance, Compute Pretax Financial Income) Andy McDowell Co. establishes a $100 million liability at the end of 2025 for the estimated site-cleanup costs at two of its manufacturing facilities. All related closing costs will be paid and deducted on the tax return in 2026. Also, at the end of 2025, the company has $50 million of temporary differences due to excess depreciation for tax purposes, $7 million of which will reverse in 2026.

The enacted tax rate for all years is 20%, and the company pays taxes of $32 million on $160 million of taxable income in 2025. McDowell expects to have taxable income in 2026.

Instructions

a. Determine the deferred taxes to be reported at the end of 2025.

b. Indicate how the deferred taxes computed in (a) are to be reported on the balance sheet.

c. Assuming that the only deferred tax account at the beginning of 2025 was a deferred tax liability of $5,000,000, draft the income tax expense portion of the income statement for 2025, beginning with the line "Income before income taxes." (*Hint:* You must first compute (1) the amount of temporary difference underlying the beginning $5,000,000 deferred tax liability, then (2) the amount of temporary differences originating or reversing during the year, and then (3) the amount of pretax financial income.)

E18.18 (LO 1, 2) (Two Differences, No Beginning Deferred Taxes, Multiple Rates) Teri Hatcher Inc., in its first year of operations, has the following differences between the book basis and tax basis of its assets and liabilities at the end of 2024.

	Book Basis	Tax Basis
Equipment (net)	$400,000	$340,000
Estimated warranty liability	200,000	–0–

It is estimated that the warranty liability will be settled in 2025. The difference in equipment (net) will result in taxable amounts of $20,000 in 2025, $30,000 in 2026, and $10,000 in 2027. The company has taxable income of $520,000 in 2024. As of the beginning of 2024, the enacted tax rate is 34% for 2024–2026, and 30% for 2027. Hatcher expects to report taxable income through 2027.

Instructions

a. Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2024.

b. Indicate how deferred income taxes will be reported on the balance sheet at the end of 2024.

E18.19 (LO 1, 2, 4) (Two Temporary Differences, Multiple Rates, Future Taxable Income) Nadal Inc. has two temporary differences at the end of 2024. The first difference stems from installment sales, and the second one results from the accrual of a loss contingency. Nadal's accounting department has developed a schedule of future taxable and deductible amounts related to these temporary differences as follows.

	2025	2026	2027	2028
Taxable amounts	$40,000	$50,000	$60,000	$80,000
Deductible amounts		(15,000)	(19,000)	
	$40,000	$35,000	$41,000	$80,000

As of the beginning of 2024, the enacted tax rate is 34% for 2024 and 2025, and 20% for 2026–2029. At the beginning of 2024, the company had no deferred income taxes on its balance sheet. Taxable income for 2024 is $500,000. Taxable income is expected in all future years.

Instructions

a. Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2024.

b. Indicate how deferred income taxes would be classified on the balance sheet at the end of 2024.

E18.20 (LO 1, 2, 4) (Two Differences, One Rate, First Year) The differences between the book basis and tax basis of the assets and liabilities of Castle Corporation at the end of 2024 are presented below.

	Book Basis	Tax Basis
Accounts receivable	$50,000	$–0–
Litigation liability	30,000	–0–

It is estimated that the litigation liability will be settled in 2025. The difference in accounts receivable will result in taxable amounts of $30,000 in 2025 and $20,000 in 2026. The company has taxable income of $350,000 in 2024 and is expected to have taxable income in each of the following 2 years. Its enacted tax rate is 34% for all years. This is the company's first year of operations. The operating cycle of the business is 2 years.

Instructions

a. Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2024.

b. Indicate how deferred income taxes will be reported on the balance sheet at the end of 2024.

E18.21 (LO 3) (Carryforward of NOL, No Valuation Account, No Temporary Differences) The pretax financial income (or loss) figures for Jenny Spangler Company are as follows.

2022	$ 80,000
2023	(40,000)
2024	(35,000)
2025	120,000
2026	100,000

Pretax financial income (or loss) and taxable income (loss) were the same for all years involved. Assume a 20% tax rate for all years.

Instructions

Prepare the journal entries for the years 2022 to 2026 to record income tax expense and the effects of the net operating loss carryforwards. All income and losses relate to normal operations. (In recording the benefits of a loss carryforward, assume that no valuation account is deemed necessary.)

E18.22 (LO 3) (Two NOLs, No Temporary Differences, No Valuation Account, Entries and Income Statement) Felicia Rashad Corporation has pretax financial income (or loss) from 2020 through 2026 as follows.

	Income (Loss)	Tax Rate
2020	$ 48,000	25%
2021	(70,000)	20
2022	90,000	20
2023	30,000	20
2024	105,000	20
2025	(60,000)	25
2026	130,000	25

Pretax financial income (loss) and taxable income (loss) were the same for all years since Rashad has been in business. In recording the benefits of a loss carryforward, assume that it is more likely than not that the related benefits will be realized.

Instructions

a. What entry (entries) for income taxes should be recorded for 2021?

b. Indicate what the income tax expense portion of the income statement for 2021 should look like. Assume all income (loss) relates to continuing operations.

c. What entry for income taxes should be recorded in 2022?

d. How should the income tax expense section of the income statement for 2022 appear?

e. What entry for income taxes should be recorded in 2025?

f. How should the income tax expense section of the income statement for 2025 appear?

E18.23 (LO 3) (NOL Carryforward, Valuation Account versus No Valuation Account) Spamela Hamderson Inc. reports the following pretax income (loss) for both financial reporting purposes and tax purposes.

Year	Pretax Income (Loss)	Tax Rate
2023	$120,000	17%
2024	90,000	17
2025	(200,000)	19
2026	300,000	19

The tax rates listed were all enacted by the beginning of 2023.

Instructions

a. Prepare the journal entries for the years 2023–2026 to record income tax expense (benefit) and income taxes payable (refundable) and the tax effects of the loss carryforward, assuming that at the end of 2025 the benefits of the loss carryforward are judged more likely than not to be realized in the future.

b. Using the assumption in (a), prepare the income tax section of the 2025 income statement beginning with the line "Operating loss before income taxes."

c. Prepare the journal entries for 2025 and 2026, assuming that based on the weight of available evidence, it is more likely than not that one-fourth of the benefits of the loss carryforward will not be realized.

d. Using the assumption in (c), prepare the income tax section of the 2025 income statement beginning with the line "Operating loss before income taxes."

E18.24 (LO 3) (NOL Carryforward, Valuation Account Needed) Beilman Inc. reports the following pretax income (loss) for both book and tax purposes.

Year	Pretax Income (Loss)	Tax Rate
2023	$120,000	20%
2024	90,000	20
2025	(80,000)	25
2026	120,000	25

The tax rates listed were all enacted by the beginning of 2023.

Instructions

a. Prepare the journal entries for years 2023–2026 to record income tax expense (benefit) and income taxes payable (refundable), and the tax effects of the loss carryforward, assuming that based on the weight of available evidence, it is more likely than not that one-half of the benefits of the loss carryforward will not be realized.

b. Prepare the income tax section of the 2025 income statement beginning with the line "Operating loss before income taxes."

c. Prepare the income tax section of the 2026 income statement beginning with the line "Income before income taxes."

E18.25 (LO 3) (NOL Carryforward, Valuation Account Needed) Meyer reported the following pretax financial income (loss) for the years 2025–2027.

2025	$120,000
2026	(150,000)
2027	190,000

Pretax financial income (loss) and taxable income (loss) were the same for all years involved. The enacted tax rate was 20% for 2025–2027.

Instructions

a. Prepare the journal entries for the years 2025–2027 to record income tax expense, income taxes payable, and the tax effects of the loss carryforward, assuming that based on the weight of available evidence, it is more likely than not that one-fifth of the benefits of the loss carryforward will not be realized.

b. Prepare the income tax section of the 2026 income statement beginning with the line "Income (loss) before income taxes."

*E18.26 (LO 6) **(Carryback and Carryforward of NOL, No Valuation Account, No Temporary Differences)** The pretax financial income (or loss) figures for Dan Lynch Company are as follows.

2021	$250,000
2022	80,000
2023	(160,000)
2024	(180,000)
2025	140,000
2026	100,000

Pretax financial income (or loss) and taxable income (loss) were the same for all years involved. Assume a 45% tax rate for 2021 and 2022, and a 20% tax rate for the remaining years.

Instructions

Prepare the journal entries for the years 2022 to 2026 to record income tax expense and the effects of the net operating loss carrybacks and carryforwards assuming Dan Lynch Company uses the carryback provision. All income and losses relate to normal operations. (In recording the benefits of a loss carryforward, assume that no valuation account is deemed necessary.)

*E18.27 (LO 6) **(NOL Carryback and Carryforward, Valuation Account Needed)** Wangerin Company reported the following pretax financial income (loss) for the years 2023–2027.

2023	$240,000
2024	350,000
2025	120,000
2026	(570,000)
2027	180,000

Pretax financial income (loss) and taxable income (loss) were the same for all years involved. The enacted tax rate was 34% for 2023 and 2024, and 20% for 2025–2027. Assume the carryback provision is used first for net operating losses.

Instructions

a. Prepare the journal entries for the years 2025–2027 to record income tax expense, income taxes payable (refundable), and the tax effects of the loss carryback and loss carryforward, assuming no valuation allowance is needed.

b. Prepare the income tax section of the 2026 income statement beginning with the line "Income (loss) before income taxes."

Problems

P18.1 (LO 1, 2, 4) Excel **(Three Differences, No Beginning Deferred Taxes, Multiple Rates)** The following information is available for Remmers Corporation for 2025.

1. Depreciation reported on the tax return exceeded depreciation reported on the income statement by $120,000. This difference will reverse in equal amounts of $30,000 over the years 2026–2029.
2. Interest received on municipal bonds was $10,000.
3. Rent collected in advance on January 1, 2025, totaled $60,000 for a 3-year period. Of this amount, $40,000 was reported as unearned at December 31, 2025, for book purposes.
4. The tax rates are 20% for 2025 and 17% for 2026 and subsequent years.
5. Income taxes of $160,000 are due per the tax return for 2025.
6. No deferred taxes existed at the beginning of 2025.

Instructions

a. Compute taxable income for 2025.

b. Compute pretax financial income for 2025.

c. Prepare the journal entries to record income tax expense, deferred income taxes, and income taxes payable for 2025 and 2026. Assume taxable income was $480,000 in 2026.

d. Prepare the income tax expense section of the income statement for 2025, beginning with "Income before income taxes."

P18.2 (LO 1, 2) (One Temporary Difference, Tracked for 4 Years, One Permanent Difference, Change in Rate) The pretax financial income of Truttman Company differs from its taxable income throughout each of 4 years as follows.

Year	Pretax Financial Income	Taxable Income	Tax Rate
2025	$290,000	$180,000	35%
2026	320,000	225,000	20
2027	350,000	260,000	20
2028	420,000	560,000	20

Pretax financial income for each year includes a nondeductible expense of $30,000 (never deductible for tax purposes). The remainder of the difference between pretax financial income and taxable income in each period is due to one depreciation temporary difference. No deferred income taxes existed at the beginning of 2025.

Instructions

a. Prepare journal entries to record income taxes in all 4 years. Assume that the change in the tax rate to 20% was not enacted until the beginning of 2026.

b. Prepare the income statement for 2026, beginning with Income before income taxes.

P18.3 (LO 1, 2, 4) (Second Year of Depreciation Difference, Two Differences, Single Rate, Discontinued Operation) The following information has been obtained for Gocker Corporation.

1. Prior to 2025, taxable income and pretax financial income were identical.
2. Pretax financial income is $1,700,000 in 2025 and $1,400,000 in 2026.
3. On January 1, 2025, equipment costing $1,200,000 is purchased. It is to be depreciated on a straight-line basis over 5 years for tax purposes and over 8 years for financial reporting purposes. (*Hint:* Use the half-year convention for tax purposes, as discussed in Appendix 10A.)
4. Interest of $60,000 was earned on tax-exempt municipal obligations in 2026.
5. Included in 2026 pretax financial income is a gain on discontinued operations of $200,000, which is fully taxable.
6. The tax rate is 20% for all periods.
7. Taxable income is expected in all future years.

Instructions

a. Compute taxable income and income taxes payable for 2026.

b. Prepare the journal entry to record 2026 income tax expense, income taxes payable, and deferred taxes.

c. Prepare the bottom portion of Gocker's 2026 income statement, beginning with "Income from continuing operations before income taxes."

d. Indicate how deferred income taxes should be presented on the December 31, 2026, balance sheet.

P18.4 (LO 1, 2) (Permanent and Temporary Differences, One Rate) The accounting records of Shinault Inc. show the following data for 2025 (its first year of operations).

1. Life insurance expense on officers was $9,000.
2. Equipment was acquired in early January for $300,000. Straight-line depreciation over a 5-year life is used, with no salvage value. For tax purposes, Shinault used a 30% rate to calculate depreciation.
3. Interest revenue on State of New York bonds totaled $4,000.
4. Product warranties were estimated to be $50,000 in 2025. Actual repair and labor costs related to the warranties in 2025 were $10,000. The remainder is estimated to be paid evenly in 2026 and 2027.
5. Gross profit on an accrual basis was $100,000. For tax purposes, $75,000 was recorded on the installment-sales method.
6. Fines incurred for pollution violations were $4,200.
7. Pretax financial income was $750,000. The tax rate is 30%.

Instructions

a. Prepare a schedule starting with pretax financial income in 2025 and ending with taxable income in 2025.

b. Prepare the journal entry for 2025 to record income taxes payable, income tax expense, and deferred income taxes.

P18.5 (LO 3) Excel Groupwork (NOL without Valuation Account) Jennings Inc. reported the following pretax income (loss) and related tax rates during the years 2024–2027.

	Pretax Income (Loss)	Tax Rate
2024	$ 80,000	40%
2025	(180,000)	40%
2026	230,000	20%
2027	100,000	20%

Pretax financial income (loss) and taxable income (loss) were the same for all years since Jennings began business. The tax rates from 2024–2027 were enacted in 2024.

Instructions

a. Prepare the journal entries for the years 2025–2027 to record income taxes payable (refundable), income tax expense (benefit), and the tax effects of the loss carryforward. Assume that Jennings expects to realize the benefits of any loss carryforward in the year that immediately follows the loss year.

b. Indicate the effect the 2025 entry (entries) has on the December 31, 2025, balance sheet.

c. Prepare the portion of the income statement, starting with "Operating loss before income taxes," for 2025.

d. Prepare the portion of the income statement, starting with "Income before income taxes," for 2026.

P18.6 (LO 1, 4) (Two Differences, Two Rates, Future Income Expected) Presented below are two independent situations related to future taxable and deductible amounts resulting from temporary differences existing at December 31, 2025.

1. Mooney Co. has developed the following schedule of future taxable and deductible amounts.

	2026	2027	2028	2029	2030
Taxable amounts	$300	$300	$300	$ 300	$300
Deductible amount	—	—	—	(1,600)	—

2. Roesch Co. has the following schedule of future taxable and deductible amounts.

	2026	2027	2028	2029
Taxable amounts	$300	$300	$ 300	$300
Deductible amount	—	—	(2,300)	—

Both Mooney Co. and Roesch Co. have taxable income of $4,000 in 2025 and expect to have taxable income in all future years. The tax rates enacted as of the beginning of 2025 are 30% for 2025–2028 and 35% for years thereafter. All of the underlying temporary differences relate to noncurrent assets and liabilities.

Instructions

For each of these two situations, compute the net amount of deferred income taxes to be reported at the end of 2025, and indicate how it should be classified on the balance sheet.

P18.7 (LO 1, 2, 4) Groupwork (One Temporary Difference, Tracked 3 Years, Change in Rates, Income Statement Presentation) Crosley Corp. sold an investment on an installment basis. The total gain of $60,000 was reported for financial reporting purposes in the period of sale. The company qualifies to use the installment-sales method for tax purposes. The installment period is 3 years; one-third of the sale price is collected in the period of sale. The tax rate was 40% in 2025, and 20% in 2026 and 2027. The 20% tax rate was not enacted in law until 2026. The accounting and tax data for the 3 years is shown below.

	Financial Accounting	Tax Return
2025 (40% tax rate)		
Income before temporary difference	$ 70,000	$70,000
Temporary difference	60,000	20,000
Income	$130,000	$90,000
2026 (20% tax rate)		
Income before temporary difference	$ 70,000	$70,000
Temporary difference	–0–	20,000
Income	$ 70,000	$90,000
2027 (20% tax rate)		
Income before temporary difference	$ 70,000	$70,000
Temporary difference	–0–	20,000
Income	$ 70,000	$90,000

Instructions

a. Prepare the journal entries to record the income tax expense, deferred income taxes, and the income taxes payable at the end of each year. No deferred income taxes existed at the beginning of 2025.

b. Explain how the deferred taxes will appear on the balance sheet at the end of each year.

c. Draft the income tax expense section of the income statement for each year, beginning with "Income before income taxes."

P18.8 (LO 1, 2, 4) (Two Differences, 2 Years, Compute Taxable Income and Pretax Financial Income) The following information was disclosed during the audit of Elbert Inc.

1.

Year	Amount Due per Tax Return
2025	$130,000
2026	104,000

2. On January 1, 2025, equipment costing $600,000 is purchased. For financial reporting purposes, the company uses straight-line depreciation over a 5-year life. For tax purposes, the company uses the elective straight-line method over a 5-year life. (*Hint:* For tax purposes, the half-year convention as discussed in Appendix 10A must be used.)

3. In January 2026, $225,000 is collected in advance rental of a building for a 3-year period. The entire $225,000 is reported as taxable income in 2026, but $150,000 of the $225,000 is reported as unearned revenue in 2026 for financial reporting purposes. The remaining amount of unearned revenue is to be recognized equally in 2027 and 2028.

4. The tax rate is 20% in 2025 and all subsequent periods. (*Hint:* To find taxable income in 2025 and 2026, the related income taxes payable amounts will have to be "grossed up.")

5. No temporary differences existed at the end of 2024. Elbert expects to report taxable income in each of the next 5 years.

Instructions

a. Determine the amount to report for deferred income taxes at the end of 2025, and indicate how it should be classified on the balance sheet.

b. Prepare the journal entry to record income taxes for 2025.

c. Draft the income tax section of the income statement for 2025, beginning with "Income before income taxes." (*Hint:* You must compute taxable income and then combine that with changes in cumulative temporary differences to arrive at pretax financial income.)

d. Determine the deferred income taxes at the end of 2026, and indicate how they should be classified on the balance sheet.

e. Prepare the journal entry to record income taxes for 2026.

f. Draft the income tax section of the income statement for 2026, beginning with "Income before income taxes."

P18.9 (LO 1, 2, 4) Groupwork (Five Differences, Compute Taxable Income and Deferred Taxes, Draft Income Statement) Wise Company began operations at the beginning of 2026. The following information pertains to this company.

1. Pretax financial income for 2026 is $100,000.

2. The tax rate enacted for 2026 and future years is 20%.

3. Differences between the 2026 income statement and tax return are listed below:

a. Warranty expense accrued for financial reporting purposes amounts to $7,000. Warranty deductions per the tax return amount to $2,000.

b. Gross profit on construction contracts using the percentage-of-completion method per books amounts to $92,000. Gross profit on construction contracts for tax purposes amounts to $67,000.

c. Depreciation of property, plant, and equipment for financial reporting purposes amounts to $60,000. Depreciation of these assets amounts to $80,000 for the tax return.

d. A $3,500 fine paid for violation of pollution laws was deducted in computing pretax financial income.

e. Interest revenue recognized on an investment in tax-exempt municipal bonds amounts to $1,500.

4. Taxable income is expected for the next few years. (Assume (a) is short-term in nature; assume (b) and (c) are long-term in nature.)

Instructions

a. Compute taxable income for 2026.

b. Compute the deferred taxes at December 31, 2026, that relate to the temporary differences described above. Clearly label them as deferred tax asset or liability.

c. Prepare the journal entry to record income tax expense, deferred taxes, and income taxes payable for 2026.

d. Draft the income tax expense section of the income statement, beginning with "Income before income taxes."

Using Your Judgment

Financial Reporting Problem: The Procter & Gamble Company (P&G)

UYJ18.1 The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

a. What amounts relative to income taxes does P&G report in its:

1. 2020 income statement?

2. June 30, 2020, balance sheet?

3. 2020 statement of cash flows?

b. P&G's income taxes in 2018, 2019, and 2020 were computed at what effective tax rates? (See the notes to the financial statements.)

c. How much of P&G's 2020 total income taxes was current tax expense, and how much was deferred tax expense?

d. What did P&G report as the significant components (the details) of its June 30, 2020, deferred tax assets and liabilities?

Comparative Analysis Case: The Coca-Cola Company and PepsiCo, Inc.

UYJ18.2 The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

a. What are the amounts of Coca-Cola's and PepsiCo's provision for income taxes for the year 2020? Of each company's 2020 provision for income taxes, what portion is current expense and what portion is deferred expense?

b. What amount of cash was paid in 2020 for income taxes by Coca-Cola and by PepsiCo?

c. What was the U.S. federal statutory tax rate in 2020? What was the effective tax rate in 2020 for Coca-Cola and PepsiCo? Why might their effective tax rates differ?

d. For year-end 2020, what amounts were reported by Coca-Cola and PepsiCo as (1) gross deferred tax assets and (2) gross deferred tax liabilities?

e. Do either Coca-Cola or PepsiCo disclose any net operating loss carrybacks and/or carryforwards at year-end 2020? What are the amounts, and when do the carryforwards expire?

Financial Statement Analysis Case: Homestake Mining Company

UYJ18.3 **Homestake Mining Company** is a 120-year-old international gold mining company with substantial gold mining operations and exploration in the United States, Canada, and

Australia. At year-end, Homestake reported the following items related to income taxes (thousands of dollars).

Total current taxes	$ 26,349
Total deferred taxes	(39,436)
Total income and mining taxes (the provision for taxes per its income statement)	$ (13,087)
Deferred tax liabilities	$303,050
Deferred tax assets, net of valuation allowance of $207,175	95,275
Net deferred tax liability	$207,775

Note 6: The classification of deferred tax assets and liabilities is based on the related asset or liability creating the deferred tax. Deferred taxes not related to a specific asset or liability are classified based on the estimated period of reversal.

Tax loss carryforwards (U.S., Canada, Australia, and Chile)	$71,151
Tax credit carryforwards	12,007

Instructions

a. What is the significance of Homestake's disclosure of "Current taxes" of $26,349 and "Deferred taxes" of $(39,436)?

b. Explain the concept behind Homestake's disclosure of gross deferred tax liabilities (future taxable amounts) and gross deferred tax assets (future deductible amounts).

c. Homestake reported tax loss carryforwards of $71,151 and tax credit carryforwards of $12,007. How do the carryforward provisions affect the reporting of deferred tax assets and deferred tax liabilities?

Accounting, Analysis, and Principles

UYJ18.4 DeJohn Company, which began operations at the beginning of 2023, produces various products on a contract basis. Each contract generates a gross profit of $80,000. Some of DeJohn's contracts provide for the customer to pay on an installment basis. Under these contracts, DeJohn collects one-fifth of the contract revenue in each of the following 4 years. For financial reporting purposes, the company recognizes gross profit in the year of completion (accrual basis). For tax purposes, DeJohn recognizes gross profit in the year cash is collected (installment basis).

Presented below is information related to DeJohn's operations for 2025:

1. In 2025, the company completed seven contracts that allow for the customer to pay on an installment basis. DeJohn recognized the related gross profit of $560,000 for financial reporting purposes. It reported only $112,000 of gross profit on installment sales on the 2025 tax return. The company expects future collections on the related installment receivables to result in taxable amounts of $112,000 in each of the next 4 years.
2. In 2025, nontaxable municipal bond interest revenue was $28,000.
3. During 2025, nondeductible fines and penalties of $26,000 were paid.
4. Pretax financial income for 2025 amounts to $500,000.
5. Tax rates (enacted before the end of 2025) are 30% for 2025 and 20% for 2026 and later.
6. The accounting period is the calendar year.
7. The company is expected to have taxable income in all future years.
8. The company has no deferred tax assets or liabilities at the end of 2024.

Accounting

Prepare the journal entry to record income taxes for 2025.

Analysis

Classify deferred income taxes on the balance sheet at December 31, 2025, and indicate, starting with the line "Income before income taxes," how income taxes are reported on the income statement. What is DeJohn's effective tax rate?

Principles

Explain how the conceptual framework is used as a basis for determining the proper accounting for deferred income taxes.

Developing Your Professional Skills

Critical-Thinking Cases

CT18.1 (LO 1) Writing (Objectives and Principles for Accounting for Income Taxes) The amount of income taxes due to the government for a period of time is rarely the amount reported on the income statement for that period as income tax expense.

Instructions

a. Explain the objectives of accounting for income taxes in general-purpose financial statements.

b. Explain the basic principles that are applied in accounting for income taxes at the date of the financial statements to meet the objectives discussed in (a).

c. List the steps in the annual computation of deferred tax liabilities and assets.

CT18.2 (LO 1) Writing (Basic Accounting for Temporary Differences) Dexter Company appropriately uses the asset-liability method to record deferred income taxes. Dexter reports depreciation expense for certain machinery purchased this year using the modified accelerated cost recovery system (MACRS) for income tax purposes and the straight-line basis for financial reporting purposes. The tax deduction is the larger amount this year.

Dexter received rent revenues in advance this year. These revenues are included in this year's taxable income. However, for financial reporting purposes, these revenues are reported as unearned revenues, a current liability.

Instructions

a. What are the principles of the asset-liability approach?

b. How would Dexter account for the temporary differences?

c. How should Dexter classify the deferred tax consequences of the temporary differences on its balance sheet?

CT18.3 (LO 1, 2) (Identify Temporary Differences and Classification Criteria) The asset-liability approach for recording deferred income taxes is an integral part of generally accepted accounting principles.

Instructions

a. Indicate whether each of the following independent situations should be treated as a temporary difference or as a permanent difference, and explain why.

1. Estimated warranty costs (covering a 3-year warranty) are expensed for financial reporting purposes at the time of sale but deducted for income tax purposes when paid.

2. Depreciation for book and income tax purposes differs because of different bases of carrying the related property, which was acquired in a trade-in. The different bases are a result of different rules used for book and tax purposes to compute the basis of property acquired in a trade-in.

3. A company properly uses the equity method to account for its 30% investment in another company. The investee pays dividends that are about 10% of its annual earnings.

4. A company reports a gain on an involuntary conversion of a nonmonetary asset to a monetary asset. The company elects to replace the property within the statutory period using the total proceeds so the gain is not reported on the current year's tax return.

b. Discuss the nature of the deferred income tax accounts and the manner in which these accounts are to be reported on the balance sheet.

CT18.4 (LO 1, 2) (Accounting and Classification of Deferred Income Taxes)

Part A: This year, Gumowski Company has each of the following items in its income statement.

1. Gross profits on installment sales.

2. Revenues on long-term construction contracts.

3. Estimated costs of product warranty contracts.

4. Premiums on officers' life insurance policies with Gumowski as beneficiary.

Instructions

a. Indicate where deferred income taxes are reported in the financial statements.

b. Specify when deferred income taxes would need to be recognized for each of the items above, and indicate the rationale for such recognition.

Part B: Gumowski Company's president has heard that deferred income taxes can be classified in different ways in the balance sheet.

Instructions

Identify the conditions under which deferred income taxes would be classified as a noncurrent item in the balance sheet. What justification exists for such classification?

(AICPA adapted)

CT18.5 (LO 1, 2) (Explain Computation of Deferred Tax Liability for Multiple Tax Rates) At December 31, 2025, Higley Corporation has one temporary difference which will reverse and cause taxable amounts in 2026. In 2025, a new tax act set taxes equal to 35% for 2025, 30% for 2026, and 20% for 2027 and years thereafter.

Instructions

Explain what circumstances would call for Higley to compute its deferred tax liability at the end of 2025 by multiplying the cumulative temporary difference by:

a. 35%.

b. 30%.

c. 20%.

CT18.6 (LO 1, 2, 3) (Explain Future Taxable and Deductible Amounts, How Carryforward Affects Deferred Taxes) Maria Rodriquez and Lynette Kingston are discussing accounting for income taxes. They are currently studying a schedule of taxable and deductible amounts that will arise in the future as a result of existing temporary differences. The schedule is as follows.

	Future Years				
	2025	**2026**	**2027**	**2028**	**2029**
Taxable income	$850,000				
Taxable amounts		$375,000	$375,000	$375,000	$375,000
Deductible amounts				(2,400,000)	
Enacted tax rate	50%	45%	40%	35%	30%

Instructions

a. Explain the concept of future taxable amounts and future deductible amounts as illustrated in the schedule.

b. How does the carryforward provision affect the reporting of deferred tax assets and deferred tax liabilities?

CT18.7 (LO 1, 2) Ethics (Deferred Taxes, Income Effects) Stephanie Delaney, CPA, is the newly hired director of corporate taxation for Acme Incorporated, which is a publicly traded corporation. Ms. Delaney's first job with Acme was the review of the company's accounting practices on deferred income taxes. In doing her review, she noted differences between tax and book depreciation methods that permitted Acme to realize a sizable deferred tax liability on its balance sheet. As a result, Acme paid very little in income taxes at that time.

Delaney also discovered that Acme has an explicit policy of selling off plant assets before they reversed in the deferred tax liability account. This policy, coupled with the rapid expansion of its plant asset base, allowed Acme to "defer" all income taxes payable for several years, even though it always has reported positive earnings and an increasing EPS. Delaney checked with the legal department and found the policy to be legal, but she's uncomfortable with the ethics of it.

Instructions

Answer the following questions.

a. Why would Acme have an explicit policy of selling plant assets before the temporary differences reversed in the deferred tax liability account?

b. What are the ethical implications of Acme's "deferral" of income taxes?

c. Who could be harmed by Acme's ability to "defer" income taxes payable for several years, despite positive earnings?

d. In a situation such as this, what are Ms. Delaney's professional responsibilities as a CPA?

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE18.1 Access the glossary ("Master Glossary") to answer the following.

a. What is a deferred tax asset?

b. What is taxable income?

c. What is the definition of valuation allowance?

d. What is a deferred tax liability?

CE18.2 What are the two basic requirements applied to the measurement of current and deferred income taxes at the date of the financial statements?

CE18.3 A company wishes to conduct business in a foreign country that attracts businesses by granting "holidays" from income taxes for a certain period of time. Would the company have to disclose this "holiday" to the SEC? If so, what information must be disclosed?

CE18.4 When is a company allowed to initially recognize the financial statement effects of a tax position?

Codification Research Case

Kleckner Company started operations in 2021. Although it has grown steadily, the company reported accumulated operating losses of $450,000 in its first 4 years in business. In the most recent year (2025), Kleckner appears to have turned the corner and reported modest taxable income of $30,000. In addition to a deferred tax asset related to its net operating loss, Kleckner has recorded a deferred tax asset related to product warranties and a deferred tax liability related to accelerated depreciation.

Given its past operating results, Kleckner has established a full valuation allowance for its deferred tax assets. However, given its improved performance, Kleckner management wonders whether the company can now reduce or eliminate the valuation allowance. They would like you to conduct some research on the accounting for its valuation allowance.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

a. Briefly explain to Kleckner management the importance of future taxable income as it relates to the valuation allowance for deferred tax assets.

b. What are the sources of income that may be relied upon to remove the need for a valuation allowance?

c. What are tax-planning strategies? From the information provided, does it appear that Kleckner could employ a tax-planning strategy to support reducing its valuation allowance?

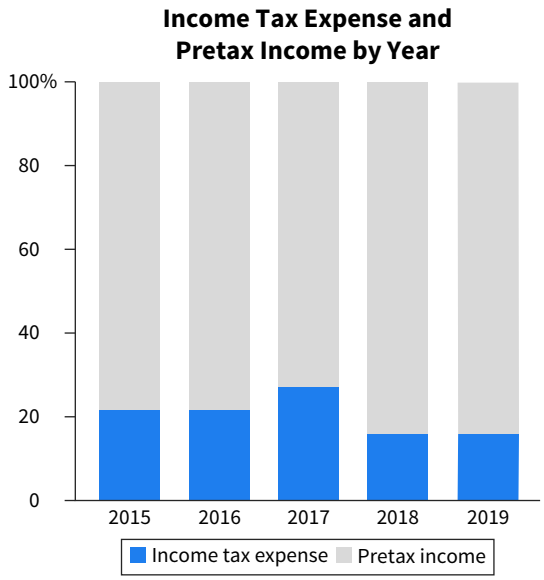
Analytics in Action Activities

Are All Data Visualizations Created Equal?

DA18.1 Data visualizations can be a great way to help us make sense of the complexities surrounding income taxes. Bringing together data on pretax income, effective tax rate, and tax expense can offer insights on taxes over time, across industries, and across different types of transactions.

However, not all data visualizations are created equal. Choosing which data to include in each visualization and how to present the data is important to ensure that the visualizations tell the true story. It is also important to understand the question we are trying to answer and how that visualization might help us answer it. For example, the following visualization shows a 100% stacked bar chart for income tax expense and pretax income. While tax expense and pretax income are related, they are not components of a larger total. As a result, a graph such as this may not be relevant.



Required

Using a dashboard of visualizations, you will explain which chart best shows the relationship between the average effective tax rate and average effective income tax expense of public companies.

Go to Wiley Course Resources for complete details and instructions.

DA18.2 Using visualizations requires not only an understanding of the accounting topic, such as taxes, but also an understanding of the insights we can draw from a particular visualization.

Required

Using a visualization comparing pretax income and income tax expense for several public companies across a 5-year period, you are asked to identify which year had the greatest total income tax expense and explain why.

Go to Wiley Course Resources for complete details and instructions.

DA18.3 Visualizations are a useful tool when digging into detailed data such as tax rates by industry.

Required

You will be given a visualization comparing average pretax income and tax expense for companies within 15 different industry categories over a 5-year period. Using the graphs provided, as well as what you have learned about accounting for income taxes, you are asked to explain why a particular industry group has the lowest effective tax rate in most years.

Go to Wiley Course Resources for complete details and instructions.

Using Data Analytics to Understand Tax Rates

DA18.4 There is a high level of interest in the tax paid by companies from both investors as well as other groups that focus on whether companies are acting in an equitable manner. As a result, there is interest in comparing tax amounts and rates both between firms as well as between industries and across time. The SEC provides financial statement data sets from the financial reports filed by public companies. We can use this data to gain insights on the taxes paid by different companies.

Required

Using financial statement data from over 600 public companies over a 5-year period, you will use Excel to organize, clean, and summarize the data. Using your summarized data, you will answer questions about the effective tax rates across time for companies in different industries.

Go to Wiley Course Resources for complete details and instructions.

IFRS Insights

LEARNING OBJECTIVE 7

Compare the accounting for income taxes under GAAP and IFRS.

The accounting for income taxes in IFRS is covered in *IAS 12* ("Income Taxes"), which is based on an asset-liability approach to measurement of deferred taxes. Following are the key similarities and differences between GAAP and IFRS related to accounting for taxes.

Similarities

- Similar to GAAP, IFRS uses the asset and liability approach for recording deferred taxes.
- The classification of deferred taxes under both IFRS and GAAP is always non-current.

Differences

- Under IFRS, an affirmative judgment approach is used, by which a deferred tax asset is recognized up to the amount that is probable to be realized. GAAP uses an impairment approach. In this approach, the deferred tax asset is recognized in full. It is then reduced by a valuation account if it is more likely than not that all or a portion of the deferred tax asset will not be realized.
- IFRS uses the enacted tax rate or substantially enacted tax rate. ("Substantially enacted" means virtually certain.) For GAAP, the enacted tax rate must be used.
- The tax effects related to certain items are reported in equity under IFRS. That is not the case under GAAP, which charges or credits the tax effects to income.
- GAAP requires companies to assess the likelihood of uncertain tax positions being sustainable upon audit. Potential liabilities must be accrued and disclosed if the position is "more likely than not" to be disallowed. Under IFRS, all potential liabilities must be recognized. With respect to measurement, IFRS uses an expected-value approach to measure the tax liability, which differs from GAAP.

Accounting for Pensions and Postretirement Benefits

WHAT are pensions and postretirement benefits?

Pensions and postretirement benefits are forms of deferred compensation. In a pension, as part of your compensation for work performed today, your employer sets aside funds that will be paid to you in retirement. In the case of postretirement benefits, the funds are set aside to cover the costs of healthcare (medical, dental, eyecare) and other expenses that arise in retirement. As you will learn, both employers and employees view these benefits favorably because of tax incentives. Employers receive a tax deduction related to contributions to these plans. Contributions by both employers and employees into a pension fund grow tax-free until received in retirement (usually taxed at a lower rate).

WHY is information about pensions and postretirement benefits important?

Generally, when an employer sets up a pension plan, it makes a promise to the employees to pay pension benefits in the future. From an accounting perspective, this promise meets the definition of a liability. In addition, companies must record pension expense as employees work and earn pension benefits. Investors need information on the magnitude of these liabilities as well as the cost of providing these benefits.

This is especially true when you consider the size of these obligations. The following table summarizes pension obligations, pension assets, and pension expense for five major companies (dollars in millions).

Company	Pension Obligation	Pension Assets	Funded Status	Pension Expense as % of Pretax Income (Loss)
General Motors (GM)	$87,275	$74,923	85.85%	−12.64%*
Merck	27,147	24,721	91.06	5.16
Deere & Company	14,845	14,574	98.17	3.68
Hewlett-Packard	13,008	14,127	108.60	10.18
Molson Coors	5,572	5,958	106.93	4.88

*General Motors reported pension income (negative expense).

What is apparent from the information in the table is the magnitude of pension obligations and assets (these are billions of dollars) and that pension expense (income) is a substantial percentage of total pretax income for many companies. Given these data, investors and creditors need information on pensions to assess their impact on companies' financial positions and operating results, and potential effects on future cash flows. For example, **GM**'s funded status (approximately 86%) indicates its pension plan is underfunded (plan assets are less than the pension liability). Investors and creditors will want to understand how GM and other companies with underfunded plans will close that gap.

HOW do we account for pensions and postretirement benefits?

The accounting for pensions and postretirement benefits begins with measuring the liability, which is the present value of expected future cash flows related to the payments a company promises to pay its employees in retirement. Under pension laws, companies must set aside assets, which will be used to meet the obligations to employees in the future. On the balance sheet, companies report the net pension asset or liability, defined as the difference between the liability and fair value of the assets.

When the liability exceeds the assets, we say the pension is underfunded (see GM, **Deere**, and **Merck** in the table above). An overfunded plan (see **Hewlett-Packard** and **Molson Coors** above) is one in which pension assets exceed the pension liability. The expense recognized each period measures the increase in the pension liability, as employees work and earn more benefits. The liability is controversial because its measurement and recognition relate to unknown future variables. Therefore, the accounting issues related to pensions can be complex. The accounting for postretirement benefit plans (discussed In Appendix 19A) is similar to the accounting for pensions.

Chapter Roadmap

LEARNING OBJECTIVES	TOPICS	REVIEW AND PRACTICE
LO 19.1 Discuss the fundamentals of pension plan accounting.	**19.1 Fundamentals of Pension Plan Accounting** • Pension plans • Role of actuaries • Measures of the liability • Components of pension expense	Examples **19.1** Defined Contribution Plan **19.2** Funded Status of Plan **19.3** Return on Plan Assets Put It into Practice LO 19.1 Determine Pension Components

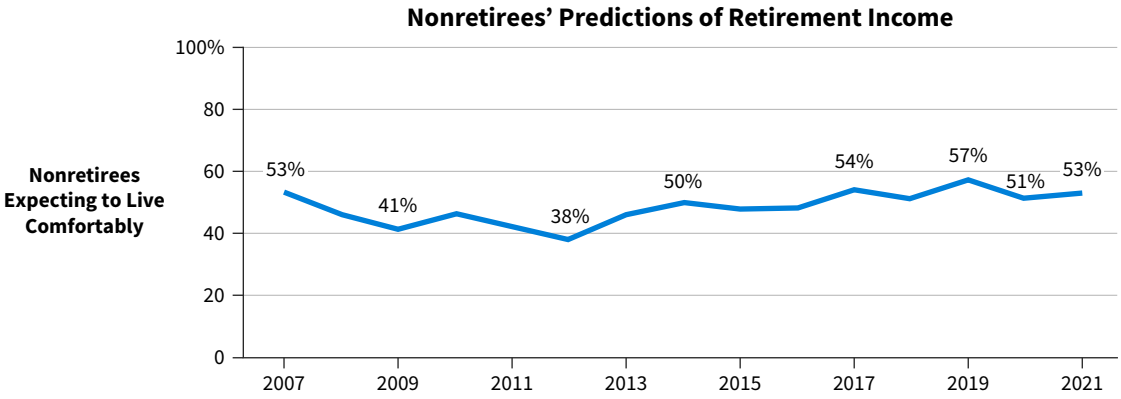
19.1 Fundamentals of Pension Plan Accounting

LEARNING OBJECTIVE 1

Discuss the fundamentals of pension plan accounting.

Have you given any thought to whether you can live comfortably in retirement? Probably not. That is understandable, as retirement is likely many years away for you. You probably have more immediate concerns, such as your accounting exam next week. Furthermore, isn't Social Security there to ensure a comfortable retirement? Also, don't all employers provide a pension plan as part of the benefit package to help you build a retirement nest egg? Maybe. So, when you do retire, do you think you will have enough money to live comfortably? **Illustration 19.1** shows how nonretired adults answered that question.

ILLUSTRATION 19.1 Survey on Comfortable Retirement



As indicated, prior to 2008, a little over 50% nonretired Americans consistently thought they would be able to live comfortably in retirement. This dropped to 46% during the U.S. recession in 2008 and stayed below 50% until 2014. Most recent data indicate that just over 50% of nonretirees thought they would have enough money to live comfortably in retirement (just over 53% in 2021). Why the pessimism?

1. General economic conditions affect how Americans look at retirement. Americans are generally more positive about retirement when the economy is growing.
2. The continuing political discussion about the fragility of the federal Social Security and Medicare programs may reduce nonretired Americans' comfort with projections of their monetary resources in their retirement.
3. While many companies have benefit plans that promise income and other benefits to retired employees in exchange for services during their working years, a shift is on from traditional defined benefit plans, in which employers bear the risk of meeting the benefit promises, to plans in which employees bear more of the risk. In some cases, employers are dropping retirement plans altogether.[1]

This means that retirement accounts, including individual retirement accounts (IRAs) and defined contribution pensions such as 401(k) plans, will need to become a bigger piece of the pie to fill the gap left by smaller government and employer-sponsored benefits.

[1]J. Mauldin, "Angst in America, Part 4: Disappearing Pensions," *Thoughts for the Frontline* (April 16, 2017); and M. Brennan, "U.S. Retirees' Experience Differs from Nonretirees' Outlook," *Gallup* (May 18, 2021).

What does this mean for you? You need to start now with a personal savings strategy to ensure an adequate nest egg at your retirement. So maybe you should spend some time thinking about that far-off-into-the-future retirement. Your study in this chapter of types of pension plans and their accounting will be a good start.

Pension Plans

A **pension plan** is an arrangement whereby an employer provides benefits (payments) to retired employees for services they provided in their working years. Pension accounting may be divided and separately treated as **accounting for the employer** and **accounting for the pension fund**.

- The **company or employer** is the organization sponsoring the pension plan. It incurs the cost and makes contributions to the pension fund.
- The **fund or plan** is the entity that receives the contributions from the employer, administers the pension assets, and makes the benefit payments to the retired employees (pension recipients).

Illustration 19.2 shows the three entities involved in a pension plan and indicates the flow of cash among them.

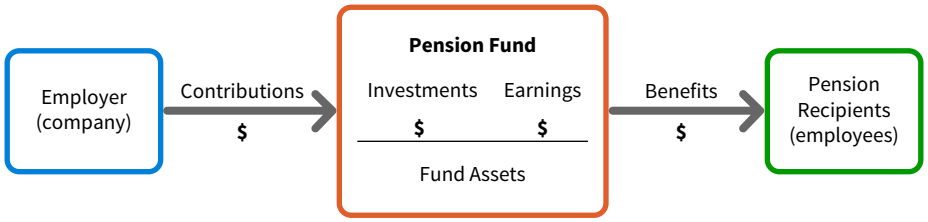


ILLUSTRATION 19.2 Flow of Cash Among Pension Plan Participants

A pension plan is **funded** when the employer makes payments to a funding agency.[2] That agency accumulates the assets of the pension fund and makes payments to the recipients as the benefits come due. Pension plans can be contributory or noncontributory as follows.

- **Contributory.** The employees bear part of the cost of the stated benefits or voluntarily contribute payments to increase their future benefits.
- **Noncontributory.** The employer bears the entire cost.

Companies generally design their pension plans to take advantage of federal income tax benefits. Plans that offer tax benefits are called **qualified pension plans**. They permit **deductibility of the employer's contributions to the pension fund and tax-free status of earnings from pension fund assets**.

The pension fund is a separate legal and accounting entity. The pension fund, as a separate entity, maintains a set of books and prepares financial statements. Maintaining records and preparing financial statements for the fund, an activity known as "accounting for employee benefit plans," is not the subject of this chapter.[3] Instead, this chapter explains the pension accounting and reporting problems **of the employer** as the sponsor of a pension plan.

The two most common types of pension plans are **defined contribution plans** and **defined benefit plans**. We look at each of them in the following sections.

Defined Contribution Plan

In a **defined contribution plan**, the employer agrees to contribute to a pension trust a certain sum each period, based on a formula. This formula may consider such factors as age, length of employee service, employer's profits, and compensation level. **The plan defines only the employer's contribution.** It makes no promise regarding the ultimate benefits paid out to the employees. A common form of this plan is a **401(k) plan**.

[2]When used as a verb, **fund** means to pay to a funding agency (as to fund future pension benefits or to fund pension cost). Used as a noun, it refers to assets accumulated in the hands of a funding agency (trustee) for the purpose of meeting pension benefits when they become due.

[3]The FASB issued separate guidance covering the accounting and reporting for employee benefit plans. [1] (See the FASB Codification References near the end of the chapter.)

The size of the pension benefits that the employee finally collects under the plan depends on several factors: the amounts originally contributed to the pension trust, the income accumulated in the trust, and the treatment of forfeitures of funds caused by early terminations of other employees. A company usually turns over to an **independent third-party trustee** the amounts originally contributed. The trustee, acting on behalf of the beneficiaries (the participating employees), assumes ownership of the pension assets and is accountable for their investment and distribution. The trust is separate and distinct from the employer.

The accounting for a defined contribution plan is straightforward.

- The employee gets the benefit of gain (or the risk of loss) from the assets contributed to the pension plan.
- The employer simply contributes each year based on the formula established in the plan. As a result, the employer's annual cost (pension expense) is simply the amount that it is obligated to contribute to the pension trust.

Example 19.1 Defined Contribution Plan

FACTS Murphy Company sponsors a defined contribution plan for all of its full-time employees that is administered by **Fidelity**. Under the terms of the plan, Murphy contributes at least 1.25% of its pretax operating income to the plan each year. On December 31, 2025, Murphy reported pretax operating income of $2,480,000, therefore, Murphy made a contribution to the plan of $31,000.

QUESTIONS (a) What entry would you make to record pension expense for Murphy's defined contribution plan at December 31, 2025? (b) Does Murphy have a liability on its balance sheet related to the plan? Explain.

SOLUTION

a. Murphy records its contribution to the pension plan as follows.

December 31, 2025		
Pension Expense	31,000	
Cash		31,000

b. Murphy does not have a liability related to its pension plan. As long as it contributes at least $31,000 ($2,480,000 × .0125), it has satisfied its obligation to the plan. Employers sometimes contribute beyond the minimum required in years of good profitability.

As indicated in Example 19.1, the employer reports a liability on its balance sheet only if it does not make the contribution in full. The employer reports an asset only if it contributes more than the required amount.

In addition to pension expense, the employer must disclose the following for a defined contribution plan: a plan description, including employee groups covered; the basis for determining contributions; and the nature and effect of significant matters affecting comparability from period to period. [2]

Defined Benefit Plan

A **defined benefit plan** outlines the benefits that employees will receive when they retire. These benefits typically are a function of an employee's years of service and of the compensation level in the years approaching retirement.

To meet the defined benefit commitments that will arise at retirement, a company must determine what the contribution should be today (a time value of money computation). Companies may use many different contribution approaches. However, the funding method should provide enough money at retirement to meet the benefits defined by the plan.

The **employees** are the beneficiaries of a defined **contribution** trust, but the **employer** is the beneficiary of a defined **benefit** trust. Under a defined benefit plan, the trust's primary purpose is to safeguard and invest assets so that there will be enough to pay the employer's obligation to the employees. **In form**, the trust is a separate entity. **In substance**, the trust assets and liabilities belong to the employer. Consider the following scenarios.

- As long as the plan continues, the employer is responsible for the payment of the defined benefits (without regard to what happens in the trust). The employer must make up any shortfall in the accumulated assets held by the trust.

- On the other hand, the employer can recapture any excess accumulated in the trust, either through reduced future funding or through a return of funds.

Because a defined benefit plan specifies benefits in terms of uncertain future variables, a company must establish an appropriate funding pattern to ensure the availability of funds at retirement to provide the benefits promised. This funding level depends on a number of factors such as turnover, mortality, length of employee service, compensation levels, and interest earnings. Because these factors are uncertain, the following situations exist with defined benefit plans.

- Employers are at risk because they must contribute enough to meet the cost of benefits that the plan defines.
- The expense recognized each period is not necessarily equal to the cash contribution.
- The liability is controversial because its measurement and recognition relate to unknown future variables.

The accounting issues related to this type of plan are complex (see **Global View**). **Our discussion in the following sections deals primarily with defined benefit plans.**[4]

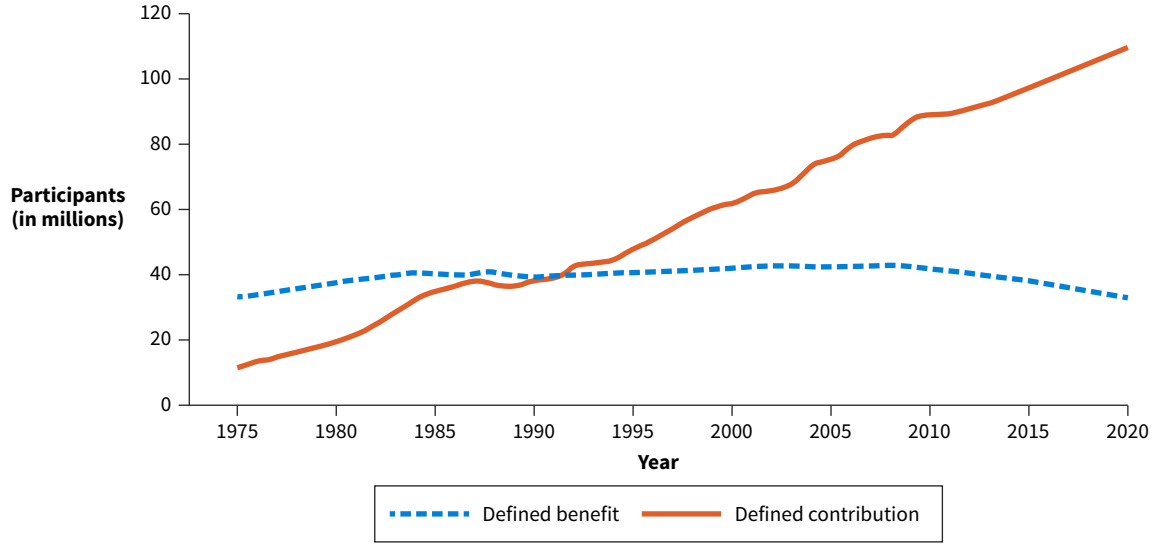
Global View

Outside the United States, private pension plans are less common because many other nations rely on government-sponsored pension plans. Consequently, accounting for defined benefit pension plans is typically a less-important issue elsewhere in the world. *See the IFRS Insights at the end of the chapter for a discussion of the similarities and differences between IFRS and GAAP.*

Accounting Matters — Which Plan Is Right for You?

Not only are defined benefit plans more costly for the employer to fund, they offer less flexibility in the timing and amount of contributions and are more complex and costly to administer. Defined benefit plans can cost upward of 5–6% of payroll. Their less-costly counterpart, the defined contribution plan, averages closer to 3% of payroll. It is no surprise then that defined contribution plans are increasingly more popular with employers, as indicated in the following chart.

Number of Participants in Employer-Sponsored Retirement Plans by Type of Plan



Source: U.S. Department of Labor, *Private Pension Plan Bulletin* (January 2021); and J. Ciesielski, "Pension Priorities: Why the Accounting Belongs on FASB's Agenda," *Analyst's Accounting Observer Blog* (February 16, 2017).

So, does this mean that we can we skip this chapter? No! There are almost 33 million employees currently participating in defined benefit pension plans. Recent data indicate the total amount of pension assets held by pension plans is $10.7 trillion (and growing), $3.3 trillion of which relates to defined benefit pension plans. Furthermore, the accounting for other post-employment benefits (OPEBs, discussed in the appendix) follows that used for defined benefit pension plans. While there is no argument that employers are turning to defined contributions pension plans to support their employees into retirement, defined benefit plans are certainly not going away anytime soon.

[4]A recent federal law requires employees to participate in an employer-sponsored defined contribution plan unless they explicitly opt out of it. This should help employees build their own nest eggs and will contribute to further growth in defined contribution plans. However, note the following three warnings: (1) low-income workers will still not be able to stash enough away, (2) it leaves each participant alone to manage risk, and (3) companies establish a minimum contribution, which too many participants choose to use, instead of a larger contribution.

The Role of Actuaries in Pension Accounting

The problems associated with defined benefit pension plans involve complicated mathematical considerations. Therefore, companies engage **actuaries** to ensure that a pension plan is appropriate for the employee group covered.[5]

- Actuaries are individuals trained through a long and rigorous certification program to assign probabilities to future events and their financial effects.
- Employers rely heavily on actuaries for assistance in developing, implementing, and funding pension funds.

Actuaries make predictions (called **actuarial assumptions**) of mortality rates, employee turnover, interest and earnings rates, early retirement frequency, future salaries, and any other factors necessary to operate a pension plan. They also compute the various pension measures that affect the financial statements, such as the pension obligation, the annual cost of servicing the plan, and the cost of amendments to the plan. In summary, accounting for defined benefit pension plans relies heavily upon information and measurements provided by actuaries.

Measures of the Liability

In accounting for a company's defined benefit pension plan, two questions arise.

1. What is the pension obligation that a company should report in the financial statements?
2. What is the pension expense for the period?

Attempting to answer the first question has resulted in much controversy.

Alternative Approaches

Most agree that an employer's **pension obligation** is the deferred compensation obligation it has to its employees for their service under the terms of the pension plan. Measuring that obligation is not so simple, though, because there are three alternative ways of measuring it.[6]

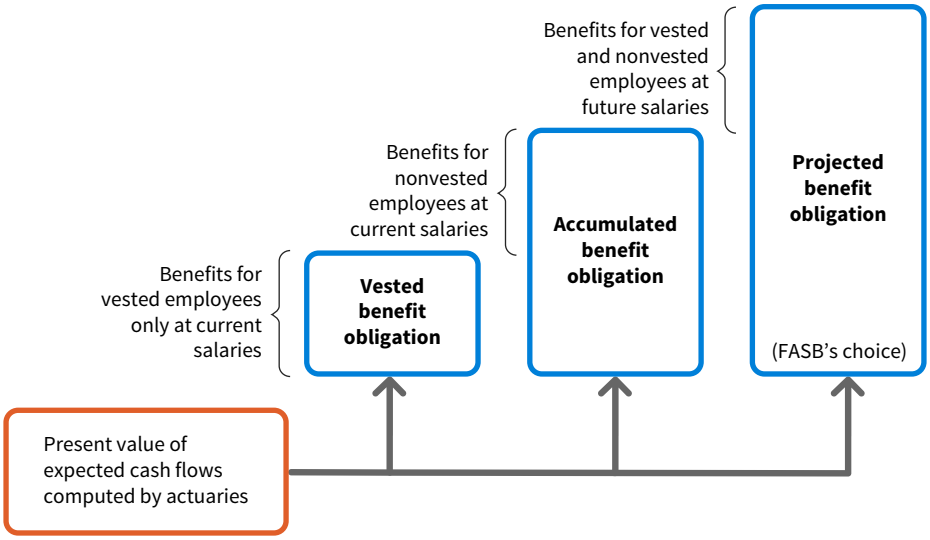
1. **Vested benefit obligation.** This measure is based only on the benefits vested to the employees, at current salary levels. Vested benefits are those that the employee is entitled to receive even if he or she is no longer employed by the company. Most pension plans require a minimum number of years of service to the employer before an employee achieves vested benefit status.
2. **Accumulated benefit obligation.** This measure uses both vested and nonvested years of service. The company computes the deferred compensation amount on all years of employees' service—**both vested and nonvested**—using current salary levels.

[5]An actuary's primary purpose is to ensure that the company has established an appropriate funding pattern to meet its pension obligations. This computation involves developing a set of assumptions and continued monitoring of these assumptions to ensure their realism. That the general public has little understanding of what an actuary does is illustrated by the following excerpt from the *Wall Street Journal*: "A polling organization once asked the general public what an actuary was, and received among its more coherent responses the opinion that it was a place where you put dead actors."

[6]One measure of the pension obligation is to determine the amount that the **Pension Benefit Guaranty Corporation** would require the employer to pay if it defaulted. (This amount is limited to 30% of the employer's net worth.) The accounting profession rejected this approach for financial reporting because it is too hypothetical and ignores the going concern concept.

3. **Projected benefit obligation.** This measure bases the deferred compensation amount on both vested and nonvested service **using future salaries**. Because future salaries are expected to be higher than current salaries, this approach results in the largest measurement of the pension obligation.

The choice between these measures is critical. The choice affects the amount of a company's pension liability and the annual pension expense reported. **Illustration 19.3** presents the differences in these three measurements.



Benefits for vested and nonvested employees at future salaries
Benefits for nonvested employees at current salaries
Benefits for vested employees only at current salaries
Vested benefit obligation
Accumulated benefit obligation
Projected benefit obligation
(FASB's choice)
Present value of expected cash flows computed by actuaries

ILLUSTRATION 19.3 Different Measures of the Pension Obligation

Which of these alternative measures of the pension liability does the profession favor? **The profession adopted the projected benefit obligation—the present value of vested and nonvested benefits accrued to date, based on employees' future salary levels.**[7] Those in favor of the projected benefit obligation contend that a promise by an employer to pay benefits based on a percentage of the employees' future salaries is far greater than a promise to pay a percentage of their current salary, and such a difference should be included in the pension liability and pension expense.

- Notice in the definition of the projected benefit obligation, we say **present value** of vested and nonvested benefits.
- When an actuary measures the obligation, they discount the future obligation back to its present value using an appropriate discount (interest) rate.

Minor changes in the interest rate used to discount pension benefits can dramatically affect the measurement of the employer's obligation. For example, a 1% decrease in the discount rate can increase pension liabilities 15%. Accounting rules require that at each measurement date, a company must determine the appropriate discount rate used to measure the pension liability, based on current interest rates.

Recognition of the Net Funded Status of the Pension Plan

Companies must recognize on their balance sheet the full overfunded or underfunded status of their defined benefit pension plan. **[3]**[8] The **overfunded** or **underfunded status** is measured as the difference between the fair value of the plan assets and the projected benefit obligation.

[7]When we use the term "present value of benefits" throughout this chapter, we really mean the **actuarial** present value of benefits. **Actuarial present value** is the amount payable adjusted to reflect the time value of money **and** the probability of payment (by means of decrements for events such as death, disability, withdrawals, or retirement) between the present date and the expected date of payment. For simplicity, though, we use the term "present value" instead of "actuarial present value" in our discussion.

[8]Recognize that GAAP applies to pensions as well as other postretirement benefit plans (OPEBs). Appendix 19A addresses the accounting for OPEBs.

Example 19.2
Funded Status of Pension Plan

FACTS Coker Company has a projected benefit obligation of $300,000. The fair value of its plan assets is $210,000.

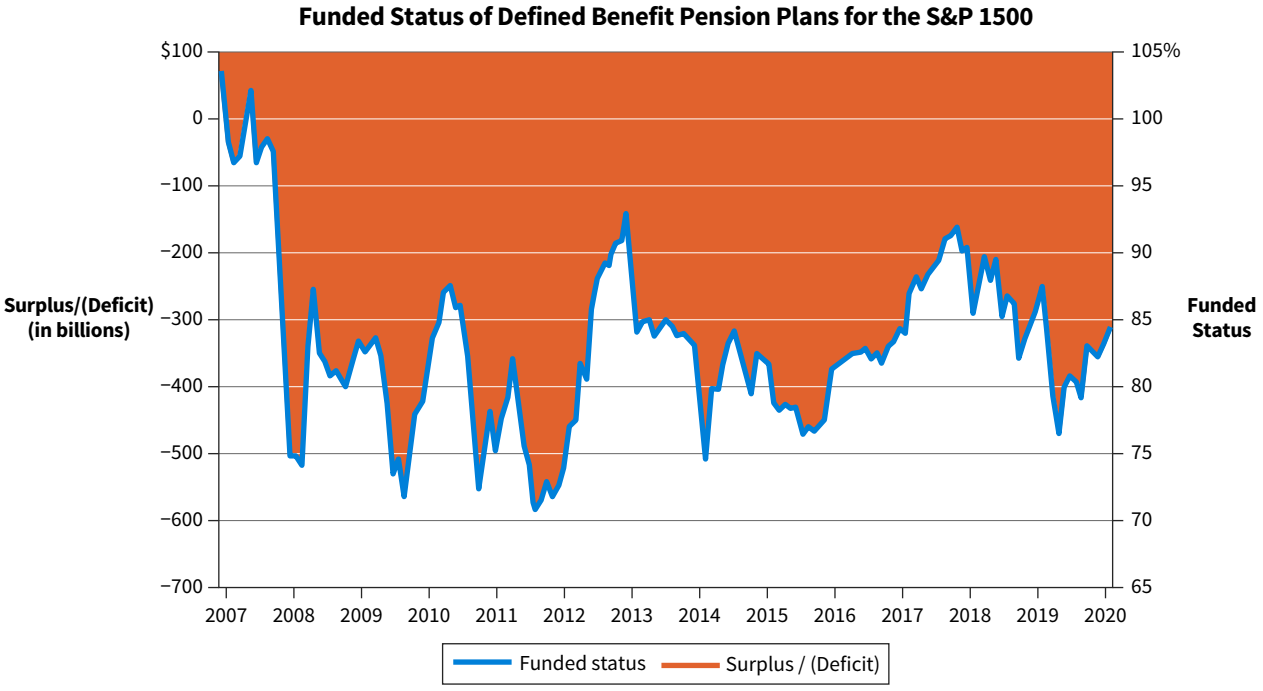
QUESTION What is the funded status of Coker's pension plan?

SOLUTION

The funded status of Coker's pension plan is $90,000 ($300,000 − $210,000) with a credit balance. That is, the plan is underfunded, and Coker therefore reports a pension liability on its balance sheet. If instead the fair value of Coker's plan assets were $430,000, it would report a pension asset of $130,000 ($430,000 − $300,000).

Accounting Matters — Roller Coaster

Ready for a roller coaster ride? Check out the chart below, which shows the financial health of pension plans over the last 10+ years.



Source: Mercer (December 2020).

As indicated, defined benefit pension plans have been underfunded since 2008, the funded status has fluctuated from lows around 70% to highs around 93%, landing most recently around an 85% funded status in 2020 with a deficit of almost $300 billion. Why the ups and downs?

A number of factors cause a fund to change from being overfunded to underfunded, interest rates being a primary culprit. First, low interest rates decimate returns on pension plan assets. Second, using low interest rates to discount the projected benefit obligation leads to a higher pension liability. **The Boeing Company** discloses that the projected benefit obligation for its pension plan would increase by $2.9 billion if the discount rate decreased by 25-basis points, or .25%.

Similarly, as was observed recently, actuaries may revise estimates related to mortality rates or expected salary levels, which could lead to an increase in the projected benefit obligation and more underfunded plans. Finally, more individuals are retiring and living longer, which leads to a depletion of the pension plan assets.

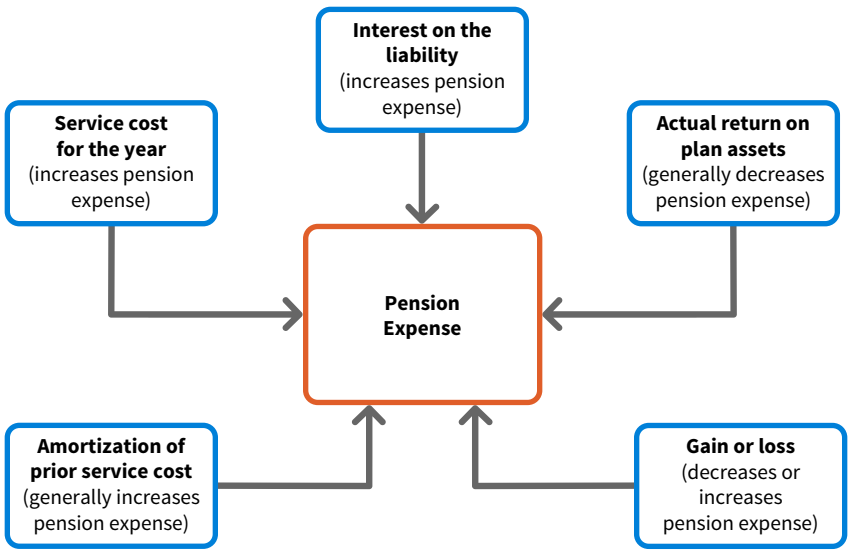
Components of Pension Expense

There is broad agreement that companies should account for pension cost on the **accrual basis**.[9] The profession recognizes that **accounting for pension plans requires measurement of the cost and its identification with the appropriate time periods**. The determination of pension expense, however, is extremely complicated because it is a function of the following components, as Illustration 19.4 shows.

ILLUSTRATION 19.4 Determining Pension Expense

Component	Explanation
Service cost	Service cost is the expense caused by the increase in pension benefits payable (the **projected benefit obligation**) to employees because of their services rendered during the current year. Actuaries compute **service cost** as the present value of the new benefits earned by employees during the year (see **Underlying Concepts**).
Interest on the liability	Because a pension is a deferred compensation arrangement, there is a time value of money factor. As a result, companies record the pension liability on a discounted basis. **Interest expense accrues each year on the projected benefit obligation just as it does on any discounted debt.** The actuary helps to select the interest rate, referred to as the **settlement rate**.
Actual return on plan assets	The return earned by the accumulated pension fund assets in a particular year is relevant in measuring the net cost to the employer of sponsoring an employee pension plan. Therefore, **a company should adjust annual pension expense for interest and dividends that accumulate within the fund, as well as increases and decreases in the fair value of the fund assets**.
Amortization of prior service cost	Pension plan amendments (including initiation of a pension plan) often include provisions to increase benefits (or in rare situations, to decrease benefits) for employee service provided in prior years. A company grants plan amendments with the expectation that it will realize economic benefits in future periods. Thus, **it allocates the cost (prior service cost) of providing these retroactive benefits to pension expense in the future, specifically to the remaining service-years of the affected employees**.
Gain or loss	Volatility in pension expense can result from sudden and large changes in the fair value of plan assets (resulting in differences between the actual return and the expected return on plan assets) and by changes in the projected benefit obligation. We will discuss these complex computations later in the chapter.

Illustration 19.5 shows the **components of pension expense** and their effect on total pension expense (increase or decrease).



Interest on the liability (increases pension expense)
Service cost for the year (increases pension expense)
Actual return on plan assets (generally decreases pension expense)
Pension Expense
Amortization of prior service cost (generally increases pension expense)
Gain or loss (decreases or increases pension expense)

ILLUSTRATION 19.5
Components of Annual Pension Expense

Underlying Concepts

The expense recognition principle and the definition of a liability justify accounting for pension cost on the accrual basis. This requires recording an expense when employees earn the future benefits, and recognizing an existing obligation to pay pensions later based on current services received.

[9] At one time, companies applied the **cash basis** of accounting to pension plans by recognizing the amount paid in a particular accounting period as the pension expense for the period. The problem was that the amount paid or funded in a fiscal period depended on financial management and was too often discretionary. For example, funding could depend on the availability of cash, the level of earnings, or other factors unrelated to the requirements of the plan. Application of the cash basis made it possible to manipulate the amount of pension expense appearing in the income statement simply by varying the cash paid to the pension fund.

Service Cost

The **service cost** is the **actuarial present value of benefits attributed by the pension benefit formula to employee service during the period**.

The actuary predicts the additional benefits that an employer must pay under the plan's benefit formula as a result of the employees' current-year service.

The actuary discounts the cost of those future benefits back to their present value to determine service cost.

The FASB concluded that **companies must consider future compensation levels in measuring the present obligation and periodic pension expense if the plan benefit formula incorporates them**.

In other words, the present obligation resulting from a promise to pay a benefit of 1% of an employee's **final pay** differs from the promise to pay 1% of **current pay**. To overlook this fact is to ignore an important aspect of pension expense. Thus, the FASB adopts the **benefits/years-of-service actuarial method**, **which determines pension expense based on future salary levels**.

Some object to this determination, arguing that a company should have more freedom to select an expense recognition pattern. Others believe that incorporating future salary increases into current pension expense is accounting for events that have not yet happened. They argue that if a company terminates the plan today, it pays only liabilities for accumulated benefits. **Nevertheless, the FASB indicates that the projected benefit obligation provides a more realistic measure of the employer's obligation under the plan on a going concern basis and, therefore, companies should use it as the basis for determining service cost.**

Interest on the Liability

The second component of pension expense is **interest on the liability**, or **interest expense**. Because a company defers paying the liability until maturity, the company records it on a discounted basis. The liability then accrues interest over the life of the employee. **The interest component is the interest for the period on the projected benefit obligation outstanding during the period.** The FASB did not address the question of how often to compound the interest cost. *To simplify our illustrations and problem materials, we use a simple interest computation, applying the interest rate to the beginning-of-the-year balance of the projected benefit liability.*

How do companies determine the interest rate to apply to the pension liability? The FASB states that the assumed discount rate should **reflect the rates at which companies can effectively settle pension benefits**. In determining these **settlement rates**, companies should look to rates of return on high-quality fixed-income investments currently available, whose cash flows match the timing and amount of the expected benefit payments. The objective of selecting the assumed discount rates is to measure a single amount that, if invested in a portfolio of high-quality debt instruments, would provide the necessary future cash flows to pay the pension benefits when due.

Actual Return on Plan Assets

Pension plan assets are usually investments in stocks, bonds, other securities, and real estate that a company holds to earn a reasonable return, generally at minimum risk. What activities increase or decrease the balance of the plan assets?

- **Employer contributions**. When the employer contributes funds to the plan assets on behalf of the employees, the balance in the plan assets will increase.

- **Actual return on plan assets**. The investments in stocks, bonds, and other securities generate a return in the form of dividends, interest, and changes in fair value. These returns increase the balance of the plan assets. The higher the actual return, the less the employer has to contribute over time, and, therefore, the less pension expense that it needs to report.
- **Benefits paid.** Employees who are currently retired receive benefit payments paid from the plan assets. Therefore, benefit payments decrease the balance of the plan assets.

Companies compute the actual return by adjusting the change in the plan assets for the effects of contributions during the year and benefits paid out during the year. The following equation, or a variation thereof, can be used to compute the actual return.

$$\text{Actual Return} = \begin{pmatrix}\text{Plan Assets}\\ \text{Ending}\\ \text{Balance}\end{pmatrix} - \begin{pmatrix}\text{Plan Assets}\\ \text{Beginning}\\ \text{Balance}\end{pmatrix} - \text{Contributions} + \text{Benefits Paid}$$

Stated another way, the actual return on plan assets is the difference between the **fair value of the plan assets** at the beginning of the period and at the end of the period, adjusted for contributions and benefit payments.

Example 19.3
Actual Return on Plan Assets

FACTS Munox Inc. had the following data related to its pension plan assets for the year.

Fair value of plan assets at beginning of the year	$4,200,000
Fair value of plan assets at end of the year	5,000,000
Contributions to plan during the year	500,000
Benefits paid during the year	300,000

QUESTION What is the actual return on the plan assets for the year?

SOLUTION

Fair value of plan assets at end of the year	$5,000,000
Deduct: Fair value of plan assets at beginning of the year	4,200,000
Increase in fair value of plan assets	800,000
Deduct: Contributions to plan during the year	500,000
Add: Benefits paid during the year	300,000
Actual return on plan assets	$ 600,000

If the actual return on the plan assets is positive (a gain) during the period, a company subtracts it when computing pension expense. If the actual return is negative (a loss) during the period, the company adds it when computing pension expense. (At this point, we use the actual return. **Later, for purposes of computing pension expense, we use the expected rate of return.**)

Put It into Practice LO 19.1
Determine Pension Components

FACTS Mayhew Inc. has the following information for its defined benefit pension plan in 2025.

Fair value of pension plan assets, January 1, 2025	$2,400,000
Fair value of pension plan assets, December 31, 2025	2,725,000
Contributions to the plan in 2025	280,000
Benefits paid retirees in 2025	350,000
Projected benefit obligation at December 31, 2025	2,737,000
Accumulated benefit obligation at December 31, 2025	1,980,000
Service cost for 2025	194,000
Interest on January 1, 2025, projected benefit obligation	253,000

INSTRUCTIONS

Determine the following for Mayhew's pension plan in 2025.

a. Actual return on pension assets.

b. Pension expense.

c. Funded status of the pension plan.

SOLUTION

a.	Fair value of plan assets at 12/31/25	$2,725,000	
	Fair value of plan assets at 1/1/25	(2,400,000)	
	Increase in fair value of plan assets	325,000	
	Deduct: Contributions to plan during 2025	280,000	
	Add: Benefits paid during 2025	350,000	
	Actual return on plan assets for 2025	$ 395,000	
b.	Service cost	$194,000	
	Interest on the liability	253,000	
	Actual return on assets (see part (a))	(395,000)	
	Pension expense	$ 52,000	
c.	Projected benefit obligation at December 31, 2025	$2,737,000	
	Fair value of pension plan assets, December 31, 2025	2,725,000	
	Funded status of the plan	$ 12,000	Credit (Liability)

Mayhew will report a pension liability of $12,000 on its balance sheet.

19.2 Using a Pension Worksheet

LEARNING OBJECTIVE 2

Use a worksheet for employer's pension plan entries.

We will now illustrate the basic computation of pension expense using the first three components:

1. Service cost.
2. Interest on the liability.
3. Actual return on plan assets.

We discuss the other pension expense components (amortization of prior service cost, and gains and losses) in later sections.

Companies often use a worksheet to record pension-related information. As its name suggests, the worksheet is a working tool. A worksheet is **not** a permanent accounting record. It is neither a journal nor part of the general ledger. The worksheet is merely a device to make it easier to prepare entries and the financial statements.[10] **Illustration 19.6** shows the format of the **pension worksheet**.

	A	B	C	D	E	F
1	Pension Worksheet					
2		General Journal Entries			Memo Record	
3	Items	Annual Pension Expense	Cash	Pension Asset/ Liability	Projected Benefit Obligation	Plan Assets
4						
5						
6						
7						

ILLUSTRATION 19.6 Basic Format of Pension Worksheet

- The "General Journal Entries" columns of the worksheet (near the center) determine the entries to record in the formal general ledger accounts.
- The "Memo Record" columns (on the right side) maintain balances in the projected benefit obligation and the plan assets.
- The difference between the projected benefit obligation and the fair value of the plan assets is the **pension asset/liability**, which is reported in the balance sheet. Remember the following two items.

1. If the pension benefit obligation is greater then plan assets → Pension liability.
2. If the pension benefit obligation is less than plan assets → Pension asset.

On the first line of the worksheet, a company records the beginning balances (if any). It then records subsequent transactions and events related to the pension plan using debits and credits, using both sets of columns as if they were one. For each transaction or event, the debits must equal the credits. **The ending balance in the Pension Asset/Liability column should equal the net balance in the memo record.**

Example 19.4
2025 Entries and Worksheet

FACTS On January 1, 2025, Zarle Company provides the following information related to its pension plan for the year 2025.

- Plan assets, January 1, 2025, are $100,000.
- Projected benefit obligation, January 1, 2025, is $100,000.
- Annual service cost is $9,000.
- Settlement rate is 10%.
- Actual return on plan assets is $10,000.
- Funding contributions are $8,000.
- Benefits paid to retirees during the year are $7,000.

QUESTION What is the pension worksheet you would prepare for Zarle?

[10] The use of a pension entry worksheet is recommended and illustrated by Paul B. W. Miller, "The New Pension Accounting (Part 2)," *Journal of Accountancy* (February 1987), pp. 86–94.

SOLUTION

The 2025 pension worksheet for Zarle is as follows.

	A	B	C	D	E	F
1	**Pension Worksheet—2025**					
2		**General Journal Entries**			**Memo Record**	
3	**Items**	**Annual Pension Expense**	**Cash**	**Pension Asset/ Liability**	**Projected Benefit Obligation**	**Plan Assets**
4	Balance, Jan. 1, 2025			$ 0	$100,000 Cr.	$100,000 Dr.
5	(a) Service cost	$ 9,000 Dr.			9,000 Cr.	
6	(b) Interest cost	10,000 Dr.			10,000 Cr.	
7	(c) Actual return	10,000 Cr.				10,000 Dr.
8	(d) Contributions		$8,000 Cr.			8,000 Dr.
9	(e) Benefits				7,000 Dr.	7,000 Cr.
10	Journal entry for 2025	$ 9,000 Dr.	$8,000 Cr.	1,000 Cr.*		
11	Balance, Dec. 31, 2025			$1,000 Cr.**	$112,000 Cr.	$111,000 Dr.
12	*$9,000 – $8,000 = $1,000					
13	**$112,000 – $111,000 = $1,000					

In the worksheet in Example 19.4, Zarle records the beginning balances for the projected benefit obligation and the pension plan assets on the first line of the worksheet in the memo record. Because the projected benefit obligation and the plan assets are the same at January 1, 2025, the Pension Asset/Liability account has a zero balance at January 1, 2025.

- Entry (a) records the service cost component, which increases pension expense by $9,000 and increases the liability (projected benefit obligation) by $9,000.
- Entry (b) accrues the interest expense component, which increases the pension expense by $10,000 (the beginning projected benefit obligation multiplied by the settlement rate of 10%), and increases the liability by $10,000.
- Entry (c) records the actual return on the plan assets, which increases the plan assets and decreases the pension expense.
- Entry (d) records Zarle's contribution (funding) of assets to the pension fund, thereby decreasing cash by $8,000 and increasing plan assets by $8,000.
- Entry (e) records the benefit payments made to retirees, which results in equal $7,000 decreases to the plan assets and the projected benefit obligation.

Continuing with Example 19.4, Zarle makes the following journal on December 31, which records the pension expense in 2025, as follows.

	2025	
Pension Expense	9,000	
Cash		8,000
Pension Asset/Liability		1,000

Funded Status

In Example 19.4, the credit to Pension Asset/Liability for $1,000 represents the difference between the 2025 pension expense of $9,000 and the amount funded of $8,000. Pension Asset/Liability (credit) is a liability because Zarle underfunds the plan by $1,000. The Pension Asset/Liability account balance of $1,000 also equals the net of the balances in the memo accounts. **Illustration 19.7** shows that the projected benefit obligation exceeds the plan assets by $1,000, which reconciles to the pension liability reported in the balance sheet.

Projected benefit obligation (Credit)	$(112,000)
Plan assets at fair value (Debit)	111,000
Pension asset/liability (Credit)	$ (1,000)

ILLUSTRATION 19.7 Pension Reconciliation Schedule—December 31, 2025

If the net of the memo record balances is a credit, the reconciling amount in the pension asset/liability column will be a credit equal in amount. If the net of the memo record balances is a debit, the pension asset/liability amount will be a debit equal in amount. The worksheet is designed to produce this reconciling feature, which is useful later in the preparation of the financial statements and required note disclosure related to pensions.

As a result of the journal entry recorded in Example 19.4, the debit to Pension Expense exceeds the credit to Cash, resulting in a credit to Pension Asset/Liability—the recognition of a liability. If the credit to Cash exceeded the debit to Pension Expense, Zarle would debit Pension Asset/Liability—the recognition of an asset.

Put It into Practice LO 19.2
Prepare a Pension Worksheet

FACTS The following data apply to the pension plan of Brickhouse Inc. for the year 2025.

Plan assets, January 1, 2025	$390,000
Projected benefit obligation, January 1, 2025	390,000
Service cost	25,000
Contributions	40,000
Actual return on plan assets	22,700
Benefits paid to retirees	33,400
Settlement rate	6%

INSTRUCTIONS

Using the above data, compute pension expense for the year 2025. As part of your solution, prepare a pension worksheet that shows the journal entry for pension expense for 2025 and the year-end balances in the related pension accounts.

SOLUTION

The pension worksheet for 2025 is as follows.

	A	B	C	D	E	F
1	**Brickhouse Inc. Pension Worksheet—2025**					
2		**General Journal Entries**			**Memo Record**	
3		**Annual Pension Expense**	**Cash**	**Pension Asset/ Liability**	**Projected Benefit Obligation**	**Plan Assets**
4	Balance, Jan. 1, 2025			$ 0	$390,000 Cr.	$390,000 Dr.
5	Service cost	$25,000 Dr.			25,000 Cr.	
6	Interest cost*	23,400 Dr.			23,400 Cr.	
7	Actual return	22,700 Cr.				22,700 Dr.
8	Contributions		$40,000 Cr.			40,000 Dr.
9	Benefits				33,400 Dr.	33,400 Cr.
11	Journal entry, Dec. 31, 2025	$25,700 Dr.	$40,000 Cr.	14,300 Dr.		
12	Balance, Dec. 31, 2025			$14,300 Dr.	$405,000 Cr.	$419,300 Dr.
13	*$390,000 × .06.					

December 31, 2025

Pension Expense	25,700	
Pension Asset/Liability	14,300	
Cash		40,000

19.3 Prior Service Cost (PSC)

LEARNING OBJECTIVE 3

Describe the accounting and amortization of prior service costs.

When either initiating (adopting) or amending a defined benefit plan, a company often provides benefits to employees for years of service **before** the date of initiation or amendment. As a result of this prior service cost, the projected benefit obligation is increased to recognize this additional liability. In many cases, the increase in the projected benefit obligation is substantial.

Amortization

Should a company report an expense for these **prior service costs** at the time it initiates or amends a plan? The FASB says no. The Board's rationale is that the employer would not provide credit for past years of service unless it expects to receive benefits in the future. As a result, a company should not recognize the **retroactive benefits** as pension expense in the year of amendment. Instead:

- The employer initially records the prior service cost as an adjustment to other comprehensive income, by debiting Other Comprehensive Income (PSC) and crediting Projected Benefit Obligation.
- The employer then recognizes the prior service cost as a component of pension expense over the remaining service lives of the employees who are expected to benefit from the change in the plan.

The cost of the retroactive benefits (including any benefits provided to existing retirees) is the increase in the projected benefit obligation at the date of the amendment. An actuary computes the amount of the prior service cost. Regarding amortization of the prior service cost, the Board prefers a **years-of-service method** that is similar to a units-of-production computation. In this approach, a company:

1. Computes the total number of service-years to be worked by all of the participating employees.
2. Divides the prior service cost by the total number of service-years, to obtain a cost per service-year (the unit cost).
3. Multiplies the number of service-years consumed each year by the cost per service-year, to obtain the annual amortization charge.

Example 19.5 Years-of-Service Amortization

FACTS Zarle Company's defined benefit pension plan covers 170 employees. In its negotiations with the employees, Zarle Company amends its pension plan on January 1, 2026, and grants $80,000 of prior service costs to its employees. The employees are grouped according to expected years of retirement, as follows.

Group	Number of Employees	Expected Retirement on Dec. 31
A	40	2026
B	20	2027
C	40	2028
D	50	2029
E	20	2030
	170	

QUESTIONS (a) What are the service-years, per year and in total, and (b) what is the annual amortization for years 2026-2030?

SOLUTION

a.

	Service-Years					
Year	A	B	C	D	E	Total
2026	40	20	40	50	20	170
2027		20	40	50	20	130
2028			40	50	20	110
2029				50	20	70
2030					20	20
	40	40	120	200	100	500

b. Given a prior service cost of $80,000 and a total of 500 service-years for all years, the cost per service-year is $160 ($80,000 ÷ 500). The annual amount of amortization based on a $160 cost per service-year is as follows.

Year	Total Service-Years	×	Cost per Service-Year	=	Annual Amortization
2026	170		$160		$27,200
2027	130		160		20,800
2028	110		160		17,600
2029	70		160		11,200
2030	20		160		3,200
	500				$80,000

An alternative method of computing amortization of **prior service cost is permitted**. **Employers may use straight-line amortization over the average remaining service life of the employees.** In Example 19.5, with 500 service-years and 170 employees, the average would be 2.94 years (500 ÷ 170). The annual expense would be $27,211 ($80,000 ÷ 2.94). Using this method, Zarle Company would record expense in 2026, 2027, and 2028 as shown in Illustration 19.8.

Year	Expense
2026	$27,211
2027	27,211
2028	25,578 (.94 × $27,211)
	$80,000

ILLUSTRATION 19.8 Straight-Line Amortization

Example 19.6
2026 Entries and Worksheet

FACTS Continuing with the Zarle Company pension plan into 2026, assume that the company amends the pension plan on January 1, 2026, to grant employees prior service benefits with a present value of $80,000. Zarle uses the annual amortization amounts, as computed in Example 19.5 using the years-of-service approach ($27,200 for 2026). The following additional facts apply to the pension plan for the year 2026.

- Annual service cost is $9,500.
- Settlement rate is 10%.
- Actual return on plan assets is $11,100.
- Annual funding contributions are $20,000.
- Benefits paid to retirees during the year are $8,000.
- Amortization of prior service cost (PSC) using the years-of-service method is $27,200.
- Accumulated other comprehensive income (hereafter referred to as accumulated OCI) on December 31, 2025, is zero.

QUESTION What is the pension worksheet you would prepare for Zarle in 2026?

SOLUTION

	A	B	C	D	E	F	G
1	Pension Worksheet—2026						
2		General Journal Entries				Memo Record	
3	Items	Annual Pension Expense	Cash	Other Comprehensive Income — Prior Service Cost	Pension Asset/ Liability	Projected Benefit Obligation	Plan Assets
4	Balance, Dec. 31, 2025				$ 1,000 Cr.	$112,000 Cr.	$111,000 Dr.
5	(f) Prior service cost			$80,000 Dr.		80,000 Cr.	0
6	Balance, Jan. 1, 2026					192,000 Cr.	111,000 Dr.
7	(g) Service cost	$ 9,500 Dr.				9,500 Cr.	
8	(h) Interest cost	19,200 Dr.				19,200 Cr.	
9	(i) Actual return	11,100 Cr.					11,100 Dr.
10	(j) Amortization of PSC	27,200 Dr.		27,200 Cr.			
11	(k) Contributions		$20,000 Cr.				20,000 Dr.
12	(l) Benefits					8,000 Dr.	8,000 Cr.
13	Journal entry for 2026	$44,800 Dr.	$20,000 Cr.	52,800 Dr.	77,600 Cr.		
14	Accumulated OCI, Dec. 31, 2025			0			
15	Balance, Dec. 31, 2026			$52,800 Dr.	$78,600 Cr.	$212,700 Cr.	$134,100 Dr.

In the worksheet in Example 19.6, we have added an additional column to the worksheet to record the prior service cost adjustment to other comprehensive income. Remember that other comprehensive income, like net income, is measured over a period of time and is then closed out into accumulated other comprehensive income on the balance sheet (much like net income is closed into retained earnings). As shown in row 5, the other comprehensive income amount related to prior service cost is added to accumulated other comprehensive income ("Accumulated OCI") to arrive at a debit balance of $52,800, which would be reported as a component of equity at December 31, 2026.

The first line of the worksheet shows the beginning balances of the Pension Asset/Liability account and the memo accounts. These are simply the balances carried forward from Example 19.4.

- Entry (f) records Zarle's granting of prior service cost, by adding $80,000 to the projected benefit obligation and decreasing other comprehensive income—prior service cost by the same amount.

- Entries (g), (h), (i), (k), and (l) are similar to the corresponding entries in 2025. To compute the interest cost on the projected benefit obligation for entry (h), we use the beginning projected benefit balance of $192,000, which has been adjusted for the prior service cost amendment on January 1, 2026.
- Entry (j) records the 2026 amortization of prior service cost by debiting Pension Expense for $27,200 and crediting **Other Comprehensive Income (PSC)** for the same amount.

Zarle makes the following journal entry on December 31 to formally record the 2026 pension expense (the sum of the annual pension expense column) and related pension information.

	2026	
Pension Expense	44,800	
Other Comprehensive Income (PSC)	52,800	
Cash		20,000
Pension Asset/Liability		77,600

Funded Status—2026

Because the debits to Pension Expense and to Other Comprehensive Income (PSC) exceed the funding, Zarle credits the Pension Asset/Liability account for the $77,600 difference. That account is a liability. In 2026, as in 2025, the balance of the Pension Asset/Liability account ($78,600) is equal to the net of the balances in the memo accounts, as shown in **Illustration 19.9**.

Projected benefit obligation (Credit)	$(212,700)
Plan assets at fair value (Debit)	134,100
Pension asset/liability (Credit)	$ (78,600)

ILLUSTRATION 19.9 Pension Reconciliation Schedule—December 31, 2026

Note that the full effect of the plan amendment awarding additional benefits for prior service is captured in the December 31, 2026, pension entry. The **reconciliation** is the formula that makes the worksheet work. It relates the components of pension accounting, recorded and unrecorded, to one another.

FACTS Robertson Company adopts a defined benefit pension plan on January 1, 2024, resulting in the following ending balances at December 31, 2024: plan assets $220,000 and projected benefit obligation $277,000. Other data relating to the operation of the plan in 2025 are as follows.

Annual service cost	$ 19,000
Actual return on plan assets	22,000
Annual funding (contributions)	40,000
Benefits paid	16,400
Prior service cost (plan amended, 1/1/25)	160,000
Amortization of prior service cost	54,400
Settlement rate and expected rate of return	10%

INSTRUCTIONS

a. Prepare a pension worksheet presenting the 2025 pension balances and activities.

b. Prepare the journal entry (from the worksheet) to record the pension plan transactions and events at December 31, 2025.

Put It into Practice LO 19.3
Prepare Worksheet for Prior Service Costs

SOLUTION

a.

Cash		40,000
Pension Asset /Liability		160,700

19.4 Gains and Losses

LEARNING OBJECTIVE 4

Explain the accounting and amortization for unexpected gains and losses.

Of great concern to companies that have pension plans are the uncontrollable and unexpected swings in pension expense that can result from:

- Sudden and large changes in the fair value of plan assets.
- Changes in actuarial assumptions that affect the amount of the projected benefit obligation.

If these gains or losses impact fully the financial statements in the period of realization or incurrence, substantial fluctuations in pension expense result.

Therefore, the FASB decided to reduce the volatility associated with pension expense by using **smoothing techniques** that dampen and in some cases fully eliminate the fluctuations.

Smoothing Unexpected Gains and Losses on Plan Assets

One component of pension expense, actual return on plan assets, reduces pension expense (assuming the actual return is positive). A large change in the actual return can substantially affect pension expense for a year. Assume a company has a 40% return in the stock market for the year. Should this substantial, and perhaps one-time, event affect current pension expense?

Actuaries ignore current fluctuations when they develop a funding pattern for employers to pay expected benefits in the future. They develop an **expected rate of return** and multiply it by an asset value weighted over a reasonable period of time (often referred to as the **market-related asset value**) to arrive at an **expected return on plan assets**. They then use this return to determine a company's funding pattern.[11]

The FASB adopted the actuary's approach to dampen wide swings that might occur in the actual return. To achieve this goal, the company calculates expected return as follows.

Fair Value of Plan Assets at the Beginning of the Year × Expected Rate of Return = Expected Return

The company includes **expected return** as a component of pension expense, not the actual return, in a given year. The difference between the expected return and the actual return is referred to as the **unexpected gain or loss.** The FASB uses the term **asset gains and losses**. These are determined as follows.

- When actual return is greater than the expected return, then the difference is an **asset gain**.
- When actual return is less than the expected return, then the difference is an **asset loss**.

What happens to unexpected gains or losses in the accounting for pensions? Companies record asset gains and asset losses in an account, **Other Comprehensive Income (G/L)**, combining them with gains and losses accumulated in prior years. This treatment is similar to prior service cost. The Board believes this treatment is consistent with the practice of including in other comprehensive income certain changes in value that have not been recognized in net income (for example, unrealized gains and losses on available-for-sale debt securities). **[5]** In addition, the accounting is simple, transparent, and symmetrical.

[11]Companies may use different ways of determining the market-related asset value for different classes of assets.**[4]** For example, an employer might use fair value for bonds and a five-year moving-average for equities. But companies should consistently apply the manner of determining market-related value from year to year for each asset class. Throughout our Zarle examples, we assume that market-related values based on a calculated value and the fair value of plan assets are equal. *For homework purposes, use the fair value of plan assets as the measure for the market-related value.*

Example 19.7
Asset Gain/Loss

FACTS In 2027, Zarle Company has an actual return on plan assets of $12,000. The expected rate of return is 10%, and the fair value of the plan assets at the beginning of 2027 is $134,100.

QUESTION What is the unexpected gain or loss (if any)?

SOLUTION

The expected return is calculated as follows.

$$\$134{,}100 \times .10 = \$13{,}410$$

Next, compare the actual return and expected return to determine if the difference is an asset gain or loss.

$12,000 (actual return) is less than $13,410 (expected return) by $1,410:
this difference is an **asset loss**

The asset loss is debited to Other Comprehensive Income (G/L) and credited to Pension Expense. **We show treatment of this loss later, in the worksheet in Example 19.9.**

Smoothing Unexpected Gains and Losses on the Pension Liability

In estimating the projected benefit obligation (the liability), actuaries make assumptions about such items as mortality rate, retirement rate, turnover rate, disability rate, and salary amounts. Any change in these actuarial assumptions may cause the projected benefit obligation to increase or decrease. Seldom does actual experience coincide exactly with actuarial predictions. These unexpected gains or losses from changes in the projected benefit obligation are called **liability gains and losses**, and are determined as follows.

- Actuary determines the projected benefit obligation should be increased → **Liability loss**.
- Actuary determines the projected benefit obligation should be decreased → **Liability gain**.

Companies report liability gains and losses in Other Comprehensive Income (G/L) along with the asset gains and losses. The combined gains and losses are accumulated from year to year and reported in Accumulated Other Comprehensive Income on the balance sheet in the stockholder's equity section.

Corridor Amortization

The asset and liability gains and losses can offset each other. As a result, the Accumulated OCI account related to gains and losses may not grow very large. But, it is possible that no offsetting will occur and that the balance in the Accumulated OCI account related to gains and losses will continue to grow.

- To limit the growth of the Accumulated OCI account, the FASB invented the **corridor approach** for amortizing the account's accumulated balance when it gets too large.
- How large is too large? The FASB set a limit of 10% of the larger of the beginning balances of the projected benefit obligation **or** the market-related value of the plan assets.
- **Above that size, the Accumulated OCI account related to gains and losses is considered too large and must be amortized.**

To illustrate the corridor approach, data for Callaway Co.'s projected benefit obligation and plan assets over a period of six years are shown in **Illustration 19.10**.

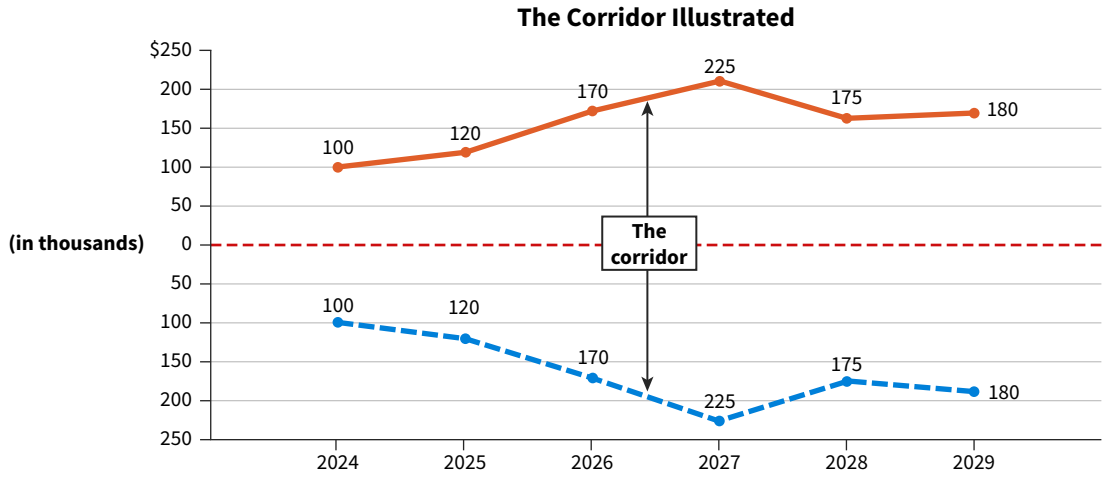
ILLUSTRATION 19.10
Computation of the Corridor

Beginning-of-the-Year Balances	Projected Benefit Obligation	Market-Related Asset Value	Corridor* +/−10%
2024	$1,000,000	$ 900,000	$100,000
2025	1,200,000	1,100,000	120,000
2026	1,300,000	1,700,000	170,000
2027	1,500,000	2,250,000	225,000
2028	1,700,000	1,750,000	175,000
2029	1,800,000	1,700,000	180,000

*The corridor becomes 10% of the larger (in red type) of the projected benefit obligation or the market-related asset value.

How the corridor works becomes apparent when we portray the data graphically, as in **Illustration 19.11**.

ILLUSTRATION 19.11 Graphic Illustration of the Corridor



If the balance in the Accumulated OCI account related to gains and losses stays within the upper and lower limits of the corridor, no amortization is required. In that case, Callaway carries forward unchanged the accumulated OCI related to gains and losses.

If amortization is required, the minimum amortization is calculated as follows.

$$\frac{\text{Excess of Accumulated OCI Above the Corridor Amount}}{\text{Average Remaining Service Period of Employees}} = \text{Amortization Amount}$$

Callaway may use any systematic method of amortization of gains and losses in lieu of the minimum, provided it is greater than the minimum. It must use the method consistently for both gains and losses, and must disclose the amortization method used.

Example of Gains/Losses

In applying the corridor, companies should include amortization of the net gain or loss as a component of pension expense only if, at the **beginning of the year**, the net gain or loss

in Accumulated OCI exceeded the corridor. If amortization is required, pension expense is impacted as follows.

Amortization of net gain → **Decrease** in pension expense
Amortization of net loss → **Increase** in pension expense

If no net gain or loss exists in Accumulated OCI at the beginning of the period, the company cannot recognize gains or losses in pension expense in that period.

Example 19.8
Amortization

FACTS Lasso, Inc. has the following information related to its pension plan.

	Beginning of the Year		
	2025	**2026**	**2027**
Projected benefit obligation	$2,100,000	$2,600,000	$2,900,000
Market-related asset value	2,600,000	2,800,000	2,700,000

Lasso recorded in Other Comprehensive Income actuarial **losses** of $400,000 in 2025 and $300,000 in 2026. Lasso has no gains or losses at the beginning of 2025.

QUESTION What minimum amount of amortization will Lasso record in 2025, 2026, and 2027? Assume the average remaining service lives for all employees is 5.5 years.

SOLUTION

The schedule to amortize the net gain or loss is as follows.

Year	Projected Benefit Obligation[a]	Plan Assets[a]	Corridor[b]	Accumulated OCI (G/L)[a]	Minimum Amortization of Loss (For Current Year)
2025	$2,100,000	$2,600,000	$260,000	$ 0	$ 0
2026	2,600,000	2,800,000	280,000	400,000	21,818[c]
2027	2,900,000	2,700,000	290,000	678,182[d]	70,579[d]

[a]All as of the beginning of the period.
[b]10% of the greater of projected benefit obligation or plan assets' market-related value.
[c]Calculation of amortization of net loss for 2026: ($400,000 − $280,000) ÷ 5.5 years = $21,818 amortization, will increase pension expense.
[d]Calculation of amortization of net loss for 2027 is a two-step process:

1. Calculate the updated balance in Accumulated OCI (G/L):

Net loss for 2026	$400,000
Less: 2026 amortization	21,818
Ending net loss balance 2026	378,182
Loss increase for 2027	300,000
Updated net loss balance for 2027	$678,182

2. Calculate amortization of net loss for 2027: ($678,182 − $290,000) ÷ 5.5 years = $70,579 amortization, will increase pension expense.

The loss recognized in 2026 increased pension expense by $21,818. This amount is small in comparison with the total loss of $400,000. It indicates that the corridor approach dampens the effects (reduces volatility) of these gains and losses on pension expense.

The rationale for the corridor is that gains and losses result from refinements in estimates as well as real changes in economic value. Over time, some of these gains and losses will offset one another. Therefore, in Example 19.8, it seems reasonable that Lasso should not fully recognize gains and losses as a component of pension expense in the period in which they arise.

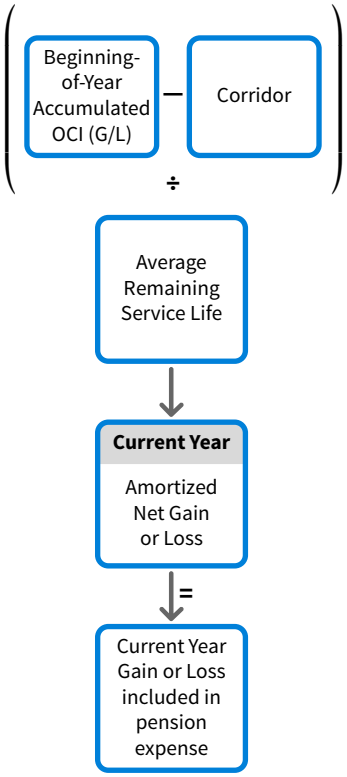
However, Lasso should immediately recognize in net income certain gains and losses—if they arise from a single occurrence not directly related to the operation of the pension plan and not in the ordinary course of the employer's business. For

example, a gain or loss that is directly related to a plant closing, a disposal of a business component, or a similar event that greatly affects the size of the employee work force should be recognized as a part of the gain or loss associated with that event.

At one time, **Bethlehem Steel** reported a quarterly loss of $477 million. A great deal of this loss was attributable to future estimated benefits payable to workers who were permanently laid off. In this situation, the loss should be treated as an adjustment to the gain or loss on the plant closing and should **not** affect pension cost for the current or future periods.

To summarize, the difference between the actual return on plan assets and the expected return on plan assets is the **unexpected asset gain or loss**.

- The unexpected gain or loss defers the difference between the actual return and expected return on plan assets in computing current-year pension expense.
- As a result, **it is really the expected return on plan assets** (**not the actual return**) **that determines current pension expense**.



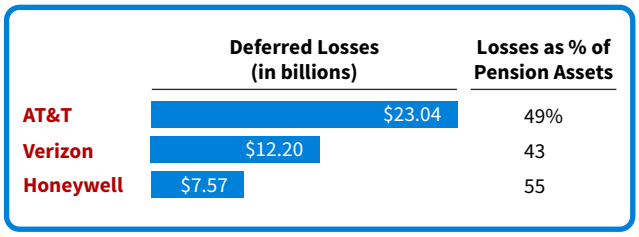
Companies determine the amortized net gain or loss by amortizing the Accumulated OCI amount related to net gain or loss at the beginning of the year subject to the corridor limitation.

In other words, **if the accumulated gain or loss (including that for the assets and the liability) is greater than the corridor**, **these net gains and losses are subject to amortization**. Lasso (in Example 19.8) computed this minimum amortization by dividing the net gains or losses subject to amortization by the average remaining service period. When the current-year unexpected gain or loss is combined with the amortized net gain or loss, we determine the current-year gain or loss.[12]

Accounting Matters — Bye Bye Corridor

Consider a company like **General Motors (GM)**, which carries over $6 billion of unamortized actuarial losses related to pension obligations in the equity section of its balance sheet. These accumulated losses, using the corridor approach, will drag down future earnings as they are amortized into net income. Most recently, GM expected a $258 million charge to income for such losses. Is there an alternative to the corridor approach? Yes! Companies may select any method of accounting for deferred losses as long as it is systematic, rational, and consistently applied, and meets a minimum for recognition in the income statement.

Some notable companies, including **AT&T**, **Verizon Communications**, and **Honeywell International**, have shifted away from the corridor approach in favor of mark-to-market, recognizing actuarial gains and losses immediately in net income in the year incurred (summarized in the following chart).



Companies argue this approach provides more transparency for losses that will directly affect pension expense in the current period. However, there is a silver lining for these companies – they can charge a good portion of these accumulated losses to past years when they make the switch.

When AT&T changed its accounting policy to immediate recognition of actuarial losses, it restated its prior-year financial statements. This restatement moved the prior year to a net loss of $2.6 billion instead of a profit of $12.9 billion. But investors are focused on the future, not the past! Charging accumulated losses to a prior year led to a much smaller pension expense going forward by avoiding the drag on earnings from the corridor amortization. Other companies, including **Ford**, **UPS**, and **Coca-Cola**, also got on the mark-to-market bandwagon, taking earnings hits upon adoption.

Although earnings in the future will probably be more volatile due to fluctuations in pension expense, more companies are willing to move in the direction of immediate expensing to eliminate large deferred losses which would be a drag on future income.

Sources: SEI, "Why Are Pension Plan Sponsors Switching to Mark-to-Market Accounting?" (October 2013); B. Snavely, "Ford Earnings to Take $2 Billion Hit on Accounting Change," *Detroit Free Press* (January 20, 2017); and M. Mauer, "CFOs Could Change Pension Accounting Style to Avoid Drag on Earnings," *Wall Street Journal* (February 26, 2020).

[12]In essence, these gains and losses are subject to **triple** smoothing. That is, companies first smooth the asset gain or loss by using the expected return. Second, they do not amortize the accumulated gain or loss at the beginning of the year unless it is greater than the corridor. Finally, they spread the excess over the remaining service life of existing employees.

Example 19.9
2027 Worksheet

FACTS Continuing the Zarle Company examples, the following facts apply to its pension plan for 2027.

- Annual service cost is $13,000.
- Settlement rate is 10%; expected return on plan assets is 10%.
- Actual return on plan assets is $12,000.
- Amortization of prior service cost (PSC) is $20,800.
- Annual funding contributions are $24,000.
- Benefits paid to retirees during the year are $10,500.
- Changes in actuarial assumptions resulted in an end-of-year projected benefit obligation of $265,000.

QUESTION What is the pension worksheet you would prepare for Zarle's pension plan in 2027?

SOLUTION

The following worksheet presents all of Zarle's 2027 pension entries and related information.

	A	B	C	D	E	F	G	H
1	**Pension Worksheet—2027**							
2		**General Journal Entries**					**Memo Record**	
3	**Items**	**Annual Pension Expense**	**Cash**	**Other Comprehensive Income — Prior Service Cost**	**Other Comprehensive Income — Gains/ Losses**	**Pension Asset/ Liability**	**Projected Benefit Obligation**	**Plan Assets**
4	Balance, Jan. 1, 2027					$ 78,600 Cr.	$212,700 Cr.	$134,100 Dr.
5	(m) Service cost	$13,000 Dr.					13,000 Cr.	
6	(n) Interest cost	21,270 Dr.					21,270 Cr.	
7	(o) Actual return	12,000 Cr.						12,000 Dr.
8	(p) Unexpected loss	1,410 Cr.			$ 1,410 Dr.			
9	(q) Amortization of PSC	20,800 Dr.		$20,800 Cr.				
10	(r) Contributions		$24,000 Cr.					24,000 Dr.
11	(s) Benefits						10,500 Dr.	10,500 Cr.
12	(t) Liability increase				28,530 Dr.		28,530 Cr.	
13	Journal entry for 2027	$41,660 Dr.	$24,000 Cr.	20,800 Cr.	29,940 Dr.	26,800 Cr.		
14	Accumulated OCI, Dec. 31, 2026			52,800 Dr.	0			
15	Balance, Dec. 31, 2027*			$32,000 Dr.	$29,940 Dr.	$105,400 Cr.	$265,000 Cr.	$159,600 Dr.
16	*Accumulated OCI (PSC)	$32,000 Dr.						
17	Accumulated OCI (G/L)	29,940 Dr.						
18	Accumulated OCI, Dec. 31, 2027	$61,940 Dr.						

In the worksheet in Example 19.9, the first line records the beginning balances that relate to the pension plan. In this case, Zarle's beginning balances are the ending balances from its 2026 pension worksheet in Example 19.6.

- Entries (m), (n), (o), (q), (r), and (s) are similar to the corresponding entries in 2025 or 2026.
- Entries (o) and (p) are related. We explained the recording of the actual return in entry (o) in both 2025 and 2026; it is recorded similarly in 2027. In both 2025 and 2026, Zarle assumed that the actual return on plan assets was equal to the expected return on plan assets. In 2027, the expected return of $13,410 (**calculated in Example 19.7**) is higher than the actual return of $12,000, resulting in an asset loss which decreases pension expense.
- Entry (t) records the change in the projected benefit obligation resulting from the change in the actuarial assumptions. The actuary has now computed the ending balance to be $265,000.

Zarle defers the unexpected asset loss of $1,410 ($13,410 − $12,000) by debiting the Other Comprehensive Income (G/L) account and crediting Pension Expense to smooth pension expense. **As a result of this adjustment, the expected return on the plan assets is the amount actually used to compute pension expense.** Given the PBO balance at December 31, 2026, and the related transactions during 2026, the PBO balance to date is computed as shown in **Illustration 19.12**.

December 31, 2026, PBO balance	$212,700
Service cost [entry (m)]	13,000
Interest cost [entry (n)]	21,270
Benefits paid [entry (s)]	(10,500)
December 31, 2027, PBO balance (before liability Increases)	$236,470

ILLUSTRATION 19.12 Projected Benefit Obligation Balance (Unadjusted)

The difference between the ending balance of $265,000 and the balance of $236,470 before the liability increase is $28,530 ($265,000 − $236,470). This $28,530 (Entry t) increase in the employer's liability is an unexpected loss.

Continuing with Example 19.9, the journal entry on December 31, 2027, to record the pension information is as follows.

Pension Expense	41,660	
Other Comprehensive Income (G/L)	29,940	
Cash		24,000
Other Comprehensive Income (PSC)		20,800
Pension Asset/Liability		26,800

Funded Status—2027

As the 2027 worksheet indicates, the $105,400 balance in the Pension Asset/Liability account at December 31, 2027, is equal to the net of the balances in the memo accounts. **Illustration 19.13** shows this computation.

Projected benefit obligation (Credit)	$(265,000)
Plan assets at fair value (Debit)	159,600
Pension asset/liability	$(105,400)

ILLUSTRATION 19.13 Pension Reconciliation Schedule—December 31, 2027

FACTS Information for the Zarle Company pension plan in 2028 is as follows.

- Service cost is $16,000.
- Settlement rate is 10%; expected rate of return is 10%.
- Actual return on plan assets is $22,000.
- Amortization of prior service cost is $17,600.
- Annual funding contributions are $27,000.
- Benefits paid to retirees during the year are $18,000.
- Average service life of all covered employees is 20 years.

INSTRUCTIONS

Prepare the pension worksheet for Zarle's pension plan in 2028.

Put It into Practice LO 19.4
Prepare 2028 Pension Worksheet

SOLUTION

The worksheet, to facilitate accumulation and recording of the components of pension expense and maintenance of amounts related to the pension plan, is as follows.

	A	B	C	D	E	F	G	H
1	**Comprehensive Pension Worksheet—2028**							
2		**General Journal Entries**					**Memo Record**	
3	**Items**	**Annual Pension Expense**	**Cash**	**Other Comprehensive Income**		**Pension Asset/ Liability**	**Projected Benefit Obligation**	**Plan Assets**
				Prior Service Cost	**Gains/ Losses**			
4	Balance, Dec. 31, 2027					$105,400 Cr.	$265,000 Cr.	$159,600 Dr.
5	(aa) Service cost	$16,000 Dr.					16,000 Cr.	
6	(bb) Interest cost	26,500 Dr.					26,500 Cr.	
7	(cc) Actual return	22,000 Cr.						22,000 Dr.
8	(dd) Unexpected gain	6,040 Dr.			$ 6,040 Cr.			
9	(ee) Amortization of PSC	17,600 Dr.		$17,600 Cr.				
10	(ff) Contributions		$27,000 Cr.					27,000 Dr.
11	(gg) Benefits						18,000 Dr.	18,000 Cr.
12	(hh) Amortization of loss	172 Dr.			172 Cr.			
13	Journal entry for 2028	$44,312 Dr.	$27,000 Cr.	17,600 Cr.	6,212 Cr.	6,500 Dr.		
14	Accumulated OCI, Dec. 31, 2027			32,000 Dr.	29,940 Dr.			
15	Balance, Dec. 31, 2028*			$14,400 Dr.	$23,728 Dr.	$ 98,900 Cr.	$289,500 Cr.	$190,600 Dr.
16	*Accumulated OCI (PSC)	$14,400 Dr.						
17	Accumulated OCI (G/L)	23,728 Dr.						
18	Accumulated OCI, Dec. 31, 2028	$38,128 Dr.						

Beginning-of-the-year 2028 account balances are the December 31, 2027, balances from Zarle's 2027 pension worksheet in Example 19.9.

- Entries (aa) through (gg) are similar to the corresponding entries previously explained in the prior years' worksheets, with the exception of entry (dd). In 2027, the expected return on plan assets exceeded the actual return, producing an unexpected loss. In 2028, the unexpected gain or loss is calculated as follows.

$$\text{Expected return} = \$159{,}600 \times .10 = \$15{,}960$$

$22,000 actual return is greater than the expected return ($15,960) by an amount of $6,040, an asset gain (entry dd)

By netting the gain of $6,040 against the actual return of $22,000, pension expense is affected only by the expected return of $15,960.

- A new entry (hh) in Zarle's worksheet results from application of the corridor test on the accumulated balance of net gain or loss in accumulated other comprehensive income. Zarle begins 2028 with a net loss balance of $29,940. The company applies the corridor test in 2028 to determine whether the balance is excessive and should be amortized. In 2028, the corridor is 10% of the larger of the beginning-of-the-year projected benefit obligation of $265,000 or the plan asset's $159,600 market-related asset value (assumed to be fair value). The corridor for 2028 is $26,500 ($265,000 × .10). The net loss balance in Accumulated OCI of $29,940 is greater than the corridor, therefore, the excess must be amortized as follows.

$$\frac{\$29{,}940 - \$26{,}500}{20 \text{ years}} = \$172 \text{ amortization for 2028}$$

- Amortization of a net loss increases pension expense. In the 2028 pension worksheet, Zarle debits Pension Expense for $172 and credits that amount to Other Comprehensive Income (G/L).

Zarle records pension expense for 2028 as follows.

2028

Pension Expense	44,312	
Pension Asset/Liability	6,500	
Cash		27,000
Other Comprehensive Income (G/L)		6,212
Other Comprehensive Income (PSC)		17,600

19.5 Reporting Pension Plans in Financial Statements

LEARNING OBJECTIVE 5

Describe the requirements for reporting pension plans in financial statements.

As you might suspect, a phenomenon as significant and complex as pensions involves extensive reporting and disclosure requirements. We will cover these requirements in four categories:

1. Assets and liabilities.
2. Net income.
3. Comprehensive income.
4. The notes to the financial statements.

Assets and Liabilities

Companies must recognize on their balance sheet the overfunded (pension asset) or underfunded (pension liability) status of their defined benefit pension plan. The overfunded or underfunded status is measured as the difference between the fair value of the plan assets and the projected benefit obligation.[13] In Zarle's case, the projected benefit obligation is greater than the plan assets at December 31, 2028. As a result, Zarle reports a net pension liability. The current portion of a net pension liability represents the amount of benefit payments to be paid in the next 12 months (or operating cycle, if longer), if that amount cannot be funded from existing plan assets. Otherwise, the pension liability is classified as a noncurrent liability.

- In the event that the fair value of plan assets exceeds the projected benefit obligation (the plan is overfunded), companies will report a net pension asset.
- However, no portion of a pension asset is reported as a current asset. That is, the excess of the fair value of the plan assets over the benefit obligation is classified as a noncurrent asset.

The rationale for noncurrent classification is that the pension plan assets are restricted to fund the projected benefit obligation.

Net Income

Pension expense includes multiple components (service cost, interest cost, return on assets, and amortization of various amounts such as prior service cost and gains and losses) deferred from prior periods. The FASB requires presentation of the components of pension expense as follows.

[13] Some companies have two or more pension plans. The Board takes the position that **all overfunded plans should be combined** and shown as a pension asset on the balance sheet. Similarly, if the company has two or more underfunded plans, the **underfunded plans are combined and shown as one amount** on the balance sheet.

The FASB rejected the alternative of combining **all** plans and representing the net amount as a single net asset or net liability. The rationale: A company does not have the ability to offset excess assets of one plan against underfunded obligations of another plan. Furthermore, netting all plans is inappropriate because offsetting assets and liabilities is not permitted under GAAP unless a right of offset exists.

1. Service cost component is reported as pension expense in income from operations (often as part of compensation expense).
2. Other components of pension expense are generally reported as one net amount in the "Other expenses and losses" section below income from operations. **[6]**

The rationale for this segregation is that presentation of pension expense as one amount combines amounts that are different in their predictive value, resulting in a presentation that is of limited value to financial statement users. The FASB indicated that service cost is the component that originates from employee service during the current period and has a significantly different effect in terms of information-usefulness compared to other pension expense components.

To illustrate the reporting of pension expense on the income statement, information from Zarle Company's 2028 worksheet (see Put It into Practice 19.4) is used. Zarle's worksheet indicates that service cost component of pension expense is $16,000, and other components of pension expense are $28,312 ($44,312 − $16,000). Assuming the following additional information for Zarle (sales revenue $2,000,000; cost of goods sold $1,500,000; other operating expenses, excluding pension expense related to service cost $110,000), **Illustration 19.14** presents Zarle's income statement for 2028.

ILLUSTRATION 19.14 Income Statement—2028

Zarle Company
Income Statement
For the Year Ended December 31, 2028

Sales revenue	$2,000,000
Cost of goods sold	1,500,000
Gross profit	500,000
Pension expense (service cost)	16,000
Other operating expenses	110,000
Income from operations	374,000
Other expenses and losses	
Pension expense (other components)	28,312
Net income	$ 345,688

If Zarle does not report income from operations, it then has the discretion to report the other components of pension expense wherever it is appropriate. Such presentation should convey the underlying nature of these components and be separated from the service cost component. *For homework purposes, assume that the income statement includes an operating income subtotal.*

Comprehensive Income

In addition to the pension expense reported on the income statement, companies are also required to recognize actuarial gains and losses and prior service costs that originate in the current period in other comprehensive income. Amounts that are not recognized as part of pension expense are recognized as increases or decreases in other comprehensive income.

- The Board requires that the prior service cost arising in the year of the amendment (which increases the projected benefit obligation) be recognized by an offsetting debit to other comprehensive income.
- By recognizing both actuarial gains and losses and prior service cost as part of other comprehensive income, the Board believes that the usefulness of financial statements is enhanced.

To illustrate, Zarle Company's 2028 worksheet is used. Zarle's worksheet indicates that both prior service cost of $17,600 and actuarial gains of $6,212 ($6,040 + $172) are amortized to pension expense in 2028. The increase in other comprehensive income of $23,812 is computed as shown in **Illustration 19.15**.

Prior service cost amortization	$17,600
Gains and losses amortization	6,212
Other comprehensive income	$23,812

ILLUSTRATION 19.15 Computation of Other Comprehensive Income

Illustration 19.16 shows the computation of comprehensive income for 2028 for Zarle Company.

Net income	$345,688
Other comprehensive income	23,812
Comprehensive income	$369,500

ILLUSTRATION 19.16 Computation of Comprehensive Income

As discussed in Chapter 3, the components of other comprehensive income must be reported in one of two ways: (1) in a second income statement, or (2) in a combined statement of comprehensive income. Regardless of the format used, net income must be added to other comprehensive income to arrive at comprehensive income. *For homework purposes, use the second income statement approach unless stated otherwise.* Earnings per share information related to comprehensive income is not required.

To illustrate the second income statement approach, assume that Zarle Company has reported **a traditional income statement**. The comprehensive income statement is then shown in **Illustration 19.17**.

Zarle Company
Comprehensive Income Statement
For the Year Ended December 31, 2028

Net income		$345,688
Other comprehensive loss		
Actuarial liability loss	$ 6,212	
Prior service cost	17,600	23,812
Comprehensive income		$369,500

ILLUSTRATION 19.17 Comprehensive Income Reporting

Illustration 19.18 shows the computation of "Accumulated other comprehensive loss" as reported in stockholders' equity at December 31, 2028.

Accumulated other comprehensive loss, January 1, 2028	$61,940
Other comprehensive income	23,812
Accumulated other comprehensive loss, December 31, 2028	$38,128

ILLUSTRATION 19.18 Computation of Accumulated Other Comprehensive Income

Regardless of the display format for the income statement, the accumulated other comprehensive loss is reported in the stockholders' equity section of the balance sheet of Zarle Company as shown in **Illustration 19.19**. (Illustration 19.19 uses assumed data for the common stock and retained earnings information.)

Zarle Company
Balance Sheet
As of December 31, 2028
(Stockholders' Equity Section)

Stockholders' equity	
Common stock	$100,000
Retained earnings	60,000
Accumulated other comprehensive loss	38,128
Total stockholders' equity	$121,872

ILLUSTRATION 19.19 Reporting of Accumulated OCI

Underlying Concepts

Does it make a difference to users of financial statements whether companies recognize pension information in the financial statements or disclose it only in the notes? The FASB was unsure, so in accord with the full disclosure principle, it decided to provide extensive pension plan disclosures.

By providing information on the components of comprehensive income as well as total accumulated other comprehensive income, the company communicates all changes in net assets.

In this illustration, it is assumed that the accumulated other comprehensive income at January 1, 2028, is not adjusted for the amortization of any prior service cost or actuarial gains and losses that would change pension expense. As discussed in the earlier examples, these items will be amortized into pension expense in future periods.

Within the Notes to the Financial Statements

Pension plans are frequently important to understanding a company's financial position, results of operations, and cash flows. Therefore, a company discloses the information shown in **Illustration 19.20**, either in the body of the financial statements or in the notes (see **Underlying Concepts**). [7]

ILLUSTRATION 19.20 Summary of Pension Plan Disclosures

Information Disclosed	Rationale
1. **Schedule** showing all the major components of pension expense.	Information provided about the components of pension expense helps users better understand how a company determines pension expense. It also is useful in forecasting a company's net income.
2. **Reconciliation** showing how the projected benefit obligation and the fair value of the plan assets changed from the beginning to the end of the period.	Disclosing the projected benefit obligation, the fair value of the plan assets, and changes in them should help users understand the economics underlying the obligations and resources of these plans. Explaining the changes in the projected benefit obligation and fair value of plan assets in the form of a reconciliation provides a more complete disclosure and makes the financial statements more understandable.
3. **Disclosure of the rates** used in measuring the benefit amounts (discount rate, expected return on plan assets, rate of compensation).	Disclosure of these rates permits users to determine the reasonableness of the assumptions applied in measuring the pension liability and pension expense.
4. **Table indicating the allocation of pension plan assets by category** (equity securities, debt securities, real estate, and other assets), and showing the percentage of the fair value to total plan assets. In addition, a company must include a narrative description of investment policies and strategies, including the target allocation percentages (if used by the company).[14]	Such information helps financial statement users evaluate the pension plan's exposure to market risk and possible cash flow demands on the company. It also will help users better assess the reasonableness of the company's expected rate of return assumption.
5. **Expected benefit payments** to be paid to current plan participants for each of the next five fiscal years and in the aggregate for the five fiscal years thereafter. Also required is disclosure of a company's best **estimate of expected contributions** to be paid to the plan during the next year.	These disclosures provide information related to the cash outflows of the company. With this information, financial statement users can better understand the potential cash outflows related to the pension plan. They can better assess the liquidity and solvency of the company, which helps in assessing the company's overall financial flexibility.
6. **Nature and amount of changes** in plan assets and benefit obligations recognized in net income and in other comprehensive income of each period.	This disclosure provides information on pension elements affecting the projected benefit obligation and plan assets and on whether those amounts have been recognized in income or deferred to future periods.
7. **Accumulated amount of changes** in plan assets and benefit obligations that have been recognized in other comprehensive income.	This information indicates the pension-related balances recognized in stockholders' equity, which could affect future income.

In summary, the disclosure requirements are extensive, and purposely so. One factor that has been a challenge for useful pension reporting has been the lack of consistent terminology. Furthermore, a substantial amount of offsetting is inherent in the measurement of pension expense and the pension liability. These disclosure requirements are designed to address these concerns and take some of the mystery out of pension reporting.

[14] At a minimum, companies must disclose the amount of assets allocated to equities, government and corporate bonds, mortgage-backed securities, derivatives, and real estate. Also, information on concentrations of risk must be explained. Finally, fair value disclosures would be required, including classification of amounts into levels of the fair value hierarchy. [8]

Illustration 19.21 shows the note disclosure of Zarle's pension plan for 2028. Note that this example assumes that the pension liability is noncurrent and that the 2029 adjustment for amortization of the net gain or loss and amortization of prior service cost are the same as 2028.

ILLUSTRATION 19.21 Minimum Note Disclosure of Pension Plan, Zarle Company, 2028

Zarle Company
Notes to the Financial Statements

Note D. The company has a pension plan covering substantially all of its employees. The plan is noncontributory and provided pension benefits that are based on the employee's compensation during the three years immediately preceding retirement. The pension plan's assets consist of cash, stocks and bonds. The company's funding policy is consistent with the relevant government (ERISA) and tax regulations.

Pension expense for 2028 is comprised of the following components of pension cost.

Service cost	$ 16,000	
interest on projected benefit obligation	26,500	
Expected return on plan assets	(15,960)	
Amortization of prior service cost	17,600	
Amortization of net loss	172	
Pension expense		$44,312

Components of pension expense

Other changes in plan assets and benefit obligations recognized in other comprehensive income

Net actuarial gain	$ 6,212	
Amortization of prior service cost	17,600	
Total recognized in other comprehensive income		(23,812)
Total recognized in pension expense and other comprehensive income		$20,500

Amounts recognized in other comprehensive income

The estimated net actuarial loss and prior service cost for the defined benefit pension plan that will be amortized from accumulated other comprehensive income into pension expense over the next year are estimated to be the same as this year.

The amount recognized as a long-term liability in the balance sheet is as follows:

Noncurrent liability	
Pension liability	$98,900

The amounts recognized in accumulated other comprehensive income related to pensions consist of:

Net actuarial loss	$23,728
Prior service cost	14,400
Total	$38,128

Amounts recognized in the balance sheet

Change in benefit obligation	
Benefit obligation at beginning of year	$265,000
Service cost	16,000
Interest cost	26,500
Amendments (Prior service cost)	-0-
Actuarial gain	-0-
Benefits paid	(18,000)
Benefit obligation at end of year	289,500
Change in plan assets	
Fair value of plan assets at beginning of year	159,600
Actual return on plan assets	22,000
Contributions	27,000
Benefits paid	(18,000)
Fair value of plan assets at end of year	190,600
Funded status (liability)	$ 98,900

Reconcillations of pension liability and plan assets

Funded status of plan

The weighted-average discount rate used in determining the 2028 projected benefit obligation was 10%. The rate of increase in future compensation levels used in computing the 2028 projected benefit obligation was 4.5%. The weighted-average expected long-term rate of return on the plan's assets was 10%.

Rates used to estimate plan elements

Illustrations 19.22 and 19.23 present four-year summaries for the Zarle example related to the key disclosures of pension expense and the funded status of the pension plan (based on the information from the worksheets in Examples 19.4, 19.6, and 19.9, and Put It into Practice 19.4).

ILLUSTRATION 19.22 Summary of Expense Components—2025, 2026, 2027, 2028

Zarle Company				
	2025	**2026**	**2027**	**2028**
Components of pension expense				
Service cost	$ 9,000	$ 9,500	$13,000	$16,000
Interest cost	10,000	19,200	21,270	26,500
Expected return on plan assets	(10,000)	(11,100)	(13,410)*	(15,960)*
Amortization of prior service cost	-0-	27,200	20,800	17,600
Amortization of loss	-0-	-0-	-0-	172
Pension expense	$ 9,000	$ 44,800	$41,660	$44,312

*Note that the expected return must be disclosed, not the actual return. In 2027, the expected return is $13,410, which is the actual gain ($12,000) adjusted by the unrecognized loss, ($1,410). In 2028, the expected return is $15,960, which is the actual gain ($22,000) adjusted by the unrecognized gain ($6,040).

ILLUSTRATION 19.23 Pension Reconciliation for Zarle Company—2025, 2026, 2027, 2028

Zarle Company Pension Reconcillation				
	2025	**2026**	**2027**	**2028**
Change in benefit obligation				
Benefit obligation at beginning of year	$100,000	$112,000	$212,700	$ 265,000
Service cost	9,000	9,500	13,000	16,000
Interest cost	10,000	19,200	21,270	26,500
Amendments (Prior service cost)	-0-	80,000	-0-	-0-
Actuarial loss	-0-	-0-	28,530	-0-
Benefits paid	(7,000)	(8,000)	(10,500)	(18,000)
Benefit obligation at end of year	112,000	212,700	265,000	289,500
Change in plan assets				
Fair value of plan assets at beginning of year	100,000	111,000	134,100	159,600
Actual return plan assets	10,000	11,100	12,000	22,000
Contributions	8,000	20,000	24,000	27,000
Benefits paid	(7,000)	(8,000)	(10,500)	(18,000)
Fair value of plan assets at end of year	111,000	134,100	159,600	190,600
Funded status (Pension asset/liability)	$ (1,000)	$ (78,600)	$(105,400)	$(98,900)

Underlying Concepts

Many plans are underfunded but still quite viable. For example, **General Motors** recently reported a $5.9 billion shortfall, but also had earnings of $6.7 billion and a good net worth. Thus, the going concern assumption permits us to ignore pension underfunding in some cases because in the long run they are not significant.

Special Issues

The Pension Reform Act of 1974

A classic example of the unfortunate consequences of an underfunded pension plan is the 1963 shutdown of the **Studebaker Automobile** operations in South Bend, Indiana, in which 4,500 workers lost 85% of their vested benefits. As a result of such situations, the Employee Retirement Income Security Act of 1974—**ERISA**—was passed.

- ERISA affects virtually every private retirement plan in the United States.
- It attempts to safeguard employees' pension rights by mandating many pension plan requirements, including minimum funding, participation, and vesting (see **Underlying Concepts**).

These requirements can influence the employers' cash flows significantly. Under this legislation, annual funding is no longer discretionary. An employer now must fund the plan in accordance with an actuarial funding method that over time will be sufficient to pay for all

pension obligations. If companies do not fund their plans in a reasonable manner, they may be subject to fines and/or loss of tax deductions.[15]

The law requires plan administrators to publish a comprehensive description and summary of their plans, along with detailed annual reports that include many supplementary schedules and statements.

Another important provision of the act is the creation of the **Pension Benefit Guaranty Corporation (PBGC)**. **The PBGC's purpose is to administer terminated plans** and to impose liens on an employer's assets for certain unfunded pension liabilities.

- If a company terminates its pension plan, the PBGC can effectively impose a lien against the employer's assets for the excess of the present value of guaranteed vested benefits over the pension fund assets.
- This lien generally has had the status of a tax lien. It takes priority over most other creditorship claims.

This section of the act gives the PBGC the power to force an involuntary termination of a pension plan whenever the risks related to nonpayment of the pension obligation seem too great. Because ERISA restricts to 30% of net worth the lien that the PBGC can impose, the PBGC must monitor all plans to ensure that net worth is sufficient to meet the pension benefit obligations.

A large number of terminated plans have caused the PBGC to pay out substantial benefits. Currently, the PBGC receives its funding from employers, who contribute a certain dollar amount for each employee covered under the plan.[16]

Accounting Matters

Who Guarantees the Guarantor?

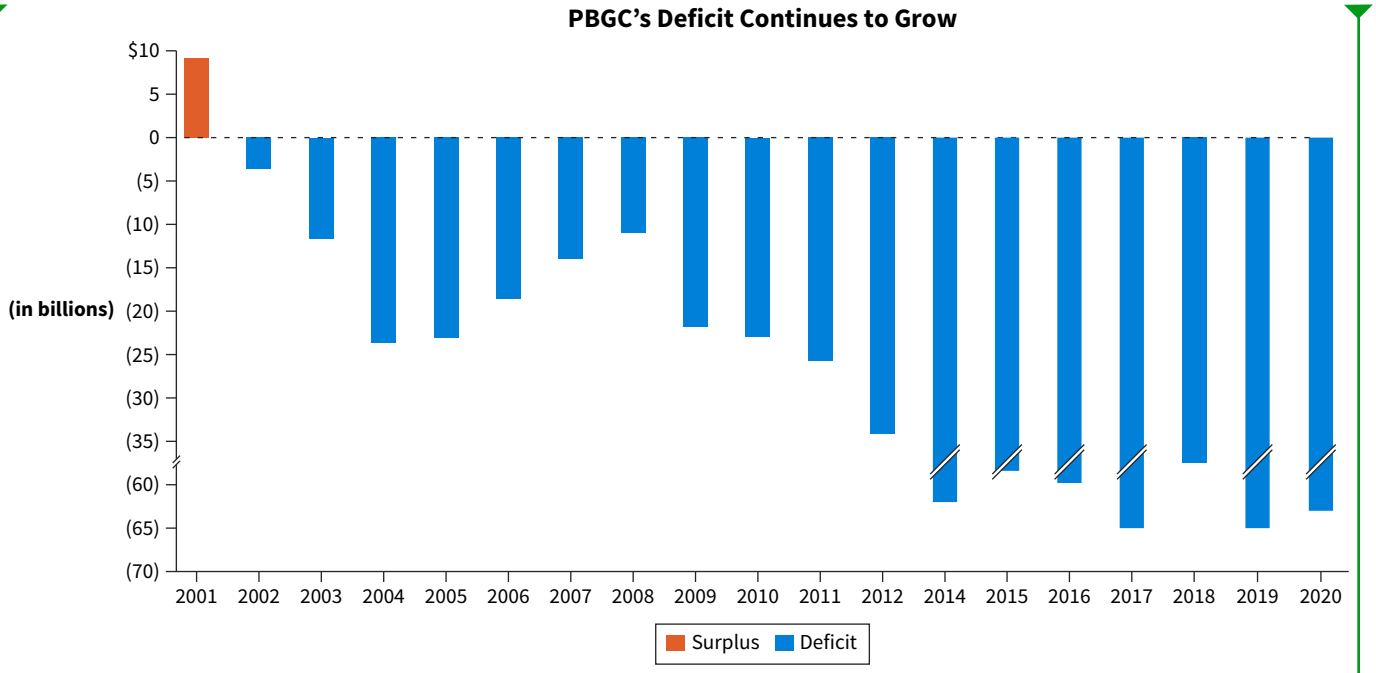
The **Pension Benefit Guaranty Corporation (PBGC)** in a recent annual report indicates that its primary mission is to encourage the continuation and maintenance of voluntary private pension plans. It's an obligation which the PBGC takes seriously. However, the trends are ominous:

- Americans today are spending more years in retirement. They're healthier and more active, which is great news. Unfortunately, pensions haven't kept up.
- Many businesses, for competitive and other reasons, continue to reduce their support for retirement plans. Many have switched from a defined benefit plan to a defined contribution plan, which costs less and comes with fewer obligations. Others offer lump-sum cash payments to employees or retirees to settle the employer's obligations.
- Left on their own, many people invest less than they should during their working years. Coupled with higher fees and lower returns on their individual savings, this can lead to trouble.
- Many people defer retirement by working longer, but still don't have enough money for retirement—and they're worried. One poll cited by the Senate Health, Education, Labor, and Pensions Committee says that 92% of people think there's a retirement crisis. They're right to be concerned.

Add to these concerns that obligations in pension plans today greatly exceed pension assets. Finally, the PBGC has a problem as well—a large deficit in its accounts. The following chart indicates that downward spiral in the net worth of the PBGC over the last 15 years as pension payments have exceeded premiums received.

[15] In 2006, Congress passed the Pension Protection Act. This law has many provisions. One important aspect of the act is that it forced many companies to expedite their contributions to their pension plans. One group estimates that companies in the S&P 500 had to contribute $47 billion to their pension plans when the new rules were fully phased in for 2006. That amount is about 57% more than the $30 billion that companies were expecting to contribute to their plans that year. Subsequently, Congress continues to provide pension funding relief. For example, in the "Moving Ahead for Progress in the 21st Century" Act (enacted July 6, 2012), companies can use a higher discount rate based on high-grade bond yields averaged over 25 years, which helps reduce the pension liability and required contributions.

[16] **Pan American Airlines** is a good illustration of how difficult it is to assess when to terminate. When Pan Am filed for bankruptcy in 1991, it had a pension liability of $900 million. From 1983 to 1991, the IRS gave it six waivers so it did not have to make contributions. When Pan Am terminated the plan, there was little net worth left upon which to impose a lien. An additional accounting problem relates to the manner of disclosing the possible termination of a plan. For example, should Pan Am have disclosed a contingent liability for its struggling plan? At present this issue is unresolved, and considerable judgment is needed to analyze a company with these contingent liabilities.



Source: PBGC annual report.

Pension Terminations

A congressman at one time noted, "Employers are simply treating their employee pension plans like company piggy banks, to be raided at will." What this congressman was referring to is the practice of paying off the projected benefit obligation and pocketing any excess.

- ERISA prevents companies from recapturing excess assets unless they pay participants what is owed to them and then terminate the plan.
- As a result, companies were buying **annuities** to pay off the participants in the pension plan and then used the excess funds for other corporate purposes.[17]

For example, at one time, pension plan terminations netted $363 million for **Occidental Petroleum Corp.**, $95 million for **Stroh's Brewery Co.**, $58 million for **Kellogg Co.**, and $938 million for **Avaya** (a spinoff of **Lucent Technologies**). Recently, many large companies have terminated their pension plans and captured billions in surplus assets. The U.S. Treasury also benefits: Federal legislation requires companies to pay an excise tax of anywhere from 20% to 50% on the gains.[18]

[17]A question exists as to whose money it is. Some argue that the excess funds belong to the employees, not the employer. In addition, given that the funds have been reverting to the employer, critics charge that cost-of-living increases and the possibility of other increased benefits are reduced because companies will be reluctant to use those remaining funds to pay for such increases.

[18]Another way that companies have reduced their pension obligations is through adoption of **cash-balance plans**. These are **hybrid** plans combining features of defined benefit and defined contribution plans. Although these plans permit employees to transfer their pension benefits when they change employers (like a defined contribution plan), they are controversial because the change to a cash-balance plan often reduces benefits to older workers.

The accounting for cash-balance plans is similar to that for defined benefit plans, because employers bear the investment risk in cash-balance plans. however, when an employer adopts a cash-balance plan, the measurement of the future benefit obligation to employees generally is lower, compared to a traditional defined benefit plan. See A. T. Arcady and F. Mellors, "Cash-Balance Conversions," *Journal of Accountancy* (February 2000), pp. 22–28.

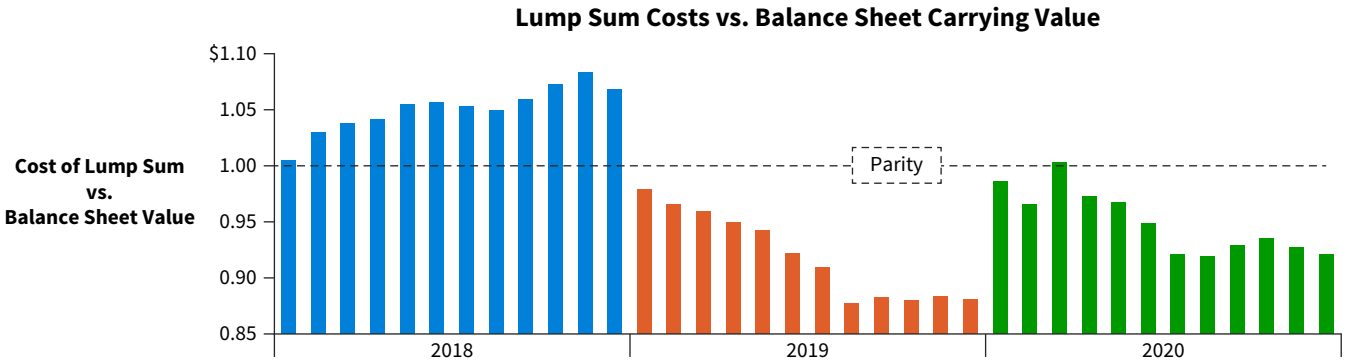
The accounting issue that arises from these terminations is whether a company should recognize a gain when pension plan assets revert back to the company (often called **asset reversion** transactions). The issue is complex. In some cases, a company starts a new defined benefit plan after it eliminates the old one. Thus, some contend that there has been no change in substance but merely a change in form. However, the FASB disagrees. It requires recognition in earnings of a gain or loss when the employer settles a pension obligation either by lump-sum cash payments to participants or by purchasing nonparticipating annuity contracts. [9]

Analytics in Action: Pension De-Risking

What actually goes into the termination of a pension plan? When companies like **FedEx** or **Bristol-Myers Squibb** decide to reduce their pension-related risk, they have a few options. One option is to shift the pension risk to an insurance company through an annuity buyout. In this scenario, the plan sponsor purchases a group annuity contract through an insurance company to cover the pension liability. FedEx purchased a group annuity contract from **Metropolitan Life Insurance Company** to transfer $6 billion of its pension obligation to the insurance company, covering about 41,000 of its plan participants. While this transfer of risk resulted in a one-time settlement of $210 million, FedEx was willing to pay to reduce its pension risk.

Another option is to offer the plan participants a lump-sum payout—this removes obligations to these employees from any future liability, and the participants can invest the funds as they see fit. In 2017, FedEx paid out $1.3 billion to 18,300 participants. How does a company determine the lump-sum value to pay out to its participants? Future pension benefits will be discounted back to a present-value amount offered to each participant. The discount rate used to calculate the lump-sum value will have a significant impact on the present value calculation.

Now consider the analytics of terminating a pension plan. The plan sponsor will likely consider a significant amount of data to understand future pension costs compared to the cost of termination, perhaps employing predictive analytics to understand the percentage of participants accepting a payout versus choosing the continued annuity payment. Participants, faced with the decision of accepting a lump-sum payout or continued annuity, will have to understand the trade-offs of their decision, which is not an easy one. The following chart shows the comparison of lump-sum payouts to pension participants compared to the value of the pension obligation on the balance sheet. As indicated, most recently, plan sponsors are able to pay out lump-sum settlements at a discount.



Indeed, armed with data, as that presented in the chart and the tools to understand the data, participants will be able to best evaluate their options.

Go to the Analytics in Action Activities section at the end of the chapter, which includes Excel-based problems with data sets, to see the relevance and application of data analytics to intermediate accounting topics.

Concluding Observations

Hardly a day goes by without the financial press analyzing in depth some issue related to pension plans in the United States. This is not surprising, since pension funds exceed over $40 trillion in assets globally. As you have seen, the accounting issues related to pension plans are complex. The FASB has clarified many of these issues which should help users understand the financial implications of a company's pension plans on its financial position, results of operations, and cash flows.

Put It into Practice LO 19.5

Prepare Worksheet, Journal Entry, and Financial Statements

FACTS Jablonski Corp. sponsors a defined benefit pension plan for its employees. On January 1, 2025, the following balances relate to this plan.

Plan assets (market-related value)	$170,000
Projected benefit obligation	340,000
Pension asset/liability	170,000 Cr.
OCI—Prior service cost	100,000
OCI—Loss	39,000

As a result of the operation of the plan during 2025, the actuary provided the following additional data at December 31, 2025.

Service cost for 2025	$45,000
Actual return on plan assets in 2025	27,000
Amortization of prior service cost	20,000
Contributions in 2025	85,000
Benefits paid retirees in 2025	51,000
Settlement rate	7%
Expected return on plan assets	8%
Average remaining service life of active employees	10 years

INSTRUCTIONS

a. Compute pension expense for Jablonski Corp. for the year 2025 by preparing a pension worksheet that shows the journal entry for pension expense.

b. Indicate the pension amounts reported in the financial statements.

SOLUTION

a.

Jablonski Corp. Pension Worksheet—2025

Items	Annual Pension Expense	Cash	Other Comprehensive Income: Prior Service Cost	Other Comprehensive Income: Gain/Loss	Pension Asset/Liability	Memo Record: Projected Benefit Obligation	Memo Record: Plan Assets
	General Journal Entries					**Memo Record**	
Balance, Jan. 1, 2025					$170,000 Cr.	$340,000 Cr.	$170,000 Dr.
Service cost	$45,000 Dr.					45,000 Cr.	
Interest cost*	23,800 Dr.					23,800 Cr.	
Actual return	27,000 Cr.						27,000 Dr.
Unexpected gain**	13,400 Dr.			$13,400 Cr.			
Amortization of PSC	20,000 Dr.		$20,000 Cr.				
Amortization of loss***	500 Dr.			500 Cr.			
Contributions		$85,000 Cr.					85,000 Dr.
Benefits						51,000 Dr.	51,000 Cr.
Journal entry for 2025	$75,700 Dr.	$85,000 Cr.	20,000 Cr.	13,900 Cr.	43,200 Dr.		
Accumulated OCI, Dec. 31, 2024			100,000 Dr.	39,000 Dr.			
Balance, Dec. 31, 2025			$80,000 Dr.	$25,100 Dr.	$126,800 Cr.	$357,800 Cr.	$231,000 Dr.

*$23,800 = $340,000 × .07

**$13,400 = ($170,000 × .08) − $27,000

*** 1/1 Projected Benefit Obligation

Year	1/1 Projected Benefit Obligation	Value of 1/1 Plan Assets	10% Corridor	Accumulated OCI (G/L), 1/1	Minimum Amortization of Loss for 2025
2025	$340,000	$170,000	$34,000	$39,000	$500****

**** ($39,000 − $34,000) = $5,000; $5,000 ÷ 10 = $500

2025

Pension Expense	75,700	
Pension Asset/Liability	43,200	
Other Comprehensive Income (PSC)		20,000
Other Comprehensive Income (G/L)		13,900
Cash		85,000

b. The pension amounts reported in the 2025 financial statements are as follows.

Income Statement

Operating expenses	
Pension expense (service cost)	$45,000
Other income or expense	
Pension expense (other components)	$30,700

Comprehensive Income Statement

Net income		$ XXXX
Other comprehensive income		
Asset gain	$13,400	
Amortization of loss	500	
Prior service cost amortization	20,000	33,900
Comprehensive income		$ XXXX

Balance Sheet

Liabilities	
Pension liability	$126,800
Stockholders' equity	
Accumulated other comprehensive loss (PSC)	80,000
Accumulated other comprehensive loss (G/L)	25,100

APPENDIX **19A**

Accounting for Postretirement Benefits

LEARNING OBJECTIVE* 6

Identify the differences between pensions and postretirement healthcare benefits.

IBM's adoption of the GAAP requirements on postretirement benefits resulted in a $2.3 billion charge and a historical curiosity—IBM's first-ever quarterly loss. **General Electric** disclosed that its charge for adoption of the same GAAP rules would be $2.7 billion. **AT&T** absorbed a $2.1 billion pretax hit for postretirement benefits upon adoption. What is GAAP in this area, and how could its adoption have so grave an impact on companies' earnings?

Accounting Guidance

The accounting guidance for postretirement benefits is similar to that for pensions. **[10]**

- These rules cover healthcare and other "welfare benefits" provided to retirees, their spouses, dependents, and beneficiaries.
- These other welfare benefits include life insurance offered outside a pension plan; medical, dental, and eye care; legal and tax services; tuition assistance; day care; and housing assistance.[19]

[19]"OPEB" is the acronym frequently used to describe postretirement benefits other than pensions. This term came into being before the scope of guidance was narrowed from "other postemployment benefits" to "other postretirement benefits," thereby excluding postemployment benefits related to severance pay or wage continuation to disabled, terminated, or laid-off employees.

Because healthcare benefits are the largest of the other postretirement benefits, we use this item to illustrate accounting for postretirement benefits.

For many employers (about 95%), these GAAP rules required a change from the predominant practice of accounting for postretirement benefits on a pay-as-you-go (cash) basis to an accrual basis. Similar to pension accounting, the accrual basis necessitates measuring the employer's obligation to provide future benefits and accrual of the cost during the years that the employee provides service.

One of the reasons companies had not prefunded these benefit plans was that payments to prefund healthcare costs, unlike contributions to a pension trust, are not tax-deductible. Another reason was that postretirement healthcare benefits were once perceived to be a low-cost employee benefit that could be changed or eliminated at will and therefore were not a legal liability. Now, the accounting definition of a liability goes beyond the notion of a legally enforceable claim; the definition now encompasses equitable or constructive obligations as well, making it clear that the postretirement benefit promise is a liability.[20]

Differences Between Pension Benefits and Healthcare Benefits

The FASB used the GAAP rules on pensions as a reference for the accounting prescribed for healthcare and other nonpension postretirement benefits.[21] Why didn't the FASB cover these other types of postretirement benefits in the earlier pension accounting statement? Because the apparent similarities between the two benefits mask some significant differences. **Illustration 19A.1** shows these differences.[22]

ILLUSTRATION 19A.1 Differences Between Pensions and Postretirement Healthcare Benefits

Item	Pensions	Healthcare Benefits
Funding	Generally funded.	Generally **not** funded.
Benefit	Well-defined and level dollar amount.	Generally uncapped and great variability.
Beneficiary	Retiree (maybe some benefit to surviving spouse).	Retiree, spouse, and other dependents.
Benefit payable	Monthly.	As needed and used.
Predictability	Variables are reasonably predictable.	Utilization difficult to predict. Level of cost varies geographically and fluctuates over time.

Two of the differences in Illustration 19A.1 highlight why measuring the future payments for healthcare benefit plans is so much more difficult than for pension plans.

1. Many postretirement plans do not set a limit on healthcare benefits. No matter how serious the illness or how long it lasts, the benefits continue to flow. (Even if the employer uses an insurance company plan, the premiums will escalate according to the increased benefits provided.)
2. The levels of healthcare benefit use and healthcare costs are difficult to predict. Increased longevity, unexpected illnesses (e.g., AIDS, SARS, and COVID), along with new medical technologies and cures, cause changes in healthcare utilization.

Additionally, although the fiduciary and reporting standards for employee benefit funds under government regulations generally cover healthcare benefits, the stringent minimum vesting, participation, and funding standards that apply to pensions do not apply to healthcare benefits.

[20] "Elements of Financial Statements," *Statement of Financial Accounting Concepts No. 6* (Stamford, Conn.: 1985), p. 13, footnote 21.

[21] Other postemployment (but before retirement) benefits include, but are not limited to, salary continuation, disability-related benefits, severance benefits, and continuance of healthcare benefits and life insurance for inactive or former (e.g., terminated, disabled, or deceased) employees or their beneficiaries. These benefits are accounted for similar to accounting for compensated absences (see Chapter 12). **[11]**

[22] D. Gerald Searfoss and Naomi Erickson, "The Big Unfunded Liability: Postretirement Health-Care Benefits," *Journal of Accountancy* (November 1988), pp. 28–39.

Nevertheless, as you will learn, many of the basic concepts of pensions, and much of the related accounting terminology and measurement methodology, do apply to other postretirement benefits. Therefore, in the following discussion and illustrations, we point out the similarities and differences in the accounting and reporting for these two types of postretirement benefits.

Accounting Matters — OPEBs—How Big Are They?

For many companies, **other postretirement benefit obligations (OPEBs)** are substantial. Generally, OPEBs are not well funded because companies are not permitted a tax deduction for contributions to the plan assets, as is the case with pensions. That is, the company may not claim a tax deduction until it makes a payment to the participant (pay-as-you-go).

The following are companies with the largest OPEB obligations, indicating their relationship with other financial items.

For Year Ended 12/31/2020	Benefit Obligation (in millions)	% Underfunded	Obligation as a % of Stockholders' Equity
General Motors	$ 6,656	100.00%	13.40%
Ford Motor	6,575	100.00	19.79
AT&T	13,928	72.41	7.77
Verizon Communications	16,168	96.46	23.34
Boeing	4,693	96.59	25.96

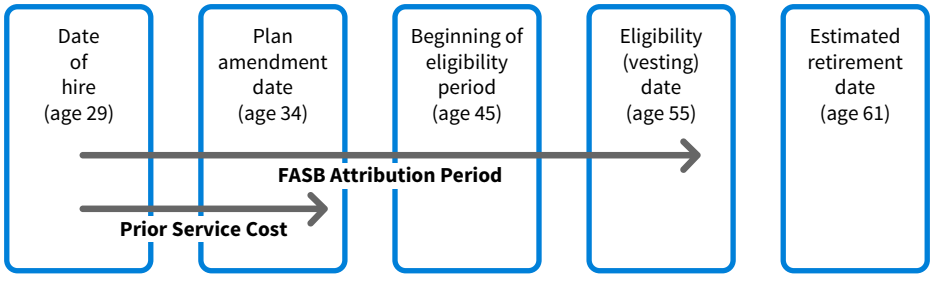
Source: Company reports.

So, how big are OPEB obligations? REALLY big.

Postretirement Benefits Accounting Provisions

Healthcare and other postretirement benefits for current and future retirees and their dependents are forms of deferred compensation. They are earned through employee service and are subject to accrual during the years an employee is working.

The period of time over which the postretirement benefit cost accrues is called the **attribution period**. It is the period of service during which the employee earns the benefits under the terms of the plan. The attribution period, shown in **Illustration 19A.2** for a hypothetical employee, generally begins when an employee is hired and ends on the date the employee is eligible to receive the benefits and ceases to earn additional benefits by performing service, the vesting date.[23]



Date of hire (age 29)
Plan amendment date (age 34)
Beginning of eligibility period (age 45)
Eligibility (vesting) date (age 55)
Estimated retirement date (age 61)
FASB Attribution Period
Prior Service Cost

ILLUSTRATION 19A.2 Range of Possible Attribution Periods

[23]This is a benefit-years-of-service approach (the projected unit credit actuarial cost method). The FASB found no compelling reason to switch from the traditional pension accounting approach. It rejected the employee's full service period (i.e., to the estimated retirement date) because it was unable to identify any approach that would appropriately attribute benefits beyond the date when an employee attains full eligibility for those benefits. Employees attain full eligibility by meeting specified age, service, or age and service requirements of the plan.

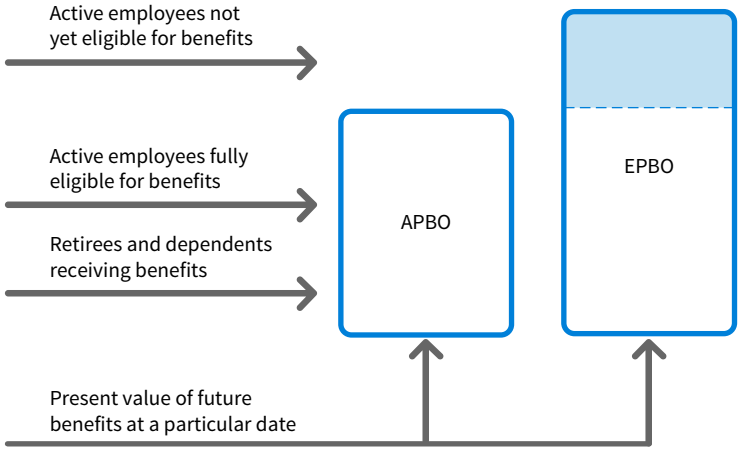
Obligations Under Postretirement Benefits

In defining the obligation for postretirement benefits, the FASB maintained many concepts similar to pension accounting. It also designed some new and modified terms specifically for postretirement benefits. Two of the most important of these specialized terms are as follows.

1. The **expected postretirement benefit obligation (EPBO)** is the actuarial present value as of a particular date of **all benefits a company expects to pay after retirement to employees and their dependents.** Companies do not record the EPBO in the financial statements, but they do use it in measuring periodic expense.
2. The **accumulated postretirement benefit obligation (APBO)** is the actuarial present value of **future benefits attributed to employees' services rendered to a particular date**. The APBO is equal to the EPBO for retirees and active employees fully eligible for benefits. Before the date an employee achieves full eligibility, the APBO is only a portion of the EPBO. Or stated another way, the difference between the APBO and the EPBO is the future service costs of active employees who are not yet fully eligible.

Illustration 19A.3 contrasts the EPBO and the APBO. At the date an employee is fully eligible (the end of the attribution period), the APBO and the EPBO for that employee are equal.

ILLUSTRATION 19A.3 APBO and EPBO Contrasted



Active employees not yet eligible for benefits
Active employees fully eligible for benefits
Retirees and dependents receiving benefits
APBO
EPBO
Present value of future benefits at a particular date

Postretirement Expense

Postretirement expense is the employer's annual expense for postretirement benefits. Also called **net periodic postretirement benefit cost**, this expense consists of many of the familiar components used to compute annual pension expense. The components of net periodic postretirement benefit cost are shown in Illustration 19A.4. **[12]**[24]

[24]See James R. Wilbert and Kenneth E. Dakdduk, "The New FASB 106: How to Account for Postretirement Benefits," Journal of Accountancy (August 1991), pp. 36–41.

ILLUSTRATION 19A.4 Components of Net Periodic Postretirement Benefit Cost

Component	Description
Service cost	The portion of the EPBO attributed to employee service during the period.
Interest cost	The increase in the APBO attributable to the passage of time. Companies compute interest cost by applying the beginning-of-the-year discount rate to the beginning-of-the-year APBO, adjusted for benefit payments to be made during the period. The discount rate is based on the rates of return on high-quality, fixed-income investments that are currently available.[25]
Actual return on plan assets	The change in the fair value of the plan's assets adjusted for contributions and benefit payments made during the period. Because companies charge or credit the postretirement expense for the gain or loss on plan assets (the difference between the actual and the expected return), this component is actually the expected return.
Amortization of prior service cost	The amortization of the cost of retroactive benefits resulting from plan amendments. The typical amortization period, beginning at the date of the plan amendment, is the remaining service periods through the full eligibility date.
Gains and losses	In general, changes in the APBO resulting from changes in assumptions or from experience different from that assumed. For funded plans, this component also includes the difference between actual return and expected return on plan assets.

Illustrative Accounting Entries

LEARNING OBJECTIVE *7

Contrast accounting for pensions to accounting for other postretirement benefits.

Like pension accounting, the accounting for postretirement plans must recognize in the accounts and in the financial statements effects of several significant items. These items are:

1. Expected postretirement benefit obligation (EPBO).
2. Accumulated postretirement benefit obligation (APBO).
3. Postretirement benefit plan assets.
4. Prior service cost.
5. Net gain or loss.

The EPBO is not recognized in the financial statements or disclosed in the notes. Companies recompute it each year, and the actuary uses it in measuring the annual service cost. Because of the numerous assumptions and actuarial complexity involved in measuring annual service cost, we have omitted these computations of the EPBO.

Similar to pensions, companies must recognize in the financial statements items 2 through 5 listed above. In addition, as in pension accounting, companies must know the exact amount of these items in order to compute postretirement expense. Therefore, companies use the worksheet like that for pension accounting to record both the formal general journal entries and the memo entries.

2025 Entries and Worksheet

To illustrate the use of a worksheet in accounting for a postretirement benefits plan, assume that on January 1, 2025, Quest Company adopts a healthcare benefit plan. The following facts apply to the postretirement benefits plan for the year 2025.

[25]The FASB concluded that the discount rate for measuring the present value of the postretirement benefit obligation and the service cost component should be the same as that applied to pension measurements. It chose not to label it the **settlement rate**, in order to clarify that the objective of the discount rate is to measure the time value of money.

- Plan assets at fair value on January 1, 2025, are zero.
- Actual and expected returns on plan assets are zero.
- Accumulated postretirement benefit obligation (APBO), January 1, 2025, is zero.
- Service cost is $54,000.
- No prior service cost exists.
- Interest cost on the APBO is zero (the beginning balance of the APBO is zero).
- Funding contributions during the year are $38,000.
- Benefit payments to employees from plan are $28,000.

Using that data, the worksheet in **Illustration 19A.5** presents the postretirement entries for 2025.

ILLUSTRATION 19A.5 Postretirement Worksheet—2025

	A	B	C	D	E	F
1	**Postretirement Worksheet—2025**					
2		**General Journal Entries**			**Memo Record**	
3	**Items**	**Annual Postretirement Expense**	**Cash**	**Postretirement Asset/Liability**	**APBO**	**Plan Assets**
4	Balance, Jan. 1, 2025					
5	(a) Service cost	$54,000 Dr.			$54,000 Cr.	
6	(b) Contributions		$38,000 Cr.			$38,000 Dr.
7	(c) Benefits				28,000 Dr.	28,000 Cr.
8	Journal entry for 2025	$54,000 Dr.	$38,000 Cr.	$16,000 Cr.*		
9	Balance, Dec. 31, 2025			$16,000 Cr.**	$26,000 Cr.	$10,000 Dr.
10	*$54,000 – $38,000 = $16,000					
11	**$26,000 – $10,000 = $16,000					

- Entry (a) records the service cost component, which increases postretirement expense $54,000 and increases the liability (APBO) $54,000.
- Entry (b) records Quest's funding of assets to the postretirement fund. The funding decreases cash $38,000 and increases plan assets $38,000.
- Entry (c) records the benefit payments made to retirees, which results in equal $28,000 decreases to the plan assets and the liability (APBO).

Quest's December 31 adjusting entry formally records the postretirement expense in 2025, as follows.

December 31, 2025		
Postretirement Expense	54,000	
Cash		38,000
Postretirement Asset/Liability		16,000

The credit to Postretirement Asset/Liability for $16,000 represents the difference between the APBO and the plan assets. The $16,000 credit balance is a liability because the plan is underfunded. The Postretirement Asset/Liability account balance of $16,000 also equals the net of the balances in the memo accounts.

Illustration 19A.6 shows the funded status reported in the balance sheet. (Notice its similarity to the pension schedule.)

Accumulated postretirement benefit obligation (Credit)	$(26,000)
Plan assets at fair value (Debit)	10,000
Postretirement asset/liability (Credit)	$(16,000)

ILLUSTRATION 19A.6
Postretirement Reconciliation Schedule—December 31, 2025

Recognition of Gains and Losses

Gains and losses represent changes in the APBO or the value of plan assets. These changes result either from actual experience different from that expected or from changes in actuarial assumptions. The amortization of these gains and losses follows the approach used for pensions. That is, the gains and losses are recorded in other comprehensive income.

The Corridor Approach Consistent with pension accounting, companies amortize the gains and losses in accumulated other comprehensive income as a component of postretirement expense if, at the beginning of the period, they exceed a "corridor" limit. The corridor is measured as the greater of 10% of the APBO or 10% of the market-related value of plan assets. The intent of the **corridor approach** is to reduce volatility of postretirement expense by providing a reasonable opportunity for gains and losses to offset over time without affecting net periodic expense.

Amortization Methods If the company must amortize gains and losses (beyond the corridor) on postretirement benefit plans, the **minimum amortization amount** is the excess gain or loss—in excess of the corridor—divided by the average remaining service life to expected retirement of all active employees. Companies may use any systematic method of amortization provided that:

- The amount amortized in any period is equal to or greater than the minimum amount.
- The company applies the method consistently.
- The company applies the method similarly for gains and losses.

The company must recompute the amount of gain or loss in accumulated other comprehensive income each year and amortize the gain or loss over the average remaining service life if the net amount exceeds the "corridor."

2026 Entries and Worksheet

Continuing the Quest Company illustration into 2026, the following facts apply to the postretirement benefits plan for the year 2026.

- Actual return on plan assets is $600.
- Expected return on plan assets is $800.
- Discount rate is 8%.
- Increase in APBO due to change in actuarial assumptions is $60,000.
- Service cost is $26,000.
- Funding contributions during the year are $18,000.
- Benefit payments to employees during the year are $5,000.
- Average remaining service to expected retirement: 25 years.

The worksheet in **Illustration 19A.7** presents all of Quest's postretirement benefit entries and information for 2026. The beginning balances on the first line of the worksheet are the ending balances from Quest's 2025 postretirement benefits worksheet in Illustration 19A.5.

ILLUSTRATION 19A.7 Postretirement Benefits Worksheet—2026

	A	B	C	D	E	F	G
1	**Postretirement Benefits Worksheet—2026**						
2		**General Journal Entries**				**Memo Record**	
3	**Items**	**Annual Postretirement Expense**	**Cash**	**Other Comprehensive Income (G/L)**	**Postretirement Asset/Liability**	**APBO**	**Plan Assets**
4	Balance, Jan. 1, 2026				$16,000 Cr.	$ 26,000 Cr.	$10,000 Dr.
5	(d) Service cost	$26,000 Dr.				26,000 Cr.	
6	(e) Interest cost	2,080 Dr.				2,080 Cr.	
7	(f) Actual return	600 Cr.					600 Dr.
8	(g) Unexpected loss	200 Cr.		$ 200 Dr.			
9	(h) Contributions		$18,000 Cr.				18,000 Dr.
10	(i) Benefits					5,000 Dr.	5,000 Cr.
11	(j) Increase in APBO (Loss)			60,000 Dr.		60,000 Cr.	
12	Journal entry for 2026	$27,280 Dr.	$18,000 Cr.	60,200 Dr.	69,480 Cr.		
13	Accumulated OCI, Dec. 31, 2025			0			
14	Balance, Dec. 31, 2026			$60,200 Dr.	$85,480 Cr.	$109,080 Cr.	$23,600 Dr.

- Entries (d), (h), and (i) are similar to the corresponding entries previously explained for 2025.
- Entry (e) accrues the interest expense component, which increases both the liability and the postretirement expense by $2,080 (the beginning APBO multiplied by the discount rate of 8%).
- Entries (f) and (g) are related. The expected return of $800 is higher than the actual return of $600. To smooth postretirement expense, Quest defers the unexpected loss of $200 ($800 − $600) by debiting Other Comprehensive Income (G/L) and crediting Postretirement Expense. As a result of this adjustment, the expected return on the plan assets is the amount actually used to compute postretirement expense.
- Entry (j) records the change in the APBO resulting from a change in actuarial assumptions. This $60,000 increase in the employer's accumulated liability is an unexpected loss. Quest debits this loss to Other Comprehensive Income (G/L).

On December 31, Quest formally records net periodic expense for 2026 as follows.

December 31, 2026		
Postretirement Expense	27,280	
Other Comprehensive Income (G/L)	60,200	
Cash		18,000
Postretirement Asset/Liability		69,480

The balance of the Postretirement Asset/Liability account at December 31, 2026, is $85,480. This balance is equal to the net of the balances in the memo accounts as shown in the reconciliation schedule in Illustration 19A.8.

ILLUSTRATION 19A.8 Postretirement Benefits Reconciliation Schedule—December 31, 2026

Accumulated postretirement benefit obligation (Credit)	$(109,080)
Plan assets at fair value (Debit)	23,600
Postretirement asset/liability (Credit)	$ (85,480)

Amortization of Net Gain or Loss in 2027

Quest has a beginning balance in Accumulated OCI related to losses of $60,200. Therefore, Quest must apply the corridor test for amortization of the balance for 2027. Illustration 19A.9 shows the computation of the amortization charge for the loss.

2027 Corridor Test

Accumulated OCI at beginning of year	$60,200
10% of greater of APBO or market-related value of plan assets ($109,080 × .10)	(10,908)
Amortizable amount	$49.292
Average remaining service to expected retirement	25 years
2027 amortization of loss ($49,292 ÷ 25)	$ 1,972

ILLUSTRATION 19A.9
Computation of Amortization Charge (Corridor Test)—2027

Disclosures in Notes to the Financial Statements

The disclosures required for other postretirement benefit plans are similar to and just as detailed and extensive as those required for pensions. The note disclosure for **Tootsie Roll, Inc.** in **Illustration 19A.10** provides a good example of the extensive disclosure required for other postretirement benefit plans.

Tootsie Roll Industries, Inc.
Notes to Financial Statements

Note 7 Employee Benefit Plans (partial)

Postretirement health care benefit plans:

The Company maintains a post-retirement health benefits plan for a group of "grandfathered" corporate employees. The plan as amended in 2013, generally limited future annual cost increases in health benefits to 3%, restricted this benefit to current employees and retirees with long-term service with the Company, and eliminated all post-retirement benefits for future employees effective April 1, 2014. Post-retirement benefits liabilities (as amended) were $13,487 and $13,743 at December 31, 2020 and 2019, respectively.

Amounts recognized in accumulated other comprehensive loss (pre-tax) at December 31, 2020 are as follows:

Prior service credit	$(1,840)
Net actuarial gain	(1,196)
Net amount recognized in accumulated other comprehensive loss	$(3,036)

Amounts recognized in other comprehensive income

The changes in the accumulated postretirement benefit obligation at December 31, 2020 and 2019 consist of the following:

	December 31	
	2020	2019
Benefit obligation, beginning of year	$13,743	$12,451
Service cost	288	270
Interest cost	403	499
Actuarial (gain)/loss	(510)	922
Benefits paid	(437)	(399)
Benefit obligation, end of year	$13,487	$13,743

Reconciliation of OPEB liability

Net periodic postretirement benefit cost included the following components:

	2020	2019	2018
Service cost—benefits attributed to service during the period	$ 288	$ 270	$ 337
Interest cost on the accumulated postretirement benefit obligation	403	499	455
Net amortization	(1,349)	(1,522)	(1,324)
Net periodic postretirement benefit cost (income)	$ (658)	$ (753)	$ (532)

Components of OPEB expense

The Company estimates future benefit payments will be $544, $564, $590, $614 and $634 in 2021 through 2025, respectively, and a total of $3,417 in 2026 through 2030.

Expected benefit payments

ILLUSTRATION 19A.10
Postretirement Benefit Disclosure

As indicated in Illustration 19A.10, Tootsie Roll shows the impact of the postretirement benefit plan on income, the balance sheet, and the cash flow statement, and it provides information on important assumptions used in the measurement of the postretirement benefit obligation. Also note that given no tax incentives for funding, Tootsie Roll (like many companies) does not have any assets set aside for its other postretirement benefit obligations.

While Tootsie Roll has only an other postretirement benefit plan, many companies sponsor both defined benefit pension and other postretirement plans. Given the similarities in accounting for these plans, companies can combine pension and other postretirement benefit disclosures.[26]

Actuarial Assumptions and Conceptual Issues

Measurement of the EPBO, the APBO, and the net periodic postretirement benefit cost is involved and complex. Due to the uncertainties in forecasting healthcare costs, rates of use, changes in government health programs, and the differences employed in nonmedical assumptions (e.g., discount rate, employee turnover, rate of pre-65 retirement, spouse-age difference), estimates of postretirement benefit costs may have a large margin of error. Is the information relevant, reliable, or verifiable? The FASB concluded that "the obligation to provide postretirement benefits meets the definition of a liability, is representationally faithful, is relevant to financial statement users, and can be measured with sufficient reliability at a justifiable cost." **[13]** Failure to accrue an obligation and an expense prior to payment of benefits would result in an unfaithful representation of what financial statements should represent.

The FASB took a momentous step by requiring recognition of a postretirement liability. Many opposed the requirement, warning that the GAAP rules would devastate earnings. Others argued that putting these numbers on the balance sheet was inappropriate. Others noted that the requirement would force companies to curtail postretirement benefits to employees.

The authors believe that the FASB deserves special praise. Because the Board addressed this issue, companies now recognize the magnitude of these costs. This recognition has led to efforts to control escalating healthcare costs. As John Ruffle, a former president of the Financial Accounting Foundation noted, "The Board has done American industry a gigantic favor. Over the long term, industry will look back and say thanks."

Review and Practice

Key Terms Review

accumulated benefit obligation 19-6
*accumulated postretirement benefit obligation (APBO) 19-42

settlement rate 19-10
unexpected gain or loss 19-21
vested benefit obligation 19-6
years-of-service method 19-16

[26]Companies also report assets, liabilities, net income, and comprehensive income elements related to other postretirement plans similar to pensions. Many companies present pension and OPEB information in a combined note disclosure.

Learning Objectives Review

1 Discuss the fundamentals of pension plan accounting.

The company or employer is the organization sponsoring the pension plan. It incurs the cost and makes contributions to the pension fund. The fund or plan is the entity that receives the contributions from the employer, administers the pension assets, and makes the benefit payments to the pension recipients (retired employees). The fund should be a separate legal and accounting entity; it maintains a set of books and prepares financial statements.

The two most common types of pension arrangements are as follows. **(1) Defined contribution plans:** The employer agrees to contribute to a pension trust a certain sum each period based on a formula. This formula may consider such factors as age, length of employee service, employer's profits, and compensation level. Only the employer's contribution is defined; no promise is made regarding the ultimate benefits paid out to the employees. **(2) Defined benefit plans:** These plans define the benefits that the employee will receive at the time of retirement. The formula typically provides for the benefits to be a function of the employee's years of service and the compensation level when he or she nears retirement.

Alternative measures for valuing the pension obligation may be used. One measure bases the pension obligation only on the benefits vested to the employees. Vested benefits are those that the employee is entitled to receive even if he or she renders no additional services under the plan. Companies compute the **vested benefit pension obligation** using current salary levels; this obligation includes only vested benefits. Another measure of the obligation, called the **accumulated benefit obligation,** computes the deferred compensation amount based on all years of service performed by employees under the plan—both vested and nonvested—using current salary levels. A third measure, called the **projected benefit obligation,** bases the computation of the deferred compensation amount on both vested and nonvested service using future salaries.

Pension expense is a function of the following components: (1) service cost, (2) interest on the liability, (3) return on plan assets, (4) amortization of prior service cost, and (5) gain or loss.

2 Use a worksheet for employer's pension plan entries.

Companies may use a worksheet unique to pension accounting. This worksheet records both the formal entries and the memo entries to keep track of all the employer's relevant pension plan items and components.

3 Describe the accounting and amortization of prior service costs.

An actuary computes the amount of the prior service cost, and the company then records it as an adjustment to the projected benefit obligation and other comprehensive income. It then amortizes it, generally using a "years-of-service" amortization method, similar to a units-of-production computation. First, the company computes total estimated number of service-years to be worked by all of the participating employees. Second, it divides the accumulated prior service cost by the total number of service-years, to obtain a cost per service-year (the unit cost). Third, the company multiplies the number of service-years consumed each year times the cost per service-year, to obtain the annual amortization charge.

4 Explain the accounting and amortization for unexpected gains and losses.

In estimating the projected benefit obligation (the liability), actuaries make assumptions about such items as mortality rate, retirement rate, turnover rate, disability rate, and salary amounts. Any change in these actuarial assumptions affects the amount of the projected benefit obligation. These unexpected gains or losses from changes in the projected benefit obligation are liability gains and losses. Liability gains result from unexpected decreases in the liability balance; liability losses result from unexpected increases. Companies also incur asset gains or losses. Both types of actuarial gains and losses are recorded in other comprehensive income and adjust either the projected benefit obligation or the plan assets.

The FASB set a limit for the size of an accumulated net gain or loss balance. That arbitrarily selected limit (called a **corridor**) is 10% of the larger of the beginning balances of the projected benefit obligation or the market-related value of the plan assets. Beyond that limit, an accumulated net gain or loss balance is considered too large and must be amortized. If the balance of the accumulated net gain or loss account stays within the upper and lower limits of the corridor, no amortization is required.

5 Describe the requirements for reporting pension plans in financial statements.

Currently, companies must disclose the following pension plan information in their financial statements. (1) The components of pension expense for the period. (2) A schedule showing changes in the benefit obligation and plan assets during the year. (3) The amount of prior service cost and net gains and losses in accumulated OCI, including the estimated prior service cost and gains and losses that will affect net income in the next year. (4) The weighted-average assumed discount rate, the rate of compensation increase used to measure the projected benefit obligation, and the weighted-average expected long-term rate of return on plan assets. (5) A table showing the allocation of pension plan assets by category and the percentage of the fair value to total plan assets. (6) The expected benefit payments for current plan participants for each of the next five fiscal years and for the following five years in aggregate, along with an estimate of expected contributions to the plan during the next year.

*6 Identify the differences between pensions and postretirement healthcare benefits.

Pension plans are generally funded, but healthcare benefit plans are not. Pension benefits are generally well-defined and level in amount; healthcare benefits are generally uncapped and variable. Pension benefits are payable monthly; healthcare benefits are paid as needed and used. Pension plan variables are reasonably predictable, whereas healthcare plan variables are difficult to predict.

***7 Contrast accounting for pensions to accounting for other postretirement benefits.**

Many of the basic concepts, accounting terminology, and measurement methodology that apply to pensions also apply to other postretirement benefit accounting. Because other postretirement benefit plans are unfunded, large obligations can occur. Two significant concepts peculiar to accounting for other postretirement benefits are (1) expected postretirement benefit obligation (EPBO) and (2) accumulated postretirement benefit obligation (APBO).

Enhanced Review and Practice

Go to Wiley Course Resources for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Exercises, Problems, Problem Solution Walkthrough Videos, Data Analytics Activities, and many more assessment tools and resources are available for practice in Wiley Course Resources.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

Questions

1. What is a private pension plan? How does a contributory pension plan differ from a noncontributory plan?

2. Differentiate between a defined contribution pension plan and a defined benefit pension plan. Explain how the employer's obligation differs between the two types of plans.

3. Differentiate between "accounting for the employer" and "accounting for the pension fund."

4. The meaning of the term "fund" depends on the context in which it is used. Explain its meaning when used as a noun. Explain its meaning when it is used as a verb.

5. What is the role of an actuary relative to pension plans? What are actuarial assumptions?

6. What factors must be considered by the actuary in measuring the amount of pension benefits under a defined benefit plan?

7. Name three approaches to measuring benefit obligations from a pension plan and explain how they differ.

8. Explain how cash-basis accounting for pension plans differs from accrual-basis accounting for pension plans. Why is cash-basis accounting generally considered unacceptable for pension plan accounting?

9. Identify the five components that comprise pension expense. Briefly explain the nature of each component.

10. What is service cost, and what is the basis of its measurement?

11. In computing the interest component of pension expense, what interest rates may be used?

12. Explain the difference between service cost and prior service cost.

13. What is meant by "prior service cost"? When is prior service cost recognized as pension expense?

14. What are "liability gains and losses," and how are they accounted for?

15. If pension expense recognized in a period exceeds the current amount funded by the employer, what kind of account arises, and how should it be reported in the financial statements? If the reverse occurs—that is, current funding by the employer exceeds the amount recognized as pension expense—what kind of account arises, and how should it be reported?

16. Given the following items and amounts, compute the actual return on plan assets: fair value of plan assets at the beginning of the period $9,500,000, benefits paid during the period $1,400,000, contributions made during the period $1,000,000, and fair value of the plan assets at the end of the period $10,150,000.

17. How does an "asset gain or loss" develop in pension accounting? How does a "liability gain or loss" develop in pension accounting?

18. What is the meaning of "corridor amortization"?

19. At the end of the current period, Agler Inc. had a projected benefit obligation of $400,000 and pension plan assets (at fair value) of $350,000. What are the accounts and amounts that will be reported on the company's balance sheet as pension assets or pension liabilities?

20. At the end of the current year, Pociek Co. has prior service cost of $9,150,000. Where should the prior service cost be reported on the balance sheet?

21. Describe the accounting for actuarial gains and losses.

22. Boey Company reported net income of $25,000 in 2026. It had the following amounts related to its pension plan in 2026: actuarial liability gain $10,000, unexpected asset loss $14,000, accumulated other comprehensive income (G/L) (beginning balance), zero. Determine for 2026 (a) Boey's other comprehensive income, and (b) comprehensive income.

23. Describe the reporting of pension plans for a company with multiple plans, some of which are underfunded and some of which are overfunded.

24. Determine the meaning of the following terms.

    a. Contributory plan.

    b. Vested benefits.

    c. Retroactive benefits.

    d. Years-of-service method.

25. A headline in the *Wall Street Journal* stated, "Firms Increasingly Tap Their Pension Funds to Use Excess Assets." What is the accounting issue related to the use of these "excess assets" through plan terminations?

*26. What are postretirement benefits other than pensions?

*27. Why didn't the FASB cover both types of postretirement benefits—pensions and healthcare—in the earlier pension accounting rules?

*28. What are the major differences between postretirement healthcare benefits and pension benefits?

*29. What is the difference between the APBO and the EPBO? What are the components of postretirement expense?

Brief Exercises

BE19.1 (LO 1) **AMR Corporation** (parent company of **American Airlines**) reported the following (in millions).

Service cost	$366
Interest on P.B.O.	737
Return on plan assets	593
Amortization of prior service cost	13
Amortization of net loss	154

Compute AMR's pension expense.

BE19.2 (LO 1) For Warren Corporation, year-end plan assets were $2,000,000. At the beginning of the year, plan assets were $1,780,000. During the year, contributions to the pension fund were $120,000, and benefits paid were $200,000. Compute Warren's actual return on plan assets.

BE19.3 (LO 2) At January 1, 2025, Hennein Company had plan assets of $280,000 and a projected benefit obligation of the same amount. During 2025, service cost was $27,500, the settlement rate was 10%, actual and expected return on plan assets were $25,000, contributions were $20,000, and benefits paid were $17,500. Prepare a pension worksheet for Hennein for 2025.

BE19.4 (LO 2) **Campbell Soup Company** reported pension expense of $73 million and contributed $71 million to the pension fund. Prepare Campbell's journal entry to record pension expense and funding, assuming campbell has no OCI amounts.

BE19.5 (LO 3) Mancuso Corporation amended its pension plan on January 1, 2025, and granted $160,000 of prior service costs to its employees. The employees are expected to provide 2,000 service years in the future, with 350 service years in 2025. Compute prior service cost amortization for 2025.

BE19.6 (LO 3) At December 31, 2025, Besler Corporation had a projected benefit obligation of $560,000, plan assets of $322,000, and prior service cost of $127,000 in accumulated other comprehensive income. Determine the pension asset/liability at December 31, 2025.

BE19.7 (LO 4) Shin Corporation had a projected benefit obligation of $3,100,000 and plan assets of $3,300,000 at January 1, 2025. Shin also had a net actuarial loss of $465,000 in accumulated OCI at January 1, 2025. The average remaining service period of Shin's employees is 7.5 years. Compute Shin's minimum amortization of the actuarial loss.

BE19.8 (LO 5) Hawkins Corporation has the following balances at December 31, 2025.

Projected benefit obligation	$2,600,000
Plan assets at fair value	2,000,000
Accumulated OCI (PSC)	1,100,000

How should these balances be reported on Hawkins' balance sheet at December 31, 2025?

BE19.9 (LO 5) Norton Co. had the following amounts related to its pension plan in 2025.

Actuarial liability loss for 2025	$28,000
Unexpected asset gain for 2025	18,000
Accumulated other comprehensive income (G/L) (beginning balance)	7,000 Cr.

Determine for 2025 (a) Norton's other comprehensive income (loss) and (b) comprehensive income. Net income for 2025 is $26,000; no amortization of gain or loss is necessary in 2025.

*BE19.10 (LO 6, 7) Manno Corporation has the following information available concerning its postretirement benefit plan for 2025.

Service cost	$40,000
Interest cost	47,400
Actual and expected return on plan assets	26,900

Compute Manno's 2025 postretirement expense.

*BE19.11 (LO 6, 7) For 2025, Sampsell Inc. computed its annual postretirement expense as $240,900. Sampsell's contribution to the plan during 2025 was $180,000. Prepare Sampsell's 2025 entry to record postretirement expense, assuming Sampsell has no OCI amounts.

Exercises

E19.1 (LO 1, 2) Excel **(Pension Expense, Journal Entries)** The following information is available for the pension plan of Radcliffe Company for the year 2025.

Actual and expected return on plan assets	$ 15,000
Benefits paid to retirees	40,000
Contributions (funding)	90,000
Interest/discount rate	10%
Prior service cost amortization	8,000
Projected benefit obligation, January 1, 2025	500,000
Service cost	60,000

Instructions

a. Compute pension expense for the year 2025.

b. Prepare the journal entry to record pension expense and the employer's contribution to the pension plan in 2025.

E19.2 (LO 1, 2, 3) **(Computation of Pension Expense)** Veldre Company provides the following information about its defined benefit pension plan for the year 2025.

Service cost	$ 90,000
Contribution to the plan	105,000
Prior service cost amortization	10,000
Actual and expected return on plan assets	64,000
Benefits paid	40,000
Plan assets at January 1, 2025	640,000
Projected benefit obligation at January 1, 2025	700,000
Accumulated OCI (PSC) at January 1, 2025	150,000
Interest/discount (settlement) rate	10%

Instructions

Compute the pension expense for the year 2025.

E19.3 (LO 1, 2, 3) **(Preparation of Pension Worksheet)** Using the information in E19.2, prepare a pension worksheet inserting January 1, 2025, balances, showing December 31, 2025, balances, and the journal entry recording pension expense.

E19.4 (LO 1, 2) **(Basic Pension Worksheet)** The following facts apply to the pension plan of Boudreau Inc. for the year 2025.

Plan assets, January 1, 2025	$490,000
Projected benefit obligation, January 1, 2025	490,000
Settlement rate	8%
Service cost	40,000
Contributions (funding)	25,000
Actual and expected return on plan assets	49,700
Benefits paid to retirees	33,400

Instructions

Using this data, compute pension expense for the year 2025. As part of your solution, prepare a pension worksheet that shows the journal entry for pension expense for 2025 and the year-end balances in the related pension accounts.

E19.5 (LO 3) (Application of Years-of-Service Method) Andrews Company has five employees participating in its defined benefit pension plan. Expected years of future service for these employees at the beginning of 2025 are as follows.

Employee	Future Years of Service
Jim	3
Paul	4
Nancy	5
Dave	6
Kathy	6

On January 1, 2025, the company amended its pension plan, increasing its projected benefit obligation by $72,000.

Instructions

Compute the amount of prior service cost amortization for the years 2025 through 2030 using the years-of-service method, setting up appropriate schedules.

E19.6 (LO 1) (Computation of Actual Return) Gingrich Importers provides the following pension plan information.

Fair value of pension plan assets, January 1, 2025	$2,400,000
Fair value of pension plan assets, December 31, 2025	2,725,000
Contributions to the plan in 2025	280,000
Benefits paid retirees in 2025	350,000

Instructions

From the data above, compute the actual return on the plan assets for 2025.

E19.7 (LO 1, 2, 3) Excel (Basic Pension Worksheet) The following defined pension data of Rydell Corp. apply to the year 2025.

Projected benefit obligation, 1/1/25 (before amendment)	$560,000
Plan assets, 1/1/25	546,200
Pension liability, 1/1/25	13,800
On January 1, 2025, Rydell Corp., through plan amendment, grants prior service benefits having this present value	120,000
Settlement rate	9%
Service cost	58,000
Contributions (funding)	65,000
Actual (expected) return on plan assets	52,280
Benefits paid to retirees	40,000
Prior service cost amortization for 2025	17,000

Instructions

For 2025, prepare a pension worksheet for Rydell that shows the journal entry for pension expense and the year-end balances in the related pension accounts.

E19.8 (LO 4) (Application of the Corridor Approach) Kenseth Corp. has the following beginning-of-the-year present values for its projected benefit obligation and market-related values for its pension plan assets.

	Projected Benefit Obligation	Plan Assets Value
2024	$2,000,000	$1,900,000
2025	2,400,000	2,500,000
2026	2,950,000	2,600,000
2027	3,600,000	3,000,000

The average remaining service life per employee in 2024 and 2025 is 10 years; in 2026 and 2027, it is 12 years. The net gain or loss that occurred during each year is as follows: 2024, $280,000 loss; 2025, $90,000 loss; 2026, $11,000 loss; and 2027, $25,000 gain. (In working the solution, the gains and losses must be aggregated to arrive at year-end balances.)

Instructions

Using the corridor approach, compute the amount of net gain or loss amortized and charged to pension expense in each of the four years, setting up an appropriate schedule.

E19.9 (LO 5) (Disclosures: Pension Expense and Other Comprehensive Income) Taveras Enterprises provides the following information relative to its defined benefit pension plan.

Balances or Values at December 31, 2025	
Projected benefit obligation	$2,737,000
Accumulated benefit obligation	1,980,000
Fair value of plan assets	2,278,329
Accumulated OCI (PSC)	210,000
Accumulated OCI—Net loss (1/1/25 balance, –0–)	45,680
Pension liability	458,671
Other pension plan data for 2025:	
Service cost	94,000
Prior service cost amortization	42,000
Actual return on plan assets	130,000
Expected return on plan assets	175,680
Interest on January 1, 2025, projected benefit obligation	253,000
Contributions to plan	93,329
Benefits paid	140,000

Instructions

a. Prepare the note disclosing the components of pension expense for the year 2025.

b. Determine the amounts of other comprehensive income and comprehensive income for 2025. Net income for 2025 is $35,000.

c. Compute the amount of accumulated other comprehensive income reported at December 31, 2025.

E19.10 (LO 1, 2, 3, 4) (Pension Worksheet) Webb Corp. sponsors a defined benefit pension plan for its employees. On January 1, 2025, the following balances relate to this plan.

Plan assets	$480,000
Projected benefit obligation	600,000
Pension asset/liability	120,000
Accumulated OCI (PSC)	100,000 Dr.

As a result of the operation of the plan during 2025, the following additional data are provided by the actuary.

Service cost	$90,000
Settlement rate, 9%	
Actual return on plan assets	55,000
Amortization of prior service cost	19,000
Expected return on plan assets	52,000
Unexpected loss from change in projected benefit obligation, due to change in actuarial predictions	76,000
Contributions	99,000
Benefits paid retirees	85,000

Instructions

a. Using the data above, compute pension expense for Webb. for the year 2025 by preparing a pension worksheet.

b. Prepare the journal entry for pension expense for 2025.

E19.11 (LO 1, 2, 3, 4, 5) (Pension Expense, Journal Entries, Statement Presentation) Henning Company sponsors a defined benefit pension plan for its employees. The following data relate to the operation of the plan for the year 2025 in which no benefits were paid.

1. The actuarial present value of future benefits earned by employees for services rendered in 2025 amounted to $56,000.
2. The company's funding policy requires a contribution to the pension trustee amounting to $145,000 for 2025.

3. As of January 1, 2025, the company had a projected benefit obligation of $900,000, an accumulated benefit obligation of $800,000, and a debit balance of $400,000 in accumulated OCI (PSC). The fair value of pension plan assets amounted to $600,000 at the beginning of the year. The actual and expected return on plan assets was $54,000. The settlement rate was 9%. No gains or losses occurred in 2025 and no benefits were paid.
4. Amortization of prior service cost was $50,000 in 2025. Amortization of net gain or loss was not required in 2025.

Instructions

a. Determine the amounts of the components of pension expense that should be recognized by the company in 2025.

b. Prepare the journal entry or entries to record pension expense and the employer's contribution to the pension trustee in 2025.

c. Indicate the amounts that would be reported on the income statement and the balance sheet for the year 2025.

E19.12 (LO 1, 2, 3, 4, 5) (Pension Expense, Journal Entries, Statement Presentation) Ferreri Company received the following selected information from its pension plan trustee concerning the operation of the company's defined benefit pension plan for the year ended December 31, 2025.

	January 1, 2025	December 31, 2025
Projected benefit obligation	$1,500,000	$1,527,000
Market-related and fair value of plan assets	800,000	1,130,000
Accumulated benefit obligation	1,600,000	1,720,000
Accumulated OCI (G/L)—Net gain	–0–	(200,000)

The service cost component of pension expense for employee services rendered in the current year amounted to $77,000 and the amortization of prior service cost was $120,000. The company's actual funding (contributions) of the plan in 2025 amounted to $250,000. The expected return on plan assets and the actual rate were both 10%; the interest/discount (settlement) rate was 10%. Accumulated other comprehensive income (PSC) had a balance of $1,200,000 on January 1, 2025. Assume no benefits paid in 2025.

Instructions

a. Determine the amounts of the components of pension expense that should be recognized by the company in 2025.

b. Prepare the journal entry to record pension expense and the employer's contribution to the pension plan in 2025.

c. Indicate the pension-related amounts that would be reported on the income statement and the balance sheet for Ferreri Company for the year 2025.

E19.13 (LO 1, 2, 4) (Computation of Actual Return, Gains and Losses, Corridor Test, and Pension Expense) Erickson Company sponsors a defined benefit pension plan. The corporation's actuary provides the following information about the plan.

	January 1, 2025	December 31, 2025
Vested benefit obligation	$1,500	$1,900
Accumulated benefit obligation	1,900	2,730
Projected benefit obligation	2,500	3,300
Plan assets (fair value)	1,700	2,620
Settlement rate and expected rate of return		10%
Pension asset/liability	800	?

Service cost for the year 2025	$ 400
Contributions (funding in 2025)	700
Benefits paid in 2025	200

Instructions

a. Compute the actual return on the plan assets in 2025.

b. Compute the amount of the other comprehensive income (G/L) as of December 31, 2025. (Assume the January 1, 2025, balance was zero.)

c. Compute the amount of net gain or loss amortization for 2025 (corridor approach).

d. Compute pension expense for 2025.

E19.14 (LO 1, 2, 4) (Worksheet for E19.13) Using the information in E19.13 about Erickson Company's defined benefit pension plan, prepare a 2025 pension worksheet with supplementary schedules of computations. Prepare the journal entries at December 31, 2025, to record pension expense and related pension transactions. Also, indicate the pension amounts reported in the balance sheet.

E19.15 (LO 1, 2, 5) (Pension Expense, Journal Entries) Latoya Company provides the following selected information related to its defined benefit pension plan for 2025.

Pension asset/liability (January 1)	$ 25,000 Cr.
Accumulated benefit obligation (December 31)	400,000
Actual and expected return on plan assets	10,000
Contributions (funding) in 2025	150,000
Fair value of plan assets (December 31)	800,000
Projected benefit obligation (January 1)	700,000
Service cost	80,000
Settlement rate	10%

Instructions

a. Compute pension expense and prepare the journal entry to record pension expense and the employer's contribution to the pension plan in 2025. Preparation of a pension worksheet is not required. Benefits paid in 2025 were $35,000.

b. Indicate the pension-related amounts that would be reported in the company's income statement and balance sheet for 2025.

E19.16 (LO 4) (Amortization of Accumulated OCI (G/L), Corridor Approach, Pension Expense Computation) The actuary for the pension plan of Gustafson Inc. calculated the following net gains and losses.

Incurred During the Year	(Gain) or Loss
2025	$300,000
2026	480,000
2027	(210,000)
2028	(290,000)

Other information about the company's pension obligation and plan assets is as follows.

As of January 1,	Projected Benefit Obligation	Plan Assets (market-related asset value)
2025	$4,000,000	$2,400,000
2026	4,520,000	2,200,000
2027	5,000,000	2,600,000
2028	4,240,000	3,040,000

Gustafson Inc. has a stable labor force of 400 employees who are expected to receive benefits under the plan. The total service-years for all participating employees is 5,600. The beginning balance of accumulated OCI (G/L) is zero on January 1, 2025. The market-related value and the fair value of plan assets are the same for the 4-year period. Use the average remaining service life per employee as the basis for amortization.

Instructions

(Round to the nearest dollar.)

Prepare a schedule which reflects the minimum amount of accumulated OCI (G/L) amortized as a component of net periodic pension expense for each of the years 2025, 2026, 2027, and 2028. Apply the "corridor" approach in determining the amount to be amortized each year.

E19.17 (LO 1, 4, 5) (Amortization of Accumulated OCI Balances) Keeton Company sponsors a defined benefit pension plan for its 600 employees. The company's actuary provided the following information about the plan.

	January 1,	December 31,	
	2025	2025	2026
Projected benefit obligation	$2,800,000	$3,650,000	$4,195,000
Accumulated benefit obligation	1,900,000	2,430,000	2,900,000
Plan assets (fair value and market-related asset value)	1,700,000	2,900,000	3,790,000
Accumulated net (gain) or loss (for purposes of the corridor calculation)	–0–	198,000	(24,000)
Discount rate (current settlement rate)		9%	8%
Actual and expected asset return rate		10%	10%
Contributions		1,030,000	600,000

The average remaining service life per employee is 10.5 years. The service cost component of net periodic pension expense for employee services rendered amounted to $400,000 in 2025 and $475,000 in 2026. The accumulated OCI (PSC) on January 1, 2025, was $1,260,000. No benefits have been paid.

Instructions

(Round to the nearest dollar.)

a. Compute the amount of accumulated OCI (PSC) to be amortized as a component of net periodic pension expense for each of the years 2025 and 2026.

b. Prepare a schedule which reflects the amount of accumulated OCI (G/L) to be amortized as a component of pension expense for 2025 and 2026.

c. Determine the total amount of pension expense to be recognized by Keeton Company in 2025 and 2026.

E19.18 (LO 1, 2, 3, 4) (Pension Worksheet—Missing Amounts) The accounting staff of Usher Inc. has prepared the following pension worksheet. Unfortunately, several entries in the worksheet are not decipherable. The company has asked your assistance in completing the worksheet and completing the accounting tasks related to the pension plan for 2025.

	A	B	C	D	E	F	G	H
1	**Pension Worksheet—Usher Inc.**							
2		**General Journal Entries**					**Memo Record**	
3	**Items**	**Annual Pension Expense**	**Cash**	**OCI—Prior Service Cost**	**OCI—Gain/Loss**	**Pension Asset/ Liability**	**Projected Benefit Obligation**	**Plan Assets**
4	Balance, Jan. 1, 2025					$1,100 Cr.	$2,800	$1,700
5	Service cost	(1)					500	
6	Interest cost	(2)					280	
7	Actual return	(3)						220
8	Unexpected gain	$150			(4)			
9	Amortization of PSC	(5)		$ 55				
10	Contributions		$800					800
11	Benefits						200	200
12	Liability increase				(6)		365	
13	Journal entry	(7)	(8)	(9)	(10)	(11)		
14	Accumulated OCI, Dec. 31, 2024			1,100	0			
15	Balance, Dec. 31, 2025			$1,045	$215	$1,225	$3,745	$2,520

Instructions

a. Determine the missing amounts in the 2025 pension worksheet, indicating whether the amounts are debits or credits.

b. Prepare the journal entry to record 2025 pension expense for Usher Inc.

c. The accounting staff has heard of a pension accounting procedure called "corridor amortization." Is Usher required to record any amounts for corridor amortization in (1) 2025? In (2) 2026? Explain.

***E19.19 (LO 6, 7) (Postretirement Benefit Expense Computation)** Kreter Co. provides the following information about its postretirement benefit plan for the year 2025.

Service cost	$ 45,000
Contribution to the plan	10,000
Actual and expected return on plan assets	11,000
Benefits paid	20,000
Plan assets at January 1, 2025	110,000
Accumulated postretirement benefit obligation at January 1, 2025	330,000
Discount rate	8%

Instructions

Compute the postretirement benefit expense for 2025.

***E19.20 (LO 6, 7) (Postretirement Benefit Worksheet)** Using the information in E19.19, prepare a worksheet inserting January 1, 2025, balances, and showing December 31, 2025, balances. Prepare the journal entry recording postretirement benefit expense.

***E19.21 (LO 6, 7) (Postretirement Benefit Expense Computation)** Garner Inc. provides the following information related to its postretirement benefits for the year 2025.

Accumulated postretirement benefit obligation at January 1, 2025	$710,000
Actual and expected return on plan assets	34,000
Prior service cost amortization	21,000
Discount rate	10%
Service cost	83,000

Instructions

Compute postretirement benefit expense for 2025.

***E19.22 (LO 6, 7) (Postretirement Benefit Expense Computation)** Englehart Co. provides the following information about its postretirement benefit plan for the year 2025.

Service cost	$ 90,000
Prior service cost amortization	3,000
Contribution to the plan	56,000
Actual and expected return on plan assets	62,000
Benefits paid	40,000
Plan assets at January 1, 2025	710,000
Accumulated postretirement benefit obligation at January 1, 2025	760,000
Accumulated OCI (PSC) at January 1, 2025	100,000 Dr.
Discount rate	9%

Instructions

Compute the postretirement benefit expense for 2025.

***E19.23 (LO 6, 7) (Postretirement Benefit Worksheet)** Using the information in E19.22, prepare a worksheet inserting January 1, 2025, balances, showing December 31, 2025, balances, and the journal entry recording postretirement benefit expense.

***E19.24 (LO 6, 7) (Postretirement Benefit Worksheet—Missing Amounts)** The accounting staff of Holder Inc. has prepared the following postretirement benefit worksheet. Unfortunately, several entries in the worksheet are not decipherable. The company has asked your assistance in completing the worksheet and completing the accounting tasks related to the pension plan for 2025.

Sheet1

Instructions

a. Determine the missing amounts in the 2025 postretirement worksheet, indicating whether the amounts are debits or credits.

b. Prepare the journal entry to record 2025 postretirement expense for Holder.

c. What discount rate is Holder using in accounting for the interest on its other postretirement benefit plan? Explain.

Problems

P19.1 (LO 1, 2, 3, 4) Excel (2-Year Worksheet) On January 1, 2025, Harrington Company has the following defined benefit pension plan balances.

Projected benefit obligation	$4,500,000
Fair value of plan assets	4,200,000

The interest (settlement) rate applicable to the plan is 10%. On January 1, 2026, the company amends its pension agreement so that prior service costs of $500,000 are created. Other data related to the pension plan are as follows.

	2025	2026
Service cost	$150,000	$180,000
Prior service cost amortization	–0–	90,000
Contributions (funding) to the plan	240,000	285,000
Benefits paid	200,000	280,000
Actual return on plan assets	252,000	260,000
Expected rate of return on assets	6%	8%

Instructions

a. Prepare a pension worksheet for the pension plan for 2025 and 2026.

b. For 2026, prepare the journal entry to record pension-related amounts.

P19.2 (LO 1, 2, 3, 4, 5) Groupwork (3-Year Worksheet, Journal Entries, and Reporting) Jackson Company adopts acceptable accounting for its defined benefit pension plan on January 1, 2024, with the following beginning balances: plan assets $200,000; projected benefit obligation $250,000. Other data relating to 3 years' operation of the plan are as follows.

	2024	2025	2026
Annual service cost	$16,000	$ 19,000	$ 26,000
Settlement rate and expected rate of return	10%	10%	10%
Actual return on plan assets	18,000	22,000	24,000
Annual funding (contributions)	16,000	40,000	48,000
Benefits paid	14,000	16,400	21,000
Prior service cost (plan amended, 1/1/25)		160,000	
Amortization of prior service cost		54,400	41,600
Change in actuarial assumptions establishes a December 31, 2026, projected benefit obligation of:			520,000

Instructions

a. Prepare a pension worksheet presenting all 3 years' pension balances and activities.

b. Prepare the journal entries (from the worksheet) to reflect all pension plan transactions and events at December 31 of each year.

c. Indicate the pension-related amounts reported in the financial statements for 2026.

P19.3 (LO 1, 2, 3, 4, 5) (Pension Expense, Journal Entries, Amortization of Loss) Gottschalk Company sponsors a defined benefit plan for its 100 employees. On January 1, 2025, the company's actuary provided the following information.

Accumulated other comprehensive loss (PSC)	$150,000
Pension plan assets (fair value and market-related asset value)	200,000
Accumulated benefit obligation	260,000
Projected benefit obligation	380,000

The average remaining service period for the participating employees is 10 years. All employees are expected to receive benefits under the plan. On December 31, 2025, the actuary calculated that the present value of future benefits earned for employee services rendered in the current year amounted to $52,000; the projected benefit obligation was $490,000; fair value of pension assets was $276,000; the accumulated benefit obligation amounted to $365,000. The expected return on plan assets and the discount rate on the projected benefit obligation were both 10%. The actual return on plan assets is $11,000. The company's current year's contribution to the pension plan amounted to $65,000. No benefits were paid during the year.

Instructions

a. Determine the components of pension expense that the company would recognize in 2025. (With only one year involved, you need not prepare a worksheet.)

b. Prepare the journal entry to record the pension expense and the company's funding of the pension plan in 2025.

c. Compute the amount of the 2025 increase/decrease in gains or losses and the amount to be amortized in 2025 and 2026.

d. Indicate the pension amounts reported in the financial statements as of December 31, 2025.

P19.4 (LO 1, 2, 3, 4) Excel (Pension Expense, Journal Entries for 2 Years) Gordon Company sponsors a defined benefit pension plan. The following information related to the pension plan is available for 2025 and 2026.

	2025	2026
Plan assets (fair value), December 31	$699,000	$849,000
Projected benefit obligation, January 1	700,000	800,000
Pension asset/liability, January 1	140,000 Cr.	?
Prior service cost, January 1	250,000	240,000
Service cost	60,000	90,000
Actual and expected return on plan assets	24,000	30,000
Amortization of prior service cost	10,000	12,000
Contributions (funding)	115,000	120,000
Accumulated benefit obligation, December 31	500,000	550,000
Interest/settlement rate	9%	9%

No benefits were paid in 2025 or 2026.

Instructions

a. Compute pension expense for 2025 and 2026.

b. Prepare the journal entries to record the pension expense and the company's funding of the pension plan for both years.

P19.5 (LO 2, 3, 4) (Computation of Pension Expense, Amortization of Net Gain or Loss–Corridor Approach, Journal Entries for 3 Years) Hiatt Toothpaste Company initiates a defined benefit pension plan for its 50 employees on January 1, 2025. The insurance company which administers the pension plan provided the following selected information for the years 2025, 2026, and 2027.

	For Year Ended December 31,		
	2025	2026	2027
Plan assets (fair value)	$50,000	$ 85,000	$180,000
Accumulated benefit obligation	45,000	165,000	292,000
Projected benefit obligation	60,000	200,000	324,000
Net (gain) loss (for purposes of corridor calculation)	–0–	78,400	81,033
Employer's funding contribution (made at end of year)	50,000	60,000	105,000

There were no balances as of January 1, 2025, when the plan was initiated. The actual and expected return on plan assets was 10% over the 3-year period, but the settlement rate used to discount the company's pension obligation was 13% in 2025, 11% in 2026, and 8% in 2027. The service cost component of net periodic pension expense amounted to the following: 2025, $60,000; 2026, $85,000; and 2027, $119,000. The average remaining service life per employee is 12 years. No benefits were paid in 2025, $30,000 of benefits were paid in 2026, and $18,500 of benefits were paid in 2027 (all benefits paid at end of year).

Instructions

(Round to the nearest dollar.)

a. Calculate the amount of net periodic pension expense that the company would recognize in 2025, 2026, and 2027.

b. Prepare the journal entries to record net periodic pension expense, employer's funding contribution, and related pension amounts for the years 2025, 2026, and 2027.

P19.6 (LO 3, 4) Groupwork (Computation of Prior Service Cost Amortization, Pension Expense, Journal Entries, and Net Gain or Loss) Aykroyd Inc. has sponsored a noncontributory, defined benefit pension plan for its employees since 2012. Prior to 2025, cumulative net pension expense recognized equaled cumulative contributions to the plan. Other relevant information about the pension plan on January 1, 2025, is as follows.

1. The company has 200 employees. All these employees are expected to receive benefits under the plan. The average remaining service life per employee is 12 years.

2. The projected benefit obligation amounted to $5,000,000 and the fair value of pension plan assets was $3,000,000. The market-related asset value was also $3,000,000. Unrecognized prior service cost was $2,000,000.

On December 31, 2025, the projected benefit obligation and the accumulated benefit obligation were $4,850,000 and $4,025,000, respectively. The fair value of the pension plan assets amounted to $4,100,000 at the end of the year. A 10% settlement rate and a 10% expected asset return rate were used in the actuarial present value computations in the pension plan. The present value of benefits attributed by the pension benefit formula to employee service in 2025 amounted to $200,000. The employer's contribution to the plan assets amounted to $775,000 in 2025. This problem assumes no payment of pension benefits.

Instructions

(Round all amounts to the nearest dollar.)

a. Prepare a schedule, based on the average remaining life per employee, showing the prior service cost that would be amortized as a component of pension expense for 2025, 2026, and 2027.

b. Compute pension expense for the year 2025.

c. Compute the amount of the 2025 increase/decrease in net gains or losses and the amount to be amortized in 2025 and 2026.

d. Prepare the journal entries required to report the accounting for the company's pension plan for 2025.

P19.7 (LO 2, 3, 4) (Pension Worksheet) Hanson Corp. sponsors a defined benefit pension plan for its employees. On January 1, 2025, the following balances related to this plan.

Plan assets (market-related value)	$520,000
Projected benefit obligation	700,000
Pension asset/liability	180,000 Cr.
Prior service cost	81,000
Net gain or loss (debit)	91,000

As a result of the operation of the plan during 2025, the actuary provided the following additional data for 2025.

Service cost	$108,000
Settlement rate, 9%; expected return rate, 10%	
Actual return on plan assets	48,000
Amortization of prior service cost	25,000
Contributions	133,000
Benefits paid retirees	85,000
Average remaining service life of active employees	10 years

Instructions

Using the preceding data, compute pension expense for Hanson for the year 2025 by preparing a pension worksheet that shows the journal entry for pension expense. Use the market-related asset value to compute the expected return and for corridor amortization.

P19.8 (LO 1, 2, 3, 4, 5) Groupwork (Comprehensive 2-Year Worksheet) Lemke Company sponsors a defined benefit pension plan for its employees. The following data relate to the operation of the plan for the years 2025 and 2026.

	2025	2026
Projected benefit obligation, January 1	$600,000	
Plan assets (fair value and market-related value), January 1	410,000	
Pension asset/liability, January 1	190,000 Cr.	
Prior service cost, January 1	160,000	
Service cost	40,000	$ 59,000
Settlement rate	10%	10%
Expected rate of return	10%	10%
Actual return on plan assets	36,000	61,000
Amortization of prior service cost	70,000	50,000
Annual contributions	97,000	81,000
Benefits paid retirees	31,500	54,000
Increase in projected benefit obligation due to changes in actuarial assumptions	87,000	–0–
Accumulated benefit obligation at December 31	721,800	789,000
Average service life of all employees		20 years
Vested benefit obligation at December 31		464,000

Instructions

a. Prepare a pension worksheet presenting both years 2025 and 2026 and accompanying computations and amortization of the loss (2026) using the corridor approach.

b. Prepare the journal entries (from the worksheet) to reflect all pension plan transactions and events at December 31 of each year.

c. For 2026, indicate the pension amounts reported in the financial statements.

P19.9 (LO 1, 2, 3, 4, 5) Groupwork (Comprehensive 2-Year Worksheet) Hobbs Co. has the following defined benefit pension plan balances on January 1, 2025.

Projected benefit obligation	$4,600,000
Fair value of plan assets	4,600,000

The interest (settlement) rate applicable to the plan is 10%. On January 1, 2026, the company amends its pension agreement so that prior service costs of $600,000 are created. Other data related to the pension plan are as follows.

	2025	2026
Service cost	$150,000	$170,000
Prior service cost amortization	–0–	90,000
Contributions (funding) to the plan	200,000	184,658
Benefits paid	220,000	280,000
Actual return on plan assets	252,000	350,000
Expected rate of return on assets	6%	8%

Instructions

a. Prepare a pension worksheet for the pension plan in 2025.

b. Prepare any journal entries related to the pension plan that would be needed at December 31, 2025.

c. Prepare a pension worksheet for 2026 and any journal entries related to the pension plan as of December 31, 2026.

d. Indicate the pension-related amounts reported in the 2026 financial statements.

P19.10 (LO 1, 2, 3, 4) (Pension Worksheet—Missing Amounts) Kramer Co. has prepared the following pension worksheet. Unfortunately, several entries in the worksheet are not decipherable. The company has asked your assistance in completing the worksheet and completing the accounting tasks related to the pension plan for 2025.

	A	B	C	D	E	F	G	H
1	Pension Worksheet—Kramer Co.							
2		General Journal Entries					Memo Record	
3	Items	Annual Pension Expense	Cash	OCI—Prior Service Cost	OCI—Gain/Loss	Pension Asset/ Liability	Projected Benefit Obligation	Plan Assets
4	Balance, Jan. 1, 2025					$120,000	$325,000	$205,000
5	Service cost	(1)					20,000	
6	Interest cost	(2)					26,000	
7	Actual return	(3)						18,000
8	Unexpected loss	$2,500			(4)			
9	Amortization of PSC	(5)		$35,000				
10	Contributions		$41,000					41,000
11	Benefits						15,000	15,000
12	Increase in PBO				(6)		43,500	
13	Journal entry for 2025	(7)	(8)	(9)	(10)	(11)		
14	Accumulated OCI, Dec. 31, 2024			80,000	0			
15	Balance, Dec. 31, 2025			$45,000	$46,000	$150,500 Cr.	$399,500 Cr.	$249,000 Dr.

Instructions

a. Determine the missing amounts in the 2025 pension worksheet, indicating whether the amounts are debits or credits.

b. Prepare the journal entry to record 2025 pension expense for Kramer.

c. Determine the following for Kramer for 2025: (1) settlement rate used to measure the interest on the liability and (2) expected return on plan assets.

P19.11 (LO 1, 2, 3, 4, 5) (Pension Worksheet) The following data relate to the operation of Kramer Co.'s pension plan in 2026. The pension worksheet for 2025 is provided in P19.10.

Service cost	$59,000
Actual return on plan assets	32,000
Amortization of prior service cost	28,000
Annual contributions	51,000
Benefits paid retirees	27,000
Average service life of all employees	25 years

For 2026, Kramer will use the same assumptions as 2025 for the expected rate of return on plan assets. The settlement rate for 2026 is 10%.

Instructions

a. Prepare a pension worksheet for 2026 and accompanying computations and amortization of the loss, if any, in 2026 using the corridor approach.

b. Prepare the journal entries (from the worksheet) to reflect all pension plan transactions and events at December 31.

c. Indicate the pension amounts reported in the financial statements.

P19.12 (LO 1, 2, 3, 4, 5) (Pension Worksheet) Larson Corp. sponsors a defined benefit pension plan for its employees. On January 1, 2026, the following balances related to this plan.

Plan assets (market-related value)	$270,000
Projected benefit obligation	340,000
Pension asset/liability	70,000 Cr.
Prior service cost	90,000
OCI—Loss	39,000

As a result of the operation of the plan during 2026, the actuary provided the following additional data for 2026.

Service cost	$45,000
Actual return on plan assets	27,000
Amortization of prior service cost	12,000
Contributions	65,000
Benefits paid retirees	41,000
Settlement rate	7%
Expected return on plan assets	8%
Average remaining service life of active employees	10 years

Instructions

a. Compute pension expense for Larson for the year 2026 by preparing a pension worksheet that shows the journal entry for pension expense.

b. Indicate the pension amounts reported in the financial statements.

***P19.13 (LO 6, 7) Groupwork (Postretirement Benefit Worksheet)** Hollenbeck Foods Inc. sponsors a postretirement medical and dental benefit plan for its employees. The following balances relate to this plan on January 1, 2025.

Plan assets	$200,000
Expected postretirement benefit obligation	820,000
Accumulated postretirement benefit obligation	200,000
No prior service costs or OCI balances exist.	

As a result of the plan's operation during 2025, the following additional data are provided by the actuary.

Service cost is $70,000

Discount rate is 10%

Contributions to plan are $65,000

Expected return on plan assets is $10,000

Actual return on plan assets is $15,000

Benefits paid to employees are $44,000

Average remaining service to full eligibility: 20 years

Instructions

a. Using this data, compute the net periodic postretirement benefit cost for 2025 by preparing a worksheet that shows the journal entry for postretirement expense and the year-end balances in the related postretirement benefit memo accounts. (Assume that contributions and benefits are paid at the end of the year.)

b. Prepare any journal entries related to the postretirement plan for 2025 and indicate the postretirement amounts reported in the financial statements for 2025.

***P19.14 (LO 6, 7) (Postretirement Benefit Worksheet—2 Years)** Elton Co. has the following postretirement benefit plan balances on January 1, 2025.

Accumulated postretirement benefit obligation	$2,250,000
Fair value of plan assets	2,250,000

The interest (settlement) rate applicable to the plan is 10%. On January 1, 2026, the company amends the plan so that prior service costs of $175,000 are created. Other data related to the plan are as follows.

	2025	2026
Service costs	$ 75,000	$ 85,000
Prior service costs amortization	–0–	12,000
Contributions (funding) to the plan	45,000	35,000
Benefits paid	40,000	45,000
Actual return on plan assets	140,000	120,000
Expected rate of return on assets	8%	6%

Instructions

a. Prepare a worksheet for the postretirement plan in 2025.

b. Prepare any journal entries related to the postretirement plan that would be needed at December 31, 2025.

c. Prepare a worksheet for 2026 and any journal entries related to the postretirement plan as of December 31, 2026.

d. Indicate the postretirement-benefit–related amounts reported in the 2026 financial statements.

Using Your Judgment

Financial Reporting Problem: The Procter & Gamble Company (P&G)

UYJ19.1 The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

a. What kinds of pension plans does P&G provide its employees?

b. What was P&G's pension expense for 2020 and 2019 related to its defined benefit plan?

c. What is the impact of P&G's pension plans for 2020 on its financial statements?

d. What information does P&G provide on the target allocation of its pension assets? (Compare the asset allocation for "Pensions and Other Retiree Benefits.") How do the allocations relate to the expected returns on these assets?

Comparative Analysis Case: The Coca-Cola Company and PepsiCo, Inc.

UYJ19.2 The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

a. What kind of pension plans do Coca-Cola and PepsiCo provide their employees?

b. What net periodic pension expense (cost) did Coca-Cola and PepsiCo report in 2020?

c. What is the year-end 2020 funded status of Coca-Cola's and PepsiCo's plans (include international)?

d. What relevant rates were used by Coca-Cola and PepsiCo in computing their pension amounts?

e. Compare the expected benefit payments and contributions for Coca-Cola and PepsiCo.

*Financial Statement Analysis Case: General Electric

UYJ19.3 A *Wall Street Journal* article discussed a $1.8 billion charge to income made by **General Electric** for postretirement benefit costs. It was attributed to previously unrecognized healthcare and life insurance cost. As financial vice president and controller for Peake, Inc., you found this article interesting because the president recently expressed interest in adopting a postemployment benefit program for Peake's employees, to complement the company's existing defined benefit plan. The president, Martha Beyerlein, wants to know how the expense on the new plan will be determined and what impact the accounting for the plan will have on Peake's financial statements.

Instructions

a. As financial vice president and controller of Peake, Inc., explain the calculation of postemployment benefit expense under GAAP, and indicate how the accounting for the plan will affect Peake's financial statements.

b. Discuss the similarities and differences in the accounting for the other postemployment benefit plan relative to the accounting for the defined benefit plan.

Accounting, Analysis, and Principles

UYJ19.4 PENCOMP's balance sheet at December 31, 2025, is as follows.

PENCOMP, Inc.
Balance Sheet
As of December 31, 2025

Assets		**Liabilities**	
Cash	$ 438	Notes payable	$1,000
Inventory	1,800	Pension liability	344
Total current assets	2,238	Total liabilities	1,344
Plant and equipment	2,000	**Stockholders' equity**	
Accumulated depreciation	(240)	Common stock	2,000
	1,760	Retained earnings	896
Total assets	$3,998	Accumulated other comprehensive income	(242)
		Total stockholders' equity	2,654
		Total liabilities and stockholders' equity	$3,998

Additional information concerning PENCOMP's defined benefit pension plan is as follows.

Projected benefit obligation at 12/31/25	$ 820.5
Plan assets (fair value) at 12/31/25	476.5
Unamortized past service cost at 12/31/25	150.0
Amortization of past service cost during 2026	15.0
Service cost for 2026	42.0
Discount rate	10%
Expected rate of return on plan assets in 2026	12%
Actual return on plan assets in 2026	10.4
Contributions to pension fund in 2026	70.0
Benefits paid during 2026	40.0
Expected remaining service life of employees	15.0
Average period to vesting of prior service costs	10.0
Unamortized net loss due to changes in actuarial assumptions and deferred net losses on plan assets at 12/31/25	92.0

Other information about PENCOMP is as follows.

Salary expense, all paid with cash during 2026	$ 700.0
Sales, all for cash	3,000.0
Purchases, all for cash	2,000.0
Inventory at 12/31/26	1,800.0

Property originally cost $2,000 and is depreciated on a straight-line basis over 25 years with no residual value.
Interest on the note payable is 10% annually and is paid in cash on 12/31 of each year.
Dividends declared and paid are $200 in 2026.

Accounting

Prepare an income statement for 2026 and a balance sheet as of December 31, 2026. Also, prepare the pension expense journal entry for the year ended December 31, 2026. Round to the nearest tenth (e.g., round 2.87 to 2.9).

Analysis

Compute return on equity for PENCOMP for 2026 (assume stockholders' equity is equal to year-end average stockholders' equity). Do you think an argument can be made for including some or even all of the change in accumulated other comprehensive income (due to pensions) in the numerator of return on equity? Illustrate that calculation.

Principles

Explain a rationale for why the FASB has (so far) decided to exclude from the current period income statement the effects of pension plan amendments and gains and losses due to changes in actuarial assumptions.

Developing Your Professional Skills

Critical-Thinking Cases

CT19.1 (LO 1) (Pension Terminology and Theory) Many business organizations have been concerned with providing for the retirement of employees since the late 1800s. Increase in this concern resulted in the establishment of private pension plans in most large companies and in many medium- and small-sized ones.

The substantial growth of these plans, both in numbers of employees covered and in amounts of retirement benefits, has increased the significance of pension costs in relation to the financial position, results of operations, and cash flows of many companies. In examining the costs of pension plans, a CPA encounters certain terms. The components of pension costs that the terms represent must be dealt with appropriately if generally accepted accounting principles are to be reflected in the financial statements of entities with pension plans.

Instructions

a. Define a private pension plan. How does a contributory pension plan differ from a noncontributory plan?

b. Differentiate between "accounting for the employer" and "accounting for the pension fund."

c. Explain the terms "funded" and "pension liability" as they relate to:

1. The pension fund.

2. The employer.

d. **1.** Discuss the theoretical justification for accrual recognition of pension costs.

2. Discuss the relative objectivity of the measurement process of accrual versus cash (pay-as-you-go) accounting for annual pension costs.

e. Distinguish among the following as they relate to pension plans.

1. Service cost.

2. Prior service costs.

3. Vested benefits.

CT19.2 (LO 1) Writing (Pension Terminology) The following items appear on Brueggen Company's financial statements.

1. Under the caption Assets:
Pension asset/liability.

2. Under the caption Liabilities:
Pension asset/liability.

3. Under the caption Stockholders' Equity:
Prior service cost as a component of Accumulated Other Comprehensive Income.

4. On the income statement:
Pension expense.

Instructions

Explain the significance of each of the items above on corporate financial statements. (*Note:* All items set forth above are not necessarily to be found on the statements of a single company.)

CT19.3 (LO 1) (Basic Terminology) In examining the costs of pension plans, Helen Kaufman, CPA, encounters certain terms. The components of pension costs that the terms represent must be dealt with appropriately if generally accepted accounting principles are to be reflected in the financial statements of entities with pension plans.

Instructions

a. **1.** Discuss the theoretical justification for accrual recognition of pension costs.

2. Discuss the relative objectivity of the measurement process of accrual versus cash (pay-as-you-go) accounting for annual pension costs.

b. Explain the following terms as they apply to accounting for pension plans.

1. Market-related asset value.

2. Projected benefit obligation.

3. Corridor approach.

c. What information should be disclosed about a company's pension plans in its financial statements and its notes?

(AICPA adapted)

CT19.4 (LO 1) Writing (Major Pension Concepts) Davis Corporation is a medium-sized manufacturer of paperboard containers and boxes. The corporation sponsors a noncontributory, defined benefit pension plan that covers its 250 employees. Sid Cole has recently been hired as president of Davis Corporation. While reviewing last year's financial statements with Carol Dilbeck, controller, Cole expressed confusion about several of the items in the footnote to the financial statements relating to the pension plan. In part, the footnote reads as follows.

> **Note J.** The company has a defined benefit pension plan covering substantially all of its employees. The benefits are based on years of service and the employee's compensation during the last four years of employment. The company's funding policy is to contribute annually the maximum amount allowed under the federal tax code. Contributions are intended to provide for benefits expected to be earned in the future as well as those earned to date.

The net periodic pension expense on Davis Corporation's comparative income statement was $72,000 in 2025 and $57,680 in 2024.

The following are selected figures from the plan's funded status and amounts recognized in the Davis Corporation's balance sheet at December 31, 2025 ($000 omitted).

Actuarial present value of benefit obligations:

Accumulated benefit obligation (including vested benefits of $636)	$ (870)
Projected benefit obligation	$(1,200)
Plan assets at fair value	1,050
Projected benefit obligation in excess of plan assets	$ (150)

Given that Davis Corporation's work force has been stable for the last 6 years, Cole could not understand the increase in the net periodic pension expense. Dilbeck explained that the net periodic pension expense consists of several elements, some of which may increase or decrease the net expense.

Instructions

a. The determination of the net periodic pension expense is a function of five elements. List and briefly describe each of the elements.

b. Describe the major difference and the major similarity between the accumulated benefit obligation and the projected benefit obligation.

c. **1.** Explain why pension gains and losses are not recognized on the income statement in the period in which they arise.

2. Briefly describe how pension gains and losses are recognized.

(AICPA adapted)

CT19.5 (LO 5) Writing (Implications of GAAP Rules on Pensions) Jill Vogel and Pete Dell have to do a class presentation on GAAP rules for reporting pension information. In developing the class presentation, they decided to provide the class with a series of questions related to pensions and then discuss the answers in class. Given that the class has all read the rules related to pension accounting and reporting, they felt this approach would provide a lively discussion. Here are the questions:

1. In an article in *Businessweek* related to pensions, it was reported that the discount rates used by the largest 200 companies for pension reporting ranged from 5% to 11%. How can such a situation exist, and does GAAP alleviate this problem?
2. An article indicated that when GAAP rules were issued related to pensions, it caused an increase in the liability for pensions for approximately 20% of companies. Why might this situation occur?
3. A recent article noted that while "smoothing" is not necessarily an accounting virtue, pension accounting has long been recognized as an exception—an area of accounting in which at least some dampening of market swings is appropriate. This is because pension funds are managed so that their performance is insulated from the extremes of short-term market swings. A pension expense that reflects the volatility of market swings might, for that reason, convey information of little relevance. Are these statements true?
4. Understanding the impact of the changes required in pension reporting requires detailed information about its pension plan(s) and an analysis of the relationship of many factors, particularly the:
   a. Type of plan(s) and any significant amendments.
   b. Plan participants.
   c. Funding status.
   d. Actuarial funding method and assumptions currently used.

   What impact does each of these items have on financial statement presentation?
5. An article noted "You also need to decide whether to amortize gains and losses using the corridor method, or to use some other systematic method. What is the corridor method and what is its purpose?

Instructions

What answers do you believe Jill and Pete gave to each of these questions?

CT19.6 (LO 4) Writing (Gains and Losses, Corridor Amortization) Vickie Plato, accounting clerk in the personnel office of Streisand Corp., has begun to compute pension expense for 2027 but is unsure whether she should include the amortization of unrecognized gains/losses. She is currently working with the following beginning-of-the-year present values for the projected benefit obligation and market-related values for the pension plan:

	Projected Benefit Obligation	Plan Assets Value
2024	$2,200,000	$1,900,000
2025	2,400,000	2,500,000
2026	2,900,000	2,600,000
2027	3,900,000	3,000,000

The average remaining service life per employee in 2024 and 2025 is 10 years; in 2026 and 2027, it is 12 years. The net gain or loss that occurred during each year is as follows.

2024	$280,000 loss
2025	85,000 loss
2026	12,000 loss
2027	25,000 gain

(In working the solution, you must aggregate the unrecognized gains and losses to arrive at year-end balances.)

Instructions

You are the manager in charge of accounting. Write a memo to Vickie Plato, explaining why in some years she must amortize some of the net gains and losses and in other years she does not need to. In order to explain this situation fully, you must compute the amount of net gain or loss that is amortized and charged to pension expense in each of the 4 years listed above. Include an appropriate amortization schedule, referring to it whenever necessary.

CT19.7 (LO 4) Ethics (Nonvested Employees—An Ethical Dilemma) Thinken Technology recently merged with College Electronix (CE), a computer graphics company. In performing a comprehensive audit of CE's accounting system, Gerald Ott, internal audit manager for Thinken Technology, discovered that the new subsidiary did not record pension assets and liabilities, subject to GAAP.

The net present value of CE's pension assets was $15.5 million, the vested benefit obligation was $12.9 million, and the projected benefit obligation was $17.4 million. Ott reported this audit finding to Julie

Habbe, the newly appointed controller of CE. A few days later, Habbe called Ott for his advice on what to do. Habbe started her conversation by asking, "Can't we eliminate the negative income effect of our pension dilemma simply by terminating the employment of nonvested employees before the end of our fiscal year?"

Instructions

How should Ott respond to Habbe's remark about firing nonvested employees?

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE19.1 Access the glossary ("Master Glossary") to answer the following.

a. What is an accumulated benefit obligation?

b. What is a defined benefit postretirement plan?

c. What is the definition of "actuarial present value"?

d. What is a prior service cost?

CE19.2 In general, how can an employer choose an appropriate discount rate for its pension plan? What information could an employer use in choosing a discount rate?

CE19.3 If an employer has a defined benefit pension plan, what components would make up its net periodic pension cost?

CE19.4 What information about its pension plan must a publicly traded company disclose in its interim financial statements?

Codification Research Case

Monat Company has grown rapidly since its founding in 2004. To instill loyalty in its employees, Monat is contemplating establishment of a defined benefit plan. Monat knows that lenders and potential investors will pay close attention to the impact of the pension plan on the company's financial statements, particularly any gains or losses that develop in the plan. Monat has asked you to conduct some research on the accounting for gains and losses in a defined benefit plan.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

a. Briefly describe how pension gains and losses are accounted for.

b. Explain the rationale behind the accounting method described in part (a).

c. What is the related pension asset or liability that will show up on the balance sheet? When will each of these situations occur?

Additional Professional Resources

Go to Wiley Course Resources for other career-readiness resources, such as career coaching, internship opportunities, and CPAexcel prep.

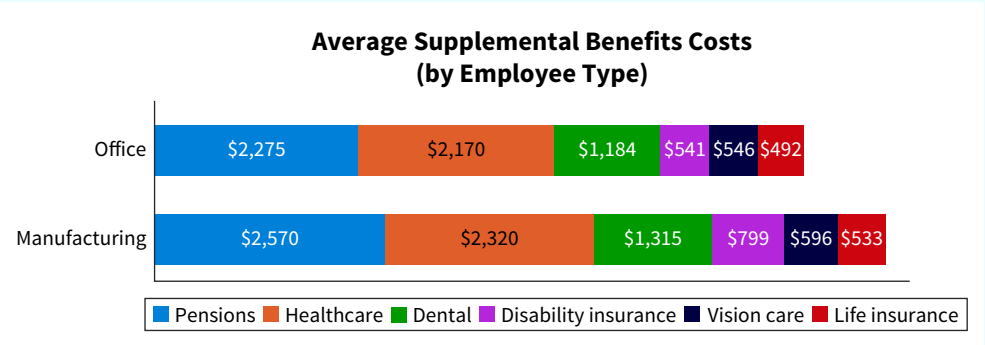
Analytics in Action Activities

Using Data Analytics to Evaluate the Cost of Employee Benefits

Excel

DA19.1 When we think about the compensation cost that an employer incurs, we probably first think about salary. A comprehensive look at compensation, however, would need to include additional benefits like pensions, healthcare, and vacation time. If not managed effectively, these costs can quickly add up.

Consumption of these benefits will vary by individual employees, making it difficult to track and plan for these types of costs. Data analytics and visualizations like the following can really help employers manage these costs while also understand which benefits are perceived as most valuable by their employees.



Required

You are provided with a set of raw employee data, including information on the cost of salary, paid leave, required benefits, and supplemental benefits, as well as the results of an employee survey ranking the importance of the benefits offered. Using Excel, you will create tables, charts, and visualizations to analyze all of the data provided.

Go to Wiley Course Resources for complete details and instructions.

IFRS Insights

LEARNING OBJECTIVE 8

Compare the accounting for pensions under GAAP and IFRS.

The accounting for various forms of compensation plans under IFRS is found in *IAS 19* ("Employee Benefits") and *IFRS 2* ("Share-Based Payment"). *IAS 19* addresses the accounting for a wide range of compensation elements—wages, bonuses, postretirement benefits, and compensated absences. The underlying concepts for the accounting for postretirement benefits are similar between GAAP and IFRS—both GAAP and IFRS view pensions and other postretirement benefits as forms of deferred compensation. At present, there are significant differences in the specific accounting provisions as applied to these plans. Following are the key similarities and differences between GAAP and IFRS related to pensions.

Similarities

- IFRS and GAAP separate pension plans into defined contribution plans and defined benefit plans. The accounting for defined contribution plans is similar.
- IFRS and GAAP recognize a pension asset or liability as the funded status of the plan (i.e., defined benefit obligation minus the fair value of plan assets). (Note that the defined benefit obligation is referred to as the projected benefit obligation in GAAP.)
- IFRS and GAAP compute unrecognized past service cost (PSC) (referred to as prior service cost in GAAP) in the same manner. However, IFRS recognizes past service cost as a component of pension expense in income immediately. GAAP amortizes PSC over the remaining service lives of employees.

Differences

- IFRS and GAAP include interest expense on the liability in pension expense. Regarding asset returns, IFRS reduces pension expense by the amount of interest revenue (based on the discount rate times the beginning value of pension assets). GAAP includes an asset return component based on the expected return on plan assets.
- Under IFRS, companies recognize both liability and asset gains and losses (referred to as remeasurements) in other comprehensive income. These gains and losses are not "recycled" into income in subsequent periods. GAAP recognizes liability and asset gains and losses in "Accumulated other comprehensive income" and amortizes these amounts to income over remaining service lives, using the "corridor approach."
- The accounting for pensions and other postretirement benefit plans is the same under IFRS. GAAP has separate standards for these types of benefits, and significant differences exist in the accounting.

Additional IFRS Resources

Additional IFRS Insights with assessment are available online at Wiley Course Resources. For those who want more IFRS coverage, *Intermediate Accounting, IFRS Fourth Edition* exists as another resource.

CHAPTER 20

© Sarath maroli / Shutterstock

Accounting for Leases

WHAT are leases?

A lease is a contractual agreement between a lessor and a lessee. A lease arrangement gives the lessee the right to use specific property, which is owned by the lessor, for a period of time. In return for the use of the property, the lessee makes rental payments over the lease term to the lessor. Have you ever leased a car? You get the right to use the car over a set period of time while making rental payments to the car dealer. At the end of your lease term, you give the car back and stop making payments. You didn't own the car while you leased it, you simply **had the right to use** the car!

WHY is information about leases important?

Leasing has become one of the popular ways that companies secure use of the assets needed in the operations of their businesses. For example, **Apple** leases many of its retail locations; it recently reported a commitment of over $10 billion in future minimum lease payments. **ExxonMobil** leases drilling equipment, tankers, service stations, and other properties. **UPS** leases warehouses, aircraft, aircraft engines, office space and more. Indeed, leasing activity in the United States represents a multi-trillion dollar business. Given the significance of leasing in many companies' operations, investors and creditors need information about the leased assets and obligations to make payments under a lease arrangement. Let's take a look at **Delta Airlines** as an example (see its partial financial statements below).

With total assets of $65 billion and total liabilities of $59 billion, leasing represents over 10% of Delta's assets and over 12% of its liabilities. And lease costs comprise nearly 8% of Delta's operating expenses. So, it is easy to see why investors and creditors need good accounting information about the amounts reported in the balance sheet and income statement as they relate to leases.

Delta Airlines, Inc.

Balance Sheet (in millions)

Assets	
Operating lease right-of-use assets	$5,627
Finance lease assets – Property and equipment	1,062
Total lease assets	$6,689
Liabilities	
Operating lease liabilities	$1,054
Finance lease liabilities	6,095
Total	$7,149

Income Statement (in millions)

Lease costs	
Finance lease cost	
Amortization of right-of-use assets	$110
Interest on lease liabilities	29
Operating lease cost	1,013
Short-term lease cost	500
Variable lease cost	1,456
Total lease cost	$3,108

HOW do we account for leases?

As shown in the Delta example, companies classify lease arrangements as either finance or operating. In either case, lessees **capitalize on the balance sheet all leased assets and liabilities**. Therefore, the balance sheet for a company that uses either a finance lease or an operating lease will be the same. However, for income statement purposes, the reporting of financial information depends on whether the lease is classified as a finance lease or operating lease. Consider your leased car. While you don't own the car, you are committed to making lease payments to the dealership over the term of your lease. Your **personal balance sheet** would report an asset for your right to drive the car over the term of the lease, and you would also have an obligation for the lease payments you are required to make!

What about lessors? Lessors also classify leases as either finance or operating. As you will learn, lessors account for financing leases in a manner similar to the accounting for a loan. Lessors account for operating leases in a manner similar to a rental agreement.

Chapter Roadmap

LEARNING OBJECTIVES	TOPICS	REVIEW AND PRACTICE
LO 20.1 Describe the environment related to leasing transactions.	**20.1 The Leasing Environment** • Lessees • Advantages of leases • Finance and operating leases	Examples **20.1** Lease Classification **20.2** Bargain Purchase Option **20.3** Bargain Renewal Option **20.4** Variable Payments—In Substance Fixed **20.5** Variable Lease Payments **20.6** Termination Option **20.7** Alternative Use Test Put It into Practice LO 20.1 Determine Lease Classifications
LO 20.2 Explain the accounting for finance leases.	**20.2 Finance Leases** • Lessee accounting • Lessor accounting • Sales-type lease example	Put It into Practice LO 20.2 Account for Sales-Type (Finance) Lease
LO 20.3 Explain the accounting for operating leases.	**20.3 Operating Leases** • Lessee accounting • Lessor accounting	Put It into Practice LO 20.3 Account for Operating Lease—Lessee/Lessor
LO 20.4 Discuss the accounting and reporting for special features of lease arrangements.	**20.4 Special Lease Accounting Problems** • Residual values • Other lease adjustments • Bargain purchase options • Short-term leases • Presentation and decision analysis	Examples **20.8** Gross vs. Net Leases **20.9** Right-of-Use Cost Analysis **20.10** Short-Term Lease

Go to the **Review and Practice** section at the end of the chapter for a targeted summary review. Multiple-choice questions with annotated solutions, as well as additional exercises and practice problem with solutions, are also available in Wiley Course Resources.

20.1 The Leasing Environment

LEARNING OBJECTIVE 1

Describe the environment related to leasing transactions.

A **lease** is a contractual agreement between a lessor and a lessee. This arrangement gives the **lessee** the right to use specific property, which is owned by the **lessor**, for a specified period of time. In return for the use of the property, the lessee makes rental payments over the lease term to the lessor. [1] (See the FASB Codification References near the end of the chapter.) If you have ever leased a car or an apartment, you are the lessee, and the car dealer or property owner is the lessor. Without even knowing it, you have probably been party to a lease transaction!

A Look at the Lessee

Aristotle once said, "Wealth does not lie in ownership but in the use of things." Clearly, many U.S. companies have decided that Aristotle is right, as they have become heavily involved in leasing assets rather than owning them. Indeed, leasing is a multi-trillion dollar industry! That is a lot of lease contracts.

What types of assets are being leased? Maybe the better question is what assets are **not** leased? Any type of property, plant, and equipment can be leased, such as buildings, land, railcars, helicopters, bulldozers, barges, CT scanners, and computers. Illustration 20.1 summarizes what several major companies are leasing.

ILLUSTRATION 20.1 What Do Companies Lease?

Company	Description
Apple	"The Company leases various equipment and facilities, including retail space, under noncancelable operating lease arrangements."
ExxonMobil	"Minimum commitments for operating leases, shown on an undiscounted basis, cover drilling equipment, tankers, service stations, and other properties."
JPMorgan Chase	"JPMorgan Chase and its subsidiaries were obligated under a number of noncancelable operating leases for premises and equipment used primarily for banking purposes."
United Parcel Service	"We have finance and operating leases for package centers, airport facilities, warehouses, corporate office space, aircraft, aircraft engines, information technology equipment, vehicles and other various other equipment used in operating our business."
McDonald's	"The Company was the lessee at 15,235 restaurant locations through ground leases (the Company leases the land and the Company or franchisee owns the building) and through other leases (the Company leases land and buildings)."
Starbucks	"Starbucks leases retail stores, roasting and distribution facilities, and office space under operating leases."
TXU	"TXU Energy Holdings and TXU Electric Delivery have entered into operating leases covering various facilities and properties including generation plant facilities, combustion turbines, transportation equipment, mining equipment, data processing equipment, and office space."
Viacom	"The Company has long-term non-cancelable operating lease commitments for office space and equipment, transponders, studio facilities, and vehicles. The Company also enters into leases for satellite transponders."

Why Is Leasing So Popular?

Lessees

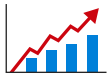
Have you ever been car shopping at a dealership? You probably know that you can purchase a car by getting a loan or paying cash, or you can lease a car. What are the benefits of leasing? Why does a company choose to lease an asset rather than purchase it outright? From the perspective of the **lessee**, leasing can provide significant advantages, such as the following.

1. **100% financing at fixed rates.** You just graduated college, you are starting your first "real" job, and you need a car! Without much savings (yet), you turn to leasing. Leasing allows you to get a reliable car and fixed (predictable) monthly payments, possibly without having to pay anything up front. This benefit is no different for companies, which may choose to lease to help conserve scarce cash—and to help protect them against inflation and increases in the cost of money. The following comment really illustrates the benefits of leasing for many companies: "Our local bank finally came up to 80% of the purchase price but wouldn't go any higher, and they wanted a floating interest rate. We just couldn't afford the down payment, and we needed to lock in a final payment rate we knew we could live with."
2. **Protection against obsolescence.** Adaptive cruise control, exit warning to protect cyclists, lane departure warning, and 360-degree camera: these are just some of the newest technology features in the auto industry. It may not be feasible to buy and sell your car every few years. But in a leasing transaction, you can get all of the latest bells and whistles that new cars offer by turning in your leased vehicle for a new one. For many companies, the benefits of having easy access to the latest and greatest technology simply outweighs the additional cost they may incur to lease.
3. **Flexibility.** Lease agreements may contain less restrictive provisions than other debt agreements. Innovative lessors can tailor a lease agreement to the lessee's special needs. For instance, the duration of the lease—the **lease term**—may be anything from a short period of time to the entire expected economic life of the asset. The rental payments may be level from year to year, or they may increase or decrease in amount. The payment amount may be predetermined or may vary with sales, the prime interest rate, the Consumer Price Index, or some other factor.
4. **Less costly financing.** We cannot talk about the benefits of leasing without mentioning taxes! Some companies find leasing cheaper than other forms of financing. For example, start-up companies in depressed industries or companies in low tax brackets may lease to claim tax benefits that they might otherwise lose. Depreciation deductions offer no benefit to companies that have little if any taxable income. Through leasing, the leasing companies or financial institutions use these tax benefits. They can then pass some of these tax benefits back to the user of the asset in the form of lower rental payments.

Lessors

Think about the car dealership that is offering a lease arrangement for a new car. Why would the dealership, the lessor, offer the option of leasing a car rather than selling it outright? Leasing can be beneficial for **lessors** as well by:

Leasing often provides profitable interest margins



Leasing can stimulate sales of a lessor's product

1. **Providing profitable interest margins.** Part of the lease payment the lessor receives usually includes an interest revenue component (which we cover later in the chapter).
2. **Stimulating sales of a lessor's product** whether it be from a dealer (lessor) or a manufacturer (lessor). For example, a car dealership can move more cars off the lot by

giving customers the option of leasing, which often provides 100% financing to lessees. Also, in a leasing arrangement, customers might be able to afford a more expensive car than if their only option was a purchase, leading to more profits for the lessor.

Similar to lessees, there can be tax benefits for the lessor

3. **Providing tax benefits** to various parties in the lease, which enhances the return to all the parties involved, including the lessor. Suppose you are starting a business and need a car for business use only. If you purchase a car, you must record depreciation on the car. Depreciation is tax-deductible, but your new business may not have any taxable income in the first year or two of operations, so you would not fully benefit from that tax savings. In certain lease arrangements, if the lessor retains ownership, the lessor will benefit from the depreciation tax deduction and pass along these savings to the lessee in the form of lower lease payments.

   To illustrate the potential tax benefits for the lessor, **Boeing Aircraft** might sell one of its 737 jet planes to a wealthy investor who does not need a plane but could use the tax benefit (tax-deductible depreciation). The investor purchases the plane and then leases it to a foreign airline, for which the tax benefit is of no use. Everyone gains. Boeing sells its airplane, the investor receives the tax benefit, and the foreign airline receives a lower rental rate because the lessor is able to use the tax benefit.

Leasing can provide a high residual value to the lessor upon return of the property

4. **Providing a high residual value to the lessor** upon the return of the property at the end of the lease term. Car lease agreements typically include mileage restrictions on the lessee. Why? Because at the end of a car lease, the car is returned to the dealership. What does the dealership do with the returned leased car? The car will go back on the lot and be sold as a used car. The dealer does not want the car having excessive mileage because that lowers the value of the car, which lowers the selling price and related profits. So, with returned leased cars, the dealership has another opportunity to profit from the same car.

Accounting Matters — Residual Value Regret

Residual value profits are an important driver for the popularity of leasing for lessors, especially for leases of equipment and vehicles. However, the profitability of equipment leasing hinges on a very important estimate: the residual value of the leased asset at the end of the lease. To realize a profit, the lessor must be able to resell the asset when returned by the lessee.

Citigroup at one time estimated that the commercial aircraft it was leasing to the airline industry would have a residual value of 5% of their purchase price. It turned out that they were worth 150% of their cost—a handsome profit. However, automakers haven't fared so well. **Ford** took a $2.1 billion write-down on its lease portfolio when rising gas prices spurred dramatic declines in the resale values of leased trucks and SUVs. Such residual value losses led to **Fiat-Chrysler** to get out of the leasing business altogether.

Not to be outdone, **General Motors (GM)** took advantage of a government subsidy for electric vehicles of $7,500 to help drive down the cost of a lease for its electric car, the Chevy Volt. The taxpayer subsidies along with other GM incentives provided for low monthly lease payments, given the estimated residual value, and led to a full two-thirds of all Volt "sales" being attributed to leases. That's about three times the lease rate for the overall industry. The problems for GM started when the Volts came back at the end of the lease. Unfortunately for GM and other electric car enthusiasts, demand for electric cars without the incentives (which expired) were not sustained, and resale values for Volts plummeted.

As a result, rather than reaping residual value profits, GM sustained losses for the Volt lease returns that sold for less than the original expected residual values. It was a double whammy for GM as the already low sales numbers for new Volts were further hurt by the supply of low-priced Volts on the used car lot. GM is hoping to avoid residual value regret for its recently introduced Bolt model.

Finance and Operating Leases (Lessee)

Lease Classification

The first step in accounting for leases is to classify the lease arrangement as either finance or operating based on the substance of the leasing transaction:

① If the lease transfers control (or ownership) of the underlying asset to a lessee, then the lease is classified as a **finance lease**.

② In a finance lease, the lessee takes ownership or consumes the substantial portion of the underlying asset over the lease term. Legally, the lessor may retain ownership, but the substance of the transaction is such that the lessee assumes the benefits and risks of ownership.

③ All leases that do not meet any of the finance lease tests are classified as operating leases. In an **operating lease**, a lessee **obtains the right to use the underlying asset** but not ownership of the asset itself.

Underlying Concepts

Leasing transactions must be consistent with the definitions established within the Conceptual Framework.

Asset: A present right of an entity to an economic benefit.

Liability: A present obligation of an entity to transfer an economic benefit.

In either case, **companies capitalize almost all leased assets and liabilities on the balance sheet**. How do companies determine whether to use the finance method or the operating method? From the lessee's perspective, the lease is classified based on whether the arrangement is effectively a purchase of the underlying asset (see **Underlying Concepts**).[1]

The issue of how to report leases is the classic case of substance versus form. In the form of the lease document, legal title may not technically pass from the lessor to the lessee. But in substance, the benefits from the use of the property do transfer to the lessee.

Example 20.1
Lease Classification

FACTS Gammon, Inc. leases one floor of an office building for 5 years to Win Co. At the end of the lease, Win (the lessee) vacates the floor. Gammon (the lessor) can then lease the floor to another tenant.

QUESTION Is this arrangement a finance or operating lease?

SOLUTION

This lease is an operating lease because the lease conveys right-of-use but does not transfer control (or ownership). The lessee controls the leased asset only during the 5-year lease. As we will see, the accounting for a lease classified as a finance lease (transfer of control or ownership) or an operating lease (transfer of right-of-use) reflects differences in control conveyed in a lease arrangement.

Illustration 20.2 presents the **lease classification tests**, which are used to determine whether a company should use the finance lease approach or the operating lease approach.

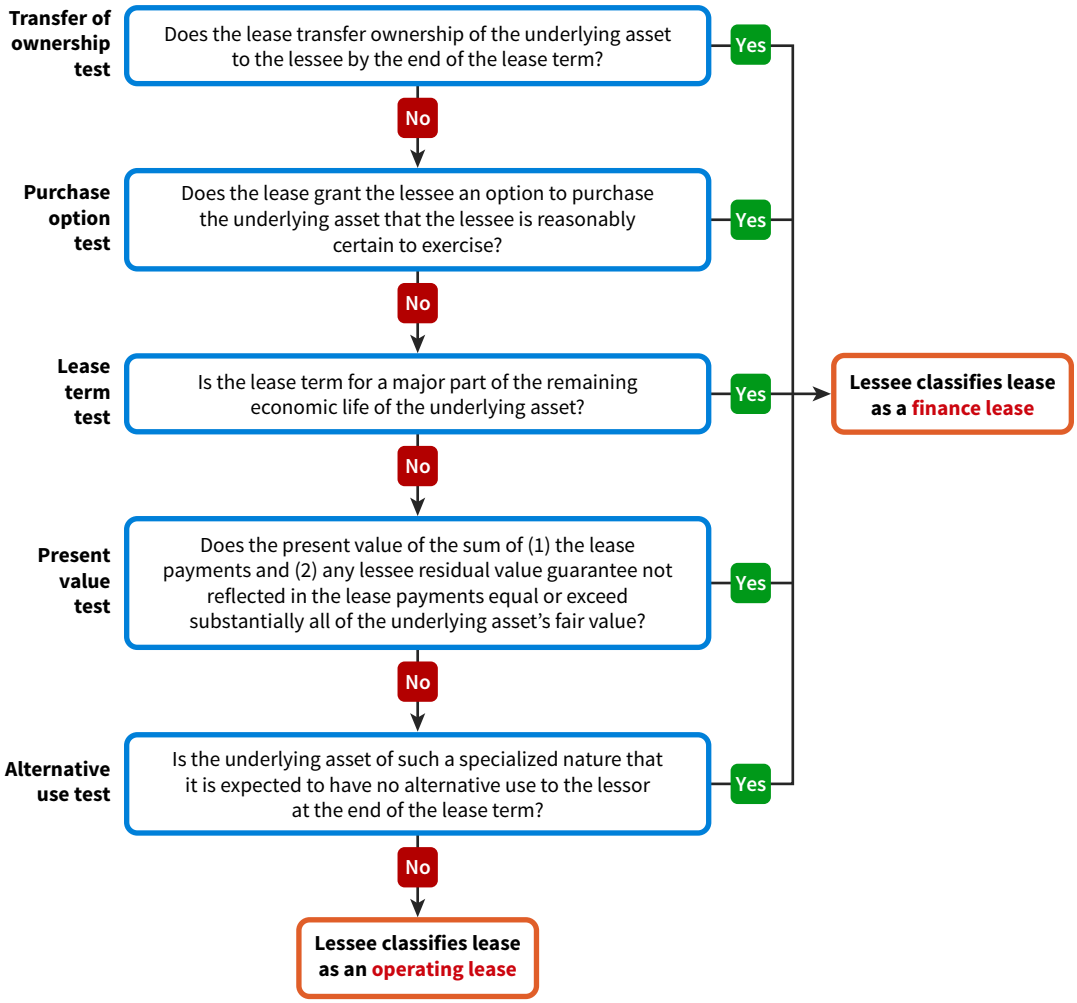
For a lease to be a finance lease, it must be non-cancelable and **meet at least one of the five tests** listed in Illustration 20.2. **[2]** Otherwise, the lease is an operating lease. Additional explanation of each of the lease classification tests follows.

Transfer of Ownership Test

If the lease transfers legal ownership of the asset to the lessee, it is a finance lease. This test is not controversial and easily implemented in practice.

[1]The FASB believes that the reporting of an asset and liability for a lease arrangement is consistent with its conceptual framework definition of assets and liabilities. See "Elements of Financial Statements," *Statement of Financial Accounting Concepts No. 6* (Stamford, Conn.: FASB, December 1985), pp. ix and x.

ILLUSTRATION 20.2 Lease Classification Tests



Transfer of ownership test
Does the lease transfer ownership of the underlying asset to the lessee by the end of the lease term?
Yes
No
Purchase option test
Does the lease grant the lessee an option to purchase the underlying asset that the lessee is reasonably certain to exercise?
Yes
No
Lease term test
Is the lease term for a major part of the remaining economic life of the underlying asset?
Yes
No
Present value test
Does the present value of the sum of (1) the lease payments and (2) any lessee residual value guarantee not reflected in the lease payments equal or exceed substantially all of the underlying asset's fair value?
Yes
No
Alternative use test
Is the underlying asset of such a specialized nature that it is expected to have no alternative use to the lessor at the end of the lease term?
Yes
No
Lessee classifies lease as a finance lease
Lessee classifies lease as an operating lease

Source: Adapted from *KPMG Leases in Depth* (April 2016), p. 147.

Purchase Option Test

A purchase option test is met if it is reasonably certain that the lessee will exercise the option. In other words, the lease purchase option allows the lessee to purchase the property for a price that is significantly lower than the underlying asset's expected fair value at the date the option becomes exercisable. This is called a **bargain purchase option**.

In some leases, it may be very clear that the purchase option is a bargain (some leases offer a $1 purchase option!), but it is not always so clear cut. When applying the lease classification tests at the inception of the lease, management may need to compare the purchase price to an estimate of what the leased asset will be worth at the end of the lease to determine if the purchase option is a **bargain.**

Example 20.2
Bargain Purchase Option

FACTS Brett's Delivery Service leases a **Honda** Accord for $499 per month for 40 months, with an option to purchase the Accord for $1,000 at that end of the lease.

QUESTION The estimated fair value of the Honda Accord is $10,000 at the end of the 40 months. Does the lease have a bargain purchase option?

SOLUTION

The $1,000 option is clearly a bargain purchase option. Therefore, Brett's accounts for this lease as a finance lease.

Lease Term Test

When the lease term is a major part of the remaining economic life of the leased asset, companies should use the finance method in accounting for the lease transaction. The question is, what is a major part of the economic life of a leased asset? Although the FASB indicates that companies should use judgment in evaluating the lease term test, it recognizes that additional implementation guidance would be helpful. As a result, the Board established a guideline that if the lease term is 75% or greater of the economic life of the leased asset, the lease is treated as a finance lease. This is called the **lease term test** (often referred to as the 75% test).[2] *This guideline should be used for homework purposes.*

The lease term is generally considered to be the fixed, non-cancelable term of the lease. What if the lease contains a bargain **renewal** option?

- A **bargain renewal option** allows the lessee to renew the lease for a rental that is lower than the expected fair rental at the time the option becomes exercisable.
- At the commencement of the lease, the difference between the renewal rental and the expected fair rental must be great enough to make exercise of the option to renew reasonably certain, which is a high threshold of probability. The intent is that parties to a lease account for options only when the lessee has a compelling economic reason to exercise an option within the lease. [4] Companies should include in the lease term any renewal periods deemed a **bargain**.

Example 20.3
Bargain Renewal Option

FACTS Assume that **Home Depot** leases **Dell** PCs for 2 years at a rental of $100 per month per computer. In addition, Home Depot can lease these computers for $10 per month per computer for another 2 years.

QUESTION What is the term of this lease?

SOLUTION

The lease clearly offers a bargain renewal option going from a $100 monthly rental rate down to $10; Home Depot should consider the lease term for these computers to be 4 years, not 2 years.

Present Value Test

If the present value of the lease payments is reasonably close to the fair value of the asset, a company is effectively purchasing the asset and should therefore use the finance method to account for the lease. Again, the FASB recognizes that determining what is reasonably close often involves significant judgment and therefore provides an implementation guideline that is referred to as the 90% test. This guideline states that if the present value of the lease payments equals or exceeds 90% of the fair value of the asset, then a lessee should use the finance method to record the lease. *This guideline should be used for homework purposes.* To apply the present value test, a lessee must determine the amount of lease payments and the appropriate discount rate.

Lease Payments The lease payments generally include the following.

1. **Fixed payments.** These are rental payments that are specified in the lease agreement and fixed over the term of the lease. The present value of these payments is used to value the lease liability.

[2]Companies may lease a used asset in the last 25% of its economic life, which raises the question of applying the lease term test for classification of the lease. The FASB's position is that it is inconsistent to require that a lease covering the last few years be recorded as a finance lease by a lessee (or as a sales-type lease by a lessor) when a similar lease of that asset earlier in its economic life would have been classified as an operating lease. This conclusion is debatable because a lessee can direct the use of and obtain substantially all the remaining benefits from a significantly used asset just the same as it can a new or slightly used asset. [3].

2. **Variable payments.** These payments are of two types:
   - Variable payments that are in substance fixed payments because future payments are known.
   - Variable payments that are uncertain in the future. For example, lease agreements may indicate that future payments should be based on an index/rate. When valuing the lease liability in these situations, no increases or decreases to future lease payments should be assumed, based on increases or decreases in the index/rate. Instead, any difference in the payments due to changes in the index or rate is expensed in the period incurred.

   Examples 20.4 and 20.5 provide an analysis of variable lease payments.

Example 20.4
Variable Payments—In Substance Fixed

FACTS On January 1, 2025, Jose Company leases an airplane for 6 years. The annual lease payments are $1,000,000 per year, payable at the beginning of each year (annuity-due basis). In addition, the lease payment increases by $30,000 every year.

QUESTION What are the lease payments in 2026 and 2027?

SOLUTION

On January 1, 2026, the lease payment is $1,030,000 ($1,000,000 + $30,000). On January 1, 2027, the lease payment is $1,060,000 ($1,030,000 + $30,000). Given that the amount of the payments is known from year to year – the base payment plus the annual increase, such payments are considered fixed payments.

While the payments in Example 20.4 vary, the amounts in the future are known at the lease commencement. These payments are included in the present value calculation.

Example 20.5
Variable Lease Payments

FACTS On January 1, 2025, Jose Company leases an airplane for 6 years. The annual lease payments are $1,000,000 per year, payable at the beginning of each year (annuity-due basis). In addition, assume that the lease payments are adjusted each year by a change in the Consumer Price Index (CPI).

QUESTION Assume the CPI is 100 at January 1, 2025, and increases to 104 on January 1, 2026. What is the payment on January 1, 2026?

SOLUTION

The variable payment on January 1, 2026, is $1,040,000 ($1,000,000 × 1.04). Because the amount of the variable payment from year to year is not known at the start of the lease, this payment is not included in determining the present value of the lease liability at January 1, 2025. This additional payment ($40,000) is recognized as an expense in the period it is incurred (2026). Similarly, when lease payments vary with a performance measure (e.g., sales at a store location, asset usage), the variable amounts will be expensed in the period incurred.
